[163] *Ibid.,* p. 76.

[164] *Ibid.*.

[165] *Ibid.,* p. 79.

133. Noortmann thus calls for a new approach not only to NSAs but to international law more generally. This approach, inspired by the New Haven School and Jessup´s theory of transnationalism, would take into account the dynamic and flexible nature of international relations. It would expand the research focus beyond the State while at the same time not framing the debate about actors in terms of legal personality as traditionally conceived. It would also look in more detail at institutions and legal frameworks rather than merely legal rules and would abandon preconceived categorisations such as State/non-State and national/international /transnational.[166]

F) The Role of Non-State Actors Under Alternative Approaches to International Law

134. Although most alternative approaches to international law may reject the State-centric, consent-based perspective of international law,[167] they have few other traits in common. They differ in their definition of international law, its functions, and its relevant actors. They also disagree about whether these actors should be defined solely based on factual reality (i.e., anyone having an impact upon international relations is a valid "participant") or whether there should still be some formal selection system and requirements (e.g., relevant actors must have particular characteristics or a certain normative position).

135. Despite their diversity, alternative approaches are valuable in that they show the non-automatic nature of many of the concepts that mainstream international lawyers tend to assume. This opens the door for possible reconceptualization particularly when it comes to the role of NSAs. While it may be premature to draw some expedient suggestions as to this role from the alternative accounts, it is at least possible to raise certain questions that the rise of NSAs render interesting, relevant and in some cases even urgent.

136. The first question is whether the ***category of NSAs*** is theoretically sound and practically useful and whether it can work as a general category at all.[168] Under the traditional paradigm of international law, States occupy the position of normative supremacy within the legal system. Anyone else is then defined through its opposition to, or difference from, States.

137. This position does not recognize the plurality of NSAs. It is already common not to construe the category of NSAs as one encompassing all actors except States. Entities that have gained special prominence internationally (IGOs) or that are simply seen as distinct from the others (individuals), are often excluded from the definition of NSAs. This is also the case in this report. With the rise in importance of other entities, the trend to break up the general category and "name" the concrete "NSAs" will grow, especially if this rise is accompanied by a decline of factual power and normative centrality of the State. From that perspective, the concept of "NSAs" may sooner or later become

[166] See NOORTMANN, Math, Globalisation, Global Governance and Non-State Actors: Researching beyond the State, *International Law FORUM de Droit International,* Vol. 4, No. 36, 2002.

[167] Some alternative theories remain largely focused on States. This is, for instance, the case of TWAIL (Third World Approaches to International Law). See MUTUA, Makau, ANGHIE, Antony, What Is TWAIL?, *Proceedings of the Annual Meeting (American Society of International Law),* Vol. 94, 2000, pp. 31-40.

[168] See GAL-OR, Noemi, Observations on the Desirability of an Enhanced International Legal Status of the Non-State Actor, in NOORTMANN, Math, RYNGAERT, Cedric (eds), *Non-State Actor Dynamics op. cit.,* pp. 125-149.

obsolete. The dichotomous classification between States and non-States might then be replaced by a more pluralistic conception. Such a conception would make it possible to take into account the particular features of each actor and would not force these actors into a one-size-fits-all mould.

138. The second question relates to ***the concept of legal personality.*** This concept has been used in IL theory to apply to inter-State relations as a way to organize actors by drawing a line between those whose acts matter and those who remain outside the legal system. It can also, however, become a straitjacket that renders this system quite inflexible. The situation is further complicated by the lack of consensus over what legal personality really means and what has to be done for an actor to acquire it. Whereas, some scholars suggest that the way out of this pitfall is simply to rethink the concept of legal personality, others argue that the concept itself is unviable and should be eliminated. Still others propose replacing it with the more flexible concept of 'participants' that would take the factual role of various entities in global decision-making process as its starting point.[169]

139. While such proposal may seem *prima facie* appealing, clearly much more must be done to establish what it would mean for the system of international law in general. Those in favour have usually offered merely a very general description of their new vision of international law,[170] while maintaining the traditional legal analysis when discussing concrete legal problems.[171] Thus, the reformulation proposal probably raises even more questions than it answers. Would the position of participants be determined simply by their factual power (along the "might means right" maxim)? How would the line between law and politics be drawn if preserved at all? Which rules would be considered as making part of international law? How would that law differ from domestic law, or would it just be merged into some kind of global law? The choice between the legal person and the participant perspectives cannot be made unless, and before, these issues are addressed.

140. In addition, it is necessary to consider the evolution of the use of the concept of international legal personality in international law (principally in the context of IGOs) and the legal distinctions created in its wake (i.e., varying capacities, rights and obligations according to each institution), as techniques of international legal theory. The reformulation/ reconsideration of the concept would then need to include the technical evolution of the concept as a scientific tool for determining the extent of capacities, rights and obligations of each actor; the diversification and multiplication of actors; the plurality of legal systems and traditions; and the rethinking of the international system beyond the traditional State-centered approach.[172]

141. The third question is that of the ***position of NSAs*** and the status of "laws" they produce. Global legal pluralism would consider the normative orders created by non-state entities as independent legal orders along, though probably not on par with, classical international law produced by States. Constitutionalists would seek to integrate them into a uniform system of international law striving towards certain common goals. Supporters of policy-oriented and interdisciplinary approaches would, most probably, simply assess the international impact of NSA acts. None of the approaches is very clear about the relationship between such normative orders/acts. Thus, as before, the alternative theoretical approaches are more explicit on what they reject than on what they wish to embrace.

V. CONCLUDING REMARKS

142. This report has analysed the role of NSAs in contemporary international law. Despite the increase in books and articles on NSAs in recent years, the topic remains under-theorised. Gal-Or rightly notes that there is *"an urgent doctrinal /.../ need for an integrated and comprehensive assessment of the status of the NSA in international law"*.[173] This final report, together with the previous reports adopted by the Committee in 2010-2014, responds to this need by offering an overview of the actual practice of NSAs in terms of their rights and obligations and their effect on the functioning of the international legal system. It demonstrates that this practice is rich and diverse, negating the traditional view that only States make international law and other actors do not have much to say in the matter.

143. NSAs play an important role in international practice that differs depending upon the particular actor and the area of activity. International law has not completely ignored this development. Through the procedures of formal incorporation and informal integration, it has taken account of the rise of NSAs. Its response, however, has not been comprehensive or systematic but, rather, incremental and on a case-by-case basis. Some NSAs have acquired formal legal personality, albeit a limited one, but others have not. Some take part in norm-creation and/or dispute settlement; others do not. Some have rights and duties, others do not. There is probably not a single legal characteristic that all NSAs share. From that perspective, the concept of NSAs has a very limited use as an analytical category. It tells us what certain entities are not but not what they are. In fact, the concept can hardly do that due to the heterogeneity of NSAs.

144. When assessing the position of NSAs, the current report has examined not only the traditional State-centric theoretical perspective but it has also applied several alternative approaches to international law (global legal pluralism, transnational law approach, constitutionalism, policy-oriented approach, interdisciplinary IL/IR approach). This report does not aspire to select one of those approaches as the most appropriate and to promote its use with respect to NSAs or within international law more broadly. As has become apparent, this is in fact quite difficult, if not impossible. Members of the Committee do not share the same theoretical and methodological preferences. Moreover, none of the approaches scrutinized in this report is truly a "winner", i.e. none has offered a truly comprehensive account of the legal consequences of the rise of NSAs. All seem to be lagging behind the reality on the ground.

---

[173] GAL-OR, Noemi, Observations on the Desirability, *op. cit.,* p. 125.

145. In its 2010 Report, the Committee undertook to produce a set of general principles in its final report.[174] This, however, has turned out to be difficult. Such principles would be either mere generalities or they would need to focus on specific NSAs rather than the whole category of NSAs. Moreover, the questions that arise in connection with NSAs do not relate to these entities only. Rather, they bring us back to the very foundations and ontology of international law and reveal that these foundations are not as firm and unshakable as they have seemed.[175] Reopening the debate about the foundations of international law and considering again certain fundamental concepts (international legal personality, sources of international law, etc.) may therefore be a necessary precondition to further understand where we stand and where we should stand with respect to NSAs.

COMMITTEE ON NON STATE ACTORS

WORKING SESSION

Tuesday, 9 August 2016, 2.00pm

Chair: Professor Stephan Hobe (Germany)

The Chair opened the session by noting that the Committee had been established in 2010. A resolution and final report was now proposed for adoption. The Chair introduced the panel, composed of Professor Math Noortmann (who would be presenting on the current status of the Committee) and Veronika Bílková, who would be presenting the final report. The report was very forward looking and went beyond the day to day business of international law. The Report posed very fundamental questions such as whether a Non-State Actor (NSA) could be defined, and how they were involved in international law. The Chair expressed the opinion that this depended on the perception of international law that one took, before giving the floor to the Chair of the Committee, Professor Noortmann.

Professor Math Noortmann (UK) introduced himself and said that this would be the last meeting of the Committee. At this session, the Committee would present its final report and draft resolution.

Discussions on a Committee on non-State actors started 10 years earlier. At the beginning of the discussions, it was thought that the Committee could start off with a policyoriented perspective; however, it became clear that this would be too hard for 99% of the constituency of the ILA, and it was therefore necessary to start from scratch. When the Committee was inaugurated in 2010 in Rio de Janeiro, it had to first determine what it was actually talking about – what kind of approaches were there, what was a non-State actor, what methodologies would be used. A first report was drawn up for the conference in The Hague in 2010, which outlined the approach and methodology of the Committee, and how it would move from one step to the next. It was already decided in Rio de Janeiro that there would be three substantial reports. The first would be an empirical one, sculpting and mapping what kinds of non-State actors were out there. The second report was a fairly broad overview of what was out there. The third report would consider the statuses of non-State actors once it was determined where to place them. Professor Noortmann emphasised that this was once again a mapping and sculpting exercise, which was very broad. International lawyers had a problem in that they only worked with States, so the Committee had to come up with a working definition.

Reading the reports of the Committee in combination provided a decent overview of what was out there. Professor Noortmann noted that sometimes, one had to wonder whether this was the right approach. Non-State actors had become a very prominent label, but there were suggestions that "participants" would be more inclusive. There was, however, a theoretical and conceptual problem if we were to agree that international law was a law between nations. Professor Noortmann therefore raised the intellectual question as to what happened when a non-State actor entered into a contract with a State actor. It was not international law, so how were these agreements to be qualified? They definitely did not fall within the scope of the the Vienna Convention on the Law of Treaties. The more the Westphalia "container" was opened, increasingly the more questions were posed. Professor Noortmann suggested that one could say that the Westphalia container should be kept as it was, and that the international lawyer would only look at States and the

interaction between them. However, an international lawyer would say that s/he dealt with interactions between States as well as non-State actors. The many different perspectives and debates were interesting, but Professor Noortmann warned that one should avoid the mistake of trying to put everything new into the Westphalia container. In 1648, when the Westphalia system was established, the legal system was not designed for situations encountered today.

Professor Noortmann concluded his presentation by expressing disappointment that many involved in the Committee and the report were not present, but commended the Committee members on being extremely committed and productive.

The Chair applauded the work of the Committee and said that it broke ground in the area of non-State actors.

Dr Veronika Bílková emphasised that the report was a collective effort, and that the Committee had been very successful. The fourth and final report built on what had been done previously. It was divided into two parts, corresponding with the two ambitions that the Committee had set for itself. The first part was empirical in nature, and mapped the landscape of how non-State actors were affected by international law and how international law affects them. The second part was theoretical in nature, dealing with whether general conclusions could be made of non-State actors, how the concept of non-State actors interacted with other general concepts in international law, and whether the view that the Committee took of non-State actors was influenced and shaped by general theoretical perspectives that it took in international law.

Dr Bílková pointed out that it was difficult to reach a definition of "non-State actors". This was a debated issue, so the Committee adopted a working definition for the purpose of its work and the final report. It was not a general definition. The definition, stated in the report, was that nonState actors were:

> legally recognized and organised entities that are not comprised of nor governed or controlled by States nor groups of States and that actually perform functions in the international arena that have real or potential effects on international law.

Dr Bílková acknowledged that this was a long definition and therefore broke it down into elements. The first element was that a non-State actor was an entity that was somehow organised (ie, a collective) and legally recognised, either at a domestic or international level. It therefore excluded individuals, as well as illegitimate and illegal entities. The second element was that nonState actors excluded international governmental organisations that were comprised solely of States. The third element was functional – for an entity to count as a non-State actor, it had to perform some function at the international level.

The Committee arrived at the following list of non-State actors based on this definition: non-governmental organisations, multinational enterprises, organised armed opposition groups, sui generis entities (eg, ICRC, the Holy See), and organised indigenous peoples' groups. Dr Bílková recognised that some attendees might have problems with this definition, just as some of the members of the Committee did, but while it might not be a terrific definition, in the end there were two reasons to opt for this specific definition. The first reason was based on the nature of entities; the entities that were included had something

more in common than just not being States. The second reason was pragmatic; there was quite a lot, both in terms of positive international law and in terms of scholarship, being done about individuals, IGOs and terrorist groups. Therefore, the Committee was concerned that, if it included these entities, it would be encroaching on the work done by others, at the same time as being hijacked by the massive amount of research on these entities.

Dr Bílková moved on to the empirical part of the report. The analysis offered in the report was quite detailed. The Committee decided to map, through this practical exercise, three specific areas of international law, namely international norm creation, monitoring compliance with international law and in dispute settlement, the scope of substantive rights and duties of non-State actors and the consequences of non-compliance. The Committee came to specific conclusions regarding each area and Dr Bílková proceeded to give a general overview of these conclusions. First, the Committee found that the engagement of non-State actors with international law in all the above mentioned areas was actually quite rich. The picture that textbooks offered was usually quite black and white. In reality, it was much more of a grey scale. Second, this engagement had very few general interests that could be applied to everyone and everywhere. The specific types of engagement depended on the type of non-State actor and the relevant area of international law. Third, international law as a system and international lawyers as a community had so far not been able to react to development in any coherent way; the responses had been very ad hoc.

Finally, the Committee concluded that, despite the ad hoc nature of responses, there seemed to be two main ways in which international law had so far dealt with non-State actors: the formal incorporation of non-State actors within the international legal system and the informal integration of non-State actors into this system. A discussion on this can be found in the report. The formal incorporation of non-State actors into international law consisted of the conferral upon these actors of formal legal personality and/or of concrete rights and duties. This could be seen with entities that were similar to States, such as the Holy See and the ICRC. This way was not, however, uniform; the degree to which such entities had been granted legal personality was quite diverse. The informal integration of non-State actors in the international legal system related to the situation in which non-State actors were not granted a formal position within this system, but their factual role was nevertheless acknowledged by other, informal means. This way granted some influence to non-State actors without granting them with legal personality.

Dr Bílková explained that the second part of the report was theoretical, and indicated that what the Committee wanted to do here was to show that there was no obvious automatic approach to take towards non-State actors. We were prisoners of theory; what we thought about non-State actors and how we interpreted empirical data depended on the theoretical position that we adopted. The report focused on five approaches, namely global legal pluralism, the transnational law approach, constitutionalism, the policyoriented approach, and the interdisciplinary IL/IR approach. The report tried to show how these approaches of international law conceptualised the role of non-State actors. Dr Bílková added two caveats. First, the Committee did not claim that these positions were the only ones that might have something to say about non-State actors; they were simply chosen because their scholars had written the most about non-State actors. Second, the Committee did

not claim that these approaches had a monolithic view on non-State actors. Furthermore, the Committee wanted to show that each position had strengths and limitations, and that no single approach could account for the richness of the empirical data from the first part of the report.

Dr Bílková summed up the general conclusions of the Committee after 8-10 years. Before doing so, she noted that, in the beginning, the Committee had ambitious plans to create general principles, but this turned out to be impossible. If general principles were to be set, then they must be extremely general, which would be useless with no content. Alternatively, creating very specific principles which would only be applicable in specific cases to specific entities did not correspond with the mandate of the Committee. Accordingly, the Committee decided on a set of reflections or questions for further studies. These were not recommendations.

The first reflection was whether the categories of non-State actors was theoretically sound and practically useful, and if not, whether it would be better to concentrate on specific non-State actors. The Committee did not suggest that the concept had never been useful, but it had possibly become obsolete. The question was, however, left open in the report. Dr Bílková did recommend that new ILA Committees be formed to deal with specific non-State actors.

The second reflection was that certain legal categories always came back when you dealt with non-State actors. Dr Bílková opted to use the concept of international legal personality to illustrate this second reflection. This concept was supposed to be very crucial for non-State actors because it should determine which non-State actors counted and which ones did not. We took it for granted that this concept was useful for this area of law, but it was actually an unclear and very fluid concept. It was unclear whether an entity was subject of rights and obligations first and then legal personality, or vice versa. The Committee found that the concept of legal personality was in fact not useful for this area of law. If it was to be used, it needed to be revisited. Dr Bílková once again suggested that a new Committee be established to deal with this topic specifically.

The final reflection concerned the relationship between international and domestic law regarding non-State actors. Again, it was suggested that a new Committee be established.

Dr Bílková concluded by inviting attendees to read the report, and to make any comments on it. The report was very open and there was space to accommodate many ideas.

The Chair thanked Dr Bílková for her excellent presentation and noted that the report made it clear the fundamental questions that were at stake.

Professor Hans-Joachim Heintze (Germany) expressed the view that the approach whereby every entity that was not a State was a non-State actor or vice versa was incorrect. It was unclear what a State was. Traditional international law did recognise actors other than States. People were the most important non-State actors and had rights and duties under international law. Transnational corporations were also recognised as non-State actors. Therefore, he liked the Committee's approach in recognising that not all entities that were not States were non-State actors, but felt that the Committee did not deal enough with this issue.

Dr Hilly Moodrick-Even Khen (Israel) thanked the panel for the presentation. Dividing non-State actors was an excellent idea because there were more differences than similarities, and the different entities were involved in different branches. By focusing on different entities such as armed groups, one could more closely examine them, and create guidelines for the international community that would be binding on these non-State actors.

Mr Samuel Matsiko (Uganda) pointed out that, at the beginning of her presentation, Dr Bílková spoke about organisations. From an international criminal law perspective, crimes against humanity must be pursuant to an organisation or policy. In his dissenting judgment in the Ruto and Sang Case (*The Prosecutor v. William Samoei Ruto and and Joshua Arap Sang*), Judge HansPeter Kaul noted that non-State actors had to be State-like. This had been an emerging debate in academia and he was sure that this was important for the Committee and its report.

Dr Bílková thanked attendees for their interventions. In response to Mr Matsiko, she said that, for the purposes of the report, the Committee looked at the collective element rather than specific organisations, but specifically wanted to move away from idea of "State-like". For an entity to qualify as a non-State actor, it was not necessary to be State-like.

In response to Dr Moodrick-Even Khen, Dr Bílková stated that the Committee had done a lot of research on armed groups. On a general level, the problem was to stay general as that was the mandate and not to focus on specific groups. In practice, however, there was specificity. The Committee only came across specific examples.

In response to Professor Heitze, Dr Bílková explained the Committee's approach that the dichotomy between non-State actors and States made sense as long as you had many States but only a few non-State actors. Once you had few States and many non-State actors that were not similar, it did not make sense to maintain the distinction.

Professor Noortmann emphasised that it was clear in certain cases that certain entities were not States, but there was a category of "others". What was interesting was that non-State actors did have rights and obligations under international law, but non-State actors had no say in the international law system which was imposed on them. For example, the Landmine Treaty was negotiated and signed by States. The treaty was then taken to Geneva, where an NGO was created called Geneva Call, which in turn presented the treaty to armed groups for them to sign. There were then two documents that were exactly the same; one was an international treaty, the other was not. Therefore, the question was whether there was a legal relationship between the "original" and the "copy". Professor Noortmann said that he was not suggesting that international law was obsolete, but that there was more going on that we needed to understand.

The Chair added that there were not just rights but also obligations under international law for non-State actors which might complicate the matter.

Mr Dipak Bhattacharyya (India) pointed out that the panel had made a distinction between State and non-State actors, and that part of the definition of non-State actors was that they must be legally recognised by States. There was a peculiar metamorphosis in India, where non-State actors in a previous regime became the State actor through parliamentary election and some State actors became non-State actors. The concepts of

State and non-State actor were therefore not constant. Conflict situations between non-State actors and State actors at this juncture of international law was very important. He queried why international law did not just stick to State actors; what is the aspiration in classifying certain actors as non-State actors and giving justification for their existence?

Mr George Anthony Long (US) found the definition of non-State actors to be too narrow such that it excluded certain groups that should be included. The definition required entities to be "legally recognised and organised". What exactly did this mean? For example, the US recognised that AlQaeda was a group and acknowledged that it was organised. Moreover, AlQaeda had an impact in the international arena on humanitarian law, so why were they excluded from the definition?

The Chair thanked Mr Long for this interesting contribution.

Ms Martha Bradley (South Africa) expressed her curiosity at the discussion of legal personality, and referred to the statement in the final report that different non-State actors might have differing legal personality. She asked the panel where on the scale of legal personality the Committee classified armed opposition groups and how the Committee dealy with the treaty obligations in terms of common Article 3 of the Geneva Conventions as applicable to these groups.

Dr Bílková responded to Mr Bhattacharyya by stating that the Committee obviously did not pretend that the categories were clear. The category of non-State actors had not been introduced or invented by the Committee. It had been out there for centuries and the Committee was just trying to make sense of it.

In response to Mr Long, Dr Bílková recognised that the definition was a most difficult aspect, and the Committee had expected questions on it. She agreed that the element of legal recognition might be confusing. As she was not present when the Committee discussed this element of the definition, she proposed to leave it to Professor Noortmann to explain. What Dr Bílková believed legal recognition to mean was not about being granted formal recognition but that it should not be completely illegitimate. In other words, it should be an entity with which a State would be willing to talk. That was why groups such as AlQaeda and the mafia were excluded, but armed opposition groups were included.

In response to Ms Bradley, Dr Bílková noted that the legal personality of armed oppostion groups was a very good question, and that the Committee had actually not done enough on international legal personality. That was why it was suggested that a new Committee be established to deal with this aspect in detail. The Committee did not set a formal scale regarding legal personality. The Committee did a lot of work on armed opposition groups, and the general consensus seemed to have been that that such groups did have some rights and duties under international humanitarian law, both under common Articles 2 and 3 of the Geneva Conventions but also under custom.

Professor Noortmann pointed out that there were many different perspectives within the Committee that reflected the various questions asked from the floor. He cited an author who said that legal personality was nonsensical from a practical and intellectual point of view. It was an internationalised fiction which was relevant when you wanted organisations to co-operate. Professor Noortmann emphasised that the question was therefore

always what it would add if a group, such as AlQaeda, had legal personality. It must be kept in mind that organisations were not put on trial in international law; only individuals were put on trial. On the whole, it was not useful to say that every person who took up arms was a non-State actor.

Dr Ioana Cismas (US) shared the concern with the definition, specifically the third element that nonState actors be legally recognised and organised entities. What the definition was saying was that a non-State actor was an actor that a State recognised as a non-State actor. This was a very State-centric view. She further commented that, in her opinion, international legal personality said nothing about the exact rights and obligations of States or non-State actors, but did offer a philosophical underpinning for a system of rights and obligations.

Professor André Thomashausen asked whether private military companies could be or were included as non-State actors.

Professor Noortmann responded to Dr Cismas by saying that the idea that a non-State actor was an actor that a State recognised as such was absurd and went against the grain of the Committee. There were non-State actors out there regardless of whether States recognised them. This should possibly be addressed in the report. He agreed with Dr Cismas's analysis of international legal personality and would understand it if the ILA no longer found the concept to be functional.

In response to Professor Thomashausen, Professor Noortmann noted that private military companies were companies, and as such were no different to companies like Nike. However, these companies fell out of some national enforcement and were also excluded from international criminal law. There was still no clarity about what to do with these companies. In an ideal world, there would be international law that would be enforced by all States in their national law and all non-State actors would be equally accountable.

Dr Bílková confirmed that private military companies fell within the definition of non-State actors. She agreed with concerns about nonState actors being legally recognised by States as the concept was misleading. The Committee should consider redrafting the report in this regard and introduce the concept of "legitimate". But she was not sure whether the trap could be escaped completely as States must play some role. But their role could be minimised to give the concept of non-State actors some independence.

Professor Noortmann added that there had been a discussion about the title of the Committee, ie, whether it would be "non-State actors *in* international law" or "non-State actors *and* international law". In the end, the latter title was chosen, which reflected more of a social legal approach as to how nonState actors were formed and how they were affected.

Mr Long raised the issue of piracy, which had been historically recognised as an international event. It must be recognised that pirates had a certain status in international law so they had to be included somehow. In terms of the clarification that "legally recognised" meant "not illegitimate", he asked by which standard we would determine that a group was illegitimate.

Ms Genny Ngende opined that it was unwise to categorise all corporations as non-State actors and lacking legal personality or legal status since the human rights encroachments

of a State-owned enterprise could be attributed to the State in regional human rights systems. She therefore asked whether this broad generalisation did not perpetuate human rights abuses.

Professor Noortmann recognised that who decided who was legitimate and who was not was a bit problematic. The term "legitimate" was often used for political purposes to negatively denote an entity. He suggested that academics should avoid political labels and try to come up with their own labels.

Professor Noortmann noted that under certain circumstances the acts of corporations could be attributed to States, which went into State responsibility. In the Netherlands, for example, corporations could be held criminally accountable but in international law this was not the case. International law was not equipped to bring non-State actors to trial or to hold them accountable.

Mr Bhattacharyya again queried what one gained by labelling them as non-State actors.

Professor Noortmann reiterated that, in an ideal world, we would just be dealing with States and States would be dealing with all other entities. But we were not living in an ideal world, and therefore the had to accommodate non-State actors. The problem would not be solved by just looking at States.

Dr Bílková added that we could ignore everything and just concentrate on States in international law, but that was difficult as States did not ignore non-State actors domestically. It was not the Committee's theoretical ambition to create non-State actors as it was already a reality. The definition did not try to label specific entities. The Committee used the general categories without looking at their specific content. One could discuss the definition again and again but the definition was not so important as it just provided context for the Committee. The question was what would be the added value of including groups such as AlQaeda and pirates. It would possibly lead to more research, but there was already so much research out there and the Committee could not add anything substantially new. Including these groups could possibly change the Committee's conclusions, but a broader definition would not change the general conclusions.

The Chair thanked the panel and attendees, and gave the floor to Professor Noortmann to introduce the resolution.

Professor Noortmann drew attendees' attention to the fact that the resolution specifically stated that it did not contain general recommendations or guidelines. The conclusions drawn were:

1. the group of non-State actors was growing and they were very diverse
2. there were distinctive but similar practices of these organisations depending on the legal regime that they were in and the way they acted
3. there was some significance to legal status.

The resolution asked the steering committee to recognise what the Committee had done and suggested that the Committee be dissolved. The Committee had achieved its mandate and was in favour of establishing new committees with more focused mandates. The resolution did not suggest a specific list of possibilities for new committees as the

Committee wanted to leave it up to the ILA members to make suggestions to the Director of Studies. Basically, the resolution was clear and short.

Dr Pauline Collins (Australia) suggested that, in light of the discussion on the definition of non-State actors, the word "broad" be deleted from the phrase "the Committee has adopted a *broad* working definition of non-state actors" in paragraph 5. She further suggested that the phrase "an applied typology of non-State actors and" be removed from the 6th paragraph so that the paragraph reads: "Recognising a corresponding need for a differentiated examination of the status, rights and/or duties of specific types of non-State actors under international law".

Professor Noortmann agreed that the word "broad" should possibly be removed from because many would agree that the definition was actually narrow. The reason "applied typology" was included was to indicate that it should be more of a practical exercise and not just an academic one; therefore, he did not agree that paragraph 6 should be changed.

Dr Bílková added that the word "broad" was included to establish a causal link between the first and second part of the paragraph 5. It made it clear that no specific guidelines were laid down. Without the inclusion of the word "broad" the sentence was meaningless.

Dr Collins responded that it was a matter of interpretation. While she accepted Dr Bílková's point regarding the word "broad", she believed that some people would say that it was actually a narrow definition.

Ms Oonagh Fitzgerald (Canada) thanked the panel for the interesting discussion. She noted that it did make sense to dissolve the Committee. However, she queried whether the initial mandate of the Committee asked the wrong question given the significant issues that remained unanswered. She queried whether the Committee should have focused in the first place on a specific topic, and suggested that the question posed was too broad for it to be useful.

Professor Noortmann clarified that, from the beginning, the Committee had purposefully adopted a broad mandate. It was intended to be an academic exercise that would sculpt and map the position of non-State actors. The Committee now had two options: the first being to ask for an extension to concentrate on one topic; the second to dissolve after 10 years and to create a new committee which allowed for new members with new and different perspectives.

Dr Bílková went back to paragraph 5 of the resolution and suggested that it be split into two paragraphs. The first part starting with "Noting that the Committee defines non-State actors as…" and including the actual definition. The second part would then start with "[a]cknowledging that it is not possible to draw general or particular conclusions…". She concluded by asking whether this would be satisfactory to members.

Professor Noortmann responded to Dr Bílková's suggestion that it would be a strategic decision. It was agreed that this was just a working definition and it would get a life of its own when added to an ILA resolution. Therefore, he voted against adding the definition into the resolution.

Dr Cisma expressed the opinion that, while it might just be a working definition, it would go beyond the lifetime of the report and be an important definition in the field of

international law. In her view, it would be more honest for the Committee to exclude the element of the definition (referred to in her earlier intervention) and just say that it was excluding individuals and any other groups because they did not want to work on them. It was for the Committee to set its own mandate and it did not need to set up criteria to justify any exclusion.

Professor Noortmann reiterated his preference for the definition not to be included in the resolution. The report might have broader implications than the definition adopted.

Dr Bílková said that she understood Dr Cisma's points, but she had two issues with it. First, the definition already appeared in the first report of the Committee; therefore, any attempts to change it would have to be negotiated again with Committee members. Second, there were some criteria on which the Committee based the definition and it was not simply written to exclude certain entities just because the Committee did not like them.

Regarding paragraph 5 of the resolution, Dr Bílková accepted Professor Noortmann's argument about not adding the definition into the resolution and therefore suggested that the first part of the fifth paragraph of the resolution be deleted and just read as: "Acknowledging the fact that it is not possible to draw general or particular conclusions…".

Professor Noortmann felt that paragraph 5 of the resolution should remain unamended. By including the idea that it was a working definition explained that general guidelines could not be adopted.

Professor Danil Vinnitskiy drew the panel's attention to a contradiction between paragraph 38 and 143 of the final report and paragraph 6 of the resolution. It might be necessary to mention that it was necessary to take additional steps in the report as well as the resolution.

Professor Noortmann pointed out that the rules of ILA prohibited references to the report in the resolution. There was a footnote which listed the publications used which was also available.

Dr Bílková acknowledged that paragraph 38 of the report eschewed new classifications while paragraph 6 of the resolution stated that there was a need for an applied typology. This was, however, an issue of wording rather than of substance. It was misleading and should possibly be revisited.

Professor Ludmila Galenskaya (Russia) stated that it was evident that the report must have some concrete conclusion which should be included in the resolution. As an example, she proposed to add in the conclusion of the report and in the resolution that all non-State actors were obliged to fulfil the provisions of the general principles of international law.

Professor Noortmann responded that the Committee members were divided on whether or not all non-State actors had all the duties and responsibilities under international law. Therefore, they could not come to the conclusion that Professor Galenskaya recommended.

Dr Bílková thanked Professor Galenskaya for her suggestion, which had been received previously and which Dr Bílková had attempted to reflect in the report. There might

be consensus that non-State actors should respect the obligations that they have under international law, but such a general statement did not add any value as it did not say anything about the contents of such obligations or whether they differed from one non-State actor to the next.

Mr Long pointed out that there were State actors and then there were actors other than States which were classified as non-State actors but this classification does not include all actors that were not States.

The Chair asked Mr Long whether he had a proposal.

Mr Long suggested that paragraph 3 of the resolution could state "actors other than States" rather than "non-State actors" and then state that the Committee decided to focus on non-State actors as a sub-category of actors other than States.

Professor Noortmann expressed a wish that Mr Long had been on the Committee to begin with. Unfortunately, the Committee had already passed the stage of labelling and it would be strange if the Committee's title was non-State actors and international law and the resolution introduced the concept of actors other than States. He agreed that the terminology might not be correct but it could no longer be changed at this point.

Dr Bílková agreed that the resolution could not introduce a new concept but it could be included in the definition in the report.

Mr Bhattacharyya noted that the resolution was interim in nature and that not all Committee members were present to clarify its meaning. The resolution should be accepted as a interim resolution with a few changes as suggested, and then a final resolution could be adopted later.

The Chair agreed and said that that would be his suggestion as well. The resolution as it stood was an important one and summed up the work of the Committee over the last 8-10 years. The Chair asked whether there were any substantive feelings of change, of which there were none. There was consensus among attendees on the adoption of the resolution before the Chair closed the meeting.

THIRD REPORT

Legal Issues of Verification of Nuclear Non-Proliferation Commitments

Introduction

1. Mandated 'to consider competing legal approaches to non-proliferation and regulating nuclear weapons within the contemporary context', the Committee is amidst a process of assessing the three pillars of the 1968 Nuclear Non-Proliferation Treaty (NPT)[1] – i.e. non-proliferation of nuclear weapons; the right to develop research, production and use of nuclear energy for peaceful purposes; and nuclear disarmament – with a special focus on controversial issues and existing interdependencies between those pillars. A Preliminary Report on key elements of the practice regarding nuclear energy, non-proliferation and the regulation of nuclear weapons was presented at the Sofia Conference 2012. The *Second Report*, which was discussed at the Washington Conference 2014,[2]

[1] Treaty on the Non-Proliferation of Nuclear Weapons (1 July 1968) 729 *UNTS* 161.

[2] ILA Committee on Nuclear Weapons, Non-Proliferation and Contemporary International Law, Second Report: Legal Aspects of Nuclear Disarmament (Washington D.C. 2014), http://www.ila-hq.org/en/committees/index.cfm/cid/1025.

has concluded that steps towards fulfilling nuclear disarmament obligations and providing appropriate access to peaceful uses of nuclear energy may substantially influence compliance with nuclear non-proliferation obligations. It has underlined that effective non-proliferation may not only support developments towards nuclear disarmament, but also help to improve security and safety of peaceful uses. The Committee will have to keep this in mind when developing 'options for future legal cooperation in this field', which is expected under the Committee Mandate.

A first set of draft elements of the envisaged ILA *Declaration on Legal Issues of Nuclear Weapons, Non-Proliferation and Peaceful Uses of Nuclear Energy* was included in the Second Report. It comprises not only existing principles and rules, but also desirable new rules. This list has been expanded as shown in the *Annex* to this Report, but there are gaps still to be filled. A comprehensive Commentary of all principles and rules will accompany the final Declaration.

2. The present *Third Report* of the Committee is devoted to *Legal Issues of Verification of Nuclear Non-Proliferation Commitments*. It looks at verification in a wider context, comprising also general legal aspects of compliance control, dispute settlement, and enforcement, thus reflecting legal controversies in literature[3] and State practice. A research project, conducted in November 2014 by the Rapporteur in cooperation with the Institute of International Peace and Security Law at the University of Cologne and kindly sponsored by the *Fritz Thyssen Stiftung für Wissenschaftsförderung* was of particular support for raising contentious issues, reviewing arguments and counter-arguments, and exploring possibilities for consensus solutions. The results of this research project have been published in the new book series, edited by the Chairman and the Rapporteur of the Committee.[4]

3. This Report is divided into six parts. The first four parts analyse legal issues related to different (but to some extent interrelated) nuclear verification regimes and their associated organisations. *Part I* is devoted to legal aspects of the verification practice of the International Atomic Energy Agency (IAEA). It focuses on recent controversies related to the Agency's mandate to verify both the non-diversion of nuclear material from declared activities (i.e correctness) and the absence of undeclared nuclear activities in the State (i.e. completeness). *Parts II, III and IV* discuss special regulations applicable to the European Atomic Energy Community (EURATOM), the Brazilian-Argentine Agency for Accounting and Control of Nuclear Materials (ABACC), and the Comprehensive Nuclear-Test-Ban Treaty Organization (CTBTO) respectively, and explore some overlaps with, and synergy effects for, the work of the IAEA. *Part V* evaluates interdependencies between legal obligations and best practices as an essential element of the nuclear non-proliferation regime. Finally, the way ahead for the work of the Committee will be discussed and first conclusions are drawn by summarizing relevant findings, identifying

open issues, developing recommendations, and recording draft elements of the envisaged ILA Declaration (*Part VI* and *Annex*).[5]

4. *Terms and Conditions of Verification*. The rules of Articles 31-32 of the Vienna Convention on the Law of Treaties between States (VCLT)[6] and the identical Articles 31-32 of the Vienna Convention on the Law of Treaties between States and International Organizations or between International Organizations (VCLTIO)[7] will guide our analysis. In the absence of treaty definitions relevant terms will be used according to their ordinary meaning and common understanding. General UN terminology and principles are particularly relevant in this context.[8] It may be recalled that there is wide consensus on the following understanding:

> Verification is a process which establishes whether the States parties are complying with their obligations under an agreement. The process includes: collection of information relevant to obligations under arms limitation and disarmament agreements; analysis of the information; and reaching a judgement as to whether the specific terms of an agreement are being met. The context in which verification takes place is that of the sovereign right of States to conclude and their obligation to implement arms limitation and disarmament agreements. Verification is conducted by the parties to an agreement, or by an organization at their request.[9]

The *P5 Glossary of Key Nuclear Terms*, recently promulgated by China on behalf of the five nuclear-weapon States Parties to the NPT, describes 'design information verification (DIV)' as follows:

> Activities carried out by the IAEA at a facility to verify the correctness and completeness of the design information provided by the State. An initial DIV is performed on a newly built facility to confirm that the as-built facility is as declared. A DIV is performed periodically on existing facilities to confirm the continued validity of the design information and of the safeguards approach. The IAEA's authority for performing a DIV is a continuing right throughout all phases of a facility's life cycle until the facility has been decommissioned for safeguards purposes.[10]

To the extent these UN and P5 documents do not fall within one of the elements set out in Article 31 VCLT [Art. 31 VCLTIO], recourse to them is possible under Article 32 VCLT [Art. 32 VCLTIO].

While verification is cooperative in nature in that it presupposes first and foremost the cooperation of the State Party concerned, its activities in certain circumstances may go beyond what is specifically agreed by the States involved in a given situation and should comprise generic, anticipatory and complementary work to ensure any collection of evidence that appears to be relevant for the application of a legal norm. Parties have to consider this general principle in implementing their obligations.

5. *Effectiveness.* Particular attention shall be given to the question whether the verification process serves its purpose in effectively assessing all relevant facts and establishing compliance with the obligations undertaken under existing treaty law and potentially evolving customary law. Not only legal obligations but also best practices are to be considered in this context. While there will be a need to come up with metrics of verification, there is some uncertainty with respect of applicable standards. What are the measurements of the different concepts? How can they be objectified? How can they be put into context?

As the goal of verification is to build confidence in parties' good faith compliance, and to support effective enforcement mechanisms in a case of violation, the criteria that the information-gathering process should meet will include requirements to produce information that is detailed, complete, timely, authentic, and confined to treaty-related matters. The relevant standard for this is not the same as the tests for what might be admissible evidence in a court of law, and no burden of proof rule would apply for cooperative efforts to maintain or restore confidence.[11] But specific practices have developed over time that may be considered as being unique for a successful implementation of arms control agreements. *Parts I – V* undertake to give distinct answers to these questions.

Part I: The International Atomic Energy Agency

6. *The IAEA Safeguards System*. Created in response to U.S. President Eisenhower's 1953 'Atoms for Peace' initiative,[12] the IAEA was already operative several years before the NPT was adopted: its Statute was negotiated within less than three years and entered into force in 1957.[13] As stated in Article II, the Agency shall seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world; it shall ensure, so far as it is able, that assistance provided by it or at its request or under its supervision or control is not used in such a way as to further any military purpose. As spelled out in Article III.A.5, the Agency is authorized

> [t]o establish and administer safeguards designed to ensure that special fissionable and other materials, services, equipment, facilities, and information made available by the Agency or

Eisenhower, President of the United States of America, to the 470th Plenary Meeting of the United Nations General Assembly, https://www.iaea.org/about/history/atoms-for-peace-speech. The idea of an international organisation in charge of the control of atomic energy dates back from before 1953 though; see UNGA A/RES/1(I)(1946), Acheson Lilienthal Report (16 March 1946), http://www.learnworld.com/ZNW/LWText.Acheson-Lilienthal.html, Baruch Plan (1946), http://www.atomicarchive.com/Docs/Deterrence/BaruchPlan.shtml.

[13] Statute of the International Atomic Energy Agency – IAEA Statute – (26 October 1956, amended 1963, 1973, 1989, and 1999), https://www.iaea.org/about/about-statute.

> at its request or under its supervision or control are not used in such a way as to further any military purpose; and to apply safeguards, at the request of the parties, to any bilateral or multilateral arrangement, or at the request of a State, to any of that State's activities in the field of atomic energy.

It is for this purpose that the IAEA safeguards system has been developed as a central part of the Agency's professional activities, in addition to the assistance, services and supplies provided to Member States.[14] The IAEA had served as a forum for exchange during NPT negotiations and the size and composition of the IAEA Board of Governors was adapted to accommodate for the Agency's role and functions envisaged in the NPT.[15]

In line with the obligation of non-nuclear-weapon States Parties to the NPT to conclude safeguards agreements with the IAEA (Art. III.1 NPT), the IAEA developed INFCIRC/153 (Corr.), which serves as the basis of Comprehensive Safeguards Agreements (CSAs).[16] The Board of Governors of the IAEA has confirmed on numerous occasions, since as early as 1992, that paragraph 2 of INFCIRC/153 (Corr.)

> The Agreement should provide for the Agency's right and obligation to ensure that safeguards will be applied, in accordance with the terms of the Agreement, *on all source or special fissionable material in all peaceful nuclear activities* within the territory of the State, under its jurisdiction or carried out under its control anywhere, for the exclusive purpose of verifying that such material is not diverted to nuclear weapons or other nuclear explosive devices. (*emphasis added*)

authorizes and requires the Agency to seek to verify both the non-diversion of nuclear material from declared activities (i.e. correctness) and the absence of undeclared nuclear activities in the State (i.e. completeness of national reports).[17] Clear reporting obligations apply even in case of the use of nuclear material in a non-proscribed military activity, i.e.

[16] IAEA, The Structure and Content of Agreements Between the Agency and States required in connection with the Treaty on the Non-Proliferation of Nuclear Weapons, INFCIRC/153 (Corr.) (June 1972).

[17] IAEA Report GOV/2013/6 (21 February 2013), n 61, http://www.iaea.org/Publications/Documents/Board/2013/gov2013-6.pdf. The correctness and completeness argument has also been discussed in other contexts, see e.g. document GC (39)/17, Strengthening the Effectiveness and improving the Efficiency of the Safeguards System, Report by the Director General to the General Conference, 22 August 1995, https://www.iaea.org/About/Policy/GC/GC39/GC39Documents/English/gc39-17_en.pdf., para. 5: 'The problem of undeclared activities was highlighted in Iraq, but was not unknown. Indeed, the need for the safeguards system to provide assurances regarding both the correctness and the completeness of a State's nuclear material declarations was considered by the drafters of the INFCIRC/153 (Corr.), the basis for comprehensive safeguards agreements. The scope of INFCIRC/153 was not limited to the nuclear material actually declared by the State; it also includes that which should be declared. However, the system such as it had developed up to the Iraqi case, had limited capability to deal with completeness. This was the result of practical, rather than legal, considerations.'

for non-explosive military purposes (nuclear naval propulsion and space propulsion).[18] The same applies for material containing uranium or thorium which has not reached the stage of the nuclear fuel cycle where it is suitable for fuel fabrication or isotopic enrichment and is directly or indirectly exported to a non-nuclear-weapon State as well as when it is imported to the State.[19]

The IAEA has developed the State-level approach as a method of safeguards implementation which resulted from the Agency's work to strengthen the effectiveness and efficiency of the safeguards system.[20] Controversies on whether the IAEA has acted beyond its legal powers by affirming its authority to verify the completeness of States' declarations in conducting verification activities,[21] have increased general interest in developing

[18] See paragraph 14 of INFCIRC/153/Corr., stating *inter alia*: 'The Agreement should provide that if the State intends to exercise its discretion to use *nuclear material* which is required to be safeguarded thereunder in a nuclear activity which does not require the application of safeguards under the Agreement, the following procedures will apply: (a) The State shall inform the Agency of the activity, making it clear: (i) That the use of the *nuclear material* in a non-proscribed military activity will not be in conflict with an undertaking the State may have given and in respect of which Agency safeguards apply, that the *nuclear material* will be used only in a peaceful nuclear activity; and (ii) That during the period of non-application of safeguards the *nuclear material* will not be used for the production of nuclear weapons or other nuclear explosive devices'.

[19] See paragraph 34 of INFCIRC/153/Corr., stating: 'The Agreement should provide that: (a) When any material containing uranium or thorium which has not reached the stage of the nuclear fuel cycle described in sub- paragraph (c) below is directly or indirectly exported to a non-nuclear-weapon State, the State shall inform the Agency of its quantity, composition and destination, unless the material is exported for specifically non-nuclear purposes; (b) When any material containing uranium or thorium which has not reached the stage of the nuclear fuel cycle described in sub-paragraph (c) below is imported, the State shall inform the Agency of its quantity and composition, unless the material is imported for specifically non- nuclear purposes; and (c) When any *nuclear material* of a composition and purity suitable for fuel fabrication or for being isotopically enriched leaves the plant or the process stage in which it has been produced, or when such *nuclear material,* or any other *nuclear material* produced at a later stage in the nuclear fuel cycle, is imported into the State, the *nuclear material* shall become subject to the other safeguards procedures specified in the Agreement.'

[20] See IAEA reports on the State-Level Concept (SLC): Document GOV/2013/38, https://armscontrollaw.files.wordpress.com/2012/06/state-level-safeguards-concept-report-august-2013.pdf: 12. The term 'State-Level Concept' was first introduced to the Board of Governors in the Safeguards Implementation Report (SIR) for 2004 to describe safeguards implementation that is based on State-level approaches developed using safeguards objectives common to all States with CSAs and taking State-specific factors into account.21 As the SIR for 2004 noted, the State-level concept was being implemented for States with integrated safeguards and would be extended to all other States with CSAs; Document GOV/2014/41, https://armscontrollaw.files.wordpress.com/2014/09/iaea-state-level-safeguards-document-august-2014.pdf: The SLC refers to the general notion of implementing safeguards in a manner that considers a State's nuclear and nuclear-related activities and capabilities as a whole, within the scope of the State's safeguards agreement. See also Laura Rockwood, 'The IAEA's state-level concept and the law of unintended consequences', in *Arms Control Today* (September 2014), https://www.armscontrol.org/act/2014_09/Features/: 'So entered into the lexicon of safeguards the state-level concept, simply another way of referring to the agency's practice, well established by then, of evaluating all safeguards-relevant information about a state as a whole and, where possible, tailoring safeguards to fit the state concerned.'

[21] See the three rounds of discussion between Daniel H. Joyner, Christopher A. Ford and Andreas Persbo, *Bulletin of the Atomic Scientists*, October, November and December 2012, http://thebulletin.org/iran-and-bomb-legal-standards-iaea-0.

an unequivocal confirmation by treaty law that States undertake to inform about, and accept inspector access to, all aspects of nuclear fuel cycle within their territories, and that the Agency has the authority to verify the completeness of their declarations.

Given the practical limitations of verifying completeness under INFCIRC/153 safeguards agreements, the Model Additional Protocol (AP) to the agreements concluded between States and the Agency for the application of safeguards was developed to strengthen the IAEA's ability to do so.[22] The Security Council called upon all non-nuclear-weapon States Parties to the NPT to sign, ratify and implement the AP.[23] Yet in a sizable number of States this still remains to be done. Hence continued attention is necessary for ways and means of contributing to the universal acceptance of the AP.[24]

7. *A Gap Between Mandate and Authority?* The question whether paragraph 2 of IAEA document INFCIRC/153 (Corr.),[25] and, indeed, the full text of that document in the light of subsequent agreements and practice is to be read as implying that the IAEA is authorized to verify the absence of 'undeclared' nuclear activities in the State subject to safeguards under CSAs, i.e. the 'completeness' of the declarations made by the State on the extent of its nuclear activities, has been discussed in-depth at the 2014 Cologne conference.[26]

a) On the one hand one participant has stated that while a textual approach, examining the context, object and purpose of CSAs and taking recourse to the *travaux préparatoires,* gives some weight to the 'completeness' argument so that it could be assumed that this embodies a correct interpretation of the disputed provision, this position was in turn weakened by the consideration of other relevant elements: at the time of the entry into force of the NPT and of the negotiation of the INFCIRC/153 safeguards system – at least until the 1990s – there was no shared understanding on the now disputed interpretation of para. 2 of INFCIRC/153; the various decisions of the IAEA Board of Governors between 1992-95 that are often invoked as supporting the 'completeness' argument did not in fact embody a common unequivocal endorsement by the Board; disagreements on interpretation have persisted to date, with a few States expressing reservations on the 'completeness' argument; subsequent agreement or subsequent practice that would confirm the 'completeness' argument could not be identified; hence an authority of the IAEA to verify the 'completeness' of declarations of States could only derive, practically and also legally, from the application of an Additional Protocol.[27]

[27] Pierre-Emmanuel Dupont, 'Interpretation of Nuclear Safeguards Commitments: the role of subsequent agreement and practice', op.cit., Chapter 3.

b) On the other hand, however, several participants contested those arguments and underlined that even without an Additional Protocol the IAEA is fully authorised to verify the completeness of States' declarations: A plain reading in good faith in accordance with the ordinary meaning to be given to the terms of the NPT, the IAEA Statute and the respective safeguards agreements in their context and in the light of their object and purpose clearly demonstrate the right and obligation of the Agency to verify the nondiversion of the declared nuclear material and the absence of undeclared nuclear material and activities; this has been supported by the context of these agreements in the light of their object and purpose and the circumstances of their conclusion; the negotiation history further confirms this interpretation and so do subsequent agreements and the practice of the Parties to those agreements, as reflected in the documents adopted by the States Parties to the NPT in their quinquennial review conferences, the decisions of the IAEA policymaking organs and the consistent practice of the IAEA at least since the early 1980s.[28]

The IAEA Board of Governors has no authority to opine as a formal matter on compliance with the NPT as the IAEA is not a party to it, yet the Board has confirmed that a failure to declare nuclear material (and/or facilities) under a CSA constitutes non-compliance with a CSA (see e.g. Iraq, Romania, Iran, Libya, Syria). While until the early 1990s the implementation of safeguards under CSAs largely, although not exclusively, focused on the verification of nuclear material and facilities declared by the State concerned, the discovery in 1991 of Iraq's clandestine nuclear programme made it clear that more should, and could, be done by the IAEA with a view to providing assurances not just of the nondiversion of declared nuclear material, but of the absence of undeclared nuclear material and activities in such States.

To interpret INFCIRC/153, and the agreements concluded on the basis of that document, in such a way as to preclude IAEA verification of the correctness and completeness of States' declarations under such agreements would defeat the very object and purpose of the NPT (which is to prevent the proliferation of nuclear weapons, as provided in its Article III.1) and the object and purpose of the safeguards agreements (which is to verify compliance of States Parties with their obligations; ensure the timely detection of any diversion of nuclear material to nuclear weapons and other nuclear explosive devices; and deter any such diversion through the risk of timely detection).[29] While it would make no sense to interpret the NPT as requiring anything other than verification that a State has in fact placed all nuclear material under safeguards, it would be incorrect to assert, on any basis, that a State's failure to declare nuclear material does not constitute a violation of its safeguards agreements. It was also underlined that the IAEA must base its activities on the evaluation of all available information on the State according to its three safeguards objectives[30] common to all States with CSAs: (1) to detect undeclared nuclear material and activities anywhere in the State; (2) to detect undeclared production or processing of nuclear material at facilities and locations outside facilities (LOFs) where nuclear material is customarily used; and (3) to detect diversion of declared nuclear material at facilities

[28] See Laura Rockwood and Larry Johnson, 'Verification of Correctness and Completeness in the Implementation of IAEA Safeguards: the law and practice', op.cit., Chapter 4.

[29] Id.

[30] See, 'The Safeguards System of the International Atomic Energy Agency', https://www.iaea.org/safeguards/safeguards-in-practice.

and LOFs.[31] Furthermore it has been stressed that the very purpose of any CSA was to assure others that a State's declaration of nuclear material stocks is both correct and complete.[32]

In this context an important observation is that since the question of State non-compliance with safeguards obligations is not a trial, no burden-of-proof rule applies here. The IAEA, collecting and evaluating facts with objectivity and great diligence, may be in the position to conclude that nuclear material remained in peaceful activities, or it may not be in a position to draw this conclusion. No State has the legal authority to review an IAEA determination that it lacks sufficient information to verify compliance, although it may provide counter-arguments and seek dispute settlement.[33]

At the 2015 NPT Review Conference there was consensus on this issue,[34] irrespective of the fact that no final document was adopted for reasons unrelated to IAEA safeguards.

c) A clear distinction should be made between the authority of the IAEA to examine the correctness and completeness of declarations made by States and the ability of assuring the non-diversion of nuclear material from declared activities. The former is fully covered by the mandate of the Agency as stated in the Statute, implemented in its safeguards agreements, and confirmed by practice; the latter depends on the cooperation by the State concerned. States must cooperate to secure verification by the IAEA. This applies not only to the Agency's obligation and authority to investigate activities at facilities and other locations with nuclear material declared to the Agency, but also to extend investigations, where necessary, to undeclared locations: If the IAEA has an obligation to seek completeness and correctness at declared facilities, that obligation also extends to undeclared locations.

Rights and obligations specifically agreed in CSAs and APs may facilitate that cooperation, but they are in no way conditioning the mandate of the Agency which otherwise could become hostage of agreements with a particular State to the detriment of other States. The purpose of the APs which are supplementing the CSAs is

[33] Barry Kellman, 'Enforcing Nuclear Non-Proliferation – The Role of Verification', op.cit., Chapter 11; see also Peter Friend, 'Urenco's Views On International Safeguards Inspection', 8th International Conference on Facility Operations – Safeguards Interface (Portland, OR, 30 March – 4 April 2008), http://web.mit.edu/stgs/pdfs/Friend%20-%20Urenco%27s%20Views%20on%20International%20Safeguards%20Inspection.pdf, at p. 9.

[34] See Draft Final Document NPT/CONF.2015/R.3 (21 May 2015), para. 19: 'The Conference reaffirms that the implementation of comprehensive safeguards agreements pursuant to article III, paragraph 1, of the Treaty should be designed to provide for verification by IAEA of the correctness and completeness of a State's declarations so that there is a credible assurance of the non-diversion of nuclear material from declared activities and of the absence of undeclared nuclear material and activities.' See also para. 24: 'The Conference stresses the importance of the IAEA exercising fully its mandate and its authority in accordance with its Statute to provide assurances about the non-diversion of declared nuclear material and the absence of undeclared nuclear material and activities in accordance with respective comprehensive safeguards agreements and, where relevant, additional protocols.'

to establish terms and conditions for cooperation,[35] not to re-define the verification mandate as such. Cooperation in the implementation of safeguards might be difficult to measure: It is a legal obligation and applicable terms and conditions generally derive from agreements providing complete and comprehensive declarations on time, facilitating inspectors' access, etc.; but cooperation is also about a positive good faith attitude towards the implementation of safeguards, which might go beyond strictly applying legal obligations.

It should be considered in this context that the Board of Governors of the IAEA and the Secretariat are, as organs of an international organization, competent to interpret the applicable institutional legal framework and thereby develop it. Hence the introduction of the State-Level Concept merely underlines the fact that the IAEA has a broad institutional mandate to implement new safeguards practices.[36]

d) As the verification process should provide meaningful information about a State's compliance or non-compliance with treaty obligations, taking into account the possibility of concealment methods, relevant activities will include reporting by a State; on-site inspection measurement data and observations; taking of samples; measurement from installed instrumentation (on-site or networks); outputs of surveillance devices; satellite imagery; publicly available information; and third party information. This includes national technical means and cyber applications independently examined and assessed by the Agency. Such information must be reviewed and analysed by the Agency in a timely fashion; any anomalies or inconsistences must be investigated and, if possible, resolved, to draw unbiased, technically sound, conclusions.

To meet these requirements the verification system should fulfil certain minimum standards: (1) the *system design* should provide for a timely, high confidence capability to detect all plausible means of evading treaty obligations and all means of concealing evasion. (2) The *information* collected for this purpose should be 'meaningful' in that it is necessary and sufficient for the performance of the mandate and its use should be transparent to Member States. All such information should be authenticated. (3) Appropriate procedures should ensure professional *data analysis*, internal consistency, data authentication, and transparency to Member States. (4) *Questions and inconsistencies* should be investigated. (5) *Results* should be evaluated and interpreted in a technically sound manner.

8. *Consequences for IAEA Practice*. In accordance with its mandate, the IAEA has in continuing practice conceptualized safeguards implementation at the State level.[37] The Agency was able to conclude in its last Annual Report that of the 118 States that had both a CSA under INFCIRC/153 and an AP under INFCIRC/540, in 65 States (and Taiwan, China) *all* nuclear material remained in peaceful activities; for the remaining 53 States the Secretariat found no indication of the diversion of declared nuclear material from peaceful nuclear activities, but evaluations regarding the absence of undeclared nuclear

[35] As stated in the Draft Final Document NPT/CONF.2015/R.3 (n 34), para. 20, this is to provide, in an effective and efficient manner, 'increased confidence about the absence of undeclared nuclear material and activities in a State as a whole'.

[36] See Tom Coppen, 'Developing IAEA Safeguards: An Institutional Perspective on the State-level Concept', 20(2) *JCSL* (2015), 169-193 at 190.

[37] See above (n 20 and accompanying text).

material and activities for each of these States remain on-going; for the 54 States with a CSA but no AP in force the Agency concluded only that *declared* nuclear material remained in peaceful activities.[38] Yet it is free to conduct monitoring activities also beyond verification measures that are regulated in safeguards agreements. For this purpose, e.g. open source information, including satellite imagery and all forms of information may be used, as explained above (para. 7 d) and will be further discussed below (para. 20).

9. *The Situation in Iran.* One of the most severe, and still ongoing challenges for IAEA safeguards is the situation in the Islamic Republic of Iran. This State had been found to be in non-compliance with nuclear non-proliferation obligations over several years[39] and therefore had become a target of Security Council sanctions,[40] which did not lead to a settlement. A cooperative solution could be reached in negotiations between the E3/EU+3 (China, France, Germany, the Russian Federation, the United Kingdom and the United States, with the High Representative of the European Union for Foreign Affairs and Security Policy) and Iran.[41] Unanimously endorsed by the Security Council,[42] this solution requires adherence by Iran to the safeguards regime associated with the Additional Protocol between Iran and the IAEA for the purpose of the implementation of Article III.1 and III.4 NPT, thus allowing IAEA inspectors access also to undeclared facilities and establishing procedures for verifying the absence of undeclared nuclear material and activities.

Vienna, 14 July 2015, http://eeas.europa.eu/statements-eeas/2015/150714_01_en.htm; Joint Statement by the IAEA Director General Yukiya Amano and the Vice-President of the Islamic Republic of Iran, President of the Atomic Energy Organization of Iran, Ali Akbar Salehi and Road-map for the clarification of past and present outstanding issues regarding Iran's nuclear program, Vienna, 14 July 2015, https://www.iaea.org/newscenter/pressreleases/iaea-director-generals-statement-and-road-map-clarification-past-present-outstanding-issues-regarding-irans-nuclear-program.

[42] SC Res 2231 (2015).

While EU, US, and UN sanctions were lifted on Implementation Day (16 January 2016), following the verification by the IAEA that Iran has taken the actions specified in paragraphs 15.1–15.11 of Annex V of the Joint Comprehensive Plan of Action (JCPOA),[43] much work remains to be done by the seven States which have undertaken a special responsibility in the Joint Commission under the JCPOA and will be assisted by the IAEA. Iran's commitment to provisionally apply the Additional Protocol to its Comprehensive Safeguards Agreement and proceed with its ratification, and to fully implement the modified Code 3.1 of the Subsidiary Arrangements to its Safeguards Agreement (JCPOA, para. 13, in accordance with Annex I, para. 64) will be a relevant factor for preparing the Broader Conclusion that all nuclear material in Iran remains in peaceful activities (JCPOA, para. 34 iv), the actions to be taken by the EU and the US to terminate, or modify to effectuate the termination of, the remaining last tier of sanctions (Annex V, paras. 20 and 21),[44] and the final decision that the Security Council would no longer be seized of the Iran nuclear issue (Annex V, para. 24). The 'snap-back mechanism', introduced in the JCPOA, paras. 37-38, and confirmed by the Security Council acting under Article 41 of the UN Charter (SC Res 2231 (2015), paras. 11-13), ensures that previous sanctions re-apply in case of significant non-performance of commitments under the JCPOA.

10. *Other Safeguards Systems*. While the NPT and treaties on nuclear-weapons-free zones[45] require the exclusive use of IAEA safeguards from their States parties, special and supplementary safeguards systems exist to ensure nuclear non-proliferation for the 28 Member States of the European Atomic Energy Community – EURATOM – (see

[43] Verification and Monitoring in the Islamic Republic of Iran in light of United Nations Security Council Resolution 2231 (2015), Report by the Director General (GOV/INF/2016/1, 16 January 2016). below, *Part II*) and for the two States cooperating with the Brazilian-Argentine Agency for Accounting and Control of Nuclear Materials – ABACC – (see below, *Part III*). Nuclear-test-ban verification, for which the IAEA is not mandated, is conducted by a special organization under the Comprehensive Nuclear Test Ban Treaty – CTBT – (see below, *Part IV*).

Part II: The European Atomic Energy Community

11. *Status and Functioning of EURATOM.* Regardless of whether the 28 EU Member States have opted for nuclear power, the European Commission as the main executive body ensures that civil nuclear material is not diverted from its intended and declared use. In its almost sixty years of existence, the safeguards system established by the European Atomic Energy Community (EAEC or EURATOM)[46] has been recognised as an important contributor to fulfilling the global task of non-proliferation and ensuring within Europe that nuclear power is used for peaceful purposes only. While not all cases of non-conformity with necessary standards could be prevented (e.g. at Sellafield),[47] EURATOM contributes to global safeguards and thus to an effective non-proliferation system.[48]

12. *Implementing Powers and Sanctions.* As the legal owner of special fissile materials, EURATOM has wide-ranging powers to pursue Member States in infringement procedures and to impose sanctions on nuclear operators breaching their safeguards obligations. Hence, the IAEA's safeguards system is successfully supplemented by a European safeguards system. The internationally recognised track record of the European regional system allows the IAEA to make increased use of EURATOM safeguards.[49]

Part III: The Brazilian-Argentine Agency for Accounting and Control of Nuclear Materials

13. *Status and Functioning of ABACC.* Following a period of confidence-building and nuclear cooperation, Brazil and Argentina have created the Brazilian-Argentine Agency for Accounting and Control of Nuclear Materials (ABACC)[50] as a binational organization responsible for verifying the peaceful use of nuclear materials that could be used, either

directly or indirectly, for the manufacture of nuclear weapons.[51] The Common System of Accounting and Control of Nuclear Materials (SCCC), which has been applied by ABACC for almost 25 years, includes about 110 inspections per year in approximately 70 nuclear facilities in the two countries.

14. *International Cooperation.* ABACC participates in international cooperation with the IAEA, the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL),[52] EURATOM, and with States.

Part IV: The Comprehensive Nuclear-Test-Ban Treaty Organization

15. *The Status of the Preparatory Commission*. The Comprehensive Nuclear-Test-Ban Treaty (CTBT),[53] which seeks to prohibit any nuclear test explosion in any environment, including underground, was part of a carefully balanced diplomatic deal struck in 1995 that made an indefinite extension of the NPT possible. As the timespan for entry into force of the CTBT was envisaged to last only a few years, States Signatories simultaneously established a Preparatory Commission, which is an international organization of its own right, separate from the Comprehensive Nuclear-Test-Ban Treaty Organization (CTBTO) proper.[54] While the Treaty's entry into force, close to twenty years after its opening for signature, still depends on ratification by another eight Annex 2 States under Article XIV,[55] the Preparatory Commission continues to play its useful role.

16. *The CTBT Verification Regime*. Since 1996 the Commission has worked tirelessly to prepare for the Treaty's entry into force, in particular by building up an elaborately designed universal verification regime that includes 321 monitoring stations and 16 laboratories in about 90 States worldwide.[56] This verification regime is now largely complete and of proven effectiveness and robustness. It allows for the use of necessary modern technological equipment for seismic, infrasound, hydroacoustic and radionuclide activities in line with internationally accepted standards of verification.[57] Thus, the lack of

[57] See, e.g. 16 Principles of Verification developed by the United Nations Disarmament Commission and endorsed by General Assembly Resolution 43/81 B (1988), see above (n 8), paras. 22-23; Sabine

entry into force of the CTBT notwithstanding, the requirements of its Article IV 1, stipulating that '[a]t entry into force of this Treaty, the verification regime shall be capable of meeting the verification requirements of this Treaty', are already met.

17. *The Legal Status of CTBT Verification*. While formal verification measures regarding compliance with obligations under the CTBT still depend on the Treaty's entry into force, effective activities which are serving very similar purposes are conducted by the Preparatory Commission, based on a shared interest of participating States. Means for securing these activities in future need to be explored. A lasting solution will not only depend on the Treaty's entry into force, as even after entry into force there may be disputes with a State affected by certain verification activities on the proper conduct or the assessment of such activities. Irrespective of whether such State will be party to the Treaty or not, there will be hardly any successful dispute settlement except by international cooperation. The entry into force of the Treaty might facilitate, but would not legally replace such cooperation. Further efforts to ensure cooperation by affected States with the Preparatory Commission remain necessary.

Part V: Interrelationships between Legal Obligations and Best Practice

18. *The Nature of Verification*. As explained above (para. 4), a common feature of verification activities is that their implementation provides evidence or at least credible assurances, as a confidence-building measure, to ascertain that the country which has voluntarily 'invited' the verification activities under an existing agreement is abiding by its obligations.[58] For this purpose the evaluation of national reporting needs to be supplemented by surveillance activities based on on-site inspections and data publicly accessible or on information that may be made available by third parties.

19. *A Fair Balance between Cooperation and Control*. While the verification process is cooperative in nature, to be credible it must lead to final determinations on compliance or non-compliance with existing obligations. It may be left open here, whether making such determination is technical in nature or rather part of a judicial or political task. International organizations involved in the verification process are bound to act within their mandate. As far as the IAEA is concerned, it is fully mandated under its Statute (Art. XII C) to determine whether a State is in compliance with its obligations under the existing Agency safeguards system.[59] There are checks and balances against possible

---

Bauer and Cormac O'Reilly, 'The Comprehensive Nuclear-Test-Ban Treaty Organization (CTBTO): current and future role in the verification regime of the Nuclear-Test-Ban Treaty', op.cit., Vol. II, Chapter 6

[58] See above (n 8), para 129.

[59] What may be questionable under general scholarly considerations – a determination on compliance with an agreement to be taken by only one of its parties – is here the convincing result of a carefully crafted regulation, to ensure a treaty-specific correction function. See Odette Jankowitsch-Prevor, 'The Normative Role of the International Atomic Energy Agency, Legal Basis and Legal Sources', in OECD Nuclear Energy Agency (NEA), *International Nuclear Law: History, Evolution and Outlook* (2010), 13, at 20-21, who rightly observes that '[i]t is an unusual trilateral legal construct in that a multilateral treaty – the NPT – contains a binding obligation for some of its parties, the non-nuclear weapon states (NNWS) to conclude a bilateral agreement (safeguards) with an intergovernmental organisation (IAEA) for the purpose of allowing verification of fulfilment of their individual obligations under the NPT'. See also the Advisory Opinion on *Namibia*, ICJ

misuse: Any alleged non-compliance determined by the staff of inspectors shall be reported by the Director General to the Board of Governors who will make an informed decision about possible non-compliance and, if it makes such a finding, submit a report to the Security Council, leaving it to the latter to take appropriate action as provided in the Charter (see Art. XII C IAEA Statute).[60]

If a Member State has persistently violated its obligations under the IAEA Statute or a safeguards agreement, it may be suspended from the exercise of the privileges and rights of membership (Art. XIX). INFCIRC/153 provides that any dispute arising out of the interpretation or application of the safeguards agreements should be submitted to an arbitral tribunal,[61] but no recourse to arbitration has been made as yet in the implementation of safeguards.[62] Generally speaking, disputes concerning the interpretation or application of the IAEA Statute may become subject to jurisdiction by the ICJ,[63] but it is rather unlikely that the relevant conditions would ever be met in practice. Thus appropriate solutions will be necessary, irrespective of the technical, judicial or political character of the decision that is disputed.

20. *New Information Technologies*. NPT safeguards agreements state that the IAEA 'shall take full account of technological developments in the field of safeguards'. This is essential in order to enhance the effectiveness and efficiency of safeguards as well as to attract to the staff of the IAEA the most capable technology specialists. With the help of Member States, the IAEA has taken advantage of new technology. Examples include the routine use of up-to-date digital technologies for camera surveillance, measurements,

Reports 1971, 49-50, paras. 101-103, in which the Court addressed aspects related to the unilateral determination of material breach by the GA. For further reference see Eric Myjer and Jonathan Herbach, 'Violation of non-proliferation treaties and related verification treaties', in Daniel H. Joyner and Marco Roscini (Eds), *Non-proliferation Law as a Special Regime. A contribution to fragmentation theory in international law* (Cambridge University Press, 2012), 119-150. The IAEA, mandated by its Member States to conclude safeguards agreements following internationally approved standards, is in any case the most competent authority for making this determination.

[60] Action taken by the Security Council, as prescribed under the UN Charter (Chapters VI and VII), is fundamentally different from making a determination on non-compliance with existing obligations. The latter remains within the domain of the IAEA, which verifies compliance with the relevant safeguards agreement, not with the NPT as such. Art. 60 VCLTIO notwithstanding, suspension or termination of a safeguards agreement would hardly be in the interest of the IAEA or its Member States.

[61] INFCIRC/153, para. 22, provides for arbitration on disputes arising out of interpretation or implementation of a safeguards agreement, except for disputes on findings of the Board made in relation to the diversion of special fissionable or other materials subject to safeguards. For an assessment of standard dispute settlement clauses including certain variations in some safeguards agreements with the IAEA see James Fry, *Legal Resolution of Nuclear Non-Proliferation Disputes* (Cambridge University Press, 2013), at 268-285.

[62] Laura Rockwood, *Legal Framework for IAEA Safeguards* (Vienna: IAEA, 2013), 25.

[63] Art. XVII IAEA Statute: 'Settlement of disputes. (A) Any question or dispute concerning the interpretation or application of this Statute which is not settled by negotiation shall be referred to the International Court of Justice in conformity with the Statute of the Court, unless the parties concerned agree on another mode of settlement. (B) The General Conference and the Board of Governors are separately empowered, subject to authorization from the General Assembly of the United Nations, to request the International Court of Justice to give an advisory opinion on any legal question arising within the scope of the Agency's activities.'

remote data transmission, and data analysis. The IAEA also makes routine use of environmental sampling and satellite photography. For sample analysis, the IAEA has its own, independent measurement capabilities, for example, to do particle analysis. However, the number of samples has led the Agency to rely on a network of analytical laboratories in Member States.

In the case of satellite imagery, the IAEA has in-house image analysts. However, it is completely unrealistic to imagine that the IAEA would ever be provided with the resources needed to obtain an independent means to gather satellite images.[64] One alternative is to take advantage of imagery provided by Governments, if made available, On the other hand, high-resolution imagery is available from commercial vendors at increasingly attractive prices. Incorporating new technologies is a technical challenge, especially given the extremely rapid changes in information technology. Both entail additional responsibilities for international organizations such as the IAEA and the CTBTO, to ensure unbiased use of technological opportunities under applicable verification principles. Any such information must be carefully scrutinised by those responsible for conducting the verification process. A fair chance must be given to affected States for challenging any decision and insisting that agreed mechanisms and procedures for review and evaluation would be used.

21. *Synergies between Non-Proliferation, Transfer Controls, Safety and Security.* Verification measures taken by international organizations must be accompanied by international cooperation with States and private institutions to ensure nuclear safety and security, considering that cooperation on and control of dual-use technology transfers must be a complementary (and not conflicting) part of effective non-proliferation.[65] End-user certificates and early warning lists may be essential tools to ensure nuclear non-proliferation in an effective manner. Peer review processes, which may not be fully based on agreed obligations, are necessary (voluntary) elements of efforts to ensure nuclear safety. To ensure nuclear security intense cooperation is indispensable.

22. *Evolving Customary Rules.* An inventory of relevant rules and best practice of States, international organizations and regional organizations could make the process of evolving customary law more obvious. Such inventory might show that the effectiveness of the law of nuclear non-proliferation, nuclear safety and nuclear security will not depend alone on the question whether relevant rules are legally binding. With respect to nuclear safety any such inventory should also include recognized principles of international environmental law, such as the prevention principle, the principle of sustainable development, the principle of common but differentiated responsibilities, and the precautionary principle.[66]

23. *The Need for Dispute Settlement*. Issues of compliance and enforcement have repeatedly been controversial, a situation that underlines the importance of cooperative

[64] See above (n 8), para 274.

[65] See Oliver Meier, above (note 1), 253.

[66] See Ved P. Nanda, 'International Environmental Norms Applicable to Nuclear Activities, With Particular Focus on Decisions of International Tribunals and International Settlements', 35/1 Denver Journal of International Law and Policy (2008), 47-65; Anguel Anastassov, 'The Sovereign Right to Peaceful Use of Nuclear Energy and International Environmental Law' op.cit., (n. 4), Vol. I, Chapter 7.

dispute settlement that should be regularised in conformity with appropriate principles and rules.[67] For peaceful dispute settlement a great variety of means and procedures is available. States and international organizations including the IAEA, the Preparatory Commission for the CTBTO, EURATOM, and ABACC have gained unique experience with verification procedures that may best be characterised as cooperative.[68] The Roles of the UN Secretary-General (Article 99 of the UN Charter), the General Assembly (Article 11) and the Security Council (Article 26) could complement each other in reaching non-coercive (cooperative) solutions that may be more effective and longer-lasting than any coercive measure. In this context the role of States should not be underestimated: more international exchange and deepened cooperation between States remain essential to ensure compliance with non-proliferation obligations. Not only those States directly involved in a dispute are called to cooperate in its settlement, as non-compliance with non-proliferation obligations could affect much wider regions even beyond neighbouring States.

To ensure compliance with existing rules and best practice, incentives may be more effective and more important than enforcement measures, considering that, none of the cases reported to the Security Council so far have been brought to a final solution by sanctions under Chapter VII of the Charter, but had to be solved by agreement.[69] Incentives, including good faith cooperation with States wanting to exercise their inalienable right to develop nuclear energy for peaceful purposes in accordance with Article IV of the NPT, should be developed in international cooperation. This might lead to a prioritisation of lawful means available and it may entail the development of new legal principles and rules.

24. *Countermeasures in Case of Non-Compliance*. Countermeasures against non-compliance with the NPT and other relevant obligations remain an open option for States and international organizations, even if implementing activities by the IAEA and States are regulated in rather specific form and Security Council sanctions may come into place. The availability of the right to take countermeasures does not have to be stated in a treaty.[70] Countermeasures may be necessary to ensure compliance with existing non-proliferation obligations. The applicable conditions are now strictly defined.[71] As essential

[67] See Art. 2(3) and Chapter VI of the UN Charter; 2625 (XXV). Declaration on Principles of International Law concerning Friendly Relations and Co-operation among States in accordance with the Charter of the United Nations (A/RES/25/2625, 24 October 1970).

[68] The Treaty of Pelindaba (see above, n 45) has a unique arrangement for addressing complaints about compliance and settling disputes. As described in its Annex IV, it calls for complaints to be resolved bilaterally; failing that the issue may be brought to the African Commission on Nuclear Energy. If the issue remains unresolved the Commission, if it considers it warranted, can request an inspection by the IAEA. The Commission may also establish its own inspection mechanism.

[69] Resolute action by the Security Council and an full compliance by States with their obligations under SC Res 1540 (2004) remains essential for any nuclear dispute settlement; but as experienced in all relevant cases so far the final solution is one of States; see Dieter Fleck, 'Disputes on Nuclear Proliferation: Means and Methods for their Settlement', op.cit. (n. 4), Vol. II, Chapter 17. 389-412.

[70] See the Namibia Advisory Opinion, *ICJ Reports* 1971, 47, para. 96, in which the ICJ held that the silence of a treaty cannot be interpreted to exclude the invocation of a right (to invoke a material breach as a ground for termination) originating outside of the treaty in general international law.

[71] Articles on Responsibility of States for Internationally Wrongful Acts – ARSIWA – (2001) UN Doc. A/56/10, *Yearbook of the International Law Commission, 2001*, vol. II, Part Two, http://legal.

obligations under the NPT do have an *erga omnes* character, it appears that the range of States eligible for taking countermeasures is barely limited.[72] Gaps in the relevant legal framework highlight the need for legal developments in this special domain of law in order to promote international cooperation to ensure compliance with existing obligations.[73] It may be useful to explore the relation between countermeasures taken by States or groups of States on the one hand and actions taken by international organizations such as the UN or the IAEA on the other. Could any tension between these two areas of activities be solved under a *lex specialis* rule? Or should diplomatic initiatives by States and institutional frameworks be accepted as complementary? Are countermeasures against non-compliance with safeguards obligations acceptable? Could the General Conference of the IAEA, based on Article V.D of the IAEA Statute, recommend collective measures to States Parties that would resemble enforcement measures – as the OPCW Conference may do under Article XII.3 of the Chemical Weapons Convention?[74] The IAEA framework does not preclude such actions which may be in line with the broader context of verification and be seen as supplementing traditionally accepted uses of national technical means.[75] Should there be more attention for the potential of cooperative unilateral incentives (political initiatives, civil cooperation) that the IAEA cannot provide? When does non-compliance with safeguards obligations amount to non-compliance with NPT obligations?

Part VI: The Way Ahead

25. A *Fourth Report* of the Committee shall be devoted to legal aspects of the use of nuclear energy for peaceful purposes. This issue remains a highly contested area of international cooperation with important legal rules still underdeveloped.[76] Not only the content of the right to develop research, production and use of nuclear energy for peaceful purposes, but also the relation between this right and the obligation to ensure security and safety of nuclear plants and materials, as well as the overall importance of this right as part of the NPT's three pillars are subject to significant controversies. The Fourth Report may draw from the research project, conducted in November 2015 by the Rapporteur in cooperation with the *Walther Schücking Institute of International*

II, Part Two, http://legal.un.org/ilc/texts/instruments/english/commentaries/9_11_2011.pdf, Arts. 22, and 51 to 57.

[72] See Art. 48 ARSIWA. Art. 54 ARSIWA introduces some ambiguity in this respect, because it reserves the question of lawful measures by States other than injured States (those under Art. 42 ARSIWA) and has deliberately refrained from using the word 'countermeasure' there. It may also be noted that the range of States entitled to take countermeasures is limited to Parties to the NPT, unless non-compliance of obligations under customary law would be at stake.

[73] See Jonathan Black-Branch, 'Countermeasures to Ensure Compliance with Nuclear Non-Proliferation Obligations', op.cit. (n. 4), Vol. II, Chapter 16.

[74] Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on their Destruction (CWC), 13 January 1993, 1974 *UNTS* 45.

[75] I am grateful to Tom Coppen for this observation.

[76] See Trevor Findlay, *Nuclear Energy and Global Governance. Ensuring safety, security and non–proliferation* (Routledge 2012).

Law at the University of Kiel and again sponsored by the *Fritz Thyssen Stiftung*.[77] To broaden international consensus on this important third pillar of the NPT, contentious issues remain to be explored. These include nuclear safety and security, radioactive waste removal, damage control and reparation.

26. *Open Issues*. To accomplish the Committee's mandate and deliver recommendations, legal issues need to be identified according to their relevance for the overall objective of nuclear non-proliferation. The focus of the Committee continues to be on questions relevant for international cooperation and legal controversies that need to be solved to ensure implementation of the NPT with respect to all of its three pillars, while paying due attention to cooperation with non-Parties in these important fields.

27. A *Declaration on Legal Issues of Nuclear Weapons, Non-Proliferation and Peaceful Uses of Nuclear Energy* will be presented as the final step of the Committee's work. It will be based on the efforts made so far, address relevant issues of existing international law, best practice and desirable new rules. The Declaration will be accompanied by a commentary. Draft elements of the Declaration are attached as *Annex* to this Report.

[77] The outcome is again being published in the new book series: Jonathan L. Black-Branch and Dieter Fleck (Eds), *Nuclear Non-Proliferation in International Law, Vol. III Legal Aspects of the Use of Nuclear Energy for Peaceful Purposes* (Berlin/Heidelberg: Springer/Asser Press, forthcoming in Autumn 2016).

ANNEX
Tentative Conclusions and Recommendations

The following draft elements of the forthcoming *ILA Declaration on Legal Issues of Nuclear Weapons, Non-Proliferation and Peaceful Uses of Nuclear Energy* are listed here in a still tentative and non-exhaustive manner. The recommendations made in the Second Report are incorporated. Issues yet to be dealt with in the Fourth Report are presented in plain letters:

A. Nuclear Non-Proliferation

(A 1) To effectively ensure non-proliferation of nuclear weapons or other nuclear explosive devices both legally and politically binding commitments are necessary.

(A 2) While the NPT and treaties on nuclear-weapons-free zones require the application of IAEA safeguards by their States parties, special and supplementary safeguards systems are in effect to ensure nuclear non-proliferation for the 28 Member States of the European Atomic Energy Community (EURATOM) and for the two States cooperating under the Brazilian-Argentine Agency for Accounting and Control of Nuclear Materials (ABACC).

(A 3) The IAEA is fully authorised to examine the correctness and completeness of declarations made by States.[78] Rights and obligations specifically agreed in Comprehensive Safeguards Agreements and Additional Protocols may facilitate that cooperation, but they are not limiting the mandate of the Agency as confirmed in its Statute agreement by its Governing Bodies, and consistent practice.

(A 4) To appropriately address dual-use problems, weapons-usable nuclear material should be limited and international control of uranium enrichment and reprocessing of spent fuel should be strengthened. For this purpose relevant measures need to be harmonised, while assuring fuel supply for peaceful purposes and preventing unbalanced or discriminating interference with international trade.[79]

(A 5) Nuclear-test-ban verification, for which the IAEA is not mandated, is conducted by a special organization under the Comprehensive Nuclear Test Ban Treaty (CTBT). While the entry into force of the CTBT still depends on ratification by another eight States, one of the Treaty requirements, stipulating that at entry into force of the Treaty, the verification regime shall be capable of meeting the verification requirements of this Treaty, is already met. Verification activities conducted by the Preparatory Commission are based on a shared interest of participating States.[80]

---

[78] Before the non-diversion of nuclear material from declared activities can be assured, the cooperation by these States is essential.

[79] Cooperation and control on dual-use technology transfers are complementary (and not conflicting) elements of effective non-proliferation.

[80] Even after the Treaty's entry into force there may be disputes with a State affected by certain verification activities on the proper conduct or the assessment of such activities. Irrespective of whether such State will be party to the Treaty or not, there will be hardly any successful dispute settlement except by international cooperation.

(A 6) There is a continuing need for a universal nuclear security regime. Existing legally binding instruments (such as CPPNM[81], ICSANT[82]) need to be universalised. Existing mechanisms, such as the Nuclear Security Summits, the Global Initiative to Combat Global Terrorism (GICNT),[83] the World Institute of Nuclear Security (WINS),[84] or the Nuclear Energy Agency of the OECD (NEA)[85] need to strengthened and made more transparent.[86]

B. The Use of Nuclear Energy for Peaceful Purposes

(B 1) The right to develop research, production and use of nuclear energy for peaceful purposes without discrimination entails the responsibility to ensure nuclear safety, nuclear security and radioactive waste management.[87]

(B 2) The right to peaceful use of nuclear energy is conditioned by an obligation to accept verification and control of full compliance with non-proliferation goals and the obligations under Security Council Resolution 1540 (2004).

C. Nuclear Disarmament

(C 1) The obligations recognised in Article VI NPT have three objectives:

- **the cessation of the nuclear arms race at an early date,**
- **nuclear disarmament, and**
- **general and complete disarmament.**

Each of these objectives requires negotiations to be pursued in good faith and implementation measures under strict and effective international control.

(C 2) Article VI is far from conditioning nuclear disarmament on the achievement of general and complete disarmament. Rather, it requires States to take effective steps to end the nuclear arms race and to enhance international security at lower levels of armament.

(C 3) To reach these objectives the Parties must pursue negotiations in good faith on effective measures. This obligation goes beyond a mere obligation of conduct in that it includes an obligation to achieve a precise result.

---

[81] Convention on the Physical Protection of Nuclear Material – CPPNM – (1 November 1979), 1456 *UNTS* 125, entered into force on 8 February 1987, amended on 8 July 2005 (amendment entered into force on April 8, 2016), INFCIRC/274/Rev 1, http://www.iaea.org/Publications/Documents/Conventions/cppnm.html, http://www.iaea.org/About/Policy/GC/GC49/Documents/gc49inf-6.pdf

[82] International Convention for the Suppression of Acts of Nuclear Terrorism (Nuclear Terrorism Convention – ICSANT – (13 April 2005), 2445 *UNTS* 89, http://untreaty.un.org/cod/avl/ha/icsant/icsant.html.

[83] See http://www.gicnt.org.

[84] See https://www.wins.org.

[85] See https://www.oecd-nea.org.

[86] See also below, C 13. Synergy effects between non-proliferation controls and measures to ensure nuclear safety and security should be used. It also needs to be recognized in an environment of increasing terrorist activity that ensuring nuclear safety and nuclear security must be treated together.

[87] See OECD Nuclear Energy Agency (NEA), *International Nuclear Law: History, Evolution and Outlook* (2010), including the following contributions: Carlton Stoiber on Nuclear Security (pp 219-242), Laura Rockwood on IAEA Safeguards (pp 243-270), Quentin Michel on Control of Nuclear Trade (pp 271-306), Odette Jankowitsch on Transport of Nuclear Materials (pp 187-218).

(C 4) Subsequent practice during the last four decades has not weakened the aforementioned legal obligations, but confirmed a growing need for a legal instrument that will prohibit the use of nuclear weapons and lead to their elimination, even if that process takes time.

(C 5) Until such time as stricter legal rules may be adopted, States having nuclear weapons are under a legal obligation to strictly limit their relevant strategies to ensure that such weapons are means of last resort in an extreme circumstance of self-defence in which the very survival of the State would be at stake.

(C 6) States modernising their nuclear arsenals should exercise transparency as to the purpose and effects for nuclear safety and consequences for nuclear deterrence in accordance with existing obligations under international humanitarian law.

(C 7) The aforementioned legal obligations are valid *erga omnes*, as they affect the international community as a whole rather than a particular State or group of States. They are not limited to States party to the NPT, as they are part of customary international law or at least evolving custom.

(C 8) States Parties to the NPT must cooperate with one another as well as with non-Parties to implement these obligations.

(C 9) A development towards mutually verifiable nuclear disarmament requires

- **confidence-building measures and consequences for military doctrines, force structures and alert levels;**
- **joint action on interim steps including a comprehensive nuclear test ban and the termination of the production of fissile material for weapons;**
- **cooperative approaches to anti-ballistic missile defence; and**
- **further limitations to military uses of outer space.**

(C 10) Negative security assurances by nuclear-weapon States are to be reviewed and further developed, including by the establishment of nuclear-weapon-free zones.

(C 11) A repository of information on measures taken by States in furtherance of nuclear disarmament and non-proliferation should be established. It should include information on the role of remaining nuclear weapons and their alert status.

(C 12) National headquarters of nuclear-weapon States should be enabled to exchange liaison officers with appropriate working conditions as a confidence-building measure.

(C 13) The challenge of nuclear terrorism requires cooperative responses by States implementing their non-proliferation obligations and ensuring law enforcement and criminal prosecution.[88]

[88] See also above, A 6.

D. Compliance with and Enforcement of Nuclear Non-Proliferation Commitments

(D 1) Extensive international exchange and deepened cooperation is essential to ensure compliance with non-proliferation obligations.

(D 2) Nuclear disarmament, deterrence, confidence-building, non-proliferation, nuclear security, and even the safe use of nuclear energy for peaceful purposes are interconnected. This remains essential for any convincing approach to effectively control nuclear armament. In the same sense nuclear safety, security and non-proliferation, albeit subject to different legal regimes, are directly linked to each other.[89]

(D 3) In the event of withdrawal from the NPT States Parties are bound to fully comply with their obligations under Article X.1 NPT.

(D 4) Whilst measures taken by the Security Council under Chapter VII of the UN Charter to ensure compliance with arms control and disarmament obligations have often proven less than effective, it is for States to seek viable solutions in exploratory talks and negotiations, pursue long-term settlements that should endure daily pressure, and co-operate towards this end.[90]

(D 5) States are obliged to cooperate in the settlement of any dispute related to nuclear non-proliferation, the use of nuclear energy for peaceful purposes, or nuclear disarmament.

(D 6) Not only those States directly involved in a nuclear dispute are called to cooperate in this context, as non-compliance with pertinent obligations could affect much wider regions even beyond neighbouring States.

(D 7) Measures by the Security Council including measures under Chapter VI of the UN Charter may help to ensure nuclear non-proliferation, support strict and effective export controls and provide transparent procedures for pertinent activities.

(D 8) Recommendations by the General Assembly with regard to principles of cooperation in the maintenance of peace and security and principles governing disarmament and the regulation of armaments may add to transparency in nuclear-non-proliferation.

(D 9) Reporting activities by the Secretary-General and the exercise of his right of initiative may be essential for nuclear non-proliferation measures taken by the General Assembly, the Security Council and by States.

(D 10) To ensure compliance with existing rules and best practice, incentives may be more effective and more important than enforcement measures. Incentives should be developed in international cooperation.[91]

---

[89] If these issues were dealt with separately, neither the cessation of the nuclear arms race nor substantive nuclear disarmament could be achieved and neither safety nor security of the use of nuclear energy could be ensured in an effective manner.

[90] The Commentary will address specific cases and also discuss whether the pertinent obligations stem from treaties like the NPT or from Chapter VII decisions and whether this makes any difference.

[91] This might lead to a prioritisation of lawful means available and may entail the development of new legal principles and rules.

(D 11) Procedures and objectives of verification are to be continuously scrutinised. Cooperative action is to be taken to reach nuclear balance at lower levels, ensure non-proliferation of nuclear weapons and nuclear explosive devices, and abolish chemical and biological weapons.

(D 12) Incentives for compliance are relevant at all stages of dispute settlement and different forms of cooperation will be required at those different stages.

(D 13) The lack of judicial control of acts performed on behalf of the United Nations remains an important issue for further legal development in this field.

(D 14) Countermeasures must be in conformity with existing legal standards.[92]

(D 15) Retorsions, i.e., acts or omissions below the level of countermeasures (such as export limitations, traffic controls, travel restrictions and criminal prosecution to ensure compliance with non-proliferation obligations)**, deserve more attention in current discussions on compliance with arms control obligations.**

(D 16) It should be recognised that there are fundamental obligations under the NPT of an *erga omnes* character. All States should cooperate in ensuring compliance with those obligations.

(D 17) States and international organizations should consider the relationship between countermeasures and the peaceful settlement of disputes.

(D 18) States should legislate and pursue criminal prosecution to ensure compliance with non-proliferation obligations.[93]

[92] States and international organizations should acknowledge the legal limits of countermeasures and especially that countermeasures are a last resort after trying peaceful dialogue. They should recognise that countermeasures are not meant to punish a State, but are aimed at bringing about compliance with an international obligation, temporary in nature and to be withdrawn when the act in question ceases.

[93] It will need to be spelled out in the Commentary what are the non-proliferation obligations in question, especially if they attach individual criminal responsibility for non-compliance by a State of treaty obligations. See Carlton Stoiber, Abdelmadjid Cherf, Wolfram Tonhauser, Maria De Lourdes Vez Carmona, *Handbook on Nuclear Law* (Vienna: IAEA, 2010, http://www-pub.iaea.org/MTCD/publications/PDF/Pub1456_web.pdf). Part V of the Handbook specifically deals with Non-Proliferation and Physical Protection (Chapter 12 on Safeguards, Chapter 13 on Export and Import Controls and Chapter 14 on Physical Protection). The Handbook is being updated, with a revision recently completed for publication in 2016.

COMMITTEE ON NUCLEAR WEAPONS, NONPROLIFERATION AND CONTEMPORARY INTERNATIONAL LAW

WORKING SESSION

Wednesday, 10 August 2016, 9.00am

Chair: Professor MaryEllen O'Connell (US)

The Chair introduced herself as a member of the American Branch and a member of the Use of Force Committee. She stated that she was happy to chair the present session in support of her good friend and colleague – and Rapporteur of the Committee – Dr Dieter Fleck (Germany). She indicated that Dr Fleck would provide a brief presentation and that she looked forward to the group discussing the report that Dr Fleck would present in detail.

Before giving the floor to Dr Fleck, the Chair added that there would be another discussion on arms control later in the afternoon. Dr Christof Heyns, Professor Noam Lubell, and she would be discussing new weapons technology in the form of drones and other kinds of weapons under the intriguing title of *Killer Robots*. She invited attendees to join that session.

Dr Dieter Fleck (Germany) highlighted that the difference between the size of the very familiar group and the overall topic of nuclear non-proliferation could not be wider. Over the past couple of years, they had been working on a specific mandate for the Committee, which was to consider competing legal approaches to nuclear non-proliferation and regulating nuclear weapons within the contemporary context and to ultimately present options for future legal cooperation in this field. The normal ambition of the ILA was to arrive at a declaration with commentary, which could be adopted and accepted by consensus at a future conference and should reflect the worldwide opinion. To cover this broad expectation and ambition, and to bring together those interested in international law from around the world, from legal and mediation practice, from the judiciary, academia, business, governmental and non-governmental organisations, to foster the understanding of international law both generally and among young people, was obviously facing problems in terms of conference participation. Joint efforts and new initiatives were necessary to cope with this situation, to increase activities within the ILA and beyond, and to ensure adequate participation at ILA conferences. Dr Fleck underlined that the Committee should try to stick to this large ambition and the result for the day's exercise would be disseminated via the internet to try to reach a wider group of experts around the world. For that purpose, he appreciated the presence of Ms Mothepa Shadung from the Institute for Security Studies in Pretoria and Ms Lolah Nkosi from the Gauteng Provincial Government, who were interested in the subject and had volunteered to draft the session report.

Dr Fleck noted that the critical issues were yet to be solved. Nuclear proliferation to States and non-State actors entailed severe security risks. The safety of nuclear energy was not fully under control in any continent in the world. Problems of radioactive waste disposal still needed to be solved without current convincing prospects. Perhaps the next generation would be more successful in solving these enormous problems for the next million years. "Global Zero" for nuclear weapons, although a widely-shared goal that had been supported by President Obama in several of his speeches, was not in sight. Controversies and existing interdependencies between the different issues relating to

the Nuclear Non-Proliferation Treaty (NPT) required an in-depth evaluation. This was definitely the goal of the Committee – to try to look at not only one but all three different pillars of the NPT in context.

Dr Fleck referred to the Committee, which had fewer than 30 people nominated by the national branches. He welcomed the presence of some Committee members and conveyed the greetings of the Chair of the Committee, Professor Jonathan Black-Branch (UK), who was not able to attend the Conference due to his acceptance of a new position as Dean of the Law School at the University of Manitoba in Canada.

To cope with the present challenge, the Committee was engaging in extensive studies within and beyond the ILA framework. The Chair of the Committee had hosted a series of roundtable meetings in London conducted under Chatham House Rule. Dr Fleck had organised research projects based on international calls for papers resulting in two conferences in Cologne, where they had a very fruitful exchange resulting in a series of publications. The next volume would be published in about 3 months in the series edited by the TMC Asser Institute and Springer (entitled *Nuclear Non-Proliferation in International Law*).

A positive aspect of the lack of sponsoring and the absence of interested organisations and economic groups in the Committee's activities was that it was working in complete independence from political and economic decision-makers. This attitude had characterised the work of the Committee from the outset.

Dr Fleck introduced the Committee's third report entitled "Legal Issues of Verification of Nuclear Non-Proliferation Commitments". This report followd the second report of the Washington conference entitled "Legal Aspects of Nuclear Disarmament". A fourth report devoted to legal aspects of the use of nuclear energy for peaceful purposes would be submitted at the Sydney conference in 2018. Based on the comprehensive work covering all the pillars of the NPT, an ILA declaration with commentary should be possible on legal issues of nuclear weapons, non-proliferation and peaceful uses of nuclear energy, which would be proposed for adoption at the Tokyo conference in 2020.

Verification of nuclear non-proliferation commitments, like all other main obligations stemming from the NPT, was a politically and legally contested issue. The aim of the Committee report, therefore, was to provide an objective account of existing controversies and to provide a reliable legal evaluation.

The third report was divided into six parts. It evaluated terms and conditions of agreed verification measures in accordance with Arts 31-32 of the Vienna Convention on the Law of Treaties (VCLT) and the identical Arts 31-32 of the Vienna Convention on the Law of Treaties between States and International Organizations or Between International Organizations (VCLTIO).

The first four parts of the report analysed legal issues relating to different (but to some extent interrelated) nuclear verification regimes and their associated organisations. The first, and most important, part was devoted to legal aspects of the verification practice of the International Atomic Energy Agency (IAEA). It focused on recent controversies, which were also represented by members of the Committee taking different views on the subject, relating to the IAEA's mandate to verify both the non-diversion of nuclear

material from declared activities (ie, the *correctness* of national reports) and the absence of undeclared nuclear activities in the State (ie, the *completeness* of national reports). Dr Fleck highlighted that there were two Committee members who took a position denying the IAEA's mandate as far as completeness was concerned. Dr Fleck welcomed different opinions and had invited for an in-depth discussion of all different aspects in the Research Conference in Cologne, where there was a very fruitful exchange, the outcome of which was reflected in the third report and published in volume II of the book series.

It was concluded that a clear distinction should be made between the authority of the IAEA to examine the correctness and completeness of the declarations made by States and the ability and obligation of States to assure the non-diversion of nuclear material from declared activities. In view of the controversy among Committee members, Dr Fleck was delighted to say that all Committee members supported the third report. It was thus an excellent exercise to exchange different views and to use this opportunity to develop one's thinking in the presence of counterarguments.

The second, third and fourth parts of the report discussed special regulations applicable to the European Atomic Energy Community (EURATOM), the Brazilian-Argentine Agency for Accounting and Control of Nuclear Materials (ABACC), and the Preparatory Commission for the Comprehensive Nuclear-Test-Ban Treaty Organization (CTBTO) respectively, and explored some overlap with, and synergy effects for, the work of the IAEA. The safeguards systems established by EURATOM and ABACC were characterised in the report as supplementing the work of the IAEA and contributing to international cooperation at the global level. While the 1996 Comprehensive Nuclear-Test-Ban Treaty (CTBT) was still not yet in force, the Preparatory Commission, based on a shared interest of participating States, was already capable of meeting the verification requirements of the CTBT.

The fifth part of the report evaluated interdependencies between legal obligations and best practices as an essential element of the nuclear non-proliferation regime. Finally, the way ahead for the work of the Committee was discussed and first conclusions drawn by summarising relevant findings, identifying open issues, developing recommendations, and recording draft elements of the envisaged ILA declaration (Part VI and Annex).

The report discussed the situation in Iran for which a cooperative solution could be reached in negotiations between the E3/EU+3 (China, France, Germany, the Russian Federation, the United Kingdom and the United States, with the High Representative of the European Union for Foreign Affairs and Security Policy) and Iran. This outcome was unanimously endorsed by the UN Security Council and still required much work for its implementation. It was agreed that it was not the time to look for any loopholes in the accord but to concentrate on its implementation and evaluation. There would be two interesting contributions on Iran in the forthcoming volume III of the book series, one written by a legal advisor of one of the negotiating teams of the EU+3 and another one written by a physicist from Italy who gathered experience in cooperating with colleagues from Iran.

In summary, Dr Fleck highlighted that the verification system, which was currently in place, provided a fair balance between cooperation and control, incorporating new information technologies and involving international organisations, States, and non-State

actors to ensure best practices for implementing legal obligations and addressing new challenges for nuclear safety and security.

In Dr Fleck's opinion, an inventory of relevant customary law and best practice of States, international organisations and regional organisations should be established. This could make the process of evolving customary law more obvious. This was an observation based on the fact that not everything was regulated in treaty law. Some of the more important treaties like the CTBT were not yet in force. In this area, cooperation between States and non-State actors was still more important than written rules and regulations. Such a study should be intriguing for PhD students but also challenging for international organisations to prepare. This demonstrated that the effectiveness of the law of nuclear non-proliferation, safety and security would not depend alone on the question as to whether the relevant tools were legally binding. With respect to nuclear safety, any such inventory should include recognised principles of international environmental law, which would also be addressed in the forthcoming volume III of the book series.

As for dispute settlements and countermeasures in case of non-compliance, incentives for compliance might be more important and effective than enforcement measures. Dr Fleck added that this was a difficult statement of his in the presence of a friend and colleague, Dr Michael Rosenthal, who had made an excellent presentation the day before under the title "Nuclear Security Under International Law: Problems and Prospects". Dr Fleck still believed that none of the cases reported to the UN Security Council had so far been brought to a final settlement by sanctions alone. Sanctions under Chapter VII of the UN Charter might become necessary. Yet disputes had to be solved by agreement in cooperation, as provided for in the UN Charter.

Dr Fleck drew attention to the draft elements of the envisaged declaration (annexed to the third report).

Those parts of the draft elements appearing in bold text were already fairly well discussed and supported in many meetings of the Committee, including the 2014 Washington conference. All draft elements still needing some consideration appeared in plain text, which included the section entitled "The Use of Nuclear Energy for Peaceful Purposes", required further discussion. Dr Fleck invited participants to comment on these, particularly on section A (Nuclear Non-Proliferation) and section D (Compliance with, and Enforcement of Nuclear Non-Proliferation Commitments). He welcomed critical opinions and advice to prepare a well-informed declaration with commentary, which could then be adopted at the later ILA conference.

The Chair asked Dr Fleck to clarify the following:

1. whether the complete Annex of the third report would be the final product for submission in 2020;
2. whether the fourth report under preparation would add to the incomplete section B (on the use of nuclear energy for peaceful purposes);
3. whether the reports prepared thus far had supported his proposal in sections A, C and D.

Dr Fleck confirmed the tentative character of the draft conclusions and recommendations. The footnotes would be used at a later stage as elements for the commentary to be

written. He added that the Committee was seeking new publications, especially of the OECD and the IAEA, and that the Committee remained open to criticism even on the bold text, thus exercising transparency in its work. The Committee was interested in comprising all the different opinions as was done in former controversial debates including on "completeness and correctness".

The Chair returned to Dr Fleck's comment that no case brought to the UN Security Council had been resolved by sanctions alone. Bearing in mind people's familiarity with the Iran case, she asked whether there were any other pending cases of nuclear proliferation on the Security Council's agenda – for example India, Pakistan and Israel.

Dr Fleck noted that he was not aware of any preparations of pertinent new resolutions of the Security Council but invited Dr Rosenthal to give a perspective from his practice in the 1540 Committee, as non-proliferation and the verification of proliferation are constant activities and require cooperation with States. These may be lacking from time to time and Security Council sanctions under Chapter VII of the UN Charter may have to be considered if necessary.

Dr Michael Rosenthal noted that he did not have a definitive answer to the question on the UN Security Council but the Board of Governors of the IAEA found that Syria was in violation of its States Party agreement.

Professor Vasilka Sancin (Slovenia) thanked Dr Fleck for the diligent work on all the reports. Commenting on the relationship between treaty and customary law, she noted that she was not convinced by the paragraphs relating to customary law in the report. For example, the report read in paragraph 5 that "[p]articular attention shall be given to the question whether the verification process serves its purpose in effectively assessing all relevant facts and establishing compliance with the obligations undertaken under existing treaty law and customary law". However, in her opinion, there was no further explanation of customary law in terms of the verification process. She thus asked for clarity in that regard.

Professor Sancin also drew attention to the reference in paragraph 22 to "[a]n inventory of relevant customary law and best practice of States…". She asked what exactly "relevant customary law" in the verification process was.

In the context of countermeasures against non-compliance, she asked what exactly was meant by countermeasures "taken by international organizations".

Dr Fleck responded that the Committee was not clear about the extent of customary law in the progressively developing area of State practice and practice of international organisations. He highlighted a good proposal made to consider the prohibition of nuclear tests as a prohibition under customary law, despite the fact that the CTBT was not yet in force. He added that he was still very careful about this, but he appreciated the idea and learned that the Preparatory Commission in Vienna was as careful and as reluctant to support the idea of customary law in this respect as they were working for the full application and adoption as treaty law. What happens, however, if this Treaty did not enter into force in the coming years? Then the question of whether there was customary law was open. This was the reason for including a sentence to the effect that "[n]ot only legal obligations but also best practices are to be considered in this context". This was thus a reluctant

statement, which was pinpointing the fact that there might be evolving customary law and the hope for the evolution of customary law in this respect. However, one must remain clear and realistic, and acknowledge the fact that this area of international law was not all about bright-line rules but all about international cooperation.

Professor Sancin fully agreed with Dr Fleck that there were important practices of States that should be taken into account. She proposed that the words "existing treaty law and customary law" in paragraph 5 be replaced with "existing treaty law and evolving/possible customary law".

Dr Fleck noted Professor Sancin's proposal and suggested that it could be phrased as "potentially evolving customary law".

As for countermeasures, Dr Fleck suggested that it would be necessary to observe the written principles in this respect. He noted that he would be hesitant to refer to treaty law because the Articles on State Responsibility for Wrongful Acts (ARSIWA) and Responsibility of International Organisations (DARIO) were not adopted as treaty law. However, the more that lawyers were discussing this, the more that they referred to customary law.

Dr Fleck argued that countermeasures were in the first place relevant for States. Regarding countermeasures to be taken by the IAEA, he referred to practice as the Agency might exclude non-complying States from certain rights under its statute.

Professor Sancin questioned whether there truly were countermeasures or sanctions/measures taken by specific international organisations.

Dr Fleck found difficulties in using the word "sanction" as it was not used in the UN Charter, which referred instead to "measures" to be taken by the Security Council based on strict voting procedures and relying on the effectiveness of these measures under Art 25 of the UN Charter. States were always referring to sanctions and States exercised sanctions even after they concluded agreements (eg, the accord with Iran). There was a practice by the European Union (EU) and other international organisations to exercise these measures and refer to them as sanctions. Sanctions, in Dr Fleck's opinion, had to comply with international legal principles, which were widely reflected in ARSIWA and DARIO.

The Chair highlighted that Dr Fleck's use of the term "countermeasures" was correct – it could include denial of access to privileges. It is within the right of treaty groups to decide which States get access to privileges. This is different from the sanction type that Dr Fleck was discussing.

The Chair argued that countermeasures was the right term because it was more of an umbrella term. She proposed the inclusion of a footnote to define this as countermeasures – currently used more synonymously with sanction. One must bear in mind that denials of access to privileges were not included. She recommended citing a general reference to the fact that "countermeasure" was the broader term. It appeared that ARSIWA was more in the sense of sanctions referred to by Dr Fleck and not retorsions, because it did refer to the need to have a prior violation. This might be the root of the confusion. The manner in which ARSIWA used countermeasures was different from the manner

in which Dr Fleck discussed it. The Chair's recommendation to Dr Fleck was to drop "counter" on paragraph 24. When discussing measures that could only be taken when in response to a prior violation of the treaty or of a Security Council authorisation, the term "countermeasures" could instead be used.

Another recommendation in relation to paragraph 24 was to be cautious about the use of *erga omnes*. The *East Timor* case suggested that one could not take countermeasures even in *erga omnes* situations. One could only take retorsions if not a directly affected State or organisation. If a party to the NPT is in non-compliance, then sanctions under the terms of the NPT would be proper. This statement is distinguishable from the statement that the "essential obligations of the NPT have *erga omnes* character." It is contested whether every State would have the right to take a countermeasure. Note the controversy over the US and EU's unilateral practices of taking countermeasures to enforce the NPT outside the Security Council enforcement of such provisions.

The Chair noted that there were serious limitations on sanction-type countermeasures within the *erga omnes* concept. Most of the provisions of ARSIWA were not rules of customary international law; they were general principles - *erga omnes*, for example, was a general principle in the sense of the third category in Art 38 of the ICJ Statute. The Chair considered the working and use of countermeasures as enforcement mechanisms to be general principles and not rules of customary international law.

Dr Fleck returned to the issue of paragraph 24, which he noted was the result of a lengthy debate among Committee members and friends of the Committee. In Volume II of the book series, the Committee Chair, Professor Black-Branch, volunteered to write a chapter on the issue. From Dr Fleck's perspective, the word "measure" was not as precise because the word would also be appropriate in a form of cooperation where everybody complied or tried to comply with an obligation. However, the issue at hand was lack of compliance. Dr Fleck was also hesitant to draw on existing jurisprudence, adding that it was the NPT that was at stake here. The statement made in the Report was that "essential obligations under the NPT do have an *erga omnes* character, it appears that the range of States eligible for taking countermeasures is barely limited." This statement was the result of a controversial debate. It was reflected in Volume II and Dr Fleck believed that, as vague as it was, paragraph 24 should stand in the third Report as it was pinpointing the seriousness of the problem.

The Chair suggested that, to be precise, the term *erga omnes* should be removed. She argued that an alternative wording could be that the parties to the NPT had a Treaty right to bring countermeasures in the case of violations. The best statement of the meaning of *erga omnes* and the best description of the type of measures that States might take in response to *erga omnes* violations was found in the *East Timor* case. In that case, there was a clear limitation on any State that was not directly injured bringing a countermeasure.

Dr Fleck suggested that the issue required further debate. With reference to *erga omnes* principles, in the context of the *East Timor* and *Barcelona Traction* cases, the issue at hand was that the rights of States were affected and a breach of the NPT might affect the rights of all States. Dr Fleck was of the opinion that the problem should not be diminished. Indeed, one must be careful in the use of words. Countermeasures could comprise measures that were lawful and measures that are nor lawful *per se* but justified, even

considering that the ILC made that distinction. Dr Fleck noted that the Committee had not arrived at a final solution; that would be done at a later stage. He recommended that everyone should start further developing his or her ideas in order to reach acceptable results in the draft Declaration.

Mr Ulf Haeussler (Germany) made a suggestion in relation to the report and the next ILA conference. He mentioned that the discussion illustrated that further work might help in developing a clear understanding of the different perspectives contributing to the compromise reflected in paragraph 24. The results of this work should be presented at the 2018 conference, and they should also address the systematic questions underpinning the system of enforcement mechanisms within and beyond the framework of the NPT and associated inspection and verification.

Dr Fleck emphasised that the issue needs to be further developed in the anticipated fourth report. What could be achieved in the meantime would be to gather further critical arguments.

The Chair noted that she was happy to share and be as helpful as possible.

Professor Seung Hwan Choi (Korea) mentioned that he fully supported the third report. He introduced the current situation on the Korean Peninsula, characterised by the development of nuclear weapons by North Korea. There had been four nuclear weapons tests by North Korea, and more than 10 ballistic missile launches by the time of the conference. As a response to the rising nuclear missile threats from North Korea, on 8 July 2016, South Korea declared the deployment of the Terminal High Altitude Area Defense (THAAD) antimissile system in South Korean territory. While this deployment was a legitimate act of self-defence, THAAD could seriously undermine peace and security in Southeast Asia. He expressed himself in favour of a formal declaration that South Korea and the USA would deploy THAAD until North Korea gave up nuclear weapons.

Dr Fleck thanked Professor Choi for his statement. He noted that the fourth report, which would deal with safety, security and peaceful uses of nuclear energy, could be used to discuss in greater detail the arguments made by Professor Choi and those made by other participants. The issue should be included in the Annex, sections A and D. As previously explained, the text of the Annex was essentially a tentative draft open to more argument before being submitted for adoption by a future ILA conference.

Professor Marco Pedrazzi (Italy) questioned whether, in relation to page 24 of the report, obligations under the NTP could be referred to not only as obligations having an "*erga omnes* character" but as integral obligations under ARSIWA, the violation of which directly affected the rights of all other states.

The Chair highlighted that there was no doubt that the problem of nuclear proliferation was a concern to every State and it was very appropriate to remind the world of everybody's interest of this in paragraph 24. There were many other issues that were described as of interest to everyone, such as concerns of health and armed conflict. However, the statement in the *East Timor* case noted that there were many issues such as human rights and arms control that affected everyone in world but not in the direct manner that would permit a countermeasure violating the rights of another State in response to that first State's violation of a rule.

The Chair added that there were a number of alternative actions that States could take in the traditional category of retorsions (eg, diplomatic protests, and denial of benefits) but the restrictive category of countermeasures was for those States (as in the trade area) that had had their access to markets in another country directly restricted. She added that this was part of the critique of the US and EU taking unilateral sanctions in the case of Iran based on what *erga omnes* required.

In the Chair's opinion, there was nothing directly in ARSIWA to support a widening view of which States could take countermeasures.

Dr Fleck observed that this was a challenging point in international law. This might be observed, for example, in the difference between the breach of human rights obligations and the breach of nuclear non-proliferation obligations.

Dr Fleck made a technical remark in relation to an important sentence in paragraph 24 of the report. It stated that "it may be useful to explore the relation between countermeasures taken by States or groups of States on the one hand and actions taken by international organizations such as the UN or the IAEA on the other". It was followed by a list of questions without any attempt to provide any answers. According to Dr Fleck, it was evident that the topic required further exploration and Dr Fleck committed himself, as the rapporteur, to make it an important part of the fourth report.

Mr Haeussler advised caution in developing the countermeasures regime or enforcement mechanisms as they should not be too closely linked to the NTP, given the possibility to denounce this treaty. At the same time, the "natural reflex" to such denunciation, that was the execution of custom, might likewise involve a challenge. If an evasion from the NPT regime and its obligations were to be responded to by an evasion into custom, this kind of action might jeopardise the legitimacy of custom so extended, and subsequently affect the binding force of international law as such.

Dr Rosenthal mentioned, in relation to paragraph 24 of the report, that termination of nuclear cooperation (for example a trade agreement) was requested in the event of non-compliance with a safeguards agreement. This comment was based on the fairness of taking countermeasures as a last resort by the affected States if there was non-compliance with the NPT and violation of other obligations, as stated in footnote 92 of the report.

Dr Fleck maintained that this was exactly the debate on reprisals versus retorsions with other measures in international cooperation. He expressed that he could not, as a lawyer, imagine the result of a situation where international cooperation would no longer be possible in view of the potential use of nuclear missiles.

Dr Rosenthal, in the context of paragraph 24 and footnote 92, argued that in event of violation of an NPT safeguards agreement, termination of nuclear cooperation was a first, rather than a last, resort for others. He cited examples of termination of nuclear cooperation carried out by the US, Germany and France.

Professor Sancin suggested that it was necessary to distinguish between the legal obligations of States under the NPT (in the case where one State was not respecting its obligations) and countermeasures, which could take various forms outside the NPT regime in response to the illegal behaviour of the wrongdoing State.

The Chair noted that Professor Sancin's statement expressed very clearly what the confusion was. The US, for example, terminated trade agreements or banking privileges and it might only do so if it had a right to take a countermeasure. It could certainly deny access to information, cooperation and engineering resources at any time it wanted to. This was the kind of retorsion that was indicated in comments made in the session and was always permissible, but one had be very careful and precise with regard to the category qualifying as countermeasures because of the implications to a much wider group of legal obligations that came into play.

The issue of countermeasures should be clarified in the report, and it might be decided that, in the nuclear proliferation regime, there was more scope for taking countermeasures. This was a point of utmost importance and paragraph 24 would require further development.

Dr Rosenthal stated that Article I of the NPT obligated nuclearweapon States not to cooperate in the event of a violation of the NPT. It was explicit in the NPT that nuclear-weapon States could not assist non-nuclear-weapon States in doing certain things. The NPT did not explicitly forbid non-nuclear-weapon States from assisting others to develop nuclear weapons.

Professor Sancin highlighted that it was important to distinguish between assistance as a legal obligation not to cooperate and countermeasures. The issue was whether non-nuclear-weapon States had a legal obligation not to cooperate or assist other States. She thus agreed with Dr Rosenthal that this was implicit, at least in the framework of the entire NPT.

Dr Fleck remarked that if Article I of the NPT was an obligation to cooperate, it did not apply to non-parties. The problem under discussion was one concerning non-parties to the NPT, such as North Korea, India, Pakistan, and Israel. This was more complicated as seen in the recent jurisprudence on *erga omnes* obligations and countermeasures since one was not operating here in the human rights area but in an even more important area for the survival of mankind. This might affect parties and non-parties to particular treaties. Dr Fleck argued that it was a particular question for how directly States might be affected.

The Chair expressed that the discussion was very helpful in clarifying the particular categories of measures that were addressed. She then asked whether the nuclear proliferation area entitled a wider group of parties to actually take countermeasures. This, for the Chair, required further investigation.

Dr Fleck suggested that there was not a need to change the text of the present report, although it did not cover all aspects that should be reflected in the draft declaration. He concluded that it was decided that paragraph 5 of the third report be amended and the issues discussed in paragraph 24 be further developed in the fourth Report to be delivered at the next conference.

The Chair, in closing, expressed gratitude to attendees who raised questions and made comments. She added that everyone in the international community looked forward to the fourth report and wished Dr Fleck and Committee members well in their work in the years ahead.

Introduction

Since the last Conference of the ILA, held in Washington, DC, USA, in April 2014, the Committee (generally known by its acronym, MOCOMILA) has held four meetings: in Vienna, Austria (19-20 September 2014), Beijing, China (9-10 April 2015), Berlin, Germany (4-5 September 2015), and Athens, Greece (3-4 June 2016). The Vienna meeting was held at the Oesterreichische Nationalbank (OeNB) and focused on two themes: Eurozone Developments (including the SSM) and legal implications of sanctions (with particular regard to Ukraine). It included talks by Mr Ewald Nowotny and Mr Claus Raidl, the Governor and President of the OeNB. That meeting was the last for our valued colleague, Mr Bertold Wahlig, and we wish him all best wishes. The Beijing conference, hosted by the People's Bank of China (PBOC), also focused on two issues: the proper place of the contemporary central bank and the international role of RMB. It featured talks by Mr Zhou Xiaochuan, Governor of the PBOC, and Dr Ma Jun, Chief Economist of the Research Bureau of the PBOC. Our Berlin conference was also very special for the committee, as it was our 100th meeting. The meeting, hosted by the Deutsche Bundesbank at the historic Berlin-Brandenburg Academy of Sciences and Humanities, included a retrospective on the work of the committee since its founding. It then focused on issues surrounding payment and settlement. The meeting included talks by Mr Jochen Metzger and Mr Olaf Christmann, the head of the payment system department and director in the legal department at the Deutsche Bundesbank. The Athens meeting was organized under the auspices of the Hellenic Bank Association and of the Bank of Greece and was held at the premises of the European Public Law Organization (EPLO). It featured presentations by Professor Louka Katseli, Chairwoman of the National Bank of Greece and the Hellenic Bank Association, Professor Spyridon Flogaitis, Director of the EPLO, and Professor John Mourmouras, Deputy Governor of the Bank of Greece.

The subjects of the foregoing meetings and other topics discussed by the Committee are reflected in the following sections of this report.

I. An Early History of MOCOMILA (by Mr L Buchheit)

II. Ethics in Finance: A Progress Report (by Mr T Baxter)

III. Decided cases in London and New York (by Sir Ross Cranston)

IV. The Operation of the European Banking Union: Institutional Developments (July 2014 – March 2016) (by Professor C Gortsos)

V. Payments Recent Developments: Virtual Currencies (by Professor B Geva)

VI. The East African Community Monetary Union (by Professor A Mugasha)

VII. Crowdfunding in International and National Regulatory Frameworks (by Dr K P Follak)

This report reflects the views of the individual members and not necessarily those of any institutions with which they are affiliated.

At our meeting in Beijing, MOCOMILA endorsed and confirmed the statement contained in its report to the Berlin meeting of the ILA in 2004, as accepted by the ILA before and since. This states MOCOMILA's policy as follows:

"The Committee has recently endorsed its longstanding membership policy. In addition to the ILA's general policy for renewing Committee mandates and membership every four years, there are essentially three elements to the practice of MOCOMILA. First, the Committee should consist of a group of experts in monetary law with a balance of representation from institutions (central banks and international financial institutions), academia and private practice of law. Second, members must be in a position to actively participate in the work of the Committee, including through participation in the Committee's twice yearly annual meetings (not necessarily every time, but regularly) and in contributions to its seminars and publications. Third, consistent with its established practice, the Committee will invite prospective new members first to attend Committee meetings as Observers in order to determine whether each such person is in a position to contribute to the work of the Committee; only afterwards would nomination to membership by the ILA Executive Committee be sought."

I. An Early History of MOCOMILA

The International Law Association was founded in October 1873. Its original name, "The Association for the Reform and Codification of the Law of Nations," was changed to the International Law Association in 1895. The Monetary Law Committee of the ILA was established by the Executive Council of the ILA in 1951. The original rapporteur was F.A. Mann and the President was Max Gutzwiller.

The records show that on at least four occasions the ILA discussed issues of monetary law before MOCOMILA was formed in 1951.

The 31st Conference of the ILA in 1922 (held, appropriately enough, in Buenos Aires) discussed the Negotiation of External Loans with Foreign Governments. After a lengthy presentation by Charles Cheney Hyde, the Chairman of the meeting endorsed the opinion of the British representative that loans to foreign governments – because they were not then enforceable in legal proceedings – were "not a matter for our International Law Association at all." Although the minutes of this meeting endeavor to lay a soft blanket over the points of disagreement, it is clear that some participants had a strong negative reaction to the view that loans to foreign governments were not a fit subject for lawyers to discuss. They reminded their colleagues of the pernicious consequences that can follow from the non-payment of such loans, and of the views of the Argentine jurist, Dr Luis Drago, on the use of force to compel payment of foreign loans.[1]

In 1926, at the 34th Conference in Vienna, one of the topics was "Rules Relating to the Rate of Exchange."

At the 38th Conference in Budapest in 1934, the ILA considered "Payments in Gold and in Foreign Currencies" (this was one year after the U.S. Congress, as a matter of public policy, abrogated the gold clause in obligations subject to U.S. jurisdiction). At both the 39th and 40th Conferences (1936 and 1938), Gold Clause issues were also discussed.

To give you some idea of priorities, however, over this same period the ILA considered matters of divorce law at five separate Conferences.

---

[1] *See* Luis Drago, *State Loans in Their Relation to International Policy*, 1 *American Journal of Int'l Law* 692 (1907) (warning of the danger of allowing public debts to be collected *manu militari*).

At its 45th Conference in Lucerne in 1952, the ILA instructed the International Monetary Law Committee, "to submit to the I.L.A. a statement of principles relating to such questions of Monetary Law as the Committee may select and for this purpose to keep in close touch with international and national authorities dealing with monetary administration and with the local branches of the Association."

Representatives of the IMF and the Bank for International Settlements have regularly attended Committee meetings, starting with the Committee's first meeting 64 years ago.

At that first meeting of MOCOMILA, Dr. Mann announced that "our task is to harmonize international monetary law." He encouraged MOCOMILA to aim high – seeking nothing less than a "comprehensive scheme for international legislation on monetary matters."

In its first report to the ILA, MOCOMILA said that it had resolved "to devote its attention primarily to practical questions rather than matters of academic interest." It therefore designated the following topics "with a view to developing principles recommended for general acceptance":

(i) the conflict of laws relating to exchange controls;
(ii) the law of protective clauses (gold clauses, index clauses, etc.) "with special reference to their efficacy in the event of legislative interferences";
(iii) the determination of the money of account with special reference to certain types of contracts such as insurance, sale, agency and negotiable instruments;
(iv) international investments and their protection by international monetary law;
(v) the enforcement of foreign currency obligations; and
(vi) international cooperation in monetary matters.

In this same initial report, MOCOMILA opined that the "branch of monetary law which is most urgently in need of international clarification is the conflict of laws relating to exchange controls."

Much of the Committee's attention – and much of its scorn – was directed at Article VIII(2)(b) of the IMF Articles of Agreement,[2] a provision that the Committee found "so obscure that it cannot afford any authoritative guidance to the solution of our problem."

Dr. Mann led the discussion of Article VIII(2)(b). He urged the Committee to treat the Bretton Woods Agreements as a *fait accompli* and to accord them a degree of "respect, goodwill and loyalty" commensurate with a multilateral treaty of great magnitude. It was now an "inescapable fact," he said, that some exchange controls – sanctioned by the IMF – had "become respectable." "Much of our old learning," he therefore concluded, "has become obsolete."

---

[2] Article VIII(2)(b) reads as follows:

> Exchange contracts which involve the currency of any member and which are contrary to the exchange control regulations of that member maintained or imposed consistently with this Agreement shall be unenforceable in the territories of any member. In addition, members may, by mutual accord, cooperate in measures for the purpose of making the exchange control regulations of either member more effective, provided that such measures and regulations are consistent with this Agreement.

Not every member of the Committee was as prepared as Dr. Mann to go gentle into the good night of Bretton Woods. One member, Mr. Eder (nationality not clear from the record), "expressed almost total disagreement" with Dr. Mann's reports on Article VIII(2)(b). Based on his personal experience, Mr. Eder regarded exchange controls as simple theft; a violation of the "plighted faith of governments great and small." About Bretton Woods, Mr. Eder had this to say:

> [I]f we are to be faithful to the high standards of our profession, we must condemn [the Bretton Woods Agreement]. The International Monetary Fund was foredoomed to failure, as was pointed out by many at the time of its drafting and signature. It is being more or less openly violated by several governments. The latest report of the Fund is a confession of failure. The fundamental vice of the Bretton Woods Agreement, from a lawyer's standpoint, is that it purports to legalize devaluation of economics.

Exchange controls, and in particular the implications of Article VIII(2)(b), occupied the attention of the Committee well into the 1960s.

President Nixon took the United States off the gold standard in August 1971. Unmoored from gold, commercial parties looked for ways to "maintain value in real terms" in international payments. This subject preoccupied the Committee's attention during the 1970s. MOCOMILA meetings in the 1970s considered the use of "value clauses," Special Drawing Rights as a unit of account in international conventions, European Currency Units (ECU) and "real value" (compensatory purchasing power) clauses.

The global sovereign debt crisis that started in August 1982 with Mexico's default set much of the agenda for the Committee's meetings in the 1980s.

In the early decades of the Committee's existence, perhaps guided by the person or spirit of Dr. Mann, MOCOMILA saw its task as attempting to harmonize international monetary law. This led to the promulgation of draft conventions and statements of principles by the Committee to a far greater extent than is attempted by the 21st century MOCOMILA.

The Committee has, however, always shown a degree of topicality in the issues it discusses. Exchange controls in the 1950s and 60s. Monetary rules in the absence of the gold standard in the 1970s. Sovereign debt crises in the 1980s. And the development of the euro in the 1990s.

II. Ethics in Finance: A Progress Report

A. Introduction

There is a new focus on ethics in finance in the aftermath of the financial crisis. This development arises out of increasing public hostility toward the financial services industry, hostility that is rooted in a loss of trust. This loss of trust appears to result from a series of different incidents where bankers have engaged in significant misconduct.

The manipulation of the LIBOR rate to advantage certain financial institutions' proprietary positions is one. This was then followed by a different scheme, where bankers traded ahead of their customers in foreign exchange markets, in a technique that is called "front running." This technique generates profit by exploiting a customer's confidential trading information. The fact that the foreign exchange misconduct closely followed the LIBOR misconduct contributed to a widespread perception about standards.

There have been unsettling incidents involving traditional banking businesses. Here, there were disturbing examples of bankers "robo-signing" foreclosure papers, and ignoring customer rights and protections that depended on an intelligent and careful review of what was said in those papers. Further, there were real consequences to this behavior – families were displaced from their homes. Wholesale residential mortgage operations also saw abuses, although they were different in kind from the robo-signing that was done in retail residential mortgage foreclosures. In the wholesale space, bankers were packaging up loans that did not meet the represented underwriting criteria. The loans wer passed to securitizers, who used this "product" to back securities being sold to buyers. These buyers thought they were getting securities backed by good loans, which they were not. The crisis showed a different reality. With respect to both the retail and the wholesale practices, bankers allowed themselves to be portrayed as untrustworthy people who would engage in misconduct for money.

Popular post-crisis movies like *The Big Short* depicted bankers as predators, who would exploit any and every profit opportunity without regard to the impact on the customer. This depiction no doubt contributed to an overall loss of trust in banks. An earlier genre of popular movie, with *It's a Wonderful Life* being the best example, depicted the banker of an earlier time as a person deeply invested in the community who put the customer's interest ahead of his own. Both may have an element of caricature, but in the post-crisis era, the banker became a villain.

B. The New Focus on Culture

Since the crisis, some financial industry supervisors observed the new reality and called for reform.[3] They lamented that the industry had lost the trust of the people it served, and looked for things to do to restore trust. After considering a range of ideas, supervisors started thinking about cultural change as a necessary method to restore trust.

At the outset, many industry participants and industry apologists expressed skepticism about the effort to transform culture. Some attacked the concept as vague and ephemeral, and contrasted it to "harder" supervisory concepts like capital and liquidity. Others considered the idea as lacking in substance. Others studied the literature and came to appreciate that there was substance to what was being described as an ethical culture, and

[3] *See* Christine Lagarde, "Economic Inclusion and Financial Integrity," Address to the Conference on Inclusive Capitalism, May 27, 2014, *available at* https://www.imf.org/external/np/speeches/2014/052714.htm ("Trust is the lifeblood of the modern business economy… . To restore trust, we need a shift toward greater integrity and accountability. We need a stronger and systematic ethical dimension."); Mark Carney, "Rebuilding Trust in Global Banking," Speech at 7th Annual Thomas d'Aquino Lecture on Leadership, Ontario, Feb. 25, 2013, *available at* http://www.bankofcanada.ca/2013/02/rebuilding-trust-global-banking ("The real economy relies on the financial system. And the financial system depends on trust. Indeed, trust is imbedded in the language of finance. The word credit is derived from the Latin, *credere*, which means 'to have trust in.'"); William C. Dudley, "Enhancing Financial Stability by Improving Culture in the Financial Services Industry," Remarks at the Workshop on Reforming Culture and Behavior in the Financial Services Industry, Oct. 20, 2014, *available at* https://www.newyorkfed.org/newsevents/speeches/2014/dud141020a.html ("Unless the financial industry can rebuild the public trust, it cannot effectively perform its essential functions. For this reason alone, the industry must do much better.").

culture could meaningfully affect behavior.[4] These commentators focused on intellectual leaders like Professor Onora O'Neil, who describe qualities like honesty, competence and reliability. These individual characteristics comprise the foundation of trustworthiness – a predicate to trust.[5]

Further, a number of financial institution leaders began to appreciate that culture lies at the root of recent scandals.[6] These firms now understand that placing an emphasis on personal qualities like honesty, competence and reliability can translate into changed banker behavior. Leaders began incorporating such characteristics into their training programs and performance systems, and have started to see the benefits.

C. Translating Ethical Concepts into Real World Behavior

One prominent illustration of this has come in the United Kingdom, which has emphasized individual accountability through the new Senior Managers and Certification Regimes and through new, enforceable conduct rules.[7] Under these rules, a banker "must act with integrity" and "with due skill, care, and diligence." Further, bankers must be "open and cooperative" with regulators. To accompany these general principles, there is specific guidance as to what a banker should *not* do. For example, it would offend the integrity principle if a banker were to mislead a client about the risks of an investment.[8] With respect to the principle requiring competence, there is specific guidance that putting a customer into an unsuitable investment would fail the competency test.[9] It is not surprising that there is also guidance to the effect that a failure to supply a regulator with requested documents would violate the principle that a banker be "open and cooperative."[10]

The official sector within the United Kingdom is not alone. From within the industry on both sides of the Atlantic, there have been some notable developments. In the area of performance management, many financial institutions have introduced ethical components into their formalized appraisal systems. It has become common practice to see concepts like honesty, competence and reliability appear in the appraisal process. The appraisal process has become more qualitative, in sharp contrast to past practice where quantitative measures, like an employee's contribution to profit and loss, was the principal determinant of good performance. This is in line with the Group of Thirty's ambitious challenge to the industry to place quantitative and qualitative components on equal footing—that is, 50-50 parity between "how results are achieved" and "what is achieved."[11]

This change with respect to the appraisal process has a direct connection to compensation, because most compensation systems in the financial services industry are performance based. The appraisal is the measure of performance. Therefore, the introduction of cultural scoring now can have a direct impact on the level of an individual's compensation.

Discipline is another visible component of a material change in practice. At the Federal Reserve Bank of New York's most recent culture conference, one financial institution senior executive related anecdotal evidence of a marked change in practice in an unforgettable fashion. "In the past," he explained, an employee who engaged in significant misconduct would be "escorted secretly to the back door, his jacket would be pulled up over his head, and he would exit the bank anonymously, never to be seen or heard from again."[12] The bank population would not know what happened to the person, or why. The executive explained that the current situation was dramatically different. He said that "today, the same individual would be discharged, his conduct would be transparent to the bank population, and he would leave through the front door, escorted by security personnel with their boots to his back." By making examples of bankers who do not meet the bank's ethical standards, financial companies accomplish three distinct objectives. First, they send a most powerful message to the employee population about conduct that is impermissible. Second, they deter employees from making bad choices. Third, they send a powerful message to all stakeholders that will help to restore trust.

The fact that senior executives of financial institutions are speaking about ethical issues is noteworthy. Even more important is that they are "walking the talk" about such matters, meaning they are taking affirmative actions that show their words have meaning. Disciplining malefactors is one example. In many different financial institutions, there are disciplinary committees considering how the organization should act to influence culture, and these committees are reporting up to the "C" suite. Some have also created "ethical champions" within the organization, typically a responsible senior officer who is the "guardian of the corporation's integrity."[13]

[13] Thomas C. Baxter, Jr., "Reflections on the New Compliance Landscape," Remarks at the "New Compliance Landscape: Increasing Roles-Increasing Risks" Conference, New York City, July 24,

D. Momentum for the Movement to Restore Trust

As noted above, considerable skepticism greeted the initial call for reform of the industry's ethical culture. Over the last two years, this skepticism has abated. In its place we see the beginning of a reform movement.

Several months ago, the Group of Thirty published its report on ethical culture.[14] This highly respected body of financial industry leaders affirmed the need to restore trust and applauded the effort to accomplish the goal through culture. The Financial Stability Board has also picked up the trend. It published influential guidance on risk culture in April 2014[15] and sponsored a conference on culture in May of 2016. The Basel Committee picked up the theme of culture in its July 2015 Corporate Governance Principles.[16] The European Systemic Risk Board also addressed culture in its June 2015 Report on Misconduct Risk.[17] The Bank of England and other UK authorities sponsored the Fair and Effective Markets Review.[18] De Nederlandsche Bank has pioneered new approaches to group conduct by boards and senior management committees.[19] And, recently, the Financial Industry Regulatory Authority ("FINRA") announced it would pilot an examination of some of its members to probe the progress that securities firms are making with respect to culture.[20]

The real test, of course, is the impact on public trust, which is closely correlated to a real change in the conduct of bankers. When the public starts to see a change in banker behavior, with a commensurate effect on trustworthiness in the financial community, this will be significant progress. At this point, we may not have not seen substantial evidence that banker behavior and industry perception have changed. But the "green shoots" that are the first sign of spring are observable, and many are hopeful that the corner has been turned in restoring trust.

E. Future Steps Forward

In the near term, there are some other initiatives that might materially impact the ethical culture of the financial services industry.

One of the steps being discussed in the United States concerns a database containing the names of bankers who have been discharged because of misconduct.[21] The database

would be supported by Federal statutory law that would require financial institutions to report to the database. It would also immunize reporters from civil liability for misreporting, while at the same time containing due process protections for anyone who is adversely affected by a false report. The law would also require financial institutions to make a proper inquiry of the database before finalizing a hire for a significant position. The database is intended to solve the "rolling bad apples" problem, where a banker is discharged by one financial institution for misconduct, and goes on to commit the same misconduct at a successor employer. Because of a fear of civil liability, financial institutions respond to inquiries about former employees with their "names, ranks and dates of service." They do not reveal that such former personnel have engaged in bad acts. Consequently, employers make employment decisions on the basis of imperfect information about a candidate's prior conduct. The database would help employers make decisions that are better informed. Presumably, this additional information would have the salutary effect of stopping the bad apple from rolling.

A different step has been taken in the United Kingdom. There, employers must now report any actual or suspected misconduct by current or former employees to a central regulatory database.[22] Only the official sector will have access to this database. The new regulatory scheme also imposes a bank-to-bank inquiry and reporting requirement.[23] A supervised firm must check the industry references of prospective managers, material risk takers, or customer advisors. An institution must, upon receipt of an inquiry, relay any conclusions it has made as to whether a former employee violated any law, regulation, or conduct rule. In addition, the Banking Standards Board has commenced operation, and it promises to reset the bar for good conduct in the financial services industry within the United Kingdom. The Board will obtain much needed agreement as to what is better practice for financial professionals, and then this will become the standard for operating in the United Kingdom.

In the Netherlands, De Nederlandsche Bank is exploring several highly advanced examination protocols directed at culture. In addition, bankers are expected to execute a pledge where they will individually commit to certain conduct standards. We may soon be able to look to the Netherlands to see whether the ethical culture in Netherlands' financial institutions has been affected by these efforts to address culture.

F. Conclusion

There have been significant reforms of the financial services industry in the post-crisis period. Traditional measures addressing the capital and liquidity of individual institutions have materially improved the safety and soundness of the industry. The new focus on ethical culture has the promise of restoring a loss of trust in the industry. The effort to build a sound ethical culture in industry participants has the potential to get at the root cause of the loss of trust, and that root cause is the bad behavior of bankers. We look forward with anticipation and hope to see this change realized.

III. Decided cases in London and New York

The Global Financial Crisis was the catalyst for a considerable volume of litigation. Some of this has revolved around the insolvency of financial institutions such as Lehman.

[22] *See* FCA CP14/13, PRA CP14/14 (July 2014).
[23] *See* FCA CP 15/31, PRA CP 36/15 (Oct. 2015).

But in the leading financial centres of London and New York some has involved claims for losses suffered in the crisis. Claims have been brought by financial institutions, corporations and investors in an attempt to find deep pockets for compensation. Both England and New York are common law jurisdictions and both share a similar judicial philosophy to resolving financial disputes. The following is concerned with claims advanced at common law, rather than under the securities laws.

One of the most extraordinary of these claims was against the New York Fed in relation to its rescue of AIG. Although he failed with his private law claims for breach of fiduciary duties by the New York Fed (*Starr International Company Inc* v *Federal Reserve Bank of New York*, 742 F.3d 37 (2d Cir. 2014)), the major shareholder in AIG has had some success in the US Court of Federal Claims. In a judgment in early July 2015 the court held that although there was no entitlement to damages, the New York Fed had exceeded its mandate with the rescue. The government is appealing.

Indeed most private law claims have failed in both England and New York. There is a strong ethos of freedom of contract in commercial dealings, with the courts assuming that the parties can look after their own interests. If one side misrepresents a matter, the other side is assumed to be able to spot it or to take the trouble to uncover the real position. As a result of a case litigated over the Russian financial crisis in the late 1990s (*Peekay Intermark Ltd* v *Australia and New Zealand Banking Group Ltd* [2006] EWCA Civ 386; [2006] 2 Lloyd's Rep. 511), England has a doctrine of contractual estoppel. A contract can set out a basis of contracting, which can well fly in the face of the facts, but which the parties are estopped from denying. Thus the contract terms can acknowledge that the contract contains the entire agreement between the parties, that there have been no other representations than those set out in the contract, and that the parties have not relied on any other representations in entering into the contract.

Titan Steel Wheels Ltd v *Royal Bank of Scotland plc* [2010] EWHC 211 (Comm); [2012] 1 C.L.C. 191 is an example of how contractual estoppel was applied post crisis. It concerned derivatives the bank provided in June and September 2007, which turned sour. The company (a substantial European manufacturer) claimed that it should have been advised not to enter the transactions and that the advice it received was wrong. The judge held that if the bank had chosen to give advice it would have avoided any responsibility since the terms of the contract relieved it not only from any obligation to give advice but provided that any statements were not to be treated as advice, nor could they be relied upon by Titan, whether or not they did constitute advice.

An exceptional case in the English courts where an investor was able to establish a misrepresentation about an investment in a bond issued by AIG, which turned bad in the crisis, was *Rubenstein* v *HSBC Bank plc* [2012] EWCA Civ 1184; [2013] 1 All E.R. (Comm) 915, but that was really a consumer case.

There is a resonance with the English approach to misrepresentation and the duty to advise in contract doctrine in New York law. Thus under New York law sophisticated parties will be expected to protect themselves from misrepresentation and are permitted to do so by contractual provisions. Indeed, failure to take such steps means that, as a matter of law, they cannot establish the justifiable reliance which the doctrine of fraud demands. This was restated by the majority of the New York Supreme Court, Appellate Division, in *ACA Financial Guaranty Corp.* v *Goldman Sachs*, 106 A.D.3d 494, 967 N.Y.S.2d 1

(2013). (An appeal from that decision was dismissed by New York's highest court, the Court of Appeals: 22 N.Y.3d 909, 998 N.E.2d 392, 975 N.Y.S.2d 729.) There the plaintiff bond insurance company alleged that Goldman Sachs fraudulently induced it to issue a financial guarantee for a portion of an investment by misrepresenting that a non-party hedge fund was taking a long position in the investment, whereas it was actually a short seller. The court held (over a strong dissent) that the lower court had been in error in denying Goldman Sachs' motion to dismiss the causes of action.

HSH Nordbank AG v *UBS AG*, 95 A.D.3d 185, 941 N.Y.S.2d 59 (2012) was an action in fraud on what was essentially a credit-default-swap transaction. On appeal the Appellate Division of the New York State Supreme Court held that one reason the plaintiff bank could not sustain the action was that the contractual documentation contained a series of disclaimers that it was not relying on any representations made to it.

Negligence as a basis of action against financial institutions for losses suffered has not fared well in either England or New York. The advantage if it can be established is that it enables claims against parties who have no contract with the financial institution; the disadvantage is that both English and New York law restrict liability. In *Torre Asset Funding Ltd* v *Royal Bank of Scotland Plc* [2013] EWHC 2670 (Ch) a property investment company collapsed with the onset of the crisis. It had been funded through a number of interrelated agreements. The bank was the agent bank at the mezzanine level and Torre one of the funders at that level. With the collapse Torre was left empty handed and unsuccessfully advanced various claims against the bank, including one in negligent misstatement.

New York law limits negligent misrepresentation to situations involving actual privity of contract between the parties or a relationship so close as to approach that of privity. *Anschutz Corp* v *Merrill Lynch & Co,* 690 F.3d 98 (2d Cir. 2012), was a case where a number of claims were advanced under federal and state law regarding offerings of securities. Separate but related allegations in negligent misrepresentation failed against the credit rating agencies, Moody's and Standard & Poor's, for the ratings they had given the securities.

Onerous obligations flow if a fiduciary relationship (a relationship of trust and confidence) can be established in English and New York law. The essence of a fiduciary relationship is that the fiduciary must subordinate its own interests to those of its principal. Outside the historical categories where fiduciary relationships have been held to exist (trustee-beneficiary, agent-principal, director-corporation, etc.), English courts are generally hostile to the infiltration of the fiduciary concept into the commercial context and accept that parties can exclude the fiduciary concept by contract. Fiduciary law has got no further in the context of financial dealings. As with English law, parties under New York law are able to contract out of any possible fiduciary duties: *Bank of America, N.A. v. Bear Stearns Asset Management*, 969 F. Supp. 2d 339 (S.D.N.Y. 2013).

IV. The Operation of the European Banking Union: Institutional Developments (July 2014-March 2016)

A. General Overview

(a) The Creation of a European Banking Union ('EBU') was tabled at the Euro Area Summit of 29 June 2012, amidst the current fiscal crisis in the euro area, which became

manifest in 2010. The establishment of the EBU is aimed at creating a 'Europeanised bank safety net' consisting of three 'main' pillars:

- a Single Supervisory Mechanism exclusively for the banking sector (*i.e.*, not for the other two sectors of the financial system, insurance and securities) and mainly for credit institutions legally incorporated in euro area Member States, with regard to their micro-prudential supervision (see below under B),
- a Single Resolution Mechanism for unviable credit institutions (also mainly incorporated in euro area Member States), and a Single Resolution Fund to cover any resulting funding gaps, provided that a decision is made on the resolution of such credit institutions (see below under C), and
- a single deposit guarantee scheme and a single deposit guarantee fund (see below under D).

The most significant institutional developments towards establishing the EBU took place in the course of 2013 and 2014, in an exceptionally short timeframe under enormous political pressure (reflecting the widespread loss of public trust in the financial system, at least in some Member States). With the exception of the creation of a single deposit guarantee scheme, on which there are current developments, all the other main components of the EBU, *which apply mainly (but not exclusively) to the euro area Member States*, are in place.

(b) The new EU institutional framework on the EBU is coupled with a 'single rulebook,' adopted by the European Parliament and the EcoFin Council and further detailed by the European Commission and European Banking Authority ('EBA'). It is mainly a child of the recent (2007-2009) international financial crisis, is *applicable across all EU Member States* as part of the single market for financial services, is based on a 'total harmonisation approach,' and contains substantive rules on:

- the prudential regulation and supervision of credit institutions, in accordance with the provisions of the Capital Requirements Regulation ('CRR') and the fully amended version of the Capital Requirements Directive ('CRD IV'),
- their recovery and resolution, in accordance with the provisions of the Bank Recovery and resolution Directive ('BRRD') of the same institutions, and
- the guarantee of bank deposits, in accordance with the provisions of the Deposit Guarantee Directive ('DGSD') of the same institutions.

(c) The full Europeanisation of the 'bank safety net' presupposes nevertheless further institutional elements. Two of them are already in place:

(i) With the creation of the European Systemic Risk Board ('ESRB'), established under Regulation (EU) No 1092/2010 of the European Parliament and of the Council of 24 November 2010 "on European Union macro-prudential oversight of the financial system and establishing a European Systemic Risk Board" as part of the European System of Financial Supervision ('ESFS'), the macro-prudential oversight of the European financial system became the first – and single until 2014 – component of the Europeanised 'bank safety net.'

(ii) The second is the provision of direct public financial assistance to credit institutions by the European Stability Mechanism ('ESM') under the 'Direct

Recapitalisation Instrument' ('DRI'). This instrument entered fully into operation on 8 December 2014, after the requisite national procedures were completed by the euro area Member States, by means of a unanimous Resolution of the ESM Board of Governors. On the same day, the ESM Board of Directors adopted a Guideline on the modalities, including, *inter alia*, the eligibility criteria for the requesting ESM Member and the institution concerned, and the allocation of specific tasks to the Managing Director of the ESM, the Commission, the European Central Bank ('ECB') and, where appropriate, the International Monetary Fund, for providing financial assistance in the form of DRI.

There are, however, two additional elements that have not yet been addressed:

(i) The first is the provision of last resort lending to solvent but illiquid 'significant' credit institutions, directly supervised by the ECB in accordance with the SSMR, also directly by the ECB. Currently, this function is still considered to be a task for the national central banks – members of the Eurosystem. Indeed, 'Emergency Liquidity Assistance' ('ELA') is provided, according to the ECB Governing Council, by the national central banks of the Member States whose currency is the euro, against collateral not eligible for the ECB's monetary policy operations. The ECB Governing Council is allowed to prohibit this, if it is deemed in conflict with the ECB objectives and tasks according to Article 14.4 of the Statute of the ESCB and the ECB.

(ii) The second aspect is the Europeanisation of the regime for the winding-up of insolvent credit institutions, which is governed by Directive 2001/24/EC of the European Parliament and of the Council of 4 April 2001 "on the reorganisation and winding-up of credit institutions" (as in force after its amendment by Article 117 BRRD). Under this legal act, credit institutions' winding-up proceedings are national and will remain so at least for the foreseeable future, since the discussions on setting up the EBU did not touch upon the prospect of amending this regime.

B. The Single Supervisory Mechanism

1. The Legal Framework

(a) The Single Supervisory Mechanism ('SSM') is based on Council Regulation (EU) No 1024/2013 of 15 October 2013 "conferring specific tasks on the European Central Bank concerning policies relating to the prudential supervision of credit institutions" (the 'SSMR'). The institutional framework pertaining to the SSM, which became operative on 4 November 2014, is further specified in:

- several ECB legal acts on the detailed operational arrangements for the implementation its tasks under the SSMR, including Regulation (EU) No 468/2014 of 16 April 2014 "establishing the framework for cooperation within the SSM between the ECB and national competent authorities and with national designated authorities ('SSM Framework Regulation'),"
- an Interinstitutional Agreement between the European Parliament and the ECB of October 2013 "on the practical modalities of the exercise of democratic accountability and oversight over the exercise of the tasks conferred on the ECB within the framework of the SSM,"

- a Memorandum of Understanding between the Council and the ECB of December 2013 "on the cooperation on procedures related to the SSM," and
- Regulation (EU) No 1022/2013 of the European Parliament and the Council, which amended the Regulation governing the operation of the EBA in order to clarify the relationship between the ECB and the EBA, to prescribe the new tasks and powers of the EBA, and to introduce amendments to the EBA's governance.

2. The Comprehensive Assessment

In view of the assumption of its tasks, the ECB was given the power to ask national competent authorities to provide it, from 3 November 2013, with all relevant information necessary to carry out a 'Comprehensive Assessment,' including a balance-sheet assessment, of the credit institutions of the participating Member States. The ECB, in collaboration with the national competent authorities and supported by the private company *Oliver Wyman Consultants*, conducted since January 2014 the Comprehensive Assessment of the credit institutions and supervised groups to be directly supervised by it, consisting of three (3) components:

- a 'Supervisory Risk Assessment' to review, quantitatively and qualitatively, key risks, including liquidity, leverage and funding,
- an 'Asset Quality Review' to enhance the transparency of bank exposures by reviewing the quality of banks' assets, including the adequacy of asset and collateral valuation and related provisions, and
- a 'stress test,' in collaboration with EBA, to examine the resilience of banks' balance sheet to stress scenarios.

The results of this exercise were published on 26 October 2014 and are contained in the ECB's "Aggregate Report on the Comprehensive Assessment."

3. The Operation of the SSM

(a) The SSMR is based on four (4) main elements:

- conferring specific tasks *on the ECB* for the micro-prudential supervision of certain types of financial firms, in transfer from national competent (supervisory) authorities, *and* establishing the SSM in relation to the *exercise* of these specific tasks,
- specifying the financial firms with regard to which these specific tasks should be conferred on the ECB,
- incorporating the Single Supervisory Mechanism in the ESFS without, in principle, touching upon the tasks of its components, and
- creating 'Chinese walls' within the ECB to ensure the effective separation of its monetary policy and other tasks from its (new) supervisory tasks.

(b) The SSMR confers on the ECB specific tasks *"concerning policies relating to the prudential supervision of credit institutions"* (a phrase taken over *verbatim* from Article 127(6) TFEU), with a view to contributing to the safety and soundness of credit institutions and the stability of the financial system within the EU and each Member State, which is the main objective of the ECB under the SSMR, and to preventing regulatory arbitrage, fully taking into account and caring for the unity and integrity of the internal

market (a duty with which it was assigned). Obviously, this ECB objective is different from the primary objective of the European System of Central Banks under the TFEU, i.e., maintaining price stability. The eventuality of conflicts of interest arising from concurrently pursuing these two objectives was the reason behind the introduction of 'Chinese walls,' separating the monetary and supervisory functions of the ECB in accordance with Article 25 SSMR.

(c) The SSMR applies mainly to 'participating Member States,' which are defined as meaning both the Member States whose currency is the euro *and* the Member States with a derogation having established a 'close cooperation' under Article 7 SSMR.

(d) The assignment to the ECB of specific tasks in relation to the micro-prudential supervision of financial firms exclusively covers credit institutions, 'financial holding companies,' in the context of the conduct of consolidated supervision of banking groups, and 'mixed financial holding companies,' in the context of the conduct of supplementary supervision on financial conglomerates including credit institutions, to the extent that they are incorporated in euro area Member States ('supervised entities'). In addition, Article 6 SSMR established, *in principle*, a 'two-tier system' with regard to the distribution of powers within the SSM, distinguishing between 'significant' and 'less significant' supervised entities, the former being directly supervised, as to the specific tasks conferred upon it, by the ECB, and the latter being supervised by the national competent authorities within the SSM.

C. The Single Resolution Mechanism and the Single Resolution Fund

1. The Single Resolution Mechanism

(a) The Single Resolution Mechanism ('SRM') was established by virtue of Regulation (EU) No 806/2014 of the European Parliament and of the Council of 15 July 2014 "establishing uniform rules and a uniform procedure for the resolution of credit institutions and certain investment firms in the framework of a Single Resolution Mechanism and a Single Resolution Fund (...)" ('SRMR'). The adoption of this Regulation, which entered into force on 19 August 2014, was a necessary complement to the SSMR, as it would be a paradox if credit institutions were directly supervised (by the ECB) at the European level, but, in the event of a need for resolution (upon proposal of the ECB), the relevant decision were to be made at national level. In this context, of particular importance are also:

- the Interinstitutional Agreement between the European Parliament and the Single Resolution Board of 16 December 2015 "on the practical modalities of the exercise of democratic accountability and oversight over the exercise of the tasks conferred on the Single Resolution Board within the framework of the Single Resolution Mechanism," and
- the Memorandum of Understanding between the Single Resolution Board and the ECB of 22 December 2015 "in respect of cooperation and information exchange."

(b) The objective of the SRMR is the establishment of *uniform rules and a uniform procedure* for the resolution of the specific categories of entities which are established in the participating Member States. These uniform rules and this uniform procedure must be applied by the Single Resolution Board ('Board'), together with the Council, the

Commission and the national resolution authorities within the framework of the SRM. The involvement of the Council and the Commission is a by-product of the fact that the Board is an agency and does not have a legal anchor in the TFEU.

(c) The Board, established by the SRMR and operational by 1 January 2015, is responsible for the effective and consistent functioning of the SRM, like the ECB for the SSM. In principle, it is also responsible for drawing up the resolution plans and adopting all resolution decisions relating to credit institutions established in participating Member States, as well as to 'significant' and 'cross-border' groups. On the other hand, national resolution authorities must perform, and are responsible for, specific tasks with regard to other credit institutions and groups, without prejudice to the responsibilities of the Board for the tasks conferred on it by the SRMR.

2. The Single Resolution Fund

(a) The SRM is supported by the Single Resolution Fund ('SRF'). The use of the SRF was contingent upon the entry into force of the Intergovernmental Agreement signed by twenty-six (26) EU Member States "on the transfer and mutualisation of contributions to the Single Resolution Fund" ('SRF Agreement' or 'IGA'). This Agreement, which entered into force on 1 January 2016 and to which Sweden and the United Kingdom are not Contracting Parties, provides for the transfer of the funds raised at national level towards the SRF, and the progressive merger of the different funds raised at national level (by the national resolution funds) to be allocated to the SRF's national compartments.

(b) The Board, which is the owner of the SRF, may use it only for the purpose of ensuring the efficient application of the resolution tools and exercise of the resolution powers, and in accordance with the resolution objectives and the principles governing resolution. Neither the EU budget nor the national budgets may, under any circumstances, be held liable for expenses or losses of the SRF.

(c) In principle, the SRF is being financed by credit institutions' *ex-ante* contributions. By the end of the transitional period of eight (8) years from 1 January 2016 the 'available financial means' of the SRF must reach at least 1% of the amount of covered deposits of all credit institutions authorised in the participating Member States ('target level'). During the transitional period, contributions to the SRF must be spread out in time evenly until the target level is reached, with due account to the business cycle's phase and the impact that pro-cyclical contributions may have on the financial position of contributing institutions.

(d) On 17 June 2016 the Council of the EU in its released Conclusions on a roadmap to complete the Banking Union took note of the intention of Member States to start work in September 2016 if and when all participating Member States have fully transposed the BRRD. In this context the Council would also take stock of the bridge financing arrangements, noting that participating Member States are committed to sign the Loan Facility Agreement to the SRF in case of possible funding shortfalls by the time. They also reaffirmed the need to have the common backstop fully operational at the latest by the end of the transitional period and that it may be decided that the backstop may become operational ahead of the transition period in line with certain risk reduction measures such as implementing the Total Loss Absorbing Capacity standard and further harmonisation of options and national discretions currently set out in the CRR/CRDIV.

D. The European Deposit Insurance Scheme and the European Deposit Insurance Fund

(a) Until 2015, the prospect of establishing a European deposit guarantee scheme, as the third main component of the EBU, has only been discussed in terms of principles and 'high-level politics.' Deposit guarantee schemes ('DGSs') remain national, even though their merger or the establishment of cross-border DGSs is not ruled out.

(b) The prospective of creating a 'European Deposit Insurance Scheme' was laid down boldly in the "Five Presidents' Report" of 22 June 2015 entitled: "Completing Europe's Economic and Monetary Union," within the framework of the proposals on the creation of an (EU) 'Financial Union.' Then, on 24 November 2015, the Commission submitted a proposal for a Regulation of the European Parliament and of the Council "amending Regulation EU No 806/2014 in order to establish a European Deposit Insurance Scheme." This scheme (the 'EDIS') is planned to be introduced gradually, in three (3) stages under strict safeguards, and will be built on the existing system, composed of national DGSs, while individual depositors will continue to enjoy the same level of protection (100,000 euros). A European Deposit Insurance Fund (the 'EDIF') will also be created from the outset. It will be financed directly by risk-adjusted credit institutions' contributions. The EDIF's management would be entrusted to the SRB.

(c) According to the proposal, the three phases in the evolution of the EDIS are as follows:

(i) Phase 1: re-insurance: during the first three-years phase (2007-2009), the 're-insurance approach' will apply, whereby a national DGS will have access to EDIS funds only when all its own resources are exhausted, and if it fully complies with the DGS Directive 2014/49/EU. EDIS funds would provide additional funds to a national DGS only up to a certain level. National DGSs can access the EDIS only when justified, since EDIS funds will only be available, if the relevant rules in the DGSD have been fully applied by the Member State concerned. Use of EDIS funds will be closely monitored, and any EDIS funds found to have been received inappropriately by a national DGS will have to be fully reimbursed.

(ii) Phase 2: co-insurance: in 2020, the EDIS will become a progressively mutualised system ('co-insurance'), still subject to appropriate limits and safeguards against abuse. During this phase, a national DGS will not be required to exhaust its own funds before accessing EDIS funds. The EDIS will be available to contribute a share of the costs from the moment when the DGS is activated and depositors need to be reimbursed, leading to a higher degree of "risk-sharing between national DGSs through the EDIS." The share to be contributed by the EDIS will start at a level of 20% and gradually increase to 100% over a four (4) year period.

(iii) Phase 3: full insurance: the EDIS will fully insure national DGSs as of 2024. This is the same year when the SRF and the requirements of the DGS Directive will be fully phased-in.

(d) On 17 June 2016 the Council of the EU in its released Conclusions on a roadmap to complete the Banking Union listed as a key step that the Council will continue

constructive work on EDIS at technical level; further, that negotiations at political level will start as soon as sufficient further progress has been made on the measures on risk reduction. It was also taken note of the intention of Member States to have recourse to an Intergovernmental Agreement (IGA) when political negotiations on EDIS start.

V. Payments Recent Developments: Virtual Currencies

Recent developments in payment and settlement systems have occurred particularly in prepaid cards, mobile payments, and securities settlement. On the regulatory side the highlights are the US Federal Reserve Faster Payments Initiative and the EU Payment Services Directive (PSD)-2. However, the emergence of virtual currencies may have overshadowed all other developments and is the subject of this review.

Originally, virtual currency was narrowly defined to cover either "in-game only" schemes or schemes facilitating only the purchase of virtual goods and services.[24] It was contrasted with digital currency that could be used for the purchase of goods and services in the real economy.[25] Or else, the latter category was limited to cryptocurrencies, discussed further below. In a broad sense, both virtual currencies and cryptocurrencies were considered as types of digital currencies.[26] In this sense, a digital currency or digital money was understood to be an Internet-based medium of exchange distinct from physical (such as banknotes and coins) that exhibits properties similar to physical currencies, but allows for instantaneous transactions and borderless transfer-of-ownership.[27]

Using digital currencies to both narrowly mean cryptocurrencies as well as broadly to cover both virtual currencies and cryptocurrencies has been confusing and led to a new taxonomy. Thus, in a 2012 Report on virtual currency schemes, the ECB provided the following definition: a virtual currency is a type of unregulated digital money which is issued and usually controlled by its developers, and used and accepted among the members of a specific virtual community.[28]

The Report went on to classify virtual currency schemes as: (i) closed; (ii) having unidirectional flow; and (iii) having bidirectional flow. In principle:

- *Closed* schemes have no link with the real economy and are "in-game only" schemes. Having paid a subscription fee, a user earns the virtual money based on his or her online performance.
- Under a *unidirectional-flow scheme* the virtual currency can be purchased with fiat currency but cannot be exchanged back to fiat currency. The virtual currency may be used to purchase virtual goods and services and possibly, depending on the terms of the scheme, also goods and services in the real economy.

[27] Digital currency - Wikipedia, the free encyclopedia, https://en.wikipedia.org/wiki/Digital_currency.

[28] European Central bank/Eurosystem, *Virtual Currency Schemes*, October 2012, at 6, *available at* https://www.ecb.europa.eu/pub/pdf/other/virtualcurrencyschemes201210en.pdf.

- Finally, in a *scheme with a bidirectional flow*, a user can buy and sell the virtual currency for fiat currency and may use the virtual currency to transact for goods and services in both the virtual world and the real world.

In a subsequent report published in February 2015,[29] the ECB questioned whether virtual currency is 'money' and yet recognized that virtual currency may be regulated. Accordingly it revised its definition to say that a virtual currency is: a digital representation of value, not issued by a central bank, credit institution [i.e., 'bank'] or e-money institution, which, in some circumstances, can be used as an alternative to money.[30]

Along the same lines, and while acknowledging "the fast evolving nature of the industry" so that "a universal definition has yet to emerge," an IMF study nevertheless went on to define virtual currencies to be: digital representations of value issued by private developers and denominated in their own unit of account.[31]

Under this taxonomy, besides virtual currency, the other category of digital currency is e-money, loaded on a store-value product,[32] or even bank money that can be accessed through a digital device.[33] However, to the extent that e-money is denominated in the unit of account of an official currency, and is redeemable at par[34] in banknotes and coins of this currency, whether directly or indirectly via bank money, no good purpose is served by treating e-money as a sub-category of a broad category which covers side by side with it virtual currency. The same certainly applies to bank money accessible by means of a digital device. By reference to fiat currency and bank money, instead of highlighting the distinctive nature of virtual money, this taxonomy blurs it.

A similar difficulty also arises in connection with the category of a centralized virtual-currency scheme. Arguably, as long as it is denominated in the unit of account of an official currency, and is redeemable at par[35] in banknotes and coins of this currency, whether directly or indirectly via bank money, it is a type of e-money. Indeed, a centralized system of alternative currency,[36] unlinked to an official currency, may

[34] Though possibly subject to a transaction fee.

[35] Though possibly subject to a transaction fee.

[36] An alternative currency (or private currency) is any currency used as an alternative to the dominant national or multinational currency systems. They are created by an individual, corporation, or organization, they can be created by national, state, or local governments, or they can arise naturally as people begin to use a certain commodity as a currency. Mutual credit is a form of alternative currency, and thus any form of lending that does not go through the banking system can be considered a form of alternative currency. When used in combination with or when designed to work in combination with national or multinational fiat currencies they can be referred to as complementary currency. Most complementary currencies are also local currencies and are limited to a certain region. Barters are another type of alternative currency. These are actually exchange systems, which only trade items; thus without the use of any currency whatsoever. Finally, LETS

exist.[37] An alternative currency which can be used only over the Internet may truly be characterized as virtual currency albeit in the broad sense of the term.[38] At the same time, particularly in relation to the payment and settlement mechanism, in the narrow and yet principal sense, virtual currency schemes are decentralized.[39]

FinCEN is quoted to say that decentralized digital currency is one: "(1) that has no central repository and no single administrator, and (2) that persons may obtain by their own computing or manufacturing effort."[40]

Decentralized virtual currency schemes use encryption techniques, particularly public-key cryptography,[41] to regulate the generation of units of currency and verify payments.[42] The underlying currency is thus called cryptocurrency, which is a digital asset with verifiable mathematical properties that can be transferred directly between users on a distributed ledger without relying on a centralized protocol operator. Both its creation and transfer are premised on 'smart contracts' of which terms are recorded in a computer rather than legal language.

A distributed ledger is an asset database that can be shared across a network of multiple sites, geographies or institutions. Its underlying technology is the blockchain, which is: a type of a database that takes a number of records and puts them in a block … Each block is then chained to the next block, using a cryptographic signature. This allows blockchains to be used like a ledger, which can be shared and corroborated by anyone with the appropriate permissions.[43]

Accuracy of the ledger is corroborated by consensus.

Participants in a cryptocurrency network hold their keys in digital wallets. A payer accesses his or her digital coins stored in the blockchain using his or her private key and

(Local Exchange Trading Systems) is a special form of barter which trades points for items, under which for example, one point stands for one worker-hour of work: https://en.wikipedia.org/wiki/Alternative_currency.

[37] Airmiles points fit into this category. Contrary to the 2012 ECB Report, *supra* note 28 at 15, I thus disagree with the classification of frequent-flier programmes as virtual currency schemes.

[38] Facebook Credits, discussed in the 2012 ECB Report *supra* note 28 at 13 is a good example.

[39] In this context, 'decentralized' is used as the opposite of 'centralized.' In fact, as explained below, the operation of a 'decentralized' virtual currency scheme is premised on the operation of a 'distributed' ledger. For the difference among 'centralized,' 'decentralized,' and 'distributed,' *see, e.g.,* http://www2.cffn.ca/usha/part-iii-article-by-pramod-dhakal/129-the-law-of-rule-centralized-decentralized-and-distributed-systems.

[40] https://bitcoinmagazine.com/articles/fincen-bitcoin-users-not-regulated-exchanges-are-1363675774.

[41] Public-key cryptography, or asymmetric cryptography, is any cryptographic system that uses two kinds of keys: *public keys* may be disseminated widely, while *private keys* are known only to the owner. In a public-key encryption system, any person can encrypt a message using the public key (better imagined as a lock) of the receiver and leave it on a public server or transmit it on a public network. Such a message can be decrypted only with the receiver's private key. *See* https://en.wikipedia.org/wiki/Public-key_cryptography.

[42] https://www.google.ca/search?q=crypto+currency&sourceid=ie7&rls=com.microsoft:en-CA:IE-Address&ie=&oe=&gfe_rd=cr&ei=hf3iVpLqJIfdswSny6OAAg&gws_rd=ssl.

[43] UK Government Office for Science, *Distributed Ledger Technology: beyond the block chain* (2016) at 17.

sends payment to the payee using the latter's public key. The payee receives payment using his or her private key and the payer's public key. For virtual currencies, specialized trading platforms function as marketplaces while exchanges offer trading services.[44]

The emergence and rise of virtual currencies has raised significant legal and regulatory questions. An overarching one is whether a virtual currency is 'money' or 'currency.' In the absence of both physical existence and official status it is not 'currency'; however, is it widely used to exchange value in transactions so as to function as a medium of exchange, storage of value and unit of account and is thus 'money'?[45] This is a matter of importance for both private and public laws. A virtual currency is, however, certainly a means of payment so as to be of interest to central banks in relation to the stability of prices, the financial system, and the payment system. Central banks are also concerned with the lack of legal basis and the risk to their reputation.[46] A more detailed list of regulatory concerns covers in addition to financial stability and monetary policy matters items such as financial integrity, consumer protection, taxation, exchange controls and capital flow management.[47] Underlying many of the concerns are both the fluctuating value of each virtual currency and the absence of central governance authority. And of course there are the 'usual' payment system issues of transparency and fairness of terms and fees, hacking, finality of payment, and the allocation of losses caused by fraud, error or insolvency. In a federal state there may also be an issue as to the appropriate level of government to address each issue.

In the United States, regulatory measures have been taken by individual states.[48] A draft of the Regulation of Virtual Currency Business Act is currently emerging as a project of the National Conference of Commissioners on Uniform State Laws (NCCUSL).[49] Broadly speaking, the project covers licensing; examinations, reports, and records; permissible investments; and enforcement. Subject to some refinements and express exclusions, Section 103(24) of the present draft defines "virtual currency" as "any digital unit of value that is used as a medium of exchange or that substitutes in transaction for money but that is not money." "Money" is defined in Section 103(8) by reference to its issue or designation by a government body.

Sooner or later regulatory and legislative measures will have to take place to accommodate the quickening pace in which virtual currencies evolve.

VI. The East African Community Monetary Union

A. Background

The East African Community (EAC) is comprised of the Republics of Uganda, Kenya, Tanzania, Rwanda, Burundi and South Sudan.[50] The Treaty that established the EAC anticipated other states joining the community in the future subject to meeting key criteria such as geographical proximity, the maintenance of a market driven economy and subscribing to the principles of democracy and the rule of law.[51] The EAC is intended to be a complete union and the Treaty lays down the key integration stages of a 'customs union, a common market, subsequently a monetary union, and ultimately a political federation.'[52] The customs union and common market have already been established and are functioning incrementally well.

The Partner States agreed to cooperate on monetary and financial matters, including monetary and fiscal harmonisation, macro-economic coordination, and banking and capital markets development. The Treaty mandates partner states to conclude protocols in each area of cooperation that spell out the objectives and scope of cooperation and integration and the institutional mechanisms for such cooperation and integration. The protocols form an integral part of the treaty.[53]

The EAC Monetary Protocol was signed in November 2013 and announced by the Summit in November 2014.[54] The roadmap attached to the Protocol sets the agreed time for implementation as ten years, thus taking the target date for the single currency to 2024. There are transitional arrangements providing for the progressive coordination of various processes and institutions, in particular the EA Monetary Institute to do preparatory work for the EA Central Bank. While there are fears and at the same time excitement among the population especially after the episodes involving the Euro, the prognosis is that monetary integration is likely to be successful.

There was a prior long history of close cooperation among Uganda, Kenya and Tanzania, including monetary cooperation under the East African Currency Board, which was established in 1905 and issued a joint currency in 1919 but subsequently dissolved. All the countries are members of the African Union, the United Nations and the International Monetary Fund and they receive financial and technical support from the European Union and agencies such as TradeMark East Africa.[55] One would therefore expect the new monetary union to conform to the norms of international monetary law.

---

[50] The Republic of South Sudan was admitted as a member at the 17th Ordinary Summit of EAC Heads of State held in Arusha, Tanzania on 2 March 2016.

[51] Treaty for the Establishment of the East African Community 1999, amended in 2006 and 2007Article 3.

[52] Treaty for the Establishment of the East African Community Articles 2(2), 75, 76 and the respective Protocols.

[53] Treaty for the Establishment of the East African Community Article 151.

[54] Protocol on the Establishment of the East African Community Monetary Union 2013. It is in force because it was ratified by each one of the Partner States and the instruments of ratification of all Partner States deposited with the Secretary General (Article 30).

[55] TradeMark East Africa is an organisation funded by a range of governmental development agencies with the aim of facilitating economic development through trade. The investors include agencies from Belgium, Canada, Denmark, Finland, Netherlands, Sweden, UK, and USA.

B. Legal Framework for EAC Monetary Integration: Protocol on the Establishment of the EAC Monetary Union

The Protocol contains comprehensive provisions on the monetary union, key among which are the following:

(1) *Establishment of Monetary Union*: The Protocol establishes the EAC Monetary Union, which shall be realised progressively and governed by the laws of the Community (Article 2).

(2) *Objective*: The objective of the EAC Monetary Union is to promote and maintain monetary and financial stability aimed at facilitating economic integration to attain sustainable growth and balanced development of the Community (Articles 3, 7, 11).

(3) *Scope of Cooperation in the Monetary Union*: Pursuant to the Treaty obligation to cooperate in monetary and financial matters, the Partner States have agreed to:
   a. harmonise and coordinate their fiscal policies;
   b. formulate and implement a single monetary policy and a single exchange rate policy;
   c. develop and integrate their financial, payment and settlement systems;
   d. adopt common principles and rules for the regulation and prudential supervision of the financial system;
   e. integrate their financial management systems;
   f. harmonise their financial accounting and reporting practices;
   g. adopt common policies and standards on statistics; and
   h. adopt a single currency (Article 4).

(4) *Pre-requisites for the Monetary Union*: For the purposes of realising the monetary union, partner states should:
   - fully implement the customs union and common market;
   - harmonise many of the items in Article 4, summarised above; and
   - adhere to some quantitative criteria geared to macroeconomic convergence; namely, core inflation (5%), fiscal deficit (6% of GDP) and the ratio of tax to GDP of 25%. (Articles 5 & 6).

(5) *Macroeconomic Policy Framework*: Partner States have agreed to a broad policy framework comprising of fiscal policies, monetary policy and exchange rate policy (Article 7). The framework on fiscal policies demands of Partner States substantial coordination, information disclosure and the avoidance of harmful tax competition, in addition to the creation of an institutional mechanism (Council)[56] to implement the fiscal policies (Article 8).

(6) *Economic Shocks*: Partner States have also agreed to establish mechanisms for monitoring risks, building resilience and managing economic shocks. These mechanisms include measures to avoid or mitigate risk that may originate in a Partner State and threaten the economic stability of the monetary union, and measures for stabilising the monetary union or the economy of a Partner State in the event of an economic shock. Particular mechanisms referred to include an early-warning system and a stabilisation facility for use in the event of a Partner State experiencing or being threatened with a severe exogenous economic shock. There is some flexibility for states to exceed fiscal deficit targets (Article 10).

[56] 'Council' means the Council of Ministers of the Community established by Article 9 of the Treaty.

(7) *Monetary Policy and Institutions*: *EACB as Key Institution*: The Protocol anticipates the creation of an East African Central Bank (EACB), which, together with the national central banks, will form a functionally integrated system of central banks. The EACB shall be independent and shall not be influenced by any Partner State. The Partner States in the single currency area shall provide capital for the bank (as determined by the Council) and the financial rights and obligations of the Partner States in the single currency area in relation to the EACB shall be distributed in accordance with a financial key,[57] determined by the Council, and shall be adjusted every three years (Article 20). The Partner States in the single currency area undertake to transfer reserves to the EACB (Article 12(3) and (4)).

The EACB is mandated to formulate a single monetary policy, which shall be binding on Partner States in the single currency area. The primary objective of monetary policy shall be to achieve and maintain price stability, and also contribute to financial stability, and economic growth and development (Article 11). The EACB shall formulate a single exchange rate policy for the single currency area and the exchange rate regime shall be free floating (Article 12(1) and (2)).

Article 21 provides for the establishment of institutions to support the Monetary Union; for example on surveillance, compliance, enforcement and statistics; while Article 23 puts in place transitional institutions; and in particular, the EA Monetary Institute to undertake preparatory work for the Monetary Union.

(8) *Currency*: There will be a new single currency if at least three Partner States that meet the convergence criteria adopt the single currency and, thereby, form the single currency area. The single currency, whose name has not yet been determined, will be legal tender in the single currency area and will be effective on a date determined by the Summit within a ten-year timeline. The single currency shall be used in the payment and settlement systems for the settlement of all transactions in the single currency area, except as otherwise provided by an Act of the Community (Article 18).

(9) *Financial, Payment and Settlement Systems*: The Protocol requires Partner States to develop and operate an efficient, stable and integrated financial system.[58] The 'financial system' is defined very broadly and includes:

a. banking;
b. capital and money markets;
c. insurance;
d. retirement benefits;
e. micro finance; and
f. other financial services.

The financial system shall, among other specified objectives, promote the development of the financial sector, promote financial inclusion and deepening, facilitate regulation and prudential supervision of the financial sector, facilitate the

[57] 'Financial Key' means the cost and benefit sharing formula or figure indicating the financial contribution of each Partner State in the single currency area in relation to the East African Central Bank (Article 1, Interpretation).

[58] 'Financial system' means interconnected financial institutions, markets, instruments, services, practices and transactions in the Community' (Article 1, Interpretation).

development of the financial system infrastructure,[59] and facilitate the orderly, fair and transparent market conduct of the financial sector (Article 14).

The Partner States are required to develop and implement secure, efficient, reliable and integrated payment and settlement systems so as to ensure the efficient flow of financial transactions within the monetary union. The Partner States have undertaken to adopt an integrated trading and securities depository system and to harmonise and integrate the payment and settlement system financial market infrastructure with other systems (Article 15).

(10) *Measures to address imbalances*: The Protocol enjoins the Council to develop measures to support a Partner State that experiences macroeconomic or structural imbalances arising from the implementation of the Protocol (Article 24).

(11) *Policies, Laws and Systems*: Last but not least, Article 22 requires the harmonisation of policies, laws and systems to support the Monetary Union. One notes, in this regard, an elaborate structure for the approximation and harmonisation of the commercial laws of the EAC that is well funded to support the regional integration project. There is also the EAC Court of Justice consisting of trial and appellate levels that may in the future be called upon to resolve commercial disputes.[60]

C. Observations

The overarching aims of EAC integration are to foster unity and increase trade among Partner States. Monetary Union is an advanced stage of true and deeper EAC integration and also contributes to the integration process.[61] While the EAC Partner States have yet to agree on the name of the new currency, the name will be decided upon by the Summit (Heads of State) upon the recommendation of the Council. They have also not yet decided the location of the new central bank but there are criteria in place for hosting EAC institutions and they will be followed.

Granted that the target date of 2024 for the full implementation of the monetary union is ambitious, this prospective review believes that the global and local context will result in the irreversible and successful adoption of a single currency and a common currency area. Success is reasonably assured since the Partner States have agreed on differentiated integration (also called 'variable geometry' or 'multi-speed EAC') for the implementation of the monetary union. This is implied in Article 18(2) of the Protocol which provides that the single currency shall be adopted when at least three Partner States meet the requirements. Several historical and economic factors support this prognosis for success. First, the success story of the European monetary union, albeit contested in quite a few circles,[62] has stimulated a renewed interest in monetary union in the region and provided a ready model to emulate. The EAC Partner States are well aware of the

[59] 'Financial market infrastructure' means a multilateral system among participating institutions, including the operator of the system, used for the purposes of clearing, settling, or recording payments, securities, derivatives or other financial transactions (Article 1, Interpretation).

[60] Most of the disputes that have so far been to the court relate to human rights, constitutional interpretations and administrative law.

[61] For the thesis that there is a strong political dimension to monetary union, *see* Mario Draghi, "Stability and Prosperity in the Monetary Union" in Project Syndicate, 2 January 2015 *available at* www.project-syndicate.org/print/ecb-eurozone-economic-union-by-mario-draghi.

[62] For the arguments for and against the European monetary integration see Paul Craig and Grainne de Burca, *EU Law Text, Cases and Materials*, 5th edition (Oxford University Press 2011) 701-703.

history of monetary failure in previous times in this and other regions[63] and have provided in the Protocol fortifications against known problems. For example, the EAC Monetary Union Protocol provisions on economic shocks, risk sharing and addressing imbalances[64] anticipate the recent debate concerning monetary transfers among euro zone countries. Similarly, the EAC right from the outset requires fiscal and capital market harmonisation, which is a structural issue that the European Union is grappling with.[65]

The local context also augurs well for the EAC monetary union. First, free exchange rates and full convertibility are operational in all the Partner States. Secondly, there is little sentimental attachment to the local currencies because they are generally weak, with a cross section of society ranging from astute investors to public servants and farmers preferring a stronger currency over its name. The dollarization[66] of the economies in the top echelons of society and in business circles provides proof of this realistic attitude. Thirdly, the whole process of EAC integration has the support of the supranational institutions (IMF and World Bank), the major foreign countries involved in the region (i.e., the European Union), and the business sector. These factors in combination reduce the hurdles to changing the currency and ceding control of monetary policy and money supply to a common authority.

The fragility of the economies of the EAC Partner States may also be a strong reason for monetary union to take hold. Monetary union is likely to reduce the cost of conducting regional business (eliminating exchange-rate risk and facilitating region-wide price harmonisation), enhance currency stability and credibility, encourage internal and international tourism, and increase regional and foreign direct investment.[67] In the search for sustainable growth and economic development, the EAC monetary union is a big innovation that has been broadly welcomed.

VII. Crowdfunding in International and National Regulatory Frameworks

A. Background

The EU regulators have defined crowdfunding as "a means of raising finance for projects from 'the crowd,' often by means of an Internet-based platform through which project owners 'pitch' their idea to potential backers, who are typically not professional investors."[68]

The benefit appreciated by the regulators is providing funds for projects which are normally not tackled by banks or other professional financial institutions, at least not at

reasonable prices, due to related risks or small size. What are the reasons why authorities are considering regulation?

Crowdfunding is not restricted to charitable aspects. There are two commercial types: lending (commonly known as peer-to-peer lending) and investment-based crowdfunding, providing functions normally reserved to strictly regulated institutions such as banks and investment firms. The relevant authorities are bank supervisors, when loan contracts, and securities regulators, as far as profit sharing and securities are involved.

In Europe, crowdfunding is still a medium-sized market segment. The UK has taken the lead with loan-based crowdfunding at almost GBP 1.3bn and investment-based crowdfunding at GBP 84m (new business in 2014).[69] In the USA, maximum amounts in the range of US$ 170m and 3,800 private investors for single office developments have been achieved. The biggest market seems to be the People's Republic of China, estimated at some 2,316 lending platforms with RMB 82.5bn (US$ 12.5bn) transactions in July 2015 alone and over 100 investment based platforms raising RMB 915m (US$ 139m) in that year.[70]

B. Crowdfunding Parties and Basic Regulatory Approaches

Three parties are involved in a crowdfunding transaction and could be targeted by regulators:

- The operator of the platform – typically, he would be neither lender/investor nor borrower/recipient of funds, but rather intermediary;
- The owner of the project to be financed, i.e., the recipient of the funds respectively the borrower or obligor of related financial instruments; and
- The lender or investor.

Currently, two types of regulatory approaches are employed by regulators:[71]

- Applying the general regulatory frameworks with certain waivers, in particular from licensing, registration and prospectus requirements. Frequently, these general frameworks have been updated by regulations addressing investor protection; and
- Establishing specific regimes for crowdfunding and extending regulatory provisions into areas that would otherwise be unregulated, including requirements on registration, and on the conduct of business, in particular in order to address investor protection.

C. Reaction by International Standard-setting Bodies

Whereas the bank regulators – the Basel Committee on Banking Supervision (BCBS) – have not yet tackled the issue, in particular peer-to-peer lending, the International Organization of Securities Commissions (IOSCO) has published a statement[72] based on a

[69] Financial Conduct Authority (FCA), "A review of the regulatory regime for crowdfunding and the promotion of non-readily realisable securities by other media, " February 2015, p.3.

[70] Zhou/Arner/Buckley, "Regulation of Digital Financial Services in China," University of Hong Kong Faculty of Law Research Paper No. 2015/044, p.18.

[71] For a comprehensive overview *see* OICV-IOSCO, Crowfdfunding 2015 Survey Responses Report, *available at* www.iosco.org/library/pubdocs/pdf/IOSCOPD520.pdf.

[72] OICV-IOSCO Statement on Addressing Regulation of Crowdfunding, December 2015, *available at* www.iosco.org/library/pubdocs/pdf/IOSCOPD521.pdf.

recent survey.[73] The IOSCO refrained from proposing a common international approach at this stage, highlighting "that most regulatory regimes for crowdfunding have only recently been implemented." Nevertheless, the standard-setter "believes regulators should pay attention to the additional risks related to crowdfunding," and recommends that "…for the purpose of investor protection, regulators and policy makers should note some of the measures taken thus far by regulators to address these inherent risks related to crowdfunding…"[74] Notwithstanding the IOSCO's current wait-and-see attitude, the items identified by the statement might give an indication of future regulatory subjects.

D. Situation at EU Community Level

The EU regulators have been dealing with crowdfunding since 2013, starting with a formal Commission consultation process, which ended up with the following results:

(a) Crowdfunding is part of the EU work plan related to small and medium-sized enterprises (SME);
(b) Establishment of the European Crowdfunding Stakeholder Forum (ECSF), an expert group;
(c) advice and opinion of the European Securities and Markets Authority (ESMA) re. investment-based crowdfunding;[75]
(d) opinion on lending-based crowdfunding by the European Banking Authority (EBA).[76]

The common conclusion is that the "EU financial services rules were not designed with the industry in mind," and that the application of EU laws highly depends on the related individual models. "Both the EBA and the ESMA have advised the Commission to consider direct regulation, addressed to platform operators: Given the significant risk currently not addressed at EU level … ESMA considers that developing an EU-level regime could be considered."[77] "ESMA advises the EU institutions to consider whether there is a case for action at EU level…"[78]

Until further action has been taken, two general regulatory frameworks are applicable in the EU:

(a) Banking regulation. However, the parties of lending-based platforms do not fall inside the perimeter of credit institutions as defined by EU legislation, because neither party carries out both lending while at the same time accepting deposits or other moneys from the public. But banking regulation can come into play in national jurisdictions with a wider definition of banking activities, such as Germany.
(b) Regulation on investment firms and markets in financial instruments, the so-called MIFID/MIFR (Markets in Financial Instruments) framework. Typically, a platform in its capacity as investment intermediary would not meet the criteria of a Multilateral Trading Facility, the basic model of all exchanges, because typically only one seller per instrument would be involved. However, the project owner or

obligor of related funding instruments might be subject to certain regulations of the Markets in Financial Instruments framework, in particular the Prospectus Directive (2003/71/EC, as amended).

(c) There are a couple of further EU laws which are potentially applicable, but are restricted to specific fields depending on the individual crowdfunding business model.[79]

E. Selected National Regimes

(a) People's Republic of China

The authorities have taken up the subject with the 2015 Guideline on the Promotion of the Health Development of Internet Finance entrusting the People's Bank of China (PBOC) with the lead in respect of the regulation of Digital Financial Services (DFS).[80] The guideline itself defines high-level principles for DFS regulation such as preservation of clients' reserve funds, risk disclosure, consumer protection, internet security and prohibition of money laundering and crime.[81]

According to the guideline, the China Banking Regulation Commission (CBRC) is mainly responsible for the lending-based aspect, in particular peer-to-peer lending platforms, whereas the China Security Regulating Commission (CSRC) deals with equity-based crowdfunding and fund management.

The CBRC issued a Circular on Risk Associated with Peer-to-Peer Lending as early as 2011[82] - which, however, merely defined a number of related risks. On 28 December 2015, the CBRC published a consultation paper on "Temporary Regulatory Measures for Internet Finance Intermediaries' Activities" addressing registration and other issues.

The CSRC and the Securities Association of China published a joint consultation draft of Measures on the Administration of Equity Crowd Funding in December 2014[83] including entry criteria, obligations and liabilities, and regulatory requirements, intended to be a self-discipline instrument of the industry.

(b) France

France has issued a comprehensive framework for both lending-based crowdfunding, regulated by the Autorité de Contrôle Prudentiel et de Résolution (ACPR)[84] and investment-based crowdfunding (subscription of equity and debt securities), regulated by the Autorité des Marchés Financiers (AMF).

(c) Germany

The German legislators have not established a specific comprehensive regime for crowdfunding.[85] Basically, the general regulatory frameworks are applied, in particular as far as licensing requirements are concerned. However, a few overarching regulations for

[79] For a comprehensive overview see ESMA/2014/1560.

[83] Zhou *supra* note 70, p. 28.
[84] Order of 30th May 2014.
[85] For an overview, *see* the BaFin's (German Federal Financial Supervisory Authority) publications: *Crowdfunding*, BaFin Journal June 2014, p. 10, and *Crowdfunding im Licht des Aufsichtsrechts*, BaFin Journal September 2012, p. 11.

both lending- and investment-based crowdfunding are included in the Capital Investment Act ("VermAnlG") as amended by the Act on the Protection of Small Investors of 3rd July 2015.[86] The VermAnlG is applied to all public offerings of Financial Instruments as defined by § 1 sect. 1 and 2 of the VermAnlG. The recent amendment has introduced a catchall paragraph with § 1 sect. 2 no.7 including all other instruments giving a claim on interest and repayment or on any monetary remuneration for temporary allocation or usufruct of money, which has come into force on 1 January 2016.

As far as crowdfunding is concerned, a few specific exemptions have been introduced by §§ 2 and 2a-2c of the VermAnlG. These exemptions are mainly related to the publication of prospectuses and to the mandatory audit of issuers' annual financial statements. They are restricted to small and medium sized transactions.

Investors can cancel without reason and without penalty within 14 days after closing related contracts.

(d) UK

The Financial Conduct Authority (FCA) has issued specific and separate regulation on investment- and on lending-based crowdfunding taking effect from 1 April 2014 with its Policy Statement 14/4.[87]

- In respect of peer-to-peer lending, a new regulated activity of "operating an electronic system in relation to lending" has been defined to cover the platform's arrangements with both consumer-lenders and borrowers.
- In respect of investment-based crowdfunding, the scope of regulation encompasses platforms that allow persons to invest in new or established businesses by buying shares or debt securities. These investments are defined as "non readily realisable securities."

Whereas the full range of FCA consumer protection is always applied, all investment-based crowdfunding platforms targeting retail consumers are subject to additional investor-related restrictions.

(e) USA

As far as lending-based funding is concerned, the general rules on lending activities apply. In respect of investment-based crowdfunding, the US SEC has adopted a framework re. securities-based crowdfunding on 30 October 2015, which is incorporated in Title III of the JOBS Act as a federal exemption under the general securities laws.[88] An explanatory SEC "Investor Bulletin Crowdfunding for Investors" has been published on 16 February 2016.[89]

The final rules, Regulation Crowdfunding, permit individuals to invest in securities-based crowdfunding transactions subject to certain investment limits.

[86] German Federal Law Gazette (BGBl). I, 2015, p. 1245.

[87] "The FCA's regulatory approach to crowdfunding over the Internet, and the promotion of non-readily realisable securities by other media," PS 14/4, March 2014.

[88] Final rule: 17 CFR Parts 200, 227, 232, 239, 240, 249, 269, 274, with further amendments to the Securities Act Rules 147 and 504.

[89] *Available at* www.sec.gov/oiea/investor-alerts-bulletins/ib_crowdfunding-.html/.

As far as the scope of application is concerned, all transactions making use of the new rules and related exemptions have to be channelled through an SEC-registered intermediary, either a broker-dealer or a funding portal.

F. Conclusions

As the general frameworks on banking and securities regulation have not been designed with the crowdfunding industry in mind, and as their application highly depends on individual business models, some convergence is desirable from a regulatory perspective in order to avoid regulatory arbitrage, create a level business field and ensure that market participants can have confidence on a reliable basis. Further, as an Internet-based activity, crowdfunding has a strong potential for cross-border activities. The different national frameworks, even within the EU, are one of the key challenges posed to international platforms that wish to act globally. This is why a moderate regulation on the basis of minimum harmonisation might be in the best interest of the new developing industry.

COMMITTEE ON INTERNATIONAL MONETARY LAW

WORKING SESSION

Wednesday, 10 August 2016, 9.00am

Chair: Professor Andreas Ziegler (Switzerland)

Sir William Blair (UK) opened the session, and welcomed and thanked the Committee members and other attendees for their participation. He introduced the Chair and commended his expert work in the field of international monetary law. Sir William would be co-chairing the session.

Sir William highlighted that the session would consider the Committee report, the draft resolution to be put by the Committee before the ILA, and the report of the Study Group on Sovereign Bankruptcy. He noted that two members of that Study Group were present to lead the discussion on sovereign bankruptcy (including Professor Cynthia Lichtenstein). He noted that even though the Committee had very few members present, the quality of the Committee's work had not been compromised.

Mr Thomas Baxter, Jr (US) noted that he had stepped down as general counsel of the Federal Reserve Bank of New York and would be speaking in a personal capacity. He commended the work of David Gross in integrating the various contributions into the report and in producing a clear, single-authored report.

Mr Baxter then gave a presentation ethics in finance. The renewed focus had been prompted by the global financial crises that had affected the US, UK, EU and other parts of the world between 2007 and 2009. The presentation would not focus on the crisis itself, but the events that occurred during the financial crisis made that period a suitable starting point for addressing/analysing the renewed focus on ethics in finance. The behaviour of bankers in the industry during and after the financial crisis had contributed to the erosion of trust in the financial and banking industry. Loss of trust from the people the that industry serves. He cited two examples of behaviours that had contributed to the loss of trust:

1. The experience with respect to LIBOR. Bankers manipulated the rate so that they were advantaged. This had a negative impact. It was hard to understand why bankers engaged in manipulative behaviour. Many in the industry exploited the confidential information of customers. This was a basic form of dishonesty.
2. Individuals within the banking house had showed fundamental dishonesty. There was a series of incidents known as "robo-signing" done to facilitate the foreclosure of residential mortgages. Signing financial instruments as robots and falsifying information presented before courts, without conducting due diligence requirements, resulted in the eviction of people from their homes. This was another fundamental failure in terms of honesty and ethics in the financial services and banking industry. Other examples of dishonesty included the securitisation of the wholesale industry, and representations of quality of loans going into securitised vehicles. These fundamental failures contributed to the depth and severity of the financial crisis and the growing recognition that the industry had lost its moral compass.

Mr Baxter noted that the renewed focus on ethics in finance started out as a call for reform of banking business principles. The industry's cry for reform was met with scepticism.

Reform was viewed by cynical people as an effort lacking in substance because it urged bankers to do good. But the call for reform had since gained impetus. The banking industry realised the advantages of reform, mainly to regain the public trust that had been lost. The report highlighted some reforms made to regulatory authorities. The renewed focus on ethics in finance was now coming from the industry itself, and complemented the regulatory measures that had been put in place by the State in response to the financial crisis. After reviewing its performance during the crisis, the industry decided to take positive steps to quash a future possibility of crisis. They realised that it was going to take affirmative and positive steps to change the ethical culture of the industry. Bankers and bank officials had realised that they wanted to be associated with public good and to bring together savers and credit seekers so as to benefit the public at large. They did not want to be only associated with organisations whose main interest was to make money. The renewed focus encapsulated the power of the financial services industry to effect positive change. These realisations started the movement to pay greater attention to an ethical culture in the financial services industry.

Mr Baxter alluded to Angela Duckworth's book entitled *Grit*, in which she defined culture in terms of shared norms and values of a group, whether a group of people, a business organisation, or a country. It was important then to view the culture of business organisations. From the banking industry, it could be observed that bankers were now focused on the culture associated with the banks that they led. He referred to the key changes proposed by the July 2015 report on culture by the Group of 30, which added great value to studying ethics in finance, realising how ethics could change the culture of an organisation. There were several ways to focus on changing the culture of an organisation advanced by the First Savings Bank, the Group of 30, and other industry participants. First, there had been suggestions included changes in respect of human resources – thus, individuals who engage in robo-signings and dishonesty could be addressed in tbe context of performance appraisals or dismissal. Secondly, in the US, there were instances of legal action being brought against dishonest bankers. Pronouncements had been made by the US Department of Justice. Thirdly, there had been actions in respect of "rolling bad actors", ie bank officials who were terminated in one institution for misconduct only to get employed immediately in successive banking houses and continue their unethical behaviour. Action had to be taken so that the history of such individuals was known and the financial services industry could rid itself of such problematic individuals. This was one way in which the industry could be complementary to State policy and law enforcement. A fourth example from the G30 Report of 2016 highlighted the need for renewed effort to address the culture of the financial services industry. Culture renewal was not the only mechanism, but it was one way. The financial industry had not yet regained the trust of the people that it served. This was a work in progress.

The overall objective of the renewed effort was to restore public trust in the financial services industry. There would be far fewer of the kinds of offences seen during the global financial crisis. The industry would gain respect by reference to principles such as reliability, honesty and credibility. The renewed effort must be done on a global basis.

The Committee's draft resolution mentioned earlier was designed to continue to encourage the industry to sustain its focus on ethical culture. The key point in the resolution was that it called on international financial institutions and the international legal community to do the following four things:

1. to devote time and attention to the fostering of ethical culture, and to supplement and inform the operational law within the national and international industry and its institutions.
2. to take steps designed to restore trust in the financial industry nationally and internationally.
3. to study and implement better practices that would lead those who dealt with financial intermediaries having a higher confidence in their integrity.
4. to ensure that supervisors and financial intermediaries and financial service providers were adequately resourced to monitor and guide such entities in their implementation of good culture and conduct, and to encourage sound standard setting initiative.

Sir William noted that the things listed by Mr Baxter were discussed in the Steering Committee meeting, and only stylistic amendments had been made the day before. These amendments did not alter the substance of the resolution. A markedup copy of the resolution showing the amendments was circulated to members.

Professor Cynthia Lichtenstein (US) made a clarification for the benefit of attendees who were not familiar with ILA resolutions. ILA resolutions went from the working sessions to a Steering Committee (which worked on language not substance) and then on to the plenary session. If the plenary session approved the resolution, it become a resolution of the ILA. That meant that the ILA took note of all things said.

Sir William agreed with Professor Lichtenstein's comments, and added that a copy of the resolution in its final form would be made available to all members before the Committee took a break. He lauded Baxter's presentation, and invited him to elaborate on the "Global Ethics Code".

Mr Baxter informed attendees that the "Global Ethics Code" addressed some of the specific practices that had led to abuse, such as the use of customer information. A novelty of the Code was that it looked to apply to forex trading across the world (not only USD-EUR trade, but trade in other currencies). It supplemented the regulation of specific conduct. The renewed focus on ethics in finance aimed at the culture of the industry. The key word was "complementarity" – all the codes would together work to regain public confidence.

Mr David Gross (US) gave a presentation on recent US and UK litigation. The Committee had decided to look at the ramifications of the global financial crisis in terms of attempts by institutions and public authorities to find those deep pockets for the purpose of recovering compensation for losses suffered as a result of the crisis. This was done through the courts (eg, through misrepresentation claims). The focus had been on commercial disputes between institutions, not so much on consumer disputes. The report commenced with public law claims and also addressed private law claims. The first public law claim was against the US Federal Reserve Bank (the "Fed"), which resulted from the FED's rescue of AIG Corporation. AIG was in financial difficulty as a result of the crisis, and a policy decision was taken to save AIG to prevent its collapse. The Fed came to the rescue with a bailout of USD85 billion, which was given on conduction that the federal government get some 80 percent share/equity in AIG. Star International, a shareholder in AIG claimed against the Fed, since the shareholding had been diluted by the bailout. They claimed that the bailout deal was illegal, done without authority from the Fed to take

interest in AIG. Alternatively, if the deal was lawful, the government had not paid just compensation for the deal. The claim was litigated in the US Court of Federal Claims. A case note was available in the 2016 *Harvard Law Review*. The court held that the deal was unlawful, but enquired whether the claimant had suffered any economic loss as a result. The logical answer was that they had not suffered any loss because AIG did no collapse due to the bailout from the Fed.

Mr Gross turned to claims in the private law area. These claims usually ended up in federal courts and commercial courts in New York and London, as detailed in Part III of the report. Because those were common law jurisdictions, there was substantial overlap within notions of negligence, fraud, and dishonesty. The bottom line was that these claims had been overwhelmingly unsuccessful due to long standing contract law rules on disclaimer provisions, even when product representations were made in the contract documents. Essentially, the big institutions were in a better position to protect themselves through the contract documents.

The theme in both the London and New York courts was that the parties had read the contract, they were in a position to make their own bargain, and the courts ought to respect that bargain. This analysis was included in the report, but it must be noted that it did deal with international law; instead, it showed that international financial disputes were mostly played out in domestic courts.

Mr Baxter added that he obviously had so much to say about this presentation. He had strong views regarding the AIG matter, since the litigation was led in terms of his legal opinion. The statute allowed the Fed to rescue AIG in return for interest/equity. The decision to rescue AIG had important policy concerns that required taking consideration in addition to interest. The loan was made by the Fed to avoid the systemic consequences that would have resulted from an AIG insolvency. That was a public purpose, and that was the reason for the world's largest loan in history. It was to avoid the innocent paying the price. AIG was the world's largest insurance company. The Fed did this not to benefit AIG or its shareholders but for the general public in the US and the world economy. That was the primary purpose. The secondary purpose was to protect the taxpayers' interests, and thus to receive a fair amount of consideration for the risk that the taxpayer was taking in making the largest loan in the world. That meant that they had to get consideration to take into account the risk of the lending. The problem with taking interest rate compensation only was that one could not charge an interest rate high enough. The goal was to get consideration consistent with the risk. But if an exorbitant interest rate would be charged on a rescue loan, the debt service faced by the private company would result in further downgrades because it would fail to sustain the debt service, and ultimately the primary purpose (ie, to rescue that organisation from insolvency and to protect the innocent) would not be fulfilled. An alternative to interest compensation was imperative. That alternative in the heat of the AIG moment was equity. A success of the deal would then be realised by the true beneficiaries of the process (the taxpayer). That was public purpose. It was permitted by statute, which conferred incidental power on the Fed. Finally, equity was a successful alternative to charging high interest. The taxpayer was saved. Therefore, the Fed's act was for a greater purpose. Additionally, this decision to bail out AIG came after the private sector had failed or refused to rescue AIG.

The Chair referred the most recent edition of the *The Economist*, which had revisited the collapse of Lehman Brothers. He asked the panel why Lehman Brothers could not be saved.

Mr Baxter responded that a rescue did not success because Lehman Brothers was dealing with Barclays as a rescuer, which had in turn they failed because of London Stock Exchange requirement.

Sir William identified the difference between the two cases. The collapse of Lehman Brothers was containable, but the collapse of AIG would have brought the whole house down. It saved us all from a crisis that would have been much worse.

Professor Christos Gortsos (Greece) gave a presentation on the operation of the European Banking Union (EBU). He began by recalling that the fiscal crisis in the Eurozone in 2010 was partly caused by the global financial crisis. He recalled the 2010 Committee meeting and noted that in that year the EBU did not exist. When the Committee's report was presented in 2012, the EBU was being established.

The political decision to create the EBU was taken on 28-29 June 2012. When the Committee's report was presented in 2014, the creation of the EBU featured significantly. The first pillar of operations of the EBU started in 2014. Therefore, the present report was a stocktake of the developments in the EU Banking Union from its beginning on 4 November 2014 to Spring 2016. A lot had happened in that time.

It was important to briefly define what the EBU was – it was an economic and political organisation. The term "European Banking Union" was allencompassing. Its functions were divided into several pillars. The EBU had a single supervisory mechanism (SSM), a single resolution mechanism (SRM), and featured a deposit guarantee scheme and deposit guarantee fund. The first two pillars were already in place; the third pillar is yet to be put in place. These pillars were contained in a single rulebook (ie, a set of rules for the supervision, regulation and authorisation of credit institutions or banks in the EU). The substance of these rules had been influenced by developments in international financial law. Therefore, there was a link between European financial law and international financial law.

The first two pillars (the SSM and SRM) could be described as consisting of the hub and some spokes. The hub was the European Central Bank (ECB), and the spokes were the national competent authorities (ie, independent administrative authorities and credit institutions which the ECB did not have the power to supervise in terms of domestic legislation). The SRM had a similar structure. Its hub was a newly established agency based in Brussels (an independent institution). Its independence had some institutional implications. It could not take final decisions as a national resolution authority. The fact that it could take final decisions was demonstrated in Articles 18-19 of the relevant regulations.

Professor Gortsos noted that, if one took into account all the different legal acts which had shaped the EU, the legal bases were different. It was "à la carte" process/framework. The framework was fragmented.

Professor Gortsos concluded by noting that the EBU was a major development in EU economic law. It was the single most important development from an institutional and

substantive standpoint, after the creation of the Monetary Union. It was an alleviation of the asymmetry consisting of the fact that, until 2014, monetary policy/activity was conducted at the supranational level, now it was at the national level. In that sense, it had become more consistent with the goal of realising effective banking supervision. Banking regulations at supranational level and now at national level; therefore, the SSM was a major development. The SRM was also a positive development in that a resolution regime did not exist in the EU before 2014. It was the first regime for the resolution of credit institutions. The EBU was now operative, and had been tested through the case of capitalisation of banks within a short period of time. The second major test was going to be the resolution of the Italian banking crisis.

Professor Chiara Zilioli (Italy) made an observation in relation to the recapitalisation of Greek banks in 2015, at a time when the Single Resolution Board (SRB) was not yet in charge, and the Bank Recovery and Resolution Directive (BRRD) rules for compulsory bailingin before any public money could be contributed to the capital were not yet in force. The recent EU Court of Justice decision in the Kotnik case had reminded us that the Commission's Banking Communication, which required bailing-in before State aid could be authorised, allowed Member States to submit other reasons for not bailingin before State aid in exceptional circumstances and obliged the Commission to consider these reasons when making decisions. This was still relevant today in the field of precautionary recapitalisation to which the BRRD did not apply.

Professor Rene Smits (Netherlands) responded to the point made by Professor Gortsos that the European banking framework was fragmented or "à la carte".

He also made the point that Mr Gross had rightly distinguished between significant and non-significant institutions, the former supervised by the ECB, the latter supervised by the national competent authorities under the ECB. But there was one element that was not widely known in the EU system, which was most revolutionary. That was that all banks in the EU (even less significant institutions) were subject to the central provisions of the ECB which dealt with authorisations. All banks were subjected to fit and proper suitability provisions of the ECB. This was crucial, and Professor Smits expressed hope that its elements would develop more profoundly.

The Chair applauded the very interesting and informative presentations and invited attendees to take a short break.

Sir William opened the second half of the working session by inviting Mr Gross to present on virtual currencies.

Mr Gross summarised Part V on recent developments in payment and settlement systems.

He noted that virtual currencies remained a matter of importance for law and public policy. They might affect the central banks' payment systems, stability of prices exchange controls, financial integrity, taxation, fluctuating value, and capital flow management. Underlying concerns also included the absence of government authority, transparency and fairness in terms of fees, hacking, finality of payment, insolvency, and fraud security. In Hong Kong, for example, bitcoin theft had caused the halt of trading. Theft did not happen only online – there had been incidents of bitcoin theft at gunpoint during an attempted sale.

Mr Gross concluded by noting that the Committee acknowledged that regulatory and legislative measures would have to be put in place to curb the negative effects of unregulated virtual currencies, and to accommodate the fast pace at which virtual currencies were operative.

Professor Zilioli offered a belated intervention on Mr Baxter's earlier presentation on ethics in finance. She applauded the draft resolution, and recommended the improvement of the industry's reputation. She queried whether, as an alternative to enforcement to ensure ethical behaviour, bankers could be made to have more "skin in the game" and be more worried about their reputation. At the board level, that message had been clear and well received, but when it came down to the subcultures, there were actors within the ranks who were ready to take risks and exhibit bad behaviours through unethical conduct. In other words, she queried what more could be down at the send level (ie, under the board) so that there was more incentive for officials to maintain ethical behaviour.

Mr Baxter responded that this was a great point. He suggested that the subculture must be integrated into the ethical culture of the organisation as a whole. But it was a challenge. It might be suggested that when an official learnt of unethical behaviour, they must come forth and speak, raise their hand and expose dishonest practice. We could also make the subculture more diverse. He agreed that the less desirable cultures must be broken down. Additionally, there was a need to develop the principle of joint and several liabilities within an organisation.

The Chair commended the Committee for its openness by allowing the officers of other ILA committees to present their work. In this regard, he introduced Dr Freya Baetens and Professor Cynthia Lichtenstein from the Study Group on Sovereign Bankruptcy to present their work.

Dr Freya Baetens (Belgian) thanked the Chair for kind introduction and thanked the Committee for the invitation to present the report of the Study Group on Sovereign Bankruptcy. She began her presentation by noting that she would deal with the highlights of the report on the legal approach to sovereign bankruptcy. This followed on from the 2010 report of the Study Group, which was presented at the Hague Conference. This report set out some issues but did not come to a conclusion on how those issues should be dealt with. Several ways forward for responding to sovereign bankruptcy were identified in the Hague report:

1. a voluntary, contractual regime, which left the resolution for sovereign insolvency to contracts that had been concluded between issuers and bondholders;
2. the adoption by treaty or statute of a limited provision for creditor voting on a plan;
3. the adoption by treaty or statute of a wider bankruptcy regime that reflected the relevant aspects of corporate insolvency reorganisation practice;
4. the adoption of measures to strengthen creditor positions and the dilute the protections insolvent States.

The Study Group examined State practice: the entry of the IMF, the role of the Paris Club, and some specific country situations (eg, Argentina). They examined whether due diligence of a regime for sovereign bankruptcy should be achieved by contract in the bonds themselves, or by treaty or legislation. The realisation was that the method of

achievement of a particular result was a secondary issue. The primary issue was to decide what should be the substance of rules for the resolution of bankruptcy, and then procedure could follow. The achievement of a proper regime for State bankruptcy could be a mix of contract and law, which in turn depended on the agreement between the parties.

The work of the Study Group also dealt with collective action clauses in terms of which bondholders could vote by majority so as to bind all bondholders, examined the pros and cons of that, as well as the description of certain clauses and gaps. The main recommendation was that collective action clauses and crucial aggregation clauses had solved many obstacles in resolving sovereign bankruptcy. Their universal use was encouraged in international issues. Their utility in domestic issues should be kept under review.

With respect to standstill clauses, the Study Group recommended that further work needed to be done with the view to developing such clauses. At present, creditor litigation prior to exchange of bonds if the debt was negotiated with creditors seemed rather unusual. But the situation should be monitored to assess whether disruptive and unjustified creditor action became a threat to the resolution of a sovereign bankruptcy.

The Study Group did not consider that sovereign States should be entitled to immunity through the imposition of a unilateral vote or a stay on creditor enforcements or explorations of debt.

The next issue dealt with was that of trustees. The appointment of trustees should be seriously considered on case by case basis. They were a communication link with the sovereign, and the fact that they had to distribute proceeds pro rata was an incentive to aggressive action by a bondholder to secure recovery. To do their job, however, it was sometimes said that trustees should be bolder and they were disincentivised by liability risks. The Study Group recommended that further work be taken to standardise documentation in this respect.

The mixed element of the report dealt with creditor committees and creditor engagement clauses. Creditor engagement clauses were endorsed by some members, while some were less convinced by their substance. The final recommendation was that further work be done to see whether such clauses could be adapted so as to give the regime acceptance and to be routinely used by issuers and bondholders.

On the issue of priorities, the Study Group recommended that the level of priorities in negotiations by public officials and private sector actors be done on a case by case basis. In most cases this worked satisfactorily. If the private sector objected, they could decline to participate and have some say in the priorities.

On the issue of an international sovereign bankruptcy court, the Study Group believed that the case still had to be made for such a court having jurisdiction over sovereign bonds to oust the traditional sovereign jurisdiction of national courts chosen in the bonds.

Professor Lichtenstein thanked the Chair and Vice-Chair for including the Sovereign Bankruptcy Study Group in the session. She noted that the report was written by the Chair of the Study Group, Professor Philip Wood, who was an expert in financial markets. An important point was made on page 4 of the report where an important point is made, namely that the IMF sought to distinguish between cases where the problem was

one of liquidity only, and cases where debt stock was is too high (a solvency problem). She queried what it meant to have debt stock too high, and how it got to be too high. This was exactly the same problem that agencies in charge of bank resolution had: was the bank in trouble merely for experiencing temporary liquidity problems, or was it in fact insolvent and should either be resolved or wound up. She posed the question whether there should be an international lender of last resort.

Next, Professor Lichtenstein noted that page 8 of the report referred to a change in solving sovereign bankruptcy. A decision had to be made whether to put money where a sovereign was in arrears either to its private creditors or to bankers before research on sustainability analysis was carried out. Unless it was highly likely that the debt stock was sustainable, money would not be provided. This led to a problem in Greece. Creditors were against reducing the total amount of debt. They were willing to extend the due date of payment, adjusting interest, austerity measures etc, but never to reduce the debt.

The question was how does debt stock become unsustainable. Underwriters on issues of sovereign debt competed with one another. Professor Lichtenstein queried whether there were any rules in international law that forbade lenders to "over-lend" hence causing unsustainability. She then referred to the resolution on ethical standards, and concluded by posing the question whether there were ethical codes to prevent the above possibility of an unsustainable debt.

Professor Gortsos asked whether the presenters considered establishing or applying the principle of responsible lending to sovereign debt as it was known in consumer lending.

Professor Lichtenstein responded that this aspect had not been taken up by the Study Group, but the principles did exist in private lending. Perhaps the principle could be better formulated and incorporated in international law as possibly binding. But the Study Group would think about in depth.

Professor Zilioli followed up on Professor Gortsos's presentation. What he was suggesting was that we place a duty on the bank to monitor or to ethically discourage issues of bigger/unsustainable debt. The point was to limit States from over-borrowing and other financial institutions from over-lending. We were not yet there, but it was a good point to be further investigated.

Professor Engela Schlemmer (South Africa) asked why lenders should not lend if the risk of not getting paid back was not there. Why should we destroy the rules of the game? She also made a further comment that it remained important to consider private law principles for responsible lending (eg, whether the loan amounted to "reckless lending"). It was also important to consider whether the lender should have required additional security or guarantees.

Sir William closed the discussion on the work of the Study Group on Sovereign Bankruptcy and introduced Mr John Taylor to present on the East African Community Monetary Union.

Mr John Taylor (Australia) began by acknowledging Professor Agasha Mugasha has written the presentation that he would be giving. The EAC was a dynamic community consisting of five members (Uganda, Kenya, Tanzania, Rwanda and Burundi). South Sudan was about to join as a sixth member. They came together historically and signed

a treaty in 1999 with the aim to become a complete union – a customs union, a common market with free movement of goods, persons and labour, a monetary union (which was of most interest to the Committee), and a political federation (which is the slowest process in the organisation).

With regards to the monetary union, it was decided in 2013 that concrete efforts should be taken to lean towards monetary union for a potential common/single currency if three members agreed that there should be a single currency. The monetary union had features similar to the European monetary union. The objective of the monetary union was the harmonisation of fiscal policy, financial payment and settlement systems, regulations and supervision of the financial system, and the adoption of a single currency. There were stated prerequisites for the monetary union, and for membership. Other aspects were covered in the treaty. The States had also agreed to build resilience to address economic shocks, and to establish an East African central bank to complement national central banks. Single monetary policy and single exchange rates were also envisaged. It would be a dramatic achievement if EAC States could indeed achieve what the treaty was envisioning.

Mr Taylor noted that there was also an East African Court of Justice that handled human rights, administrative law and constitutional law cases. The objective was that there would be an attempt to harmonise financial laws in the region and that the Court of Justice would be given jurisdiction to deal with commercial cases. Mr Taylor hoped that this would be successful, and encouraged attendees to watch this space. The success of the monetary union would mean additional strengthening of the other regional unions in West Africa and Southern Africa. It would foster regional groupings in Africa by leading as an example.

Mr Taylor concluded his presentation my emphasising that the EAC consisted of an estimated 150 million people with a GDP of USD 160 billion. This put it in the world's 55th largest grouping by GDP.

Sir William invited Professor Gortsos to give the final presentation on crowdfunding.

Professor Gortsos acknowledged that the part of the report on crowdfunding was prepared by Dr Klaus Peter Follak. It was divided into five parts. It addressed regulatory developments in international financial law. Crownfunding was part of the financial technology known as FinTech. Crowdfunding as a new type of financing raised one major regulatory concern because it involved an unregulated platform. Profssor Gortsos asked whether this type of activity should be regulated, and what type of regulation was necessary. Would the existing rules in capital markets regulation or banking regulation be suitable in protecting investors? There was no conclusive proposal on regulation. There might be a need for regulation, but a lot of work was still to be done. The discussion may be of interest to future Committee meetings.

Sir William noted that FinTech was indeed an important subject to explore. It was also relevant in Africa because of the rise of mobile banking, which is used by large population. This raised significant legal questions.

Professor Lichtenstein made one final note in respect to the East African Monetary Union. She noted that at the time of the entry of the European monetary union, there were

difficulties pointed with regard to the fiscal union. She therefore asked whether there was a regime on fiscal union envisioned in the East African Monetary Union. Having a monetary union without a fiscal union might not work.

Mr Taylor responded that there was no such fiscal union. Instead, there were mechanisms of managing or monitoring risks and managing shocks, ie, early warning systems and stabilisations. There was no specific reference to fiscal union. They had considered it but it was not in the plans. Another interesting question to ask further was whether there were provisions in the treaty on the term of the treaty and withdrawal from the treaty.

Sir William intervened that it was important to state that Euro had been a very successful currency. There was a lot of confidence among the EU general public that the Euro meets its objective. The Chair then stated that the Session has come to an end. The draft resolution entitled "The Ethical Culture of Financial Services" was adopted by unanimous vote of members present.

THIRD COMMITTEE REPORT (2016)

I. General Remarks

This is the Third Activity Report of the ILA Committee on "Intellectual Property and Private International Law" prepared for the 2016 ILA Congress.[1] Since its creation in 2010, this ILA Committee has been working intensively in order to examine the current state of affairs related to the protection of IP in the transnational sphere. Acting in accordance with its mandate, the members of the Committee gathered on at least six occasions. In addition, a number of seminars, workshops and meetings have been organized by sub-committee members and project officers.

[1] The First and Second Committee Report are available at the Committee's website at: www.ila-hq.org/en/committees/index.cfm/cid/1037.

The Committee's activities conducted within six years of its existence could be divided into three main stages: (i) preparing comparative studies of the pre-existing projects and starting discussions in sub-committees about the future drafting of the ILA Guidelines[2] (2010-2012); (ii) drafting of the first proposals for the ILA Guidelines, mainly on non-controversial issues related to jurisdiction, choice of law, and, recognition and enforcement (2013-2014); (iii) finalizing the draft guidelines on non-controversial issues as well as seeking Committee's approval for continuing the discussions on "controversial issues" (e.g., ubiquitous infringements, law governing initial ownership and IP-related contracts, arbitrability, coordination and cooperation, etc., (2015-2016)). During the final stage of its mandate, the Committee aims to conclude its work by finalizing the guidelines on remaining controversial issues and preparing a publication. This would provide a commentary on the Guidelines, and also map the directions in which the development of the legal framework for the transnational exploitation of IP rights should head to.

This Third Activity Report attempts to provide an overview of the work accomplished by the Committee since the last ILA Congress, which took place in 2014 in Washington DC. In particular, Section II provides a short overview of the structure and the main elements of the draft Guidelines on Intellectual Property in Private International Law. Section III summarizes the Committee's activities, inter alia, two meetings held in 2015 including the expected future collaboration with several international organizations. Finally, Section IV briefly addresses the current state of the debates within the Committee with regard to the "controversial issues" that have to be crystallized and approved by the whole Committee in order to be included in the Guidelines.

II. Draft Guidelines: "Intellectual Property in Private International Law"

[as of May 25, 2016]

[PREAMBLE]

GENERAL PROVISIONS

1. Scope of the Guidelines

(1) These Guidelines apply to civil and commercial matters involving intellectual property rights which are connected to more than one country.
(2) These Guidelines may be applied mutatis mutandis to claims based on unfair competition, if the matter arises from the same set of facts as relating allegations involving intellectual property rights, and on the protection of undisclosed information.

2. Definitions

"Intellectual property right" means copyright and related rights, patent, utility model, plant breeder's right, industrial design, layout-design (topography) of integrated circuits, trademark, geographical indication and similar rights.

[2] Some of the Reports were published in the Journal of Intellectual Property, Information Technology and Electronic Commerce Law (JIPITEC) Vol. 3, No. 3 (2012), available at: jipitec.eu/issues/jipitec-3-3-2012.

JURISDICTION

Basic Forum

3. Defendant's Forum

Unless otherwise provided for in these Guidelines, the defendant should be subject to jurisdiction to the courts of the State in which he or she is habitually resident. The courts' jurisdiction shall be territorially unlimited.

Alternative Fora

4. Contracts

In disputes concerning intellectual property license or transfer contracts, a person may be sued in the courts of the State for which the license is granted or the right is transferred; the courts' jurisdiction shall be territorially limited to the State in which the court is situated.

5. Infringements

In case of an alleged infringement a person may be sued:

(a) In the courts of the States where the alleged infringer has acted to initiate or further the alleged infringement; the courts' jurisdiction shall be territorially unlimited with regard to any damages caused by those acts; or
(b) In the courts of the States where the infringement may have caused substantial damages unless it could not be anticipated that the infringement would cause those damages; the courts' jurisdiction shall be territorially limited to the State in which the court is situated.

6. Consolidation

A plaintiff bringing an action against a defendant in a court of the State in which the defendant is habitually resident may proceed in that court against other defendants not habitually resident in that State if –

(a) The dispute involves the same or substantially related intellectual property rights granted for one or more States, and
(b) The claims against the defendant habitually resident in that State and the other defendants are so closely connected that they should be adjudicated together to avoid a serious risk of inconsistent judgments, and
(c) As to each defendant not habitually resident in that State, there should be a substantial connection between the intellectual property rights at issue and the dispute involving that defendant.

7. Title and Ownership

The court of the State where the intellectual property right exists or for which application is pending shall have jurisdiction over matters of title to and ownership of that right.

Other Fora

8. Choice of Court

The parties to a particular relationship may designate in an agreement a court to have jurisdiction over any dispute that has arisen or may arise in connection with that relationship. The chosen court shall have jurisdiction to decide all contractual and non-contractual obligations and all other claims arising from that legal relationship unless the parties express their intent to restrict the court's jurisdiction. Such jurisdiction shall be exclusive unless the parties have agreed otherwise.

9. Submission and Appearance

A court shall have jurisdiction if the defendant appears and does not contest jurisdiction in the first defense.

10. Validity Claims and Related Disputes

(1) In proceedings which have as their main object the grant, registration, validity, abandonment, or revocation of a registered intellectual property right the court of the State of registration shall have exclusive jurisdiction.
(2) Any other court having jurisdiction may decide on these matters when they arise in proceedings other than those referred to in paragraph 1. However, the resulting decision shall not have any effect on third parties.

11. Declaratory Actions

Subject to Guidelines 8 [validity] and 11 [coordination], a court may hear an action for a negative or a positive declaration on the same ground as a corresponding action seeking substantive relief.

12. Provisional and Protective Measures

(1) A court having jurisdiction as to the merits of [of the claim], shall have jurisdiction to order provisional and protective measures.
(2) Other courts shall have jurisdiction to order provisional and protective measures within their territory.

13. Scope of Injunctions / Jurisdiction

The scope of an injunction is limited both by the extent of the jurisdiction of the court and by the territorial reach of the intellectual property right enforced.

14. Counterclaims

A court which has jurisdiction to determine a claim under these Guidelines shall also have jurisdiction to determine a counterclaim arising out of the same set of facts on which the original claim is based.

15. Insufficient Grounds for Jurisdiction

Insufficient grounds for exercising jurisdiction include:

(a) the presence of (any) assets [, physical or intellectual property, or a claim] of the defendant in a State, except when the dispute is directly related to that asset;
(b) the nationality of the plaintiff or the defendant;
(c) the mere presence of the plaintiff or of the defendant in that State;
(d) the mere conduct of commercial or other activities by the defendant in that State, except when the dispute is related to those activities;
(e) the service of a writ upon the defendant in that State; or
(f) the completion in that State of the formalities necessary to execute an agreement.

Coordination and Cooperation

16. Lis pendens

(1) Where proceedings between the same parties on the same cause of action are brought in the courts of more than one State, any court other than the court first seized shall suspend its proceedings until such time as the jurisdiction of the court first seized is established, and thereafter it shall terminate its proceedings.
(2) A suspension may be lifted or a terminated proceeding may be restored if the proceeding in the court first seized does not proceed within a reasonable time.
(3) This guideline does not apply if:
  (a) the proceeding is within the exclusive jurisdiction of the court subsequently seized;
  (b) the proceeding is for provisional or protective measures; or
  (c) it is shown by the party invoking the jurisdiction of the court subsequently seized that a judgment of the court first seized would not be recognized in the State of the court subsequently seize.

17. Related Proceedings

Where related proceedings are pending in the courts of more than one State, any of the courts may take any step permitted by its own procedures that will promote the fair and efficient resolution of the related proceedings considered as a whole. The scope of this guideline includes both consolidating proceedings in one court and coordinating the conduct of proceedings in different courts.

APPLICABLE LAW

General Rules

18. Existence, Scope and Transferability (Lex loci protectionis)

The law applicable to determine the existence, validity, registration, duration, transferability, and scope of an intellectual property right, and all other matters concerning the right as such, is the law of the State for which protection is sought.

[19. Law Applicable to Initial Ownership]

Contracts

20. Freedom of Choice

Parties may choose the law governing their contractual relationship.

21. Absence of Choice

(1) In the absence of choice of law by the parties pursuant Guideline 20, a contract other than an employment contract shall be governed,
   (a) if the contract deals with intellectual property granted for one State only, by the law of this State, unless it is clear from all the circumstances of the case that the contract is [manifestly] more closely connected with another State. Then the law of that other State shall apply;
   (b) if the contract deals with intellectual property for more than one State, by the law of the State with which the contract is most closely connected; in determining this State, the court shall take into consideration among other possible factors:
      – the common habitual residence of the parties;
      – the habitual residence of the party effecting the performance characteristic of the contract;
      – the habitual residence of one of the parties when this habitual residence is located in one of the States covered by the contract.

(2) For the purpose of this provision, the habitual residence of a party shall be determined at the time of conclusion of the contract.

22. Employment Contracts

(1) An employer and its employee whose efforts give rise to an intellectual property right may choose the law governing their contractual relationship in accordance with Guideline 20.

Such a choice of law shall not, however, have the result of depriving the employee of the protection afforded to him by the provisions that cannot be derogated from by agreement under the law that, in the absence of choice, would have been applicable pursuant to paragraphs 2 and 3.

(2) In the absence of choice of law by the parties, the contractual relationship between employer and employee shall be governed by the law of the State in which or, failing that, from which the employee habitually carries out his work in performance of the contract.

The country where the work is habitually carried out shall not be deemed to have changed if the employee is temporarily employed in another country.

(3) Where it is clear from all the circumstances of the case that the contract is [manifestly] more closely connected with a State other than that indicated in paragraph 2, the law of that other State shall apply.

23. Formal Validity

Any contract dealing with intellectual property rights shall be formally valid to the extent that it satisfies the formal requirements:

(a) of the law of the State which governs the contract pursuant Guidelines 20-22 [Freedom of Choice, Absence of Choice, Employment Contracts], or
(b) of the law of the State in which either of the parties or their agents is present at the time of the conclusion of the contract, or
(c) of the law of the State in which either of the parties has its habitual residence at the time of the conclusion of the contract.

Infringements

24. Basic Rule on Infringement

(1) The law applicable to the infringement of an intellectual property right is the law of each State for which protection is sought.
(2) The law applicable to the remedies for the infringement may be chosen by the parties.

25. Law Applicable to Ubiquitous or Multi-state Infringements

(1) When the infringement in multiple states is pleaded in connection with the use of ubiquitous or multinational media, it may be appropriate to apply to the infringement as a whole only the law or laws of the State(s) having an especially close connection with the global infringement.
(2) Relevant factors to determine the applicable law (or laws) in these situations may be:
   – the place where the harm caused by the infringement is substantial in relation to the infringement in its entirety;
   – the parties' habitual residences or principal places of business;
   – the place where substantial activities in furthering of the infringement have been carried out.
(3) In situations where paragraph (1) is applied, any party may claim that, with respect to particular States covered by the action, the solution provided by any of those States' laws differs from that obtained under the law(s) chosen to apply to the case as a whole. The court must take into account such differences when fashioning the remedy.
(4) Paragraphs (1) to (3) above may apply mutatis mutandis in cases of secondary or indirect infringements of intellectual property rights.

26. Public Policy

The application of the law determined under these Guidelines may be refused only to the extent that its effects would be manifestly contrary to the public policy of the forum.

27. Overriding Mandatory Provisions

(1) Nothing in these Guidelines shall restrict the application of the overriding mandatory provisions of the law of the forum.
(2) When applying under these Guidelines the law of a country, the court may give effect to the overriding mandatory rules of any State with which the dispute has a close connection.

28. Renvoi

The application of the law of any State determined under these Guidelines means the application of the rules of law in force in that State other than its rules of private international law.

[Security rights]
[Consumer protection]
[Unitary rights]

RECOGNITION AND ENFORCEMENT

29. Object of Recognition and/or Enforcement

(1) A foreign judgment may be recognized and enforced in accordance with this part of the Guidelines.

(2) For the purposes of these Guidelines, a judgment means any judgment rendered by a court or tribunal of any State, irrespective of the name given by that State to the proceedings that gave rise to the judgment or the name given to the judgment itself, such as decree, order, decision, or writ of execution. A judgment for the purposes of these Guidelines also includes court approved settlements, provisional and protective measures, and the determination of costs or expenses by an officer of the court.

(3) If a judgment is still subject to appeal in the State of the rendering court, or if the period for launching ordinary review has not expired in that State, the requested court may stay the recognition and enforcement until the appeal is decided or the period expires, or may make it a condition of the recognition and enforcement that the party seeking it provides security.

(4) Provisional and protective measures adopted without prior hearing of the adverse party and enforceable without prior service of process to that party shall not be recognized or enforced.

30. The Effect of a foreign Judgment

The effect of a foreign judgment in the State of the recognizing and/or enforcing court shall to the extent possible be the same, and under no circumstances greater, than the effect enjoyed by the foreign judgment in the State of the rendering court.

31. Grounds for Non-Recognition and Non-Enforcement

(1) A court shall not recognize or enforce a foreign judgment if:

(a) such recognition or enforcement would be manifestly incompatible with the public policy of the requested State;

(b) the proceedings leading to the judgment were manifestly incompatible with fundamental principles of procedural fairness of the requested State;

(c) the judgment was rendered by default where i) the defendant to the proceeding was not adequately and timely notified of the proceeding, or ii) the defendant was deprived of an adequate and meaningful opportunity to present its case before the rendering court;

(d) the judgment is inconsistent with a prior judgment rendered in the requested State and having preclusive effect;

Wording A:

(e) the foreign judgment is inconsistent with another foreign judgment that was rendered earlier by a court of competent jurisdiction, where the earlier-rendered foreign judgment addresses the same parties to the same dispute and the same of cause of action, and was either recognized in the state of the recognizing and/or enforcing court, or has not yet been recognized but fulfills the conditions necessary for its recognition in the recognizing or enforcing state, unless the party against whom recognition and/or enforcement is sought had full opportunity in the second action to argue the binding force of the earlier judgment;

Wording B:

(e) the judgment is irreconcilable with an earlier judgment given in another State between the same parties and having the same cause of action, provided that the earlier judgment fulfills the conditions necessary for its recognition in the requested State.

(f) the rendering court exercised jurisdiction in violation of the rules of jurisdiction under these Guidelines.

(2) In assessing the rendering court's jurisdiction, the recognizing and/or enforcing court is bound by the findings of fact made by the rendering court in the original proceeding.

(3) The requested court shall not review a foreign judgment as to its merits.

32. Partial and Limited Recognition and Adaptation

(1) If the foreign judgment contains elements which are severable, one or more of them may be separately recognized or enforced.

(2) If a foreign judgment awards non-compensatory, including exemplary or punitive, damages that are not available under the law of the requested state, recognition and enforcement may be refused if, and only to the extent that, the judgment awards damages that do not compensate a party for actual loss or harm suffered and exceed the amount of damages that could have been awarded by the courts of the requested State.

(3) If a judgment contains a measure which is not known in the law of the requested State, that measure shall, to the extent possible, be adapted to a measure known in the law of the requested State which has equivalent effects attached to it and which pursues similar aims and interest.

(4) If a foreign judgment includes a decision concerning the validity of a registered intellectual property right and the rendering court is not a court of the State of registration, the decision on the validity shall be effective only between the parties to which the foreign judgment pertains.

ARBITRATION

[33. Arbitrability of Intellectual Property Disputes]

– [end] –

III. Activities Report

III.1 Outreach Activities of the Committee

III.1.1 Joint Seminar with WIPO (January 2015)

The ILA Committee had a joint meeting together with WIPO on January 15-16, 2015 in Geneva. Besides ILA Committee members, representatives for the HCPIL (Ms Marta Pertegás) and WIPO (Ms Min Eun Joo) took part. The overall objective of the Committee meeting was to resolve some of the pending issues and seek approval by the whole Committee in order to prepare the draft for the ILA Guidelines for the 2016 Congress in South Africa. During those two days, open and closed sessions were held. In closed sessions, the Committee members discussed the following issues: the scope of the Guidelines, coordination and cooperation, choice of law matters, arbitrability,

recognition and enforcement of judgments in IP-related cases and the future activities of the Committee.

Scope. The first issue on the Committee agenda was the scope of the Guidelines. Firstly the Committee members discussed whether the Guidelines should apply to "international" or "transnational" disputes. The general opinion was that it is important to avoid confusion with other already existing terms of art (e.g., reference to "international" might create confusion with the existing international investment dispute settlement mechanisms). Hence, it was agreed to use a more open and explanatory language. Second, the material scope (*ratione materiae*) has raised many questions. Namely, it was discussed whether such issues as trade secrets, undisclosed information, geographical indications, topography-related rights, etc. should fall within the scope of the Guidelines. One suggestion was to keep the definition quite open so that the court hearing a case would have the possibility to apply the ILA Guidelines. In deciding upon the scope of the Guidelines, the ILA Committee agreed that further study is needed to explore how inclusion of certain rights would affect the operation of ILA Guidelines on jurisdiction, choice of law and recognition and enforcement. Finally, it seems that there is a quite general agreement within the Committee to exclude personality and privacy rights from the scope of the Guidelines because those rights are analyzed by other ILA Committees and also because their nature is quite different from IP rights.

Jurisdiction, Coordination and Cooperation. Since most of the ILA Committee work at the early stage was aimed at drafting guidelines on jurisdiction, the discussion focused mainly on several remaining issues, i.e., coordination and cooperation. The Committee members shared the view that special rules on coordination and cooperation are desirable, and that their objective should be to increase efficiency, prevent parallel proceedings and torpedo actions. Yet it was not clear to what extent the ILA guidelines should address these issues. One view was to adopt a minimalist approach and leave it up to the countries to modify their own domestic laws to facilitate coordination and cooperation. Another view was that the ILA Committee should take a more courageous approach and establish a more elaborate set of provisions on cooperation and coordination. Sources of inspiration for the ILA work could be the 1997 UNCITRAL Model Law on Cross-border Insolvency[3] or the recent steps to establish a Unified Patent Court in Europe. At the initial stage, however, the Sub-committee decided to continue work in order to crystallize the definitions of such complex notions as "the same cause of action" or "the same party" and then consider further directions of drafting guidelines on coordination and cooperation.

Applicable law. Much time was devoted to discuss various aspects of choice of law provisions. A number of issues related to choice of law issues have been raised. For instance, the Committee considered whether it is reasonable to add a separate guideline specifying the application of mandatory rules. Although this could be considered to be outside of the scope of the Guidelines, in certain cases, e.g., ubiquitous infringements, some certainty with regard to the applicability of mandatory rules would certainly add to the efficiency of litigation.

The ILA Committee also considered whether a choice of law provisions for consumer related contracts should be added. A special Sub-committee had been entrusted with

[3] For more information see: http://goo.gl/knp34Q

the task of deciding whether there were any IP-specific consumer related contracts that needed to be addressed by drafting a special rule, or whether a general guideline referring to *lex fori* would suffice. The risk was that the Committee might go beyond its mandate; yet, if some IP-specific matters were identified (e.g., in cases of mass-market contracts), the ILA guideline should be in line with the existing legal framework in various countries. Further complexities may require deliberation with regard to the definition of a "consumer". In addition, further studies may be necessary with regard to the proposed choice of law rule relationship with jurisdiction rules as well as other choice of law rules (namely, party autonomy, *lex loci protectionis* or mandatory rules).

One of the controversial issues in the field of choice of law is initial ownership. There are multiple circumstances in which creative activities take place, and the Committee members shared the view that *lex loci protectionis* is no longer the most appropriate rule to allocate IP rights to newly created works. Even though the departure from the territoriality principle is widely supported, the members of the Committee did not entirely agree whether one choice of law rule would suffice, or whether several alternative provisions to various case-by-case based scenarios should be adopted. Moreover, there was a debate whether the ILA Guideline should provide several alternate choice of law provisions that would help determine initial ownership. Some Committee members expressed their strong preference to have one single law governing questions related to initial ownership. The advantage of such a solution would be legal certainty and predictability which are very important in globally intertwined economies. Some other members of the Committee were more reserved and highlighted the need to be aware that choice of law dealing with the law governing initial ownership should be in line with other choice of law provisions (e.g., transferability of IP rights).

One session open to the public was held on January 16, 2015 during which the ILA Committee members presented general progress regarding the drafting of the guidelines. The first presentation was given by two reporters of the ALI Principles on Intellectual Property[4] (Professors Rochelle Dreyfuss and Jane Ginsburg) who briefly explained the goals of the ALI Principles. They also provided a succinct presentation of the scope and main principles on jurisdiction, choice of law and recognition and enforcement of foreign judgments in IP cases. Professor Josef Drexl from the Max Planck Institute of Innovation and Competition (Munich, Germany) gave a presentation about the CLIP Principles – a major legislative proposal prepared by a group of European scholars.[5] Professor Toshiyuki Kono followed up with a similar overview of the Japanese Transparency Project.[6]

Professor Andrew Christie presented the results of a survey concerning national approaches to cross-border online IP infringement disputes. The survey identified 56 court

Metzger (eds.), *Intellectual Property in the Global Arena: Jurisdiction, Applicable Law, and the Recognition of Judgments in Europe, Japan and the US* (Tübingen, Mohr Siebeck, 2010), Transparency Proposal is also available at www.tomeika.jur.kyushu-u.ac.jp/ip/proposal.htm.

decisions from 19 different jurisdictions. The survey included different fields of analysis in various degrees of detail such as: a) factual issues (type of IP rights, fact scenario and cross-border elements), b) types of claims (civil or criminal, primary or secondary, IP validity challenge and parallel proceedings), c) orders (provisional measures, remedies and foreign enforcement), and d) private international law issues and how they were treated in online infringement cases. Professor Christie emphasized that from the data collected there were no online (ubiquitous) infringement cases where a single plaintiff would seek multi-state relief or where parallel proceedings would take place. This led him to question whether online IP infringements should not be treated in the same manner as local infringements.

After Professor T. Kono's presentation about the ILA Project and the current state of affairs, Professor Gyooho Lee from Korea introduced the Japan-Korea Principles on Private International Law on IP Rights.[7] Taking into account that most East Asian countries belong to the civil law tradition, the purpose and scope of these Principles is to create a model law, which can be a source of inspiration for legislators in East Asian countries. This proposal was drafted jointly by a group of scholars from Japan and Korea and its conceptual roots could be traced back to the ALI and CLIP Principles. Professor G. Lee discussed the solutions adopted in the joint Japan-Korea Principles with regard to such matters as jurisdiction, choice of law, and recognition and enforcement of foreign judgments. Professor G. Lee noted that these Principles were taken into account in preparing the amendment of the Korean Civil Procedure Act in 2014.

Some selected issues in relation to the ILA Committee Draft Guidelines were presented to the audience by members of the Committee in a session chaired by Professor Joost Blom. Professor Axel Metzger and Professor Benedetta Ubertazzi discussed the main features of the jurisdiction provisions of the Guidelines. The most relevant issues of the applicable law section of the Draft Guidelines were presented by Professors Pedro de Miguel Asensio, Marie-Elodie Ancel, Rita Matulionytė, and Mireille van Eechoud. The provisions on recognition and enforcement of judgments were introduced by Professor Marketa Trimble.

Professor Dr Dário Moura Vicente discussed about the legal issues, which arise with regard to the arbitrability of IP matters. The advantages of arbitration as an alternative to court litigation of IP disputes are manifold. Yet one should be aware of the fact that IP rights are monopolies granted by States, which explains why jurisdiction over IP disputes is in many states reserved to domestic courts. Professor Moura Vicente explained that there are at least five approaches to arbitrability of disputes pertaining to registered IP rights: (i) registered IP rights disputes are not arbitrable (e.g., South Africa). In other countries arbitrability is possible, however, with some limitations. In Germany, for instance, jurisdiction of the court is generally held to be exclusive, hence validity issues are not arbitrable even if raised as a defense in infringement or breach of license disputes. (ii) the French approach, validity issues are arbitrable, although the arbitral award only has *inter partes* effect; (iii) the American approach (S. 294 of the Patent Act), which also

[7] The Joint Japanese-Korean Proposal, see 'Commentary on Principles of Private International Law on Intellectual Property Rights (Joint Proposal Drafted by Members of the Private International Law Association of Korea and Japan)' (2011) 2(6) *Kigyō to Hōsōzō*, available at www.globalcoe-waseda-law-commerce.org/activity/pdf/28/08.pdf.

allows arbitration of any disputes related to validity or infringement arising under contract. In case of no contract the parties may agree to settle the dispute by arbitration with *inter partes* effects. (iv) In some states disputes over registered IP rights are arbitrable and arbitral awards have *res judicata* effect (e.g., Belgium, Art. 51(1) of the Patent Law of 1984), and (v) in other countries such disputes are even mandatory (e.g., Portugal, Art. 2 of the Law No. 62/2011 of 2011).

Differences among the national legal systems exist also with regard to arbitrability of non-registered IP rights. For instance, in France such disputes are not arbitrable (perhaps stemming from *droit d'auteur* considerations) whereas in other states such a dispute resolution method could be framed as "default" (e.g., Quebec, Art. 37(1) of the Act Respecting the Professional Status of Artists) or Portugal where such dispute resolution method is mandatory. In the opinion of Professor Moura Vicente, existing differences create uncertainty and show the need for a uniform conflict of laws rules.

III.1.2 ILA Committee Meeting in Munich (November 2016)

On November 21-22, 2015 a Committee meeting took place at the Max Planck Institute for Innovation and Competition. During those two days, three sessions were held: one session open for the wide public and two closed sessions during which the Committee members were able to discuss pertinent matters concerning the drafting of the ILA Guidelines.

The open session began with a short presentation about the outline of the Guidelines and its main underlying objectives. The structure as well as the main solutions with regard to jurisdiction and choice of law were presented to the audience by the officers of the Committee. This was followed by a presentation by Ms Marta Pertegás, who is the First Secretary at the Hague Conference on Private International Law ("HCPIL"). Ms M. Pertegás introduced the status of the so-called Hague Judgments Project the objective of which was to develop an international instrument for the facilitation of the recognition and enforcement of judgments. Ms M. Pertegás noted that the draft of the HCPIL contained only provisions on recognition and enforcement; besides, it was not clear whether any provisions on jurisdiction would be added. Ms M. Pertegás also drew attention to the fact that the HCPIL draft did reflect the peculiarities of IP-related cases and that future cooperation with the ILA Committee should be greatly facilitated.

The second presentation in an open session was given by Ms Min Eun Joo who is a Senior Legal Officer at WIPO who made a presentation about recent and future activities of WIPO in the areas of private international law and IP. Ms Joo explained that at the outset there was no debate concerning transnational aspects of IP at WIPO. This was so because the nature and mandate of WIPO, differently from HCPIL, is less related to norm-setting. Instead, WIPO has been often providing legal assistance to national judiciaries in creating a more efficient IP enforcement framework. Therefore, judges form a very important stakeholder group in the operation of WIPO. Ms Joo further discussed a WIPO report prepared in 2015, which focuses on "online" IP infringements, which was presented in advance by Professor Christie at the above mentioned meeting at WIPO in January 2015. Some members of the Committee pointed out that the case studies in the report are not representative enough to draw conclusions, because for example only two cases from EU were reviewed in the report. With regard to the future activities of the

WIPO, Ms Joo emphasized that WIPO is likely to take some active steps to highlight the interface between IP and private international law and seek to provide more assistance to national judges in this regard. Therefore, WIPO will need partners with strong private international law expertise, which may lead to a closer cooperation between WIPO and the ILA Committee.

The third guest speaker at the open session was Professor Dr Burkhard Hess[8] who prepared a thorough presentation addressing various issues of the Draft of the ILA Guidelines from a procedural law perspective. Professor B. Hess began by drawing attention to the recent changes of procedural law in the EU: namely, the adoption of the Brussels I bis Regulation[9], the signature of the Agreement on the Unified Patent Court (UPC)[10] and more recent work conducted at the HCPIL in the area of recognition and enforcement of foreign judgments. Professor B. Hess noted that the conceptual approach taken in the ILA Guidelines places them somewhere in between the HCPIL draft, which is very territorial, and the UPC, which aims to establish a uniform regime for the whole region. From a purely procedural point of view, however, the draft of the ILA Guidelines seemed like a private international law instrument. This feature, in the opinion of Professor B. Hess, sets conceptual limitations for the ILA Committee to introduce desirable rules that would facilitate direct communication between courts and other agencies related in the administration of IP rights.

Overall, Professor B. Hess admired the structure of the ILA Guidelines and the way specific rules are organized. He commended the approach taken by the ILA Committee with regard to matters of validity and raised the provoking question of whether in such exclusive head of jurisdiction is still necessary. Professor B. Hess also suggested considering the need to eliminate, or at least curtail, differences that exist in national laws with regard to evidence gathering. Professor B. Hess also questioned whether it would be advantageous to define clearly the definition of "priority" in *lis pendens* situations or what period is "reasonable" in the case where the court later [required the ability] seized needs to suspend the proceedings. The idea of closer coordination of parallel proceedings and the need to enhance direct communication was raised multiple times. The UPC was referred to as one possible source of inspiration. Professor B. Hess finished with a short exposition about the activities of the ILA Committee on Privacy.

The last presentation at the open session was given by Professor Christian Heinze who spoke about the applicable law issues related to security rights in IP. This area of law is rather new and the ILA Committee is considering adding a separate rule on this matter. Professor C. Heinze explained various choice of law rules (*lex loci protectionis, lex fori, lex contractus*) and how they applied to various aspects of IP: existence, initial ownership, infringement as well as complexities related to the securities in IP. Professor C. Heinze addressed the need to fine tune traditional approaches to the realities of today

[8] Prof. B. Hess is the Executive Director at the Max Planck Institute for International, European and Regulatory Procedural Law (Luxembourg) and the Chairman of the ILA Committee on the Protection of Privacy in Private International and Procedural Law. in order to cope with the challenges brought by global business models and digital means of communication. He also discussed whether there is a need to have so-called *de minimis* rule in the choice of law context.

The open session ended with a Q&A session in which the participants were able to raise questions and seek clarifications about the practical results that would be achieved if ILA Guidelines were applied. Such issues as the scope (*ratione materiae*) of the ILA Guidelines as well as the applicable laws to initial ownership received much attention. With regard to initial ownership, much time was spent to consider the most suitable connecting factor for the determination of initial ownership in online cases as well as in cases where there are multiple creators.

Besides the open session, the ILA Committee held two closed sessions, the aim of which was to discuss some of the remaining controversial issues (namely, law governing initial ownership, arbitrability of IP disputes, the scope *ratione materiae* as well as some drafting-related issues) and discuss the future of the ILA Committee's agenda.

III.1.3 Officer's Meetings

The ILA Committee officers met at least four times in 2014-2016 (November 28-29, 2014 in Berlin, 6-7 February, 2015 and January 14-17, 2016 in Japan, and May 26-27, 2016 in Paris). Those meetings usually were to create and adapt strategies in order to streamline the activities of the Committee as a whole and coordinate the work between the sub-committees. Officers also decided about the future steps that are necessary in order to further develop the drafting work of the ILA Guidelines and to prepare for the forthcoming Committee meetings.

III.1.4 Future Relationship with the HCPIL

The cooperation between the ILA Committee and the HCPIL seems to be very desirable and necessary. Moreover, such a necessity of cooperation between HCPIL and ILA is clearly acknowledged by the staff of both organizations. Since the establishment of the ILA Committee, the cooperation between two organizations has been quite close: representatives of the HCPIL participated in ILA Committee meetings in Amsterdam (2014), and Munich (2015), while the representatives of the ILA Committee were invited to the Council of General Affairs and Policy of the HCPIL meeting in 2013 as well as the Special Commission on the Judgment Project in 2016.

The cooperation between the ILA Committee and the HCPIL has been mutually beneficial since a number of substantive law issues overlap. Although the present Draft of Provisions on Recognition of Judgments prepared by HCPIL barely reflect the specifics of IP-related cases, three overlapping substantive law areas could be highlighted. First, HCPIL will have to investigate the different nature of registered IP rights and those IP rights that require no registration and how this dichotomy affects the recognition and enforcement of foreign judgments. In this regard, ILA Guidelines could provide for a solid foundation for HCPIL's work. Second, HCPIL could benefit from the ILA Committee's work with regard to the interplay between the court's jurisdiction in IP matters and how this affects the recognition and enforcement of a particular judgment in a foreign state. Third, the HCPIL could exploit the insights of the ILA Committee members with regard to the cross-border ramifications of cases where the validity of registered IP rights is

challenged as a main claim or as a defense. Sharing information and expertise also in other related areas could certainly save resources of both organizations and further collaboration is expected to continue.

III.2 Remaining Issues and Future Work of the Committee

Three main issues proved to be controversial and require more time for the Committee's deliberation: coordination and cooperation, initial ownership and arbitrability of IP disputes. Coordination and cooperation is one of the areas where most of the work is still remaining. The Sub-Committee will prepare several alternative provisions to facilitate further discussions within the Committee as to what extent the ILA should address the issue of coordination and cooperation. A more humble approach would be limited to matters of dealing with parallel proceedings and it would be up to the Committee to decide whether more detailed Guidelines are desirable to provide some guidelines for the cooperation between courts in transnational IP proceedings.

Initial ownership remains another area of controversy for the Committee. The shared understanding among the members of the ILA Committee is that the territorial approach to such questions as initial ownership has two main drawbacks: first, applying the *lex protectionis* rule increases uncertainty about the ownership, adds transaction costs and reduces the value of IP assets. Second, territorial approaches potentially adds undue burden on weaker parties (e.g., employees) in exploiting IP rights. In order to overcome such shortcomings and contribute to greater certainty in the global IP marketplace, the Committee is likely to adopt the approach where initial law would be determined by way of applying single choice of law rule. Moreover, in situations where the parties are engaged in pre-existing relationships (e.g., based on employment or production contract) the law governing such relationships might be also applicable to the issue of initial ownership. The Committee also discusses to what extent party autonomy should be allowed.

With regard to registered IP rights, the Committee is likely to adopt the *lex loci protectionis* rule to determine entitlement and ownership of registered IP rights. However, in the case of a non-registered approach, the law of the closest connection to the creation (e.g., habitual residence of the creator) might be applied to determine initial ownership. In situations where there are multiple authors involved, some limited possibilities of exercising party autonomy might be allowed. More conceptually, the ILA Committee struggles to resolve such complex matters as the interface between choice of law rules for ownership and transferability interface and making sure that these two legal issues are subject to the same governing law as much as possible.

Regarding arbitrability of IP-related disputes, one of the initial questions for the ILA Committee is whether the Guidelines should contain a special section on arbitration at all. Given the existing differences among national legal systems, the proposed guidelines should be in line with the prevalent international arbitration practice. Since many of the Committee members agree that there has been a notable degree of liberalization of domestic laws allowing more IP-related disputes to be resolved by means of arbitration, it is likely, that some guidelines will be proposed. Moreover, taking into consideration the fact that ILA Guidelines will not have the force of law, it is widely agreed that some sort of guidance for the future with regard to settlement IP disputes in arbitration proceedings is desirable.

Among the matters discussed within the arbitration Sub-committee were arbitrability of IP-related matters. Among the possible approaches considered within the Committee, arbitrability may be resolved by way of applying the law of the place of arbitration, but this remains controversial. The Committee discussed in which scenarios the arbitral tribunal should take into consideration the law of the protecting country. One of the possible provisions in the ILA Guidelines may be that the law of the protecting country would have to be taken into consideration when the arbitral award is to be enforced in that country.

To complete the Guidelines, the Committee needs to further decide upon the guidelines concerning the scope and draft the preamble. With regard to the scope of the Guidelines, the Committee will have to crystallize the notion of "IP rights" and specify what other areas of law should fall within the scope of the Guidelines. As mentioned in other parts of this report, the scope of the Guidelines has to be carefully framed in order to make sure that important aspects of transnational IP litigation are not left out of reach of the Guidelines. This, in particular, requires a careful consideration of matters that are dealt with by unfair competition rules as well as regimes regulating traditional knowledge, geographical indications etc. At the final stage of its work, the ILA Committee will also have to make a decision whether to introduce special provisions covering unitary IP rights, consumer protection and law governing securities in IP.

IV. Concluding Remarks

Eric Schmidt, Executive Chairman of Google, once stated that we are creating as much information every second day as all of the humanity created from the beginning of recorded history to 2003.[11] Much of such information is created in online environments or transnational settings. ILA Committee's Guidelines is one of many projects, which aims to contribute to creating more transparent legal framework for the appropriation and exploitation of ideas. While the basic structure and principles proposed in the ILA Guidelines are already in place, some further work will still have to be done. First, the ILA Committee will have to finalize the Guidelines and seek comments from the public. Second, the Committee will have to continue working with partner organizations and institutions in order to spread the information about the existence of the ILA Guidelines. Finally, in the remaining period of its mandate, the Committee aspires to prepare a more comprehensive publication, which could potentially involve a brief explanatory report about the underlying considerations behind the Guidelines and also offer some recommendations about the work that could be done in the future.

INTELLECTUAL PROPERTY AND PRIVATE INTERNATIONAL LAW

WORKING SESSION

Wednesday, 10 August 2016, 9.00am

Chair: Professor Burkhard Hess (Germany)

The Chair welcomed attendees and introduced the Chair of the Committee. Before giving him the floor, he acknowledged the absence of one of the CoRapporteurs, Professor Axel Metzger (Germany).

Professor Toshiyuki Kono (Japan) began his presentation by giving a brief overview of how the Committee was established and its modus operandi in trying to produce draft guidelines on intellectual property (IP) in private international law (PIL).

Professor Kono dealt with the concept of territoriality in IP law by giving a historical background of how IP was established from the era of sovereign rulers who used to grant special permission to engage in particular activities. Countries then evolved in the 19th century to protect IP.

The issue of cross border protection of IP was very important and explained the use of bilateral and multilateral treaties such as the Berne Convention and the Paris Convention. One of the fundamental principles underlying these treaties was territoriality and the national treatment principle.

The advent of the 20th century brought digitisation and globalisation, which influenced markets to change. Finding the best way to protect IP within the context of globalisation and digitisation was the most fundamental question that the Committee sought to answer in the draft guidelines.

Prior to the creation of the Committee, there were a number of projects that dealt with this issue. However, these projects were only regional, and most had ended by 2011. Therefore, the Committee aimed to widen the reach of the previous projects and to continue dealing with the issues with a view to reaching recommendations that could be accepted at a global scale.

To achieve their aim, the Committee devised a new way to recruit the members. It approached the best experts all over the world to join the ILA and then had their national branch nominate them. This was central to the success of the Committee's activities, as it ensured that the best experts and specialists of IP and PIL would be selected.

Professor Kono elaborated on the methodology used by the Committee. Each member was requested to identify the fundamental issues to be discussed by the Committee. Subcommittees were constituted to discuss particular issues. To facilitate communication and the exchange of information and ideas, regular Skype meetings were conducted. A drafting committee of junior participants was also constituted to record all meetings.

Most importantly, there was a concerted effort to collaborate with prominent international organisations. In particular, the Committee had a joint meeting with the World Intellectual Property Organisation (WIPO) in January 2015 in Geneva (live streamed globally). Cooperation had also been intense with the Hague Conference on Private International Law and the Max Planck Institute for Innovation and Competition.

The guidelines that the Committee had developed were structured as follows:

1. General provisions
2. Jurisdiction
3. Applicable Law
4. Recognition and Enforcement of Judgments.

The draft guidelines were published in the Committee's third report, although several significant issues remained open. Regarding scope, one issue that was still in preliminary discussions was the protection of traditional knowledge applicable to one country and how it should be enforced in a territory that does not recognise that particular traditional knowledge. Furthermore, the Committee's future works could involve an array of undecided provisions that still needed discussion, including the development of new issues, such as collective management of IP and PIL, and possible collaboration with the Hague Conference in this respect.

The Chair commended the Committee for the work done so far, especially the initiative to collaborate with other international organisations such as WIPO and the Hague Conference.

Professor Pedro A de Miguel Asensio (Spain) walked attendees through the draft guidelines relating to jurisdiction.

Guideline 3 established the defendant's habitual residence as the basic forum. This allowed for the enforcement of IP rights on a crossborder basis and enabled consolidation of claims by granting access to IP protection beyond where the right was registered. This possibility was identified by the Committee as being of great importance in the current context of globalisation and digitisation. However, to provide a reasonable balance, this ground of jurisdiction was only available with respect to disputes not falling within the exclusive jurisdiction of the court of the State of registration, as provided for in guideline 10.

The main purpose of guideline 4 was to provide an alternative ground of jurisdiction for IP licence or transfer contracts.

Guideline 5 concerned infringement claims, and was very relevant in the context of the digital exploitation of rights. It allowed for the enforcement of an IP right both where the event giving rise to infringement occurred and where the damage occurred. This was in tandem with the concerns of the effect of digitisation on the enforcement of IP rights to which Professor Kono alluded.

Paragraph (a) conferred unlimited jurisdiction to the courts of the place where the event giving rise to the infringement occurred. This provision was of limited practical significance since it usually led to the courts of the infringer's habitual residence, and the enforcement of IP rights before those courts was envisaged by the basic forum of the defendant's habitual residence.

Paragraph (b) conferred jurisdiction on the courts of the place where the infringement caused damage, but the courts' jurisdiction was territorially limited to the State in which the court was situated. The use of the phrase "substantial damages" was intended to

limit this ground of jurisdiction and to exclude its application on the basis of the mere accessibility of Internet content without any significant connection with the forum.

Guideline 7 concerned title and ownership and applied to specific disputes relating to who owned an IP right. Such disputes did not fall within the exclusive jurisdiction provided for in guideline 10.

Guideline 8 provided for party autonomy. Professor De Miguel Asensio emphasised that the choice of court applied to noncontractual disputes.

Guideline 9 conferred jurisdiction on a court where a defendant appeared and did not contest jurisdiction upon the commencement of proceedings.

Guideline 10 conferred exclusive jurisdiction in certain matters, and to that extent, prevailed over the other provisions in the draft guidelines. The Committee had focused on reducing the matters in which exclusive jurisdiction was conferred as a key element to make possible the use of cross-border private enforcement of IP rights. Exclusive jurisdiction was conferred on the courts of the State of registration with regard to proceedings which had as their main object the grant, registration, validity, abandonment, or revocation of a registered IP right. To attain a reasonable balance, a decision of a court of a different State on these matters when they arise in another sort of proceeding would not have any effect on third parties (ie, the decision only applied to the parties to the dispute).

Guideline 13 did not establish a ground of jurisdiction, but rather dealt with the scope of injunctions. In the Internet context where judicial measures might have global consequences, it was important to highlight that, in many situations, injunctions to enforce IP rights were to be regarded as territorially limited. Therefore, the Committee had considered it appropriate to address expressly this issue and to state that injunctions should be limited both by the extent of the jurisdiction of the court and by the territorial reach of the IP right enforced.

Guideline 14 provided that a court with jurisdiction on a claim could also hear a counterclaim on the same facts.

Guideline 15 did not establish direct grounds of jurisdiction but rather a non-exhaustive list of grounds of jurisdiction which were not regarded as appropriate. This list was of particular significance in the context of the recognition and enforcement of foreign judgments.

Guidelines 16 and 17 reflected a recognition by the Committee that coordination between courts in different territories might face significant difficulties in the global context. Resources were limited and some countries did not have efficient or well-functioning courts, which could hamper coordination across boundaries. The guidelines included two provisions on lis pendens and related proceedings. A safeguard had been included in guideline 16(2) with a view to impeding "torpedo" strategies that had been common in cross-border IP litigation.

The Chair commended Professor De Miguel Asensio on the work of the Committee, particularly on issues of jurisdiction. He then opened the floor to comments on the issues of jurisdiction introduced by Professor de Miguel Asensio.

Professor Frederick Abbott (US) suggested that an explanatory document on the guidelines would be of interest.

With regards to guideline 3, Professor Abbott queried the meaning of the courts of the defendant's forum being "territorially unlimited". The concept might be problematic in practice. With regards to guidelines 13, he queried why it was limited to injunctions only, and not to other forms of relief such as damages. With regards to the definition of "intellectual property right" in guideline 2, Professor Abbott expressed concerned that the words "and similar rights" might be too broad, extending to subject matter not specifically addressed in the draft guidelines, such as goods in transit.

Professor De Miguel Asensio accepted the concern about the words "similar rights" in guideline 2, adding that the Committee recognised the need for additional precision and would address this in the final version of the guidelines or in its explanatory report. The guidelines clearly encompassed core traditional IP rights, such as patents, trademarks, design rights, and copyright and related rights.

The issue of goods in transit had been the focus of a special subgroup within the Committee. The subgroup concluded that the current private international law rules were sufficient to enable right holders and customs agencies to stop goods found in transit if there was a suspicion that the situation was not one of mere transit. Therefore, no new jurisdiction or choice of law rules covering the issue of jurisdiction goods in transit were envisaged, since the guidelines already included rules on provisional matters. However, the subgroup identified a need for a precise definition of the concept of transit in substantive trademark and customs laws, but that fell beyond the scope of the guidelines.

In so far as guideline 3 was concerned, the purpose of the Committee was to facilitate cross-border litigation in the courts of the defendant's habitual residence and such provision had to be read in conjunction with guidelines 8 and 10, which contained rules of jurisdiction that prevailed over guideline 3. Therefore, such unlimited jurisdiction was not open-ended and was restricted by law to the extent that exclusive jurisdiction was conferred on other courts.

Professor Jan von Hein (Germany) congratulated the Committee for the draft guidelines and offered some suggestions with regard to guideline 5 in an attempt to draw a line in localising the relevant place.

First, he queried the location of the place where an alleged infringement is "furthered" (see guidline 5(a)), and whether this extended to acts of third parties, such as industrial espionage. Second, with regard to guideline 5(b), he suggested that it was advisable to limit this to the State of *immediate* damage, since the mere reference to substantial damages might be too openended, and mere financial or indirect consequential damages should be excluded.

Professor De Miguel Asensio agreed that substantial financial damages should not be included. However, there was a need to compromise. Be that as it may, it seemed reasonable for clarity that mere financial damages were not included, at least in the commentary to the draft guidelines. He informed attendees that the Committee intended to supplement the final text of the guidelines with a commentary or explanatory report that could clarify such issues.

Mr Alexander Kunzelmann (Australia) queried what the Committee sought to achieve by the guidelines, given that they were guidelines after all but were formulated almost as a draft treaty. This did not seem appropriate to the target audience.

Professor De Miguel Asensio noted that the Committee was considering mentioning in a preamble to the guidelines to whom they were principally addressed, which might include international and national legislators, as well as courts and tribunals and other relevant actors. The guidelines were not yet complete, and there was still work to be done.

Professor Kono noted that similar questions had been raised on the language used in the draft guidelines in the context of a presentation before the Japanese branch. He suggested that the use of softer language, for example, shifting from the use of "shall" to "may" should be looked into as a possibility by the Committee.

The Chair noted that most IP disputes involved legal persons, and queried what the habitual residence of such a person would be. It would be helpful if the guidelines included a definition of habitual residence to avoid interpretive challenges.

The Chair also asked whether the requirement in guideline 9 that the defendant "not context jurisdiction in the first defense" was referring to national or regional laws or instruments. There was a need for some clarification on this in the commentary.

Furthermore, in relation to injunctive relief, the Chair asked how this rule applied to orders of discovery in IP litigation. He added that he supported the approach of the Committee to limit torpedo strategies in IP litigation.

Professor De Miguel Asensio noted that the definitions in guideline 2 were not complete, and that there was a need to include other definitions. In this regard, the Committee was considering a possible definition of "habitual residence" and the position to be adopted with regard to legal persons. With respect to the need to determine if jurisdiction had been contested in the first defense in the context of jurisdiction based on appearance, it could be assumed that the court would apply its own procedural rules to determine whether its jurisdiction had been contested (in the absence of additional indication in the guidelines). As for discovery in IP litigation for injunctive relief, Professor de Miguel Asensio noted that this was a very important aspect and the Committee would consider further whether additional clarification was needed.

Professor De Miguel Asensio proceeded to walk attendees through the draft guidelines relating to applicable law.

With regard to guideline 18, the Committee was still in discussions about transferability of an IP right, since this issue was very much related to the question of the law applicable to initial ownership. Initial ownership was currently the main focus of the Committee's discussions on applicable law issues. Reaching a compromise solution would be a significant achievement in the light of the conflicting approaches on this issue that had prevailed in previous projects.

Guideline 20 allowed party autonomy to choose the applicable law. This would not apply to consumer contracts, since the latter remained at this stage outside the scope of the draft guidelines.

Professor De Miguel Asensio noted that, since in reality the legal systems in most countries lacked specific rules on how to determine the law applicable to IP contracts in the absence of parties' choice, guideline 21 was inserted to address the gap and could be of particular significance.

Professor Abbott intervened to ask if the guidelines referred to the habitual residence of the licensor or the licensee of the IP right as a connecting factor to determine applicable law.

Professor De Miguel Asensio responded that guideline 21(1)(b) merely provided a non-exhaustive list of factors that might be relevant to establish the State with which the contract was most closely connected. Those factors included the common habitual residence of the parties, the habitual residence of the party effecting the performance characteristic of the contract, and the habitual residence of one of the parties when this habitual residence was located in one of the States covered by the contract. The reference to the habitual residence of the party effecting the performance characteristic of the contract should be usually understood as being a reference to the licensor of the IP right.

Professor De Miguel Asensio went on to discuss guideline 24, which concerned the law applicable to the infringement of IP rights. The main problem with the traditional *lex loci protectionis* rule in the current context was that certain infringing activities might affect a number of countries and attempting to address such multinational infringements could face significant obstacles. A solution to this was difficult due to the territorial nature of IP rights. To address this quagmire, the Committee considered two solutions.

The first was guideline 24(2), which allowed the parties to choose the applicable law to the remedies available for the infringement. As such, there was no choice as to the infringement, but the possibility for the parties to choose a single law with respect to the compensation arising out of activities that infringed rights in several countries.

The second was guideline 25(1). The Committee advocated for an exception (to the traditional *lex loci protectionis* rule) that enabled the application of a single law to multi-state infringements in connection with the use of ubiquitous or multinational media. However, as it was difficult to determine which single law to apply in all situations, the factors contained in guideline 25(2) would be instrumental in determining this. These factors were flexible and nonexhaustive. Guideline 25(3) established a defence available to a defendant in multi-state infringement disputes and was intended to ensure a reasonable balance that safeguarded the territorial nature of IP rights. Guideline 25(4) addressed the position of internet intermediaries by stating that the preceding paragraphs of guideline 24 might apply *mutatis mutandis* in cases of secondary or indirect infringements.

The Chair opened the floor for questions and comments.

Professor Abbott queried whether trade secrets were included in the guidelines.

Professor De Miguel Asensio responded that the scope of the draft guidelines had not yet been finalised. It was the general consensus of the Committee that trade secrets shared only some features with IP rights and that therefore, although in principle they remained outside the scope of the guidelines, some of its provisions could apply *mutatis mutandis* to trade secrets.

The Chair asked if guideline 24(2) could apply to standard clauses in IP contracts which gave specific jurisdiction to a particular territory regardless of where the infringement occurred.

Professor De Miguel Asensio responded that, as a general rule, the guidelines did not apply to consumer contracts, however exceptions to this might need to be discussed further by the Committee. Therefore, in commercial disputes, guideline 24(2) would apply.

Professor von Hein requested for some clarity on guideline 18, specifically on what the choice of law rule should be for the transfer/assignment of IP rights. Was it the general law of contract that applied?

Professor De Miguel Asensio responded that complex characterisation issues might arise in this regard. Contractual issues fell within guidelines 20 and 21, but transferability fell in principle within the scope of guideline 18. The Committee was still working on the issue of ownership, which affected transferability.

Professor De Miguel Asensio then turned to the guidelines dealing with the recognition and enforcement of foreign judgments.

Guideline 29 included a broad definition of foreign judgment for the purposes of recognition and enforcement. Guideline 31 established the grounds for non-recognition and non-enforcement in line with the recent texts drafted under the auspices of the Hague Conference.

Professor Abbott asked if there was ever a case in which a patent registered in the US was invalidated in the EU (ie, whether court had ever invalidated a foreign registered patent).

Professor De Miguel Asensio responded that, although the current EU instruments established a broad jurisdiction based on the defendant's habitual residence, the reach of the exclusive jurisdiction concerning registered IP rights had so far prevented judgments concerning the validity of IP rights other than those created in the forum. The guidelines intended to improve that situation by allowing a court having jurisdiction on other grounds to decide on the validity of a foreign IP right, but only in proceedings which did not have validity as their main object (eg, because non-validity was raised as a defence); moreover, the resulting decision would not have any effect on third parties.

The Chair raised the need for the Committee to address arbitration issues.

Professor De Miguel Asensio noted that a number of issues had arisen concerning arbitration in the discussions of the Committee. The guidelines on applicable law could be relevant to arbitrators in cases where they had to determine the law applicable to the substance of a dispute as an indication of general principles of private international law. Additionally, the Committee was considering the possibility of the guidelines addressing the law applicable (by State courts) to the arbitrability of IP disputes.

The Chair emphasised the importance of guidelines for arbitrability so as to aid dispute resolution. This would pave the way for an arbitrationfriendly approach that brought about a coherent and unambiguous answer to those who chose arbitration.

Professor Abbott expressed his agreement with the Chair, adding that arbitration was central especially when dealing a country that had poor track record with upholding the rule of law. This would address the level of corruption and poor rule of law found in several counties and provide a speedy solution to this possibility.

The Chair expressed his sincere gratitude to the CoRapporteurs for their diligent work and looked forward to the final draft of the guidelines.

Professor Kono expressed his gratitude to the Chair for facilitating the session, and looked forward to addressing all the issues raised during the session in the ongoing work of the Committee.

THE UNESCO CONVENTION ON THE UNDERWATER CULTURAL HERITAGE

In its 28 years, among many projects, the Committee on Cultural Heritage Law has drafted two international conventions. The more recent of these is the Convention on Immunity from Suit and Seizure for Cultural Objects Temporarily Abroad for Cultural, Educational or Scientific Purposes. The 76th conference in Washington, D.C. (2014) approved of the committee's resolution for adoption of the convention. Although the Immunity Convention is too new to have generated any significant developments, the Committee's earlier project, the Buenos Aires Draft Convention on the Protection of the Underwater Heritage (1994), has had an important history.

Committee member Piers Davies presented a biennial report, as follows, on progress in the ratification and implementation of the UNESCO Convention of the same name, based on the Committee's Buenos Aires Draft Convention: Mr. Davies acknowledges that the comments and assistance of David Conlin, Sarah Dromgoole, Craig Forrest,

David Gadsby, Paul Myburgh, Jim Nafziger, Patrick O'Keefe, Ole Varmer, Andy Viduka and Nout van Woudenberg have been most helpful in completing this report.

* * *

The ILA Committee on Cultural Heritage Law has had a long connection with the UNESCO Convention on the Protection of the Underwater Cultural Heritage Convention since 1990 when the Committee first discussed the project. Eventually, the Committee's Buenos Aires Draft Convention was approved by the ILA in 1994 and then submitted the United Nations Educational, Scientific and Cultural Organization for its consideration. UNESCO developed the draft and adopted a revised version of it in November 2001. The Convention entered into force on 2 January 2009 after the requisite 20 ratifications had been submitted.

When the Committee met in Washington during the 76th Conference of the I.L.A. (April 2014), 46 States Parties had ratified or acceded to the Convention. Since then, nine more states have ratified or acceded, making a total of 55. The last two ratifications were by Ghana and Guinea-Bissau, making the number of African States Parties 14, including Madagascar off Africa's southeastern Coast, four states in North Africa, eight in Western and Southern Africa, and one in Central Africa (the Democratic Republic of Congo, which has a narrow coastal access to the Atlantic Ocean). The acceptance of the Convention by South Africa in May 2015 is a major exemplar. France's ratification of the Convention in 2013 has undoubtedly encouraged other neighbouring States Parties to ratify it -- for example, Belgium -- or to accelerate the process of consideration leading to ratification. The Netherlands announced on 19 May 2016 that it will ratify the Convention, but established no timeframe. Germany is also moving towards ratification.

There is a significant concentration of States Parties around the Mediterranean Sea and the Black Sea. Indeed, apart from Monaco (which is not a Party), the States Parties that have ratified the Convention run continuously from the Albanian / Greek border around the Mediterranean to Spain and then up the Atlantic Coast to Portugal, France and Belgium. There are also important States Parties clustered around the Black Sea and on the southern rim of the Mediterranean. Yet another concentration of States Parties in the Caribbean suggests a pattern: once a substantial number of States Parties in a region ratify the Convention, the pressure mounts for other States in the same region to do so as well.

In the South Pacific, the ratification by France has added the substantial maritime areas of the Exclusive Economic Zones around French Polynesia including Tahiti, New Caledonia and its dependencies, and the Wallis and Futuna Islands. Also, Australia has begun the process of reviewing its historic shipwreck legislation as a first step towards ratification, but the process is taking time despite the urging of a number of academics and maritime archaeologists as well as an element of urgency because of the sunset provisions in the existing legislation. New Zealand is unlikely to give the issue any urgency until Australia has become a State Party.

The Annex to the Convention sets out detailed Rules which have become accepted as international law norms. These Rules have been widely referred to, either directly or indirectly, by countries that have not ratified the Convention, including the UK, the USA, Australia and New Zealand. The contract awarded over the *H.M.S. Victory* wreck

(1744) to Odyssey Marine illustrates this insofar as all participants in the ongoing debate about the contract have quoted from the Annex to support their opposing positions. For example, Odyssey argues that the way it is proposing to carry out the wreck recovery project complies with the Convention Rules. In the USA, all of the federal agencies conducting activities in the marine environment have sent letters to the Society of Historical Archaeology pledging to follow the Annex as a matter of practice and policy. In particular, the National Oceanic and Atmospheric Administration and the National Park Service have entered into bilateral non-binding agreements with Spain and the UK that incorporate the Annex and other provisions consistent with the Convention. In addition, courts in the USA have recognized and upheld conditions for the conservation of the *RMS Titanic* wreck (1912) that are consistent with the international law norms. This trend of officially applying the Convention's Rules, continues to be one of the most significant developments in recent years.

Finally, it should be noted that World War I wrecks have become subject to the Convention because of the requirement in the Convention that sunken vessels must have reposed in that condition for 100 years. Many of these are war graves. This development has major political significance due to the large number of countries involved in the conflict and the numerous vessels and crews lost. For example, at the beginning of June 2016 the naval vessels lost by Great Britain and Germany in the battle of Jutland reached the 100-year anniversary of their sinking.

THE LAW PERTAINING TO CULTURAL LANDSCAPES SIGNIFICANT TO INDIGENOUS PEOPLES

I. Background

Landscapes and, by extension, seascapes are becoming an important topic of cultural heritage law. Related issues are apparent in decision-making and dispute-resolution processes. Unfortunately, neither those processes nor the academic literature have adequately addressed the contours, limitations and future development of the pertinent transnational law. In 2013 the Committee on Cultural Heritage Law of the International Law Association therefore decided during an intersessional meeting at Herlufsholm near Naestved, Denmark, to focus its work on the international legal dimensions of landscapes as cultural heritage. In 2014, during the Seventy-Sixth Conference of the International Law Association in Washington, D.C., the Committee decided more specifically to prepare an exploratory report on the international legal framework for protecting cultural landscapes of significance to indigenous peoples. A preliminary agenda provided for submission of the report for approval during the ILA's Seventy-Seventh Conference in 2016. A summary of the Committee's discussion at the Washington, D.C. Conference may be found in International Law Association, *Report of the Seventy-Sixth Conference* (2014), at pages 776-79.

Immediately after the Washington, D.C. Conference, Professors Margaret Beukes of the South African Branch of the I.L.A. and Elina Moustaira of the Hellenic Branch agreed to serve as co-rapporteurs for the project. Members of the Committee were then invited to submit commentaries on the chosen theme and examples of cultural landscapes, without any agreed-upon definition, in their respective countries.[1] In June 2015 the Committee,

[1] Contributing members were: Thomas Adlercreutz, Kaare Bangert, Janet Blake, Ernesto Becerril, Margaret Beukes, Janet Blake, Kevin Chamberlain, Patricia Conlan, Piers Davies, Craig Forrest,

at the invitation of Talia Einhorn of the Israeli Branch, met in Jerusalem to discuss the project, taking account of commentary prepared by the chair and special rapporteurs.

The exploratory Report that follows is not intended to be definitive. It is set forth simply as a framework for further development of the pertinent transnational regime, as described in the Report, to assist governments, international organizations, non-governmental organizations, business interests and other stakeholders in efforts to protect cultural landscapes, with all of their diverse manifestations, that are of significance to indigenous peoples. In particular, assistance to the governing authority and other institutions of these indigenous peoples is essential. A special effort has been made to render the report accessible and understandable to the general public as well.

II. Applicable International and Regional Law

A. An Overview

An acceptable definition of the core concept, "cultural landscape," as a topic of international cultural heritage law, is uncertain, as is the precise scope of its application. In other disciplines, however – for example, archaeology, anthropology, environmental management, environmental law, and geography – the core concept has been more thoroughly and holistically developed as a tool to help shape research agendas and policy.[2] It is noteworthy that much of the resulting work has been closely linked to the principle of "sustainable development," which has thereby served as a basis for a shared understanding of cultural landscapes. Accordingly, interdisciplinary work has focused on interactions between humans and their environment and on cultural identity with landscapes as key factors in achieving biodiversity and land-use sustainability. The same kind of focus and objectives are apparent as the topic of cultural landscapes emerges in cultural heritage law.

> To be sure, the core concept of "cultural landscapes," specifically, may have less traction among those who prefer the generic term "landscape."[3] Arguably:
>
> [t]he distinction between natural and cultural landscapes is becoming increasingly difficult. Some landscapes are more influenced by natural processes while some of them are more intensively influenced by cultural processes. The transition between landscapes that are

---

Kristin Hausler, Andrzej Jakubowski, Federico Lenzerini, Lucas Lixinski, Elina Moustaira, James Nafziger, Patrick O'Keefe, Robert Paterson, Jorge Sánchez Cordero, and Sabine von Schorlemer. Gideon Koren and Amy Strecker also assisted the committee with their commentaries.

[2] *See, e.g.*, the cogent observation about cultural seascapes by C. Westerdahl, "The Maritime Cultural Landscape," in A. Catsambis, B. Ford and D. Hamilton, *The Oxford Handbook of Maritime Archaeology (*Oxford University Press, 2011), p. 732: "The study of maritime culture and its landscape ought to mean the exploration of all kinds of human relationships to the sea, or very plausibly to any large body of water" (p 754.) This report will therefore use the somewhat misleading but generic term "landscapes" to include maritime landscapes (seascapes).

[3] M. Jones, "The Concept of Cultural Landscape: Discourse and Narratives," in H. Palang and G. Fry (eds.) *Landscape Interfaces: Cultural Heritage in Changing Landscapes* (Springer, New York, 2003), p. 21, 22. This approach (to merely refer to "landscape" without the adjective "cultural") is apparent in Article 1 of the European Landscape Convention ("'Landscape' means an area, as perceived by people, whose character is the result of the action and interaction of natural and/or human factors").

> predominantly culturally or predominantly naturally shaped is gradual. Therefore, in some respects, it appears better to simply use the term landscape without further qualification.[4]

On the surface, that observation rings true. As we shall see, however, it is precisely the varying fusion of natural and cultural phenomena in distinctive ways among different indigenous cultures as well as the mutuality of the interactions between human cultures and the natural environment that justify the core concept. Cultural landscapes may include, build upon, or be projected upon natural landscapes variously among different peoples. Sometimes natural and cultural landscapes are one and the same and sometimes they are not.

Given the complexity of the relationship between nature and culture among different peoples, this Report will devote only passing attention to a definition of cultural landscapes. Instead, the Report will offer a comprehensive typology of cultural landscapes defined by categories that merge natural and cultural phenomena in distinctive ways. Before doing so, however, it will be helpful to summarize the pertinent regime of transnational law, first in general terms and then more specifically.

The foundation of this regime is International Human Rights Law (IHRL), centered on the so-called International Bill of Rights that includes the Universal Declaration of Human Rights,[5] the International Covenant on Civil and Political Rights (ICCPR),[6] and the International Covenant on Economic, Social and Cultural Rights (the ICESCR)[7]. More specific agreements include, *inter alia*: the 1972 World Heritage Convention (of fundamental importance);[8] the 1965 Convention on the Elimination of All Forms of Racial Discrimination;[9] and the International Labor Organization's *Convention concerning Indigenous and Tribal Peoples in Independent Countries (No. 169)*.[10] Any responsible enquiry into the place of the cultural landscape of indigenous peoples must take account of these instruments. International environmental instruments, such as those addressed

[6] G.A., Res 2200A(XI), adopted and opened for signature, ratification and accession on 16 December 1966 (the ICCPR entered into force internationally on 23 March 1976).

[7] G.A., Res 2200A(XXI), adopted and opened for signature, ratification and accession on 16 December 1966 (the ICESCR entered into force on 3 January 1976).

[8] The Convention was adopted on 16 November 1972, available at http://whc.unesco.org/en/convention/text (last visited on 26 February 2015).

[9] This Convention was adopted and opened for signature by G.A. Resolution 2106 A(XX) on 21 December 1965 and entered into force on 4 January 1969. Article 5 provides that "…State Parties undertake to prohibit and to eliminate racial discrimination in all its forms and to guarantee the right of everyone, without distinction as to race, color, or national or ethnic origin, to equality before the law, notably in the enjoyment of the following rights: …" Article 5(d)(v), under the heading "other civil rights, particular," provides that everyone has "the right to own property alone as well as in association with others."

[10] International Labor Organization, Convention No. 169 concerning Indigenous and Tribal Peoples in Independent Countries, Geneva, adopted 27 June 1989, entered into force 5 September 1991. *See* 28 *ILM* 1382 (1991).

to biological diversity and decertification, are also relevant insofar as the foundation of IHRL enshrines the right of all to cultural development and to participate in cultural life.[11]

Regional treaties are also relevant, beginning with the following foundational human rights instruments, in chronological order of their coming into force: the European Convention for the Protection of Human Rights and Fundamental Freedoms (ECHR);[12] the American Convention on Human Rights (ACHR);[13] and the African Charter on Human and Peoples' Rights (ACHPR) (the Banjul Charter).[14] All three of these fundamental conventions contain similar rights to the enjoyment of culture and cultural life within a community, particularly in the ECHR's Charter of Paris for a New Europe,[15] article 14 of the ACHR's Protocol of San Salvador,[16] and articles 17 and 22 of the ACHPR. All three Conventions also confirm a right to property – in Protocol 1, article 1 of the ECHR, article 21 of the ACHR, and article 14 of the ACHPR.

Two other European instruments are particularly relevant: the European Landscape Convention (the Florence Convention)[17] of 2000; and the Convention on Access to Information, Public Participation in Decision-making and Access to Justice on Environmental Matters of 1998 (the Aarhus Convention).[18] The latter is essential in establishing public access to environmental information, public participation and access to justice.

These treaties are legally binding on States Parties. *Pacta sunt servanda. S*tates parties and their subordinate governments therefore can be held liable not only for violating the stipulated rights but also for failing to respect, protect and fulfil them. Accordingly, if a non-state actor such as a corporation violates such rights, either the actor's national state or the state on whose territory the violation occurred may be held responsible on the basis of an attribution to it of such violations or a lack of due diligence to fulfil its obligations to respect, protect and fulfil the stipulated rights. The state may limit them only on a sound legal basis that is both necessary and proportional.

---

[11] *See* section I (B) of this Report for a discussion of the specific content of these treaties pertaining to cultural development and cultural life.

[12] The Convention was signed in Rome on 4 November 1950 and entered into force in accordance with article 66 on 3 September 1953.

[13] The Convention (also referred to as the "Pact of San José") was signed at San José, Costa Rica on 22 November 1969 and came into force on 18 July 1978.

[14] The Charter was adopted by the 18th Assembly of the Heads of State and Government of the Organization of African Unity (OAU) (now the African Union (AU)) on 17 June 1981 and came into force on 21 October 1986.

[15] The Charter was adopted on 21 November 1990 at Paris.

[16] This Protocol was adopted on 14 November 1988 at San Salvador.

[17] The Convention, (Council of Europe Treaty Series no. 176), was adopted on 20 October 2000 in Florence, Italy and came into force on 1 March 2004 [hereinafter Florence Convention].

[18] Adopted on 25 June 1998, 2161 U.N.T.S. 447, 28 ILM 517 (1999). It should be noted that Directive 2003/04/EC implements the Aarhus Convention in respect of rights to information held by public authorities (Directive 2003/04/EC on public access to environmental information, OJ 2003 L 41/26). *See* J. Holder and M. Lee, *Environmental Protection, Law and Policy* (Cambridge University Press, Cambridge, New York, 2009), p. 102.

Numerous non-binding instruments of soft law[19] supplement and reinforce the treaty obligations.[20] The examples include the studies and reports of the International Council on Monuments and Sites (ICOMOS), a global non-governmental organization associated with UNESCO. Its mission is to promote the conservation, protection, use and enhancement of monuments, building complexes and sites. It participates in the development of doctrine, evolution and distribution of ideas and conducts advocacy. ICOMOS is the Advisory Body of the World Heritage Committee for the Implementation of the World Heritage Convention, to be discussed later in this Report. As such, it reviews the nominations for cultural world heritage sites and helps protect the conservation status of properties. Its National Committees and International Scientific Committees have made particular contributions to the doctrinal heritage internationally.

General principles of law apply as well. Because cultural landscapes are inextricably environmental, the guiding concept or root principle of sustainable development, noted earlier in this Report, is fundamental as the "contemporary international norm which underpins environmental law generally."[21] It is generally accepted that this multi-faceted concept was first mooted by the World Commission on Environment and Development (WCED) in 1987, calling for "development that meets the needs of the present without compromising the ability of future generations to meet their own needs".[22] Whatever has been written of the concept and from whatever angle, position or political agenda, it is clear that sustainable development "attempts to integrate three facets: *environmental protection; economic development;* and *social upliftment* … into decision-making".[23] These three facets will be pivotal in shaping a transnational regime of law to protect cultural landscapes. The ultimate questions are ones of spatial justice.[24]

The need for sustainable development whenever the prospect of development may impact a cultural landscape inevitably necessitates careful risk management or assessment in accordance with the precautionary principle of international law.[25] ICOMOS conducts

[20] The importance of soft law has been expressed as follows: "[t]he main advantage of 'soft law' over 'hard law' is that it can enable states to take on obligations that they would not have taken on had they been required to accede to a treaty, for instance, owing to the obligations being couched in vaguer terms. Alternatively, the obligations may be formulated in a more precise and restrictive form than would have been acceptable in a treaty." M. Kidd, *Environmental Law* (Juta, Cape Town, 2011), quoting from P.W. Birnie and A.E. Boyle, *International Law and the Environment* (Oxford University Press, Oxford, New York, 2005), p. 25.

[25] The noun "risk" is described by UNESCO as "the expression of the likelihood and impact of an uncertain, sudden and extreme event that, if it occurs, may impact positively (opportunity) or negatively (threat) on the achievement of a project or program objective. *Risk Management Handbook*, UNESCO Bureau of Strategic Planning (Paris, France, 2010), p.11. In essence a "risk" is an "uncertain event" (p. 17) that has a potential impact. It is "as much a potential missed opportunity as well as a potential threat" (p.12).

the Heritage@Risk program to identify threatened heritage places, monuments and sites; to present typical case studies and trends; and to share suggestions for solving individual or global threats to our cultural heritage. Each year an invitation is made to all ICOMOS National Committees, International Scientific Committees and ICOMOS's world-wide professional network, to provide short reports outlining risks including case studies. This process is one of soft law in action.

Some risks are linked to the internal environment (for example, operational risks in executing a project or activity, general administration, human capital risks, information technology, and financial risks) whereas others are linked to the external environment (for example, political, economic, and socio-cultural risks; legal or regulatory requirements; and environmental and security risks).

"Risk management" encompasses, first, a "systematic approach to managing risks … by identifying, assessing, understanding, acting on and communicating risk issues;" second, within an organization, risk management "requires a clear delineation of roles based on existing hierarchy, responsibilities and areas of work. It has to be understood as a collective responsibility--the anticipation and management of risks have to become everyone's concern."[26] Third, risk management contributes to strengthening and maintaining the capacity to enhance the process of decision-making and manage change through a proactive anticipation of negative and positive uncertainties and the development of appropriate strategic plans; to adapt resiliently to unforeseen events or disruptions; to align strategies with the expectations of stakeholders; and to seize opportunities.

Careful risk management can help protect cultural landscapes of significance to indigenous peoples in several ways: by enabling responsible decision-making and priority-setting; by allocating resources in a better way; by increasing efficiency; by avoiding negative surprises; by facilitating innovation; by identifying indicators for change based on experience; by maintaining the trust of stakeholders; by analyzing causes and consequences of potentially difficult situations and disruptive challenges (transparency); by increasing credibility and reputation; and by strengthening foresight and anticipation in order to counter potential threats.

Sustainably developing cultural landscapes of significance to indigenous peoples does not, of course, mean that cultural landscapes are or should always be subject to development. But when development is at issue, as it so often is, it must comply with both substantive requirements, such as the integration of environmental protection and economic development, cultural considerations, and procedural requirements, such as access to information and public participation in decision-making. The procedural elements of accessibility and participation are of crucial importance to indigenous peoples, *as reflected in provisions of the* United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP),[27] to be discussed later in this Report. In 2012 the United Nations General Assembly underscored

---

[26] *Ibid*, p. 29 and p. 23, respectively.

[27] Adopted on Sept. 13, 2007, 45 ILM 1013 (2007) by the UN General Assembly following more than 20 years of negotiations between UN Member States and indigenous peoples' representatives. *See* S. Disko, H. Tugendhat and H. and L. García-Alix, "World Heritage Sites and Indigenous Peoples' Rights: An Introduction," in S. Disko and H. Tugendhat (eds), *World Heritage Sites and Indigenous Peoples' Rights* (IWGIA – Document 129, Copenhagen, 2014), p. 3.

the importance of participation by indigenous peoples in the achievement of sustainable development when it adopted Resolution A/RES/66/288.

Unfortunately, these procedural elements and hence the interests of indigenous peoples are too often overlooked, even within the supposedly protective regimes of environmental and cultural heritage law. Thus, "[w]hat is also clear is that the impact of World Heritage sites on indigenous peoples has not always been positive".[28] The rapporteur on the rights of indigenous peoples, James Anaya, made the same observation in his 2012 report to the United Nations General Assembly (UNGA), as follows:[29]

> 33. Indigenous peoples have expressed concerns over their lack of participation in the nomination, declaration and management of Word Heritage sites, as well as concerns about the negative impact these sites have had on their substantive rights, especially their rights to lands and resources.

B. Specific Provisions

1. General International Instruments

Ultimately, the interests of indigenous peoples rest on a qualified right of self-determination. It is enshrined in article 1 of The United Nations Charter, the ICCPR and the ICESCR as a right to "freely dispose of their natural wealth and resources"; other specific rights include a right to freedom from discrimination "without distinction of any kind, such as race, color, sex, language, religion, political or other opinion, national or social origin, property, birth or other status" (ICCPR art. 2.1); rights to freedom of thought, conscience and religion (ICCPR art. 18(1))[30]; a right to take part in *cultural* life (art 15(1)(a) of the ICESCR)[31]; and, arguably by analogy, rights of minority groups (ICCPR art. 27). Article 27 reads: "In those States in which ethnic, religious or linguistic minorities exist, persons belonging to such minorities shall not be denied the right, in community with the other members of their group, to enjoy their own culture, to profess and practise their own religion, or to use their own language".

Another binding, overarching instrument relevant to this Report is the 1965 Convention on the Elimination of All Forms of Racial Discrimination.[32] As noted earlier, article 5(d)(v) of that Convention provides that everyone has "the right to own property alone as well as in association with others." This article is of cardinal importance to indigenous

---

[28] Disko, Tugendhat and García-Alix, *ibid.*

[29] *Report to the UN General Assembly of the UN Special Rapporteur on the rights of indigenous peoples (13 August 2012),* UN Doc. A/67/301 (hereinafter UN Report).

[30] Article 18(1) reads: "Everyone shall have the right to freedom of thought, conscience and religion. This right shall include freedom to have or to adopt a religion or belief of his choice, and freedom, either individually or in community with others and in public or private, to manifest his religion or belief in worship, observance, practice, and teaching".

[31] Article 15(1)(a) reads: "The State Parties to the present Covenant recognize the right of everyone: (a) To take part in cultural life; …"

[32] The Convention was adopted and opened for signature by Resolution 2106 A(XX) of the UNGA on 1965-12-21 and entered into force on 1969-01-04. Article 5 provides that "…State Parties undertake to prohibit and to eliminate racial discrimination in all its forms and to guarantee the right of everyone, without distinction as to race, color, or national or ethnic origin, to equality before the law, notably in the enjoyment of the following rights: …"

peoples insofar as they have often been marginalized by severe deprivations of the right under the guise of development.

Turning to the crucial elements of procedural rights, article 6 of the ILO Convention concerning Indigenous and Tribal Peoples *in Independent Countries*[33] requires consultation with the peoples concerned, "through appropriate procedures …" before they may be relocated or their land developed. Article 7 provides, that "[g]overnments shall take measures, in co-operation with the peoples concerned, to protect and preserve the environment of the territories they inhabit." More specific to this Report, articles 13-19 deal with "land(s)". In article 13.2 the term "lands" is defined to "include the concept of territories, which covers the total environment of the area which the peoples concerned occupy or otherwise use". Article 16.2 provides that relocation must take place "only with their [the peoples'] free and informed consent."

The principle of "free, prior and informed consent" (FPIC) is well-established, particularly in international instruments that address biological diversity. The principle is fundamental whenever land development may have an impact in or on a cultural landscape of significance to indigenous peoples. FPIC requires transparency and the participation of impacted people. They possess a right to give or withhold their consent to proposed projects that may affect the lands an indigenous community customarily owns, occupies or otherwise uses. Those who wish to use the customary lands belonging to indigenous peoples must therefore enter into negotiations with them, in compliance with both substantive and procedural principles of sustainable development under international law. For example, the UN Collaborative Programme on Reducing Emissions from Deforestation and Forest Degradation in Developing Countries (UN-REDD) has issued Guidelines to this effect.

The United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP)[34] is crucial even as soft law.[35] In the Preamble to the Declaration, the UN General Assembly "solemnly proclaims" the Declaration "as a standard of achievement to be pursued in a spirit of partnership and mutual respect". The Preamble also recognises that "respect for indigenous knowledge, cultures and traditional practices contributes to sustainable and equitable development and proper management of the environment".

The principal operative provisions are as follows: Article 11(1) declares that "[i]ndigenous peoples have the right to practice and revitalize their cultural traditions and customs. This includes the right to maintain, protect and develop the past, present and future manifestations of their cultures, such as archaeological and historical sites, artefacts…" Article 3(1) echoes this expectation by pronouncing that "[i]ndigenous peoples have the right to maintain, control, protect and develop their cultural heritage…" and, by virtue of the right of self-determination, to freely pursue their cultural development.

One of the UNDRIP's paramount functions is to confirm the FPIC requirement in a host of scenarios that constitute the best practices for negotiations between indigenous

[33] *Supra* note 9.
[34] *Supra* note 26.
[35] The International Law Association's Resolution on the Rights of Indigenous Peoples (2012) acknowledges, however, that some of UNDRIP's provisions articulate customary international law.

peoples and other parties.[36] For example, article 10 of UNDRIP, concerning land rights, provides as follows:

> Indigenous peoples shall not be forcibly removed from their lands or territories. No relocation shall take place without the free, prior and informed consent of the indigenous peoples concerned and after agreement on just and fair compensation and, where possible, with the option of return.

Article 26 of UNDRIP specifically applies the right of self-determination to lands and thus cultural landscapes, as follows:

> 1. Indigenous peoples have the right to the lands, territories and resources which they have traditionally owned, occupied or otherwise used or acquired.
> 2. Indigenous peoples have the right to own, use, develop and control the lands, territories and resources that they possess by reason of traditional ownership or other traditional occupation or use, as well as those which they have otherwise acquired.
> 3. States shall give legal recognition and protection to these lands, territories and resources. Such recognition shall be conducted with due respect to the customs, traditions and land tenure systems of the indigenous peoples concerned.

Article 28 provides, in specific terms, for a right to redress by indigenous peoples for confiscation, occupation, use or damage without their informed consent of lands and thus landscapes that they have traditionally owned or otherwise occupied or used.

Article 32, which addresses the threat to indigenous lands through resource development, enshrines the requirement of FPIC, as follows:

> 1. Indigenous peoples have the right to determine and develop priorities and strategies for the development or use of their lands or territories and other resources.
> 2. States shall consult and cooperate in good faith with the indigenous peoples concerned through their own representative institutions in order to obtain their free and informed consent prior to the approval of any project affecting their lands or territories and other resources, particularly in connection with the development, utilization or exploitation of mineral, water or other resources.

Finally, it should be noted that article 37 confirms the right of indigenous peoples to "recognition, observance and enforcement" of treaties (such as those that structure legal relationships between Native American tribes and the federal and state governments of the United States).[37]

---

[36] *See, e.g.*, article 19, which addresses negotiations, and requires that states consult and cooperate in good faith with the indigenous peoples concerned through their own representative institutions in order to obtain their free, prior and informed consent before adopting and implementing legislative or administrative measures that may affect them." Similarly, article 29.1, requiring conservation of the lands of indigenous people, as well as 29.2, which protects against having hazardous material stored or disposed in their territories require "their free, prior and informed consent". Under Article 31 indigenous peoples have the right to maintain, control, protect and develop their cultural heritage, traditional knowledge and traditional cultural expressions, as well as the manifestations of their sciences, technologies and cultures, including human and genetic resources, seeds, medicines, knowledge of the properties of fauna and flora, oral traditions, literature, designs, sport and traditional games and visual and performing arts. They also have the right to maintain, control, protect and develop their intellectual property over such cultural heritage, traditional knowledge, and traditional cultural expressions.

[37] *See infra*, text two paragraphs after note 60.

2. Cultural Heritage and Landscapes

a. Global Instruments

The 1972 World Heritage Convention merits specific attention. The following preambular paragraphs are especially relevant to this Report:

> *Noting* that the cultural heritage and the natural heritage are increasingly threatened with destruction not only by the traditional causes of decay, but also by changing social and economic conditions which aggravate the situation with even more formidable phenomena of damage or destruction,
>
> *Considering* that protection of this heritage at the national level often remains incomplete because of the scale of the resources which it requires and of the insufficient economic, scientific, and technological resources of the country where the property to be protected is situated,
>
> *Considering* that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of mankind as a whole,

As background for a typology of cultural landscapes, it will also be instructive to set forth the Convention's definition of "cultural heritage," as follows:

> **Article 1**
> For the purpose of this Convention, the following shall be considered as "cultural heritage":
>
> monuments: architectural works, works of monumental sculpture and painting, elements or structures of an archaeological nature, inscriptions, cave dwellings and combinations of features, which are of outstanding universal value from the point of view of history, art or science;
>
> groups of buildings: groups of separate or connected buildings which, because of their architecture, their homogeneity or their place in the landscape, are of outstanding universal value from the point of view of history, art or science;
>
> sites: works of man or the combined works of nature and man, and areas including archaeological sites which are of outstanding universal value from the historical, aesthetic, ethnological or anthropological point of view.

In 1992 the UNESCO World Heritage Committee, during its 16th session, formally introduced the concept of "world heritage cultural landscapes" and opened that category for national nominations and UNESCO inscription. As of early 2016, some 88 of such cultural landscapes had been inscribed as World Heritage sites. Of these, only four are transboundary; the rest are solely within national boundaries.

Under Article 1 of the Convention, the Committee revised the cultural criteria for the inscription of properties on the World Heritage List to include "'the combined works of nature and man'" of "'outstanding universal value.'"[38] Later, the "Operational Guidelines for the Implementation of the World Heritage Convention" elaborated on the concept of "cultural landscapes"[39] as follows:

---

[38] *See* M. Rössler, "Linking Nature and Culture: World Heritage Cultural Landscapes," in P. Ceccarelli and M. Rössler (eds.), *Cultural Landscapes: The Challenges of Conservation,* presented at a workshop, Ferrara, Italy, 14-16 November 2002. *World Heritage Papers, No. 7,* (UNESCO World Heritage Centre, Paris, 2002), p. 10.

[39] For the original adoption of the concept "cultural landscapes," *see* the text prepared by an Expert Group on Cultural Landscapes at La Petite Pierre, France. UNESCO document WHC-92/

> Cultural landscapes are cultural properties and represent the combined works of nature and of man [under Article 1 of the *Convention* that] are illustrative of the evolution of human society and settlement over time, under the influence of the physical constraints and/or opportunities presented by their natural environment and of successive social, economic and cultural forces, both external and internal.[40]

Because the Operational Guidelines are amended from time to time to ensure their fine-tuning on the basis of experience, definitional revisions and further elaboration of them would seem to be likely.[41] The category of "protectable" landscapes, however, has not been amended since 1992.

Annex 3, clause 10 of the World Heritage Committee's "Guidelines on the inscription of specific types of properties on the World Heritage List" identified three main categories of "protectable" landscapes. They are, as follows:

1. The "clearly defined landscape designed and created intentionally by man." Under this category the World Heritage Committee included, amongst others, garden and parkland landscapes constructed for aesthetic reasons "which are often (but not always) associated with religious or other monumental buildings and ensembles."
2. The organically evolved landscape that is the result of "an initial social, economic, administrative, and/or religious imperative." This category developed its present form "by association with and in response to its natural environment" and the landscapes "reflect that process of evolution in their form and component features." Two "sub-categories" are a "relict (or fossil) landscape -- in which an evolutionary process came to an end at some time in the past, either abruptly or over a period" and whose "significant distinguishing features" are that they are still visible in "material form" -- and "a continuing landscape," that is, one which "retains an active social role in contemporary society closely associated with the traditional way of life, and in which the evolutionary process is still in progress," and also "exhibits significant material evidence of its evolution over time."
3. The associative cultural landscape. Its inscription on the World Heritage List is justified by virtue of the landscape's "powerful religious, artistic or cultural associations of the natural element rather than material cultural evidence, which may be insignificant or even absent."

As applied to indigenous peoples, these criteria are relevant but inadequate. For example, although one might infer from the third category (through the reference to the "associative cultural landscape") an intangible element to cultural landscape, no such "intangible category" has been spelled out or identified in specific terms. This Report will therefore propose and develop a new typology based on a set of categories applicable to cultural landscapes of significance to indigenous people.[42]

CONF.202/10/Add, October 24-26 1992. The World Heritage Committee, at its 16th conference in Santa Fé in 1992, subsequently approved the text for inclusion in the Operational Guidelines for Implementation of the World Heritage Convention. Doc. WHC-92/CONF.002/12 [hereinafter Operational Guidelines].

b. Regional Instruments: Europe

(1) European Landscape Convention (Florence Convention)

In 2000 the Council of Europe opened for signature the European Landscape Convention (Florence Convention).[43] The Council of Europe observed that "as a reflection of European identity and diversity, the landscape is our living natural and cultural heritage, be it ordinary or outstanding, urban or rural, on land or in water".[44] Accordingly, "the European Landscape Convention promotes the protection, management and planning of European landscapes and organizes European co-operation on landscape issues".[45]

The Convention's Preamble sets out background and objectives relevant to this Report.[46] The most pertinent objective is, to achieve "sustainable development" based on a balanced and harmonious relationship between social needs, economic activity and the environment." The Preamble states that the landscape has an important "public interest role in the cultural, ecological, environmental and social fields, and constitutes a resource favorable to economic activity and whose protection, management and planning can contribute to job creation." Closely linked to this role is the acknowledgement of an awareness that the "landscape contributes to the formation of local cultures and that it is a basic component of the European natural and cultural heritage, contributing to human well-being and consolidation of the European identity." Finally, the Preamble acknowledges that the landscape is an "important part of the quality of life for people everywhere." Such landscapes vary from "urban areas" to the "countryside;" from "degraded areas" to areas of "high quality" (exactly what constitutes an area of "high quality" is not spelled out); and from areas recognized as being of "outstanding beauty" as well as "everyday areas."

The Florence Convention has been aptly described as a "dynamic, peoplecentred instrument."[47] It is an instrument that recognizes "the tangible and intangible duality inherent in landscape" and focuses on not only "outstanding landscapes, but also everyday or degraded landscapes – the places where most people live and work – hence the term 'landscape' in the singular".[48] The Convention also emphasizes planning and management of landscapes in line with the principles of sustainable development rather than mere preservation. The Convention, then, is for everyone: "The landscape is a key element of individual and social well-being [whose] protection, management and planning entail rights and responsibilities for *everyone.*"[49]

Unfortunately, the Convention is incomplete, if not defective. The reference to "rights and responsibilities for everyone" seems to implicate ideas of spatial justice, environmental

[43] *Supra* note 16.
[44] "Introduction," Florence Convention, *supra* note 16.
[45] *Ibid*
[46] Preamble, European Convention, *supra* note 16, from which all of the quotations in this paragraph of the text are taken.
[47] Amy Strecker, "The European Landscape Convention: A Commentary on Strengths, Weaknesses and Relevance" (2015) (unpublished commentary on file with the authors).
[48] Article 2 of the Florence Convention, *supra* note 16, makes it clear that it "applies to the entire territory of the Parties and covers natural, rural, urban and peri-urban areas. It includes land, inland water and marine areas. It concerns landscapes that might be considered outstanding as well as everyday or degraded landscapes."
[49] Preamble, Florence Convention, *supra* note 16 (emphasis added).

justice, human rights and democracy. Apart from the reference to the procedural requirements of the Aarhus Convention,[50] however, no mention of access to justice or judicial review is to be found in the text. Instead, the Convention emphasizes the pre-emptive and proactive planning and development of landscape that "can contribute to job creation"[51] but fails to contemplate disputes that may arise in the planning process when the "obligations have not been sufficiently provided for".[52] Another problem is that the definition of a cultural landscape is overly broad ("an area, as perceived by people, whose character is the result of the action and interaction of natural and/or human factors."[53]) This definition is susceptible to varying interpretations by decision-makers such as a simple reference to the "environment", "cultural heritage," "economic development," or even everyday interactions of people rather than a particularized landscape. Moreover, the Convention lacks both a protection system and a procedure for definitive listing of European landscapes of cultural significance.[54]

(2) Aarhus Convention

The second European instrument that pertains directly to this Report is the Aarhus Convention, which has been described as the most detailed and farreaching international development in public participation to date,[55] particularly its requirement governing access to information by the public.[56] This is evident not only in the sheer breadth of the provisions, but also in the range of requirements relating to any requests for environmental information. Indeed, this barrage of requirements calls into question the actual accessibility of environmental information. The accessibility of indigenous peoples, particularly those who are remotely situated, is of particular concern. The provision of alternative means of communication may be essential.

The pertinent provision is Article 4, entitled "Access to environmental information." Its key language is as follows:

> 1. Each Party shall ensure that, subject to the following paragraphs of this article, public authorities, in response to a request for environmental information, make such information available to the public, within the framework of national legislation, including, where requested and subject to subparagraph (b) below, copies of the actual documentation containing or comprising such information:

---

[50] *Supra* note 17.

[51] *Ibid.*

[52] Strecker, *supra* note 46, p. 2.

[53] Florence Convention, *supra* note 16.

[54] *Ibid*, p.2

[55] Holder and Lee, *supra* note 17, p. 97. The Aarhus Convention, *supra* note 17, is a product of the UN Economic Commission for Europe (UNECE), one of five UN regional commissions, but is open to any member of the United Nations.

[56] Holder and Lee, *ibid*, p. 97. It is interesting that the Convention distinguishes between the "public" and the "public concerned". The purpose of this distinction is not clear, however. The "public" is defined in paragraph 2.4 as "one or more natural or legal persons, and, in accordance with national legislation or practice, their associations, organizations or groups." Paragraph 2.5 defines the "public concerned" as "the public affected or likely to be affected by, or having an interest in, the environmental decision-making; for the purposes of this definition, non-governmental organizations promoting environmental protection and meeting any requirements under national law shall be deemed to have an interest."

(a) Without an interest having to be stated;
(b) In the form requested unless:
  (i) It is reasonable for the public authority to make it available in another form, in which case reasons shall be given for making it available in that form; or
  (ii) The information is already publicly available in another form.

Paragraphs 2-8 set out the required timeframe within which a response must be made to any request as well as limitations to such requests and the terms for any charges that a state may impose for its services. Under the provisions of paragraph 2 the requested environmental information must be made available "as soon as possible and at the latest within one month after the request has been submitted," unless the volume and the complexity of the information justify an extension of the period up to two months after the request. The paragraph provides, further, that the applicant must be informed of any such extension of time and of the reasons justifying it.

Paragraph 3 sets out the circumstances under which a request for environmental information may be refused. A refusal is permissible if: (a) the public authority to which the request is addressed does not hold the environmental information requested; (b) the request is "manifestly unreasonable or formulated in too general a manner"; or (c) the request concerns material "in the course of completion or concerns internal communications of public authorities where such an exemption is provided for in national law or customary practice, taking into account the public interest served by disclosure."

In paragraph 4 further provisions relating to the refusal of any request to be provided with environmental information are set out. A request for environmental information may be refused if the disclosure would adversely affect:

(a) The confidentiality of the proceedings of public authorities, where such confidentiality is provided for under national law;
(b) International relations, national defence or public security;
(c) The course of justice, the ability of a person to receive a fair trial or the ability of a public authority to conduct an enquiry of a criminal or disciplinary nature;
(d) The confidentiality of commercial and industrial information, where such confidentiality is protected by law in order to protect a legitimate economic interest. Within this framework, information on emissions which is relevant for the protection of the environment shall be disclosed;
(e) Intellectual property rights;
(f) The confidentiality of personal data and/or files relating to a natural person where that person has not consented to the disclosure of the information to the public, where such confidentiality is provided for in national law;
(g) The interests of a third party which has supplied the information requested without that party being under or capable of being put under a legal obligation to do so, and where that party does not consent to the release of the material; or
(h) The environment to which the information relates, such as the breeding sites of rare species.

The paragraph provides, further, that the grounds for refusal must be interpreted in a "restrictive way," taking into account the "public interest served by disclosure and taking into account whether the information requested relates to emissions into the environment."

If a public authority does not hold the requested environmental information, it must "as promptly as possible, inform the applicant of the public authority to which it believes it is possible to apply for the information requested or transfer the request to that authority and inform the applicant accordingly." Under paragraph 6 each party must ensure that any information exempted from disclosure "can be separated out without prejudice to the confidentiality of the information exempted" but the responsible public authorities must make available the remainder of the requested environmental information.

Paragraph 7 provides that any refusal of a request must be in writing if the request was in writing or the applicant so requests and must state the reasons for the refusal and provide information to the applicant on access to a review procedure. Any refusal must be communicated as soon as possible and at the latest within one month, unless the complexity of the information justifies an extension of this period up to two months after the request. The applicant must be informed of any extension and of the reasons justifying it. Paragraph 8 of article 4 provides that each party may permit its public authorities to set a fee ("to make a charge") for supplying information, but such a fee must not exceed a reasonable amount. Public authorities intending to set fees for supplying information must make available to applicants a schedule of fees that may be levied, "indicating the circumstances in which they may be levied or waived and when the supply of information is conditional on the advance payment" of such a charge.

C. National Law: A Few Examples

Several national legal systems seek to protect lands significant to the cultures of indigenous peoples, including, but not limited to, those of: Australia, Bolivia, Brazil, Canada, Honduras, India, Norway, Panama, the United States, Venezuela and Vanuatu.[57] Although Mexico has no specific legislation for indigenous cultural landscapes as such, communities are entitled to an active role in the cultural life of the country, and the federal government has instituted a dialogue with them regarding cultural landscapes. Four national examples are as follows:

Australia has been described as a "leader in applying the idea of cultural landscapes to lands associated with Aboriginal people in its territory"[58] whose title to lands has been recognized. Ironically, in view of such accommodation, a difficult issue often arising and subject to detailed judicial consideration is that the entire continent might be viewed as a cultural landscape from the perspective of an Aboriginal or a Torres Strait Islander.

In the United States several federal statutes specifically seek to protect cultural sites, for example, the American Indian Religious Freedom Act of 1978[59] (*inter alia,* access to sacred sites) and the Native American Graves Protection and Repatriation Act[60] (*inter alia*, protection of pertinent monuments, Native American and Hawaiian land holdings, and burial grounds). The President of the United States also has authority under the

[57] *See, e.g.,* "*6. Land Rights*," International Law Association, Sofia Conference. The *Final Report of the Committee on the Rights of Indigenous Peoples* (2012), p. 23 [hereinafter the Sofia Report].
[58] S. Buggey, "*An Approach to Aboriginal Cultural Landscapes*" (Historical Sites and Monuments Board of Canada, Ottawa, March 1999), p. 16.
[59] 42 U.S.C. §§ 1996-1996b (2012).
[60] 25 U.S.C. §§ 3001-3013 (2012).

Antiquities Act of 1906[61] to set aside land as National Monuments. In 2016, for example, President Obama so designated three National Monuments covering a vast area (1.8 million acres) of southern California.

The three new National Monuments are all desert and mountain landscapes, as the President specifically noted, with significant features of significance to indigenous peoples. These features include ancient Native American trading routes (Mojave Trails National Monument); sacred, archaeological and cultural sites as well as some 1,700 Native American petroglyphs (Sand to Snow National Monument); and additional archaeological sites (Castle Mountains National Monument). The chief sponsor of the designation in the United States Senate emphasized that "[t]his kind of landscape represents icons of our cultural heritage."

The legal framework for protecting cultural sites in the United States also includes, at least inferentially, a few of some 371 treaties between the federal government and Native American tribes, state law, and tribal law. The pertinent treaties ensure the tribes' entitlements to natural resources embedded in traditional landscapes within designated "Indian country." In particular, they are found within Indian reservations throughout the country, which are home to both tribal members and non-members. The reservations often resemble a checkerboard of tribal trust land (with the federal government as a trustee), tribal fee land (in the common-law sense of fee ownership), tribal-member trust land, and non-member fee land.

Canada's Declaration on the Safeguarding of Indigenous Ancestral Burial Grounds as Sacred Sites and Cultural Landscapes 2014 observes that "ancestral burial grounds are both the tangible and intangible cultural heritage of indigenous communities as sites of historical and religious importance integral to their traditions and spiritual beliefs as unique cultural landscapes…Federal, provincial and local authorities [urgently need to] find legal means to protect ancestral burial grounds, skeletal and other physical remains and funerary belongings as integral parts of indigenous cultural landscapes interconnected with the health and well-being of indigenous societies…legally and ethically, there are professional, corporate, and political obligations and duties to recognize, assist and support indigenous communities in the care-taking, safeguarding, protection and preservation of ancestral burial grounds, ancestral remains and cultural landscapes."[62] The Canadian Declaration does not, however, provide any mechanism for undertaking this protection or any enforcement measures.

In Nigeria the National Commission for Museums and Monuments (NCMM) oversees two World Heritage Sites listed as cultural landscapes. The first is the Sukur Cultural Landscape located within the Mandara Mountains of the Madagali local government area of Adamawa state,[63] in northeastern Nigeria. The NCMM acts concurrently with the legal authority of the Adamawa state government and with the written consent of the

"Hidi-in-Council."[64] According to the UNESCO World Heritage Centre, the recognition of this landscape of outstanding universal value is to be found in its consonance with three crucial criteria for such declaration: Criterion (iii): Sukur is an exceptional landscape that graphically illustrates a form of land-use that marks a critical stage in human settlement and its relationship with its environment.

Criterion (v): The cultural landscape of Sukur has survived unchanged for many centuries and continues to do so at a period when this form of traditional human settlement is under threat in many parts of the world. Criterion (vi): The cultural landscape of Sukur is eloquent testimony to a strong and continuing spiritual and cultural tradition that has endured for many centuries.

The second Nigerian cultural landscape of interest is the River-Side Shrine and Sacred Grove of Osun at Osogbo, Osun State.[65] It was declared a national monument in 1965 and a cultural landscape "of outstanding universal value" in 2005. Inscribed by UNESCO as the "Osun-Osogbo Sacred Grove,"[66] it is a dense forest on the outskirts of the city of Osogbo and is described as "one of the last remnants of primary high forest in southern Nigeria." The grove is also regarded as the home of the goddess of fertility, Osun, the most important god of the Yoruba people. Most importantly, the sacred grove "is now seen as a symbol of identity for all Yoruba people," probably the last in Yoruba culture. The site testifies to the once widespread practice of establishing sacred groves outside all settlements.

UNESCO inscribed the Osun-Osogbo Sacred Grove in view of three criteria: Criterion (ii): The development of the Movement of New Sacred artists and the absorption of Suzanne Wenger, an Austrian artist, into the Yoruba community have proved to be fertile exchange of ideas that revived the sacred Osun Grove. Criterion (iii): The Osun Sacred Grove is the largest and perhaps the only remaining example of a once widespread phenomenon that used to characterise every Yoruba settlement. It now represents Yoruba sacred Groves and their reflection of Yoruba cosmology. Criterion (vi): The Osun Grove is a tangible expression of Yoruba divinatory and cosmological systems; its annual festival is a living, thriving and evolving response to Yoruba beliefs in the bond between people, their rule and the Osun goddess.

Although Nigeria's statutory provisions for the protection of the cultural landscape appear elegant and sophisticated on paper, in reality the protection and preservation of the cultural heritage is -- as in virtually all other African countries -- unfortunately low on the list of priorities for both the federation and the various state governments.

III. Toward a Transnational Legal Regime to Protect Cultural Landscapes of Significance to Indigenous People

A. Conceptual Attributes of an Orientation to Landscapes

Against this background of incomplete normativity at best, the need for development of a more comprehensive and coherent transnational regime of law pertaining specifically

[64] *See* http://whc.unesco.org/en/list/938, p.4. (last visited 8 February 2016). The "Hidi-in-Council" to which the inscription refers is the chief of the community.
[65] *See* www.ncmm.gov.org.ng (accessed 8 February 2016).
[66] *See* http://whc.unesco.org/en/list/1118, p.3 (accessed 8 February 2016).

to cultural landscapes is apparent, particularly insofar as it might address the interests, perspectives and, indeed, way of life of indigenous peoples. But why seek to develop yet another regime of law? Seven distinctive attributes of landscapes are noteworthy in explaining the need to do so, as follows:

1. The sheer panorama of space in which issues may be considered comprehensively in terms of land-use sustainability at the congested intersection of multiple interests such as those of investment, construction and resource development, indigenous peoples, and environmental exigencies.
2. The specific recognition of the intrinsically "combined works of nature and of man," as elaborated in the Operational Guidelines for the Implementation of the World Heritage Convention.
3. The enhanced capacity to integrate otherwise disparate norms and rules of municipal and international law, and of soft and hard law, drawn from a variety of legal disciplines and services.
4. The freedom to focus on non-monumental, non-spectacular phenomena of cultural importance unlike, for example, the limitation under the World Heritage Convention to unique sites of great importance.
5. An alternative to the emphasis on a mosaic of land "rights" and their allocation under national law (usually that of settler societies).
6. A broad framework for legal development and decision-making that encourages the free, prior and informed consent (FPIC) of indigenous peoples to activities that may impact on the sustainability of their cultural environment, and with due regard to their right of access to information to guide them in legal development and the decision-making process.
7. The enhanced potential to address transboundary needs and issues in a more holistic manner defined by a common rather than territorially constricted panorama and derivative interests in common.

B. Definitional Issues

The various definitions of a "cultural landscape" range from very broad and ambiguous, as in the European Landscape Convention, to specific, as in the amended UNESCO Guidelines under the World Heritage Convention. An underlying political problem in the search for agreement on a single acceptable definition of the core concept is the difficulty raised by the welter of interests, rights, and legal disciplines that bear on the status and protection of cultural landscapes. These include, for example, the public interest, the property rights of indigenous peoples, developmental rights, environmental rights founded on the principle of sustainable development, rights derived from the law of contract – the list is virtually endless.

Yet another definitional problem relates to the very term, "indigenous peoples." The Sofia Report listed the following indicators:[67]

- *self-identification*: self-identification as both indigenous and as a people;
- *historical continuity*: common ancestry and historical continuity with pre-colonial and/or presettler societies;

[67] Sofia Report, *supra* note 56, pp. 2-3.

- *special relationship with ancestral lands*: having a strong and special link with the territories occupied by their ancestors before colonial domination and surrounding natural resources. Such a link will usually form the basis of the cultural instinctiveness of indigenous peoples;
- *distinctiveness*: having distinct social, economic or political systems; having distinct language, culture, beliefs and customary law;
- *non-dominance*: forming non-dominant groups within the society;
- *perpetuation*: perseverance to maintain and reproduce their ancestral environments, social and legal systems and culture as distinct peoples and communities.

Under the Sofia Report's "relative flexibility" approach, not all the elements are "absolutely indispensable to identify a particular group as an 'indigenous people'." The Sofia Report nonetheless emphasised two of the listed indicators as "essential for a community to be considered as an indigenous people":

> "These two criteria are *self-identification* – which should also be regarded as an essential element of the right to self-determination of indigenous peoples – and [the community's] *special relationship with its ancestral lands*. This said, it must be emphasised that – in terms of methodology – the fact of whether or not a community may be considered as an indigenous people is in any event to be established on a case-by-case basis."[68]

But merely identifying these two essential indicators of an indigenous community does not provide or readily lead to a reliable, operational definition of the term "indigenous peoples." Indeed, some populations that might qualify as "indigenous peoples" may not wish to be so defined. An ancillary problem relates to the distinction between the terms "indigenous peoples" and "minorities." They are not the same, but what is their relationship exactly? One example of the problem may be drawn from the Lusatia region in the eastern part of Germany. This region is populated by the Sorbs, a minority group of Slavic people, who saw their region damaged by industrialization and, in particular, coal mining. To what extent is their land a "cultural landscape" by virtue of their status as a minority group within Germany? Do the Sorbs' rights to their traditions, language, and land(s) transform the lands into cultural landscapes? Why would only these specific pockets of land be cultural landscapes and not, for example, the whole of Europe?

Would any of a national minority's lands – either the whole of its territory or only discrete panoramas -- qualify as cultural landscapes within a regime that is intended to pertain to indigenous peoples? This is a question insofar as a minority population is not necessarily indigenous. Also, in the case of a minority's lands, there is not as apt to be the kind of cosmological relationship (close link) between the particular people and the earth as is more characteristic of indigenous peoples such as the Aboriginals, the Mãori, the Inuits, the Cherokees, the Navajo (Diné), or the marginalized groups in Africa such as the Khoesan/San in southern Africa and the Endorois in Kenya.[69]

Finally, defining transboundary cultural landscapes shared by multiple states has its own distinctive problems. The Sami people in northern Scandinavia (Norway, Sweden, Finland and Russia) provide one example of the problem. Sami culture rests on two

---

[68] *Ibid,* p. 3 (emphasis added).

[69] *Ibid,* n. 3. For example, one comment noted "the profound extent of marginalisation suffered" by such communities of indigenous peoples in Africa.

fundaments: their linguistic identity and their characteristic tradition of reindeer herding with connected hunting and fishing. In general, the other vestiges of their transboundary culture are threatened by modern methods of forestry and other land uses. But the legal protection of the two fundaments is complicated by disparities among national laws. For example, the Sami are constitutionally recognised as a people in Sweden, but, unlike Norway, Sweden has not yet ratified the International Labor Organization (ILO) Convention 169 concerning Indigenous and Tribal Peoples in Independent Countries, which provides that existing land rights are to be recognized and respected such that a Sami right to substantial land use for reindeer husbandry would have to be as respected as other land rights in Sweden. The Swedish and Norwegian governments, after a long period of contention about borderland grazing rights, now cooperate in that regard, and, with Finland, seek a border agreement on grazing rights.

The African continent, where the borders are extremely "arbitrary,"[70] presents a particularly difficult challenge. For example, it was noted in 2007 that Africa has 165 designated borders,[71] and there is little doubt that they have since changed. Against such a backdrop, effective cooperation in the protection and preservation of the cultural landscapes of indigenous peoples that transcend national boundaries remains daunting.

IV. A Typology of Cultural Landscapes and Seascapes

A. The Need for an Expanded Framework

Given the difficulty of defining cultural landscapes to the satisfaction of all stakeholders and for all purposes, it may be considerably more productive to establish a typology that allows for variation in normative development among different categories of cultural landscapes. As this Report has already observed, the three categories of cultural landscapes identified by UNESCO are noteworthy, but they are incomplete as applied to indigenous peoples. They fail to recognize the reality that for many indigenous peoples "earth, people and history" form a distinctive, holistic perspective on life. For example, the roots of Native American tribal culture are grounded in the land. Many tribes regard specific lands as holy. In the Cherokee language, for example, the word *eloheh* means land, religion, culture, and traditional history.[72] Similarly, among the Navajo (Diné), "the land is the Earth Mother, she who gives life to humanity."[73] It is noteworthy that the Navajo (Diné) reservation, the largest in area, is bounded by four sacred mountains.[74]

The concept of *place* has a deep, often spiritual significance. The relationship between indigenous peoples and the earth is therefore apt to be regarded as sacred or cosmological. Natural, uncultivated or built landscapes can all be deeply cultural insofar as they

[70] If Africa's borders were to be redrawn to allow each ethnic group to have their own country, Africa would have "at least 2,000 countries." C. Mungai, "Africa's borders split over 177 ethnic groups, and their 'real' lines aren't where you think" available at http://mgafrica.com/article/2015-01-09-africas-real-borders-are-not-where-you-think/ (last visited on 26 February 2015).

[74] National Geographic, *Indian Nations of North America* (2010), p. 222.

are associated with the spiritual nature of the earth. The barren, icy "nothingness" in Greenland, for example, may constitute an important cultural landscape for indigenous peoples. Another example is the Cultural Space of the Yaaral and the Degal in Mali.[75] It encompasses the vast pastoral lands of the Peul people of the inner Niger Delta. It is a space in which all the ethnic groups of the interior Niger Delta gather during and after the pastoral festivals, reactivating inter-community pacts and reinforcing social cohesion. The Yaaral and the Degal festivities mark the crossing of the river at the time of the transhumance when, twice a year, herds of cattle cross the arid land of the Sahel and the flood plains of the inner Niger Rover. Since they bring together representatives of all the ethnic and occupational groups in the Delta – the Peul cattle-breeders, Marka or Nono rice-growers, Bambera millet-growers and Bozo fishermen – the Yaaral and the Degal festivities continue to renew inter-community pacts and contribute directly to environmental protection. The children of Diafarabe (Yaaral) and Dialloube (Degal) must accompany the animals along with the adults who show them the pastoral ways, the correct behaviour with animals, strategies for animal survival, etc. This is the knowledge that children must learn in order to safeguard their social, cultural and identity values related to Yaaral and Degal and, in particular, the means of sustaining their pastoral way of life.

For many indigenous peoples, history is a spatial-temporal phenomenon, often differing fundamentally from the Western concept of history as a temporal sequence of past events. Thus:

> [m]any indigenous communities throughout the world have stressed that territories and lands are not only the basis of economic livelihood but also the source of spiritual, cultural and social identity, and form an essential part of their cultural heritage…[T]here is an obligation to protect the cultural heritage of indigenous peoples through recognition of their rights to own, control and manage their ancestral territories… under the banner of cultural rights.[76]

Against this background of an inextricable link in the belief systems of many indigenous peoples among earth, people, and history, the concept of "place" is becoming a critical focus of theoretical advancement. Two major qualities of place are contributing to this development as

> "1) … humans occupy a remarkable diversity of ecosystems (diversity of place), and 2) we are the dominant species of our ecosystems (therefore, we will change them; we may turn any place into "our place," even for a while). Humans create both qualities through their unique way of adaptation that is distinctively flexible, for adaptation is at once the solution to a particular problem and the source of unanticipated changes and new problems."[77]

---

[75] The Yaaral and Degal Cultural Space was initially inscribed by UNESCO in 2001 as a "Masterpiece of Oral and Intangible Heritage of Humanity" and then transferred in 2008 to the Representative List of the 2003 Convention on the Intangible Cultural Heritage. ITH/08/3.COM/CONF.203/1.

B. Five Categories

Taking into account the need for an improved typology of cultural landscapes as well as the essential concept of *place* among many indigenous peoples, the following list of categories is designed to help structure a transnational legal regime pertaining to cultural landscapes of significance to indigenous peoples:

1. Pure natural landscapes and seascapes of indigenous cultural significance.
2. Natural landscapes created by indigenous peoples (often as the product of indigenous knowledge systems and land-use practices).
3. Built or constructed landscapes such as villages whose layout or structure is of cultural significance.
4. Cultural imagery that projects cultural statements on a natural landscape.
5. Intangible landscapes characterized as "landscapes of the mind".

All of these categories of cultural landscapes reflect the mutuality of interaction between human culture and the natural environment. A few examples of each category of cultural landscapes, as follows, will illustrate the variations among them that suggest the need for variations in normative development according to the character of each category.

1. Pure natural landscapes of cultural significance

A world-renowned example of a pure natural landscape of indigenous cultural significance is the Uluru-Kata Tjuta National Park (the Park) in Australia (better known as Uluru and previously known as Ayers Rock). For millennia this immense monolith has been of paramount cultural significance to the Aboriginal peoples, the Anangu, in central Australia. In 1987 the Park was declared to be a World Heritage site of purely "natural value".[78] This declaration was highly controversial. Opponents argued that it showed a "lack of international recognition of the ongoing relationship between the Anangu and their country"[79] -- a matter of concern not only to the Anangu, but also to the Park's Board of Management and cultural heritage professionals.

This criticism appears to have influenced the World Heritage Committee in two respects: (a) developing the World Heritage Convention's Operational Guidelines; and (b) including "cultural landscapes" as a factor in reviewing nominations for the World Heritage listings. Consequently, in 1994 the Park was also inscribed as an associative cultural landscape, in addition to its listing as a World Heritage site of natural value.[80]

In the United States pure natural landscapes of significance to Native Americans range from sacred monoliths, such as Bear Butte in South Dakota, the Devil's Tower in Wyoming and Rainbow Bridge in Utah (the largest known natural bridge in the world), to more extensive settings. For example, a Blackfeet healer, Molly Kicking Woman, campaigned against an oil-drilling venture by attributing religious significance to "all the mountains and not just the area where we pick plants and roots."[81] The Yurok, Karok,

[78] "Pukulpa pitjama Ananguku ngurakutu – Welcome to Anangu land: World Heritage at Uluru-Kata Tjuta National Park", in Disko and Tugendhat (eds.), *supra* note 26, p. 289, p. 291.
[79] *Ibid*, p. 291.
[80] *Ibid*, p. 292, p. 292, n 11.
[81] *See* "The Blackfeet Nation (U.S.) and Petroleum Exploration," in *The Eagle*, Late Winter 1993.

and Tolowa religious traditions sanctify the entire high country in parts of the western United States.[82] The seeds of conflict and the needs for legal intervention inhere in the ambiguity of defining and demarcating landscapes as fundamental constructs of Native American culture.

In South Africa the Richtersveld Cultural and Botanical Landscape was inscribed by UNESCO as a World Heritage site in 2007. What makes this particular landscape exceptional is that it is owned and managed by a community that until recently had very little to call its own. This community comprises the Nama, which was so named after the merger of two groups, the Khoi (termed "Hottentots" by Europeans who effectively eliminated them), and the San (termed Bushmen by the Europeans and of whom a small number survives in the country). The cultural distinction of this population lies in the Nama "still practis[ing] seasonal migration between stock-posts, using and building portable rush-mat houses. The Nama are the last practitioners of this millennia-old way of life".[83]

The Sami and the Inuit people provide two examples from the Arctic North. In 1996, the Laponia area -- really a vast landscape -- covering some 9,400 square kilometres in the north of Sweden, was placed on the World Heritage List based on both cultural and natural criteria. The cultural criteria are "exclusively connected with the Sami population and its use of the area for reindeer herding, hunting and fishing". As the United Nations rapporteur on the rights of indigenous peoples pointed out in his 2012 Report to the United Nations General Assembly, the Sami "actively supported"[84] the inscription of the Laponian area as a World Heritage site.

Although the landscape of Greenland may, on the face of it, appear to be terrestrial nothingness or a polished white emptiness – a vast icy and uninhabited landscape – it has deep cultural significance to the Inuit people. Measures are therefore afoot to have the Greenland landscape declared a World Heritage site in recognition of Inuit culture and to protect it.[85]

Seascapes are also noteworthy. An early definition of a seascape as a maritime cultural landscape, was "the network of sea routes and harbours, indicated both above and under water".[86] In other words, a "seascape" can be much more that the mere expanse of the ocean. A good example of a cultural seascape is the vast swath of ocean that the United States successfully nominated as its first mixed (natural and cultural) World Heritage site and cultural landscape, the Papahānaumokuākea Marine National Monument. As inscribed in 2010, it encompasses 140,000 square miles of water, islands and atolls to the northwest of the main Hawaiian Islands in the Pacific Ocean -- essentially a vast seascape. This huge seascape blends both living and non-living marine resources with traditional cultural connections between Native Hawaiians and the sea. In particular, the cultural

seascape includes traditional wayfinding (non-instrument navigation) on double-hulled sailing canoes, a practice that continues today. In 2016 this National Monument was more than quadrupled in size to nearly 583,000 square miles.

2. Natural landscapes created by indigenous peoples

Natural landscapes created by indigenous people are often the products of indigenous knowledge systems and land-use practices. A salient example is the pattern of "gardens" of the Saramaka People in Suriname. The decision of the Inter-American Court of Human Rights in the *Case of the Saramaka People v Suriname,* involving the destruction of the gardens (land) by Chinese loggers,[87] is an early recognition and acknowledgment of the rights of indigenous peoples to a natural landscape of their creation. We shall return to this case later.

Another example of such a landscape involves the Rice Terraces in the Philippine Cordilleras. In the UNESCO inscription these "rice terraces" are described as follows:

> The Rice Terraces of the Philippine Cordilleras is an outstanding example of an evolved, living cultural landscape that can be traced as far back as two millennia ago in the pre-colonial Philippines. The terraces are located in the remote areas of the Philippine Cordillera mountain range on the northern island of Luzon, Philippine archipelago. While the historic terraces cover an extensive area, the inscribed property consists of five clusters of the most intact and impressive terraces, located in four municipalities. They are all the product of the Ifugao ethnic group, a minority community that has occupied these mountains for thousands of years.[88]

A sobering statement that accompanied the recognition of the terraces is noteworthy. It reads: "The rice terraces are an outstanding example of land-use that resulted from a harmonious interaction between people and its environment which has produced a steep terraced landscape of great aesthetic beauty, now vulnerable to social and economic changes."[89]

Moreover, the terraces not only are a product of tradition, but also represent an integral part of the indigenous knowledge systems insofar as the agricultural practices are

---

[87] Judgment of November 28, 2007. For an abridged version and discussion of it, see J.A.R. Nafziger, R.K. Paterson and A.D. Renteln, *Cultural Law: International, Comparative and Indigenous* 176-200 (Cambridge University Press, 2010). Paragraph 2 of the opinion sets forth the cause of action as follows: "The application submits to the Court's jurisdiction alleged violations committed by the State against the members of the Saramaka people, an allegedly tribal community living in the Upper Suriname River region. The [ACHR] Commission alleged that the State [Suriname] has not adopted effective measures to recognize their right to the use and enjoyment of the territory they have traditionally occupied and used, that the State has allegedly violated the right to judicial protection to the detriment of such people by not providing them effective access to justice for the protection of their fundamental rights, particularly the right to own property in accordance with their communal traditions, and that the State has allegedly failed to adopt domestic legal provisions in order to ensure and guarantee such rights to the Saramakas." See also the Sofia Report, *supra* note 56, p. 4 for a discussion of this decision within the context of requiring from the Saramaka people their free, prior and informed consent (FPIC) according to their customs and traditions.

[88] See http://unesco.org./en/list722 (last visited on February 26, 2015).

[89] *Ibid.*

accompanied by various rites and rituals.[90] Sustainable development[91] of the terraces is essential to their survival so as to ensure both that the indigenous knowledge system continues by allowing the continuity of traditional practices and that the integrity of the terraces remains intact in the face of negative impacts on a cultural and natural environment of outstanding universal value. Accordingly, only a balance between "economic growth, social development and environmental protection in order that future generations have the same or better opportunities than the present generations," to be understood as such by both management and the communities, will ensure the survival of the rice terraces.[92]

3. Built or constructed landscapes such as villages whose layout or structure is of cultural significance

A famous example of a built or constructed landscape is the Konso Cultural Landscape in Ethiopia, which was inscribed as a World Heritage site in 2011. Its inscription describes it as a "55^2 km property of stone walled terraces and fortified settlements … [constituting] a spectacular example of a living cultural tradition stretching back 21 generations (more than 400 years) adapted to its dry hostile environment".[93] The inscription continues, as follows: "The landscape demonstrates the shared values, social cohesion and engineering knowledge of its communities. The site also features anthropomorphic wooden statues – grouped to represent respected members of their communities and particularly heroic events – which are an exceptional living testimony to funerary traditions that are on the verge of disappearing. Stone stele in the towns express a complex system of marking the passing of generations of leaders."[94]

In South Africa the Mapungubwe Cultural Landscape was inscribed as a World Heritage Site in 2003. According to archaeological and research from other disciplines, Mapungubwe ("place of the stone of wisdom") was South Africa's first kingdom and "developed into the subcontinent's largest realm, lasting for 400 years before it was abandoned in the fourteenth century. Its highly sophisticated people traded gold and ivory with China, India and Egypt…The remains in the Mapungubwe cultural landscape are a remarkably complete testimony to the growth and subsequent decline of the Mapungubwe state. What remains are the almost untouched sites and also the entire settlement area dependent upon them, as well as two earlier capital sites, the whole presenting an unrivalled picture of the development of social and political structures over some 400 years."[95] In all, "[t]he importance of the Mapungubwe cultural landscape is enormous. It was here that social, cultural and political developments led to the first complex societies in southern Africa."[96]

[96] T.N. Huffman, *Mapungubwe: Ancient African Civilization on the Limpopo (2007).*

Sometimes a constructed landscape is defined by a complex of a natural landscape, indigenous heritage, and non-indigenous development. A good example is the Tequila landscape region in Mexico. This region, between the foothills of the Tequila Volcano and the deep valley of the Rio Grande River, is part of an expansive natural landscape of blue agave, shaped by the culture of the plan which has been used since the sixteenth century to produce tequila spirit and over at least 2,000 years to make fermented drinks and cloth. Within the landscape are working distilleries reflecting the growth in the international consumption of tequila beginning in the nineteenth century.

This landscape region reflects the fusion of pre-Hispanic traditions of fermenting mescal juice with the European distillation processes and of local and imported technologies. The property also covers archaeological sites which bear testimony to the Teuchitlan culture which shaped the Tequila area from 200 to 900 A.D., notably through the creation of terraces for agriculture, housing, temples, ceremonial mounds and ball courts.

Today, the agave culture is seen as part of a national identity. The area encloses a living, working landscape of blue agave fields and the urban settlements of Tequila, Arenal, and Amatitan with large distilleries and factories (both active and not), tabernas (distilleries that were illegal under Spanish rule), towns and Teuchitlan Archaeological sites. The property includes numerous haciendas (estates), some of which date back to the eighteenth century. The architecture of both factories and haciendas is characterized by brick and adobe construction, plastered walls with ochre lime-wash, stone arches, quoins and window dressings, and formal, neo-classical or baroque ornamentation.

4. Cultural imagery that projects cultural statements on a natural landscape

Rock art created by indigenous peoples is a common form of imagery projected by indigenous peoples as a cultural statement onto a natural landscape. A poignant example of such expression is to be found in the ancient rock art of the San people of Southern Africa [97] – the true "first peoples" of Southern Africa. Testament to this view is the declaration as a World Heritage site of the uKhahlamba Drakensberg Park in KwaZulu-Natal in South Africa inscribed in 2000. For more than 4,000 years the area was the home to the indigenous San people, who created a vast body of rock art – the largest collection in Africa.

Another site commonly known for its rock art covers the Tsodilo Hills of north-western Botswana. That site has some 4,500 rock-art sites "representing one of the highest concentrations of rock art in the world".[98] Moreover, what makes Tsodilo Hills particularly distinct is that it is a rock-site area where the descendants of the Khoesan (the ancient San people) still live.[99] Not only does the Tsodilo rock art serve as an example of cultural imagery that projects statements on a natural landscape, but it also offers a perceptive case study concerning land use involving indigenous peoples who continue to occupy the land.

---

[97] As far as science can determine today, the San people are the true First Peoples or Indigenous Peoples of southern Africa and in some writings they are referred as the "Khoesan." For example, M. Taylor refers to the "San" as the "Khoesan," in "'We are Not Taken as People': Ignoring the Indigenous Identities and History of Tsodilo Hills World Heritage, Botswana," in Disko and Tugendhat, *supra* note 26, p. 27, pp. 118, 120, n. 1.

[98] Taylor, *supra* note 96, p. 119.

[99] *Ibid*, p. 122.

The Declaration of the Tsodilo Hills[100] as a World Heritage site in 2001 has been controversial inasmuch as the Khoesan people were completely ignored in the declaration process even though the Hills represented an important "ritual site"[101] for them. Not only did this omission unfortunately reflect the Khoesans' status as a "marginalised and stigmatised minority",[102] but also their value only to "external researchers," insofar as the designation of Tsodilo as a World Heritage site would serve primarily as "'…an important data bank [to "ethnologists"] for the study of Indigenous peoples who continue to inhabit the site.'"[103]

The declaratory process of the World Heritage Committee has been doubly deplored for its uncritical acceptance and perpetuation of the one-sided official narrative of the Tsodilo-area peoples and for the failure of the World Heritage Committee to recognize them adequately as an indigenous community for whom the Hills has cultural significance in terms of their heritage, identity and status today. The Committee consequently failed to consider how their status, as a marginalized and stigmatized minority, has disabled them from engaging as equals in the changes associated with the designation of Tsodilo as a World Heritage site. The Committee failed "to make any recommendations for particular measures that should be put in place to reverse exclusionary processes or to ensure the equal participation of Tsodilo's indigenous residents in its representation to the outside world and in enjoying the benefits of heightened interest in the Hills".[104]

A very different example of cultural imagery that projects statements on a national landscape involves imaginative photographic panoramas. We usually think of constructed landscapes as actual human settlements and related activity, but the related category of projected imagery includes photographic constructions that infuse landscapes with artificial cultural elements. A superb example of such imagery is the didactic photography of a prominent Navajo (Diné) photographer, Will Wilson.

Wilson's panoramic commentaries on threats to Navajo (Diné) landscapes are stunning. In particular, the images in his *Auto Immune Response* series[105] portrays the environmental threats to, and consequences of, uranium mining and other exploitation of Navajo (Diné) lands as a legacy of colonization. In his words, the series

> has focused on a post-apocalyptic Navajo man's journey through an uninhabited landscape. The character in the images is searching for answers. Where has everyone gone? What has occurred to transform the familiar and strange landscape that he wanders? What has occurred to transform the familiar and strange landscape that he wanders? Why has the land become toxic to him? How will he respond, survive, reconnect to the earth?[106]

Perhaps the two most poignant images in the series feature gas-masked tribal members surveying, in one panorama, the Grand Canyon (adjacent to the Navajo reservation),

and, in the other panorama, an utterly barren, steaming wasteland.[107] The Navajo (Diné) world is thus viewed as both breathtakingly beautiful and deadly poisonous. The contrast between a natural utopia and a post-apocalyptic dystopia is jarring.

What makes Wilson's didactic imagery, his political intervention, so compelling is his forthright effort to reconcile traditional dichotomies, especially that between Navajo (Diné) and white stereotypes. Although he condemns the historic colonization by outsiders of Navajo land and landscapes, he nevertheless has candidly acknowledged the tribes' own contribution to a polluted environment that threatens their cultural equipoise as denizens and caretakers of sacred land. Wilson's motive of reconciliation is underscored by another series of his images, *Critical Indigenous Photographic Exchange.*[108] In this project he critiques and expands upon the iconic photography of Native Americans by the pioneering Edwards S. Curtis a hundred or so years ago. In defining photography as a mechanism of colonization, in his own words, Wilson "resumes the documentary mission of Curtis from the standpoint of a 21st century indigenous, trans-customary, cultural practitioner."[109] To Wilson, a romantic vision of Native Americans frozen in time is no more appropriate than a bucolic depiction of sacred landscapes if either type of image is to remain culturally cogent.

This brief excursus into land issues under the head "Cultural imagery that projects statements on a natural landscape" serves as a reminder that when cultural landscapes significant to indigenous peoples are in focus, we should always keep in mind the characteristic integration of human expression with the natural environment. After all, "[f]or indigenous peoples, 'heritage' is something holistic that includes not only products of human thought and craftsmanship but also natural features of the landscape and natural species of plants and animals with which a people has long been connected".[110]

5. Intangible Landscapes or "Landscapes of the Mind"

The category of "landscapes of the mind" can be approached from two angles. On the one hand are perceptions or experiences of indigenous peoples regarding, for example, land tenure, as expressed in terms of particular scientific disciplines. Accordingly, there is a spectrum of understanding between the consideration of land as part of the environment – its physical existence – and land in an emblematic, metaphoric[al] or symbolic sense. Unfortunately this dichotomy manifests itself most pointedly when natural resources are present on the land of indigenous peoples, resulting not only in the exploitation of these resources, but also in clashes between, for example, business operations sometimes assisted by governments, on the one hand, and environmentalists, indigenous peoples, and anthropologists -- often assisted by NGOs, on the other hand. Moreover, the dichotomy has "tended to shift the tribal focus from *all* land, given the economic advantages of

[110] J. Gilbert, *supra* note 75, p. 56.

exploiting some of it, to designated landscapes, in not only a physical, but also a metaphorical sense. After all, '[t]he landscape of the mind affects the use of land'".[111]

On the other hand, another sense of intangibility, a natural landscape may become of cultural significance by its transformation into a shared image or association that may even take on a mystical or mythological character in the human mind. Powerful religious, artistic or cultural associations of a natural element rather than "material cultural evidence" (physical reality) itself -- which may be insignificant or even absent -- comprise an intangible landscape or landscape of the mind. Such phenomena are apt to be highly nuanced, and, in addition, adept at reconstructing the meanings of heritage. Viewing landscapes from an intangible perspective allows for the social, spiritual and cultural significance of a landscape to be paramount, rather than the physicality of the terrain.

The attitudes of New Zealand's Māori toward their landscape serve as an example. For the Māori, "'Wāhi tapu'" is a place especially sacred in a traditional, spiritual, religious, ritual or mythological sense. Often particular features of the landscape are identified as being the core basis of the *iwi* (the tribe) or *hapū* (sub tribe). Frequently this is by reference to the most prominent feature in a landscape, for instance a mountain (*maunga*). Examples of this include Aorangi (Mount Cook), Taranaki (Mount Egmont) and the key volcanic cones of the Tāmaki Makaurau in the area of Auckland. For coastal or island iwi and hapū, the sacred landscape or at least one of several sacred landscapes may be a reef off the island or the seashore. An example of this is the Motiti Island where the nearby Otaiti Reef is sacred.

Another example of a cultural landscape that combines features of a natural landscape with an intangible landscape or landscape of the mind is a famous battlefield at "Blood River" in the South African province of KwaZulu-Natal. The battle fought there in 1838 between Black warriors (the Zulu) and the Afrikaners of today is now commemorated annually since 1994 on December 16 as a day of reconciliation. The purpose is not to celebrate the victory of one group over the other, but as the word "reconciliation" suggests, to bridge the chasm between conflicting racial groups that the battlefield recalls. Whether the noble aspiration of reconciliation can be realized is, of course, another matter. The reality is, however, that the battlefield is both a natural landscape of cultural significance in itself and a durable source of cultural imagery in the mind apart from, but clearly linked with, the physical reality of the battlefield itself.

To summarize, an intangible cultural landscape therefore can be understood as either the manifestation over territory of the historic signs and traces that shape cultural identity or as a geographical space associated with an event, activity or community, holder of aesthetical values and associated memory. After all, the UNESCO Operational Guidelines recognize that cultural landscapes are "combined works of nature and man," which arguably include the mental or imagined constructs (as works) of man that are, according to the Operational Guidelines, "illustrative of the evolution of human society and settlement over time, under the influence of the physical constraints and/or opportunities presented by their natural environment and of successive social, economic and cultural forces both external and internal."

V. Territorial Bases for Indigenous Custodianship of Particular Cultural Landscapes.

A. Property-based claims

Indigenous claims to custodianship may sometimes extend to cultural sites, including entire landscapes that are not owned by the claimants. For example, the Navajo (Diné) Nation in the United States has opposed tourist development near the sacred but *offreservation* Rainbow Bridge in Utah, through which they believe their ancestors arrived on earth.[112] Usually, however, indigenous claims rely on territorial rights. Property law may therefore be determinative in disputes pitting indigenous claims to custodianship against other interests, particularly those of economic development. But whose property law? After all, property is a highly contested concept as applied to indigenous peoples in view of the fundamental reverence for land in many indigenous societies. It therefore follows that western theories of property do not necessarily conform to the shared understanding of land-related interests among many indigenous peoples. Moreover, critical landscapes of indigenous peoples may be subject to distinctive rules and patterns of indigenous land-tenure, thereby complicating the process of providing comprehensive protection of the landscape, as in the case of the Saramaka people of Surinam.[113]

Three general arguments address the property interests of many indigenous peoples within settler societies. First are doctrinal arguments within the established normative order of settler states. Accordingly, the literature therefore distinguishes between two types of claims: property-right claims based on an explicit recognition of the exogenous laws and customs of indigenous peoples *by* the legal system of a settler society and claims based on a recognition of prior indigenous occupation and aboriginal rights *within* the rules of general application in the legal system of the settler society itself. Various legal structures that bring proprietary features within governmental authority, such as corporate forms, land trusts, and so on, have been used to accommodate the public-law dimension of indigenous rights.[114]

Second are arguments, not mutually exclusive of the first one, which rely upon international human rights law -- for example, the foundational right of self-determination;[115] the right to equality;[116] and the right to take part in a common culture[117] -- to support the property rights of indigenous peoples and potentially prevail over conflicting provisions of settler law.[118] It should be noted that the exercise of indigenous self-determination is

[115] *See* article 1 of both the ICCPR and ICESCR: "all peoples have the right to self-determination" (a 1.1).

[116] Article 3 of the ICCPR.

[117] Article 15(1)(a) of the ICESCR.

[118] International case law in which property rights of indigenous peoples are linked to fundamental rights include, among others, the *Western Sahara, Advisory Opinion,* 1975 ICJ Reports (International Court of Justice). Regional jurisprudence includes the *Saramaka* decision (discussed earlier) of the Inter-American Court of Human Rights, *supra* note 86, the work of the Inter-American Commission

not to establish autonomous sovereignty, but rather institutional and normative autonomy for indigenous peoples within the established nation-state structure on the principle of *uti possidetís,* and to acknowledge indigenous control over resources necessary for their survival and livelihood in both physical and cultural senses.

Third are arguments, at least in English-speaking countries, that historically responded to the writings of John Locke, (English philosopher (1632-1704)). Locke's seminal work, *Two Treaties of Government*, published in 1690, set forth the then radical argument that human rights, not governments, come first in the natural order. Rights to life, liberty and property should be paramount, he argued. But Locke argued against the recognition of indigenous property interests. Today, of course, it seems clear that indigenous peoples never consented to the alienation of their traditional territories and are therefore not bound by the supplanting rules of settler societies. A gratifying cross-fertilization between national law and international law has helped shape the legal argumentation about property rights.[119]

A particularly critical aspect of property-based claims involves the emerging recognition of claims by indigenous peoples over resources necessary for their combined physical and *cultural* survival. One example involves the Sami people in Scandinavia. Until recently, traditional indigenous livelihood activities, such as hunting, fishing and migratory grazing, were not considered a basis for the recognition of title and rights of use, since such use of land was not deemed to be sufficiently intensive and continuous. During the 20th century, this argument significantly influenced Norwegian jurisprudence, for example.[120] However, it seems that this line of reasoning is slowly but surely changing. Even as early as 1968, the Norwegian Supreme Court delivered a judgment granting compensation to two Swedish Sami villages – Saarivuoma and Talma – for the substantial loss of grazing land on Norwegian territory resulting from the construction of a dam at Lake Altevann in Troms, Norway. The court stated that the Sami's right to use the area rested on ancient usage.[121]

In *Mabo v Queensland,*[122] the Australian High Court confirmed that the traditional land rights of Aboriginal and Torres Strait Islanders (known in Australia as "native title") were recognized by the common law of Australia. The Australian Federal Government

responded by codifying the *Mabo* decision in the Native Title Act 1993.[123] It is controversial insofar as the resulting framework, as interpreted by the National Native Tribunal and Australian courts of general jurisdiction, has placed a heavy burden on Aboriginal and Torres Strait Islanders seeking to prove native title rights.[124]

B. Sacred Natural Sites

"Sacred Natural Sites" (SNSs) are natural areas of special spiritual significance that may constitute an integral part of ethnic identity and, if so, may form a cultural landscape. Some SNSs include cultural constructions; others do not. For example, within the Māori belief system, mountains are considered to be the frozen bodies of their ancestors. In tribal meetings, participants identify themselves by first giving the name of their mountain tribe, then their lake or stream, and finally their leader.[125]

Notwithstanding that SNSs often have compelling cultural significance to some indigenous peoples, their legal protection has often been inadequate because of either constitutional constraints on religious establishment, the exigencies of economic development or sheer neglect. For example, in the Arctic it is growing increasingly difficult to protect these ancient sites due to outside impacts, such as tourism, mining, and forestry. Also, infrastructural development such as the construction of roads and dams. Sometimes current policies and management practices differ fundamentally from traditional management structures based on indigenous laws and customary practices.

A good example of a landscape that included, *inter alia*, a major cemetery that was despoiled by a public works project involved the prehistoric Boyne Valley passage-tombs in County Meath, Ireland. The cemetery was associated with the early history of the royal establishment of Tara. As a focus of scientific study, the tombs have had "the inestimable advantage that some of them have been subject of the most detailed and careful excavation which also produced a limited but nevertheless significant number of radiocarbon dates."[126] (That, of course, raises questions in itself.)

The Irish government planned to construct a motorway through the cemetery. Legal action to halt the plans was not successful. The judge hearing the matter rejected a claim that the provision in the National Monuments (Amendment) Act 2004 that had authorized the proposed construction was unconstitutional. The court then ruled that the legislature was entitled to regulate land and provide for construction of roads in the interests of the common good, even when such developments interfere with property rights, monuments, and national sites that may have been sacred.

SNSs are gaining greater recognition at the international level. For example, at the fifth IUCN World Parks Congress in 2003, Recommendation V.13, entitled *Cultural and Spiritual Values of Protected Areas*, provided for the designation of sites of cultural value as "sacred areas," and these were given special protection. The Preamble to the 2003

[123] Native Title Act 1993*,* (cth), Act No. 110 of 1993 (Austl.).

[124] *See* S. Mascher, "The Australian Approach to Recognising the Land Rights of Indigenous Peoples: The Native Title Act 1993 (cth)," in N. Bankes and T. Koivurova (eds.), *supra* note 113, p. 323.

[126] P. Harbison, *Pre-Christian Ireland from the First Settlers to the Early Celts* (Thames & Hudson Ltd., London, 1988), p. 66 *et seq*.

UNESCO Convention for the Safeguarding of the Intangible Cultural Heritage[127] confirms that: "…communities, in particular indigenous communities, groups and, in some cases, individuals, play an important role in the production, safeguarding, maintenance and re-creation of the intangible cultural heritage, thus helping to enrich cultural diversity and human creativity." Of course, recognition is not tantamount to implementation, lending credence to the observation that "effective and culturally appropriate implementation is often still lacking".[128]

Apart from the recognition of SNSs indirectly under the 2003 UNESCO Convention for the Safeguarding of the Intangible Cultural Heritage,[129] it is possible to read into UNDRIP an explicit recognition of sacred places of indigenous peoples as an integral part of their culture.[130] Article 25 of UNDRIP provides that:

> Indigenous peoples have the right to maintain and strengthen their *distinctive spiritual relationship* (emphasis added) with their traditionally owned or otherwise occupied and used lands, territories, waters and coastal seas and other resources and to uphold their responsibilities to future generations in this regard.[131]

Although the ILO Convention concerning Indigenous and Tribal Peoples in Independent Countries (No 169)[132] does not explicitly recognise SNSs, it does recognize and seek to protect social, cultural, religious and spiritual values and practices,[133] as well as the cultural and spiritual relationship of indigenous peoples to their lands and territories.[134] Also, article 27 of the ICCPR broadly recognizes an individual right of minorities to share cultural life with other members of their society.[135] This broad expression of minority rights entails a collective dimension, which by analogy helps support the culture-based claims of indigenous peoples.

At the regional level, decisions of the Inter-American Court of Human Rights (IACHR) are germane. For example, in *Mayagna (Sumo) Awas Tingni Community v Nicaragua,*[136] the IACHR stressed that the close ties of indigenous peoples with the land must be recognized and understood as the basis for their spiritual life. Similarly, in *Case of the Saramaka People v Suriname,*[137] the IACHR held that the Inter-American human rights

[137] Judgment of November 28, 2007, para 95.

instruments protect the right of indigenous peoples to enjoy their spiritual relationship with the territory they have traditionally used and occupied. In other decisions such as *Case of the Yakye Axa Indigenous Community v Paraguay*,[138] *Case of the Plan de Sanchez Massacre v Guatemala*,[139] and *Case of the Mayagna (Sumo) Awas Tingni Community v Nicaragua*[140] – the IACHR has held that states have an obligation to protect indigenous territory as well as the relationship between indigenous communities and their lands and their resources, in order to preserve their spiritual life.[141] The IACHR thereby adopted an integrationist approach by balancing the interests of the state in economic development and the indigenous peoples' way of life. More than the UN human rights system, the IACHR's approach shows an endorsement of the customary norms of indigenous peoples as a primary means of strengthening their custodianship of SNSs against outside interference.

National governments have also supported indigenous claims to SNS. In the United States, for example, the Native American Graves Protection and Repatriation Act[142] establishes indigenous entitlement to ancestral burial sites. In Canada, through the Albanel-Témiscamie-Otish National Park Project, such cooperation brought the government of the province of Québec into partnership with the Cree First Nation of Mistissini, with the additional innovation that the Mistissini Cree Elders were vested with the authority to define the protected areas they considered sacred. In the arctic tundra of Nunavik, the Government of Quebec, in partnership with the Kativik Regional Government, created the Kuururjuaq National Park, which embraces the Caribou Heaven, an important spiritual site for the Naskapi First Nation.

In New Zealand, governmental protection of sacred landscapes of the Māori people has been evident especially in official acknowledgements and administration of sites.[143] The Māori people describe themselves as *tangata whenua*, that is, people of the land, thereby reinforcing the bond that they have with the land. Interestingly, this term is used for other indigenous people as well. Moreover, as Māori mythology attests, land is sacred.

In 1993 Tongariro National Park in the Central North Island, became the first of three New Zealand properties to be inscribed on the World Heritage list under the revised cultural criteria describing cultural landscapes. The volcanic mountains at the heart of the Park have cultural and religious significance for Māori and are acknowledged as embodying the spiritual links between the community and its environment. It has a range of landscapes from tussock to forests to lakes, a desert-like plateau, and active volcanoes. New Zealand rivers, too, are sacred landscapes. In an August 2014 settlement between the Crown and the Whanganui River iwi, the Whanganui River became a legal entity with legal standing, rights and an independent voice. This was to give expression to Māori belief that a river is a living entity from its source to the sea with the help of the local iwi inextricably linked with it.[144]

The key volcanic cones of Auckland have been significantly modified, initially by Māori fortifications and later by housing that intruded up the slopes of the volcanic cones in the late nineteenth and twentieth centuries. In addition, an important issue has been what local tribe or tribes should have guardianship of the volcanic cones. The Ngāti Whaua o Orakei Hapū was initially recognised by the Crown as the sole guardian of the key volcanic cones, but this was disputed and taken as a matter of urgency to the Waitangi Tribunal, which is a type of truth-and-reconciliation forum to mitigate breaches by the Crown of the Treaty of Waitangi (1840) between the major Māori tribes and the Crown. After much discussion and negotiation, it was decided that the sacred volcanic cones should be administered by a body with six representatives each from the Auckland Council and the Tamaki Collective, a committee set up by Ngāti Whatua and other tribes and hapū that have land claims in relation to the Auckland area, and one Government representative. The new body took steps to limit excessive road access to the summit of the sacred Maungawhau (Mt. Eden), the highest volcanic cone.

VI. Recommendations

A. The United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), though not hard law,[145] establishes a commendable procedure of intercultural collaboration and a set of expectations concerning the protection of indigenous culture as well as land, and hence landscapes and even seascapes, of patrimonial importance to indigenous peoples. It cannot be the last word, of course. Article 31 of UNDRIP does not explicitly include the core concept of this Report -- *cultural landscapes* -- on its extensive list of cultural heritage phenomena. More specific and perhaps divergent initiatives at international, regional, national and local levels may eventually be helpful. For the time being, however, it may be wise to rely primarily on UNDRIP as a chosen instrument to shape general practices. Even in an age of legal pluralism and overlapping normative ordering (a description rather than prescriptive development, after all), the interests of indigenous peoples may be best served by universalizing and refining a single regime (UNDRIP) to provide an authoritative common language for protecting cultural landscapes and seascapes of significance to indigenous peoples. An obvious model for such an approach has been the Universal Declaration of Human Rights as a foundation for the progressive development of human rights law in all of its complexity today. Then, as empirical evidence accumulates about both the efficacy and limitations of an UNDRIP-based regime, modifications to it and entirely new initiatives will likely be in order.

B. The established principle of sustainability must guide the formulation of rules to protect cultural landscapes of significance to indigenous peoples and to resolve disputes among diverse stakeholders. Representatives of indigenous peoples must be allowed to participate in global initiatives, such as the preparation of the United Nations Sustainable Development Goals (SDGs 2030) and local efforts so as to take fully into account and apply the experience and contributions of these peoples in promoting harmony with the Earth. By the same token, the United Nations organs and agencies should integrate the emerging regime associated with this Report for protecting cultural landscapes of significance to indigenous peoples. Economic development that encroaches on or impacts such cultural landscapes necessitates careful risk management or assessment.

---

[145] *But see supra* note 34 (the ILA Resolution on the Rights of Indigenous Peoples acknowledges that some provisions of UNDRIP articulate customary international law).

C. The five distinct categories of cultural landscapes that the Report's typology proposes should structure the development of an effective international regime. Each category can be expected to generate its own normative variations.

D. The Aarhus Convention should be adopted as a model in requests to governing authorities for critical information that will enable interested parties to undertake good practices and collaborate effectively in making good choices concerning cultural landscapes based on risk assessment and sound policy. The limitations to access of information in the Aarhus model, however, should be modified to improve that access.

E. The UNESCO Operational Guidelines for the Implementation of the World Heritage Convention should be modified to require that all States Parties to the Convention obtain (as opposed to merely being encouraged to obtain) the informed consent of indigenous peoples as a condition for seeking inscription on the World Heritage List of a site traditionally belonging to an indigenous community.

James A.R. Nafziger, Chair
Margaret Beukes and Elina Moustaira,
Special Rapporteurs

COMMITTEE ON CULTURAL HERITAGE

WORKING SESSION

Wednesday, 10 August 2016, 9.00am

Chair: Professor Photini Pazartzis (Greece)

The Chair welcomed attendees to the session and noted that the Committee on Cultural Heritage Law was one of the longest standing committees in the ILA. The object of this session was to offer an opportunity for the attendees to make any final changes in the Committee's report and related draft resolution. The Chair of the Committee was invited to introduce and comment upon the agenda.

Professor James A R Nafziger (US), as Chair of the Committee, thanked the Session Chair and briefly summarised the work of the Committee in the 28 years since it had been first proposed. Its work product had included the preparation of two international conventions, a book, a law review symposium, three sets of guidelines and declarations, as well as numerous studies. One of these, on cultural landscapes significant to indigenous peoples, had been the Committee's primary focus during the past 2½ years. This project would conclude the Committee's work, as presently constituted. As one of the two oldest ILA committees, its mandate had been scheduled to expire in 2014 under the revised ILA rules, but it was then extended to enable the Committee to undertake the current study.

The agenda for this session included two items: a report on the first of the Committee's two international conventions concerning the underwater heritage, followed by a discussion of the current report and related draft resolution. Professor Nafziger noted that the second of the Committee's conventions, on immunities of cultural heritage on international loan from seizure and jurisdiction, had been completed only in 2014. It therefore was too recent to have generated any substantial considerations by States, general practice, or commentary. He then invited a Committee member, Mr Piers Davies (New Zealand), to present an update on the 2001 *UNESCO Convention on the Protection of the Underwater Cultural Heritage*, which was based on the Committee's 1994 Buenos Aires Draft Convention of the same name.

Mr Piers Davies (New Zealand) reported that 55 states had ratified the 2001 Convention. The last two ratifications were those of two African states, Ghana and Guinea. It was clear that South Africa's ratification had set an important precedent for the 14 African parties to the Convention. As to the ratification or accession by western European states, France's ratification in 2013 undoubtedly encouraged other states such as Belgium either to ratify the Convention or to accelerate the process of consideration leading to ratification. The Netherlands announced on 19 May 2016 that it would ratify the Convention, although no timeframe had been announced. Germany was also moving towards ratification. Elsewhere in the world, there were clusters of States parties around the Black Sea, on the southern rim of the Mediterranean Sea, and in the Caribbean area. Australia had started to review its historic shipwreck legislation as a first step towards ratification, but the process would take substantial time. New Zealand was unlikely to take any action until Australia has ratified the convention.

The rules for acceptable activity involving underwater heritage were set out in a detailed annex to the Convention. This annex was widely accepted as normative, even by State

that had not ratified the Convention such as the UK, the US, Australia and New Zealand. In the US, all of the federal agencies conducting activities in the marine environment had sent letters to the Society of Historical Archaeology pledging to follow the annex as a matter of practice and policy. The National Oceanic and Atmospheric Administration (NOAA) and the National Park Service (NPS) had entered into bilateral, non-binding agreements with Spain and the UK that incorporated the annex and other provisions consistent with the Convention. Courts in the US had ruled on issues related to the famous sunken vessel, the *RMS Titanic*, that were consistent with international law norms. World War I wrecks were all becoming subject to the Convention once its exclusion from coverage of heritage that had sunk more than 100 years ago no longer applied. Many of these wrecks were war graves. This development was of major political significance due to the large number of countries involved in the conflict and the numerous vessels and crews lost during World War I.

Professor Nafziger thanked Mr. Davies and introduced the other members of the Committee present. He had distributed to all attendees both an original Draft Resolution 3/2016 and a revised version with minor changes to reflect the formal requirements of the Conference Steering Committee. These documents would frame the concluding discussion in this session.

Professor Nafziger then introduced the report, 2½ years in preparation, on "The Law Pertaining to Cultural Landscapes Significant to Indigenous Peoples". In 2013, the Committee had decided during an intersessional meeting at Herlufsholm near Næstved, Denmark, to focus its work on the international legal dimensions of landscapes as cultural heritage. At the 2014 Washington Conference, the Committee had decided more specifically to prepare an exploratory, forward-looking report that focused on the interests of indigenous peoples.

Overall, the report was intended to provide a framework for further development of a pertinent regime in order to assist governments, international organisations, non-governmental organisations, business interests and, above all, indigenous peoples, in efforts to protect pertinent cultural landscapes, in all of their diverse manifestations, and resolve conflicts related to them. Assisting the governing authorities and other responsible institutions of indigenous peoples had been a fundamental objective of the project. A special effort had also been made to render the report accessible and understandable to the general public.

After the 2014 Washington Conference, Professor Nafziger had invited two Committee members, Margaretha Beukes (South Africa) and Elina Moustaira (Greece), to assist in the project. Committee members then contributed examples and commentary on the theme of the project within the purview of their national systems. In June 2015, the Committee and invited experts met for two days at Jerusalem's Rockefeller Museum to discuss a draft report. The report had gone through several subsequent drafts.

Professor Margaretha Beukes (South Africa) noted that cultural landscapes were a problematic issue in other disciplines such as environmental science and ecology, because their consideration of landscapes had largely ignored the cultural dimensions that were often of particular concern to indigenous peoples. The Committee's report offered a detailed typology that distinguished between different types of cultural landscapes. This

typology, accompanied by numerous examples, was intended to serve as a framework for differentiated regimes of protection. The concept of sustainable development was also essential, as was the principle of participation by indigenous peoples in decision-making and the development of a protective regime.

Professor Nafziger thanked Professor Beukes and invited commentary on the report.

Mr Thomas Adlercreutz (Sweden), a member of the Committee, noted a typographical error in the acronym for "free, prior and informed consent" and suggested rewording a related description of that principle of collaboration. These suggestions were then accepted. Professor Beukes explained that the principle had originated in Philippe Sands' work on procedural aspects of environmental law.

Professor Robert Paterson (Canada) added that the 1992 *Convention on Biological Diversity* was the only intellectual property convention that really addressed indigenous rights *per se*.

Mr Bruce Mauleverer QC (UK) expressed his delight to be present as a member of the Committee. It was worth noting that, in Olympic terms, the host country was a clear winner in this report in view of its rich cultural heritage in relevant landscapes. These landscapes included the Richtersveld Cultural and Botanical Landscapes, the Mapungubwe Cultural Landscapes, the UKhahlamba Drakensberg Park, and the famous Battlefield of Blood River. Mr Mauleverer also observed that the fact that the ILA as a whole and this particular Committee were meeting in a country imbued with such a rich culture and inhabited by indigenous people who rejoiced in their cultural landscapes was certainly worthy of celebration.

The Chair agreed, noting the report's reliance on examples of pertinent landscapes throughout the world.

Ambassador Ihor Turyanskiy (Ukraine) noted that the protection of culture was very important for many countries including Ukraine. Ukraine had always been at the centre of events on the historical and political maps of Europe, as a leading hub of trade and economic relations between West and East. It was a polyethnic State that had absorbed different cultures and had thereby developed a rich and diversified cultural heritage. The Ukrainian Constitution confirmed that the country's cultural heritage was clearly under the protection of the State. Ukraine also had become a party to several international instruments concluded under the auspices of UNESCO and the Council of Europe. Of UNESCO's 1034 World Heritage sites, seven were in Ukraine: the Saint Sophia Cathedral in Kiev, the Historical Centre in Lviv, the Residence of Archbishops of Bukovina and Dalmatia, the Struve Geodetic Arc, the wood churches of the Carpathian region of Ukraine and Poland, the KievPechersk Lavra, and the Ancient City of Tauric Chersonese and its Chora.

In 2015, the Government of Ukraine nominated 16 more sites for inclusion on the preliminary List of World Cultural Heritage. Five of these were in Crimea, which, along with Eastern Ukraine, was occupied by Russian forces. This situation had created a difficult problem in Ukraine's effort to protect sites. Therefore, Ukraine considered it necessary to strengthen international cooperation to protect world cultural heritage and thereby create legal mechanisms and actions to cover critical needs that were beyond the letter of its current law and of existing international law.

Ambassador Turyanskiy concluded his intervention by expressing his appreciation to the Committee and his hope that cultural heritage law would continue to be a focus of the ILA's work.

Professor Nafziger thanked Ambassador Turyanskiy and assured him of the broad support for future ILA projects focused on cultural heritage.

Mr Dipak Bhattacharyya (India) also expressed his support for the work of the Committee and future efforts by the ILA to develop the international law of cultural heritage. Although India had a national heritage law, its implementation relied on funding from UNESCO and efforts such as those of the ILA, given, for example, that the Indian government had done nothing to protect its cultural landscapes as such. He commended the Committee for its efforts to better define cultural landscapes significant to indigenous peoples. He then noted the distinction between natural and cultural landscapes, which, however, had become increasingly difficult to make.

Professor Mary Footer (UK) referred to the wording of the paragraph in the Committee's report that related to non-state actors, such as corporations, that threatened the rights of indigenous peoples regarding the protection of cultural landscapes. She indicated a need to clarify who was being held responsible for what when it comes to violations of those rights and the attribution of acts that might challenge the protection of cultural landscapes. She queried whether it was the State or the corporate which had the duty of due diligence. As to the ILA's continuing work on cultural heritage issues, which she enthusiastically supported, she drew on her similar experience with the Committee on International Trade Law, which had concluded its work at the 2014 Washington Conference after 22 years of work. What then emerged were two new committees. She observed that the theme of the Committee on Cultural Heritage Law was well suited to continuing with specific project-based committees. She endorsed the intent of this Committee as well as for all Committees in the future to undertake projects within defined periods of time instead of operating under an unlimited mandate, as had been the practice before the ILA's recently revised rules for the tenure of committees.

Professor Nafziger thanked Mr Bhattacharyya and Professor Footer for their cogent and helpful comments. He reiterated his hope and expectation that cultural heritage law would continue to be an important theme in the work of the ILA. Moreover, the presence of numerous Committee members at this session and their continuing commitment to the development of cultural heritage law would help insure an effective implementation of the recommendations in the Committee's report on "The Law Pertaining to Cultural Landscapes Significant to Indigenous Peoples".

Professor Beukes summarised the recommendations in the Committee's report. The paradigm of sustainability was essential to the development of an effective international regime to protect cultural landscapes significant to indigenous peoples. Also, an overarching requirement, which should encapsulate every single effort to protect landscapes, was an effective process for collaboration in the implementation of the recommendations involving the prior consent and participation of indigenous peoples. It was of no use to have only aspirations on paper. It was important for all stakeholders concerned about cultural landscapes to develop an understanding and appreciation of the ethos of indigenous people so as to move away from a traditional notion of "us" versus "them".

The Chair solicited further comments. Hearing none, Committee members then adopted the report and the Chair suggested that the session conclude with a consideration of the Committee's draft resolution.

After brief discussion, Committee members agreed on minor stylistic changes in the draft resolution that Professor Nafziger would discuss with the Conference Steering Committee.

The Chair and Professor Nafziger thanked the Committee members and other attendees for an amiable and productive discussion. The session concluded with strong support for the ILA's continuing attention to issues of cultural heritage law.

REPORT FOR THE BIENNIAL CONFERENCE IN WASHINGTON D.C. APRIL 2014

I. INTRODUCTION

At the International Law Association's Biennial Conference in The Hague in 2010, the Committee on International Commercial Arbitration was mandated to study the topic of the inherent powers of arbitrators in international commercial arbitration. As the project developed and expanded, the Committee felt it appropriate to consider also the notion of implied powers and its relation to inherent authority, as well as arbitral discretion. Hence, reference will be made to inherent and implied powers throughout this Report. The Committee presented on this topic at the Biennial Conference in Sofia in August 2012, with an aim to present a final report and recommendations at the Biennial Conference in Washington, D.C., in April 2014. This is the final Report prepared under this mandate.

A. General Description of the Topic

Party agreement to arbitrate is the foundation of every international commercial arbitration. However, arbitrators are sometimes confronted with situations that are not addressed by either the parties' arbitration agreement or the applicable curial law and rules. What, if any, powers do the arbitrators have to deal with those situations? What is the source of those powers? What is the limit of them?

Within the arbitration community there appears to be a general, albeit diffuse, understanding that arbitrators in international commercial cases – in addition to their expressly enumerated and defined powers – enjoy some measure of inherent or implied powers. Parties cannot be expected to have anticipated every possible contingency in their arbitration agreement. After all, arbitration agreements are typically prepared long before a particular dispute crystallized; indeed, they are most often adopted at the time of contracting, when possible future disputes may seem unlikely and remote. Moreover, it would not be sensible, efficient, or commercial to require parties to attempt to provide express directives for every possible contingency that might arise in arbitration; the arbitration clause would become so complex and unwieldy that parties would hardly ever agree to arbitrate at all.

Instead, the parties typically draw the contours of the arbitral procedure and otherwise leave it up to the arbitrators and counsel to fill in much of the detail when a dispute has arisen. The arbitration laws of many countries, as well as various sets of rules commonly used in international commercial arbitration, recognize this and expressly afford arbitrators discretion over procedural questions not otherwise decided by the parties. Arbitrators acting in such jurisdictions or operating under such rules may cite this general grant of the discretionary power as giving them the authority necessary to flesh out procedural lacunae. But few would contend that arbitrators would be hamstrung in the absence of such provisions, unable to make the procedural judgment calls necessary to fulfill their adjudicative mandate. Instead, when faced with a situation for which the arbitration agreement and rules do not provide an answer, arbitrators might act on the basis of some power that is inherent or implied.

To take a very modest example, the parties typically will not empower the arbitrators to conduct a hearing on a day that is a public holiday at the seat of the arbitration, but most

people would agree that the arbitrators have the power to do so. In this sense, arbitrators routinely exercise a form of inherent or implied authority. They make concrete decisions based on only a general and imprecise grant of power. They fill in the gaps. That is what parties largely expect arbitrators to do: to exercise the authority implied by their mandate to enable them to manage and decide a dispute within the parameters provided.

Actions taken in the absence of explicit authority, however, carry a greater risk of running afoul of the parties' expectations when they extend beyond procedural questions, to more challenging and controversial matters that may fundamentally affect the outcome of the dispute. Indeed, the doctrine of inherent powers is invoked most often to deal not with routine matters of procedure but with challenging and unforeseen circumstances that implicate the integrity of the arbitral process itself. For example, in recent international investment cases, arbitrators have invoked such powers to exclude counsel chosen by a party from appearing at a hearing and to impose the costs of arbitration on a party found to have acted in bad faith where the parties' agreement provided for the sharing of costs.

Defining the scope of arbitrators' non-enumerated powers—or, at a minimum, developing a framework for understanding when they may be properly employed—is essential because a wrongful exercise of authority can have harmful consequences to the success and finality of arbitral proceedings. Arbitrators presented with novel problems that they resolve via recourse to implied or inherent powers may be challenged for bias by a disadvantaged or losing party. An exercise of authority attacked as improper at the setting aside or enforcement stage of proceedings risks imperiling the fate of a tribunal's award, if it is deemed to constitute a violation of due process or an act beyond the tribunal's jurisdiction.[2] These concerns, however, beg the question, insofar as it remains uncertain how, in the absence of a coherent jurisprudence on inherent powers, a reviewing court should determine whether arbitrators have exercised a power they inherently possess or have overstepped the bounds of their authority.

Despite the evident importance of understanding the proper limits of a tribunal's authority, the definition of and conceptual basis for inherent and implied powers, and the principles that may at once animate and constrain them, has not been carefully developed in the context of international commercial arbitration. Though regrettable, this is not surprising given the difficulty of such an analysis: insofar as every commercial arbitration is a unique product of a series of choices, each of which separately shapes the rules and laws that govern the conduct of proceedings, it is impossible to produce a universal catalogue of inherent and implied powers, with clear instructions on when they may be properly employed. The non-public nature of many arbitral awards adds to this challenge. Moreover, when challenged before national courts, commercial awards are more often criticized as falling outside of a tribunal's jurisdiction rather than as evidencing an improper exercise of implied or inherent powers *per se*.

---

[2] For example, the New York Convention contemplates that it is proper to refuse recognition and enforcement of all or part of an award upon proof that "[t]he award deals with a difference not contemplated by or not falling within the terms of the submission to arbitration, or it contains decisions on matters beyond the scope of the submission to arbitration." Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958), Art. V(1)(c); see also, e.g., UNCITRAL Model Law on International Commercial Arbitration (2006) ("UNCITRAL Model Law"), Art. 36 (circumscribing the grounds for refusing the recognition or enforcement of an award).

While understandable, the absence of clear guidance on the topic risks leaving parties and arbitrators adrift when confronted with difficult situations for which the parties' agreement or the arbitral rules provide no roadmap. In this Report, the Committee attempts more systematically to explore the notion of inherent and implied powers and to offer some guidance for their exercise in the international commercial arbitration context. In doing so, the Report raises a number of potentially controversial questions about the potential scope of a tribunal's power and the manner in which its implied or inherent powers might be exercised. Such questions are intended not to encourage or discourage invocation of implied or inherent powers but to prompt careful thought and consideration about the types of difficult issues tribunals might face. It is hoped that the Report will provide a conceptually satisfactory yet practical framework for thinking about inherent and implied powers, which will in turn assist parties in structuring their arbitration agreements, arbitrators in addressing problems for which the textual sources before them offer no pre-determined solution, and courts in reviewing arbitral awards.

B. Outline of the Report

Section II begins with an overview of the origin of inherent and implied powers, as they developed principally in the common law legal tradition and then migrated into international arbitration. The Report then discusses the various situations and circumstances where such powers may be relevant to international commercial arbitration, based on analogues drawn primarily from the investment dispute context. In Section III, the Committee proposes definitions and classifications regarding inherent and implied powers of arbitral tribunals as well as a framework for analyzing these powers in international commercial arbitration. Finally, Section IV sets out the Committee's findings and recommendations on the topic.

The Committee held six meetings to discuss the preparation of this Report and Recommendations.[3] It has widely surveyed the relevant literature and has received reports from several Committee members on the topic.[4] This Report expresses the consensus of the Committee; it does not necessarily and in all respects reflect the personal views of the chair, the rapporteurs, the individual members of the Committee, or the other lawyers who participated in the preparation of this text.

II. THE PRACTICE OF INHERENT AND IMPLIED POWERS

A. The Origin of Inherent and Implied Powers

The notion of inherent and implied powers has its origin in domestic common law courts, where its emergence can be traced back several centuries. The concept of inherent powers as a source of judicial power emerged first in England, where early judges, serving as the king's personal representatives, enjoyed substantial discretion in exercising the royal

[3] Committee meetings on this project were held in Geneva in May 2011; Dubai in November 2011; Stockholm in March 2012; and Paris in May 2012, May 2013, and February 2014. The Chairman and Rapporteurs are grateful to all those members who contributed to the Committee's work, attended the meetings, and submitted comments.

[4] Country reports were received from Committee members on the laws of Australia, Austria, Brazil, Canada, England, France, Hong Kong, Italy, Portugal, Sweden, and Switzerland.

prerogative to do justice.[5] Over time, as courts gradually developed greater autonomy and "judges' allegiance shifted from the king to the law, certain powers that had originated in the royal prerogative came to be seen as inherent characteristics of a 'court.'"[6]

Initially, the powers asserted as "inherent" were most often tied to the court's need to punish misconduct, protect against the abuse of process, and ensure its jurisdiction. As early as 1885, such authority was already well-established, as observed by Lord Blackburn when he commented that "from early times (I rather think, though I have not looked at it enough to say, from the earliest times) the court had inherently in its power the right to see that its process was not abused by a proceeding without reasonable grounds."[7] Pursuant to their inherent powers, courts have also long punished contempt, arranged the conduct of court business, and fashioned informal rules to regulate their proceedings.[8]

With the spread of the English common law system also spread the notion of inherent and implied powers. In the United States, courts saw their powers constricted in the immediate aftermath of the Revolutionary War,[9] but the federal judiciary established under the new Constitution quickly reasserted its authority as a judicial body to exercise power by implication. In the seminal 1803 case of *Marbury v. Madison*,[10] the United States Supreme Court inferred that it possessed the power to override laws it deemed unconstitutional.[11] Reasoning that it was the "very essence of judicial duty" to assess which rule should govern when two conflict,[12] the Court concluded that it could not, via a grant of statutory authority, exercise jurisdiction beyond the limits set by the Constitution.[13] The Court's determination that it possessed the power of judicial review, implied from the existence of a written Constitution that the judiciary was sworn to uphold, has had profound implications on the U.S. constitutional system. It was not until nearly a decade later, however, that the Court first made explicit reference to the judiciary having implied powers, when it observed, in *dicta*, that "[c]ertain implied powers must necessarily result to our Courts of justice from the nature of their institution."[14] It found such "necessary" powers to include the authority to fine for contempt, imprison for contumacy, and to enforce its orders.[15]

Over time, common law courts began to invoke a wider breadth of authority under the mantel of inherent or implied powers. Today, inherent powers are routinely referenced to support a variety of claimed powers throughout numerous jurisdictions, including Australia, Canada, Singapore, and New Zealand, in addition to the United States and

the United Kingdom.[16] "These courts have variously invoked inherent powers to make rules of court and practice directions, to prevent abuse of the court's process, to remand cases involving pendent claims, to stay proceedings, to correct any injustice caused by an earlier order, … to allow the admission of evidence," and in myriad other situations.[17]

In recent decades, the notion of inherent powers has migrated from the common law tradition into the practice of international courts and tribunals, where they are conceived of in a manner that largely mirrors the domestic context. The Iran-U.S. Claims Tribunal, for example, has defined the inherent powers of arbitral tribunals as "those powers that are not explicitly granted to the tribunal but must be seen as a necessary consequence of the parties' fundamental intent to create an institution with a judicial nature."[18] Similarly, inherent powers may be viewed as the "logical corollary of the judicial nature of such organs and of their duty to ensure a sound administration of justice."[19] The source of this authority has been traced to international courts' need to safeguard their jurisdiction, conserve the rights of the parties, and fulfill their functions as adjudicative bodies.[20]

International tribunals today are widely recognized to possess inherent and implied powers. Indeed, their acceptance is so common that, for example, "there have been no challenges to the appropriateness of inherent powers *per se* in ICSID arbitration."[21] Given the sparse nature of these bodies' constitutive instruments relative to the more elaborate laws and procedural rules of domestic courts, inherent and implied powers arguably have greater relevance in the international context,[22] and it is not surprising that they have been used in a broad variety of circumstances.

---

[16] Chester Brown, "The Inherent Powers of International Courts and Tribunals," *British Yearbook of International Law*, Vol. 76, No. 1, 195, 205 (2005). A similar doctrine of inherent powers does not exist, as such, in the civil law tradition. In civil law jurisdictions, procedural law derives primarily from constitutional law and statutes. However, "the exercise by courts of jurisdictional powers which are not expressively provided for in legislation or statutory rules is not unknown in civil law countries." *Id*. at 206 & n.71.

For the view that inherent powers are also established in the international commercial arbitration context, see Robert Wachter, "Chapter II: The Arbitrator and the Arbitration Procedure: On the Inherent Powers of Arbitral Tribunals in International Commercial Arbitration," in Christian Klausegger, et al. (eds.), *Austrian Yearbook on International Arbitration*, 65–83 (Manz'sche Verlags – und Universitätsbuchhanlung 2012).

[22] *See* Abba Kolo, "Witness Intimidation, Tampering and Other Related Abuses of Process in Investment Arbitration: Possible Remedies Available to the Arbitral Tribunal," in *Arbitration International*, Vol. 26, No. 1, 61 (LCIA 2010) ("Indeed, the possession of inherent powers is more pertinent with respect to international courts and tribunals, which operation in a 'decentralised

The limited availability of published jurisprudence from international commercial arbitrations makes it difficult to trace the degree to which inherent or implied powers have been called upon in that specific context. However, the widespread diffusion of national arbitration laws that give arbitrators substantial discretion over proceedings suggests that there exists a general recognition that arbitrators cannot carry out their mandate absent some authority to fill in gaps left unaddressed by party agreement. Indeed, common law and civil law jurisdictions alike have enacted national arbitration laws that afford arbitrators considerable flexibility in overseeing arbitral procedure.[23] These laws echo the approach embraced in the UNCITRAL Model Law, which confers upon parties the right to agree on arbitral procedure but otherwise gives the tribunal discretion to "conduct the arbitration in such manner as it considers appropriate."[24]

As the general authority of arbitrators to oversee proceedings has gained greater recognition, parties have come to view as routine actions by arbitral tribunals that, just decades ago, would likely have sparked debate or controversy. Before interim relief and document production were widely embraced by international arbitration, for example, few would venture to argue that arbitrators possessed a general power to grant provisional measures or order the production of documents. Today such authority is likely to be assumed, even if not explicitly provided for by the underlying arbitration agreement or applicable arbitral rules. To take another salient example, the *competence-competence* doctrine, now considered a central tenet of international commercial arbitration, did not historically enjoy universal recognition. In the early days of international arbitral practice, parties may have disputed the notion that a tribunal could assess its own jurisdiction on the basis of its inherent or implied authority.

Somewhat paradoxically, as certain arbitral powers have become so common in modern arbitration practice that they might now be considered inherent or implied, they have also increasingly found concrete expression in arbitral laws or rules and have, thereby, become explicit powers. As noted above, many national jurisdictions have passed laws that confirm that arbitrators enjoy a general authority to shape proceedings. Similarly, the principle of *competence-competence* has been enshrined in arbitration rules,[25] and the arbitration community has developed opt-in rules for document production.[26] As such practices become more common and accepted through the spread of laws and rules, they are increasingly viewed as naturally falling within the scope of arbitral power.

---

legal system', lacking a law-making body and judicial precedent, as obtained in the domestic legal systems."). *Cf.* Gaeta, *supra* note 18, at 365 (observing that the doctrine of inherent jurisdiction of the Court originated in common law countries in order to supplement the paucity of statutory provisions on procedural matters).

[23] Reports from the Committee members practicing in jurisdictions as diverse as Austria, Australia, Brazil, Canada, England, France, Hong Kong, Italy, Portugal, and Sweden have confirmed that, under the laws of those jurisdictions, arbitrators enjoy fairly broad discretion over arbitral proceedings. The enactment, in civil law jurisdictions, of provisions that explicitly endow arbitrators with discretion may be seen as reflecting an accommodation between the civil law notion, from the Rechtsstaat theory of law, that any legitimate exercise of state power must be grounded in a legal provision and the practical need for flexibility in arbitration.

[24] UNCITRAL Model Law, *supra* note 1, Art. 19.

[25] *See*, *e.g.*, UNCITRAL Arbitration Rules (1976), Art. 21.

[26] IBA Rules on the Taking of Evidence in International Arbitration (2010), Art. 3.

Arbitrators who creatively employ inherent or implied powers to achieve efficient and successful outcomes may take some comfort from the fact that actions previously perceived as novel have now become integral to the fabric of international commercial arbitration, and have even been given express incorporation into arbitral rules. However, when tribunals justify contentious decisions by mere reference to implied or inherent authority, they risk acting beyond the scope of the parties' agreement, to the potential detriment of the arbitral process. The use of inherent and implied powers in international arbitration thus merits reflection and examination.

B. The Diverse Application of Inherent and Implied Powers

When asked by the parties to act or intervene on a particular issue, an international commercial arbitral tribunal's first point of reference must always be the relevant sources governing the arbitration, namely the arbitration agreement, any arbitration rules, and the applicable curial law. A tribunal is uniquely shaped by the circumstances under which it is constituted, and the inherent or implied powers it may properly exercise will depend upon the distinct configuration of direction and autonomy produced by the parties' choices. While a tribunal overseeing a dispute governed by sophisticated arbitral rules and detailed curial law may find textual support for a particular action it sees fit to take during the course of an arbitration, another tribunal—operating without similar instruction and guidance in the same measure—might need to predicate the very same action on its implied or inherent authority. A third tribunal, by contrast, may find that same action prohibited by the parties' arbitration agreement or the set of rules governing its arbitration. It is thus neither possible nor useful to compile a universal list of inherent or implied powers to which parties or arbitrators may turn for guidance.

In order to gain a thorough understanding of the potential utility and outward limits of inherent and implied powers, the Committee has thus considered in what circumstances an international commercial arbitral tribunal—if not otherwise advised or constrained—might be permitted to act on the basis of its inherent or implied authority, and has sought to categorize these powers based on the function or objective that they serve to achieve.

Recognizing that the decisions of each tribunal are highly contextual and may not be applied mechanically in superficially analogous situations, the Committee has nonetheless found it helpful to examine and reflect upon the reasoning employed in various publicly-available awards rendered on the subject. It has drawn, in particular, from the decisions of international investment tribunals, the International Court of Justice, and ad hoc arbitral bodies.[27] The confidential nature of most international commercial arbitrations makes the "jurisprudence" developed by such cases inaccessible. The public decisions of other international tribunals are the best available proxy for studying the application of inherent and implied powers in international disputes. While there are important differences between commercial arbitration and other international fora, the differences—at least those between commercial arbitrations and investment arbitrations—by and large do not appear to be material to the present inquiry. At a basic level, all of these processes offer a consent-based form of binding dispute resolution achieved via an adjudicatory process. Whether it involves the adjudication of an investor-State dispute under a treaty and governed by international law or an international commercial dispute under a contract

[27] The Committee has also drawn from decisions of reviewing courts, where available.

and governed by the law of a particular state, arbitration represents a consensual process whereby the parties' elections afford jurisdiction and define its contours.

In extrapolating from examples that have arisen in the investment context to think about what issues may arise in a commercial context, however, there is one caveat to keep in mind. Arbitrators in commercial settings will likely be presented with more concrete and well-developed law than are arbitrators adjudging investment disputes. Commercial arbitrators must, therefore, be carefully attuned to any limits that the substantive law of the dispute, or the law of the place of arbitration or likely enforcement, may place on their exercise of inherent or implied powers, which may vary from those outlined below.

1. Powers Relating to Procedure

Tribunals routinely make decisions relating to the conduct of procedure that— where not explicitly contemplated or prohibited by the arbitral rules or curial laws before them— might be permissible exercises of their implied or inherent authority as quasi-judicial actors. These include determining the seat of arbitration, allowing *ex parte* proceedings,[28] bifurcating proceedings,[29] and facilitating or mediating settlement. Depending on the circumstances, arbitrators may have the inherent or implied authority to establish rules for the conduct of hearings and to fix the forms of argument permitted (i.e., written or oral). Such exercises of authority, readily viewed as incidental to the adjudicatory function of tribunals, are often exercised without debate or serious question.

Arbitrators also have a degree of discretion with regard to the admission, exclusion, and consideration of evidence. Arbitral rules often explicitly provide for the exercise of judgment by arbitrators in deciding what evidence they are to credit. However, "[e]ven when inherent powers are not invoked expressly to deal with evidentiary matters, reliance on comparative and functional analysis to flesh out necessary procedural powers supports the view that the intellectual operation that the Tribunals are engaged in relates to inherent powers."[30] For example, in *Methanex Corporation v. United States of America*,[31] the tribunal made reference to the UNCITRAL Rules and the discretion they afford over evidentiary matters in deeming inadmissible documents that Methanex had obtained via trespass onto private property and rummaging through dumpsters.[32] But the tribunal's

[28] In the Australian case of *Benedetti v Sasvary* [1967] 2 N.S.W.R. 792, for example, the court found that the nature of the office of the arbitrator authorizes arbitrators to proceed *ex parte* for good cause and that it was in the arbitrator's discretion to decide whether they had cause for doing so. *Id.* at 799.

[29] *See*, *e.g.*, Massimo Benedettelli, "To Bifurcate or Not to Bifurcate? That is the (Ambiguous) Question," *Arbitration International*, Vol. 29, No. 3, 505 (LCIA 2013) ("Even where not expressly mentioned, the power to split the proceedings in different phases, each finalized to the rendering of a decision on a discrete matter, may be considered 'inherent' to the judicial function performed by the arbitral tribunal."). However, as Benedettelli acknowledges, *id.* at 505 n.40, enforcement of an award has been refused where bifurcated proceedings, not provided for in the applicable arbitration rules and unacceptable to one of the parties, were found not to accord with the parties' agreement. *See* A.J. van deen Berg, "Why Are Some Awards Not Enforceable?," in A.J. van den Berg (ed.), *New Horizons in International Commercial Arbitration and Beyond*, ICCA Congress Series, Vol. 12, 302–03 (Kluwer Law International 2005).

[32] *Id.*, Part II, Chapter I, ¶¶ 53–60.

analysis gave equally significant or greater weight to considerations of good faith, the duty of which it noted was "incumbent on all who participate in international arbitration, without which it cannot operate."[33] Thus, although that tribunal did not need to justify its conduct by reference to inherent or implied authority, its reasoning suggests that another tribunal, operating without the benefit of the UNCITRAL Rules, might be able to reach the same conclusion on that basis.

It has also been argued that tribunals have an inherent power to permit non-party participation in arbitration. In *Aguas Provinciales v. The Argentine Republic*,[34] the tribunal denied the request of a would-be *amicus curiae* to attend arbitral proceedings where the request was predicated on the tribunal's inherent powers over procedure. Agreeing with the petitioner that the tribunal possessed "certain inherent powers with respect to arbitral procedure," it concluded that "it had no authority to exercise such power in opposition to a clear directive in the Arbitration Rules, which both Claimants and Respondent have agreed will govern the procedure in this case."[35] ICSID Arbitration Rule 32(2) conditioned the arbitrator's discretion over the attendance of non-parties on the consent of the parties, which was absent in that case.[36]

Interestingly, however, the tribunal considered the would-be *amicus*'s petition to submit a "friend of the court" brief over Claimant's objection.[37] In doing so, the tribunal referenced its grant of residual power under Article 44 of the ICSID Convention, which directs a tribunal to decide any question of procedure that arises outside of the agreed-upon rules of the arbitration and has been described as "provid[ing] explicit legal basis for the exercise of inherent powers that have not been already spelled out."[38] Using a multi-factor test drawn from its review of the practices of other jurisdictions and fora, the tribunal determined that the conditions for admission of the brief were not met in the circumstances of the case.[39] While the tribunal did not, therefore, admit the brief over a party's opposition, it did raise the prospect of such an eventuality. One wonders if, under the mantle of such "residual" or inherent power, a tribunal might determine, in a different context, that an amicus brief should be admitted over the objections of both parties. Would such a decision align with the concept of party autonomy? If this is a possibility, what other powers might a tribunal elect to exercise on the basis of its inherent powers of procedure?

2. Power to Issue Interim Relief

Tribunals have long maintained their inherent or implied authority to grant interim relief in order to protect their jurisdiction, even though the arbitral rules often expressly provide for such authority. In 1963, Judge Sir Gerald Fitzmaurice observed, in his separate

[39] *Aguas Provinciales*, *supra* note 33, ¶ 34.

concurring opinion in *Case Concerning the Northern Cameroons*[40] that the Court possesses a "preliminary or 'incidental' jurisdiction" to decree interim measures of protection, admit counterclaims or third party-interventions, and take similar actions that "it can exercise in advance of any determination of its basic jurisdiction as to the ultimate merits."[41] Such authority was noted to inhere in the court's judicial nature:

> Although much (though not all) of this incidental jurisdiction is specifically provided for in the Court's Statute, or in the rules of Court which the Statute empowers the Court to make, it is really an inherent jurisdiction, the power to exercise which is a necessary condition of the Court—or of any court of law—being able to function at all.[42]

In cases following this *dictum*, tribunals have repeatedly cited their inherent powers to justify grants of interim relief, often in the context of addressing a party's out-of-court conduct that has the potential to interfere with arbitral proceedings.

In a case before the Iran-U.S. Claims Tribunal, *E-Systems, Inc. v. Iran*,[43] the claimant filed a motion to compel dismissal or a stay of proceedings that had been initiated in an Iranian court. After determining that Iran was free to initiate the subject claims in a domestic forum even though it could have brought them as arbitration counterclaims, the tribunal requested that Iran seek a stay of the Iranian case pending completion of arbitral proceedings. It based its authority for such action on its "inherent power to issue such orders as may be necessary to conserve the respective rights of the Parties and to ensure that this Tribunal's jurisdiction and authority are made fully effective."[44] Noting that its award would prevail over inconsistent decisions rendered by the domestic courts of Iran or the United States, the tribunal resolved that a stay of proceedings was necessary in order "to ensure the full effectiveness of the Tribunal's decisions."[45] Relying in part on that decision, the tribunal in *RCA Globcom v. Iran*[46] similarly found a stay of domestic proceedings to be an appropriate form of interim relief, notwithstanding respondent Ministry of Defense's contention that it was beyond the scope of discretion afforded the tribunal under the applicable rules.[47]

Tribunals constituted under the ICSID Rules have similarly relied on their inherent powers to grant interim relief, often in contexts touching on a concern for the integrity of some aspect of proceedings. In *Quiborax S.A. v. Bolivia*,[48] the tribunal issued an interim measure to stop criminal proceedings threatening the claimant's right to present its case by obstructing access to potential witnesses and documentary evidence. The tribunal had "no doubt that it [possessed] the power to grant provisional measures to preserve the procedural integrity of the ICSID proceedings, in particular the access to and integrity

of evidence."[49] In *EDF v. Romania*,[50] the tribunal banned, among other actions, the unauthorized disclosure of documents produced during the proceedings.[51] It based its order on the power conferred by applicable arbitration rules and "the inherent power of the Tribunal to take steps to prevent the exacerbation of the dispute and to maintain the integrity of the arbitral process."[52] Similarly, in *Biwater Gauff v. Tanzania*,[53] the tribunal issued an interim measure forbidding the parties from disclosing to third parties documents concerning the arbitration. It predicated this action on its responsibility to "ensur[e] that the proceedings will be conducted … in a regular, fair and orderly manner (including by issuing and enforcing procedural directions to that effect)."[54]

These decisions impose restrictions on parties' actions that may be justified based on their having consented to arbitration, a process that entails certain rules and an obligation to participate in good faith. But at what point does a tribunal's interim order risk unduly infringing on the autonomy of parties to act beyond the boundaries of the arbitration? For example, where the parties' agreement provides for full publication of all arbitral briefs and decisions, could a tribunal override that condition on the basis of its inherent powers, if it determines that the integrity of proceedings might be jeopardized by the risk of potential media frenzy?

3. Powers Related to Decision-Making

In relation to the decision of the dispute, the notion of implied or inherent powers may come into play in the context of a tribunal's deciding its jurisdiction, deeming certain issues as irrelevant or moot at interim stages of the arbitration, awarding declaratory or injunctive relief,[55] applying the law, investigating or taking of evidence *ex officio*, or summarily dismissing a case. In *Rio Grande Irrigation and Land Company, Limited (Great Britain) v. United States*,[56] the United States-United Kingdom Mixed Claims Commission considered, over an objection, a motion to dismiss on grounds that, as a matter of law, the claimant had no valid interest on which to predicate its claim. The claimant objected to the motion on the basis that "a preliminary motion of this character was not contemplated by or provided by the rules or any of the instruments controlling the Tribunal."[57] Viewing the issue as one of jurisdiction, the tribunal held that, "[w]hatever the proper construction of the instruments controlling the Tribunal or of the rules of procedure, there is inherent in this and every legal Tribunal a power, and indeed a duty, to entertain, and, in proper

[55] Courts in Australia have found that arbitrators enjoy an implied power to order declaratory and injunctive relief under the same circumstances that it might be available in a court. [57] Id. at 135.

cases, to raise for themselves, preliminary points going to their jurisdiction to entertain the claim."[58] It observed that this power "is inseparable from and indispensable to the proper conduct of business" and granted the motion.[59] Similarly, the ICSID tribunal in *Siag v. Egypt*[60] entertained new challenges to jurisdiction after having already issued an award on the matter, under its inherent power "to deal with any issues necessary for the conduct of matters falling within its jurisdiction."[61] It found this power to exist "independently of any statutory reference" and to be a broader expression of the tribunal's "inherent power to take measures to preserve the integrity of the proceedings."[62] In order to ensure continuity and fairness, however, the tribunal did not suspend its proceedings pending its consideration of the objections.[63]

Inherent powers may also be pertinent to arbitrators' ability to grant relief, award damages, and apportion costs. For example, the tribunal in the *Case Concerning the Rainbow Warrior Affair*[64] stated that "[t]he authority to issue an order for the cessation or discontinuance of a wrongful act or omission results from the inherent powers of a competent tribunal which is confronted with the continuous breach of an international obligation which is in force and which continues to be in force."[65] With respect to damages, the Iran-US Claims Tribunal noted nearly thirty years ago that it was already "customary for arbitral tribunals to award interest as part of an award for damages."[66] It found the power to award interest "inherent in the Tribunal's authority to decide claims," such that "the exclusion of such power could only be established by express provision."[67] The tribunal in *Vivendi v. Argentina*[68] confirmed that liability for interest remains "an accepted legal principle."[69]

It does not appear, however, that arbitrators possess the inherent power to issue binding arbitrator fee awards, enforceable against parties who do not pay. Assessing an interim award issued by an arbitral tribunal constituted under the Swiss Rules of International Arbitration, the Swiss Supreme Court expressly determined that the weight of scholarly opinion was against the position that arbitral tribunals have the power to issue a binding decision on fees owed under the arbitrators' agreement. It found the outcome justified "by the fact that claims arising from the relationship between the parties and the arbitrators do

not arise under the arbitration agreement" and the determination that "it would represent an unacceptable situation in which the arbitrators were judges in their own cause."[70]

4. Powers to Safeguard Against Misconduct and Perceived Improprieties

As already touched upon in the context of interim orders, arbitrators sometimes turn to inherent powers when deciding how to address party behavior that poses a threat to the integrity of arbitral proceedings or the success of the tribunal's adjudicative mandate. While tribunals have shown a substantial degree of comfort with granting provisional measures to accomplish these goals, they have been hesitant to use inherent powers to grant dispositive relief as a remedy for party misconduct. In *Waste Management v. Mexico*,[71] the tribunal denied the respondent's request that the tribunal exercise its inherent powers to dismiss a claim on abuse of process grounds. The tribunal found it unnecessary to determine whether such an inherent power existed because there was no evidence of bad faith on claimant's part; however, it "inferred that if such a power exists, it would only be for the purpose of protecting the integrity of the tribunal's processes or dealing with genuinely vexatious claims."[72] Similarly, the annulment committee in *Commerce Group Corp. & San Sebastian Gold Mines, Inc. v. El Salvador*[73] observed that, in extreme circumstances, it could use its inherent powers to order security for costs "[a]s the guardian of the integrity of the proceeding."[74] In contrast, the Australian courts have held that arbitrators do not have the authority to order security for costs if the arbitration agreement does not confer the power to do so.[75]

In *Libananco v. Turkey*,[76] the tribunal was presented with an allegation by the claimant that the Turkish authorities were holding claimant's legal representatives and potential witnesses under surveillance, leading claimant's legal expert to refuse to testify for fear of government reprisal.[77] The claimant, having adduced *prima facie* documentary evidence that respondent had intercepted its counsel's email communications, sought to exclude respondent from participating in the "current phase of the arbitral process."[78] Recognizing the serious nature of the allegations at issue and the principles affected by them, the tribunal commented:

[77] Id. ¶ 72.

[78] Id. ¶ 73.

> Nor does the Tribunal doubt for a moment that, like any other international tribunal, it must be regarded as endowed with the inherent powers required to preserve the integrity of its own process – even if the remedies open to it are necessarily different from those that might be available to a domestic court of law in an ICSID member state. The Tribunal would express the principle as being that parties have an obligation to arbitrate fairly and in good faith and that an arbitral tribunal has the inherent jurisdiction to ensure that this obligation is complied with; this principle applies in all arbitration[.][79]

However, the tribunal declined to grant the "extreme form of relief" requested, finding such relief unwarranted in the circumstances, where the issue of possible prejudice remained largely a matter of allegation and counter-allegation.[80] Instead, it ordered measures targeted at preventing concrete, future harm and warned that it could "consider other remedies available apart from the exclusion of improperly obtained evidence" if respondent wrongfully used information obtained through surveillance.[81] One wonders what "other remedies" the tribunal might have considered had it had occasion to do so: would sufficiently egregious behavior have permitted the tribunal to bar respondent from presenting its defense?

In international arbitration, the arbitration rules often provide for the tribunal to determine the proper allocation of fees as part of its award, and arbitrators have cited such authority to impose costs on parties whose participation has been marked by bad faith.[82] In some contexts, inherent powers have been cited as providing authority to sanction parties for misbehavior or improper conduct. In *ReliaStar Life Insurance Company of New York v. EMC National Life Company*,[83] a tribunal awarded attorneys' and arbitrators' fees to sanction the bad faith conduct of the losing party to the arbitration. The tribunal did so despite a provision in the parties' arbitration agreement explicitly providing that each party shall bear its own costs and share the expenses of the third arbitrator. The United States Court of Appeals for the Second Circuit determined that an arbitral panel had not exceeded the scope of its authority. The court reasoned that the parties' arbitration clause was a broad one of the sort that "confers inherent authority on arbitrators to sanction a party that participates in the arbitration in bad faith and that may include an award of … fees."[84] It characterized the contractual fee provision as a general statement of the

---

[79] Id. ¶ 78. It would not, however, appear permissible for a tribunal to invoke similar authority as a basis to annul an award. An ICSID ad hoc annulment committee, invited by a claimant to investigate bribery allegations as an exercise of the committee's inherent jurisdiction, found such an inquiry to lie outside of its narrowly defined jurisdictional mandate. The committee, viewing the explicit grounds for annulment provided in the ICSID convention as exhaustive, stated that "there are limitations on the exercise of inherent powers, including that such powers cannot be inconsistent with the terms of the relevant constitutive instrument of the international court or tribunal." It noted that tribunals "can only exercise [inherent] powers where those powers are necessary to ensure the performance of functions that have been expressly conferred." RSM Production Corporation v. Grenada, ICSID Case No. ARB/05/14 (Annulment Proceeding), Decision on RSM Production Corporation's Application for a Preliminary Ruling, ¶ 20 (7 Dec. 2009).

[83] 564 F.3d 81 (2d Cir. 2009).

[84] Id. at 86.

American rule on fee sharing and found nothing therein "signal[ing] the parties' intent to limit the arbitrator's inherent authority to sanction *bad faith* participation in the arbitration," given the comprehensive arbitral authority expressly conferred on the arbitrators.[85] The Court noted that, should contracting parties wish "to limit the … sanction authority to exclude attorney's fees or arbitrator's awards," they would need to do so "explicitly and clearly" as part of their agreement to arbitrate.[86]

Although the case did not involve allegations of bad faith or professional misconduct, one tribunal, in *Hrvatska Elektroprivreda v. Slovenia*,[87] has invoked the concept of inherent powers to rule that a party's chosen counsel could not participate in arbitration proceedings. The excluded counsel's appearance in the case was disclosed only shortly before the merits hearing. That counsel was a member of the same London Chambers at which the tribunal's president was a "door tenant." [88] The opposing party, who was unfamiliar with the English legal system's "split profession" of solicitors and barristers, objected that the participation created an "appearance of impropriety."[89] In determining that counsel's participation would be inappropriate, the tribunal cited its "inherent power to take measures to preserve the integrity of its proceedings."[90] It noted that this power found "a textual foothold" in Article 44 of the ICSID Convention, which grants discretion on procedural issues, and observed that, more broadly, international courts possess an inherent power, independent of statutory reference, "to deal with any issues necessary for the conduct of matters falling within [their] jurisdiction."[91]

In the Canadian arbitration context, an arbitrator has deemed "well established" the power to entertain motions to disqualify counsel based on alleged conflicts of interest as "a necessarily implied adjunct to the power of any tribunal to control its own process," a power "clearly recognized and established by all provincial arbitration statutes."[92]

Is disqualification of counsel a general inherent power of arbitrators, and, if so, how much control may arbitrators properly exert over the decisions of parties with respect to their counsel? In reaching its decision, the *Hrvatska* tribunal was careful to emphasize the particular distinguishing circumstances of the case that justified its course of conduct, including the party's disclosure of counsel's participation "only at an extremely late stage of proceedings," suggesting that such power should be used sparingly.[93] When

asked by the respondent in *The Rompetrol Group N.V. v. Romania*[94] to exclude counsel who had previously been employed by a law firm of which one of the arbitrators was a member, the tribunal distinguished the circumstances present in *Hrvatska* and opined that the decision "might be better seen as an *ad hoc* sanction for the failure to make proper disclosure in good time than as a holding of more general scope."[95] The tribunal denied the respondent's request and took a highly skeptical view of whether the inherent power to preserve the integrity and effectiveness of proceedings extended to the exclusion of counsel. Observing that the power to exclude counsel was a power for which one would expect the relevant legal texts to provide, the tribunal commented that "[a]bsent express provision, the only justification for the tribunal to award itself the power by extrapolation would be an overriding and undeniable need to safeguard the essential integrity of the entire arbitral process."[96] It hypothesized that such control would be exercised rarely and only in compelling circumstances.[97]

If the power to exclude counsel is to be reserved only for compelling circumstances necessary to safeguard the essential integrity of the arbitral process, what might those circumstances be? More generally, what is the breadth of tribunals' inherent power to protect proceedings and is it possible to develop a principle to provide guidance on when that power may be employed? Could arbitrators terminate proceedings if they determine the underlying dispute to be characterized by bad faith conduct or infected with corruption? What remedies are available to punish contempt of a tribunal's decisions?

5. Powers of Revision

The decisions of international tribunals also indicate that commercial arbitrators might, in limited circumstances, possess the inherent or implied authority to revise their decisions, so long as they are still seized of a matter and are not yet *functus officio*. The U.S.-Iran Claims Tribunal expressly declined to hold that it has such an inherent power of revision, opining that a remedy of revision could only be established through the formal modification of its rules, but it left open the possibility of making an exception in cases of fraud or perjury.[98] In the *Sabotage Cases*,[99] the U.S.-Germany Mixed Claims Commission held that "[e]very tribunal has inherent power to reopen and to revise a decision induced by fraud," and took the firm view that "[n]o tribunal worthy its name or of any respect may allow its decision to stand" if confronted with well-founded allegations of perjury,

[98] Islamic Republic of Iran v. United States of America, IUSCT Cases Nos. A3, A8, A9, A14 & B61, Decision No. DEC 134-A3/A8/A9/A14 & B61, ¶ 64 & n.105 (1 July 2011); see Riahi v. Iran, IUSCT Case No. 485, Decision No. DEC 133-485-1, ¶¶ 32–57 (17 Nov. 2004). However, its prior jurisprudence confirms that revision of a decision induced by fraud would only be available, if at all, upon the discovery of a new fact of a decisive nature that upsets the conclusions earlier drawn by the tribunal. See Ram International v. Air Force of Iran, IUSCT Case No. 148, Decision No. DEC 118-148-2, ¶ 20 (28 Dec. 1993).

[99] Lehigh Valley Railroad Company, Agency of Canadian Car and Foundry Company, Limited, and Various Underwriters (United States) v. Germany (Sabotage Cases), Decision (15 Dec. 1933), reprinted in VII RIAA 160.

collusion, and suppression."[100] Similarly, a tribunal proceeding under the UNCITRAL Arbitration Rules has held that tribunals and courts have the

> inherent power to take cognizance of credible evidence, timely placed before it, that its previous determinations were the product of false testimony, forged documents, or other egregious "fraud on the tribunal" … . Certainly if such corruption or fraud in the evidence would justify an international or a national court in voiding or refusing to enforce the award, this Tribunal also, so long as it still has jurisdiction over the dispute, can take necessary corrective action.[101]

These cases suggest that it may be within a still-sitting tribunal's inherent power to modify or even withdraw a prior decision that rewarded a party's misconduct. But under what circumstances might a tribunal actually do so? If a witness gives inconsistent testimony in a second case, would the tribunal in the first case have the authority to consider whether the inconsistency affected its view of the witness's credibility?

The recent decision and dissenting opinion on a request for reconsideration in *ConocoPhillips v. Venezuela*[102] confirm that the answer to this question is far from straightforward. In that case, Venezuela asked the tribunal to revisit a portion of its award on jurisdiction and the merits, based on new evidence revealed by Wikileaks, before proceeding to the quantum phase of proceedings. The majority rejected this request, concluding that its earlier decision was not of an "interim" nature but meant to be final, with *res judicata* effect.[103] It reasoned that the overall structure and the detailed provisions of the ICSID Convention precluded the exercise of a power of review under Article 44's gap-filling authority because there was "no gap to be filled by the power proposed" and nothing in the Convention's provisions on explicit powers "even hinting at such a power."[104]

In a sharply-worded dissent, arbitrator Georges Abi-Saab rejected the majority's reasoning and contended that it was in the tribunal's inherent jurisdiction to correct a material error made in an interlocutory decision:

> [I]n certain contingencies which put or risk putting the credibility and integrity of the tribunal into question – such as its becoming aware that it had omitted an error in interpreting evidence or in establishing the facts that led it astray in its legal findings; that the decision did not follow from the facts as determined; that new credible evidence demonstrate[s] that the facts as established by the tribunal were based on wrong premises; or that changed circumstances have rendered the decision otherwise untenable – inherent jurisdiction empowers and even mandate[s] the tribunal to reconsider the prior decision.[105]

The dissent found such power to exist within the "inherent jurisdiction [that] accrues to any body or organ by the mere fact of it[s] being possessed of the adjudicative function."[106]

According to the dissent, such jurisdiction "brings with it powers as well as duties and responsibilities," including the duty of "safeguarding the credibility and integrity of its adjudicative function."[107] Professor Abi-Saab opined that no self-respecting tribunal that took seriously its "overriding legal and moral task of seeking the truth and dispensing justice according to the law on that basis" could turn a blind eye to newly discovered evidence that severely contested its prior findings.[108]

III. A FRAMEWORK OF ARBITRAL POWER

As seen from the examples discussed above, the range in which inherent and implied powers have and potentially could be employed is broad and diverse, and the ability to invoke different powers will change depending on the stages and circumstances of a given arbitration. In the commercial arbitration context, the parties' choices—embodied in the arbitration agreement, the arrangements governing their relationship with the arbitrators, and the rules and curial law of the arbitration—are likely to produce significant variances in procedure from one arbitration to the next. At one end of the spectrum, a tribunal may find itself presented with a terse arbitration agreement providing for the ad hoc arbitration of any dispute arising out of the parties' contract and designating the seat of arbitration as a country with a minimally-developed national arbitration law. At the opposite end of the spectrum, arbitrators may be faced with an elaborate arbitration agreement providing for an institutional arbitration seated in a country with a detailed arbitration law that has generated extensive precedent. The express powers of the arbitrators will differ considerably in the two cases, as will the authority they can permissibly exercise as a matter of discretion and implication.

The context-dependent nature of international commercial arbitration renders difficult any attempt to develop a coherent framework for the use of arbitral power. In particular, the notion that one tribunal might be barred from exercising power that another justifies as "inherent" is conceptually problematic: if such powers are inherent—and, by definition, exist "in something as a permanent attribute or quality"[109]—how can they be said to vary based on the peculiarities of the case? One could respond that the inherent powers are those essential powers common to all tribunals and that all others are implied, but such a response is also intellectually unsatisfying. What qualifies as an "essential" power? By what exactly are other powers implied? Where a particular rule or provision of the parties' agreement implies the existence of a discrete power, deeming that power "implied" may be proper, but where a power appears to be implied from the nature and function of the tribunal as constituted, the power at issue seems more properly labeled "inherent" to that tribunal. These conceptual difficulties are compounded by the fact that the terms "inherent" and "implied" are often treated as fungible words, by arbitrators and practitioners, and may carry different meanings and understandings in the jurisprudence of different national legal orders. For that reason, the Committee refrains from formulating definitions as to the concepts of inherent and implied powers of arbitral tribunals and prefers to present a framework under which these powers can be further discussed and analyzed.

---

[107] Id., Dissent, ¶¶ 56–57.
[108] Id., Dissent, ¶ 66.
[109] Oxford English Dictionary, "Inherent" 3(a), http://www.oed.com/view/Entry/95945.

Despite these challenges, the Committee considers that it seems possible to divide a tribunal's non-enumerated powers into three different and somewhat overlapping categories, or conceptions, that may be instructive to arbitrators and parties in thinking about the scope of power that arbitrators may permissibly employ. *First*, beyond the express powers of arbitrators, there exist powers implied by the provisions of the parties' arbitration agreement and the other sources selected to govern the arbitration. *Second*, there is a general discretionary power over procedure that arbitrators enjoy in the absence of contrary instruction. *Third*, there exists a limited authority to exercise truly inherent powers, which arbitrators may employ only if presented with compelling circumstances that risk undermining a tribunal's integrity or compromising the enforceability of its award. Each of these categories and their implications are discussed in turn. This discussion is to be read against the background of each particular case where the applicable statutory framework at the seat of the arbitration, the applicable arbitration rules and the parties' arbitration agreement will provide the context of the arbitral tribunal's express, inherent or implied powers.

A. Powers Implied by Textual Sources: Powers Particular to the Parties' Agreement

A first category of non-enumerated powers may be said to consist of powers implied by express provisions contained in the sources governing a particular arbitration. As arbitrators' authority and jurisdiction fundamentally stems from the consent of the parties, arbitrators seeking to exercise authority must always look first to the text of the parties' agreement and the applicable arbitration rules, as well as the law chosen to govern the arbitration, to assess the permissible scope of action they may take. When these sources do not speak directly on a specific question, they may nonetheless imply some corollary authority to take action to effectuate the parties' agreement. For example, an arbitration agreement requiring that any dispute be decided "on the basis of law," and little else, might be read to imply that the tribunal is empowered to ask the parties to submit legal briefing or research the issue on its own. Similarly, to the degree that arbitral laws and rules assign various objectives or duties to arbitrators, such provisions may also be fairly interpreted as implying the authority to advance those prescribed goals. For instance, a provision saying the arbitration shall be conducted efficiently might give an arbitrator the implied authority to bifurcate proceedings or limit the scope of document production.

Because implied powers track closely with the selections made by parties in agreeing to arbitrate, they may permit arbitrators to make decisions that would otherwise be questionable absent explicit authorization. For instance, if the parties' agreement refers to U.S. Federal Rules of Evidence, an implied power to exclude expert witnesses based on qualifications established in American jurisprudence[110] is much more likely to withstand challenge than would a tribunal's decision to impose such requirements absent any such textual referent.

To the degree that arbitrators are able to justify contested decisions on the basis of implied powers, their actions are more likely to be viewed as falling within the reasonable contemplation of the parties' agreement to arbitrate. When properly used, implied powers

[110] See, e.g., Daubert v. Merrell Dow Pharmaceuticals, 509 U.S. 579 (1993) (articulating the standard for admitting expert testimony in U.S. federal courts).

permit arbitrators to implement the parties' choices and may thus be seen as promoting party autonomy. To arbitrators and parties with civil law backgrounds, their use is less likely to prompt the discomfort that the exercise of purely inherent authority—untied to any textual provision—might elicit.

B. Discretionary Powers of Procedure: The Right to Oversee Proceedings

It is possible to discern a second category of powers consisting of a tribunal's discretionary powers over procedure. These powers may include, among other things, the authority to hold evidentiary hearings, admit and weigh evidence, determine the order and method of witness examinations, and apportion costs. Insofar as they may be seen as broadly implied by the practical necessities of rendering an enforceable award, the powers in this category share some relation to implied powers, and it may be possible to find a textual foothold from which to imply the power to take a particular action that could also be justified as an exercise of a tribunal's discretion over procedure. These discretionary powers also resonate, however, as having an "inherent" quality, as arbitrators are widely understood to have some inherent degree of control over the efficient conduct of procedure. Indeed, the discretion "to determine the arbitral procedure, in the absence of agreement by the parties on such matters, is a[] foundation of the international arbitral process."[111]

In arbitrations governed by developed national arbitration laws or institutional rules, the authority to exercise such discretion will usually be confirmed by provisions that reserve to tribunals a significant degree of flexibility over procedure. For example, Article 17 of the UNCITRAL Arbitration Rules provides:

> Subject to these rules, the arbitral tribunal may conduct the arbitration in such manner as it considers appropriate, provided that the parties are treated with equality and that an appropriate stage of the proceeding each party is given a reasonable opportunity of presenting its case. The arbitral tribunal, in exercising its discretion, shall conduct the proceedings so as to avoid unnecessary delay and expense and to provide a fair and efficient process for resolving the parties' dispute.[112]

In the same vein, the arbitration rules of the International Chamber of Commerce empower a tribunal to "proceed within as short a time as possible to establish the facts of the case by all appropriate means."[113] Following the widespread adoption of the UNCITRAL Model Law, the curial law of many states similarly confirms that arbitrators enjoy broad discretion over procedure.[114] However, while provisions confirming a tribunal's discretion

---

[111] Gary B. Born, International Arbitration: Law and Practice, 148–49 (Kluwer Law International 2012). A former Chief Justice of the High Court of Australia has observed in this regard that "[i]t is well settled that when parties submit their dispute to a private arbitral tribunal of choice, in the absence of some manifestation of a contrary intention, they confer upon that tribunal a discretion as to the procedure to be adopted in reaching its decision… . No doubt the conferral of that power upon the tribunal is incidental to the power which it is given to determine the dispute submitted to the Tribunal." Esso Australia Resources Ltd v Plowman [1995] 183 CLR 10, 26–27.

[112] UNCITRAL Arbitration Rules (2010), Art. 17(1).

[113] ICC Rules of Arbitration (2012), Art. 25(1). Similarly, the London Court of International Arbitration Rules provide that, unless otherwise agreed by the parties, "the Arbitral Tribunal shall have the widest discretion to discharge its duties allowed under such law(s) or rules of law as the Arbitral Tribunal may determine to be applicable." LCIA Arbitration Rules (1998), Art. 14.2.

[114] See UNCITRAL Model Law, supra note 1, Art. 19 (giving a tribunal discretion to "conduct the arbitration in such manner as it considers appropriate" in the absence of party agreement).

over procedure serve the useful function of articulating the existence of gap-filling authority, and arbitrators acting with the benefit of such rules or laws should make reference to them, such provisions should not be seen as the exclusive source of a tribunal's power in this regard. A tribunal proceeding without the advantage of such a provision cannot be said to lack the practical power to carry its mandate to completion.

As the institutional rules provide and acknowledge, discretionary authority gives arbitrators the right to make procedural decisions in the absence of contrary instruction or constraints. As such, they may be seen as a default or background authority that the parties' elections may supersede. Given the reality that "parties in practice often do not agree in advance on detailed procedural rules," however, arbitrators often exercise considerable power in determining the manner in which proceedings will be conducted, subject of course to certain due process requirements.[115]

While arbitrators will generally feel comfortable exercising such discretion where both parties acquiesce, a harder case is presented when one party opposes a proposed course of action. While a tribunal's discretionary powers typically do not permit arbitrators to take actions that override party agreement, they may permit a tribunal to authorize non-conventional and creative approaches to procedure that may not enjoy the universal support of the parties. For instance, should a party seek to preserve the testimony of a witness through a subpoenaed deposition procedure available in the witness's home country, a tribunal might determine it is proper to authorize the procedure, even if it is one previously unknown to the litigating parties, would not have been contemplated at the time of contracting, and is opposed by the party to whom the witness's testimony presumably would be adverse.

To pose a more difficult example, might arbitrators have the power to order consolidation of related arbitrations over the objection of one party? In permitting the mass claims of roughly 60,000 claimants to proceed in *Abaclat and Others v. Argentine Republic*,[116] the majority there determined the "the silence of the ICSID convention concerning collective proceedings" constituted a gap in the existing rules that it had the power to fill, by virtue of the discretionary power over procedure afforded by Article 44 of the ICSID Convention and ICSID Rule 19. The arbitrators characterized these provisions as "the mere expression of the inherent power of any tribunal to resolve procedural questions in the event of a lacunae."[117]

While this decision would indicate that a tribunal might have the power to order consolidation of parallel proceedings pursuant to its discretionary authority over procedure, the

[115] Born, supra note 110, at 148.

[116] Abaclat and Others (Case formerly known as Giovanna a Beccara and Others) v. Argentine Republic, ICSID Case No. ARB/07/5, Decision on Jurisdiction and Admissibility (4 Aug. 2011).

[117] Id. ¶¶ 521–26. In Abaclat, the tribunal found it would be contrary to the purpose of the underlying treaty and the spirit of ICSID "to require in addition to the consent to ICSID arbitration in general, a supplementary express consent to the form of such arbitration" and declined to find that the ICSID Convention's silence on collective proceedings prohibited them. Id. ¶¶ 518–19. U.S. jurisprudence views the issue as one of contract interpretation, and an arbitral award will withstand a motion for vacatur where an arbitrator's decision to permit class certification is based on an interpretation of the parties' intent. See Oxford Health Plans LLC v. Sutter, 133 S.Ct. 2064 (2013).

decision in *Ambiente Ufficio S.p.A v. Argentine Republic*,[118] which permitted a multiparty action composed of ninety claimants to proceed, suggests that joinder lies beyond arbitral discretion. The tribunal there noted the case before it involved the original submission of a claim by a plurality of claimants in a single proceeding, and not the "*ex post* joinder or consolidation of proceedings," which would "no doubt" be "subject to the specific consent of the Parties."[119] Nonetheless, depending on the circumstances and the evolution of arbitral procedure, it is conceivable that another tribunal might one day come to a different conclusion—finding that a respondent's consent is not required for joinder, as that is a procedural issue over which the tribunal has discretion.

Arbitrators can expect to be presented with these and similar challenges in the future. As these examples suggest, a tribunal must initially determine, as a prerequisite to exercising its discretionary powers, that the action under consideration is strictly procedural in nature, and does not implicate substantive rights. In then assessing the breadth of its discretionary power, a tribunal must always first look to the arbitration agreement, the arbitral rules, and any other consensual agreement reached by the parties. If one of these sources provides an answer to the procedural question posed, that should generally end the inquiry because, on a matter of process not affecting the integrity of proceedings, a tribunal typically may not override the parties' agreement under the guise of its "inherent" authority. However, to the degree that those sources are silent, leave room for interpretation, or—in some cases—affirmatively endow the tribunal with discretion, the tribunal may properly employ its power of judgment to render a decision. It is through this exercise of judgment that the evolution of arbitral procedure often occurs.

C. Inherent Powers: The Duties of Arbitrators to Protect the Integrity of Proceedings and Render an Enforceable Award

Given the broad range of actions that may be justified on the basis of implied or discretionary power, arbitrators are unlikely to be presented—in the average international commercial arbitration—with circumstances that require action for which they truly cannot find any authority to act. However, as the examples from international investment cases demonstrate, tribunals could be faced with challenges that risk undermining the ultimate enforceability of their awards and for which the rules are of no assistance.

It is in such situations that a third and final category of non-enumerated powers becomes relevant, encompassing that authority which can be said to be truly inherent, namely those powers necessary to safeguard a tribunal's jurisdiction and the integrity of its proceedings. Stated differently, these powers are those required to decide a legal dispute fairly and in a manner consistent with at least the minimal requisites of due process and public policy. They trace their roots most clearly to the original notion of inherent powers as protecting jurisdiction and curtailing procedural abuses, and their exercise may justify overriding party preferences.

---

[118] Ambiente Ufficio S.p.A. v. Argentine Republic, ICSID Case No. ARB/08/9, Decision on Jurisdiction and Admissibility (8 Feb. 2013).

[119] Id. ¶¶ 123–25. U.S. courts likewise express considerable skepticism towards the permissibility of consolidating arbitral proceedings absent party consent. Martin Domke, et al., Domke on Commercial Arbitration, § 32.28 (Clark Boardman Callaghan, 3d ed. 2013).

Because such powers are key to ensuring that a tribunal obtains a final and enforceable award via procedures that are viewed as both fair and neutral, permitting their limitation by party agreement would threaten to undermine the arbitral process itself. Such powers are so core to the function of arbitration that they might be more properly termed arbitral duties, the fulfillment of which is a necessary function of serving as a competent arbitrator. The LCIA Arbitration rules, for example, recognize that arbitral procedure is subject to certain due process constraints that arbitrators are bound to enforce. To that end, Article 14 subordinates party autonomy over arbitral proceedings to the Arbitral Tribunal's general duties "to act fairly and impartially as between all parties, giving each a reasonable opportunity of putting its case and dealing with that of its opponent" and "to adopt procedures suitable to the circumstances of the arbitration, avoiding unnecessary delay or expense, so as to provide a fair and efficient means for the final resolution of the parties' dispute."[120]

Insofar as a tribunal's inherent authority stems from the need to protect the fundamental integrity of the arbitral process it is overseeing, it is an authority properly exercised in markedly limited situations; as "an extraordinary control," it "is to be resorted to only in compelling circumstances."[121] These powers may, depending on the context, permit a tribunal to issue interim relief to prevent the exacerbation of a dispute, to investigate or enjoin behavior constituting fraud or an abuse of process, and to take prudential action to ensure that its proceedings are fair. As seen from the cases discussed above, international investment tribunals have exercised powers in this category to stay domestic litigation impinging upon their jurisdiction and to enjoin party misbehavior that may undermine the fairness of proceedings.[122]

A hypothetical example is illustrative of other instances in which these powers, particularly in the international commercial arbitration context, might come into play. If presented with a request by parties for a consent award[123] in circumstances that reasonably indicate that the arbitration is being used as a vehicle to facilitate money laundering or reward corruption, a tribunal probably could—over the objection of both parties—conduct an inquiry to assure itself that the underlying settlement is lawful. In such a situation, arbitrators are not merely service providers but also play a role as "guardians of international public policy."[124] As a number of commentators have noted, enforceability problems could arise if arbitrators disregard such concerns and render an award that, when challenged before national courts, might be deemed invalid on public policy grounds.[125]

[120] LCIA Arbitration Rules, supra note 112, Art. 14.1.

[121] Commerce Group Corp., supra note 72, ¶ 44.

[122] It is noteworthy that a tribunal's authority to order such remedies may not necessarily be matched with the power to enforce them.

[123] See, e.g., LCIA Arbitration Rules, supra note 112, Art. 26.8 ("In the event of a settlement of the parties' dispute, the Arbitral Tribunal may render an award recording the settlement if the parties so request in writing ('a Consent Award'), provided always that such award contains an express statement that it is an award made by the parties' consent. A Consent Award need not contain reasons.").

[124] Bernard Hanotiau, "Misdeeds, Wrongful Conduct and Illegality in Arbitral Proceedings," in Albert Jan van den Berg (ed.), International Commercial Arbitration: Important Contemporary Questions, 285 (Kluwer Law International 2003).

[125] See Michael Hwang S.C. and Kevin Lim, "Corruption in Arbitration – Law and Reality" (expanded version of Herbert Smith-SMU Asian Arbitration Lecture, delivered 4 Aug. 2011), ¶

Thus, it appears that arbitrators faced with such a situation could reasonably point to their inherent authority to protect the integrity of proceedings as a basis for undertaking a *sua sponte* investigation into evidence of corruption or money laundering.[126]

Inherent powers may also be implicated where arbitrators face competing duties that cannot be simultaneously satisfied. For instance, if an arbitration agreement provides for a hearing to take place in a particular location that is subsequently rendered inaccessible due to conflict and one of the parties insists on the original agreement with the goal of upsetting proceedings, a tribunal might cite its inherent power as providing the authority to move the place of the hearings. In that instance, the arbitrators' duty to render an award, pursuant to the parties' overall agreement, would be frustrated if it were unable to change one of the agreement's arguably less critical terms. So long as the arbitrators can determine that the condition of meeting in the designated city was not a fundamental element on which the parties' consent to arbitrate was predicated, invocation of inherent powers might offer a tenable exit from the seemingly irreconcilable dilemma the tribunal would otherwise face.

Because inherent powers of this type are a necessary correlate of a successful and functional arbitral system, they should be available to arbitrators operating under a variety of different arbitral rules and national jurisdictions, so long as compelling circumstances justifying action exist. However, as emphasized repeatedly in this Report, context remains important: any action taken should be carefully calibrated to respond proportionately to the exigencies of the circumstances and to align with the particular notions of fairness and due process that animate the legal culture from which the parties originate and under which they have decided to submit their dispute.[127] Such an approach strikes a proper balance between the notion of arbitration as a party-driven process and the imperative to respect due process, the disregard of which could give reason not to enforce an award.[128]

Although the context of international commercial arbitration affords parties considerable leeway in defining and constraining the manner in which their disputes are arbitrated, that

16, available at http://www.arbitration-icca.org/articles.html; Allan Philip, "Arbitration – money laundering, corruption and fraud: The role of the tribunals," in Kristine Karsten and Andrew Berkeley (eds.), Arbitration- Money Laundering, Corruption and Fraud (ICC Institute of World Business Law 2003).

[126] Arbitrators may also be able to find other bases on which to substantiate such action. As argued by Hwang and Lim, issues of corruption may be deemed to fall within the mandate of the tribunal when those issues are relevant to the dispute under consideration. Hwang and Lim, supra note 124, ¶¶17–23. Philip has asserted that ICC tribunals are obliged to investigate and decide issues of corruption and money laundering by virtue of the duties under the ICC Rules to make every effort to render an enforceable award and to establish the facts of the case by all appropriate means. Philip, supra note 124, at 153.

[127] Indeed, as the Honorable James Allsop, former Chief Justice of the Federal Court of Australia, has observed: "[T]he authority of the arbitrator can be enhanced and buttressed by the legal culture of the supervising authority." James Allsop, "The Authority of the Arbitrator" (Clayton Utz International Arbitration Lecture, University of Sydney, delivered 29 Oct. 2013), available at: http://www.claytonutz.com/ialecture/2013/speech_2013.html.

[128] See Wachter, supra note 20, at 73–75 (observing that "the outer boundaries of the tribunal's authority solely as a matter of contract interpretation will probably remain unanswered" in light of the statutory due process requirements imposed by the New York Convention and modern arbitration statutes).

control cannot be viewed as absolute, and arbitrators that blindly follow party elections notwithstanding their effect on the integrity of proceedings or the legality of the outcome risk abdicating their duties as adjudicators. While international commercial arbitration is a service-oriented process that seeks to satisfy the party-consumers, it also a legal process that results in an internationally enforceable award and should provide a just and fair result. As one commentator has noted, the "conforming notions of equality, fairness and reasonable cooperation in dispute resolution can be seen" as features common to both judicial and arbitral power, which "derive from the essence of the process and the task required: the civil resolution of disputes."[129] In deciding to arbitrate, parties consent to a legal process involving certain minimum standards of due process and fairness upon which they should not be able, consistent with that agreement, to renege. Arbitrators should be seen as having the authority to enforce these standards.[130] Thus, when faced with a challenge that risks undermining the very mandate they are empowered to carry out, arbitrators have the authority to depart from the parties' elections, or—if not able to do so within the bounds of due process and other considerations—to resign.

D. Exercising Inherent and Implied Powers

The first category above by and large does not generate major problems as to how an arbitral tribunal is to exercise its powers as they relate directly or indirectly to powers already embedded in the *lex arbitri*, the applicable arbitration rules and the arbitration agreement. The procedural discretionary powers of an arbitral tribunal referred to in the second category also will not often raise problems as the very nature of discretionary powers is that they give wide latitude to arbitral tribunals in making use of such powers provided these powers are respectful of procedural arrangements agreed upon by the parties and due process and are not used in an arbitrary way. As referred to above, it is the third category of inherent powers which intend to protect the integrity of the arbitral process that requires most attention as to how these powers are to be exercised. In addition to the requirement that the parties are to be heard as to how the arbitral tribunal intends to exercise its inherent powers, any orders the arbitral tribunal issues ought to be necessary to safeguard the integrity of the arbitral process and to enable the arbitral tribunal to proceed to an award which implies that the arbitral tribunal should consider not taking any measure if not strictly required to achieve that objective. Any anticipated order should also be proportionate to the aims it intends to achieve and, thus, should consider alternatives to achieve the intended objective and account is to be had to less intrusive measures meeting such objective.

In making use of an arbitral tribunal's inherent and implied powers, an arbitral tribunal is finally to consider the impact of any of its measures in relation to possible intervention of domestic courts pending the arbitration proceedings and, after an award is rendered, in the course of setting aside and enforcement proceedings. Although the exercise of inherent and implied powers is not specifically addressed in the New York Convention nor in the UNCITRAL Model Law and – save for violations of due process – ought not to come within the scope of these instruments, arbitral tribunals may well be advised to check the *lex arbitri* to verify whether their exercise of inherent and implied powers may

[129] Allsop, supra note 126.
[130] Id.

not come within the purview of local standards of annulment using standards such as excess of authority, excess of powers or excess of mandate.

E. Conclusion

Although the boundaries between the conceptions above of implied, discretionary, and inherent powers are imprecise and a tribunal's exercise of a particular power may fall into more than one category, it is hoped that this conceptual framework will assist arbitrators in deciding whether to take a particular course of action and in explaining their justifications for doing so, and courts when reviewing the actions of arbitrators. Arbitrators are most secure in exercising non-enumerated powers when the authority to act may be implied by a specific textual source governing the arbitration or when their action reflects a routine exercise of discretion over the conduct of proceedings. The use of inherent authority alone to overcome an impasse in proceedings, however, requires a considered determination that the arbitrators have a duty to act. Where arbitrators are unable to find a justification for a particular action within this conceptual framework, they should be hesitant to proceed.

It is hoped that locating the source of arbitral authority within one or more of these categories will enable arbitrators to describe more clearly and coherently the parameters and limitations of the powers they seek to exercise. The process may prompt deeper discussions among arbitrators regarding the decisions they reach or inspire them to initiate dialogue with the parties before acting, which could lead to an outcome more consonant with the parties' visions of the arbitral process. To the degree that it results in decisions that are more consistent and defensible, it carries the potential to strengthen arbitration as a means of achieving the efficient, binding, and fair resolution of international commercial disputes.

IV. FINDINGS AND RECOMMENDATIONS

E. Findings

1. In addition to the powers expressly conferred by the parties' agreement and by the laws and rules governing the arbitration, international arbitral tribunals ("arbitral tribunals") have powers that are inherent and implied.
2. There exists no universal or closed catalogue of such powers, nor any fixed rules governing their invocation. Instead, the powers available and the use to which they may be employed depend substantially on the particular circumstances of the case.
3. Arbitral tribunals have invoked inherent and implied powers in varied situations, involving, inter alia, arbitral procedure, interim relief, decision-making, sanctions regarding alleged misconduct and impropriety, and revision of earlier decisions.
4. The arbitral rules and laws that apply to the arbitration constrain the powers that arbitral tribunals may exercise, and meaningful limits on those powers can be expressed by party agreement.
5. Inherent and implied powers have grown in recognition over time, and the historical context in which arbitral tribunals are operating is relevant. Actions that were once considered novel and contentious to take, absent express powers to do so, have now become part of the fabric of international arbitration.

6. The recognition and development of inherent and implied powers have proceeded in tandem with the proliferation of international arbitration, fostering and contributing to its creative development.
7. Inherent and implied powers may be assigned to three potentially overlapping categories:
   (a) Powers implied by the parties' agreement and the rules and laws governing the arbitration,
   (b) Discretionary powers over procedure, which are related conceptually to both implied and inherent powers, and
   (c) Inherent powers necessary to preserve jurisdiction, maintain the integrity of proceedings, and render an enforceable award.
8. Implied and discretionary powers typically stem from and remain subordinate to party agreement.
9. Inherent powers are powers that would be expected to exist absent the clearest agreement, or provision of the lex arbitri, to the contrary.
10. Inherent powers will by their nature only arise for use in limited circumstances. They are to be read narrowly and used proportionately and only so far as necessary to meet the exigencies of the particular situation.
11. Categorising powers as implied, discretionary, or inherent helps ascertain the scope of powers that arbitral tribunals enjoy and assists in rendering orders and awards that withstand review.

The Committee recommends as follows:

1. To Parties:
   (a) Parties should understand that arbitral tribunals have inherent and implied powers.
   (b) Should parties wish to confirm, expand, or constrict arbitral powers, they should do so by agreement. However, it would be unusual and would at least require the clearest provision if arbitral powers were to be restricted in a manner that undermines an arbitral tribunal's jurisdiction, damages the integrity of its proceedings, or might result in an award liable to setting aside or unenforceability.
2. To Arbitral Tribunals:
   (a) In assessing the scope of their powers in any given situation, arbitral tribunals should first look to the arbitration agreement, the rules governing proceedings, and any relevant law.
   (b) If those sources do not adequately resolve the issue presented, arbitral tribunals should consider whether they can act on the basis of their implied, discretionary, or inherent power.
      (i) Implied power: Arbitral tribunals should examine the text of the parties' agreement and the other instruments governing the arbitration to determine if that text implies the power to resolve the particular issue.
      (ii) Discretionary power: Arbitral tribunals should assess whether the issue raised is a procedural question that, in the absence of contrary instruction, they would normally have the discretion to address.
      (iii) Inherent power: Arbitral tribunals should consider whether the issue before them risks undermining their jurisdiction, impugning the integrity of proceedings, or leading to their issuing an unenforceable award.

(c) In proper deference to party autonomy, arbitral tribunals should undertake the analysis in this section sequentially, first determining whether they have the implied power to act, then whether they may exercise discretion, and finally whether they are to exercise an inherent power.
   (i) Arbitral tribunals may determine that the power to act is supported by more than one type of power. Where there are multiple bases for acting, tribunals should feel more comfortable in exercising power.
   (ii) Arbitral tribunals should feel safer in acting on the basis of implied or discretionary power than in acting on the basis of inherent power.
   (iii) When arbitral tribunals act solely pursuant to their inherent power, they must satisfy themselves that there is a compelling duty to act in order to preserve jurisdiction, maintain the integrity of proceedings, or render an enforceable award.

(d) Before acting on the basis of any of these powers, arbitral tribunals should give the parties a reasonable opportunity to express their views and provide assistance to fashion the most appropriate solution in the circumstances before them. In doing so, the tribunal should also take into account the following:
   (i) The legal background of the parties, and the legal systems under which the parties have chosen to arbitrate. Where the law governing the arbitration speaks clearly as to the permissibility of the exercise of a certain implied or inherent power, that determination must of course govern.
   (ii) The appropriate scope of arbitral action, given the interests that a proposed measure might serve or put at risk. The remedy fashioned should be proportionate to the power being exercised and narrowly tailored to the situation presented.

(e) Arbitral tribunals should provide their reasoning for exercising implied, discretionary, or inherent powers, invoking such powers in a deliberate and thoughtful manner that will assist the award or decision in withstanding review at enforcement or set-aside proceedings.

3. To Courts:
Courts should appreciate that arbitral tribunals have inherent power as well as power conferred expressly or impliedly, as more fully described in paragraph 2 (b) and (c) above.

Rapporteur	*Chairman*	*Rapporteur*

INTERNATIONAL COMMERCIAL ARBITRATION

WORKING SESSION

Wednesday, 10 August 2016, 2.00pm

Chair: Mr Jeremy Carver (UK)

The Chair commence by introducing himself along with Professor Filip De Ly, Chair of the Committee.

Two topics were scheduled to be discussed, divided into the two sessions. The first topic was to complete business that was raised and discussed quite extensively at the last conference in Washington. The report discussed was on the work of the Committee, conducted over four years on "The Inherent and Implied Powers of Arbitrators".

The Chair explained that Professor De Ly would present the work of the Committee up to and at the Washington conference as well as the draft resolution, which was before attendees, who would be invited to comment and vote on it towards the end of the first session. Provided it passes the Committee session today, it would be put to the plenary session at the close of the conference and would be voted on appropriately as a resolution of the ILA.

Professor Filip De Ly (Netherlands) presented the work done up to and at the Washington conference along with the draft resolution. During the open session at the Washington conference on 10 April 2014, the report and recommendations on the implied and inherent powers of international arbitral tribunals were approved. Some suggestions were made for amendments to the recommendations, which were duly incorporated. The Steering Committee of the ILA refused to approve the recommendations due to some formulation and standard issues with the draft recommendations. The report was well prepared, well researched and original, but in relation to the innherent powers of arbitral tribunals did not have much literature and no comprehensive study on it. The Committee decided to resubmit the recommendations and to leave the report as it was in Washington.

In June 2016, Professor De Ly prepared slightly amended recommendations. They were circulated to the members of the Committee. The members endorsed the amended recommendations and they were then submitted to ILA headquarters. Professor De Ly noted that the interesting thing was the annex to the resolution found on pages 2 through 5. There were two sections in the resolution:

1. a summary of the major conclusions ("Findings") of the report were found in paragraphs 1 through to 11.
2. the "Recommendations" that followed had hardly any substantive changes.

Requests for further comments were invited from attendees and then Professor De Ly invited the session to proceed to the adoption of the text of the recommendations.

The Chair stated that the essence of the topic was powers available to arbitrators, which were categorised in view of the lack of scholarship on this subject.

There had been an attempt by the Committee to categorise them into powers that were necessarily implied by implication of the parties' own agreement to arbitrate and by the

lex arbitri, the law governing the arbitration. For convenience, those were described as 'implied powers'. In the first place, they derived from the instruments that created and governed the arbitration itself. Secondly, they were discretionary, in the sense that they derived from the fact that arbitrators had competence in order to decide the procedure to be adopted, save to the extent they were being contradicted by the parties' own agreement. Thirdly, the Chair explained that inherent powers of arbitrators existed in the nature of the functions that arbitrators performed. There must be a certain inherent power that arbitrators could draw upon when necessary to maintain the integrity of the process and to ensure that their function was discharged by the delivery of an enforceable award. Those were the three general categories. It was said that such powers should be exercised with great care and attention.

The draft resolution set out principles which, if adopted, could be extremely helpful to arbitrators. The Chair invited members of the Committee to add or subtract anything from what had already been said about the draft resolution.

Mr Eduardo Grebler (Brazil) stated that the draft resolution represented very precisely the understanding of the four years of work that the Committee had undertaken, and he supported the language in the document as perfectly appropriate.

The Chair thanked Mr Grebler for his comment and noted the importance of having such types of interventions. Other members of the Committee were invited to make their comments, express disagreements or make clarifications.

Mr Richard Allen (UK) noted that the draft resolution made only brief reference to the report in its recital. There was limited reference to actual implied and inherent powers that the tribunal was entitled to exercise. These were in the report itself, which he read with interest in Washington. He queried whether it was standard practice to omit the underlying report. As a practitioner, he would welcome having a single source to refer to in future cases.

Professor De Ly answered that generally recommendations were very abstract and that this was in conformity with the general format that one would expect from ILA recommendations. Further concrete indications could be found in paragraph 3 of the Findings on page 2:

> "3. Arbitral tribunals have invoked inherent and implied powers in varied situations, involving, *inter alia,* arbitral procedure, interim relief, decision making, sanctions regarding alleged misconduct and impropriety, and revision of earlier decisions."

Professor De Ly noted that the conference report from Washington already had the report and the non-approved draft recommendations. The conference report for the Johannesburg conference would probably only have these documents and a description of the open session. One could also visit the ILA website to obtain the Washington conference report along with the recommendations from the Johannesburg conference. The Committee intended to publish the report in one of the major arbitration journals. Most of the ILA reports such the one on *lis pendens*, published by Mr Sheppard and Professor Radicati di Brozolo, were published in *Arbitration International*.

Professor Catherine Kessedjian (France) recommended publication of the report again for the purpose of visibility of the record of the ILA. It would be much better if the report

signalled that it was the same report as in Washington DC but with a slightly different resolution.

Professor De Ly reiterated the suggestion to republish the report and recommendations and thanked the attendees and members for their suggestions and comments.

The Chair noted that a resolution would normally identify the report on which it was based. He did not understand why this draft resolution referred to a report without specifying or explaining that the report had already been considered and discussed by both the Committee in open session and by the ILA at the Washington conference. The first preamble could benefit from that reference to identify the report.

The floor was opened for any other thoughts on the substance of the general topic.

Mr Sanjeev Anand (India) noted that, since an arbitral tribunal was an adjudicatory body appointed by the parties to decide their dispute, in the absence of the restriction on the powers of the tribunal imposed by the parties, a tribunal should have inherent power to decide substantial matters affecting the merits of the matter, if it found it necessary to decide the dispute, effectively, fully and finally.

The Chair commented that one could be over-specific about recommendations that were of a general nature. Once one started subdividing different aspects, the generality (and power) of the text could be lost because it started to become more controversial. He would be reluctant to suggest that was a sensible way.

Professor De Ly agreed with the Chair. One should take to the Report for further understanding. Section C on page 17 of the report dealt specifically with inherent powers of arbitrators to protect the integrity of proceedings and to render an enforceable award. In order to better understand this form, paragraph 7 of the Findings and Section C of the report must be read together.

The Chair noted that Mr Allen had a very similar point on the record of the discussions in Washington. This point was recorded and was now part of the official record.

Professor Christopher Ward (Australia) had a question relating to paragraph 4 of the Findings, which spoke of the arbitral laws and rules "constraining" the power of the arbitral tribunal. He suggested that it refer instead to "constraining and supporting". It might be more accurate given that domestic laws in many countries supported and supplemented the powers of tribunals. For example, in Australia, the *International Arbitration Act 1974* expressly permitred parties in arbitration to approach a local court to obtain documents by way of subpoena, which was a power of the arbitral tribunal and might or might not be an inherent power.

Professor De Ly acknowledged that the law of the place of arbitration might explicitly support the arbitral process. He mentioned the French concept of "*le juge d'appui*" (the support judge).

These powers related to mandatory laws of the place of arbitration and the constraint in paragraph 4 did not refer to supporting functions but rather referred to the powers of arbitral tribunals and their relationship to mandatory rules that might constrain the exercise of those kinds of powers.

Professor Ward accepted the response, but invited the Committee to consider whether or not the paragraph read as an accurate statement.

The Chair answered by saying that, after reading paragraph 4, he would be satisfied with the wording that was suggested; they were only talking at this stage about constraint and not about support. Support was something that certainly existed and might open avenues for a tribunal.

The Chair read out the full draft preamble to the resolution. It was noted to be necessarily general and acceptable. It would more helpful for the first recital to identify the Commttee report as being submitted to and discussed by the Committee in open session at the Washington conference. The last two recitals would be dealt with in the last session.

Professor Kessedjian stated that it was strange that the draft resolution did not have the language that was usually in the introduction to a resolution, namely an instruction to the Secretary General of the organisation to send it to international organisations who might be interested in this topic and here of course, UNCITRAL, who would be the natural receiver of such a resolution. She suggested that the Committee add a recital to that effect.

The Chair stated that there was no difficulty in accepting such a suggestion.

Professor De Ly agreed.

The Chair continued to the Findings of the draft resolution, and read out the paragraphs one by one and invited any comments. Findings number 1 and 2 were read out. The Chair elaborated on paragraph 2 of the Findings, stating that the powers were case-specific and one could not apply general rules across the board. These were powers that might in a particular case be curtailed or excluded. There was not a finite catalogue of powers. They were not of universal application.

The Chair read out paragraph 3 of the Findings. He explained that this was a limited catalogue of circumstances in which inherent and implied powers had been invoked, but did not believe they were exhaustive. Studies in this area were met by the difficulty presented by only a small percentage of arbitral awards being published. It was difficult to draw much broader categories of use of powers when so much remained confidential.

Mr Anand proposed that, in paragraph 3 of the Findings, "revision of earlier decisions" be amended to ream to read "revision of its own earlier decisions".

The Chair considered this and countered that it should remain "revision of earlier decisions". The reference must by necessary implication be to earlier decisions of the arbitral tribunal.

Mr Anand agreed to leave the words unamended.

The Chair read out paragraph 4 of the Findings. No comments were made.

The Chair mentioned that this raised Mr Ward's earlier suggestion to refer to "constrain *and support*", which he believed was not necessary, and which Mr Ward had withdrawn.

Professor Ward interjected that he did not withdraw the point for formality's sake.

Professor De Ly stated it was noted on the record.

The Chair proceeded to read out paragraph 5 of the Findings. The Chair noted that he would like to analyse the sentence. He repeated the phrases "grown in recognition" and "historical context in which arbitral tribunals are operating", and said in other words there was relevance but this did not lead to precedence. Temporary development in international arbitration was being discussed here.

Professor De Ly acknowledged this.

The Chair considered the words "actions that were once considered novel and contentious to take, absent express powers to do so, have now become part of the fabric of international arbitration".

Professor De Ly stated the report gave the example of interim relief in the 1970s. It was novel when the question first arose. Now it was generally accepted and uncontroversial.

The Chair stated that by implication that process was continuing. What would be novel now would become an accepted use of power in 5 years' time.

The Chair proceeded to read out paragraph 6 of the Findings. Emphasis was placed on creative development. There was a lot of development in international arbitration but the process was not very creative.

Mr Grebler asked whether the word "proliferation" conveyed a certain critical contempt.

The Chair stated that it did not.

Professor De Ly noted that it referred to the increasing use of international arbitration.

The Chair continued by reading out both paragraphs 7 and 8 of the Findings. This was a reminder that international commercial arbitration was itself a product of a consensual process between parties. The Chair read out paragraph 9 of the Findings. It dealt with inherent powers that were expected to exist absent agreement to the contrary or constraint from the curial law.

Mr Allen stated that the term "lex arbitri" in paragraph 9 should be in italics to be consistent with the use of "*inter alia*" earlier in the document which is.

The Chair thanked Mr Allen for bringing this to the Committee's attention. The Chair read out paragraph 10 of the Findings. It produced no comments. He then read out paragraph 11 of the Findings. This really picked up on what was in the recommendations. The Committee felt – and invited the ILA to agree – that this categorisation would help tribunals when they were confronted with a need to draw upon power not stated expressly in the agreement, by inviting them to proceed on a tiered basis: first, are these powers that are implied; second, are these powers within our discretion; third, are these powers that are inherent because of the function we have to perform of delivering and enforcing.

The Chair then turned to the Recommendations. Recommendations 1(a)-(b) were read out. It would be unusual and would at least require the clearest provisions if arbitral powers were to be restricted in a manner that undermined an arbitral tribunal's jurisdiction, or damaged the integrity of the proceedings, or might result in an award liable to be set aside or unenforceable. The Chair elucidated that one could write whatever one wanted,

but in terms of powers that one should be wary of doing it in such a way that one actually damaged the powers of the arbitrators to do the job that they were called upon to do.

Recommendation number 2(a) was read out. Here, one would not only consider curial law but also other parts of the substantive law, both of which had an effect on these powers.

Recommendations number 2(b)(i)-(iii) and 2(c) were read out. These recommendations were directed to ensuring that the tribunal was firmly founded on what it was doing as opposed to taking an issue, as it were, that had arisen in the course of arbitration and simply saying that they must be able to do that. The recommendation was that tribunals should really consider what it was that they were trying to do and that would produce a sounder, more deliberate use of a power, and operate to exclude what a tribunal's first instinct would be to do.

Recommendation 2(c)(i) was read out. This recommendation meant that, if one thought to have the power in two or three categories, one should be much more comfortable. Recommendations 2(c)(ii)-(iii) and 2(d)(i)-(ii) were read out. Recommendation 2(d)(ii) was an important provision as it was seen at times that arbitrators made decisions on the basis of what they thought was the correct manner of solving a matter without actually inviting a response from the parties. Parties could sometimes be difficult or have different attitudes to solutions, but an arbitrator was not going to advance the interests of the arbitration as a whole by simply exercising their power without sufficient consultation with the parties.

Professor De Ly indicated that it was essential. It was the relationship between powers and how to exercise those powers on the one hand and due process on the other.

The Chair proceeded to read out recommendation 2(e). Many procedural orders by tribunals were made without reasoning. Tribunals should set out their reasoning for invoking these powers, particularly as it was not expressed in the terms of appointment that the Tribunal had such powers. Therefore, tribunals must explain the source of the power, and the reasons why it should be exercised in the way it had been exercised.

Recommendation 3 was read out. There were no comments on this recommendation.

The Chair queried whether the members were content for the draft resolution to go before the plenary session for adoption. This was enthusiastically accepted by members. The Chair thanked the members.

Mr Grebler asked a procedural question. Was the draft subject to any sort of correctional amendment or was it the final text that would either be approved or rejected.

The Chair replied that they had had difficulties in the past in plenary sessions where one person raised a procedural issue about the language and wanted to change it. It became extremely awkward to do so. The process was done in the working session with the people most interested in the resolution attending the session in order to consider, discuss, and arrive at a final text.

The Chair expected that the Chair of the plenary session would be resistant to changes, and would exercise his own discretionary implied and inherent power to do so! There had

been other committee reports in the past that had been argumented at the plenary session, but that was rare. He hoped that this would not be one of them.

Professor De Ly noted that there were four small corrections that would go before the Steering Committee meeting, and which would be included in the final text.

The Chair closed the first session and proceeded to open the second session to deal with proposed new projects. To begin with, the Chair proposed to continue on remarks stated earlier by Professor De Ly regarding what happened in Washington. The report of the Washington conference stated that, after the adoption of the resolution of inherent and implicit powers of arbitrators, the Chair of the Committee and the corapporteurs would resign from their office and the Committee would be dissolved and re-established anew in view of the 2016 ILA Conference. Of course, circumstances changed. The Chair asked Professor De Ly whether or not he still held to what was reported in his name in Washington.

Professor De Ly replied in the affirmative with the qualification that it would be useful to the Committee the he remain on for another two years to get the new project going. It has been ILA policy to dissolve committees. He had the impression that the ILA was somewhat coming back on that policy for a number of reasons, noting that it would take a long time for the ILA to go back to the branches for nominations to the new committee. The Director of Studies had agreed at present not to dissolve the Committee after the adoption of the draft resolution but to extend the mandate of the existing Committee. New nominations would need to be sought by the branches. The present membership of the Committee could be kept.

The present Committee could continue for a new project to be determined. Professor De Ly suggested that he remain Chair until the Sydney conference in 2018, provided that a new project could be completed and there were no more projects.

The Chair clarified the above procedure. The ILA had resolved the issue of unproductive committees by introducing an encouragement to ensure that committees would always generate a product at each conference, as opposed to producing nominal reports and having their mandate extended for an indefinite period of time. A principle was introduced that the committees had to justify themselves, noting that certain areas of the ILA work had generated almost perpetual committees. Those perpetual committees were encouraged to add and subtract to their membership and to come up with new topics and to develop new thought. The most obvious ones were International Trade Law and International Monetary Law. Each of those committees accepted the commitment and obligation to renewal. Certain committees had a limited life.

International Commercial Arbitration was one which, while not having a perpetual existence, was expected to have a long life. It was a large committee with 50 members, and could be unwieldy. However, the Committee had met six times since the Washington conference.

Professor De Ly replied that they only met to discuss inherent powers in 2010 and 2014, but there were six meetings in total, where they considered the 12 topics.

The Chair asked whether there were any members of the Committee or other attendees who would want to consider any other topics on the list of 12.

The decision to be considered now would be on whether "reasoning in international commercial arbitration" was the correct topic to develop.

Professor De Ly proceeded to discuss the background and why the Committee feels that the new project to develop should be "reasoning in international commercial arbitration". 19 of the 22 replies voted for the topic. One stated that it was a boring topic to consider. Two more members showed preference for arbitration and public-private partnership contracts. On the basis of this vote, Professor De Ly noted that there was broad support for the proposal when 22 members replied and 19 members had endorsed it.

The Chair asked whether anyone, either a member of this Committee or other attendee, wanted to consider any other topic on the list of 12, or would disagree with the proposal, or would hold that one of the other topics listed was more appropriate to be discussed.

Mr Grebler endorsed the topic. He queried the focus of the topic on international commercial arbitration, particularly as some of the other listed topics touched on investment arbitration. He queried whether the topic would simply focus on international arbitration.

Professor De Ly added that it was an interesting observation but it was necessary to look to the recent history within the ILA because of the surge in foreign investment arbitration. First, there was a Committee on foreign investment arbitration. While the Committee was active, the Committee coordinated with the study group and that explained why a number of the earlier projects excluded foreign investment arbitration. Some of the listed topics should be reconsidered, as they could only be pursued by this Committee after prior consultation with the other Committee. For instance, the topic of investment arbitration awards (number 11 on the list) was clearly a topic the Committee could only do after prior consultation with its sister committee. Accordingly, Professor De Ly recommended that the proposed topic be limited to reasoning in international commercial arbitration.

Mr Allen added that, without wanting to come across as a bit of an upstart, he noticed that it was mentioned by Professor De Ly **that** there were about 50 members of this Committee and only 22 responded one way or the other.

The Chair pointed out that this was a very high percentage.

Mr Allen continued to add to his previous intervention that it led him to a second question. Referring back to comments by the Chair about the need for renewal, he queried whether this was an indication of how involved members of the Committee were if they could not even email to let the Committee know if they agreed with this topic.

Professor De Ly answered that it was to be expected as it was the summer period at present.

The Chair said that it was up to the offices of each committee to try to ensure engagement with their members. Where a committee member was not contributing, the right course of action was to invite them to resign. The chair would exercise his inherent, discretionary and implied powers to subtract the non-performing member. It was important to do that. However, 50 percent of the Committee responding to the Chair was quite satisfactory.

Professor De Ly added that he received other responses from Committee members, some of whom where present. This was quite representative and gave sufficient confidence that this was a project that raised sufficient interest and support.

The Chair thanked the members and stated that he would like to consider the substance and possibilities of the proposed new topic. Again, this further work requires a positive decision to be made by the ILA. The topic was set out in general terms. The Chair referred to a discussion paper, which he found very useful, and which inviteed comments on the topic.

There were very interesting aspects to the topic. Again, arbitration in its historical origins was considered. Often, and certainly in the common law system, it did not encourage reasoning at all. The reason for this was simply that there was not expected to be any statement of legal significance in an arbitral award. An arbitral award was the manner of reaching a decision on usually some trade or commercial matter and the decision was the decision, and that was that. With the expectation that if there was deemed to be some mistake made by the arbitrators or there was something in the decision that was contrary to the law, the Courts would sort that out. It was the function of the courts, as the courts did have an obligation to produce reasons. With civil lawyers, the expectation was always to state reasons that were fundamental in due process. Reasons had to be given for any decision and these were reasons that were expected to deal with not only the facts but with the law.

From his own experience in International Commercial Arbitration, the Chair noted that he had seen some appalling reasons, which were not really reasons at all but rather a restatement, recital and plagiarism of the parties' submissions. Lazy arbitrators would do this, arbitrators should know much more about what they were doing. It was dishonest not to do so. Reasoning comprised much more than just citing the arguments of the parties before it, but rather actually engaging in the issues in dispute.

The Chair queried whether reasons had to be long. In answering this question, he recalled that the judgment of Lord Reid on the House of Lords were very short, but when one read them, nothing was lost. There was enormous strength in short judgments, as long as the key reasons were there. Very few arbitrators truly appreciated the importance of brevity and succinctness. They usually expanded to great lengths, and the award took on the characteristic of bricks.

The Chair hoped that this was a topic that Committee members were willing to include within their discussion.

Professor De Ly added that the Committee members present could reflect upon a proposal and express what they had expressed by email in relation to the proposal to have "reasoning in international commercial arbitration" as the topic for this Committee over the next few years.

Professor Burkhard Hess (Germany) noted that he supported the proposal because it was very important to look at the reasoning of the award. There were many problems which they might entail. One was of setting aside an award. Of course, there were also issues concerning a type of taboo, i.e. the extent to which arbitrators were committed to review, to correct, to improve the argument when giving the award. It remained to be seen

to what extent the Committee might be able to agree on this, but he would be very happy to see guidelines in this respect in practice.

One could also look at practice in the stakeholder's jurisdiction. Where recognition of foreign judgments was involved, the reasons for the judgment could be so contradictory that it was important to consider the reasoning carefully.

The Chair agreed and invited reactions to that.

Mr Grebler commented that it was not common to find awards that are totally deprived of any reasoning. However, there were multiple ways of constructing the award; and from what he had seen, especially from countries where arbitration was only developing recently, they lacked uniformity in terms of what they should do. The analysis of the situation might be helpful for arbitral tribunals to handle the awards or to define how they should handle the awards. It was possibly a very constructive topic for arbitral tribunals to address in a more adequate way than in some cases, that we could do this in several parts of the world.

Mr Grebler mentioned that he had a particular comment on one line of the proposal and would like to know whether to continue or come back to it later.

The Chair replied that they would come back to it as the Chair had a reaction to Mr Grebler's intervention. He agreed with the intervention, and said that it was indeed rare to find a complete absence of reasoning. He was more concerned by the other side of it, which was that the reasons were inadequately expressed or over-expressed as a way to justify large fees or for some other reason. This was not serving a useful purpose at all. He expressed his hope that the Committee would consider the manner and approach that arbitrators took when arriving at reasons, which was essentially to drill down into why it was that one side prevailed on a particular issue rather than the other.

Continuing contractual commitments to be resolved were often forgotten. Much arbitration took place in the heat of battle with no court sanction, with difficulties created for arbitrators and tribunals all the time, which in some respects could be a breach of the contractual obligation to settle the dispute by arbitration. The arbitrators had a function, which was to arrive at an answer and an answer that answered the questions that the parties delivered. Sometimes they did not articulate questions very well, but it was important that any difficult question was explained.

Professor De Ly noted that the worst case that he had seen was an 80 page award of which 60 pages was a repetition of all of the procedural orders and only 10-15 pages were on the substance of the case. The best case that he had seen was everything that needed to be said in 25 pages regarding a complex case. There were very different ways to do what was required, appropriate or necessary.

There was potential to look at the practice of arbitrators and at the membership of the Committee such as practitioners and arbitrators. It was difficult to get an overview of what arbitrators would want, but this was only a proposal and it was dynamic. As things developed, the Committee would need to make decisions as to the scope of its work.

Professor De Ly acknowledged that this was but one perspective. He referred to Professor Hess's earlier intervention about the role of institutions and scrutiny of awards.

The Chair expressed a hope that the Committee would also consider the role of a tribunal secretary's discretion. Arbitrators sometimes gave considerable responsibility to their registrars, which was an important function. These registrars could be of enormous assistance to arbitrators in shaping the reasoning.

The Chair elaborated on his own experience in public international law dispute resolution. The functions of this process was to resolve disputes. Disputes in this public sphere always had significant political dimensions. International commercial arbitration often involved States. There were very important key political aspects to them which could not be resolved at the domestic level. It was very important that a tribunal and an arbitrator have a clearer understanding of what those key points were and to provide an answer to them. Two sovereign States should be capable of resolving it themselves, but in this instance they could not and therefore they refer the matter to a court or tribunal to obtain an answer. That answer was not necessarily to provide a great panoply of reasons, but to say that the arbitrator understands the issue: 'this was our answer and these were our reasons for that answer in a way that helped the politicians come back and explain to their own populations why it was that the dispute had been resolved this way'.

The Chair referred to the *Beagle Channel* arbitration. A thoroughly unsartisfactory award was produced which resulted in Chile and Argentina commencing military action within hours of the award being delivered. The Pope at the time had to intervene and mediate the matter and the solution was eventually found some 6 years later which effectively endorsed a bad award.

There was a general aspect to this process and even in the area of international commercial disputes between private parties, there was a reason why the parties invoked arbitration and that reasons had to be provided. It was not an exercise in demonstrating how clever you were but to deliver a result for the parties to resolve their dispute. Even if one party did not want it, the arbitrator still had to do that.

Professor De Ly said that, unlike court proceedings, arbitration did not have avenues of appeal (noting that there were exceptions to this in commodities and maritime matters. Reasoning in arbitration did not have the function of facilitating review by a superior court. The main function of reasoning in arbitration was to convince the losing party that the arbitrator understood the case, that they took into consideration all of the arguments, and that there was a legitimate and a fair process.

The Chair invited contributions from the floor, adding that, at this stage, all that the Committee might be seeking was an endorsement and encouragement of its proposed future work program, which would then be submitted to the Executive Council for endorsement.

Professor De Ly added that, from the replies of Committee members, there was one expressing concern about whether the Committee should do a report focussing on reasoning. On the one hand, there was educational value for younger practitioners as well as for older practitioners. These were the benefits that some parties might still be dissatisfied with the award and would want to attack it in court to have it set aside or to apply for a dismissal. That was a fact of life. Also in that respect, we could do what courts had been doing, referring to the practice of the Swiss Supreme Court in finding a kind of balance

in terms of not wanting a review on the merits. That practice limited a lot. If one could not go into the merits, then how could the reasoning be reviewed? That was apparent in some English and French case law.

Mr Allen added that, in contrast to the criticism that Professor De Ly was mentioning immediately before his intervention, Mr Allen thought that it would be very helpful, and further explained that many arbitration awards that he had personally come across in the commercial context were extremely long because of the fears that the arbitrators had about being criticised for not following due process. He noted the practice of one arbitral process where parties were asked to submit Word versions of all of their documents so that they could be readily copied and pasted to make sure that the award touched on everything and could not be criticized for missing out on anything.

Mr Allen suggested that a guidance document from the Committee could hopefully result in something setting out the bare minimum on matters such as why certain evidence was given, the weight attributed to that evidence, and specific pleadings that went to the crux of the case. It would be extremely helpful in making an award shorter and also in allowing both the parties and the arbitrators to have some degree of certainty that they had done what they needed to do and commended it for that reason.

The Chair agreed with Mr Allen's intervention and expressed hope that the work would have a higher aspiration than just educative. He also addressed the point about improving the quality or efficacy of arbitration by dealing with issues that had to be resolved in the course of the arbitral process. Typical arbitrations and the experience of practitioners could be enormously valuable. That was why the ILA had such potential strength in its membership involving judges, scholars and lawyers of all walks of international life.

Dr Jie Huang (HQ) suggested that reasoning of the award might be developed into a course for younger generations.

Professor De Ly responded that the proposed topic was somewhat more limited than the drafting of an award. He concluded by expressing a hope that a report of the Committee at the Sydney conference would be considered so that it might be discussed.

The Chair thanked attendees for their participation and closed the session.

INTERIM REPORT (2016)

PART I: Background

A. Establishment of the Committee and its Mandate

The International Law Association (ILA) Committee on International Law and Sea Level Rise (hereinafter: Sea-level Rise Committee, or Committee) was established with the approval of the ILA Executive Council in November 2012.[1] The Committee was tasked with a two-part mandate:

(1) to study the possible impacts of sea-level rise and the implications under international law of the partial and complete inundation of state territory, or depopulation thereof, in particular of small island and low-lying states; *and*

[1] ILA, *Minutes of the Meeting of the Executive Council* (London, 10 November 2012), at 5.

(2) to develop proposals for the progressive development of international law in relation to the possible loss of all or of parts of state territory and maritime zones due to sea-level rise, including the impacts on statehood, nationality, and human rights.

The ILA Executive Council approved the appointment of Professor Davor Vidas (Norwegian branch) as the Chair of the Committee, and Professors David Freestone (British branch) and Jane McAdam (Australian branch) as Co-Rapporteurs.[2]

B. Background for the Establishment of the Committee

When the proposal for the Sea-level Rise Committee was made in October 2012, it was prompted by the findings and conclusions of the ILA International Committee on Baselines under the International Law of the Sea (hereinafter: Baselines Committee), as contained in its report adopted at the 75th ILA Conference in Sofia, Bulgaria, in August 2012;[3] the discussions at the closed and open sessions of the Baselines Committee at the Sofia Conference;[4] and the Resolution 1/2012 adopted at that conference.[5] The proposal for the Sea-level Rise Committee was also prompted by scientific findings regarding the profound changes taking place in the Earth system, especially since the mid-20th century. The prospect of further and accelerating changes in the course of this century, including sea-level rise, will have consequent ramifications for the development of international law. This was the wider context motivating the proposal for a new ILA committee to focus on the international law implications of sea-level rise.

1. Conclusions of the Baselines Committee Sofia Report and Resolution 1/2012

The first international committee of the ILA set to study consequences of sea-level rise as regards the implications for international law was the Baselines Committee, formed in 2008.[6] The Baselines Committee was established with a two-part mandate; as stated in the Committee's report, this was:

> first, to "identify the existing law on the normal baseline" and, second, to "assess if there is a need for further clarification or development of that law". The need to identify, and possibly clarify or develop, the existing law concerning the normal baseline *arises in response to possible sea level rise* that has been predicted to accompany the phenomenon of climate

[5] Ibid, at 17. Available also on-line at ILA Baselines Committee webpage: http://www.ila-hq.org/en/committees/index.cfm/cid/1028.

[6] The Baselines Committee was established with the approval of the ILA Executive Council in November 2008; see: ILA, *Minutes of the Meeting of the Executive Council* (London, 15 November 2008), at 4. The issue of sea-level rise was later also touched upon by the ILA Committee on the Legal Principles Relating to Climate Change, in its Second Report (Sofia, 2012), at 29–30 and 39–40; text available at the ILA website, at <www.ila-hq.org/en/committees/index.cfm/cid/1029>.

> change, and the effects this may have in particular upon low-lying, small island developing states.[7]

In its 2012 Sofia report, the Baselines Committee concluded:

> [I]f current predictions of sea level rise are realized, some States will become completely submerged. The resulting deterritorialization will likely mean, among other things, a total loss of baselines and of the maritime zones generated by coastal territory and measured from those baselines. Should the issue of deterritorialization fall to be considered by the international community at least in part as a baseline issue, the existing law of the normal baseline does not offer an adequate solution. Here the Committee raises the possibility of deterritorialization in the context of Article 5 baselines, *but the loss of a State's territory to rising sea levels is not primarily a baseline or law of the sea issue*. Substantial territorial loss is a much broader issue encompassing concerns of statehood, national identity, refugee status, state responsibility, access to resources, and international peace and security. This issue requires consideration by a committee established for the specific purpose of addressing this range of concerns. The work of that committee should take into account the spirit of the modern law of the sea in which the interests of differently situated states are balanced. That committee should also recall the aims of the Convention: to strengthen peace, security, cooperation, and friendly relations among nations in conformity with the principles of justice and equal rights; to take account of the interests and needs of humankind as a whole; and to promote the economic and social advancement of all peoples of the world considering the special interests and needs of developing countries.[8]

Following on this, Resolution 1/2012 of the 75th ILA Conference recognised that:

> substantial territorial loss resulting from sea-level rise is an issue that extends beyond baselines and the law of the sea, and encompasses consideration at a junction of several parts of international law, including such fundamental aspects as elements of statehood under international law, human rights, refugee law, and access to resources, as well as broader issues of international peace and security.[9]

The 2012 ILA Conference acknowledged that the issue requires consideration by a committee established for the specific purpose of addressing this broad range of concerns.[10]

2. Scientific Assessments of On-going Sea-level Change and Projections of Future Rise

As indicated above, it was new scientific evidence and findings that prompted the establishment of the Committee in 2012. These include in particular the findings of the Intergovernmental Panel on Climate Change (IPCC) concerning the trends in sea-level rise during the course of 20th century and the first decade of the 21st century, as well as its projections for further sea-level rise. Scientists agree that one of the most certain outcomes of a warmer world is an increase in global sea-levels; the amount and rate of future sea level rise is, however, still uncertain, even for the rest of the 21st century. A review of the scientific literature on sea-level rise, as referred to in the proposal for this

[8] *Baselines Committee Sofia Report*, at 424–425 (on-line, at 30–31); emphasis added.

[9] Resolution No. 1/2012, para. 7.

[10] Ibid, para. 8.

Committee, was compiled in 2011;[11] the review indicated that, in a world that warms by 4˚C by the year 2100, the rise in global sea levels was estimated in the literature between 0.5 and 2 metres.

At the time of the establishment of this Committee in 2012, the IPCC had issued four assessment reports, the last of which was published in 2007.[12] The First IPCC Assessment Report (FAR), issued in 1990, laid the groundwork and resulted in important general findings, including recognition that: (a) sea level had risen during the 20th century; (b) the rate of rise had increased compared to the 19th century; (c) ocean thermal expansion and the mass loss from glaciers were the main contributors to the 20th century rise; (d) during the 21st century the rate of rise was projected to be faster than during the 20th century; (e) sea level will not rise uniformly around the world; and (f) sea level would continue to rise well after GHG emissions are reduced. The FAR also concluded, however, that no major dynamic response of the ice sheets was expected during the 21st century, leaving ocean thermal expansion and the melting of glaciers as the main contributors to the 21st century rise. This was, in retrospect, a significant misconception in the context of our current understanding of sea level rise.[13] The Second Assessment Report (SAR) in 1996 contained similar conclusions. However, by 2001, when the Third Assessment Report (TAR) was issued, new models replaced the energy balance climate models that had been previously used by the IPCC.

The 2007, Fourth Assessment Report (AR4) relied on more robust observations of the variations in the rate of global average sea level rise for the 20th century. Moreover, by the time of AR4, the satellite altimeter record[14] was long enough to reveal the complexity of the time-variable spatial distribution of sea level. Nevertheless, three central issues remained in AR4. First, the observed sea-level rise over decades was larger than the sum of individual contributions as estimated by the AR4 methodology. Second, it was not possible to make confident projections of the regional distribution of sea level rise. Third, there was insufficient understanding of the potential contributions from the destabilisation (melting) of ice sheets – and AR4 recognized that existing ice-sheet models were unable to simulate the recent observations of accelerated ice-sheet melting. Indeed, understanding of ice-sheet dynamics was too limited to assess either the likelihood of continued accelerated melting or to provide a reliable estimate or even an upper bound for their future contribution.

When comparing the projections of sea level rise for 2100 contained in the earlier IPCC Assessment Reports, it is notable that they contain remarkably similar range of predictions, despite changes in the scenarios. However, there was a progressive reduction in the upper end of their predictions:

[11] R Nichols et al., 'Sea-level Rise and Its Possible Impacts Given a "Beyond 4 C World" in the Twenty-First Century', *Philosophical Transactions of the Royal Society–A*, 369 (2011), 161–181.

[12] The brief overview, contained in this and the next two paragraphs, of the previous four IPCC assessment reports, as related to sea-level change, is based on J.A. Church et al., 'Sea Level Change', in: *Climate Change 2013: The Physical Science Basis. Contribution of Working Group I to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change* (Cambridge University Press, 2013), at 1142. Hereinafter: 'Sea Level Change', *Contribution of WG I to AR5*.

[13] See further below in this section, especially in subsections 2.1, 2.2 and 2.3.

[14] Satellite sea level altimetry began in 1993; see further below, especially notes 26 and 28, and the related text.

- FAR (1990): sea level rise from 31 cm, at the lower end, to 110 cm at the upper end;
- SAR (1996): from 13 to 94 cm;
- TAR (2001): from 9 to 88 cm;
- AR4 (2007): from 18 to 59 cm (not including dynamic ice-sheet response additions).

The Fifth Assessment Report (AR5)[15] of 2013/14, issued soon after this Committee was established, was the first to reverse this trend of successive reductions in the upper end of projections for 2100. With an upper end prediction of 98 cm,[16] it is the second highest so far. It is important, however, that this prediction is based on major scientific advances since AR4, resulting in a better understanding of 20th century sea level change and its components, and in an improved ability to project future rise.[17] The AR5 also acknowledged, however, that significant challenges remain, in particular in incorporating the dynamics of the Greenland and Antarctic ice sheets.[18] The findings of the AR5 provide a major context for the work of this Committee, therefore the next three subsections briefly review the salient aspects of AR5: its progress in the understanding of on-going sea level change; its improved projections of future sea level rise; and its analysis of the key challenges that remain.

2.1 Progress in the understanding of on-going sea level change

The findings of AR5 reflect a significantly improved understanding of the components that contribute to total sea level change.[19] The evidence now available in AR5 gives a much clearer account of the observed sea-level change than did the AR4.[20]

AR5 confirms that the amount of global mean sea level rise in the course of the 20th century and up to 2010 was ~20 cm.[21] A transition from relatively low mean rates of sea level change, that were characteristic for the previous two millennia (in the order of tenths of mm/year), occurred at some time between the end of the 19th to the early 20th

---

[15] In addition to *Contribution of WG I to AR5*, two further reports of IPCC within AR5 were drawn upon for presenting the overview in this section: *Climate Change 2014: Synthesis Report. Contribution of Working Groups I, II and III to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change* (Core Writing Team, RK Pachauri and LA Meyer (eds)), IPCC: Geneva, 2015 (hereinafter: *AR5 – Synthesis*); and *Summary for Policymakers. In: Climate Change 2013: The Physical Science Basis. Contribution of Working Group I to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change* (Cambridge University Press, 2013), hereinafter: *AR5 – Summary for Policymakers*.

[16] 'Sea Level Change', *Contribution of WG I to AR5*, at 1186. It is, moreover, noted that if the Antarctic precipitation increase is omitted from the process-based projections, the likely range increases to 103 cm; ibid.

[17] 'Sea Level Change', *Contribution of WG I to AR5*, at 1204; also *AR5 – Synthesis*, at 62.

[18] *AR5 – Synthesis*, at 56.

[19] 'Sea Level Change', *Contribution of WG I to AR5*, at 1157-1159 and 1204; also *AR5 – Synthesis*, at 56.

[20] Models used in AR4 were able to explain only about 60% of the observed sea-level rise, and consequently projections of future sea-level rise in AR4 were underestimated; see *Contribution of WG I to AR5*, at 1182.

[21] That is: 0.19 [0.17 to 0.21, i.e., +/-0.02] m; see 'Sea Level Change', *Contribution of WG I to AR5*, at 1150.

century,[22] and led to higher rates of rise in the course of the 20th century (in the order of mm/year) – with a global mean rate of rise of 1.7 mm/year over the span of the century.[23] The key distinction observed in the course of the 20th century, as compared to previous centuries and even previous millennia, is not only the absolute amount of rise but also the accelerating rate of mean sea level rise that was noted, especially in measurements since 1971.[24] Between 1993 and 2010, the observed rate is already markedly greater: 3.2 mm/year.[25] This indicates both a greater amount of rise and an acceleration in the rate in the late 20th and the early 21st century.[26]

Current understanding of sea level rise identifies ocean thermal expansion and glacier melting (not including Antarctica) as the dominant contributors for most of the 20th century mean sea level rise; observations since 1971 result in estimates, with a degree of high confidence, that those two sources contribute about 75% of the observed rise.[27] However, the contribution of the Greenland and the Antarctic ice sheets to sea-level rise has increased since the early 1990s.[28] AR5 indicates a progressive trend in which the Greenland contribution has 'very likely' increased from 0.09 mm/year (for 1992-2001) to 0.59 mm/year (for 2002-2011), while the Antarctic contribution 'likely' increased from 0.08 mm/year (for 1992-2001) to 0.40 mm/year (for 2002-2011).[29] This trend is significant for future projections, and it also poses important challenges for the (process-based model) projections, especially regarding the dynamical responses of the Antarctic ice sheet.

2.2 Improvements in projections of future sea level rise

Confidence in the projections of global mean sea level rise has increased since the AR4, because of improved understanding of the physical components of sea level, the improved correlation between the process-based models and actual observations, and the

---

[22] AR5 refers to most recent studies concluding that sea level began to rise above the late Holocene background rate (characteristic of the previous ca 2000 years) between 1905 and 1945; 'Sea Level Change', *Contribution of WG I to AR5*, at 1146 and 1184–1185.

[23] 'Sea Level Change', *Contribution of WG I to AR5*, at 1146 and 1150, indicating the rate as 'very likely', meaning in AR5: 90 to 100 % probability; see also *AR5 – Summary for Policymakers*, at 9.

[24] Since 1971, significantly more ocean data became available and systematic glacier reconstructions began; global mean rate of sea-level rise since 1971 was estimated to approximately 2.0 mm/year.

[25] 'Sea Level Change', *Contribution of WG I to AR5*, at 1204, 1150; with the indication of this being 'very likely'. This rate is found by the satellite sea-level altimetry data.

[26] In this context, 1993 is also important as the first year when satellite sea level altimetry record, and observations of all sea level components, became available; a 20-year span (1993-2012) enabled trend analyses as presented in AR5; see *AR5 – Synthesis*, at 41; 'Sea Level Change', *Contribution of WG I to AR5*, at 1139 and, especially, at 1150. It is important to note here that satellite altimetry measures *sea surface height* (SSH), primarily in the open ocean, whereas tide gauges measure *relative sea level* (RSL) along the coastline. A change in RSL is the difference between the change in SSH and the vertical land motion. See also section I.B.2.3 below.

[27] 'Sea Level Change', *Contribution of WG I to AR5*, at 1139 and 1157.

[28] Ibid, at 1153–1157. Data for those contributions comes primarily from satellite and airborne surveys.

[29] 'Sea Level Change', *Contribution of WG I to AR5*, at 1153. This translates into the average rate of ice loss from the Greenland, from 34 Gt/year (for 1992-2001) to 215 Gt/year (for 2002–2011), and from the Antarctic, from 30 Gt/year (for 1992-2001) to 147 Gt/year (for 2002–2011). As to contribution to global mean sea level rise: 100 Gt/year of ice loss is equivalent to 0.28 mm/year increase; *AR5 – Summary for Policymakers*, at 7.

inclusion of ice-sheet dynamical changes.[30] The projections of sea level rise contained in AR5 are larger than in AR4, primarily because of the improved modelling of land-ice contributions.

The projections of the likely amount of sea level rise in the 21st century range in AR5 from 26 cm rise at the lower-end of the lowest scenario (RCP2.6) to 98 cm rise at the upper-end of the highest scenario (RCP8.5).[31] The rate of rise, between 2081 and 2100, in the latter scenario is 8 to 16 mm/year.[32] This is, in the upper-end, a five-fold increase if compared with the rate of rise from 1993 to 2010, or almost ten times the average rate of rise (of 1.7 mm/year) in the 20th century.

Two additional aspects are estimated by AR5 as 'very likely' in the 21st century. First, that sea level change will have a *strong regional pattern*, with some places experiencing significant deviations of local and regional change, which can differ from the global average rate by more than 100%; second, that there will be a significant increase in the occurrence of future sea level *extremes* in some regions (with a likely increase in the early 21st century).[33]

While exact figures of amount and rates of future sea level rise still remain uncertain, even for the 21st century, AR5 states that it is 'virtually certain'[34] that sea level will continue to rise during the 21st century, and for centuries beyond – even if GHG concentrations are stabilized (with the amount of rise in later centuries dependent on future GHG emissions).[35] For higher emission scenarios and warmer temperatures, surface melting of the Greenland ice sheet is projected to exceed accumulation, leading to its long-term decay and a sea level rise of several metres, consistent with paleo sea-level data,[36] which indicates – for the last interglacial (between 129 and 116 thousand years ago) – between 5 and 10 m higher than the present-day global mean sea level that has been relatively constant for the last several thousand years.[37]

On current understanding, the only event that could cause global mean sea level to rise substantially above the *likely* range presented in AR5 during this century would be the collapse of the marine-based sections of the Antarctic ice sheet. However, the effect of this, which AR5 states 'cannot be precisely quantified', is, with *medium confidence*, predicted to be within several tenths of a meter of sea-level rise during the 21st century.[38] The

---

[30] 'Sea Level Change', *Contribution of WG I to AR5*, at 1139.

[31] 'Sea Level Change', *Contribution of WG I to AR5*, at 1180. 'Representative Concentration Pathways' (RCPs) are different future scenarios of concentration of GHGs, aerosols, and other climate drivers. RCPs are dependent on human activities, technology and policy developments, however these factors are not assessed in AR5.

[32] 'Sea Level Change', *Contribution of WG I to AR5*, at 1180.

[33] 'Sea Level Change', *Contribution of WG I to AR5*, at 1140.

[34] In AR5 terminology of likelihood, 'virtually certain' means 99 to 100% probability.

[35] 'Sea Level Change', *Contribution of WG I to AR5*, at 1205.

[36] Ibid.

[37] 'Sea Level Change', *Contribution of WG I to AR5*, at 1139 – implying, for estimates up to 10 m, substantial contributions from both the Greenland and the Antarctic ice sheets.

[38] *AR5 – Synthesis*, at 59; 'Sea Level Change', *Contribution of WG I to AR5*, at 1140.

distinction between Antarctica and Greenland is that the latter has no known large-scale instabilities that might generate an abrupt increase in sea level rise.[39]

2.3 Challenges that remain

Despite the progress since AR4, it is clearly acknowledged in AR5 that significant uncertainties remain, particularly related to the magnitude and rate of the ice sheet contribution to sea level during the 21st century and beyond, as well as the regional distribution of sea level rise and the regional changes in storm frequency and intensity.[40] AR5 states that:

> Although improved understanding has allowed the projection of a *likely* range of sea level rise during the 21st century, it has not been possible to quantify a *very likely* range or give an upper bound to future rise. The potential collapse of ice shelves, as observed on the Antarctic Peninsula (…), could lead to a larger 21st century rise.[41]

It should be added here that, regarding ocean warming, the AR5 predicts the most pronounced warming at greater depth in the Southern (Antarctic) Ocean.[42] Recent studies, including those following the publication of AR5, have focused on the destabilisation of the West Antarctic ice sheet and its potential for contributing rapidly to global sea level rise.[43]

Another challenging aspect is the wide range of differences in the results for the upper bounds of projected sea-level rise, identified in assessments using process-based modelling, on the one hand, and those based on semi-empirical models, on the other – with the latter resulting in upper bounds of up to 2.4 m of global mean sea level rise by 2100.[44]

A further important consideration is that of *relative* sea level rise, which is defined by the elevation of both the land and the sea. This concept acknowledges that as sea levels rise, complex feedbacks may occur on the shape or morphology of the coast as well as its associated systems (such as coral reefs) making some coasts highly responsive to changing sea levels.

Records of past sea level changes provide insights into the sensitivity of sea level to past climatic changes, and may also be able to contribute to our understanding of current

---

[39] 'Sea Level Change', *Contribution of WG I to AR5*, at 1179. For recent studies on the destabilisation of the West Antarctic ice sheet (especially around the Antarctic Peninsula and the Amundsen Sea area), see, e.g., Craig Rye et al, 'Rapid sea-level rise along the Antarctic margins in response to increased glacial discharge', *Nature Geoscience*, 7 (2014), 732–735, estimating that an excess of freshwater input of 430 (+/- 230) Gt/year is required to explain the observed sea-level rise. Compare this with AR5 data, as presented *supra*, in note 29.

[40] 'Sea Level Change', *Contribution of WG I to AR5*, at 1205.

[41] 'Sea Level Change', *Contribution of WG I to AR5*, at 1205. In AR5 terminology of likelihood, 'likely' refers to a probability between 66 and 100% (while 'very likely' is 90 to 100 % probability).

[42] *AR5 – Synthesis*, at 60.

[43] See, e.g., Rye et al, 'Rapid sea-level rise along the Antarctic margins'. A highly relevant study, supplementing the findings in AR5, is found in: RM DeConto and D Pollard, 'Contribution of Antarctica to past and future sea-level rise', *Nature*, 531 (31 March 2016), 591–597.

[44] See 'Sea Level Change', *Contribution of WG I to AR5*, at 1179–1186. The semi-empirical approach regards changes in sea level as an integrated response of the entire climate system, reflecting changes in the dynamics and thermodynamics of the atmosphere, ocean and cryosphere – in contrast to process-based approach, which explicitly attributes sea level rise to its individual physical components; ibid, at 1182.

changes and to provide a means of evaluating projections.[45] In contrast to the more recent gradual progressions of sea-level rise that have occurred over a very long period, there is geological evidence of significant 'jumps' over a relatively short time-span of centennial – perhaps even decadal – scale,[46] followed by longer periods of general stability or slower rises. The timing of such future 'jumps' is very difficult to predict.

Discussing risk and the management of an uncertain future, AR5 states that – while it is 'unlikely' for global mean sea level rise to exceed one meter in this century – the consequence of a greater rise could be so severe that this possibility must become a significant part of risk assessment.[47] Relatively low confidence but high consequence outcomes are policy relevant – and therefore an aspect pertinent also in the considerations of the present Committee.

3. Change of Epochs in the History of the Earth: A New Context for International Law

The wider context for the proposal for this Committee were recent scientific findings regarding the profound changes that have been taking place in the Earth system, especially since the second half of the 20th century. The prospects of further and accelerated changes in the course of this century (reflected in sea-level rise) have possible ramifications for the development of international law. Scientific evidence increasingly indicates that, due to the nature and size of on-going and predicted changes, the Earth may already be undergoing a shift from the conditions of the current officially accepted geological time interval, the Holocene, to a new planetary state.[48] The Holocene is the latest, and formally still current, geological epoch. It comprises the past 11,700 years,[49] which have been marked by an exceptionally long period of relative environmental stability, especially during the last few thousand years.[50] As such, the conditions of the Holocene were a key factor facilitating the development of human civilization and, ultimately, the territorial divisions of the political world as we know it today.

It has been argued that, because of the interaction between the global environmental effects of economic development and increased human population, the Earth system

[50] The lower boundary for the 'late Holocene' is currently proposed at 4200 years BP; see M Walker et al, 'Formal subdivision of the Holocene Series/Epoch', *Journal of Quaternary Science*, 27 (2012), 649–659.

has already left the Holocene and has entered a new epoch: the Anthropocene.[51] So far, the 'Anthropocene' is an unofficial scientific term referring to the human imprint on the Earth system that is already so profound as to have reached geological significance.[52] Since 2009, the Anthropocene hypothesis is under formal scrutiny within geology. In that year, the Anthropocene Working Group (AWG) was set up within the International Commission on Stratigraphy to examine the stratigraphic basis and the scientific justification for possible formalization of the Anthropocene as the most recent geological time unit.[53] The AWG held its latest meeting in Oslo, 22-23 April 2016, and currently works on completing the interim findings and recommendations.

The Holocene has been characterized, especially in its late stage, by the longest period of stability in environmental conditions on Earth since the appearance of *Homo sapiens.* By contrast, the Anthropocene is seen as characterized by change, uncertainty and instability in the future behaviour of the Earth system.[54] This may have increasing relevance and, over time, important consequences for the organisation of international relations as currently reflected in international law.[55] It has been argued that within the current system of international law, the stability of the late Holocene has played a major role in the development of the political system which has in turn reflected the generally stable natural conditions of the Earth system.[56] Changes in that underlying element of stability contain the potential for new types of tension in relations between states.[57]

One such core aspect, which is in the focus of this Committee, relates to the international legal implications of sea-level rise, as it is already projected for this century. The onset of changing Earth system conditions in an Anthropocene epoch may draw into question some key aspects of international law, since these rely on the general stability of geographic conditions, and may require the re-examination of some currently accepted paradigms of international law.

C. Work of the Committee and Focus of this Interim Report

After the establishment of the Committee at the end of 2012, its membership was initially appointed during the course of 2013 in two rounds (May and November). The first meeting of the Committee was held at the 76th ILA Conference, in Washington DC, in April 2014.[58] An *Initial Discussion Paper* was prepared by Committee officers and several members in order to facilitate discussions at the first meeting, the primary purpose of which was to identify questions and issues related to the mandate, rather than to present pre-formed solutions.

Three main issue-areas to be dealt with by the Committee were defined at the Washington DC meeting: the law of the sea; forced migration and human rights; and issues of statehood and international security. Although each of these issue-areas has already attracted a lot of research and publications, the Committee considered that it could make a useful contribution, within the framework of its mandate, by synthesising these various issues, elaborating interlinkages and considering options for proposals *de lege ferenda*. In addition, the Committee discussed impacts of sea-level rise on other areas of international law, such as cultural heritage law and environmental law (e.g., in the context of biodiversity protection regimes), and it was suggested that these issues might as well be relevant in the later stages of the Committee's work.

The Committee agreed to divide its work thematically into two main stages. The first stage involved two parallel streams of study: one on the law of the sea issues, and the other on the migration and human rights issues. The second stage would then involve the study of the statehood question, but also other relevant issues of international law and broader issues of international security, as the point of commonality of both streams.

On this basis, the Committee agreed to plan its work around the two reports that would need to be presented at the next two ILA conferences, namely the Interim Report at the 77th ILA Conference in Johannesburg, South Africa in 2016; and the Final Report at the 78th ILA conference in Australia in 2018.[59] The Interim Report, it was agreed, would not be fully comprehensive and would focus on the two streams of study, identified above. The Final Report will be the subject of the work of the Committee thereafter, with the aim of presenting it at the 78th ILA conference in 2018. In order to facilitate the work of the Committee on the Interim Report, and to strengthen the communication and coordination between the two agreed streams of study, a two-day inter-sessional meeting was held in Oslo, 12-13 June 2015, organised and hosted by the Fridtjof Nansen Institute.

---

[58] See ILA, *Report of the Seventy-Sixth Conference, held in Washington D.C., April 2014* (London: ILA, 2014), at 877–881. At the time of the Conference, the Committee had 21 members and 4 alternates. Two-thirds of the members (14 out of the 21) took part in the work of the Committee at its first meeting in Washington DC. Minutes of the sessions (open and closed), held on 9 and 10 April 2014, are available at: http://www.ila-hq.org /en/committees/index.cfm/cid/1043. As of 6 May 2016, the Committee has 27 members and 5 alternates.

[59] This required the adjustment of the Committee time-frame, from November 2016 to November 2018.

PART II:
International Law and Sea-level Rise: Law of the Sea Issues

This part of the Committee's interim report addresses some of the law of the sea issues that are raised by both segments of its mandate, i.e., regarding the *study* of the "possible impacts of sea-level rise and the implications under international law", and some preliminary considerations in connection with *developing proposals* "for the progressive development of international law". This part draws upon the findings and recommendations of the *Baselines Committee Sofia Report* of 2012, and develops the issues for further consideration of the present Committee on that basis.

A. Sea-level Rise and Maritime Zones

As already outlined in part I of this report, the IPCC in AR5, revising the predictions in AR4, posits global mean sea-level rise of up to approximately one metre by 2100. This may ultimately prove to be a conservative estimate. Moreover sea-level rise is likely to exhibit "a strong regional pattern, with some places experiencing significant deviations of local and regional sea level change from the global mean change."[60] This degree of change in sea level may pose potentially serious, maybe even disastrous, threat to many coastal States, especially those with large, heavily populated and low-lying coastal areas, as well as for small, low-lying island States. Such sea-level variability is also highly likely to impact coastal areas where wetlands and other sites may be protected by international treaty regimes,[61] although the highly variable responses of different coastal environments to changing sea levels also needs to be taken into account.

In addition to the threat posed to low-lying coastal areas and their associated populations, as well as to coastal infrastructure from inundation by rising seas, there are also threats to the ocean spaces adjacent to such threatened territories. In particular, sea-level rise has the potential to impact significantly the spatial extent of national claims to maritime jurisdiction.[62]

Generally, the baseline from which States' maritime zones are measured is the 'normal' baseline, determined in accordance with Article 5 of the 1982 United Nations Convention on the Law of the Sea (LOSC).[63] From the baseline States may measure

[60] 'Sea Level Change', *Contribution of WG I to AR5*, at 1140.

[61] Under, e.g., the 1971 Ramsar Convention on Wetlands of International Importance, 996 UNTS 245; ILM, (1972), 963; as well as under regional conventions.

[62] The literature on this is extensive. Early (legal) writers agreed that this was a consequence of ambulatory baselines: ECF Bird and JRV Prescott 'Rising Global Sea Levels and National Maritime Claims', *Marine Policy Reports*, 1 (1989), 177–196; AHA Soons 'The Effects of a Rising Sea Level on Maritime Limits and Boundaries', *Netherlands International Law Review*, 37 (1990), 207–232. DD Caron, 'When Law Makes Climate Change Worse: Rethinking the Law of Baselines in Light of Rising Sea Level' *Ecology Law Quarterly*, 17 (1990), 621. D Freestone, 'International Law and Sea Level Rise' in: RR Churchill and D Freestone (eds), *International Law and Global Climate Change* (London/Dordrecht: Graham and Trotman/Martinus Nijhoff, 1991), 109, 119–122. D Freestone and J Pethick, 'Sea Level Rise and Maritime Boundaries: International Implications of Impacts and Responses' in: G Blake (ed.) *International Boundaries: Fresh Perspectives*, Vol 5 (Routledge, 1994), 73–90.

[63] Article 5 of the 1982 United Nations Convention on the Law of the Sea, UN Doc A/CONF.62/122; text in 1833 UNTS 3; text reprinted in ILM, 21(1982), at 1261; available at <www.un.org/ Depts/los>.

their territorial sea,[64] contiguous zone,[65] exclusive economic zone (EEZ)[66] and continental shelf.[67] Consequently, if those 'normal' baselines move inland as a consequence of sea level rise, so too will the outer limits of those maritime zones measured from such baselines, if the basepoints that control the definition of the outer limits to maritime zones are impacted. As a result of such shifting baselines and a re-adjustment of the boundary of maritime zones, waters previously under national jurisdiction could become part of the high seas. Moreover, changes to the baselines could impact upon maritime boundaries between adjacent or opposite States.

Further, sea-level rise has the potential to inundate small islands and other geographical features which may have generated their own maritime zones,[68] or been used by the coastal State as base points for drawing straight baselines.[69] This too may have major impacts on the capacity of a feature to generate maritime jurisdictional claims.[70] As the discussion in part III of this report demonstrates clearly, some low-lying island States, already under pressure, may find their land area rendered uninhabitable well before they are overrun by the sea. In extreme cases this will raise questions as to the ability of some island States to maintain their statehood without a habitable land area, and to maintain sovereignty over the territorial sea, and sovereign rights over the resources of the maritime zones appurtenant to those land areas.[71]

The Sea-level Rise Committee has decided that in its final report in 2018 it will consider how international law may be able to respond to these unprecedented existential challenges as well as the serious human dimension of the issues. It will consider whether these issues need to be addressed by treaty law or whether customary international law and 'softer' methods of norm creation will be sufficiently flexible to address these challenges, and what might be the appropriate mechanisms for this.

---

[64] Article 3, LOSC.

[65] Article 33, LOSC.

[66] Article 57, LOSC.

[67] Article 76(1), LOSC. Of course, defining the outer limit of the continental shelf is more complex as the continental shelf extends beyond a coastal State's territorial sea "throughout the natural prolongation of its land territory to the outer edge of the continental margin", and therefore for many coastal States it extends beyond 200 nautical miles from the baselines.

[68] Article 121, LOSC.

[69] As permitted by Article 7, LOSC.

[70] See generally the detailed provisions of Part II, LOSC. For example, the low water line of islands may be used to measure maritime zones (Article 121(2)). The low water line of low tide elevations (LTE) may also be used to measure maritime zones if the LTE is situated "wholly or partly at a distance not exceeding the breadth of the territorial sea from the mainland or an island" (Article 13(1), LOSC). All these features are susceptible to change.

[71] This may include the resources of the 200 nautical mile EEZ in which coastal States have "sovereign rights for the purpose of exploring and exploiting, conserving and managing the natural resources, whether living or non-living, of the waters superjacent to the sea-bed and of the sea-bed and its subsoil" (Part V, LOSC), and of the continental shelf over which coastal States exercise "sovereign rights for the purpose of exploring it and exploiting its natural resources" (Part VI, LOSC). See also R Rayfuse, 'Sea Level Rise and Maritime Zones: Preserving the Entitlements of "Disappearing" States' in: MB Gerrard and GE Wannier, *Threatened Island Nations: Legal Implications of Rising Seas and a Changing Climate* (Cambridge University Press, 2013), 167–191.

In this first interim report the Committee considers some preliminary legal issues regarding the potential impacts of sea-level rise on coastal States' maritime zones. The Committee decided that it was appropriate to begin its review by revisiting the findings of the Baselines Committee as regards its interpretation of Article 5 of LOSC as the basis for its own further deliberations.

B. The Existing Law of the 'Normal' Baseline

In its 2012 Sofia Report,[72] the Baselines Committee considered at some length the legal implications of Article 5 LOSC which in the English text reads as follows:

> Except where otherwise provided in this Convention, the normal baseline for measuring the breadth of the territorial sea is the low-water line along the coast as marked on large-scale charts officially recognized by the coastal State.

The Baselines Committee concluded that "the legal normal baseline is the actual low-water line along the coast at the vertical datum, also known as the chart datum, indicated on charts officially recognized by the coastal State" and that "the phrase 'as marked on large-scale charts officially recognized by the coastal State' provides for coastal State discretion to choose the vertical datum at which that State measures and depicts its low-water line". The charted low-water line "illustrates the legal normal baseline, and in most instances and for most purposes the charted low-water line provides a sufficiently accurate representation of the normal baseline". However, the Committee considered that although the charted line appears to enjoy a strong presumption of accuracy, "where significant physical changes have occurred so that the chart does not provide an accurate representation of the actual low-water line at the chosen vertical datum, extrinsic evidence has been considered by international courts and tribunals in order to determine the location of the legal normal baseline".[73]

In accordance with the Baselines Committee's view, "it follows that if the legal baseline changes with human-induced expansions of the actual low-water line to seaward, then it must also change with contractions of the actual low-water line to the landward."[74]

The Baselines Committee therefore reached the view that

> the existing law of normal baseline applies in situations of significant coastal change caused by both territorial gain and territorial loss. Coastal States may protect and preserve territory through physical reinforcement, but not through the legal fiction of a charted line that is unrepresentative of the actual low-water line.[75]

Consequently, the Baselines Committee concluded that

> the normal baseline is ambulatory, moving seaward to reflect changes to the coast caused by accretion, land rise, and the construction of human-made structures associated with harbour systems, coastal protection and land reclamation projects, and also landward

---

[72] *Baselines Committee Sofia Report*, *supra* note 3.

[73] *Baselines Committee Sofia Report*, at 425 (on-line, at 31). This was the view of 28 of the 30 member Committee, with two statements of dissent, from Dr Oude Elferink (Netherlands) and Professor Yee (HQ), with reasons as further explained in footnotes 217 and 218 of the *Baselines Committee Sofia Report*, at 425 (on-line, at 31).

[74] *Baselines Committee Sofia Report*, at 422 (on-line, at 28).

[75] *Baselines Committee Sofia Report*, at 424 (on-line, at 30).

> to reflect changes caused by erosion and sea level rise. Under extreme circumstances the latter category of change could result in total territorial loss and the consequent total loss of baselines and of the maritime zones measured from those baselines. The existing law of the normal baseline does not offer an adequate solution to this potentially serious problem.[76]

The Baselines Committee recommended "that the issue of impacts of substantial territorial loss resulting from sea level rise be considered further by a Committee established for the specific purpose of addressing the wide range of concerns it raises".[77] This, therefore, was the wider issue that the Baselines Committee passed on to the new committee.

C. Preliminary Issues Addressed by the Sea-level Rise Committee

In considering the implications of this finding by the Baselines Committee, the Sea-level Rise Committee decided to address two important preliminary issues that the Baselines Committee had identified in its 2012 report:

> [T]he prospect of significant sea level rise carries with it problems of global scale and effect and serious existential implications for some States. Among these problems are negative impacts on maritime boundaries negotiated in reliance on normal baselines in existence at the time of a delimitation, and the outer limits of a State's maritime zones proclaimed in reliance upon a normal baseline.[78]

It should be noted that the Baselines Committee had also identified a third issue, namely that:

> [T]he likelihood that some offshore low-lying islands will be completely submerged … which will give rise to debate as to whether a coastal state loses the totality of its entitlement to claim a normal baseline from territory that has become submerged.[79]

All those issues were identified by the Baselines Committee independently of the extreme scenario of sea-level rise leading to the submergence of the entire territory, and actual low-water line, of low-lying small island States below the vertical datum, thereby, as stated by the Baselines Committee, "eliminating entirely the normal baseline and any entitlement to maritime zones generated from the baseline".[80] The Sea-level Rise Committee will revert to and address this issue in its final report (in 2018), in conjunction with the discussion of statehood.

1. The Effect of Sea-level Rise on the Outer Limits of Maritime Zones

The issue simply stated is that as sea levels rise the low water line along the coast, which marks the 'normal baseline' for the purposes of Article 5, will usually move inland and some key geographical features used as base points may be inundated and lost.

If, as a matter of international law, the coastal baseline is ambulatory (as the Baseline Committee has concluded)[81] then where a baseline moves inland[82] and critical basepoints

[80] *Baselines Committee Sofia Report*, at 422 (on-line, at 29).
[81] *Baselines Committee Sofia Report*, at 426 (on-line, at 31).
[82] Also, note that because of changes in sediment flows rising sea may in some circumstances also have an opposite effect in some places – accreting sediments to push the low water line seaward.

from which maritime zones are measured are inundated, then the outer limits of the maritime zones which are measured from this baseline may also move landward.[83] Where key geographical features which are used as basepoints for the construction of straight baselines are totally inundated then these movements inland may be even more substantial. This same principle of course applies to the archipelagic baselines of archipelagic States, where the effect of losses of key basepoint features may appear to be even more pronounced.

This is the issue which has exercised writers. For example, Judge Jesus has argued that "a substantial rise in sea level, whatever the cause, should not entail the loss of States' ocean space and their rights over maritime resources, already recognized by the 1982 Convention and by the community of nations."[84] However, this is the unavoidable legal consequence of the finding of the Baselines Committee that baselines are ambulatory.

Schofield has however cautioned that, extreme as this issue may seem in theory, the outer limits of broader maritime zones, notably the EEZ, are often less susceptible to change as they are reliant on a restricted number of contributing or critical basepoints. Thus, even significant changes in the location of the coastline may have only limited impacts in terms of 200 nautical miles outer limits so long as key basepoints are not subject to change.[85]

In the longer term however, as reported above,[86] the planet is already irrevocably committed to continued sea-level rises in the course of this and the coming centuries, and the actual amount and pace of sea-level rise is as yet unknown. Moreover, as IPCC reports in AR5,[87] the actual amount of sea-level rise is uncertain even in the course of the 21st century, and significant changes, especially in some most affected regions, cannot be excluded at this point.

This Committee considered the views of a number of scholars who have written on this issue. There was a common understanding that the unavoidable consequence of the impact of sea-level rise, using the existing law of the normal baseline, is the loss of maritime space. However, legal authors that have addressed this issue so far seem equally dissatisfied by this result, and have proposed different solutions *de lege ferenda*. Soons had pointed out in 1990 that coastal States may legally defend existing coastlines by artificial

---

[83] Where the outer edge of the natural prolongation of the continental shelf is less than 200 nautical miles from the coastal baseline, then the outer limit of the shelf may extend to 200 nm from the baseline (Article 76(1), LOSC). Due consideration should be here also given to Article 76(9) LOSC, which states that the 'coastal State shall deposit with the Secretary-General of the United Nations charts and relevant information, including geodetic data, permanently describing the outer limits of its continental shelf'.

[85] CH Schofield, 'Defining the "Boundary" between Land and Sea: Territorial Sea Baselines in the South China Sea', in: R Beckman, MR Page and L Bernard (eds), *UNCLOS and the South China Sea* (Cheltenham: Edward Elgar, 2014), 21–54.

[86] IPCC projections in AR5; see further above, in part I, section B.2.2 of this report.

[87] Ibid.

means but accepted that this was an extremely expensive option.[88] As the 2012 *Baselines Committee Sofia Report* summarized the issue: "Short of actual physical protection of the coast the authors do not find that the existing law provides for any other way to protect the maritime interests of States threatened with a total loss of territory."[89]

The Sea-level Rise Committee considered that this was an appropriate issue on which to make proposals for progressive development of international law. In order to preserve – at least provisionally – existing maritime zone entitlements, the Committee discussed two possible options for progressive development. The first option would be to propose a new rule freezing the existing baselines in their current position, using the "large scale charts officially recognized by the coastal State";[90] the second option would be to propose a new rule freezing the existing defined outer limits of maritime zones measured from the baselines established in accordance with the LOSC.

The practical complications of divorcing the actual low water line from the 'legal' low water line had already been explored by the Baselines Committee, which had also looked at State practice in some detail. Although it had found evidence that at least one State took the view that the charted line was the definitive baseline for maritime entitlements even where it might depart from the actual low water line,[91] this was found by the Baselines Committee to be at the extreme end of the spectrum of State practice studied, and the majority of State practice was to the contrary or hybrid,[92] while also "the preponderance of the scholarship in this area appears to support the view that charts are not determinative of the naturally ambulatory normal baseline."[93]

The second option of proposing the freezing of the outer limits of maritime zones was the option also discussed by a number of authors cited, most of whom now take part in the work of the Committee as its members. Soons had suggested the creation of a new rule of customary international law which allows coastal States in case of sea level rise to maintain the original outer limits of their maritime zones.[94] Like Soons, Caron had recognized early on the waste of resources that would be involved in physically defending basepoints simply to protect maritime interests[95] and has suggested that, in order to address the problems of inefficiency and conflict, "States should move toward permanently fixing ocean boundaries."[96] He, like Jesus, is in favour of freezing baselines, whereas Rayfuse has proposed that a freezing of maritime zone outer limits "would be consistent with, and

would significantly assist in, the promotion and achievement of the LOSC objectives of peace, stability, certainty, fairness, and efficiency in ocean governance."[97] Schofield and Arsana had considered that one option would be to "legally fix or declare the location of normal baselines and/or the maritime limits derived from them."[98]

Hayashi thinks that "the idea of freezing, and thus permanently fixing, the baselines and consequently the outer limits of various maritime zones, has considerable merit."[99] However he contrasts the two possible approaches pointing out that "the fixing of baselines would mean that the future submerged area becomes internal waters, whereas fixing only the outer limits of maritime zones would result in expanding the breadth of the territorial sea landward to the extent of the shifting baselines" and he considers the proposal to fix baselines, in contrast to fixing outer limits, as having "the merit of not changing the rules on the breadth of the territorial sea and the EEZ as stipulated in Articles 3 and 57, respectively."[100]

This issue was the subject of a preliminary discussion at the Oslo intersessional meeting of the Committee (June 2015) and there was preference expressed for considering modalities *de lege ferenda* for freezing the outer limits of maritime zones. It was felt that the issue would benefit from wider discussion within the Committee in its work on the 2018 final report.[101] The legal consequences of 'divorcing' coastal baselines (which would still be ambulatory) from the outer limits of maritime zones, by freezing the outer limit without freezing the baseline, has implications for some of the key provisions of the LOS Convention, including the breadth of the territorial sea[102] and of the EEZ.[103] Hayashi has also highlighted the risks of freezing what might already be 'excessive' claims where

[101] Note that on 16 July 2015, seven leaders of Polynesian States and Territories signed at Papeete the Taputapu-ātea Declaration on Climate Change. This Declaration states (in para. 4) that, ahead of COP 21 in Paris, "the Polynesian Leaders Group call upon all State Parties to the UNFCCC to" … "with regards to the loss of territorial integrity:… [A]cknowledge, under the [UNCLOS], the importance of the Exclusive Economic Zones for Polynesian Island States and Territories whose area is calculated according to emerged lands and permanent-ly establish the baselines in accordance with the UNCLOS, without taking into account sea level rise."

[102] Article 3, LOSC: "Every State has the right to establish the breadth of its territorial sea up to a limit not exceeding 12 nautical miles, measured from baselines determined in accordance with this Convention."

[103] Article 57, LOSC: "The exclusive economic zone shall not extend beyond 200 nautical miles from the baselines from which the breadth of the territorial sea is measured."

States have established baselines in violation of the rules of the Convention.[104] Moreover, a decision would also need to be made as to which specific point in time that any 'freezing' might be permissible. Concerns have also been raised about the fundamental principles of the law of the sea, such as the principle of the land dominating the sea, rather than vice versa.[105] Although the motive for making such a proposal would be to facilitate stability and orderly relations between States, there might well be unintended negative consequences.

The Sea-level Rise Committee has also yet to discuss in detail how any proposal *de lege ferenda* might best be implemented. Hayashi has systematically adumbrated a number of options, some of which he admits may not be practical – they include the development of customary international law,[106] a protocol to the UN Framework Convention on Climate Change,[107] utilization of the amendment provisions of the LOSC, a decision of the Meeting of the State Parties to the LOSC (SPLOS), or by means of a diplomatic conference open also for States non-parties to the LOSC, or by an agreement adopted by the UN General Assembly after negotiation in its subsidiary bodies or informal consultations.[108]

There is also the question of how long such a 'freezing' might be effective? Would it be regarded as a permanent solution or as a temporary provisional measure until such time as the international community might agree upon a more permanent approach?

2. Effects of Coastline Changes on Maritime Boundaries

The second issue flagged by the Baselines Committee was what it termed the "negative impacts on maritime boundaries negotiated in reliance on normal baselines in existence at the time of delimitation." In other words, if the representatives of two (or possibly more) States negotiating a maritime boundary delimitation agreement have relied on the coastal baseline in order, for example, to measure an equidistance line, and then the coastal baseline changes as a result of inundation and resultant shift in the location of baselines landward caused by sea-level rise. Is it possible for one party then to argue that this is a fundamental change of circumstances which would undermine the validity of the maritime boundary agreement?

The concept of 'fundamental change of circumstances' or clausula *rebus sic stantibus*, is specifically referred to in Article 62 of the 1969 Vienna Convention on the Law of Treaties. Article 62(1) reads:

---

[104] Hayashi, 'Sea Level Rise and the Law of the Sea – Future Options', at 196, citing T. Palmer, 'Sea-level Change and Baselines', in: *Proceedings of the Canadian Hydrographic Conference and National Surveyors Conference, 2008*, at 4.

[105] *Baselines Committee Sofia Report*, at 423 (on-line, at 29).

[106] As suggested by Soons, 'The Effects of a Rising Sea Level on Maritime Limits and Boundaries', at 255.

[107] As proposed in 1990 by the Coastal Zone Management Subgroup of the IPCC, reported by Freestone and Pethick, 'Sea Level Rise and Maritime Boundaries: International Implications of Impacts and Responses', at 76.

[108] All discussed further by Hayashi, 'Sea Level Rise and the Law of the Sea – Future Options', at 200–206.

> A fundamental change of circumstances which has occurred with regard to those existing at the time of the conclusion of a treaty, and which was not foreseen by the parties, may not be invoked as a ground for terminating or withdrawing from the treaty unless:
>
> a) the existence of those circumstances constituted an essential basis of the consent of the parties to be bound by the treaty; and
> b) the effect of the change is radically to transform the extent of obligations still to be performed under the treaty.

However, Article 62(2) does specifically exclude two situations from the application of this doctrine. It provides that:

> A fundamental change of circumstances may not be invoked as a ground for terminating or withdrawing from a treaty: (a) if the treaty establishes a boundary;[109]

Commenting on this provision in the Vienna Convention, Aust notes that "the principle cannot be invoked if the treaty establishes a boundary, that term being used so as to include treaties which cede territory, not merely delimit a boundary".[110] Some scholars have suggested that the application of this provision of the Vienna Convention to maritime boundaries is still an open issue. For instance, Caron has argued that "it is entirely plausible that a State might argue that circumstances had changed in that the parties had not foreseen such a rise in sea level."[111]

Lisztwan has looked in detail at the *travaux préparatoires* of the Vienna Convention text – itself based on an International Law Commission draft prepared by Rapporteur Sir Humphrey Waldock (building on the previous 1957 report of Sir Gerald Fitzmaurice). Her research reveals that many types of boundary treaties were referred to in the context of the negotiation and she concludes that "[a]lthough limited, those comments, and the absence of any contrary statements, suggest that the State Parties intended maritime boundaries to fall within the Article 62(2) boundary exception."[112] From this, Lisztwan draws the conclusion that: "States cannot invoke coastline shift as grounds to terminate a maritime boundary."[113] She also cites the dicta in the *Aegean Sea case*, where the International Court of Justice (ICJ) said

> Whether it is a land frontier or a boundary line in the continental shelf that is in question, the process is essentially the same, and inevitably involves the same element of stability and permanence, and is subject to the rule excluding boundary agreements from fundamental change of circumstances.[114]

---

[109] The second exception is not relevant here: "(b) if the fundamental change is the result of a breach by the party invoking it either of an obligation under the treaty or of any other international obligation owed to any other party to the treaty."

[113] Ibid.

[114] *Aegean Sea Continental Shelf* (Greece v. Turkey), [1978] ICJ Reports 3, 85 (19 December 1978).

As a matter of existing law, the Committee took the view that changes in coastlines arising through sea-level rise or any other reason did not affect, and had not to date affected, the validity of existing maritime boundary agreements. On the grounds of legal stability and certainty the Committee was sceptical as to whether this rule should be re-examined *de lege ferenda* or be subject to revision at this stage, since this could involve a revision of both the LOSC and the Vienna Convention on the Law of Treaties, Article 62(2).

Re-examination of the above rules may, however, become necessary in connection with the extreme scenario of sea-level rise leading to the submergence of the entire territory of low-lying small island States or to their territory becoming uninhabitable. The Sea-level Rise Committee will revert to and address this issue in its final report (in 2018), in conjunction with the discussion of statehood.

The preliminary view of the Sea-level Rise Committee was that, for any treaty negotiated since the time that the issue of climate change and consequent sea-level rise has been in the public domain, the negotiators must be deemed to have been aware of it, hence sea-level rise could not in that event be regarded as a fundamental change of circumstances.

The key question in this regard is to assess at which point in time it could be considered that sea-level rise, of such a magnitude as to impact objective criteria for negotiated boundaries, became a matter which was in the 'public domain'. The First World Climate Conference hosted by the World Meteorological Organization (WMO) was in 1979, while the IPCC was established by UNEP and WMO in 1988 – and the First Assessment Report by the IPCC was published two years later, in 1990.[115] As already mentioned, however, in 2014 the IPCC revised its predictions published in AR4 (2007), and posited sea-level rise of up to approximately one metre by 2100. IPCC estimates in AR5 are, already as of 2016, considered to be rather conservative.

This time could arguably be as early as at the time of the WMO First World Climate Conference in 1979. However, it has been noted that "during the Third UN Conference on the Law of the Sea [which was concluded in 1982], there was no widespread recognition of the possible problems of sea-level rise, and negotiators did not anticipate that there would be a significant global regression of coastlines".[116] There are therefore no provisions in the 1982 LOS Convention itself for dealing with possible rises in sea level;[117] it can therefore hardly be expected that maritime boundary negotiators before that time could have been deemed to have been aware of the issue of sea-level rise as potentially relevant to the agreement they were negotiating.

On the other hand, it could be argued that the latest estimates by the IPCC, as contained in AR5 of 2013/2014, are now based on significantly improved understanding

[115] Regarding findings on sea-level rise in that and subsequent IPCC assessment reports, see *supra*, part I of this report, section B.2.1. Note also General Assembly Resolution 44/206, 'Possible Adverse Impacts of Sea-Level Rise on Islands and Coastal Areas, Particularly Low-lying Coastal Areas', UN Doc A/44/206, adopted on 22 December 1989, 85th plenary meeting; and General Assembly Resolution 43/53, 'Protection of Global Climate for Present and Future Generations of Mankind', UN Doc A/43/905, adopted on 6 December 1988, 70th plenary meeting.

[116] Hayashi, 'Sea Level Rise and the Law of the Sea – Future Options', at 194, as well as the literature cited there.

[117] Ibid.

of components that contribute to sea-level rise, and have for the first time introduced in the public domain a well-founded scientific explanation of all components of sea-level rise and its projections for the 21st century, of such a magnitude as to have the potential to affect the objective criteria on which the negotiation of maritime boundaries is based.

There could also be various other points in time – before, between, or after those already discussed above – at which the knowledge or presumed awareness of the negotiators of the maritime boundaries about sea-level rise as the relevant circumstance might be regarded as being 'foreseen by the parties' at the time of the conclusion of the agreement. Moreover, in those instances in which negotiators are clearly aware that there may be changes to the relevant baselines subsequent to the conclusion of a boundary treaty, the fact that they opted for a defined boundary instead of allowing for later changes indicates a preference for legal stability. The views, suggestions and opinions of the Committee members on this wide range of issues will be required in the further work of the Committee towards its final report in 2018.

PART III: International Law and Sea-level Rise: (Forced) Migration and Human Rights

This part of the report focuses on a segment of Committee's mandate relating to "the study of the … implications under international law of the partial and complete inundation of state territory, or depopulation thereof, in particular of small island and low-lying states" by examining issues relating to human rights and mobility.[118] The combined and cumulative impacts of relative sea level rise, sea-level extremes and other effects of climate change present a range of direct and indirect negative consequences for human lives and living conditions in coastal and low-lying areas. They pose risks to all aspects of human life, including mortality, food and water security, health and well-being, housing, land and other property, livelihoods and industry, infrastructure and critical services,[119] and cultural heritage,[120] which may progressively threaten human security over the course of this century and beyond.[121]

Current legal frameworks do not facilitate the movement of people across borders in anticipation of future climate change-related harm. As explained below, international refugee law generally will not apply. Likewise, it is a misconception that people will necessarily be rendered stateless as a matter of law if their small island country becomes uninhabitable.

The first section (A) provides a brief overview of the ways in which sea-level rise may affect the enjoyment of human rights, including people's ability to remain in their homes. The second section (B) identifies 'tools' that have the potential to address the implications of sea-level rise on human mobility, both in terms of interventions that would enable

affected people to remain *in situ*, as well as those that would assist them to move either within their own country or to another country. The final section (C) draws out key areas and principles of international law with the capacity to lend clarity and content to States' obligations to address the mobility challenges presented by sea-level rise, which will be explored in greater detail in the Committee's final report in 2018.

A. Background

At the outset, it is important to note that sea-level rise does not automatically mean that people will need to leave their homes. Rather, legal, policy, technical and scientific interventions now and in the coming years, including through climate change adaptation and mitigation, will determine whether, and for how long, it is possible for people to remain *in situ* – and whether doing so enables them to lead dignified lives or exposes them to risks and increased vulnerability. The impacts of sea-level rise on the enjoyment of human rights can be favourably influenced by State action on disaster risk reduction and management, climate change mitigation and adaptation, and development policies, among others. Identifying the need for a broad, complementary set of policy strategies necessarily affects how international law should be progressively developed in this area.

Not all communities will experience the same pressures or have the same needs, and the needs of particular individuals within communities will also vary. This is because underlying socio-economic circumstances, differing degrees of exposure and vulnerability, general environmental and geographical circumstances, adaptive capacity and resilience, and the resources of governing institutions will all affect the ability of individuals, communities and governments to respond to change.

These impacts will, in turn, affect human mobility. Where people cannot live in safe conditions with access to livelihoods – or expect they will not be able to in the future – they may move elsewhere. Sometimes they may move because of a sudden-onset event, such as a storm surge, astronomical tide, or flooding. At other times, they may plan to move in anticipation of longer-term changes to their environment due to erosion, change in wetlands, or saltwater intrusion into groundwater. The nature of any movement – as well as its geography – will depend in part on mitigation and adaptation action, what assistance and protection is available to people, and on legal and policy frameworks regulating cross-border movement. Even so, the precise scale and timeframes remain unclear.

1. Sea-level Rise and Human Rights

There is already a substantial body of literature describing the impacts of climate change, including sea-level rise, on people's ability to enjoy their human rights.[122] In successive UN Human Rights Council (HRC) resolutions, States have acknowledged that "the adverse effects of climate change have a range of direct and indirect implications for

[122] See, e.g., literature cited in J McAdam and M Limon, *Human Rights, Climate Change and Cross-Border Displacement: The Role of the International Community in Contributing to Effective and Just Solutions* (Universal Rights Group, Geneva, 2015); S Humphreys (ed), *Human Rights and Climate Change* (Cambridge University Press, Cambridge, 2010); W Kälin, 'The Human Rights Dimension of Natural or Human-Made Disasters', *German Yearbook of International Law*, 55 (2012), 119, 128–29.

the effective enjoyment of all human rights",[123] including "immediate and far-reaching threats to people and communities around the world".[124] The rights to life, adequate food, health, housing, cultural identity and self-determination may be particularly affected.

Since climate change interacts with other stressors, there will always be multiple reasons why people's rights are negatively impacted. As the HRC has stressed, "the effects of climate change will be felt most acutely by individuals and communities … that are already in vulnerable situations owing to geography, poverty, gender, age, indigenous or minority status or disability",[125] with "people in developing countries, particularly in least developed countries, small island developing States and African countries … among the most vulnerable to the adverse effects of climate change on the full and effective enjoyment of all human rights".[126] As such, it is impossible to isolate the precise role that sea-level rise will play in any given scenario (although this may change over time). Similarly, in most cases, more than one human right will be affected because of the interdependence of many rights.

Of course, identifying that the enjoyment of a right may be impacted by rising sea levels does not automatically render a State in breach of its international obligations. States have an obligation to respect, protect and fulfil human rights to protect people from *foreseeable* harm, including from the impacts of sea-level rise, and this may be tempered by a number of factors. In particular, the jurisprudence of both the European Court of Human Rights[127] and the New Zealand Immigration and Protection Tribunal has drawn a distinction between man-made and natural hazards, the latter noting that:

> The disasters that occur in Tuvalu derive from vulnerability of natural hazards such as droughts and hurricanes, and inundation due to sea-level rise and storm surges. The content of Tuvalu's positive obligations to take steps to protect the life of persons within its jurisdiction from such hazards must necessarily be shaped by this reality.[128]

Accordingly, an affected State would be faced with 'an impossible burden' were it required, as a matter of law, to mitigate the underlying environmental drivers of these hazards in order to comply with the obligation to protect against the arbitrary deprivation of life.[129]

Thus, while there is growing recognition that inherent in existing human rights obligations are duties that require States to address adverse impacts of climate change, greater clarity and guidance is needed on the ways in which international and regional human rights law obligate States to take action to adapt to and address the mobility-related

impacts of sea-level rise on their populations. This is especially so where movement occurs across an international border.

2. Sea-level Rise and Mobility

In 2014, more than 19.3 million people fled their homes in the context of disasters stemming from natural hazards.[130] Each year since 2008, disasters have displaced an average of more than 26 million people.[131] Most movement took place within countries, not across international borders – a trend that is predicted to continue.[132] In some contexts, however, such as low-lying island States, international movement may become inevitable over time.[133]

Global estimates for movements linked to slower-onset changes, such as sea-level rise, do not exist. However, an array of literature, including research and findings from the Nansen Initiative, shows that the gradual impacts of sea-level rise, such as erosion, saltwater intrusion into groundwater and rising water tables, will progressively affect living conditions and livelihood opportunities, which may spur migration.[134] Experience indicates that people will seek to migrate from at risk areas, rather than waiting for a crisis point.[135]

A key point to note is that even when land is not submerged, it may become unsuitable for human habitation. Saltwater intrusion into groundwater, surface water and land may jeopardize fresh water supplies, diminish the fertility of agricultural land, and in turn affect livelihoods and food security. Immediate and short-term impacts, such as flooding, inundation and saltwater intrusion, are likely to be exacerbated by longer-term impacts, such as erosion.[136] Additionally, States whose governance capacity is already weak may

[136] R Nicholls, 'Planning for the Impacts of Sea-level Rise', *Oceanography*, 24 (2011), 144, 147.

be significantly challenged long before substantial portions of habitable territory are lost and populations are seriously affected. This has implications for human mobility.

It is also important to note that slow-onset processes like sea-level rise may have more immediate impacts. Indeed, most movement will be triggered by 'interim' extreme weather and sea-level events, such as storm surges, astronomical tides, and flooding. The ~20 centimetre increase in global sea levels since the mid-19th century means that there is now much more water riding on a storm surge, which makes flooding more extensive and severe.[137] Sea-level rise may also interact with other oceanic impacts associated with climate change. Such interactive effects were seen in Cyclone Pam in Vanuatu in March 2015, when higher water surface temperatures also created faster wind speeds and more damaging rainfall.[138] The cumulative effects of a series of sudden-onset events can erode resilience over time and contribute to further displacement.

Overall, the relationship between human mobility and climate change, including sea-level rise, is complex and non-linear, and depends on a range of interacting factors.[139] It is a multi-causal phenomenon in which climate change impacts interact with other economic, social, and political drivers (or stressors) that themselves affect migration.[140] In many cases, it will be impossible to disentangle the impacts of sea-level rise from other impacts when it comes to mobility decisions.

Finally, although movement away from the impacts of environmental change has long been an important adaptation strategy,[141] it will not always be an option. The most vulnerable people may be 'trapped' because they do not have the resources to move at all.[142] Those who can move may not be able to go very far because they do not have the economic or social networks to assist them. Movement across international borders may be hampered by immigration formalities and high costs.[143]

B. Tools

Mobility issues associated with the impacts of sea-level rise[144] require both timely and proactive interventions, and pertinent reactive responses. International law has a role to play, but there are also many pragmatic national, regional and/or bilateral interventions that will not require the creation of new international legal principles or frameworks.

[143] Adger et al, 'Human Security', *Climate Change 2014. Contribution of WG II to AR5*, at 758.

[144] In general, throughout this part of the report, unless the context indicates otherwise or 'sea-level extremes' is explicitly mentioned, whenever a reference is made to sea-level rise, it is intended to also encompass sea-level extremes.

In short, legal and other measures are needed to help people: (a) remain *in situ*, where this is possible and desirable; (b) move elsewhere, in anticipation of harm; and (c) be protected and assisted if they are displaced (whether internally or across an international border). In all cases, the principles of human dignity, non-discrimination and international cooperation must be paramount.[145]

1. Avoiding Movement: Disaster Risk Reduction and Climate Change Adaptation

Most communities likely to be adversely affected by the impacts of climate change and disasters want to remain in their homes for as long as they can. For example, in the South Pacific, where low-lying islands are particularly susceptible to sea-level rise, communities want to develop adaptation initiatives to enable them to remain in their homes for as long as possible, while also developing strategies to facilitate migration for those who wished to move.[146]

Disaster risk reduction is a very important tool in this regard. It seeks to avert damage where possible, lessen its negative impacts when it does occur, protect the most susceptible through risk and vulnerability assessments, build people's resilience, and take multi-sectoral approaches to creating national strategies.[147] The Sendai Framework on Disaster Risk Reduction 2015–30 highlights the need to develop disaster risk reduction policies based on information on persons and communities particularly exposed to disaster risks, and to formulate "public policies, where applicable, aimed at addressing the issues of prevention … of human settlements in disaster risk zones"[148] It also calls for the promotion of "transboundary cooperation … to build resilience and reduce disaster risk, including … displacement risk".[149] Likewise, national climate adaptation plans and similar instruments can importantly help people to stay in their homes, even when the impacts of climate change seriously affect their traditional livelihoods.

By enhancing resilience, any displacement that is triggered by a sudden-onset event may only be a short-term, emergency measure to get out of harm's way. Where *in situ* adaptation is not viable, has been exhausted, or is unsatisfactory for other reasons, movement away from impacted areas may be another form of adaptation/disaster risk reduction.

2. Responding to Movement: The Role of International Law

Movement can be both a form of adaptation, as well as a sign that other types of adaptation have failed,[150] and will fall somewhere on a spectrum from forced to voluntary. For instance, 'displacement' describes the (primarily) forced movement of people, often at

---

the point when disaster strikes. 'Migration' refers to (primarily) voluntary movement, which, in the present context, would likely occur in anticipation of future harm (and in stages, over a longer timeframe). The extent to which people can migrate voluntarily in anticipation of, or in response to, the impacts of sea-level rise, will depend upon the legal and policy frameworks in place, and the resources available to those wishing to move. 'Planned relocation' describes a process in which people move or are moved away from their homes, settled in a new location, and provided with the conditions for rebuilding their lives. It can be either forced or voluntary, large-scale or small-scale.[151] It is generally carried out by the State as a risk mitigation strategy, but it is also possible that communities may take the initiative to relocate themselves.

Reflecting these forms of mobility and the critical role of policy in shaping their contours, paragraph 14(f) of the Cancun Adaptation Framework, adopted in 2010, invited States to enhance action on adaptation by undertaking, inter alia, "measures to enhance understanding, coordination, and cooperation with regard to climate change induced displacement, migration and planned relocation, where appropriate at the international, regional and national levels".[152] Although non-binding, paragraph 14(f) has operational significance. First, it evidences States' recognition of the impacts of climate change on human movement, the need for strategies to address this, and the recognition of three types of movements as forms of adaptation: displacement, migration and planned relocation. Secondly, it provides a basis for securing adaptation funding to develop strategies that support mobility as an adaptation option.

The Paris Agreement, adopted in December 2015, has moved towards a more action-oriented agenda. It calls for the establishment of a task force, under the auspices of the Warsaw International Mechanism for Loss and Damage associated with Climate Change Impacts, "to develop recommendations for integrated approaches to avert, minimize and address displacement related to the adverse impacts of climate change".[153] The agreement does not specify how the task force will operate, and it is not yet clear how its recommendations will be implemented, what weight they will carry, or how they will be financed. The Advisory Group on Climate Change and Human Mobility, comprised of a small number of academic, policy and operational actors, including the United Nations High Commissioner for Refugees and the International Organization for Migration,

[151] E Ferris, *Protection and Planned Relocations in the Context of Climate Change* (UNHCR Legal and Protection Policy Research Series, Geneva, 2012) 11; http://www.refworld.org/docid/5023774e2.html. See also *Guidance on Protecting People from Disasters and Environmental Change through Planned Relocation* (Brookings/Georgetown/UNHCR, 2015). The term should not be confused with the notion of 'resettlement' in the refugee context, which refers to resettling refugees from a country of first asylum to a third State on a permanent basis.

[152] Decision 1/CP.16, The Cancun Agreements: Outcome of the Work of the Ad Hoc Working Group on Long-Term Cooperative Action under the Convention, UN Doc. FCCC/CP/2010/7/Add.1, 15 March 2011, paragraph 14(f).

[153] Draft decision -/CP.21, Adoption of the Paris Agreement, UN Doc. FCC/CP/2015/L.9/Rev.1, 12 December 2015, paragraph 50; see also paragraph 51. The preamble also notes that when taking action to address climate change, States parties should "respect, promote and consider their respective obligations on human rights, the right to health, the rights of indigenous peoples, local communities, migrants, children, persons with disabilities and people in vulnerable situations and the right to development, as well as gender equality, empowerment of women and intergenerational equity".

has recommended that the task force should have four key objectives in carrying out its mandate, namely to enhance (a) knowledge; (b) policy coordination; (c) action; and (d) technical expertise and capacity-building.[154]

Cross-cutting all three forms of mobility – displacement, migration and planned relocation – is whether the movement in question occurs within a State, or involves movement across an international border. As noted above, most displacement, migration and planned relocation is likely to take place *within* countries. This is significant because the range of applicable international law is not identical in each case, and consequently the need for development of international law to address any resulting gaps differs.

The extent to which people feel compelled to move across international borders may be tempered by the degree to which assistance and protection is available to people who are internally displaced, as well as the legal and policy frameworks regulating cross-border movement. Some international movement is inevitable and is already occurring (although the scale is unclear).[155]

Proactive interventions that can be put in place now to allow people to undertake planned migration can be an effective way to build long-term resilience, especially in the face of slower-onset impacts of sea-level rise and sea-level rise itself. Research has shown that resilience determines the extent to which people can use migration to 'flourish', rather than just to 'survive'.[156] Any migration or relocation strategies must be developed and executed in a manner fully consistent with the minimum standards of protection articulated under human rights law.

2.1 Displacement

Some existing legal tools are relevant to displacement. With respect to internal movement, the UN Guiding Principles on Internal Displacement are particularly relevant. Although in themselves non-binding, the Guiding Principles reflect binding international legal standards and have been recognized by the international community as an "important international framework for the protection of internally displaced persons",[157] addressing people's needs and rights before, during and after displacement.[158]

[157] UNGA, 2005 World Summit Outcome, UN Doc A/RES/60/1 (24 October 2005) para 132.

[158] Guiding Principles on Internal Displacement, UN Doc E/CN.4/1998/53/Add.2 (11 February 1998), http://www.un-documents.net/gpid.htm. They are complemented by other international and regional instruments on human rights and disasters, including the 2009 African Union Convention for the Protection and Assistance to Internally Displaced in Africa (Kampala Convention), which has a specific provision (Article 5(4)) obliging States parties to take measure to protect and assist persons who have been internally displaced due to natural and human made disasters, including climate change. They are further complemented by non-State initiatives, such as the Peninsula Principles on

The challenge lies in strengthening the normative and operational implementation of the Guiding Principles and related instruments. They can be strengthened *normatively* through the development/amendment of national laws, policies and strategies, and/or sub-regional and regional instruments, to recognize and respond to displacement as a response to disasters including those linked to climate change. They can be strengthened *operationally* by building/enhancing the capacities of national and local authorities to implement and apply them.[159]

At the international level, the 1951 Convention relating to the Status of Refugees, as well as complementary forms of protection under human rights law, are also potentially relevant. As explained elsewhere,[160] however, the existing international legal regime on refugees, complementary protection and stateless persons is unlikely to provide assistance in most cases. Further, there is no political will among States to expand their protection obligations under international law at this point in time.

Nevertheless, it may *already* be possible to engage States' existing refugee or complementary protection obligations in the context of sea-level rise and other environmental degradation or destruction – for instance, if a government were to restrict access to fresh water supplies or agricultural land, or to limit humanitarian assistance in the aftermath of an extreme weather event.[161] The 'cause' of the harm would not be sea-level rise or environmental destruction per se, but it would provide the background setting.

2.2 Migration

Migration can be an effective way to build long-term resilience of people and communities, allowing them to cope with adverse impacts of sea-level rise and potentially reduce or avoid displacement at a later stage. Experience indicates that people will initially seek to migrate from at-risk areas rather than wait until a crisis point arrives.[162] In this respect, proactively anticipating and planning for migration is an important policy option. Migration can enable people to move 'voluntarily' and relatively safely away from the impacts of sea-level rise, be a beneficial channel for livelihood diversification, and play an important role in risk management strategies. Increased migration could also help relieve population and resource pressures, particularly in some low-lying island States, where these are of pressing concern.[163]

People who voluntarily migrate to another part of their home country to avoid the anticipated negative impacts of sea-level rise remain entitled to the full range of rights and protections afforded by international (and domestic) law as nationals of that country including, in particular, the right to liberty of movement and freedom to choose one's place of residence. While core norms of international human rights law, such as the prohibition on discrimination, will be important, the main challenges for international law in the case of internal (voluntary) migration will be more operational and compliance-oriented, than

normative. In contrast, while there are some tools to address cross-border movement, there are also considerable legal gaps.

Many of the existing tools to address cross-border mobility are premised on the idea that it is too dangerous to return *now or in the immediate future*. One important tool in this regard is the use of temporary protection visas, or ad hoc adjustments to existing immigration processes, to assist people who need to leave disaster-affected countries.[164] Such tools are more displacement-oriented and remedial than proactive, and do not facilitate movement that is anticipatory – namely, where people calculate future risks and decide to leave rather than stay.[165] International treaties concerning labour migration will typically not apply because they are designed to regulate movement across borders for purposes of employment.

Existing national immigration laws and regulations related to employment, family or education, as well as other forms of privileged access to territory, might allow for adaptive international migration.[166] In some parts of the world, processes of colonization and trusteeship have provided the foundation for sub-regional 'clusters' of States within which varying levels of privileged rights to temporary or permanent residence, or labour-market access, are conferred, particularly in the State that acts as a 'cluster hub'. Examples in the Pacific include New Zealand, USA and France, and new clusters are emerging centred around countries such as Australia.[167] At the regional level, existing free movement agreements also present important existing frameworks for facilitating migration as adaptation, but require adjustment to be effective in the context of sea-level rise.[168]

Nevertheless, targeted mechanisms for enabling people to migrate in the context of sea-level rise, and indeed the broader effects of climate change, need to be part of the policy mix. Some States affected by sea-level rise have already called for the expansion of existing migration opportunities to create planned movement pathways for their nationals

and to enable them to 'migrate with dignity'.[169] Managed regular admission schemes, including immigration quotas or targeted admission of migrants from particularly affected areas, would assist adaptation efforts, and at the same time potentially reduce the extent of irregular migration. These could be implemented through bi-lateral or (sub-) regional agreements between countries, building on historical migration flows and new patterns of movements.

2.3 Planned relocation

In the face of sudden- and slow-onset impacts of sea-level rise, planned relocation may be used as a preventative measure to reduce the risk of future displacement by moving people out of risk-prone areas. Planned relocation may also serve as a durable solution by enabling displaced people to return as a community to a new part of the country, in the event that their original place of origin has been destroyed or rendered uninhabitable. Most planned relocations are envisaged as taking place within countries, rather than across international borders (for practical, legal, cultural and related reasons). In cases where internal planned relocation is not a viable long-term solution, such as in some low-lying island States, it remains to be seen whether movement will take place as individual/household migration, or whether the planned relocation of whole communities across international borders will be possible. This will depend on what other States are prepared to offer.

The planned relocation of persons or groups of persons should be an option of last resort. This was the clear message from the Pacific Island consultation held by the Nansen Initiative in 2013,[170] and is borne out by fraught experiences of cross-border relocation in the past in that region,[171] and the experiences of development actors in moving populations to facilitate various development projects.[172] Over the course of this century and beyond, the planned international relocation of groups may, however, be necessary for those remaining in low-lying island States, as their territory becomes uninhabitable from the impacts of sea-level rise and other effects of climate change. In part, this will depend on what other mitigation and adaptation strategies are put in place – including migration strategies to enable people to move if and when they so desire.

In a context where planned relocation becomes a necessary and viable option, policy-makers will need to pay acute attention to planning, embrace lessons learned from past experiences,[173] prioritize a human rights-centred approach throughout the process, and involve and consult those to be relocated as well as host communities.

Planned relocation is a tool with myriad complexities. Aside from the intricacies of securing agreement to relocate communities to the territory of another State, there are

[169] Kiribati is one example; see McAdam, *Climate Change, Forced Migration, and International Law*, 175.

implications for fundamental issues such as self-determination, identity and status, as well as other important facets of daily life including livelihoods, health, shelter, culture, and property. Effects of dislocation can have intergenerational consequences. Experiences from the development field demonstrates that impoverishment of relocated groups is a distinct risk. There are also questions about how to balance the human rights of relocated groups with those of the communities into which they move.

C. Further Issues for the Consideration of the Committee

1. International Human Rights Law

Human rights law, and the different categories of obligations (respect, protect, and fulfil) intrinsic in specific rights, must inform the ways in which States undertake action to address the impacts of sea-level rise, including action to facilitate *in situ* adaptation and prevent and address internal and international movements. Greater clarity and guidance is needed on the ways in which international and regional human rights law obligate States to take action to adapt to and address the impacts of sea-level rise on their populations, including as they pertain to the three different types of mobility discussed above in section B.

Beyond this general duty, emerging jurisprudence from the European Court of Human Rights and UN treaty bodies have shed light on the ways in which States' obligations to respect, protect and fulfil certain human rights relate to phases of disaster response.[174] Arguments have also been made that victims of natural disasters can claim a right to humanitarian assistance when in need pursuant to extant human rights.[175] In these ways, there is growing recognition that inherent in existing human rights obligations are duties that require States to address adverse impacts of climate change. Various bodies are attempting to articulate and give meaning to the content of such duties.[176] In addition, some treaties expressly refer to disaster relief,[177] and there are also efforts to recognize a single, overarching right to a healthy environment.[178]

However, the risks posed by sea-level rise for some States may, in turn, challenge contemporary understandings about State responsibility, including which State(s) bear legal duties when it comes to the protection and enjoyment of human rights.

2. Other Principles of International Law

States that have contributed the least to anthropogenic changes to the climate system will be many of the worst affected. They will require support to assist and protect their own populations and to respect, protect and fulfil their human rights obligations. Support may

[175] Ibid, 141.

[176] These aspects are expected to be the subject of further research within this Committee.

[177] Convention on the Rights of Persons with Disabilities, entered into force 3 May 2008, 2515 UNTS 3, Art 11; African Charter on the Rights and Welfare of the Child, entered into force 29 July 1999, OAU Doc CAB//LEG/24.9/49, Arts 23 and 25.

[178] J Knox, *Report of the Independent Expert on Issues of Human Rights Obligations Relating to the Enjoyment of a Safe, Clean Healthy and Sustainable Environment: Preliminary Report*, United Nations Human Rights Council, UN Doc A/HRC/22/43 (24 December 2012) para 51.

take the form of technical, financial and operational measures, aspects that are already envisioned under the UNFCCC and associated instruments.

In this context, greater clarity is needed on the role and responsibility of the international community to step into the breach. Further guidance is needed on the ways in which the international community's collective responsibility to adapt to the impacts of climate change should be translated into more specific obligations and discharged in specific situations.

In particular, two general principles of international law – the duty to cooperate, and the principle of common but differentiated responsibilities – have the potential to provide greater clarity on the role and responsibilities of the States. Additionally, elementary considerations of humanity and the closely connected concept of human dignity may provide overarching normative concepts to guide the development of strategies to respond to the impacts of sea-level rise, acting as meta-principles guiding necessary conduct.

Clarifying the content of States' existing duties under human rights law as they pertain to the impacts of sea-level rise, and complementing them by determining the content of the duty to cooperate in light of the principle of common but differentiated responsibilities, has the potential to provide a substantial contribution to the field and to lead towards developing options for the progressive development of international law. These aspects will be the subject of further research and discussion in the lead-up to the preparation of the Committee's final report in 2018.

ILA COMMITTEE ON INTERNATIONAL LAW AND SEA LEVEL RISE

WORKING SESSION

Wednesday, 10 August 2016

(2:00 pm – 4:00 pm)

Chair: Professor Aziz Tuffi Saliba (Brazilian)

The Chair welcomed attendees and introduced the reporters after which he invited the Chair of the Committee, Professor Davor Vidas, to outline aspects of the Committee and its work towards the draft Interim Report that is presented at today's session.

Professor Davor Vidas (Norway), Chair of the Committee on International Law and Sea Level Rise, thanked the session Chair for the opportunity and said that the main purpose of today's open session of the Committee was to present and discuss its draft Interim Report.

He reminded the delegates that while this Committee has the reference to 'sea-level rise' in its name, it is in fact not the first International Committee of the ILA set to study international legal implications of sea-level rise, rather that it was the Committee on Baselines under the International Law of the Sea (hereinafter: Baselines Committee) which was formed in 2008 with a part of its original mandate stating that: "the need to identify, and possibly clarify or develop, the existing law concerning the normal baseline *arises in response to possible sea level rise* that has been predicted to accompany the phenomenon of climate change, and the effects this may have in particular upon low-lying, small island developing states".

He also reminded that in 2012, when the Baselines Committee adopted its first Report at the Sofia Conference, it concluded that: "the loss of a State's territory to rising sea levels is *not primarily a baseline or law of the sea issue*. Substantial territorial loss is a much broader issue encompassing concerns of statehood, national identity, human rights, refugee status, state responsibility, access to resources, and international peace and security". The ILA Conference at Sofia acknowledged that this array of issues would require consideration by a committee to be set up for the specific purpose of addressing such a broad range of concerns.

Professor Vidas stated that this Committee on International Law and Sea Level Rise in a way evolved from part of the original mandate of the Baselines Committee, however with a mandate that is a far broader one than limited to baselines and the law of the sea only, since it includes the tasks to "study the possible impacts of sea-level rise and the implications under international law of the partial and complete inundation of state territory, or depopulation thereof, in particular of small island and low-lying states"; and "develop proposals for the *progressive development* of international law in relation to the possible loss of all or of parts of state territory and maritime zones due to sea-level rise, including the impacts on statehood, nationality, and human rights".

He added that the establishment of the Committee was prompted by current natural science concerns about the profound changes on-going in the Earth system (including, but not limited to, climate change) – and the possible ramifications of those changes for international law.

Although the exact figures are uncertain, even for this century, he reminded the meeting that scientists agree that one major feature of a warmer world will be rising sea levels and that scientific literature on this aspect is quickly growing. The matter is highly relevant for several areas of international law and requires a study inter-linking different parts of it, he said.

One such part, he stated, is directly related to the sea: to the law of the sea, regulating maritime entitlements of states and delimitation of their maritime zones. Ultimately, he continued, sea-level rise may call into question the conceptual architecture of the maritime zones under today's law of the sea. While this is a complex matter in its own right, the issue of sea-level rise may – in certain special situations, in particular of some low-lying Pacific and Indian Ocean states – extend far beyond the law of the sea and the determination of baselines and maritime zones of the coastal states, he stated.

He explained that this gives rise to fundamental questions regarding aspects of state territory and statehood under international law, such as the way that the concept of a defined territory is seen as a constituent criterion of statehood in international law. Aspects like that, he considered, may have to be re-examined in a perspective of profound changes in natural conditions. However, he held that the key factor may be population, rather than territory itself, as small island states are likely to become uninhabitable for other reasons long before they become physically submerged. Do people then resettle as individuals only, or as a community? And, indeed, when would a state cease to exist – given the criterion of population in defining statehood. These questions, he pointed out, have far-reaching implications.

Professor Vidas went on to explain that the Committee was faced with a rather comprehensive mandate, and that at the first meeting, at the Washington ILA Conference in 2014, it had already decided to address this mandate through two main phases – and accordingly, to produce an Interim Report first (the one presented today), and a comprehensive Report thereafter, for the next ILA Conference to be held in Australia in 2018, at which stage the Committee will also formulate some recommendations.

He explained that main issue-areas to be dealt with by the Committee were identified as:

- the law of the sea;
- forced migration and human rights; and
- issues of statehood and international security.

Although each of these issue-areas has already attracted a lot of research and publications, he further explained that the Committee considered that it could make a useful contribution, within the framework of its mandate, by:

- synthesising these various issues,
- elaborating interlinkages; and
- considering options for proposals *de lege ferenda*.

He explained that the Committee agreed to divide its work thematically into two main stages. The first stage involved two parallel streams of study: one on the law of the sea issues, and the other on the migration and human rights issues. That stage was now

completed with the Interim Report. The second stage, as he explained, will from now on involve the study of the statehood question and of subjects of international law, but also other issues of international law and broader issues of international security, as the common elements of both streams.

Finally, he added that the Committee had discussed impacts of sea-level rise on other areas of international law, such as cultural heritage law and environmental law (for instance, in the context of biodiversity protection regimes), but that it was suggested that these issues might be relevant in the possible later stages of the Committee's work.

Before inviting Professor David Freestone, Co-Rapporteur of the Committee, to present the main issues and findings in the Interim Report, Professor Vidas added that the themes dealt with by the Committee have so far attracted 29 Members and 6 Alternates from a total of 19 different ILA branches (and from six continents) to join the work of the Committee.

Professor David Freestone (United Kingdom), Co-Rapporteur of the Committee specially dealing with the law of the sea aspects of the Committee's mandate, introduced his presentation by underscoring the importance of the issue of sea-level rise and he alluded to the Intergovernmental Panel on Climate Change's Fifth Assessment Report which noted that projections of sea-level rise are larger than in the Fourth Assessment Report, primarily because of improved modelling of land-ice contributions. He then moved on to address the potential impacts of sea-level rise on maritime zones. In this regard, he noted that the Baselines Committee 2012 Sofia Report drew important conclusions, namely that:

- the normal baseline is ambulatory;
- under extreme circumstances … [a] change could result in total territorial loss and the consequent total loss of baselines and of the maritime zones measured from those baselines;
- the existing law of the normal baseline does not offer an adequate solution to this potentially serious problem;
- the existing law of the normal baseline applies in situations of significant coastal change caused by both territorial gain and territorial loss. Coastal states may protect and preserve territory through physical reinforcement, but not through the legal fiction of a charted line that is unrepresentative of the actual low-water line.

In relation to maritime boundaries, he then stated that there may be problems associated with maritime boundaries negotiated in reliance on normal baselines in existence at the time of delimitation and the outer limits of a state's maritime zones proclaimed in reliance upon a normal baseline. He noted that under these circumstances, a question arises as to whether the existing law of normal baselines would or should apply.

He then summarised the issues for the Committee's Interim Report. He said first and foremost the Committee will not second guess the findings of the Baselines Committee but it is considering advantages of ambulatory or fixed baselines or of fixed outer limits of maritime zones as well as how such lines might be fixed *de lege ferenda*. He added that the Committee is also seeking to answer the question whether or not maritime boundary treaties are affected by the rule generally known as *clausula rebus sic stantibus* despite

Article 62(2) of the Vienna Convention on the Law of Treaties and that this also includes the question whether or not sea-level rise does or should qualify as a fundamental change of circumstance for the purpose of *clausula rebus sic stantibus*.

The Chair invited questions and comments and none were forthcoming at this stage.

Professor David Freestone (United Kingdom) proceeded to present the third part of the Committee's Interim Report which was on migration and human rights. He acknowledged that this part was prepared by Professor Jane McAdam (Australia), Co-Rapporteur specially dealing with the aspects of migration and human rights, who unfortunately was unable to attend. The third part of the report had three sections. Section A focused on how sea-level rise may affect human rights, including people's ability to remain in their homes. Section B focused on 'tools' to address the impacts of sea-level rise on human mobility and the assistance of affected people to remain *in situ* or to move either within their own country or abroad. The last section dealt with key areas for future study.

He then reported that the key findings are that:

- displacement linked to climate change is a multi-causal phenomenon;
- climate change impacts interact with other economic, social, and political drivers (or stressors) which themselves affect migration;
- most movement will occur within states, not across borders;
- slow-onset processes like sea-level rise can also have more immediate impacts (e.g. stronger storm surges, flooding);
- people may be displaced by a sudden-onset event (cyclone) or may migrate in anticipation of longer-term changes to their environment (erosion, saltwater intrusion);
- people have different 'tipping points', related to such things as underlying socio-economic conditions, environmental exposure, vulnerability, resilience, and access to resources;
- governance will impact significantly on how disasters are experienced and responded to;
- building codes, disaster risk reduction, climate change mitigation and adaptation, development, etc. help to shape community resilience;
- legal and other measures are needed to help people to remain at home, where possible and desirable, to move elsewhere, before disaster strikes and to be protected and assisted if displaced.

Having outlined the preliminary findings he noted that in addressing the question of the impact of sea-level rise on human rights the needs and rights of affected individuals must be central to all responses and the principles of human dignity, non-discrimination and international cooperation must be paramount. Regarding displacement he stated that the guiding principles on internal displacement must address needs and rights before, during and after displacement but these need to be strengthened normatively and operationally.

He stated that, in sea-level rise induced displacements, people will not necessarily be rendered stateless as a matter of law if their state becomes uninhabitable. He also explained that generally, international refugee law will be inapplicable. In relation to migration he stated that current legal frameworks do not facilitate the movement of people across borders in anticipation of future climate change-related harm. He added, however, that

migration can be a form of adaptation by building long-term resilience hence states should consider mechanisms to enable people to move from particularly affected areas and this can be achieved through an expansion of existing visa categories, e.g., by special visas for at-risk areas. He then highlighted the significance of planned relocations as a response to forced migration noting that these would mostly be within states as opposed to cross-border movements.

Regarding human rights, he addressed the issue through questions, namely:

- What are States' obligations under international and regional human rights law to respect, protect and fulfil specific rights to protect people from foreseeable harm, including sea-level rise?
- Drawing on emerging jurisprudence in relation to disaster relief, to what extent are such duties inherent in states' existing human rights obligations? What is their content in specific situations?
- What are states' obligations under international and regional human rights law to take action to adapt to and address the impacts of sea-level rise on their populations, including in relation to displacement, migration and planned relocation?
- Which state(s) bear legal duties in this context (especially if sea-level rise challenges contemporary understandings of state responsibility)?
- What responsibilities does the duty bearer have with respect to adaptation, including mobility?
- Is there a right to a healthy environment? To disaster relief?

Similarly, he stated that the question of the international community's responsibility must be answered through the following questions:

- What is the role and responsibility of the international community to assist states vulnerable to sea-level rise?
- How should the international community's collective responsibility to adapt to the impacts of climate change be translated into more specific obligations, and discharged in specific situations?
- What is the meaning and content of the duty to cooperate (in light of the principle of common but differentiated responsibilities), especially when it comes to states taking joint and separate action to protect human rights in the context of sea-level rise?
- Can elementary considerations of 'humanity' and 'dignity' serve as overarching normative concepts to guide strategies to respond to the impacts of sea-level rise?

In conclusion, he stated that there was work underway to collate and compare states' understandings of international cooperation and international responsibility-sharing in the context of climate change law and refugee law, which might be used as a springboard for further research and analysis by the Committee. Also underway was work on the implications of sea-level rise on the protection of cultural heritage, and how international law should protect cultural heritage and identity as a human right if communities are displaced from their homes. He then concluded the presentation and thanked delegates for their attention.

The Chair invited questions and comments.

Professor Makoto Seta (Japan) asked why the Committee is concerned that freezing the outer limits of the maritime zones would challenge a fundamental principle of the law of the sea known as 'the land dominates the sea'. In his opinion, it is indeed possible to consider 'the land dominates the sea' as a general principle, but, in certain exceptional circumstances caused by sea-level rise, it will be so that, in effect, 'the sea dominates the land'; and in such situations an exception from the general principle should be allowed.

Professor David Freestone (United Kingdom) thanked Professor Seta for this comment and added that, with sea-level rise, the world will be facing some major changes in current natural conditions, due to which the Committee will have to contemplate proposals as to how to take geographical features into account in interpreting the provisions of the Law of the Sea Convention and also in progressively developing the law of the sea.

Dr Vasco Becker-Weinberg (Portugal) suggested that accepting that path might also have implications for maritime delimitation itself, including for the methodology developed thus far by international judiciary. He was therefore interested to hear views on whether raising the questions indicated in the discussion above might not entail implications beyond the issue of sea-level rise.

Professor Davor Vidas (Norway) responded that there are no readymade answers to a change of such proportions as presented in scientific predictions of sea-level rise in the long run. However, he went on to note, that the primary issue before the Committee in this respect concerns the specific situation, of a *sui generis* nature, of several low-lying island states. This is likely to require specially-tailored solutions to which the Committee will try to contribute by identifying options for practical solutions as regards this unprecedented situation. He acknowledged that the Committee will have to look into the fundamental principles as currently embodied in the law of the sea, and agreed that, even though the Law of the Sea Convention does not explicitly state as a principle that 'the land dominates the sea', its architecture of maritime zones is largely based on that approach. He added that, in a longer-term perspective, the consequences of a profound change in the current geographical circumstances due to rising sea levels will give raise to fundamental considerations for the law of the sea, and that the Committee is still in a position to analyse options for possible legal solutions in theory, whereas the broader aspects of the law of the sea will remain among core issues in the work of the Committee.

Dr Vasco Becker-Weinberg (Portugal) pointed out, with reference to the geographic situation of Bangladesh, that the sea is already 'dominating the land' there in some respects; and that, if current predictions as referred to in the report are accurate, the situation is only going to get worse. With this in mind, he was interested in views regarding the predictability and certainty of maritime boundaries, like those between Bangladesh and Myanmar in the Bay of Bengal, which is a matter related to maritime boundary delimitation and is therefore a process in its own right.

Professor David Freestone (United Kingdom) responded that, as the Law of the Sea Convention does not offer solutions here, the Committee will have to devise proposals *de lege ferenda*, and also recognise some principles as more important than others. He added that it is unclear whether these proposals might entail challenges to the current law of the sea, but in any case, the Committee will need to present concise arguments for and

against the different approaches suggested. He further noted that some changes in the current regime may be inevitable.

Pham Trang (ILA Scholar, Vietnam) was interested to know how sea-level rise might impact the practice of international courts and tribunals. She referred to the recent arbitral award in the South China Sea case in which the legal status of some maritime features was addressed, and pointed out that the evidence referred to dated from the 1930s to 1950s. She therefore wondered about the impact of sea-level rise since then, and whether this might have changed the characteristics of some maritime features, resulting, e.g., in islands becoming rocks or low-tide elevations. In her view, the Tribunal did not mention this issue in its award.

Professor David Freestone commented that the award in the South China Sea arbitration fleshes out and clarifies the meaning of some provisions of the Law of the Sea Convention, and that we can expect an evolution of legal thinking in the future, as the natural conditions are increasingly becoming subject to change – which is also a key issue for this Committee.

Professor Clive Schofield (Australia), Member of the Committee who also acted as an expert witness before the Arbitral Tribunal in the South China Sea case, commented that the Tribunal in the South China Sea arbitration did consider issues related to tidal conditions in its assessment of the relevant insular features, and concluded, as evident in its award of 12 July 2016, that it had sufficient information concerning historical observations of tidal conditions in the South China Sea, and was confident in the consistency of the hydrographic information before it regarding tidal levels.

Gawie Kanjemba (ILA Scholar, Namibia) asked about the most likely courses of action for maintaining statehood for low-lying island states and citizenship of their affected people, who will at some point be forced to migrate. He wished to know what international law provides in this regard and what can be done in terms of proposals for legal development in order to ensure smooth transitions in this respect.

Professor David Freestone (United Kingdom) responded that this is an issue that international law has not really had to address up until now; the Interim Report has identified some issues, and the Committee will in its further work aim at offering workable proposals in this regard.

Professor Davor Vidas (Norway) concurred with Professor David Freestone and added that this will be another important aspect of the Committee's work for the next two years, also noting that this inquiry might not necessarily be limited to the statehood question but could encompass broader considerations of international legal personality and subjects of international law.

The Chair asked if there were any further questions and thereafter invited the Chair of the Committee, Professor Davor Vidas, to add any closing remarks.

Professor Davor Vidas (Norway) thanked attendees for their participation and interest in the work of the Committee, and explained that the draft Interim Report of the Committee presented today will, pending minor updates, be forwarded to ILA Headquarters for publication.

The Chair thereafter thanked the Committee Chair, Professor Davor Vidas (Norway), Co-Rapporteur Professor David Freestone (United Kingdom), congratulated the Co-Rapporteurs and the Committee on their excellent work, and declared the session closed.

COMMITTEE ON COMPLEMENTARITY AND
INTERNATIONAL CRIMINAL LAW

WORKING SESSION

Wednesday, August 10, 2016

Chair: Professor John Dugard (South Africa)

Professor John Dugard, the Chair, gave a welcoming address and opened the session, giving the floor to Professor Mia Swart, the Chair of the Committee.

Professor Mia Swart (South Africa) made some introductory remarks and noted that the Committee is over two years old with a mandate to look at positive complementarity. She noted that complementarity is a concept that lends itself to different interpretations. She explained that country reports were sent fairly late, which made it difficult to complete a full report in advance of the conference.

She informed that the country reports look at prosecution of international crimes in national jurisdictions.

She handed over to Professor Charles Jalloh.

Professor Charles Jalloh (USA) explained the structure and objectives of the committee's report, which he pointed out, had been previously circulated and would thus only be summarized here:

He stated that he had prepared the discussion report, which attempts to reflect the initial mandate of the committee, as a way of provoking substantive group deliberation about possible directions that the work could be taken. The background section had relied on information that was available on the ILA website. The report has three components and annexes individual country reports produced by three other members in respect of the Kenya, Mali and Sudan Situations presently before the International Criminal Court (ICC). It is not the official committee report but benefited from the useful input of several committee members who had offered helpful comments on it. The discussion report highlights broad strokes of the concept of complementarity that was introduced by the Rome Statute. The application of the concept has presented some challenges in conflict zones. And, as is widely known, there is a growing body of literature on complementarity which would need to be taken into account in future discussions of the committee's work.

The focus of the ICC and its mandate is centred around the notion of complementarity and is typically contrasted to that of the ad hoc tribunals created by the United Nations (namely ICTY and the ICTR) which operated under the so-called "primacy principle". The latter entailed that the tribunal would decide to take cases from the national prosecutions for example in respect of the ICTR it would prosecute at the Tribunal in Arusha as opposed to in Rwanda itself. The question, during the Rome Statute negotiations, was whether the ICC should also be organized around primacy and it was said at the time that it should rather have complementarity which gave the national jurisdictions both the right and responsibility to prosecute the crimes themselves. He explains that the ICC jurisdiction is thus, essentially, triggered by failure or the default of national jurisdictions to investigate and prosecute the Rome Statute crimes themselves.

The issue of "positive complementarity" arises in that we now wonder, whether in light of the practice of so-called self-referrals by states of situations that they should be investigating and prosecuting in the first place, post-conflict or transition countries actually have the capacity to investigate and prosecute the Rome Statute crimes.

There are questions raised about the principle of complementarity when countries defer to the ICC, instead of prosecuting at home, and then go to the ICC as a court of first instead of last resort. He cited the Uganda Situation as an example. Future committee work could shed light on these types of questions.

Some obstacles to prosecution are that the ICC is busy, some countries do not prosecute nationally due to lack of expertise, infrastructure, or impossibility for material reasons. He cites the case of Sudan.

Professor Jalloh explains further that the ICC has taken the view, at its Assembly of States Parties that positive complementarity is important, but that the role of the ICC is not to act as a development organization in addition to investigating and prosecuting the core crimes in its jurisdiction – which form part of its primary mandate.

He points out that the discussion report also details the history of the committee in its second part.

He informs that the third part of the discussion report includes addenda analysing the state of affairs in terms of investigating and prosecuting Rome Statute crimes at the national level. Individual members could report on the specific experiences of specific ICC situations, such has been done by three members in respect of Sudan, Kenya and Mali. This could open the door for the committee to identify the commonalities between the three situations and to measure the national level factors that gave rise to the failure to investigate and prosecute the cases. These country reports present useful data and were added to the report unedited.

To conclude his initial address, Professor Jalloh raised some questions for further deliberation: where does the committee want to go and does it want to start from the Rome Statute? Is the involvement of the court having impact on national implementation of ICC obligations, on the creation of specialized prosecution sections as in, for instance, the Crimes Against War Crimes Section in the Department of Justice in Canada? As well as: What are the results of the preliminary examinations by the ICC in certain countries? What about formally active situations presently before the ICC? Do they feel pressured to do something about the crimes because the ICC is involved or threatens to get involved?

He wrapped up by saying that he would like to emphasise that the discussion report is not an official document and that it aimed merely to provoke a discussion about the future direction of the committee's work.

The Chair said that the best course of action from this point was to allow Professor Swart to comment on the country reports that were based on the country specific questionnaire which was circulated. Thereafter, the floor would be opened for questions and comments.

Professor Mia Swart (South Africa) expresses that Professor Jalloh's document summarises some important information but her main concern with the document pertains to the focus of the report. She said that his view is that the first focus of the committee

should be on the situational countries' reports; whereas her view is to aim at divorcing complementarity from Article 17 and rather to look at national prosecutions even by non-signatory countries. Especially in light of Security Council referrals where any country can potentially become relevant to the ICC.

Professor Swart continues to draw the picture of membership to the Committee stating that there are Palestinian and Israeli members participating. She suggests working on the creation of a Palestinian Committee. She mentions that there are also members from the far east, with six country reports under the theme of complementarity as well as that there are not many members from Latin America. There are some European members and three members from the US. She expressed her contentment with having received 26 country reports for the purposes of the committee. While she wants to have wide representation at the Committee, she still wants to limit membership. She expressed that interest from a Colombian member was welcomed.

Going back to the reports, Professor Swart says that the idea is to draw from all the country reports and informs on the questions addressed in those reports.

Questions from the Committee to the country branches: Professor Swart reads the list of questions sent in a prior document annexed to this report. These questions include:

1. Give an overview of prosecutions of international crimes (whether prosecuted as such or as ordinary crimes) in your region, if any, since 1 July 2002.
2. Have these been prosecuted (either as ordinary or as international crimes) in the country where the crimes were committed?
3. Have these been prosecuted in other countries, and if so, on the basis of which head of jurisdiction?
4. If not, why have these cases not been prosecuted in the state where the crimes were committed, or in any other state? In discussing the causes of impunity the following can be considered:
   (i) The availability of evidence;
   (ii) The ability to arrest
   (iii) The investigatory powers
   (iv) The political obstacles for the police, prosecution, judiciary
   (v) The availability of relevant legislation
   (vi) The availability of capable justice institutions
   (vii) The priorities of the domestic justice system
5. Which States in your region have imported a) the core international crimes and b) modes of liability into national criminal law?
6. Which States in your region, if any, have specialized institutional capacity to investigate, prosecute and adjudicate core international crimes?
7. What role have actors other than prosecution authorities played e.g. civil society and the international community?
8. How can the political will to prosecute be bolstered in the states you have chosen to focus on in your region? In considering this question it will be useful to further consider: Why is there no political will? What are the political costs of proceedings? Which interests are at stake? And how could the political costs be alleviated?
9. Have there been strong calls for national prosecution of core international crimes after 1 July, 2002 and, if so, from whom?

10. To what extent is the prosecution independent from the executive? Is the prosecution under influences and pressures, and if so, which ones?
11. How independent is the judiciary in the states you have chosen to focus on? What is being done to reform the judiciary and the court system?
12. In certain contexts, truth commissions and traditional courts have been held out as alternatives by governments and have deeply impacted prosecutions where these take place. In other settings, they have been deployed in particular ways alongside prosecutions. To what extent have alternative (in the sense of non-criminal) justice processes interacted with or had an impact on prosecutions in the country concerned?
13. Sketch the context, particularly political in which the accountability debate and prosecutions unfold (for example the peace v justice debate) capturing both national and international dimensions of the politics of justice.

Professor Swart gave general feedback on the responses to the questionnaires and mentioned for example that in countries such as Malawi and Zimbabwe, the reports are short because there is not that much to report on due to the stance of the specific country.

She continues to reiterate that it would be useful to define complementarity because even though the decision has been made to focus on positive complementarity the Committee is still battling with some definitional issues. She asked whether the Committee would be seeing Complementarity as a function of Article 17; or is it going to be thrown open to say that complementarity is relevant to any jurisdiction.

The Chair gave the opportunity to members of the Committee to comment and says that before opening the floor Professor Charles Jalloh will make an additional remark.

Professor Charles Jalloh (USA) explains that the suggestion was to use current situations before the court as a starting point, without excluding reference to other situations later. He recalls that there were at least two phases to the undertaking of research and the preparation of a committee report.

Professor Mia Swart (South Africa) added that she would like to clarify regarding the phases of the report as Professor Jalloh mentioned, that Phase A would be a more geographical approach, and phase B would be to draw themes out from the various countries and have a more thematic approach.

The Chair then opened it to the floor for questions and comments.

.**Advocate Yael Gvirsman (Israel)** adds that the division between situation countries and non-situation countries or state parties and non-state parties is artificial and suggests that a broader scope is of interest for the questions looked at. She adds that the reason for such comment is that Security Council in terms of Article 13 may trigger jurisdiction globally as mentioned by Professor Swart. Secondly, she stated that situation may and do involve non state parties. She suggests the use of a thematic horizontal approach as being more helpful than putting all countries in geographical boxes.

Dr Sarah Nouwen (Netherlands) highlighted that getting 26 country reports is a success, and this is the result of Professor Mia Swart chasing members to submit reports with a great positive energy. She further noted that most reports were submitted to Professor

Jalloh in June, allowing him little time to draft a report and she would like to commend his ability to have done so in spite of the short time frame.

Dr Nouwen noted that the difficulty of decoupling this Committee's work from the legal provisions in the Rome Statute is deciding on what other concept of complementarity to base its work on. Articles 17 and 20(3) of the Rome Statute at least provided a definition She argued that because complementarity has been considered a linchpin of the Rome Statute and thus an important notion, it has become a term used by many, but for very different things: people have for instance begun talking about "positive complementarity", "investigative complementarity" or "proactive complementarity" and all these concepts mean different things to different people because they lack of legal basis in the Rome Statute and clear agreed upon definition.

If this Committee wished to focus on "positive complementarity", Dr Nouwen said, it should decide which type of positive complementarity it wants to focus on. She argued for adopting a definition from an official or semi-official ICC document, rather than an academic paper. ICC documents that came to mind are a policy paper from the Office of the Prosecutor (OTP) elaborating the idea of positive complementarity and the other are resolutions of the Assembly of States Parties, first adopted at the Review Conference in Kampala, where the states parties effectively embrace the idea of positive complementarity as long as the International Court itself stays away from implementing it.

Dr Nouwen added that if the Committee decided to focus on positive complementarity it should be clear that while there are some links with the legal concept of complementarity in the Rome Statute, there are also important differences. Both have to do with the idea of states investigating the crimes within the ICC's jurisdiction. However, complementarity as a legal concept in the Statute and positive complementarity require different types of actions and are implemented by different actors. Legal complementarity is an admissibility rule in the Rome Statute. Pursuant to Article 17, this rule puts an obligation on the court, not on states. Positive complementarity, by contrast, is not an arrangement of admissibility, but a policy aimed at enabling or encouraging states, through assistance from the ICC or from other states, to investigate and prosecute the crimes within the Rome Statute domestically. Positive complementarity is thus effectively a policy of co-operation, even if different from the type of cooperation primarily envisaged in the Rome Statute, namely co-operation by states with the ICC.

Professor Mia Swart (South Africa) asks Dr Nouwen to clarify as she is not sure she understands what Dr Nouwen said about positive complementarity being about co-operation. Professor Swart disagrees in part and points out that positive complementarity does not necessarily mean cooperation.

Dr Sarah Nouwen (Netherlands) responds that the degree to which positive complementarity is about cooperation, depends on which type of positive complementarity one has in mind. The OTP once set forth an idea of positive complementarity in which it involved the ICC helping states to prosecute domestically. Prosecutor Luis Moreno Ocampo had famously stated in his inaugural address that the ICC would be successful if there were no proceedings before the ICC because states were doing this domestically. Because of this, he had added, controversially, , that the first responsibility of the Court was to help states to do this. While it is difficult to find a legal basis for the claim that

this is the Court's responsibility, and for some of the proposed types of co-operation such as capacity building, other forms of ICC-to-state co-operation could be based on Article 93(10) of the Statute. Many states have argued that it is not the Court's responsibility to do capacity building but that other states and institutions could do so. For example, the UNDP could support in enabling prosecutions.

Dr Nouwen reiterated that the question remained which notion of complementarity the Committee wanted to work on.

The Chair asked Dr Nouwen a question regarding the duty on states to investigate and prosecute in the Rome Statute, saying that the prosecutor has often given the impression that there is such a duty on states. He asked whether this would be something that should be investigated by the Committee.

Dr Sarah Nouwen (Netherlands) answered that she refers to this as "the normative paradox of complementarity": on the one hand, complementarity may be based on the idea that ideally states investigate and prosecute domestically; on the other hand, the Statute itself does not impose such an obligation on states, nor does the Court have the jurisdiction to adjudicate state responsibility for failing this obligation. Indeed, the very creation of the Court, combined with the first Prosecutor's policy of inviting states to refer situations in their own states, may have undermined the sense of responsibility on states. While the Preamble recalls 'the duty of every State to exercise its criminal jurisdiction over those responsible for international crimes', neither this nor any other provision in the Rome Statute creates an obligation to that effect. The Statute does impose an obligation on states to implement legislation to facilitate cooperation and to criminalise offences against the administration of justice, but not to investigate or prosecute crimes in the Rome Statute domestically, or to incorporate these into domestic law. She mentioned that nonetheless that certain states have domesticated international crimes, in part to make sure that they can fully benefit from the complementarity arrangement. She argued that the preamble referred to existing obligations under bodies of international law other than the Rome Statute. She stated that the Committee could follow the approach suggested by The Chair, but would then move away from the idea of positive complementarity which the Chair of the Committee had suggested focusing on, and begin to examine the international duties of states to prosecute international crimes domestically. .

Professor Mia Swart (South Africa) asks what would be bad about doing so? She asks further how far the Committee can venture outside of complementarity.

Dr Sarah Nouwen (Netherlands) replied that the Committee could go beyond complementarity as a legal principle, merely stating that the Committee is inspired by the fact that the principle of complementarity grants states the primary right to investigate and prosecute and also to say that it seems to espouse a normative preference for proceedings at the domestic level. Another question for exploration could be what the obstacles are to domestic proceedings that are to be overcome.

The Chair gave the floor to others present to comment.

Bettina Ambach (Germany, Wayamo Foundation) informs that her organization was involved precisely in a project on 'Complementarity in Practice' as they called it. The German's warned her against using the word "positive" complementarity or she would

not get anything done. The project in Kenya was in capacity building and lasted two years, offering practical field insight. She suggests identifying "what we want to achieve," and says that for her it is strengthening global capacity so that international crimes can be dealt with. She raises that the second question to follow would then be "How can we do that" and she is of the opinion that the answer lies in capacity building on a very wide scale rather than engaging in academic discussions. In her organization's project, the result was that complementarity was positive. She noted that the ICC participated.

Director Ambach highlighted the importance of what is happening on the ground, and the field experience. In the project she mentioned, if there was a judge, ICC judges also participated. She noted that this is was positive complementarity could entail. If there was a need of a prosecutor, an ICC prosecutor also participated. This does not mean that the ICC should do the actual training but this is where smaller organisations such as the Wayamo Foundation could play a role.

Dr Charles Alenga Khamala (East Africa) explained that in 1998 there was no theoretical opinion. There was no theory at the origin. He suggested there are different perspectives, all of them viable. Continental European lawyers think of mandatory obligations namely that where there is enough evidence, prosecution should take place. He mentioned that in the common law system countries – the opportunity principle demands that despite the existence of sufficient evidence, the prosecutor only prosecutes where it is in the public interest. This illustrates how different traditions have different perspectives; each can opt for the principle that best suits them.

Dr Khamala invited the committee to develop guidelines which could reduce the independence of the prosecutor and no longer allow prosecution to be a subjective test.

The Chair clarified that the purpose of the session is to raise issues of importance to the work of the Committee and reiterates that it is important to discuss issues of this kind. He invites participants to share their comments.

Judge Richard Goldstone (South Africa) indicated that he has an open mind as to the conceptual limitation and as to what aspects and topics are included under the term complementarity. He underscores that the ultimate goal is to formulate recommendations and, with this in view, it is good to provide guidance on concrete themes that the Committee would be looking at. This should be tied to the question of recommendations.

Advocate Yael Gvirsman (Israel) Advocate Yael Gvirsman (Israel) added that when the Committee speaks of complementarity the idea that they should have in mind is the broader notion of accountability.

She said States have an interest to know what they need to do to answer the legal definition of complementarity. She added that it is a challenge to state's understanding of legal complementarity to even consider the ICC's case law. So far there is a case to case analysis. If earlier case law is considered such as the Lubanga case, where the focus was on what a 'situation' or a 'case' is. Then the Kenyan case law changed that. The approach now is a 'case by case' approach so there is even lack of clarity as to what is meant by 'legal complementarity'. She added further that the Libyan case law proved an entirely new plethora of issues. There is no longer the obligation to call a crime an international crime in order for a domestic procedure or prosecution to be valid in the eyes of the ICC.

She said that there is an unsettling lack of clarity as to legal complementarity and that is an aspect the Committee could focus on.

She also said that accountability should be read in a broad manner and not restrict itself to 'purely' prosecution or criminal purposes. She states further that there is an earlier hint in one OTP Prosecution Policy Paper of 2007 with regard to Article 53. She said that it also reflects on complementarity because it states an array of domestic mechanisms of accountability that may be valid domestic mechanisms. This list was far broader than criminal prosecutions. This strengthens the view that the Committee should observe accountability under a broad scope.

In addition, Advocate Gvirsman stated that the way victims perceive accountability is useful. She suggests thinking of a broad understanding of accountability.

Professor Mia Swart (South Africa) raised a question which was directed at Bettina Ambach about the German understanding of complementarity. Does the ICC always have to be the measure of all things? Should it provide all the answers?

She mentioned that there is an interesting example in the Indonesian report which says that Indonesia has enacted legislation for the prosecution of international crimes independent of the ICC or the ICC statute. She explained that this could be a theme to explore: legislation that is not in response to the ICC Indonesia is not even a member to the ICC but they showed political will which some member countries have not.

Professor Sharon Weill (France, non-member) suggested methodological aspects. She says it is good to talk to relevant actors and in particular to the prosecution authorities in different places that have legislation in place and ask them what it is that they need.

University of South Africa participant pointed out that there are 32 indictments in Africa in 8 different countries, Shouldn't Africa and the African Union be one of the themes?

Judge Richard Goldstone (South Africa) highlighted that one interesting effect of complementarity is seen in the American Bar Association's efforts in Congress. They are encouraging legislation to domesticate the international crimes defined in the Rome Statute. This is a case of a non-member state where pressure is growing.

The Chair adds another theme, related to international accountability and states that the whole purpose of International Law is to secure International Accountability. He notes that in the discussion paper, Professor Jalloh raised the question of immunity for example. There is no ILA Committee examining immunity. He adds that he feels it would be helpful if this was possibly also included in the scope of this Committee.

Professor Mia Swart (South Africa) replied to say that the Committee had not discussed regional complementarity yet. She is uncertain whether this would really form a part of the mandate of the Committee. Professor Swart asked Dr Nouwen and Professor Jalloh what their opinion on this point would be.

Dr Sarah Nouwen (Netherlands) responded that from a technical perspective the question would probably be whether proceedings by a regional court could render cases inadmissible before the ICC. She said that this was an interesting legal question but one that

is not necessarily best suited for answering by the ILA. She thought that the Committee could best focus on a question that would make use of the fact that this Committee combines expertise from several countries.

The Chair added a point about immunity and complementarity in the African context and each are very prominent in debate at present. He relates back to what was mentioned or asked about complementarity and the proposed African Criminal Court. He commented that whether it is to ever come into existence is a debateable topic but he reiterates that this is an issue that requires attention because it is the prime regional issue.

Professor Charles Jalloh (USA) said that he would like to mention something which relates less to the immunity issue but instead goes back to what was mentioned before in Dr Nouwen's initial intervention about a theme that is about a legal question, where the issue is framed in a wider manner to allow the possible achievement of a number of objectives. He agrees with Dr Nouwen and says that he drew a parallel with one of the challenges of complementarity for the ICC with the broad and ambiguous meaning of the word 'justice'. He explained that this word could mean something different to one person when compared to another. Saying that we agree on what justice means might, in actuality, that we have agreed on something that is not necessarily the same. He thought complementarity is one of those broad terms that could mean different things to different people.

He said that maybe, one possible approach, would be to bring it back to the element of what is the responsibility of states at the national level to investigate and prosecute core international crimes more generally rather than focused only on the Rome Statute. And then the next question could then bring to the fore possible ways of implementation. He said he liked the idea of going beyond the Rome Statute, however, that raises a possible question of focus for the committee and the issue of what legal questions were being addressed by the committee and the added value of its studies. It might create a problem of the work not being anchored as such.

He felt that by framing the scope of the question more broadly, the ICC situation countries can be looked at but then also other countries that are may or may not be members to the Rome Statute system. Countries that are not presently states parties to the ICC could find themselves having a treaty basis or customary law obligation to prosecute certain core international crimes. He gave the example of genocide and the 1948 Genocide Convention and mentioned the duty, at least in respect of international armed conflict, to prosecute or extradite war crimes under the 1949 Geneva Conventions. The question of what is happening at a national level, which could preclude prosecution, he finds interesting as well. He explained further using the example of countries granting amnesty. He added further that countries having internal legislation to prosecute such crimes could be relevant to a complementarity evaluation.

The Chair invited non-committee members to give an opinion and concluded that there seems to be consensus on the need to go beyond the ICC. He posed the question as to whether anyone believes that the work should be restricted to states who are state parties to the ICC?

Mr Seko Samo from East Africa (non-member) said, relating back to the question of regional complementarity, he thinks that if the regional court came into place- what

would the relationship be between the regional court and domestic courts that were established due to the domestication of the Rome Statute.

Professor Charles Jalloh (USA) answers to say that, in terms of the question that Professor Mia Swart raised, it shows why it is a better idea to frame a broader question around legal accountability for core crimes. He suggested that, what we are seeing in the African context at least implicitly from the ICC's docket, is that are states basically saying that they do not have the capacity to investigate and prosecute the Rome Statute crimes. He adds that this could be examined under a notion of positive complementarity, loosely speaking, with the attempt to help the country in issue discharge its duty to prosecute. He cited the example of Uganda, where the government claimed it did not have the capacity to prosecute and then tried to pass the responsibility on to the ICC. He says that even in terms of the proposed regional court for Africa, where complementarity will play the same role, the same problem of lack of ability to prosecute will likely arise. He suggested that this means that we should have a more flexibile mindset about how to prosecute international crimes that implicates national, regional and international bodies/institutions. If you have mechanisms that are multi-layered, it can be seen as very helpful for criminal accountability in the end because then in the case of a failure at each level, reliance can be made of the next level and ultimately at the end of the line, at the ICC.

Mr Patryk Labuda (Poland – observer) refers back to The Chair's suggestion regarding themes that can be explored. He finds interesting the issue of seniority and the phrase that is used: "those that bear the greatest responsibility". He finds that there is a paradox on complementarity because it is said that the ICC and the International Criminal Tribunals are supposed to look at those most responsible but if capacity at a national level is being developed then it should be done with the view that the state could also then prosecute people who are in positions of power. Therefore, the states could then prosecute the low-level people and the rest could be sent to the ICC. The question that then follows is whether we want the ICC to prosecute only those bearing the greatest responsibility.

He summarises the point that he is making by saying that what might be interesting to explore is asking how this seniority should work in terms of the level of responsibility of perpetrators and how it feeds in to complementarity.

The Chair comments that the question raised by Mr Labuda raises a very important point relating to that International law allows for immunity at national level but not at the ICC and therefore the situation at present exist where a senior person in government is immune from domestic jurisdiction. He emphasises that this is also an important factor to consider.

Dr Sarah Nouwen (Netherlands) adds to the point made by Mr Labuda that Office of the Prosecutor has in recent years, when doing outreach in situation countries, often spoken on complementarity as meaning domestic and international courts 'complementing' each other, according to which the ICC investigates and prosecutes the 'big fish' while domestic courts investigate and prosecute the 'small fry'. She adds that this division-of-labour approach is not inherent in the legal provision of complementarity: complementarity in the Rome Statute gives states the primary right to investigate and prosecute also the senior people.

Professor Mia Swart (South Africa) mentioned that she would like to add to this debate about the ICC being the leader in terms of complementarity, that she could foresee that a country could do well on its own. She clarifies through the use of an example where in the very few war crimes provisions in the ICC statute- what if a country can on its own, in terms of 'ICC Plus Crimes' (as were referred to by Professor Jalloh), enable itself to develop its own sophisticated scheme of prosecution. She reiterates that she does not see why one should think of measuring up to the provisions of the ICC as being the end point.

Advocate Yael Gvirsman (Israel) intervened to say that we can choose to go beyond the ICC if we'd like, however, the ICCmust be taken into consideration by the Committee because it is the only authority at present as to what complementarity is.

Bettina Ambach (Germany, Wayamo Foundation) mentioned how, in Nigeria, actors questioned whether it made sense to domesticate the Rome Statute. They concluded that yes, it made sense, because then they would have laws and modes of liability that could help them prosecute terrorists for example. She adds that while states would like to have their own domestic systems, as The Rome Statue helps include aspects not contemplated in the national legislation already.

Professor Charles Jalloh (USA) said that the question about greatest responsibility is not only informally one of the yardsticks that the ICC Prosecutor is using to determine which cases to prosecute. It links back to the Rome Statute, though there it is not explicit as a criterion, but also back to the Special Court for Sierra Leone which used the terminology of greatest responsibility and popularized it in international criminal law. The debate at SCSL, he recalls, was that the 'greatest responsibility' principle was introduced into the statute of the court as a form of redline for prosecutorial discretion. The other view, advanced by the defense, was that it meant that only those from a given level of hierarchy could be prosecuted. In the end, the issue is really who should be prosecuted by what level of institution. The ICC and international courts are practically only able to prosecute a handful of persons, compared to national systems that are more able to investigate and prosecute a mass of perpetrators.

Participant from the University of Brussels (Observer) liability under the Rome Statute should be extended to states and corporations.

The Chair responded that the International Law Commission considered this carefully, and decided against criminal state responsibility because there is no authority to enforce because the ICC has no jurisdiction over states.

Participant from the University of Brussels replied that the AU does contemplate corporate criminal liability.

Hannah Woolaver (South Africa), proposed that the committee consider an in depth study of good practices or guidelines for domestication of the Rome Statute. She stated further that this should include: definitions of crimes, responsibility and political checks if any on domestic prosecutions as well as the issue of standing. She emphasised that in South Africa, domestic legislation has been very valuable in terms of getting a foothold for civil society to initiate domestic prosecutions.

The Chair summarised the point made by Hannah Woolaver by saying that the suggestion is that the domestication of laws should be included under the scope of complementarity.

Professor Claus Kress (Germany) added a few suggestions on the way the committee could deal with issues if they were chosen for study.

Firstly, he commented on the topic raised regarding those 'most responsible' and burden sharing. He did not feel that there is any paradox in legal terms. The ICC prosecutor, as he sees it, has never said that he/she wanted to prosecute the most responsible wherever it has jurisdiction - but what he/she has said is that it wishes to concentrate on the most responsible to the extent that the proceedings are admissible. That means whenever international proceedings are instituted, which presupposes that genuine national proceedings are not underway, the ICC will have to make a choice and the current tendency is that it chooses to focus on those who are most responsible.

With regard to burden sharing, he would not suggest that burden sharing is ruled out by complementarity. He explained that one of the beauties of complementarity is that it is not so rigid and inflexible as some may suggests. He added that it could be that burden sharing has had a certain appeal for a period of time, and perhaps the appeal has already started to fade but it has been an idea that has been ventilated and it is, legally, something that is possible. From the perspective of the Committee, it could therefore include it in their considerations and see whether and to what extent burden sharing could be useful in certain situations at least.

On regional complementarity, he opined that it does not have to become part of the Committee's agenda, but still, he stated, as one is now confronted with a proposal for the establishment of a regional court in Africa, however likely this is to materialise the question is worth asking on whether it is to be included in the Committee's Complementarity study. On this he added two points namely: is it to be approached more as a technical legal issue? In such a case then it would not be possible to avoid the applicable law on 'negative' complementarity as much as the Committee had hoped. He then added that the Committee could look into how such a regional court could be integrated in the ICC complementarity system. Secondly, he observed, the focus could be shifted from a legal study to a policy and practical level and he added that if more regions considered embarking on such an avenue, the need would increase to explore how they could most usefully do so.

Third, the notion of 'ICC plus crimes'. He did not see any principle preventing the Committee from including crimes not listed in the ICC Statute However, he added one word of caution, namely that the Committee should not be entirely liberal in the use of key concepts and should be aware at what point the demarcation line between crimes under international law and and transnational crimes is crossed. He pointed out that such conceptual distinctions are important because the applicable legal regimes partly differ. .

Professor Claus Kress summarises that ICC plus crimes can be included but that it should be kept in mind that the Rome Statute has been a watershed events in that proposals for crimes under international law had been put to a vote by the international community.

He then answered the question regarding Germany's position regarding 'positive' complementarity. He emphasized not to be in a position to speak on behalf of Germany, but he recalled that there has been a question to what extent the ICC should be charged with responsibilities for positive complementarity. He has understood the German position at the time to be that a juvenile, fragile and struggling institution such as the ICC should perhaps be cautious before taking on all kinds of duties on top of those falling upon it

under the statute, and he added that in his personal view this seems like a fairly reasonable scepticism..

The Chair made his closing remarks to the first working session of the Committee and that there should be a break before the start of the closed session which is for committee members only.

Professor Mia Swart (South Africa) mentioned in closing that she would like to thank Professor John Dugard for chairing the session and she congratulated him on the Special Award the ILA awarded him for his contribution to the association. She proceeded to thank Professor Charles Jalloh for the discussion report as well as for his various pieces of constructive input through the last six months as a rapporteur. Professor Jalloh also congratulated the Chair and wished her and the committee much success.

The Chair thanked Professor Swart for the comments and he added that he thinks the consensus in the meeting indicates that this Committee should adopt a broad approach to the subject of complementarity.

The Chair closed the first session.

I. INTRODUCTION

1.1 Background

Previous reports from earlier manifestations of the Committee and their related mandates included *Women's Equality and Nationality in International Law* (2000) and *Women and Migration (2002, 2004, 2006, 2008)*.[1]

This is the third report of the (current) ILA Feminism and International Law Committee (Committee). The mandate was approved by the Executive Council in May 2011 and is entitled *Economic Empowerment of Women: Contribution of International Law*. The overarching thrust of the combined reports is two-fold. In the first place, to explore the contribution of international law to achieving structural change. The second focus is to try to establish to what extent there has been a realisation of individual rights arising from positive obligations of States parties, as relating to the substantive aspect expressed in the title of the mandate.

The Committee presented an initial scoping report to the Sofia Conference in 2012, which explored the complexity of the umbrella topic and identified sub-themes, one of which was *Positive Obligations of States Parties in relation to Substantive Equality.*[2] The

[2] Committee, Report of the Seventy-Fifth Conference, [2012 Sofia], 717-752.

Washington Conference built on the Committee's mandate and on the initial scoping report. Acknowledging the multi-faceted nature of the topic, as well as the indivisibility of rights, the Washington report in 2014 focused on the sub-theme of *Positive Obligations of States Parties in relation to Substantive Equality* as it specifically related to two substantive areas: *Equal Remuneration* and *Equal Access to Economic Activities*. It examined relevant positive obligations in international law as well as national practice with respect to these two substantive areas. The report aimed to contribute both to current debate on the realisation of women's economic empowerment and to the work of the CEDAW Committee, in particular, by identifying instances of good practice in the implementation of rights at national level.[3]

1.2 Johannesburg Report

Building on the work of the two previous reports, and conscious of the multi-faceted nature of the mandate, for the Conference in South Africa the Committee decided to address two sub-themes, both of which are seen as potentially very important for the overall focus of the Committee's mandate. The two sub-themes are 'women in (power and) decision-making' and 'gender responsive budgeting' (GRB).

2. Definitions

2.1 Women's Economic Empowerment

As we pointed out in the Washington report, while the term 'women's economic empowerment' has been defined in various ways,[4] the Committee adopted UN Women's definition:

> '[*Women's economic empowerment entails] increasing the ability of women to bring about change that drives valuable outcomes as result of their increased economic capabilities and agency, i.e. their ability to function effectively in the economy, to participate in labour and product markets on equal terms with men, to shape the gender division of labour, to accumulate assets, and to shape the relationship between markets and the state and to influence the institutions and processes that determine growth and development'*.[5]

2.2 Women in (power and) decision-making

We have taken a broad view in adopting a definition, so that it may be applied to multilevel actors and actions, and not merely in one field. This is in line with the Beijing Platform for Action (BPfA) and encompasses

> '*women's equal access to and full participation in power structures and decision-making.*'[6]

An important qualification to this BPfA definition is that participation (for women) has to be 'meaningful'.[7] Therefore note should be taken of the reference to '*power* structures *and* decision-making' in the definition chosen. It should not be just a 'numbers' exercise.

2.3 Gender responsive budgeting

There are myriad[8] definitions of gender budgeting,[9] using a variety of terms, including gender responsive budgeting (GRB), all with similarities of focus and differences of emphasis. Inspiration can be drawn from all of them. The definition we have decided on is

> '*Gender responsive budgeting (GRB) is government planning, programming and budgeting that contributes to the advancement of gender equality and the fulfilment of women's rights. It entails identifying and reflecting needed interventions to address gender gaps in sector and local government policies, plans and budgets. GRB also aims to analyse the gender-differentiated impact of revenue-raising policies and the allocation of domestic resources and Official Development Assistance. GRB initiatives seek to create enabling policy frameworks, build capacity and strengthen monitoring mechanisms to support accountability to women.*[10]

This is a very comprehensive definition. This is our preferred definition because of the identification of 'government' as the key actor, responsible for the actions laid down in the definition (of GRB). It also allows for the institutionalisation of GRB (in the process).[11] However, in the interest of trying to capture as complete a 'snapshot' as possible, from the contributions to this Report, we look at the broad 'gender' implications in the range of budgetary processes provided.

3. Scope

As previously noted, economic empowerment of women is a very broad concept. However, the two sub-themes chosen to be examined here strengthen the specificity of the scope of the Report. The focus in the first place is to attempt to establish the extent to which these two economically relevant concepts have been realised in those States being discussed in this Report. In addition, it is hoped that the influence of international law measures (as we have chosen) on the realisation of the two concepts can be identified. An appreciation of the experiences in different States will be facilitated by the contribution of Committee members coming from different legal and political regimes. It is not intended to be exhaustive or conclusive, but to provide a 'snapshot'.

4. Methodology

The Report looks at both the international legal framework, broadly defined, with the main focus on CEDAW, and selected national practice in relation to the two sub-themes identified above. Primary and secondary sources will be used, as well as publicly available data, as far as possible.

II. BACKGROUND TO SUB-THEMES CHOSEN

1. Women in (power and) decision-making

Following the logic of the definition we have chosen, *women's equal access to and full participation in power structures and decision-making',* it is reasonable to seek to ensure that women are facilitated in achieving the goals set out. The use of 'equal' and 'full' to qualify the actions set out in the definition, give a sense of the direction to be pursued. Taking the latest World Bank statistics for the period 2011-2015,[12] all countries listed indicate their female population as hovering around the 50 per cent level (high 40s to early 50s), with five exceptions.[13] This should indicate that female participation in (power and) decision-making roles should fall within the same percentages. Unfortunately this theory is not reflected in reality. This means that the voice of women, their needs and views, do not have full expression. There is extensive literature available which supports the arguments for greater female participation in power and decision-making structures. [14] However, quite apart from the human rights dimension, there is a solid business case to be made.[15] Women bring different experiences and outlook to tasks. This does not mean that they should automatically fit into neat, 'stereotypical' roles, as is often the expectation. In political and economic situations it means that their experience can enrich the policy and practice of the decision-making process, because women have to balance different demands arising from the potentially competing roles they have. This benefits society as a whole. It can also recalibrate the decision-making process. Even unwittingly, decisions can be taken on assumptions which have never been challenged. In sum, denying equal and full access to women to *contribute* to power and decision-making roles, robs the end result of potential benefits – as the literature shows. Finally, the goal (of *equal* and *full* access) has clear implications for potential cross-cutting issues (relating to the mandate of the ILA Committee).[16] Education is vital for empowerment – on a personal, and at the broader community level, and includes budgetary decisions.[17] The same applies to health, the environment (especially Climate Change),[18] and all that these imply; violence, unfortunately, continues to scar the life chances of many women – at a minimum. These are just some of the many issues where women's input at different levels of decision-making, must be provided for, in the interests of all.

Finally, for our purposes in this Report, power and decision-making in the broadest context fall into a number of categories, mainly political[19] (different levels, and aspects), and economic.[20] We attempt to provide some national examples in this Report.

2. Gender Responsive Budgeting

As noted at the outset there are myriad definitions of gender budgeting including (GRB). As noted above, there are variations of the budgetary process, using different nomenclatures. We will try to capture a broad range of these processes, but our preferred focus would be GRB, due to its comprehensiveness, and the responsibility of Governments to use it (we would say, in the service of fulfilling the aims of CEDAW).

Equality budgeting is a term in regular use, but not necessarily confined to a gender focus. It was first implemented in the form of gender budgeting in the 1980s, and has evolved over time to include other categories of potential disadvantage. The idea was pioneered in Australia where a women's budget was adopted in 1984. [21] By 2002, what is termed Gender Budget Initiatives (GBI) was to be found in all parts of the world, involving ca 50 countries.[22] That said, the intensity of the approach has been variable, including what is termed 'sensitization workshops' and some have faded. Gender budgeting[23] is a term also put to use.

UNIFEM has been involved in the development of the concept[24] of GRB, and its own publications and those of experts it has engaged (and others), provide a rich source of the theoretical and conceptual foundations. A key point made by a range of commentators (including UNIFEM) is that budgets are not gender neutral. What one could say is that, *at best*, they are gender blind.[25] Accepting this most benign assessment, it is clear that Governments have '*a central role in reducing gender inequalities and in promoting women's rights.*' There is also the efficiency argument – as touched on earlier. Finally, a frequently heard comment is that women's unpaid work is 'generally',[26] some might

[21] For a thorough discussion on the principles involved, and applying it to the Irish situation, see http://stephendonnelly.ie/wp-content/uploads/2013/10/20131003-Equality-Budgeting-Proposal-Stephen-Donnelly-and-Equality-Budgeting-Campaign.pdf (last accessed 16 June 2016)

[26] UN media, op cit

say 'rarely, if ever, recognised in conventional budgetary policy approaches. Thus the conventional budgetary process omits the contribution of this unpaid work to society at the micro and macro level.

The most effective approach found is to institutionalise the Gender Responsive Budgeting (GRB) approach in the budgetary process in some form or stage of the process. [27] GRB is seen as one tool among many available to policy makers to tackle inequality.[28] It is also seen as a tool for implementing gender mainstreaming when distributing financial resources. As we shall see, the Swedish, Austrian and emerging Irish approaches are informative in this regard.

Developments since the early days have seen a collaboration emerging between civil society and human rights activists. This collaboration provides invaluable 'shadow reports'. These contribute to the evaluation, inter alia, by Treaty Bodies, such as the CEDAW Committee, for compliance with CEDAW and can act as an incentive to States parties to 'improve their performance' (compliance).

III. INTERNATIONAL LAW

1. UN level

The States parties whose practices are being discussed here, have accepted, adhere to and/or have ratified a wide range of international instruments.[29] These include, *inter alia*, the Universal Declaration of Human Rights (UDHR),[30] the Vienna Human Rights Declaration (VHRD), CEDAW[31] (and the Optional Protocol). Some are parties to the Convention on the Political Rights of Women (CPRW), the International Covenant on Civil and Political Rights (ICCPR),[32] the International Covenant on Economic, Social and Cultural Rights (ICESCR) and the Convention on the Rights of Persons with Disabilities (CRPD).[33] Conventions of the International Labour Organisation (ILO) should also be borne in mind.

2. Regional level

Regional instruments ratified by some States discussed in this Report, include the African Charter on Human and Peoples' Rights,[34] and the Protocol to the African Charter on Human and Peoples' Rights, on the Rights of Women.[35] The African Charter is the primary

[27] See, inter alia, op cit, Elson

[28] Ibid

[29] Relevant Articles indicated

[32] Ratified by the USA, which is noteworthy given that it has not ratified CEDAW Note Articles 2, 3 (equality of rights between men and women), 25 (right to political participation), and 26 (non-discrimination), see the US's Fourth periodic report, especially paras 114 et seq, available at http://www.ushrnetwork.org/sites/ushrnetwork.org/files/iccpr_us_fourth_periodic_report.pdf (accessed 30 May 2016)

[33] Articles 6 (women with disabilities), 29 (Participation in Public and Political Life)

[34] Articles 2(non-discrimination), 13/2 (equal access to public service); 18/3(elimination of every discrimination against women)

[35] Also called the Maputo Protocol; it entered into force in 2005, Articles 2 (elimination of discrimination against women), 9 (right to participation in the political and decision-making process)

treaty providing a framework for human rights in the region, and is intended to promote and protect rights in line with the UDHR. However, its provisions on women's rights are largely seen as ineffective and inadequate, resulting in the need for the Protocol. Only one out of the more than sixty articles in the African Charter makes specific reference to women. One of the key shortcomings of the African Charter, as it pertains to women, is its failure to provide an explicit definition of discrimination against women. However, in line with CEDAW, the African Charter recognises and affirms women's rights in three provisions, namely Articles 2, 3 and 18(3).

Taking the example of *Nigeria*, advocates for women's rights recognised weaknesses (in the application of the Charter) and were motivated to address them by adopting an additional Protocol (as we have seen) that focused solely on women's rights. From the drafting of the Protocol to its eventual adoption took six years. The Protocol covers a number of areas of relevance to this contribution. It provides for the participation of women in decision-making and guarantees women's right to participate in the political and decision-making process without any discrimination. It requires States parties to promote women's effective and equal participation – by means of affirmative action, enabling legislation and other appropriate measures – in the political life of their countries, including the formulation and implementation of State policies.[36] The elimination of all forms of discrimination against women,[37] the right to education and training,[38] are provided for, as is participation in the planning, management and preservation of positive cultural context.[39] Finally, and importantly (also in the context of the SDGs), the Protocol provides for participation in the conceptualisation, decision-making, implementation and evaluation of development policies and sustainable development programmes.[40] Nigeria has not only ratified these regional instruments, but has gone a step further by recognising the regional treaty as part of Nigeria's fundamental human rights by virtue of the Fundamental Rights (Enforcement Procedure) Rules 2009, and in national jurisprudence.

There is no equivalent regional instrument in Asia; there is however, the American Convention on Human Rights[41], and the Treaties of the European Union,[42] including the Charter of Fundamental Rights[43] (and secondary legislation[44] as well as 'soft law'.)[45]

[36] Article 9
[37] Article 2
[38] Article 12 – education is vital to equip women to participate on equal terms with men

[45] Inter alia, the Recommendation adopted by the Council of the European Union on balanced participation of women and men in the decision-making process, 96/694/EC, Brussels, 2 December 1996, and the European Commission's '*How to Create a Gender Balance in Political Decision-making'*, European Commission document V/1206/96-EN (March 1996), both referred to in GR 23

Some States are (also, with others,) Member States of the Council of Europe and have ratified, or at least signed,[46] treaties such as the European Convention for the Protection of Human Rights and Fundamental Freedoms[47] (and some relevant Protocols),[48] the (Revised) European Social Charter, and the 'Istanbul Convention.'[49]

3. Other

The Beijing Platform for Action (BPf'A) and succeeding developments, are key to our topic, and continue to play an important role. In addition, the 2000 Millennium Development Goals (MDGs) [50] have been succeeded by the Sustainable Development Goals (SDGs), [51] the most recent measures adopted at the UN level, in 2015.[52] While acknowledging that they are not legally binding, the stated view is that each UN member state has committed to achieving the SDGs. The follow-up and review processes are to be country-led and voluntary, with specific guidance for national, regional and global processes. Apart from the specific gender Goal, Goal 5, all Goals have implications for gender equality. The SDGs are at the initial stages of influence, but represent an additional tool on the international level, to progress gender issues in general, including the focus of this Report.

In sum: The most relevant international (as opposed to regional) influences for our topic are CEDAW (and BPfA, as well as the ICESCR),[53] which Elson reminds us will often '*give us the substance of a right mentioned in CEDAW*; *it also has given rise to some*

relevant principles on resource allocation').[54] Other influences[55] may be mentioned, as appropriate, and as space permits.

Finally, the distinction between binding, and non-binding status of instruments establishing standards for women's economic empowerment should be borne in mind. At the same time sight should not be lost of the persuasive value of such mechanisms.

4. Reservations

As indicated above, while there are instances where there has been common ratification of international instruments, there are also instances where this is not the case. In addition, some States may have ratified a Treaty, but also entered a reservation.[56]

Some reservations could be seen as contrary to the wording and spirit of the Treaty (Bangladesh for example). It has been said that it is '*astonishing*[57] *that Bangladesh was allowed to ratify the Convention with a reservation on the most fundamental of its articles, namely Article 2*.' Reservations have not gone without criticism, inter alia, by other States parties. [58] In relation to Bangladesh and its reservation regarding Article 2, we are told that '*it is fair to say that, in spite of the fact that the Government has put a reservation on Article 2, it has done much to ensure the fulfilment of the provisions of the Convention*.'[59]

In other words, there are similarities and differences in the approach of States parties to be borne in mind.

5. Domestic transposition – examples from contributing jurisdictions

Some States take the dualist approach to international law.[60] In the case of *Bangladesh*, the provisions of international instruments are seldom mentioned or applied by the Courts. However, following the *Hussain Mohammad Ershad* [61] decision, the High Court Division delivered three other judgements, holding that the provisions of the Convention on the Rights of the Child (CRC), being beneficial provisions, should be applied by Courts in Bangladesh, particularly since Bangladesh is a signatory to the (particular)

[54] Elson, D, *Budgeting for Women's Rights: Monitoring Government Budgets for Compliance with CEDAW, '*Booklet*',* 2, based on report (same title) for UNIFEM, [2008] available at http://www.gender-budgets.org, (last accessed 30 May 2016)

[55] Regional, for example, from the European Union

[56] In relation to CEDAW see, https://treaties.un.org/Pages/ViewDetails.aspx?src=TREATY&mtdsg_ no=IV-8&chapter=4&lang=en, inter alia, Austria, para 9, Bangladesh, para 5 Brazil, para 8, Ireland, para 29

[57] Contrast this comment with the observation by Byrnes, A, in, Freeman et al, 97,who says that Article 2 '*has drawn a significant number of reservations in which States parties purport to limit their obligations under the article generally, or under its specific provisions'*

[58] In this case, inter alia, by Sweden, ibid. See too, ibid, Byrnes

[59] For example, including some aspects of discrimination as well as substantive provisions relating to mothers being able to pass on citizenship to their children A great deal has been done to bring the level of education for girls to that of boys, which in the context of Bangladesh is the most important development towards long term empowerment of women in a society which has heretofore kept women mostly within the residential compounds

[60] Bangladesh, Ireland Nigeria and Sweden for example

[61] *Hussain Mohammad Ershad v Bangladesh and others* 21 BLD (AD) 69

Convention.[62] In another case[63] specific reference was made to a number of Treaties[64] observing that '*Bangladesh is a signatory and has acceded to the above instruments making it obliged to implement those provisions*.' In a subsequent decision[65] reference was made to a range of instruments and how the Court was thereby influenced. It was observed by the Appellate Division that those provisions have been incorporated in Article 35(1) of the Constitution. [66]

There can be differences of opinion between a State party and the Treaty Body regarding transposition of Treaty concepts, and this can extend over several cycles of periodic reviews.[67] This would suggest a reluctance on the part of the State party to concede that its actions have not met its obligations, and on the part of the Treaty body, a conciliatory approach so that the end result is appropriate.

Nigeria has ratified CEDAW, but it has not been transposed into national law. '*This lack of transposition further appears to excuse Nigeria from observing CEDAW'*, we are told. An explanation (but not excuse) could be that custom is a vital source of law in Nigeria. The importance of these customs is so high that Nigerian law[68] accords it judicial recognition. Cultural practices like female genital mutilation (though declining), widowhood practices and others affect the right of women to self-determination (an integral part of decision-making).

In the case of *Sweden*, several international treaties of relevance for the focus of this Report have been ratified. These include CEDAW (and the ICESCR). As a dualist country, these are not directly applicable before domestic courts. Rather, Sweden sets out to interpret domestic norms in light of such international treaty obligations.

6. CEDAW – Overview

The role played by CEDAW in relation to the substantive[69] issues set out in the overall mandate of the (ILA) Committee cannot be exaggerated – hence it is our (main) instrument of choice for this Report. According to Freeman et al,[70] CEDAW '*is the result of the determination of international women's rights activists – inside and outside Government – to ensure that a comprehensive treaty setting out women's human rights*

[62] *State v Metropolitan Police Commissioner*, 60 DLR 660; *The State v Secretary, Ministry of Law, Justice and Parliamentary Affairs*, 29 BLD 656; and *BNWLA . Govt of Bangladesh*, 31 BLD 324

[67] See for example, in relation to Ireland and the concept of 'discrimination' CEDAW/C/IRL/2-3,5.1 and CEDAW/C/IRL/4-5/CO, 23 As it happens, the question of transposition of Treaties is being examined by the Law Reform Commission, see, inter alia, http://www.ihrec.ie and its submission to the CEDAW Treaty Body, in relation to the combined sixth and seventh periodic reports from Ireland, 2016

[68] Hons, S T*, Law Of Evidence In Nigeria* VOL 2 2nd ed, [2013 Abuja], 1104

[69] We try to avoid restating well established fact, but offer some comment for the sake of completeness

[70] Freeman, M, Chinkin, C and Rudolf, B (eds), (Freeman et al), *The UN Convention on the Elimination of all forms of Discrimination Against Women, A Commentary,* [2012 Oxford]

and the obstacles to their full implementation is at the core of international human rights law'.[71] The emphasis on 'human rights' reflects the universality of these rights. Freeman et al noted that CEDAW was one of the first human rights treaties to include '*the idea of universality, indivisibility and interdependence of all human rights.*[72] CEDAW also bridges the divide between human rights and development, and includes specifically rural women.[73] Key to its efficacy is the focus on achieving *substantive*, not merely *formal*, equality (in law and policy).[74] Finally, by requiring States parties to take '*all appropriate measure to modify the social and cultural patterns of conduct of women and men to eliminate prejudices'* (and practices rooted in ideas of inferiority or superiority of either of the sexes) or '*stereotypes for them'*, CEDAW requires multilevel transformation in order to achieve full gender equality.[75] General Recommendations (GR) play an important role in the work of the CEDAW Committee: for example, GRs 23 and 24, elaborating as they do, on Treaty Articles of direct relevance to our subject, can be regarded as having been particularly important for the focus of this Report.

It is clear even from this brief overview that the transformative potential of CEDAW is considerable. The interaction between the Treaty Body and the States parties and the approach by the States parties to the obligations they have undertaken, can be a delicate exercise, but the very action of exchange (of views) can have beneficial impacts over time. The fact that the issues (and responses) are in the public domain can also have a wide impact.

7. Selected Articles of CEDAW

Having presented an overview of CEDAW[76], some particularly relevant[77] aspects for this Report will be touched on briefly.[78] The first 'step', which points us in the direction we intend to follow, is the Preamble, where the importance of equal participation is made clear. Discrimination, apart from representing a violation of human rights, is also an obstacle to the equal participation of women (in decision-making) *'in the political, social, economic and cultural life of their countries, hampers the growth of the prosperity of society and the family and [ ] ….the full and complete development of a country, the welfare of the world and the cause of peace require the maximum participation of women on equal terms with men in all fields.'* Article 1 gives us a broad definition of 'discrimination'. The application of such broad notions of discrimination and equality thus indicates that not only must laws not discriminate, directly or indirectly, but, relating to one of our sub-themes, GRB, States parties must *adopt* (we would say *institutionalise)* programmes

[73] A focus the (ILA) Committee hopes to address in its next Report

[74] See too GR 23, and Report of the Fourth World Conference on Women, Beijing, 4-15 September 1995 (A/CONF.177/20 and Add.1), chap. I, resolution 1, annex I

[75] Op cit, Freeman et al

[76] For a detailed examination of CEDAW, on an Article by Article basis, see Freeman et al

[77] Selected to relate specifically to the two sub-themes addressed in this Report

[78] Although not addressed here, note should be taken of further non-discrimination and equality with regard to Article 10 (non-discrimination in education); Article 11 (non-discrimination in employment; Article 12 (non-discrimination in health); Article 13 (non-discrimination in other areas of economic and social life Article 14 (non-discrimination of women in rural areas)

and revenue systems with women as specific beneficiaries, for example, maternal health care. [79]

Article 2 is very carefully phrased. It sets out, inter alia, that *'States parties condemn discrimination in all its forms*' and the steps to be taken by States parties to *'eliminate discrimination'*, and incorporates some examples of policies aimed at this. Participation in decision-making is clearly addressed, as we have seen. However, while the text of CEDAW does not explicitly reference an obligation for States to undertake gender (responsive) budgeting (GRB), nor does the Convention directly mention the budgetary resources of a State required for its implementation, Article 2 (f) obliges States to take '*all appropriate measures to modify or abolish existing laws, regulations, customs and practices which constitute discrimination against women'*. This includes budgetary means, as can be seen from the approach adopted by the CEDAW Committee in Concluding Observations (CO) and General Recommendations (GR).

As has been mentioned above, and as found in Article 3, CEDAW (additionally) requires States to ensure not only formal but also substantive equality.[80] The latter implies also non-identical treatment under certain circumstances, to acknowledge biological and socially constructed differences between the genders.[81] Article 4 allows for the adoption of '*temporary special measures aimed at accelerating de facto equality between men and women'*, but also other universal human rights treaties insofar as they are applicable.This requires States to employ both temporary and permanent special measures to achieve substantive equality, the former includes measures such as the application of quotas to promote hiring of female applicants in employment, and the latter relates to maternity health care services.[82]

Article 5 is very important in addressing the problem of stereotyping. Note the mandatory language 'States parties shall *take all appropriate measures:..(a) To modify the social and cultural patterns* of conduct of men and women, with a view to achieving *the elimination of prejudices and* customary and all other practices which are based on the idea of the inferiority or the superiority of either of the sexes or *on stereotyped roles for men and women.'* States must address relations and stereotypes that negate women's enjoyment of substantive equality.[83] Applied to GRB, this may entail, inter alia, that tax systems should not amplify traditional gender roles and inequalities. It also addresses the question of gender division of unpaid labour in the home, including childcare tasks.[84] Articles 7 and 8 address women's participation in decision-making by 'all *appropriate measures…*' (inter alia, public life, including official representation.) [85] It is noticeable that women continue to be under-represented within the higher levels of the UN Secretariat and that only seven

[79] See, inter alia, GR 24, para 17, relating to CEDAW Article 12 (Women and Health), para 17

[80] See too GR 23, and Report of the Fourth World Conference on Women, Beijing, 4-15 September 1995 (A/CONF.177/20 and Add.1), chap. I, resolution 1, annex I

[81] GR 25, on Article 4(1), of the Convention on the Elimination of All Forms of Discrimination against Women, on temporary special measures, CEDAW Committee, para 8

[82] Article 4 (1), Article 12 (2) CEDAW

[83] This is applicable also to women in power and decision-making

[84] This assessment is supported by GR 23

[85] See too GR 23, *Political and Public Life* , paras 35-40 Reinforcing both CEDAW and GR 23, see Resolution (S/RES/1325) '*Security Council resolution 1325 (2000) urges member states to include women at all levels in national, regional, and international bodies* In fact, there is a view that women

out of 44 Special Representatives of the Secretary-General (SRSGs)[86] are women. Is the appointment of the next Secretary-General an opportunity for positive action?

The CEDAW Committee has made specific comments regarding our sub-theme of G(R)B. The Treaty Body has commended States in its Concluding Observations (COs) for applying GRB in their national budgets,[87] addressing this under sections concerning '*national machinery for the advancement of women and gender mainstreaming'*.[88] At the same time the Treaty Body has criticised States parties for a lack of an '*overall integrated strategy for gender mainstreaming, including gender budgeting'*[89] as well as a lack of information about specific budgetary allocations in State reports regarding specific posts. An example would be in relation to implementing programmes to increase gender parity in primary schools.[90] It has also expressed concern when the amount of financial resources allocated to women's empowerment from the overall budget is limited, [91] as well as criticised States for allocating limited resources to specific posts, for example, activities to combat violence against women.[92]

Finally, there are currently 189 States parties to CEDAW, representing an overwhelming endorsement.[93] An obvious gap is the United States. Although the US was involved in the drafting of CEDAW, [94] and it was signed on 18 July 1980, during the Carter Administration, it has not yet been ratified (by the US).[95] We are told that the Obama Administration strongly supported ratification of CEDAW and included CEDAW as one of the multilateral treaties it identified as a priority.[96] However, ratification of international treaties by the US, albeit signed by 'a' President, requires the support of two-thirds of the Senators. CEDAW has not found such support (to-date).

IV. SUBSTANTIVE AREAS –WOMEN IN (POWER AND) DECISION-MAKING; AND GENDER RESPONSIVE BUDGETING

1. Women in (Power and) Decision-making

1.1 Major barrier – stereotyping

A major barrier to women's advancement, whether in economic or political spheres, or otherwise, which attracts widespread agreement on the need to tackle it, is the persistence

are more likely to be members of international delegations formed by civil society (NGOs) rather than representing States parties

[95] Ibid

[96] Ibid, (last accessed 18 June 2016)

of stereotyping.[97] It is widely recognised that regardless of *de jure* equality (formal) between men and women, in the absence of *de facto* equality (substantive) women fail to achieve real equality, due to discrimination. During the drafting stage of CEDAW, the proposal to make it obligatory for States to prohibit incitement to discriminate against women was rejected.[98] However, States parties do have duties concerning the protection of women against damaging gender stereotypes produced by private parties. Holtmaat is of the view[99] that although CEDAW Article 1 does not mention gender stereotypes or fixed parental roles, and Article 5 does not speak of discrimination, these phenomena are closely related to discrimination against women.

1.2 Example of stereotyping - Ireland

A regular topic in the periodic reporting cycle between Ireland and the CEDAW Committee is the issue of 'stereotyping'. It is a topic to be addressed (again) in the forthcoming combined sixth and seventh periodic reports, in response to the issues and questions raised by the Treaty Body.[100]

While women were active during the revolutionary period[101] if we go back to the very early days of the new Irish State (pre-1937 Constitution), a report on the Civil Service, (quoted by Kettle in her minority report) refers to the cohort of women Civil Servants, '*The great majority of women Civil Servants are employed as Writing Assistants, Typists and Cleaners on duties, according to the report, 'peculiar' to women.*'[102] The terminology ('*peculiar to'*) accentuates the prism through which women were viewed. If we look at the occupational segregation in the modern Civil Service we can draw parallels in the sense of where women are grouped;[103] this is not to be understood as reflecting the sentiments referred to by Kettle, merely a fact of where women predominate numerically. Endeavours to bring about greater targeted opportunities for women to progress have also to be acknowledged.[104]

Many years after the foundation of the new State, the legal challenge by a civic minded woman resulted in women being able to function as equal citizens in terms of jury

(all accessed 30 May 2016)

service, even if not property owners. The stereotyping of women can be seen reflected in the decision.[105]

However, the main concerns that have arisen relate to the reference to women (in the home) in the Constitution of Ireland, from1937. Any amendment to the offending Article (of the Constitution) will require a referendum, and the agreement of the electorate. The exchange between the State party and Treaty Body may have to continue for some time.[106]

> *'Article 41*
> *2.1 In particular, the State recognises that by her life within the home, woman gives to the State a support without which the common good cannot be achieved.*
> *2.2. The State shall, therefore, endeavour to ensure that mothers shall not be obliged by economic necessity to engage in labour to the neglect of their duties in the home.'*

In his seminal work on the *Irish Constitution* Kelly's assessment of Article 41 (combined with Article 42 on Education) was that these were '*among the most innovatory in the entire Constitution.*'[107] Later editions refer to the suggestions that the '*articles were inspired*

---

[105] *De Búrca v Attorney General* [1976] IR 38 See too (Commission Report 1972), paras 466-472 which recommended a change in eligibility for jury service See (Commission Report 1993) , para 1 2 4 for commentary on the majority/minority decisions The Chief Justice felt that as jury duty takes the juror away from 'his' occupation and home 'special provision must obviously be made in respect of women'

[106] Some selected examples of women in leadership rolesin Ireland underline the breadth of ability available (*including* the maternal role); the first woman elected to the Westminster Parliament was Irish, but she did not take her seat; she subsequently became Minister for Labour (a European first for women) in *Dáil Éireann*– having actively sought the role. Of the nine Presidents of Ireland, two have been women. Three women have been heads of political parties; two were newly founded, and one was the oldest political party in the State, all three parties would have been in the 'small category'. It has been said that it is easier to make a mark as a member of a smaller party. Five women have been *Tánaiste* (Deputy Prime Minister). At the time of writing the *Tánaiste*/Minister for Justice, Attorney General, Chief Justice and President of the District Court are women. The Chief State Solicitor, Director of Public Prosecutions, Garda (Police) Commissioner, Head of the State Forensic Laboratory, Data Protection Commissioner and European Ombudsman (formerly Irish Ombudsman and Information Commissioner) are women. The former Chief Commissioner of the Revenue Commissioners is female, (subsequently – and currently appointed Chair of Policing Authority). The Chief Commissioner of the Irish Human Rights and Equality Commission (formerly the Children's Ombudsman) is a woman. Ireland has nominated women to be members of the Court of Justice of the European Union, European Commission and European Court of Auditors (one was a member of two of these institutions, and had also held several ministerial portfolios – at junior and senior level); the current and previous Irish members of the Court of Human Rights in Strasbourg are women. There are three women on the Central Bank Commission (10 members). The current Chair of the Board of RTE (State broadcaster) is a woman, as is the newly appointed Director-General. Although not a Government appointment, it should be noted that an Irish woman was (the only woman) Secretary-General of the European Commission. The General Secretary of the Irish Congress of Trade Unions (ICTU) is a woman, having previously been Vice-President of SIPTU, the biggest trade union in the country, and two women have been editors of two national newspapers. The first woman President of the Royal Irish Academy has been elected, and the CEO of Enterprise Ireland is also a woman.These individuals are neither representative of the female population, nor is the listing exhaustive. However, they are an encouragement to those who are responsible for such appointments, and to those who would like to be appointed, to take the appropriate steps.

[107] Kelly, J M, *The Irish Constitution,*(Kelly) [1980 Dublin], 483

in part by papal encyclicals and Catholic teaching,[108] *and also refer to a declaration in the German Constitution of 1919 of the special status of marriage and motherhood, as well as parents' rights and duties*.'[109] It is worth noting that *Kelly*[110] argues that '*one could infer from the reference in Article 45.2.i to the right of men and women equally to an adequate means of livelihood that the drafters of the Constitution did not envisage that the only role for women lay in homemaking.*' [111] This would be similar to the minority view held by Denham J (now CJ) in *Sinnott v Ireland* [2001] I. R. 545.

More than a decade before Ireland acceded to CEDAW in 1985 and prior to accession to the European Communities in 1973, the 1972 report of the Commission on the Status of Women (Commission Report 1972) offered stark conclusions on the dangers of stereotyping. These are particularly prescient comments in relation to the impact of stereotyping and are not in contradiction with the views of the CEDAW Committee. The Commission commented that: *'....[However], the removal of [these] discriminations leaves untouched a larger and more subtle area of discrimination consisting of those factors which limit women's participation even in the absence of formal discrimination, that is the* stereotyped *role that is assigned to women, the inculcation of attitudes in both boys and girls in their formative years that there are definitive and separate roles for the sexes and that a woman's life pattern must be predominantly home-centred while a man's will be predominantly centred on employment. It is from this type of cultural mould that formal discrimination arises and it is only by the removal of such traditional attitudes that women can hope to achieve self-fulfilment and equal participation in all aspects of the life of the community…'*[112]

[112] Commission Report 1972, para 21 Paras 21-27 of the Report set out an enduring assessment of the dangers of stereotyping, and provide examples and possible actions to overcome the dangers, available at http://opac.oireachtas.ie/AWData/Library3/Library2/DL017466.pdf (last accessed 30 April 2016) A contribution to a symposium on the Commission's *Interim Report on Equal Pay,* commenting on para 128 of the Report (re State investment in education, and women at home rather than in the workforce) was to the effect that the Report ignored '*the possibility that much of Irish women's education is geared to fitting them for home duties and the State certainly should count as part of the social return on these outlays the improved quality of child-care etc*', see Geary, P T and Walsh, B M, *The Economics of Equal Pay,* in Journal of the Statistical and Social Inquiry Society of Ireland, 1972, 22 (4) 1972, 112-125, 118 This was an economic analysis and not a personal preference/view

The Commission Report was just one of many such reports.[113] However, there are signs that changes may be in sight.[114] In his Statement to the *Dáil* on the *Second Report of the Constitutional Convention*, the then Minister addressed the matter.[115] Among the many issues he highlighted was the original protective purpose of Article 41.2.1 and Article 41.2.2. '*It was part of the philosophy that resulted in women in the public service being required to give up their employment upon marriage'.* He expressed support for much of the Constitutional Convention's *Second Report*, including changed wording of the offending provisions, but cited a particular difficulty which will delay progress.[116]

Finally, looking specifically at the low level of female participation in national electoral politics,[117] what can be discerned is a change in the motivation for women for getting involved. An initial peculiarity of the Irish political involvement of women (especially, but not exclusively), was the preponderance of 'kith and kin' standing for (and winning) seats left vacant due to the death of the elected holder. This was described by the Commission Report 1972 as '… *common method of entry for women[is] by marriage or family relationship'*.[118] This was clearest where by-elections were concerned.[119] For example, in by-elections held during the 16th *Dáil* (1957) three women were successful, of whom two were widows; in the 17th *Dáil* (1961) all successful women (3) were widows, whereas in the 18th *Dáil* (1965) two women were unsuccessful, neither was a widow. The Commission Report 1972 notes that '*only 9 individual women were involved in the 22 successful candidatures of the four Dáil elections and by-elections'* (including 19th *Dáil*- 1969): ' *of these 8 were the widows of former Dáil Deputies.*'[120] A commentary on the 1977 General Election by an active participant noted that six women were returned to the 20th *Dáil* (then with 147 seats). This was one more than in the previous election. Of the six, three were widows, one a daughter and one a granddaughter of former members

[116] '*The inclusion of a reference by the Convention to the issue of 'carers' is the reason why it is not possible to offer a more specific timeframe for a Referendum to take on board the overarching Recommendation at this time.*'

[117] For comparison see http://www.oireachtas.ie/viewdoc.asp?fn=/documents/Committees30thDail/J-JusticeEDWR/Reports_2008/20091105.pdf (last accessed 27 May 2016)*'Women account for half of the Irish population, yet the proportion of women TDs has never exceeded 14 per cent. To put it another way, the Dáil has always been at least 86 per cent male. Since 1990, when Mary Robinson was elected as Ireland's first woman President, Ireland's rate of women's political representation has reduced drastically. In 1990, Ireland was in 37th position in the world classification of women's representation in the lower or single house of national parliaments'*

[118] Op cit, Commission Report 1972, para 489

[120] Op cit Commission Report 1972, para 488

of the *Dáil*.[121] While the practice remains (and includes the current –male- *Taoiseach*) it is no longer the recognised route for women's entry into politics.

A key factor identified by three female former politicians, two former ministers, and one a former minister of state, was the existence of, and support offered by, what became known as the Women's Political Association (WPA). This had been founded in 1971 and supported women candidates seeking to stand for election initially in the 1977 General Election.[122] Some of the key activists were successful in electoral politics – nationally and at European level over the subsequent years.[123] The 2016 General Election saw several similar groups mounting countrywide events and facilitating dissemination of information, and importantly, providing support in tangible and intangible ways. A common factor between the civil society organisations – in earlier years and now – is the non-party nature of the support; everyone, regardless of political views were involved. This support is part of the successful dual approach advocated (State funding tied to quotas, and civil society support). Family tradition continues, but it is no longer the main route for women.

1.3 Women in (power and) decision-making

1.3.1 Political -general

Political decision-making is multi-level; national, regional, local, communal and of course, international.[124] The Inter-parliamentary Union (IPU) maintains publicly available data on women parliamentarians worldwide which allows for comparisons to be drawn. Currently 193 parliaments are listed.[125] Of these 46 (less than 25 per cent) reach the critical mass level of 30 per cent).[126] It has to be borne in mind, that while female parliamentary representation is welcome, the main issue, as we have noted, has to be 'meaningful' participation.[127] As a co-decision-maker in the legislative process of the European Union (EU), the European Parliament (EU) can play an important role in the development of gender equality within the 28 Member States. The EP Committees play a very active role, including in relation to our sub-themes.[128] Prior to 1979, Members

[121] Fennell, N, *Political Woman A Memoir,* [Dublin 2009], 104 See too, Sub-Committee of the Joint Committee on Justice, Equality, Defence and Women's Rights (now Justice and Equality) (Sub-Committee), In relation to the role of sport and 'being well known and asked to stand, as a result' (male politicians) see same, available at http://www.oireachtas.ie/viewdoc.asp?fn=/documents/Committees30thDail/J-JusticeEDWR/Reports_2008/20091105.pdf (last accessed 27 May 2016)

[122] As noted op cit, Fennell, 95 et seq, of 375 party candidates selected in 1977 twelve were women See too Hussey, G, *At the Cutting Edge: Cabinet Diaries, 1982–1987* [1990 Dublin]

[123] See, op cit, Fennell, 97, and reference to Mary Bannotti who was elected an MEP 1984-2004 - http://www.europarl.ie/en/your_meps/irish_former_meps_1.html previously unsuccessfully in a by-election in 1983, and subsequently to be President of Ireland in 1997, showing that she was undaunted

[124] We will concentrate on national parliaments, with some examples from other levels (as available)

[125] As of 1 May 2016, see http://www.ipu.org/wmn-e/classif.htm, relating to 193 parliaments This applies to all parliaments being addressed in this Report Some of the States being discussed in this Report have federal systems of government In such instances, only the federal level is addressed here

[126] GR 23, para 16 See too, .Report of the Fourth World Conference on Women, Beijing, 4-15 September 1995 (A/CONF.177/20 and Add.1), chap. I, resolution 1, annex I

of the EP (MEPs) were nominated, and direct elections commenced only in 1979 (with the extension to nine Member States). In the interim the number of Member States has increased to 28. In the intervening years the level of female MEPs has increased from 16 per cent to 37 per cent. National examples show mixed results.

1.3.2 National examples – including political, public sector (broadly) and judiciary

i. Looking first at the *national Parliament*, some political parties in *Austria* have introduced (voluntary) political party quotas for women. These range between 50 per cent (the Green Party (GA), and 33.3 per cent (the Austrian People's Party (ÖVP), with the Social Democratic Party of Austria (SPÖ) at 40 per cent. Austria is bicameral and federal, and after the last election in September 2013, is currently ranked as number 44. It is one of the rare States which have achieved the critical mass of 30 per cent female members, (in fact, 30.6 percent), in the *Nationalrat* (Lower House) and just under the critical mass level, at 29.5 per cent, in the *Bundesrat* (Upper House). None of the proposed quota levels has been met.

The *European Parliament* elections in 2014 saw 56 per cent male MEPs, and 44 per cent women.[129] However, the Austrian parliamentary representation in the European Parliament *currently* [130] shows 50:50 (men and women) – nine men and nine women.

ii. There has been an improvement in the number of women parliamentarians in *Bangladesh*, elected in 2014 (20 per cent) compared to 1991 (12.73 per cent). Female parliamentarians hold some of the highest offices, including those of Prime Minister, Speaker, Leader of the Opposition, as well as Leader of the next biggest party.[131] Bangladesh, which is unicameral currently stands at number 89. At the same time, the country has achieved a better participation than the US, several EU Member States, and immediate neighbours. A positive assessment was reached when Bangladesh was placed in tenth place, out of 142 countries, in the political empowerment sphere, and was awarded the prestigious Women in Parliaments Global Forum award in 2015. The Constitution, article 65(3),[132] was amended in 2011 to ensure increased representation by women in national and *local government.*

[129] http://www.europarl.europa.eu/elections2014-results/en/gender-balance.html (25 June 2015)

[130] http://www.europarl.europa.eu/meps/en/search.html?country=AT (25 June 2015)

[131] This is in addition to a number of Ministers. A very modest seven out of 104 Judges in the Supreme Court are women, although substantial numbers of female judges are to be found in the subordinate courts.

[132] Article 65(3): Until the dissolution of Parliament occurring next after the expiration of the period of ten years beginning from the date of the first meeting of the Parliament next after the Parliament in existence at the time of the commencement of the Constitution (Fourteenth Amendment) Act, 2004, there shall be reserved 2[fifty seats] exclusively for women members and they will be elected by the aforesaid members in accordance with law on the basis of procedure of proportional representation in the Parliament through single transferable vote: Provided that nothing in this clause shall be deemed to prevent a woman from being elected to any of the seats provided for in clause (2) of this article.] (3A) For the remaining period of the Parliament in existence at the time of the commencement of the Constitution (Fifteenth Amendment) Act, 2011, Parliament shall consist of three hundred members

In terms of *public office holders*, the National Human Rights Commission, Act 2009[133] provides for at least one woman as a Member, the Right to Information Act 2009[134] provides for at least one woman as Commissioner, and by law a fixed number of posts at the *local government* level are reserved for women.

iii. Currently *Brazil* is ranked 155 in terms of female representation in the national Parliament, and is a bicameral, federal state. After the last election in 2014 the female presence in the Chamber of Deputies (Lower House) stands at 9.9 per cent and at 16 per cent in the Federal Senate (Upper House). It is clear that female representation is a long way off reaching the recognised critical mass of 30 per cent. Despite this poor female federal parliamentary representation, the two most recent *presidential* elections have resulted in the successful female candidate being returned (twice). Dilma Rouseff was the first woman to reach this office in Brazil. However, for domestic legal reasons, the twice elected President was suspended in May 2016, and has subsequently been impeached,[135] (and replaced).

There are national provisions in Brazil establishing quotas for women candidates.[136]However, despite this legal obligation, the reality is different; women often are only recruited by the parties to fill empty positions in order to meet these legal provisions, but without being able to fill, and fulfill, the positions. In other words, it is said to be a sham.[137]

As regards *local government*, UN Women has confirmed that in the Executive Branch, women occupy only 10 per cent of municipalities and represent 12 per cent of municipal councils.[138] Looking more widely, we see that women make up fewer than 15 per cent of all current chairpersons in Brazilian *public bodies*.[139] In a ranking which assesses political penetration by gender in 146 countries, prepared by the Inter-Parliamentary Union, Brazil occupies the 110th place.[140]

[140] Ibid

In the *Judiciary*, 35.9 per cent of national judges are women.[141] In the Federal Supreme Court (STF), in 2016, out of 11 Ministers, only two are women.[142] In the history of the Brazilian Supreme Court, only three women have served as Ministers.[143] In the Superior Court of Justice (STJ), seven Ministers are women, out of 33 judges (21 per cent). In 2016, it is expected that two women Ministers will assume the presidency of both Courts. If this happens, it will be the first time in Brazilian history that the Superior Court of Justice will be presided over by a woman.

iv. *Finland's national Parliament* is ranked at number 10, following the April 2015 general election. It is a unicameral State, with a female parliamentary representation of 41.5 per cent. This is clearly over the 30 per cent critical mass level, but below the goal of gender parity, of 50 per cent. After the 2014 EP elections, Finnish members of the *European Parliament* are at 45 per cent male, and 55 per cent women.[144]

v. *India*'s last general election was in 2014, resulting in a ranking of 144. It is a bicameral system. Coincidentally, both Houses of Parliament have the same percentage of female parliamentarians, namely 12 per cent in both cases.

vi. *Ireland* is currently ranked at number 76 by the IPU, having fluctuated (mainly downwards) over time. It is bicameral, with the *Seanad* (Upper House) partly elected, and partly appointed by the *Taoiseach* (Prime Minister). The *Seanad* electoral system is regarded as undemocratic; a referendum to abolish the *Seanad* was defeated in 2013, as the 'reform' option was considered preferable. This remains to be seen. Current ranking stems from the general election in February 2016, when the highest ever success rate for women parliamentarians was achieved. This is largely attributed to the introduction of candidate quotas linked to State financial support for political parties.[145] The support of active, apolitical civil society also played an important role.

The implications of the 2012 Act did not receive universal approval, particularly its potential negative impact on current, and potentially, future, male politicians. It has to be noted that some women politicians had also previously expressed opposition, or at best reservations, about quotas. A High Court challenge was mounted, unsuccessfully, by a would-be candidate.[146] The State had argued its entitlement to enact laws regulating elections included an entitlement to legislate to promote the '*constitutional guarantee of equality'*.[147] The Court[148] found that the challenger lacked standing; as it was the political

[147] Note, inter alia, op cit IHREC, op cit CEDAW/C/IRL/2-3 and op cit CEDAW/C/IRL/QPR/6-7

[148] Keane J noted in the *Mohan* case that taking the period 1918-1977 '*[T]he proportion of the* members *of Dáil Éireann who are women has never exceeded the current percentage of the whole,*

party which would have had standing to mount the challenge, and in fact the party had seemed to welcome the legislation when mooted.[149] In addition, the court held that the plaintiff '*had failed to prove his claim (that) a 50 per cent cut in funding for Fianna Fáil, if it did not meet the gender quota targets, would make it impossible for the party to function*.' He had also failed to show his exclusion from being considered for selection at the election convention '*was due to a decision imposed on the party as a result of the 2012 Act rather than a voluntary decision of Fianna Fáil*.' The judgment was an important legal hurdle to overcome. In the event, the 32nd *Dáil* saw the highest percentage of women ever elected (22.2 per cent).[150] This legislation had been included in the Programme for Government adopted in March 2011 (2011-2016) .

The 31st *Dáil* (166 members in total) ended with 16.3 per cent female members and the 24th *Seanad* had 30 per cent female members.[151] The 32nd *Dáil* (158 members in total), has 22.2 [152] per cent women parliamentarians, an increase of almost 6 per cent since the 31st *Dáil* election. Women candidates made up 30 per cent of the total.[153] 16 of the 40[154] constituencies returned no women (even though 15 of these had had women candidates); one constituency had no women candidates, despite the legislative imperative.[155] However, as we have noted, the outcome falls well short of the recommended 30 per cent (women), needed to form a critical mass. The 25th *Seanad* has 28.5 per cent female members (60 seats).

Ireland currently has 11 members of the *European Parliament*, of whom the majority (55 per cent), are women, thereby exceeding the EU average of 37 per cent.[156] This is an improvement from the previous election of 42 per cent women MEPs, against an EU average of 36 per cent.[157] The percentage of Irish women MEPs in the European Parliament elected in 2014 is one of the highest; similar to Sweden, 1 per cent more than Finland, and only Malta – with 67 per cent – has more. One of the current (women) Irish MEPs was elected Vice President of the Parliament. However, over the course of Ireland's EU membership, women have not always been so well represented. In the period 1973-2014

---

that is 16.3 per cent, having fallen as low as 0.7 per cent after both the second election of 1927 and the election of 1932.' In the period 1977-2011 '*…..the proportion of women* candidates *has never exceeded 20 per cent of the total (the high point being 19.8 per cent in the 1997 election).*

a total of 31 of women and 112 men have been nominated/elected as MEPs for Ireland.[158] There were no quotas applied.

a. Government ministers

The Constitution (*Bunreacht na hÉireann*) restricts the numbers of *Government ministers* to a minimum of seven and a maximum of 15.[159] The first Cabinet Minister for Equality (and Law Reform) was appointed in 1993. Given that the Constitution restricts the numbers of members of the Cabinet to a maximum of 15, this was a very important development. In the 32nd *Dáil* four out of the 15 ministers are women – as was the case in the 31st *Dáil*, representing 27 per cent. Two are continuing as Ministers, albeit one in a differently configured Department; two are new to office (one of whom is an Independent, and one of whom was a first time backbencher in the 31st *Dáil*).[160] There had been mention – indeed a promise - of a 50:50 gender balanced Cabinet in the 32nd Dáil.[161] It is disappointing that this has not happened. Looking at the division of competences we see that the 2016 Government has Departments (Ministries) headed by a female Minister in one of the five basic functions (Justice and Equality); in one of the three economic function (Jobs, Enterprise and Innovation); two in two of the three socio-cultural functions (Regional Development, Rural Affairs, Arts and the Gaeltacht; and Children and Youth Affairs) and none in the infrastructure functions.[162] Out of the 18 Ministers of State, four women have been appointed, one of whom was appointed Government Chief Whip, with the status of Minister of State, - representing 22.2 per cent of the appointments.[163] The portfolios of her three female colleagues relate to Mental Health and Older People; Health Promotion; and Communities and the National Drugs Strategy. Health and Drugs are two areas of considerable difficulty, nationally, Health representing a particularly difficult funding area. Nonetheless, these could be seen as being 'female' areas of concern. There are

[158] The number of seats held by Ireland have changed over the years from 17 (15, 13, `12) to 11, as overall membership grew. The first elections to the European Parliament were in 1979; prior to then, MEPs were nominated, despite also holding a national mandate. In Ireland's case, all nominated MEPs were men Irish women MEPs have always been elected. The dual mandate was abolished in Ireland only 'from the general election after 2004' This could have been used to involve women, see http://oireachtasdebates.oireachtas.ie/debates%20authoring/debateswebpack.nsf/takes/dail2004012900010?opendocument (last accessed 20 May 2016) See also http://www.europarl.ie/en/your_meps/irish_meps_since_1973.html;jsessionid =E55DADDF520BD9C81DA1515BD4A3D3CE

[159] Article 25.1

[160] www.taoiseach.gov.ie/...Government/List_of_Ministers_Ministers_of_State/ (last accessed 17 May 2016) The four portfolios are Children and Youth Affairs; Jobs, Enterprise and Innovation; Justice and Equality (and Tánaiste); and Regional Development, Rural Affairs, Arts and the Gaeltacht. The constitutional numerical constraints are visible from the extended titles of the portfolios; the limit was set in a different era of the parliamentary process

[161] See, inter alia, http://www irishtimes com/.../taoiseach-wants-equal-number-of-men-and-women-in-next-cabinet-1.2477506 *,and* http://www.irishtimes *com/.../enda-kenny-pledges-to-appoint-women-to-half-of-cabinet-posts* www.irishtimes.com/.../gender-balance-and-the-next-cabinet-1.2478691

[162] http://ec.europa.eu/justice/gender-equality/files/database/024_map.pdf , Country BEIS type, A-4, (last accessed 24 May 2016)

[163] She is not the first female Government Chief Whip;this had been the situation in 2002-2004 However, it has been the norm to appoint men to this post, possibly arising from stereotyping

no constitutional numerical restrictions on ministers of state (junior ministers).[164] It is a purely political decision. It would be hard not to see the paucity of female appointees as an opportunity missed, particularly as the percentage of women elected to the Dáil was the highest ever, as noted. It is also difficult not to reflect on the fact – that since the foundation of the State (only) 17 women ministers have been appointed.[165]

The most recent Local Elections were held in 2014 (coinciding with the European Parliament Elections). Unlike the 2016 General Election there were no candidate quotas tied to State funding, although there was voluntary civil society activity, and at least a claim of voluntary party quotas. The results, taking all Councils into consideration (City and County), were that 21.65 per cent of the candidates were women, as were 20.76 per cent of the successful candidates. An interesting 'divide' can be seen between City (urban) and County Councils (rural, with towns and villages). Dublin City Council had 29.14 per cent women candidates, and 31.75 per cent of the successful candidates were women – thus exceeding the critical mass threshold. The second city (Cork), on the other hand had 18.46 per cent women candidates, and only 16.13 per cent of the successful candidates were women. This was slightly over 50 per cent of the percentage achieved in Dublin.[166] Given that Local Government is a well trodden route for entry into national politics these differences (achievements) are significant. In any event, there is still a long road to travel.

b.Civil Service/public sector

The *public sector*[167] *(including the Civil Service)* has always had a large female staff. Education and health are key employers for women – perhaps practical examples of (caring professions) stereotyping driving career choices. It has been noted that this occupational segregation had an impact during the recession post 2008, in terms of gender imbalance in the overall unemployment figures.[168] Gender imbalance has been very stark in the Civil Service, at all levels, but most acute in terms of career progression for women, the higher the level. Extensive efforts have been made to address this imbalance, and while progress is recorded, it is still a work in progress. For example, in the Civil Service, progress has been made in addressing gaps between male and female participation at different grade levels. In 2014, women accounted for 43 per cent of Assistant Principal Officers and for 35 per cent of Principal Officers. However, at the (next/two) most senior grades; women represent only 25 per cent and 24 per cent at Deputy/Assistant Secretary General level and at Secretary General[169] level respectively.[170]

vii. *Nigeria* is ranked at number 178, following the elections of March 2015. It is a *bi-cameral parliament* in a federal state. Female parliamentarians comprise 5.6 per cent in the Lower House, and 6.5 per cent in the Upper House. This is the weakest female parliamentary representation among the countries being discussed here, but is not the lowest female representation in parliaments, overall. It is an example of the challenge faced by those trying to increase the voice of women in relation to formulating a future moulded by a wider range of experiences, interests and needs.

From 2007 to 2011, the National Assembly had 24 members, which increased to 27 in the 2011-2015 Assembly. However, there are fewer women in the current Assembly following the March 2015 election.[171]

This lack of progress in terms of Nigerian women and their involvement with parliamentary decision-making is despite a range of legal mechanisms, as we have seen above. There is still work to be done to improve the participation of women in the parliament.

viii. *Sweden's national parliament* is unicameral, and has the highest international ranking of those countries being discussed in the Report, standing at number 5 in the IPU rankings. Parliament has 43.6 per cent female membership; this is well over the critical mass threshold, but still not at the 50:50 level. The European Parliament elections in 2014 resulted in 45 per cent male members elected and 55 percent women.[172]

ix. *The United States* is ranked 97 out of 193 parliaments in terms of female representation. It is a federal country without a parliamentary form of government. Thus, political control in the US Senate, the House of Representatives, and the Presidency can be split between the two (main) opposing parties. This can create barriers to decision-making including in relation to the ratification of international treaties; of particular interest to our topic is the lack of ratification of CEDAW. This is despite it having been signed during President Carter's tenure of the White House, and President Obama's expressed desire to see ratification of CEDAW during his Administration. There is no gender parity requirement in any of the branches of the US federal government. In the US House of Representatives, women members constitute 19.4 per cent, and in the Senate women comprise 20 per cent. [173] The last relevant elections were in November 2014. In the federal trial and appellate courts there are 17 per cent women judges in 2016.[174] The selection by a major party, of a woman candidate for the presidency, for the first time, raises the possibility of the first woman president being elected later this year.

US women, however, have been in positions to contribute to the economic empowerment of women, and to international law. Beginning in 1933, women have been appointed to powerful, Cabinet-level, policy-making positions in the US government Executive branch. There are currently 23 women with Cabinet and Cabinet-level positions, 35 per cent of the total positions.[176] Eleanor Roosevelt, a member of the US Delegation to the

UN from 1945 to 1951, was elected chair of the UN Human Rights Commission in 1946. She was one of the drafters of the Universal Declaration of Human Rights. Four women have served as US Permanent Representatives to the UN since 1982, and, therefore, also represented the US in the Security Council. Three women have served as Secretaries of State since 1996. In the US legislative branch, a woman was Speaker of US House of Representatives: from 2005 to 2011. This is the most powerful position in the House. The first woman was appointed to the nine-member US Supreme Court in 1981, the second in 1993. Although from opposite political parties, they have jointly supported women's rights.[175] Since 2010, there have been three women justices on the Court, who all support women's equal rights based on the US Constitution and federal laws against discrimination based on sex.

The current Chair of the Board of Governors of the Federal Reserve (the US central bank) is the first woman to hold that post, having been appointed by the President and confirmed by the Senate in February 2014. The Attorney General[176] and Chair of the Securities and Exchange Commission are also women. All these posts held by women carry 'meaningful[177] decision-making powers'.

In the US federal system the State and local governments share power with the national government in areas that effect women's economic, health, political, and education rights, and social services. States each have their own criminal, social services, health, and education laws, in addition to some overriding federal laws in these areas. Marriage, divorce, and inheritance laws, however, are controlled by each of the States, exclusively, and vary among the States.[178] State courts are where most criminal cases and all family law cases are decided. In the State courts 31 per cent of judges are women.[181]

The State governments each have separate Executive, Legislative and Judicial branches. In 2016, women held 24.7 per cent of all the state wide Executive level positions throughout the 50 States. In 2015, six (of the 50) States had women Governors. The 50 State legislatures had 25.2 per cent women members.[179]

1.3.3 Summary

Only three (33 per cent) of the nine countries discussed in this Report have met the 30 per cent critical mass threshold of female members of their national parliaments. Two of the jurisdictions discussed are in single figures in terms of female parliamentarians. There is clearly room for improvement in all cases, although it has to be acknowledged that there are considerable differences in achievements. What we can agree is that there is no room for complacency.

1.4 Economic decision-making

This very important area cannot be fully explored due to length constraints.[180] However, it can be said that there is still a lot of work to be done. In the economic field the Bangladesh Government has formed a National Women SME Forum under the SME Foundation of the Ministry of Industry to promote women's participation in formal economic sectors. The involvement of women (as decision-makers) in the economy is focused very much outside the large corporations.[181]

On the EU front the lack of progress on the EU's Directive to address gender balance on boards is disappointing. That said, there are some positive statistics – including Finland 29.5 per cent and Sweden with 29.4 per cent.[182] Ireland stands in contrast, at 13.2 per cent.[183]

We have seen that the US has a female Chair of the Federal Reserve; there is no question but that this is a meaningful decision-making role. There are three women on the ten person Central Bank Commission in Ireland.[184] An important State agency supporting industry in Ireland, has a female chief executive.[185]Brazil, Finland, India, Ireland, Sweden and the US are included in a report on the Forbes Global 500 companies.[186] Finland and Sweden are number two and three respectively.

2. Gender (responsive) budgeting

2.1 Introduction

It is clear that CEDAW is particularly important for our topic of G(R)B. This is despite no explicit textual reference to an obligation for States to pursue GRB. In addition, the Convention makes no direct mention of the budgetary resources of a State required for its implementation. However, as we have seen, Article 2 (f) obliges States to take '*all appropriate measures'* to eliminate discrimination, which include budgetary means, as can be seen from the approach adopted by the CEDAW Committee in Concluding Observations and General Recommendations. Several other provisions are also relevant in attributing obligations to adopt GRB. We have noted that Article 3 additionally requires States to ensure not only formal- but also substantive equality. This requires States to employ both temporary and permanent special measures to achieve substantive equality, the former includes measures such as the application of quotas to promote hiring of female applicants in employment, and the latter relates to maternity health care services.[187]

The application of such broad notions of discrimination and equality thus indicates that not only must laws not discriminate, directly or indirectly, but States must adopt programmes and revenue systems with women as specific beneficiaries, for example, maternal health care. With regards to Article 12 of CEDAW, concerning women's health,

[180] Treatment choice made by contributors hence understandable length constraints
[181] Which is the focus of our Report

[186] http://www.oecd.org/gender/data/boardroommembershipbysex.htm
[187] Article 4 (1), Article 12 (2) CEDAW

the Committee has, inter alia, held that the duty to fulfill this article requires budgetary measures to the maximum extent of a State's resources to ensure gender equality in health care.[188] The Committee holds in relation to this that '*States parties should allocate adequate budgetary, human and administrative resources to ensure that women's health receives a share of the overall health budget comparable with that for men's health, taking into account their different health needs.*'[189]

Additionally, States must also act to transform relations and stereotypes that negate women's enjoyment of substantive equality.[190] Applied to GRB, this could include, inter alia, ensuring that tax systems do not amplify traditional gender roles (stereotyping) and ensuing gender inequalities. It also entails States actively addressing (unacknowledged/quantified) gender division of unpaid labour in the home, *inter alia*, rearing of children.[191]

As we have already noted, the CEDAW Committee has commended States parties, in Concluding Observations, for applying GRB in their national budgets,[192] addressing this under sections concerning '*national machinery for the advancement of women and gender mainstreaming'*.[193] It has also criticised States parties for a lack of an 'overall integrated strategy for gender mainstreaming, including gender budgeting.[194] Other criticism has related to a lack of information about specific budgetary allocations in state report regarding specific posts, e.g. for implementing programmes to increase gender parity in primary school.[195] It has also expressed concern when the amount of financial resources allocated to women's empowerment from the overall budget is limited, [196] and has criticised States parties for allocating limited resources to specific posts, for example, activities to combat violence against women.[197] We see here the valuable role played by the Treaty Body in commending *and* challenging States parties and thereby contributing to wider dialogue (and 'change').

Taking the definition – and objectives – of gender responsive budgeting (GRB), which we have addressed at the outset,[198] an assessment of the national examples provided by contributors to this (section of this) Report presents a mixed picture. As noted by one contributor, budgetary provisions for women's economic empowerment are often lacking in the budgets even of States which have ratified CEDAW. She is also of the view that States which have signed and ratified CEDAW are *obliged* to frame policies and programmes which aim at gender equality and to provide funds for such programmes. Her view is that it is therefore important to analyse the gender sensitivity displayed in the

annual budget of a State, even when the State constitution or its laws guarantee equality and non-discrimination.[199]

2.2 Case for GRB – austerity - criticisms

The lack of G(R)B, or at the very least, the lack of positive vision, can be seen in the austerity measures introduced in those countries suffering from economic 'downturns'.[200] Their ensuing impact – particularly on women who are most affected, has been heavily criticised, inter alia, at an event organised at CSW59[201] in memory of the esteemed Finnish lawyer, diplomat, women's advocate, and the first female assistant secretary general of the United Nations. [202] The panel of women economists were critical of the lack of progress on women's rights and the goals of the Beijing Platform for Action (BPfA): '*Economic and social rights are not being turned into laws and policies. Austerity in Europe harms women most. This is apparent especially in reduced spending on public health, education, social services, and cash benefits for the disabled, migrant, and minority women*.' This is an argument heard in other countries. Several international instruments were identified as having been breached '*because they fall most heavily on women.*' On the positive side specific mention was made of the SDGs, which it was contended, '*expected.. financial investment in gender equality in all areas of government operation*.'

2.3 National (selected) examples

Drawing on the examples of different budgetary approaches adopted in those States chosen by the contributors we can see both similarities as well as stark differences.

i. Gender responsive budgeting enjoys a particularly strong legal basis in Austria, not least given that it can be traced back to the Austrian Federal Constitution (Articles 13, 51(8)).[203] Both gender responsive budgeting and gender impact assessment were introduced at the federal level in 2013, as an integral element of a major budget reform. From 2009 all levels of government (i.e. federal, states and municipalities) are legally required to aim at effective gender equality in budgeting. GRB at the federal level rests on two pillars: GRB in the multi-annual and annual regular budgeting process as one element of performance oriented budgeting; and gender impact assessment as one element of regulatory impact assessment within the policy-making and evaluation process. As one important element of the introduction of performance budgeting, regulatory impact assessment was reformed as of 2013.

ii. In the case of *Brazil,* we are told that Brazil adheres to its international obligations (including regional instruments). In addition, 'Soft law' plays an important part; one example of this being the recent Addis Ababa Action Agenda, the outcome of the Third International Conference on Financing for Development that promotes measures to '*close the financing gaps that hinder progress towards gender equality and women's empowerment'*.[204]

More specifically, since 2004 Brazil, has developed a National Policy Plan for Women,[205] within the Special Secretariat of Policies for Women (Special Secretariat), a national institution with ministerial status established in 2003 and linked to the Presidency of the Republic. In 2013, the Special Secretariat issued the latest version of the National Policy Plan for Women, setting out actions for the years of 2013-2015.[206] In order to put the recommendations of the National Policy Plan for Women into practice, the Brazilian Institute of Geography and Statistics (IBGE) produced research[207] that concluded the following: in 2013, 40.7 per cent of Brazilian states had a specific secretariat to address gender policies. Eight states[208] had no specific budget for policies of gender responsive budgeting, reducing the quality of the intervention actions. Among those with a budget, the state of Pernambuco had the highest (R$ 21.7 million) and Pará, the lowest (R$ 60,100). Among national administrative structures for gender policies, the most used was the Police Specialized in Assistance to Women (DEAMs), responsible for the protection of women facing gender violence.[209] The absence in all states of Brazil of specific institutions to promote gender equality represents a barrier to the completion of Brazil's goals as set out in the instruments mentioned above.

iii. The situation regarding gender equality in *India* is described as challenging.[210] The Global Gender Gap Index 2014 ranked India at 114 out of 142 countries. The ranking is based on a country's ability to reduce gender disparities in four areas: economic participation and opportunity, education, political empowerment, and health and survival. The CEDAW Committee has emphasised the need for increased investments for the Ministry of Women and Child Development (MWCD) and for gender budgets across Ministries. On the other hand, some Ministries have either had monies withdrawn or not

allocated any money and also funds for some schemes of the Ministry have been reduced or slashed.[211]

In 2014, following its review of the fourth and fifth periodic reports submitted by the Government of India, the Committee also reiterated the need to strengthen institutions such as the National Commission for Women and the State commissions. It is not unusual[212] for the CEDAW Committee to seek information on National Commissions for Women (or similar), including its financing, in order to be able to assess whether it can contribute to gender equality strategies in the States parties. Decisions on the financing of such bodies fall within the GBR remit.

What could be regarded as a cross-cutting issue, but for our purposes falls within the GRB discussion, is women's access to jobs, professions or business. Their promotions or success in their chosen area of work depend on educational qualifications and access to periodic training programmes. These need to be funded and to form part of the budgetary process. In this context the programmes in India relating to education of women and girls are important as they help to strengthen women's economic status. In India free and compulsory education up to the age of 14 is available to girls. The right to education is a fundamental right.[213] However, schools are not always within easy distance from their homes for girls in many rural areas. This may raise security concerns. Budgetary provision for more schools closer to villages, better schools and a programme to encourage girls to attend schools are being framed. Special financial aid or scholarship schemes are also required for women wanting to pursue higher education. A recent article under the aegis of the Inclusive Media-UNDP Fellowship 2015 dealt with a related topic.[214]

A positive trend over the past couple of years has been the pre-budget consultations organised by the Ministry of Finance, aimed at ensuring that the voices of women are also heard in the budget making process. This year, in addition to meeting women's rights organisations, the Ministry also held a dialogue with UN Women along with the MWCD to discuss key issues pertaining to GRB. So far, 57 government Ministries/departments

in India have set up Gender Budgeting Cells — a major step that could potentially impact the lives of scores of women in India. [215]

iv. GRB has not been a term in open circulation in official circles in *Ireland*, as we shall see. However, there has been a requirement for some time that any decision proposed to Government includes an indication of the *impact* of such a policy proposal on a range of identified groups or situations.[216] It has also become noticeable that in the last number of years, some members of the Oireachtas have been making reference to 'Equality Budgeting'.[217] This is a broader concept than Gender or Gender Responsive, Budgeting, but could include Gender as one of the categories being affected.

By coincidence of timing, the *Programme for Partnership Government*[218] agreed after the 2016 General Election and subsequent Minority Government arrangement[219] makes specific reference to '*equality and* gender proofing in *the budget process'*.[220] This is separate to other references to advancing 'equality *and reducing poverty and strengthening economic and social rights*.' In sum, the new political situation, including Ministers with backgrounds in equality, diversity and women's issues, have (perhaps?) led to this very recent development.

The recent recession and ensuing austerity resulted in changes in taxes (increased) and welfare systems (cuts) and the introduction of new taxes, levies and charges.[221] Barry and Conroy[222] refer to the '*indiscriminate early retirement scheme'* and the '*freeze on recruitment in the public sector'*. There has been, and continues to be, a widespread concern about poverty and economic disadvantage in general, in Ireland. As reported

[215] See, Chakraborty, L, *A case study of Gender Responsive Budgeting in India,* [2013] available at https://consultations.worldbank.org/Data/hub/files/grb_papers_india_updf_final.pdf (last accessed 16 June 2016)

[216] See, inter alia, http://www.parliamentary-questions.com/question/31872-13/ (last accessed 11 June 2016) Cabinet procedures require a range of impacts to be covered in every decision proposed to Government such as the impact of policy proposals on *gender equality*, rural communities, North-South/East-West Relations, employment, persons experiencing or at risk of poverty or social exclusion, people with disabilities and industry costs In addition, distributional analyses are carried out by the DSP including distributional analysis of Budget measures and social welfare changes, see https://www. welfare.ie/en/downloads /SocialImpact2016.pdf In addition, the Department of Finance carries out distributional analyses of budgetary options using the ESRI's (SWITCH) model which facilitates analysis of the impact of the Budget on the income distribution by equivalised household income quintile and family type On the ESRI's work, see too, op cit Keane et al

[222] Op cit, Barry and Conroy

by Barry and Conroy the rise in poverty levels did not go without criticism from the UN High Commissioner for Extreme Poverty.[223]

The list of issues and questions furnished by the CEDAW Committee to the Irish Government in relation to the combined sixth and seventh periodic reports includes a request for progress on gender budgeting to be indicated.[224] More precisely, the question seeks a response setting out *'the mechanisms in place to monitor and evaluate the implementation of any existing strategies, to ensure that the budget allocations to various sectors are consistent with their respect gender mandates and activities'*.[225] It is important to note that disadvantaged groups of women, those who experience multiple discrimination, are specifically mentioned.

Unlike the *Programme for Partnership Government*,[226] the *Programme for Government 2011-2016*[227] did not include any *reference* to gender budgeting; however, several areas were mentioned of relevance to women.[228] In addition the Government undertook to require all public bodies to take due note of equality (sic) and human rights when carrying out their functions.

The *Programme for Partnership Government*[229] marks a decided shift in approach to gender equality to that of its predecessor. There is to be greater scope for consultation (in the Budget process) and amendment. Most importantly there is an undertaking to '*develop the process of budget and policy proofing as a means of advancing equality (sic), reducing poverty and strengthening economic and social rights'*. There are two steps provided for of particular interest to this contribution. Institutional arrangements are to be put in place to support '*equality and gender proofing in the independent fiscal and budget office and within key government departments.*' Included in this process will be the facility to draw on the expertise of the IHERC to support the proofing process. Finally, a political perspective was added to the approach in that a new '*Dáil* Committee on Budget and Finance' (which has been established) will be '*tasked with looking at gender and equality proofing budget submissions and proposals with independent expertise (including the IHREC) to assist where necessary.*' This proposed, explicitly gender (and equality) related, process will therefore fit more into the GRB approach, in that budget and policy proofing are to proceed in tandem, including gender and equality proofing budget submissions and proposals. This is to commence for Budget 2017 and in fact has commenced with an initial meeting between the IHREC and the Select Committee on 21 June 2016.[230]

The question arises: how has the composition of the new *Oireachtas*, specifically of the new Government, rendered this changed and more explicitly gendered approach? Can a relationship with international obligations, including CEDAW (and the forthcoming submission of the long overdue combined sixth and seventh periodic reports) be detected? Or, is it just fortuitous?

v. *Sweden* presents not merely a contrasting picture to most of the other examples (other than Austria) addressed in this contribution, but also sets the scene for the application of GRB. It should be remembered that Sweden has had an outspoken feminist Government since 2014. In the first instance gender equality is a central goal of the Government, which is understood to entail the practical capacities of both men and women to shape society and their own lives, through equal political and economic power.[231] It has been noted that State budgeting frequently builds on the premise of a certain traditional life style that is primarily male. Thus, the gendered nature of resource allocation must be exposed. In order to do so, similarities and differences in the life of men and women must firstly be clarified. This has led to affirmative steps to conduct gender-responsive budgeting. During 2015, the Government developed methods for conducting GRB analysis and adopting gender indicators to be used in statistical surveys.[232] In practical terms this means that the Ministry of Finance drafts a report, which is added to the Government Budget Bill each year, on the distribution of economic resources between women and men. Statistical indicators according to gender are included in the report. These include, inter alia, level of income, the number of individuals working full- or part-time, the extent to which women and men stay at home in order to care for a sick child or an elderly relative, division of time for unpaid work in the home, and, interestingly, the number of filed complaints on physical assault, in relationships as well as in other contexts.[233]

V. CONCLUSIONS

1. Structural change:

Perhaps one of the most important changes is the establishment of Women's 'Machinery' (in whatever form), to contribute to embedding gender issues in the official as well as the public and private discourse. Looking at our two sub-themes, we can see some increase in female participation in (power and) decision-making, and some developments in relation to gender (sic) budgeting. As regards the latter, other than in the Swedish and Austrian – and potentially emerging Irish – examples, there is little evidence of GRB being part of the embedded budgetary approach, on a wide scale. Very recent Irish experience raises at the very least, the suggestion that women in power and decision-making roles, who have a history of involvement in gender and diversity issues, can contribute to bringing about structural change.

2. Women in (Power and) Decision-making:

Eight of the nine contributions to this Report reflect jurisdictions where CEDAW and ICESCR[234] have been ratified, and all respect BPfA objectives. If we take the role of women in (power and) decision-making, in the political sphere, despite improvements, it could not be said that the level of participation of women is satisfactory, or reflects the objective of BPfA[235] or obligations of CEDAW.[236] Apart from the level of participation, the question of 'meaningful' participation[237] remains open (not least given, inter alia, the Brazilian experience indicated). The experience in the Irish 2016 general election (State funding tied to obligatory quotas, aided by apolitical civil society support (grassroots) did have a positive impact, but the best ever general election outcome (22.2 per cent) is still a long way from the critical mass of 30 per cent (female parliamentarians), and was not translated into meaningful increased numbers of ministerial posts At the same time, a mere ca 25 per cent of the 193 parliaments on the IPU listing meet this minimum target. These are bleak figures. It would be difficult to do other than answer in the negative in terms of the general situation. On a more positive note, the Irish recent experience of involvement of women with a track record of involvement in gender and diversity issues, does raise the possibility of their being able to 'nudge' progress in this area, when they are in positions of decision-making and influence. It remains to be seen what transpires.

3. Increased female participation in the higher echelons of the Civil Service/Public sector (arising from those instances where we have had some discussion in this report):

This is 'a work in progress'. Structural change is still in the future, although efforts made are welcome and may contribute to changed practices as shared experiences of attempting work:life balance. However, as we have seen, when austerity measures were decided in the budgetary process as a response to the recession, the gender implications were not taken into account; GRB – or any variation of it – was not a factor.

4. Board membership/senior executives:

The failure of the EU Member States to agree on the proposed Directive[238] is an example of the failure of decision-makers to make use of the talents, education and experience of potential women Board members; at the very least, this is not a good economic or strategic decision. The low levels of females in senior positions we have seen in the discussions in this Report echo this lack of strategic vision. That said, there are some improvements. The appointment of a woman as Chair of the Federal Reserve in the US should act as a role model, and not as an 'exception'.

5. Influence of international law (specifically CEDAW, but also other measures):

The importance of CEDAW is as a constant presence, in the form of the Treaty Body and the periodic reports and ensuing exchanges. These also act as a guide for civil society and different actors in the State apparatus to draw on. Although there are mixed views on the 'success' of the MDGs (as we have noted above), the SDGs give hope for the future. Perhaps by the time this Committee's next report is drafted, we will be in a position to give some positive, empirically based, assessments. An unequivocal assessment is not yet possible.

COMMITTEE ON FEMINISM AND INTERNATIONAL LAW

WORKING SESSION

Thursday, 11 August 2016, 9.00am

Chair: Professor Hélène Ruiz-Fabri (France)

Dr Patricia Conlan (Ireland), the Chair of the Committee, welcomed attendees to the session and introduced the Session Chair.

The Chair said that she was happy to preside over the session. The panel would report on the empirical data that the Committee had gathered.

Dr Conlan started by saluting South African women for celebrating Women's Day on 9 August before going on the present a short background of the Committee. The Committee was first established in the 1990s and had since then gone through different stages. The focus of the Committee in its current form was the economic empowerment of women and the contribution of international law, which could be found in the third report of the Committee. The Committee would finish its work at the next ILA conference. The topic of the Committee had been broken down into different subthemes for the 2016 report. The first subtheme was *women in power and decisionmaking* and the second subtheme was *gender responsive budgeting*. These two themes were linked to the work of the Committee on the Elimination of all Forms of Discrimination against Women (CEDAW Committee). The 2016 report did not attempt to repeat what was already well established. The dialogue between the CEDAW Committee and States Parties, arising from the periodic reports (and responses), including national measures and the implementation of *Convention on the Elimination of all Forms of Discrimination against Women* (CEDAW) had been specifically useful. In terms of the influence of CEDAW, the open dialogue (with States Parties) can be seen as providing guidance and indirect influence – over time, rather than directly. The open dialogue also serves to inform civil society, other States Parties and all those interested in progressing the issues raised.

Dr Conlan noted that "women's economic empowerment" was defined in paragraph 2.1 of the 2016 report to mean "increasing the ability of women to bring about change that drives valuable outcomes as result of their increased economic capabilities and agency". The concept should act as a platform for action.

The empirical research provided in the various contributions of the members of the ILA Committee on Feminism and International Law and reflected in the report provided a snapshot of the progress (or otherwise) of the subject matter of the report. Equal access and full (and meaningful) participation by women (in power and decision-making) are the focus. Tokenism, or a mere increase in the numbers of women participating, did not comply with full and equal access. The definition of "gender responsive budgeting" (GRB) in paragraph 2.3 of the 2016 report was an allencompassing definition. It identified the "government" as the key actor, responsible for the actions laid down in the definition. In this regard, for example, while tax policy was said to be gender neutral, it was not the case in practice. Drafters might be gender blind but there were negative impacts, as any change in income levels affected women.

Dr Conlan drew attendees' attention to a range of instruments at the UN and regional level that were applicable and considered in the report. At a regional level, the contribution of Nigeria and of the Maputo Protocol to the African Charter on Human and Peoples' Rights on the Rights of Women in Africa was noteworthy. There was no equivalent regional instrument in Asia. There was, however, the InterAmerican Convention on Human Rights, and the treaties of the European Union, including the Charter of Fundamental Rights of the European Union, as well as the Council of Europe instruments. She emphasised that one should not lose sight of the Beijing Platform for Action and the 2000 Millennium Development Goals, which had been succeeded by the Sustainable Development Goals adopted in 2015. While Goal 5 of the Sustainable Development Goals specifically addressed women, all of the goals had an impact on women in some form or other. The report drew attention to how States took different approaches to the implementation of CEDAW. Domestic transposition of CEDAW was especially interesting in dualist countries such as Ireland, which had ratified CEDAW (and the Optional Protocol) but not transposed specifically into domestic law. The US had signed CEDAW but ratification had not yet followed, for domestic political reasons.

The report focused on CEDAW as the main instrument because of the role played by the CEDAW Committee in relation to the substantive issues set out in the overall mandate of the (ILA) Committee; this role could not be overstated. Key to CEDAW's efficacy was the focus on achieving substantive, not merely formal, equality (in law and policy).

After the providing an overview of the introductory part of the report, Dr Conlan handed over to Professor Christina Binder to discuss the first subtheme of the report, *women in power and decision-making*.

Professor Christina Binder (Austria) explained that *women in power and decisionmaking* was a broad notion that looked at representation at all levels of government as well as economic participation. The Committee looked at international law and nine national examples, based on country reports. The reason for the focus on women in power and decisionmaking was because there was a human rights dimension of non-discrimination, as well as a business case to be made. The critical mass level of meaningful participation of women was 30 per cent.

Professor Binder drew attendees' attention to international law relevant to women in power and decisionmaking. The preamble to CEDAW made reference to participation of women and the core provisions were Articles 7 and 8, which dealt with equal political participation. Article 4 was also key, in that it mandated States Parties to adopt temporary special measures aimed at accelerating substantial equality between men and women. General Recommendation 23 of the CEDAW Committee focused on political and public life of women and made specific reference to political power.

Regarding the national examples, Professor Binder pointed out that the focus was on representation in parliament and economic decision makers. The Inter-Parliamentary Union (IPU) maintained publicly available data on women parliamentarians worldwide, which allowed for comparisons to be drawn. Currently, of the 193 parliaments listed, only 46 (i.e., less than 25 per cent) reached the critical mass level of 30 per cent. Professor Binder used Ireland as an example of increased participation.

Dr Conlan interjected to note that it was still lower than 30 per cent.

Professor Binder acknowledged this, and added that in some countries, the political representation of women was furthered by gender quota either required by law, as in Brazil; or on a voluntary basis, such as in Austria, where political parties committed to include a minimum of women in their lists..

Dr Conlan drew attendees' attention to the fact that Brazil and Austria did not actually meet these quotas.

Professor Binder emphasised that one should not underestimate civil society, which had pushed for participation. Sweden and Finland represented examples of exactly this. Only three of the nine countries discussed in the report had met the 30 per cent critical mass threshold in the composition of their national parliaments, and, notably, Brazil and Nigeria had only single figure representation in parliament.

Dr Anja-Riitta Ketokoski-Rexed (Finland) pointed out that there had been a dramatic global change, not only in the Western world, but also in countries such as Rwanda.

Professor Binder agreed, adding that women represented 63 per cent of parliament in Rwanda. Rwanda actually reserved seats for women. The country also represented the positive effect of role models. Unfortunately, the Committee had not received a country report from Rwanda (as there are no Committee members from Rwanda). Another positive example was the increase of women's participation in Bangladesh, but a lot still needed to be done. In terms of the influence of international law, Professor Binder pointed out that CEDAW was there as a yard stick and presented guidelines for civil society. CEDAW had been very successful as a form of soft power due to the work of the CEDAW Committee. In fact, (she was of the view that) the soft power of CEDAW had been more powerful than the binding obligations contained therein.

Dr Conlan then turned to the second subtheme of the report, namely *gender responsive budgeting*. She noted that Australia led the way in the mid-1980s. The issue was not mentioned specifically in CEDAW, but the inference could be drawn. There was a lack of recognition of GRB in (many of) the national examples. The lack of GRB, or at the very least, the lack of positive vision, could be seen in the austerity measures introduced in those countries suffering from economic "downturns". The unintended consequence was that it had had the greatest negative impact on women. In terms of the national examples, Dr Conlan referred to Austria, where GRB enjoyed a particularly strong legal basis, not least due to it being based in the Austrian Federal Constitution (Article 13). Both GRB and gender impact assessment were introduced at the federal level in 2013. It had formed an integral part of national reform. It sent a message for budgetary equity. The national reports showed that Brazil adhered to international obligations and was influenced by soft law. Since 2004, Brazil had developed a National Policy Plan for Women aimed at closing financial gaps.

Mrs Justice Sujata Manohar (India) presented a newspaper article from India that showed the effect of gender budgeting. There was a scheme in India under which people who could not open bank accounts previously could now do so if they had a mere 500 Rupees. These people in turn became eligible for loans. The effect had been that, of those that took advantage of the scheme, 23 per cent were women. These women could now get capital loans to start small enterprises. This micro-financing scheme has spread throughout the whole country and had made a difference to women's capacity.

Dr Conlan asked whether this scheme was specially targeted at women.

Mrs Justice Manohar replied that the effect on women was not specifically in mind.

Dr Conlan noted that, while it could be difficult to trace back developments to international norms, good national practice could have a great impact.

Mrs Justice Manohar noted that, instead of an NGO introducing plans, you now had a national scheme.

Dr Conlan said that she had noticed in India that there was pre-budget consultation between relevant bodies (including ministries), which had had a positive effect in bringing about change. In addition, she noted that there were currently women in parliament in Ireland who had been active feminists prior to entering formal politics. Research showed that tax policies had had a massive impact due to income distribution. The Programme for Partnership Government of 2016 (in Ireland) now made reference to gender proofing the budgetary process. This was an important development. Previously, there was (only) reference to equality, frequently linked to a reference to poverty.

Mrs Justice Manohar presented another newspaper example from India which illustrated the indirect effects of gender budgeting. There were grants available for girls who came from households with an income of less than 10,000 Rupees. Two million girls had been able to pursue higher education in India because of this, which in turn led to more gainful employment.

Dr Conlan informed attendees that this example was referred to in the Committee's report. Research showed that GRB was very effective. Sweden set the scene for GRB in a formal way for the application of GRB. Sweden had had a feminist government since 2014, where equality was at the forefront. In the first instance, gender equality was a central goal of the government, which was understood to entail the practical capacities of both men and women to shape society and their own lives, through equal political and economic power. The government was cognisant of the traditional approach that men were the breadwinners and tried to bridge this gap, which led to affirmative steps to conduct GRB. In 2015, the government developed methods for conducting GRB analysis and adopting gender indicators to be used in statistical surveys. In practical terms this meant that the Ministry of Finance drafted a report, which was added to the Government Budget Bill each year, on the distribution of economic resources between women and men. This was a detailed approach which was not just motivated by ideas, but by hard data. The statistical indicators included the division of unpaid work in the household as well as the number of physical assaults on women, which was unusual.

Dr Conlan presented the conclusions reached by the Committee in the report. First, perhaps one of the most important changes was the establishment of Women's "Machinery" (in whatever form) to contribute to embedding gender issues in the public and official discourse. If one looked in general at States in empirical studies, there was regular reference to Women's Machinery. The question however, was whether Women's Machinery was given adequate budgetary support. The report suggested that reference to, and providing funding for, Women's Machinery, did bring about (structural) change.

Second, in terms of women in power and decisionmaking, of the nine national examples, only three met the 30 per cent critical mass threshold (in parliament). There had been no

huge impact from international law to bring about greater representation. The Committee was, however, of the view that ongoing dialogue between the CEDAW Committee and States Parties could bring about change. There was more discussion and awareness raising needed.

Third, the increase of female participation in the higher echelons of the civil service/public sector was still "a work in progress". When austerity measures were decided in the budgetary process as a response to recession, the gender implications were not taken into account. GRB – or any variation of it – was not a factor. Women represented roughly 50 per cent of the population but did not benefit 50 per cent. Dr Conlan was of the opinion that, from an EU standpoint, one should hang one's head in shame with regard to the failure to reach consensus on female representation on boards.

Lastly, the influence of CEDAW was through its constant presence, in the form of the CEDAW Committee and the exchanges brought about through periodic reporting. These acted as a guide on which civil society and different actors in the State apparatus could draw. There had, however, been very little actual progress directly influenced by CEDAW (or other instruments).

The Chair thanked the panel and noted that, in France, quotas had increased female representation. It had shaken political parties, which, in previous years, had preferred to pay fines rather than appoint women. Fortunately, the debate now continued, even though participation was still far below the 30 per cent threshold.

Ms Melody Hui queried the meaning of, or criteria for, meaningful participation. Did it mean the number of women participating in the decisionmaking process, and if not, how would the Committee quantify "meaningful"?

Dr Conlan responded that it was not a numbers game; it was not just a box ticking exercise. Meaningful participation meant that women must have some real power. This power was not necessary linked to financial power but rather to decisionmaking power.

Professor Binder added that the empirical evidence and analysis showed that it was not just a numbers exercise but also about strong voices. Women must consider themselves as making a change.

Ms Emelia Kamena commended the panel on the discussion, which she found to be very empowering. She pointed to the fact that the panel had mentioned that public participation should be encouraged at a domestic level. In terms of the Oscar Pistorius case in South Africa, where Judge Masipa had been criticised for being too emotional as a woman when she sentenced Oscar Pistorius to a five year prison sentence, even though the Supreme Court of Appeal had found him guilty of the murder of his girlfriend; Ms Kamena wanted to know whether this criticism was correct.

Dr Conlan responded that Ms Kamena, being a South African, was in a better position to comment.

Ms Kamena expressed the view that the judge did make an emotional decision, but that it was not necessarily a bad thing.

Mrs Justice Manohar interjected that, as a judge, Judge Masipa was entitled to exercise her discretion in sentencing, and should not be criticised for how she acted.

The Chair noted that, all around the world, women's decisions were being attacked on the basis of gender.

Dr Oonagh Fitzgerald (Canada) commented that Canada's Bill of Rights (1960) enshrined equality but the language of the provision was interpreted in a sterile manner. This led to formal equality but not substantive equality. The law applied equally to men and women and did not take differences into account. Ms Fitzgerald proceeded to present a couple of examples from Canada demonstrating a shift in thinking which had affected the law and had brought about more substantive equality. She further presented an example of how indigenous women in Canada were doubly discriminated against.

Mrs Justice Manohar noted that equality before the law and non-discrimination provisions should be supplemented by special provisions for extra protection of women.

Dr Ketokoski-Rexed added that Canada celebrated Person's Day on 18 October as it was on that day in 1929 that the Judicial Committee of the Privy Council determined that women were also "persons". The problem with the legal profession was that when the law said something, it became. She provided the example of the Finnish language, which had no gender. In GRB, this became a problem. When looking at the status of women in a particular society, it was necessary to ask why the situation was what it was and one had to be aware of context and history. Sweden was the most progressive with GBR.

Dr Conlan asked the audience if there were any Swedes present that could comment on this.

Mr Martin Ratcovich (Sweden) said he was not aware of GRB in Sweden but in the analysis of legislation, they have to look at gender impacts.

Dr Conlan asked what international instrument influenced this decision.

Mr Ratcovich replied that he was not sure, but that it was enacted in domestic Swedish legislation. He added that Sweden had recently been elected as a non-permanent member of the United Nations Security Council, and that the Swedish government had repeatedly declared that it had a feminist foreign policy. It would be interesting to see how this manifested into practice within the Security Council. He further asked whether the Committee had also studied the negative effects of international law.

Dr Conlan responded that they had not, but that she would make a note of it and discuss it with the Committee members as it would be interesting to look at the negative impacts of international law.

Dr Fitzgerald held that Canada had come a long way since women were also held to be persons. Canada now had a Prime Minister who was a feminist and the Cabinet was made up of 50 per cent men and 50 cent women. Gender analysis had been a requirement for federal policy for about 15 years.

Dr Conlan asked in turn whether these impact studies of legislation and policy only looked at gender or whether there were other boxes/criteria that were looked at.

Dr Fitzgerald replied that gender was not the only criterion in Canada.

Mr Ratcovich responded that, in Sweden, the criteria were quite wide in scope and a lot of boxes had to be ticked. He added that the gender analysis was applicable to new as well as old legislation.

Mrs Justice Manohar suggested that, in terms of 'Women's Machinery', national human rights commissions should have a special women's wing to examine policies and impacts. Another option was to have a separate women's commission. There was a need for some machinery as a matter of routine to examine laws and policies to see if improvements could be made. She asked whether a systematic process to push for changes rather than ad hoc machinery would be workable.

Dr Conlan responded that it was an interesting suggestion to have a women's wing in human rights commissions. Due to austerity measures, Ireland combined its Equality Authority and Human Rights Commission. There had been concern that the new combined body would not be effective; this formed part of the Questions and Issues sent by the CEDAW Committee to Ireland. However, the contribution of the Irish Human Rights and Equality Commission to the periodic reporting cycle relating to CEDAW showed that the Irish Human Rights and Equality Commission was a body which adopted a rigorous approach to its task. Therefore, it was not necessary to have one size fits all approach.

Mrs Justice Manohar agreed with Dr Conlan's conclusion and added that, as long as the job got done, it did not matter what form the machinery took.

Professor Binder referred to the Austrian example where consistency of women's machinery was part of the portfolio.

Dr Ketokoski-Rexed added to the discussion on women's machinery by noting that, in Finland, they cut the Equality Ombudsman and moved the Equality Commission. This was a dangerous move, but there was a strong system to fall back on. She pointed out that CEDAW was a women's convention and not about general equality. A patriarchal culture was still prevalent. It was important not to abolish equality commissions but it was possible to combine them. One should not lose sight of the Sustainable Development Goals, which provided enough of a framework. A vigorous women's perspective should be developed in all 17 goals.

Dr Fitzgerald pointed out that there was the good and the bad of international law. She pointed to a case in Canada where the Human Rights Commission had ruled that indigenous women who lost their status in their community if they married outside it amounted to discrimination. This case illustrated that racial and gender issues were linked. In terms of austerity, Dr Fitzgerald said that, despite a national court decision that women must receive back-pay for being paid lower salaries than men over many years, one Canadian province did not have to implement the reward as it would bankrupt them. This decision showed that, even if there were good laws, it did not mean that equality was rife. She presented another two examples in Canada that illustrated that, if one was at the edges of disadvantage, there was no protection available.

Dr Conlan agreed that there was often multiple discrimination, and that gender and sex was only one category.

Professor Photini Pazartzis (Greece) noted that the basic work of the report was based on CEDAW, and that there was a parallel between the work of the Committee and the work of the CEDAW Committee. How States reacted to the questions that were raised by different human rights treaty bodies in the reporting process, and the questions asked of and the responses given by government, and by civil society provided a lot insight. It was clear that good legislation did not always translate into practice. She suggested that the Committee consider material on other treaty bodies.

Dr Conlan responded that a more general approach was taken in the two previous reports of the Committee. The national reports received for the latest report were from Committee members who presented more empirical evidence and the members were therefore more involved.

Professor Binder added that, in Rwanda, there was very strong legislation for protection of women. When the legislation was first introduced there were no women campaigning, but four years later, it was a completely different picture.

The Chair noted that the report identified GRB as a positive tool but the question was how to implement it.

Professor Binder responded that, of the nine national reports, four or five had GRB programmes. Budgetary programmes that did have an impact on quality of life in all sectors of the community were a very effective tool to bring about equality and equity. It was very much a political action, and it was therefore necessary to convince political decisionmakers. As a political tool towards equity and equality, GRB was a subtle tool and had a low financial impact on government resources. What was needed was a call to action for governments and for political will.

Dr Ketokoski-Rexed noted that Ireland had all the measures needed, but it would still be necessary to train the civil service successfully to implement GRB, such as in Sweden, which had a programme to train civil servants in human rights. Equality and equity did not happen by itself.

The Chair queried whether it was suggested to promote education first.

Dr Ketokoski-Rexed responded affirmatively, adding that there was also a need for good governance.

Professor Christina Cerna (US) noted that the report was thin on regional bodies and that she would like to submit information on the work done on women's rights under the auspices of the inter-American human rights system.

Dr Conlan thanked Professor Cerna for her input.

Mrs Justice Manohar noted that, in India, women judges had discussions among themselves about women's rights. These discussions were very useful.

The Chair agreed that this could be a strong tool.

Mrs Justice Manohar added that many universities promoted such discussions. There was a Yale University study group on constitutionalism for judges, which encouraged

international harmonisation. Those who enforced rights in domestic courts should have an international outlook.

The Chair agreed that domestic judges faced the same issues as international ones and that programmes such as the one at Yale were open for a wide range of exchanges.

Professor Spyridon Flogaitis (Greece) expressed the opinion that the key to the issues discussed was education, and especially free access to education. If free education was available to all then it would never be necessary to take affirmative actions in other areas. He presented the example in Greece where the law regulated dowries until 1982. In 1963, the government offered free education for all in universities. The more educated a woman was, the less her parents had to pay in dowry as they had already spent the money on her education. Therefore, in an attempt to get rid of the dowry obligations, parents pushed women to universities. This changed Greek society and it was never necessary to change other laws. 80 per cent of university students were women.

The Chair interjected by saying that there was still a glass ceiling regarding salaries in most European countries

Professor Flogaitis responded that, in Greece, there were no difference in salaries, and many people in high positions were female. This happened because women tried to find secure jobs. By promoting free education, the rest would follow.

Dr Conlan noted that while there was 'free education' in Ireland, due to austerity measures, there were now financial 'contributions' at all levels, with different names – including 'voluntary contributions' (at the first cycle); at the third level the term 'registration fees' was used. It is currently a topic of widespread debate. Dr Conlan subscribed to the view that education was vital for change. Evidence showed that investment in the early stages of education had considerable benefit. This was where GRB came in.

Dr Ketokoski-Rexed emphasised that it was not just about free education, but also a question of the content of education. Effective education could not be patriarchal and gender blind.

Dr Ioana Cismas (US) pointed out that the report's discussion on regional law made no mention of Islamic conventions and that she would be happy to submit information on the instruments on women concluded by the Organisation of Islamic Cooperation.

Mrs Justice Manohar argued that, unlike in Greece, if a woman in India were educated then she had to find an educated husband who would ask for an increased dowry. Increased access to education had not led to fewer dowries in India. It was necessary to distinguish between education for economic empowerment and education for the abolishment of inequality.

Mr Mohan Katarki (India) concurred with Mrs Justice Manohar on the dowry issue in India. Education of women in India nevertheless had made a big difference in other ways, but certain social elements had not been eradicated by education.

Dr Oluwabunmi Lar (Nigeria) pointed out that education was not about being marketable for marriage but about being more profitable in a business market. In the Nigerian civil service, salaries were the same for women and men. Education was critical for

empowerment. It was not just about educating the women but the whole family as it would have a trickle-down effect.

The Chair summed up the discussion by noting that it was clear that education had a big impact on many aspects, and that the impact on society differed from one country to the next.

Dr Conlan offered some concluding remarks. The discussion during the session had been enlightening, from which she had made many notes for further consideration. The Committee would definitely explore the question about the negative impact of international law. The idea of going beyond CEDAW and looking at other treaties and treaty bodies was a very interesting suggestion. The reason the Committee focused on CEDAW was because it was so specifically geared at substantive equality for women. The question of implementing GRB would also be considered more closely. The Committee had focused on certain countries only because these were the countries subject to national reports received from Committee members. Dr Conlan concluded by acknowledging the general consensus that education was empowering for all.

The Chair closed the session and thanked the panel and attendees for their attendance and their contributions.

Dr Conlan expressed thanks to the reporter, Ms Clea Strydom for her diligence.

"Islamic law and Freedom of Expression: Challenges and Prospects"

Report 2016

The following report has been prepared by members of the ILA Committee on Islamic Law and International Law, Hossein Esmaeili (Section I: The Rule of Law and Freedom of Expression in (*Fiqh*), Javaid Rehman (Section II: Freedom of Expression: Domestic Blasphemy Laws and Politicisation of Debates around 'Defamation of Religions'), and Irmgard Marboe (Section III: Freedom of Expression in Islamic, Arab and Asian Organisations). The Committee members remain thankful for the generous support and excellent guidance of the Chair of the Committee, His Excellency Judge Awn Al-Khasawneh and to Marija Đorđeska in the completion of this report.

The Rule of Law and Freedom of Expression in Islamic Jurisprudence (*Fiqh*)

Introduction

1. In the previous reports of the International Law Association Committee on Islamic law and International Law[1] the nature of law in the legal system of Islam as well as the concept of the rule of law were discussed in some detail. The Report of 2014 focused on

[1] See the Report of the Committee on Islamic Law and International Law, 74th Conference in The Hague (2010); the Report of the Committee on Islamic Law and International Law, 75th Conference in Sofia (2012), and the Report of the Committee on Islamic Law and International Law, 76th Conference in Washington (2014), all are available at http://www.ila-hq.org/en/committees/index.cfm/cid/1006.

the freedom of expression under the original sources of Islamic law. It was important to provide a basis for an understanding of how the rule of law can be upheld within the legal system of Islam and of how the freedom of expression can be strengthened within the law of Muslim countries. This section of the report summarises the previous reports discussion of the nature of law and the rule of law under Islamic law as well as the concept of freedom of expression and opinion within the Islamic jurisprudence (*Fiqh*). In the previous reports, particularly in the 2010 report, a number of very important aspects of Islamic law such as its sources, divine origin of the system, sacredness of certain principles, the principle of *Ijtihad*, and the relationship between Islamic law and state made law were discussed. One of the fundamental questions in relation to Islamic law is its compatibility, not with other legal systems, but with state made law within a Muslim country. In other words, how the law which is made by states in Muslim majority countries can be considered in relation to the framework of Islamic law. The rule of law principles could be better accommodated within the public laws of Muslim majority states if it was possible to reconcile the principles of Islamic law and modern state constitutions.

The Nature of the Islamic Legal System

2. While many scholars consider Islamic law as a divine and sacred legal system,[2] only a limited number of Islamic law principles are generally regarded as having this particular quality. Overwhelmingly, the majority of Islamic law principles are the product of the study of sources of Islamic law known as Islamic jurisprudence or *Fiqh*. The Islamic *Fiqh*, while undoubtedly commanding the respect and authority that comes with an old venerable tradition, is nevertheless not sacred or immutable. It is a product of interpretation and experience of Islamic jurists from around the seventh century up until now. The body of Islamic law based on the Qur'anic verses as well as on other original sources of Islamic law, is also limited. The original sources of Islamic law provide legal principles in relation to certain core areas of law, such as some aspects of family law, contract law, property law, torts, and limited areas of criminal law. A large number of these legal principles are what is known in Islam as *imzaei* or *imdaei* (confirmed) rules against *tasisi* (established) rules. The former are the practice and customs of early seventh century Arabian societies.[3] For example, while the Qur'an consists of approximately 6,600 verses, less than ten percent of the Qur'anic verses are concerned with both religious and legal duties of Muslims.[4] This means that, in the modern world, while certain principles

[2] See, for example, Noel J Coulson, *A History of Islamic Law* (Edinburgh University Press 1964) 75; Seyyed Hossein Nasr, *The Heart of Islam: Enduring values for Humanity* (HarperCollins 2002) 117-119; Bernard G Weiss, *The Spirit of Islamic Law* (University of Georgia Press 1998) 24.

[3] On development of Islamic law, see generally Norman Calder, *Studies in Early Muslim Jurisprudence* (Clarendon Press 1993); Wael B Hallaq, *The Origins and Evolution of Islamic Law* (Cambridge University Press 2005); Kamil Musa, *Al Madkhal Ila Al Tashira Al Islami, [The Genesis of Islamic Law Making]* (1989); Majid Khadduri and Herbert Liebesny (eds), *Law in the Middle East. Volume One, Origin and Development of Islamic Law* (The Middle East Institute 1955); Muhammad Al Khirzry, Tarikh Al Tashira Al islam [History of Law making in Islam] (1994); Abdullah Saeed, *Interpreting the Qur'an. Towards A contemporary Approach* (Routledge 2006); Chibli Mallat, 'From Islamic to Middle Eastern Law, A Restatement of the Field (part I)', 51 *American Journal of Comparative Law* (2003) 699; idem, 'From Islamic Law to Middle Eastern Law, A Restatement of the Field (part II)', 52 *American Journal of Comparative Law* (2004) 209.

[4] Muslim theologians consider the Qur'anic verses under five main headings namely preaching, polemics, stories, allusions and legislation. Sholmo D Goitein, 'The Birth-Hour of Muslim Law? An Essay in Exegesis', in Wael B Hallaq (ed), *The Formation of Islamic Law* (Ashgate 2004) 69-70.

of family law inheritance law, contract, and criminal law may be based on primary sources of Islamic law, many other new or emerging areas of law such as corporations law, commercial law, environmental law, administrative law, immigration law are regulated by states and parliaments in Muslim countries. The body of law known as Islamic law (or Sharia), the study of Islamic law (*Fiqh*), or Islamic jurisprudence, is indeed much wider than the limited numbers of legal principles based on original or divine sources. Therefore, a review of Islamic law literature proves that Islamic law can accommodate modern international and national legal principles which are developed based on human experience and rational principles.[5]

The Rule of Law and Islamic Law

3. As demonstrated in previously in the ILA Committee Reports,[6] while certain characteristics of Islamic law, such as sacredness of certain Qur'anic legal principles (in view of some Muslim jurists), may not be flexible, many other principles are fairly adaptable to the modern international law standards. Furthermore, many elements of the rule of law can be found in the system of Islamic law. To support the establishment of the rule of law in Muslim societies and Islamic countries, three characteristics and approaches to Islamic law can be considered.

4. Firstly, certain traditional Islamic law principles and presumptions indeed promote establishing the rule of law. The principles of non-retroactivity, presumption of innocence, prohibition of unlawful detention, property rights of individuals (including women), the prohibition of collective punishment, and the injunction against disproportionate or excessive reactions, are examples of traditional principles of Islamic law which may support the establishment of the rule of law. These principles were established in early stages of Islamic law development (seventh century AD) at the time when the common law system (originated late eleventh century AD) even did not exist. Under traditional Islamic law, law should not be applied retroactively.[7] The principle of legality, which provides that no one can be persecuted or found responsible in the absence of a law which is clearly communicated to people, is also recognised under traditional Islamic law.[8] Also,

[5] See for example Muhammad al-Ghazali, *The Socio-Political Thought of Shah Wali Allah* (Islamic Research Institute Press 2001); Wael B Hallaq (ed), *The Formation of the Classical Islamic World: The Formation of Islamic Law* (Ashgate 2004); Wael B Hallaq, *Sharia: Theory, Practice Transformations* (Cambridge University Press 2009); Hossein Esmaeili, 'The Nature and Development of Law in Islam and the Rule of law Challenge in the Middle East and the Muslim World' 26 *Connecticut Journal of International Law* (2011) 262.

[6] See the Report of the Committee on Islamic Law and International Law, 74th Conference in The Hague (2010); the Report of the Committee on Islamic Law and International Law, 75th Conference in Sofia (2012), and the Report of the Committee on Islamic Law and International Law, 76th Conference in Washington (2014), all are available at http://www.ila-hq.org/en/committees/index.cfm/cid/1006.

[7] Qu'ran 17:15 '…We do not punish people before We send a messenger," and Qu'ran 17:16 '…and when We intend to destroy a town We first send Our commandment to its transgressors and when they turn away from Our commands then We punish them…'; further see the Qu'ran 28;59; Qu'ran 5:95; Qu'ran 4: 22-3. For a discussion of the principle of non-retroactivity, see Gamil Muhammed Hussein, 'Basic Guarantees in the Islamic Criminal, Justice System', in Muhammed Abdel Haleem et al (eds), *Criminal Justice in Islam: Judicial Procedure in the Sharia* (Tauris 2003) 35.

[8] Ibid.

unlawful detention is prohibited under Sharia and, based on a Hadidh of the Prophet, pre-trial detention must be limited to a day and a night, or at most to three days.[9]

5. Secondly, there is a large number of legal concepts which have been developed within Islamic jurisprudence in order to meet modern socio-economic challenges. These concepts include the use of *Ijtihad, masaleh* (public policy considerations), *istihsan* (equity, or juristic preference), and *urf* (custom and experience).

6. Thirdly, there are modern interpretations and the rational development of legal principles, which are based on international law and contemporary requirements of modern societies. This does not only encompass Islamic legal scholarship and Islamic jurists, but also the practice of states, the legislative process, and rational interpretations of Islamic texts.

7. In the last few years, this reasoned approach to Islamic law has been taken up in countries such as Tunisia, Malaysia, and Indonesia. The 2015 Rule of Law Index produced by the World Justice Project[10] places the United Arab Emirates, Malaysia, Jordan, Tunisia, and Indonesia within the top rankings among Muslim countries with respect to the development of the rule of law. Afghanistan, Pakistan, Bangladesh, Iran, and Egypt occupy the lowest ranking.[11]

Freedom of Expression in Islamic Jurisprudence

8. As demonstrated in more detail below, the freedom of expression is an important aspect of the rule of law, and is protected by various international instruments. The Islamic Sharia, both in its traditional version as well as in its modern interpretation, recognises certain aspects of freedom of expression. With some reformation and adjustment, freedom of expression may be accommodated within modern interpretations of Sharia. However, there are aspects of Sharia law, particularly certain legal principles relating to apostasy and blasphemy laws, which contradict international human rights treaties, which have been ratified by many Muslim counties.

9. In the ILA Committee Report of 2014, a large number of Qur'anic verses, as well as some examples of *hadiths,* were cited to state that even the traditional sources of Islamic law may potentially support and adopt basic principles of freedom of expression, as articulated in international instruments. Nevertheless, in the same sources, there are principles which would seem to be in contradiction with international law and freedom of expression.

10. While both apostasy and blasphemy are punishable under Islamic jurisprudence, or *fiqh*, the punishment prescribed for both offences is not mentioned in the Qur'an. While the Qur'an discourages and condemns apostasy, it does not prescribe any punishment for committing apostasy. Contemporary Muslim scholars and jurists, based on the lack

[9] For Example, Abu Huraya (A companion of the Prophet and a hadith authority) narrates that the Prophet of Islam put an accused in detention for only a day for investigation. See Al-hakim Al Naysapouri, Al-Mustadrak Alal Al-Sahihayn, Vol. IV [The Understanding of Two Hadidh Books] 102 (Yusuf Mar'ashli ed., n.d.).

[10] World Justice Project*, World Justice Project Rule of Law Index 2015*, 2016, available at http://worldjusticeproject.org/sites/default/files/roli_2015_0.pdf.

[11] Ibid, 6.

of prescription of punishment for apostasy in the Qur'an, argue that apostasy may not be a *hudud* punishment, and hence can be subject to modern legislation. Even the Sunna of the Prophet Muhammad, the second source of Islamic law, does not strongly support punishing apostasy and blasphemy in all circumstances.

11. This means that the punishment for apostasy in the Sunna was prescribed because at the time, apostasy was considered to be a form of treason. The offence of treason is subject to severe punishment under the criminal laws of most counties throughout the world. However, in the contemporary world where there are diverse religions and cultures, and most political and legal systems of the world are based on secular principles, changing one's religion is not equal to treason, and hence may not be punishable at all.

Freedom of Expression: Domestic Blasphemy Laws and Politicisation of Debates around 'Defamation of Religions'

Introduction

12. The previous Reports of the Islamic Law and International Law Committee explained in considerable depth, aspects of rule of law within international law.[12] This concluding Report also highlights the rule of law and its nexus with freedom of expression, while retaining a focus on Muslim State practices. The right to freedom of expression represents a right within international law–arguably a right that represents the core of human rights values.[13] Freedom of expression is also regarded as the foundational stone for all democracies.[14] The right to receive uninhibited information and to exchange ideas provides the essential element which enables citizens to make informed decisions to build and sustain democratic frameworks. Notwithstanding the numerous positive elements in the right to freedom of expression, there are also considerable concerns that emerge with the granting of this right. One of the key areas for our consideration is the extent to which the right to freedom of expression can coexist with other rights, in particular the right to freedom of religion or belief? An essential component of the right to freedom of religion or belief is the right of expression and manifestation of this religion or belief. Thus according to Article 18(1) of the ICCPR, the right to freedom of religion or belief includes freedom

[12] See, in particular, the ILA Committee Report of 2012 on 'The Rule of Law and Islamic Legal System' (Sofia Conference, 2012) and of 2014 on 'Rule of Law and Freedom of Expression' (Washington Conference, 2014), available at http://www.ila-hq.org/en/committees/index.cfm/cid/1006.

[13] The right to opinion and expression is most prominently crystallised in Art. 19 (ICCPR) with parallel rights contained in Art. 19 (UDHR). See also Art. 10 (ECHR) and Art. 13 (ACHR). The right to hold opinions, as determined by Article 19 of the ICCPR, is assured to be held without interference whereas expression can be subjected to restrictions and restraints. Article 19(1)(2)(3). Freedom of expression can be restricted inter alia for ensuring respect for the rights or reputations of others, for protecting national security, public order, public health or morals. Propaganda for war is to be prohibited. Article 20(1), ibid. Expression is also to be harnessed where it leads to 'advocacy of national, racial or religious hatred that constitutes incitement to discrimination, hostility or violence'. Article 20(2) International Covenant on Civil and Political Rights of 16 December 1966, in force since 23 March 1976, UNTS 171.

[14] Human Rights Committee, General Comment No 34 (Article 19: Freedom of Opinion and Expression), UN Doc CCPR/C/GC/34 (12 September 2011) para 2.

'either individually or in community with others and in public or private, to manifest his religion or belief in worship, observance, practice and teaching'. [15]

Expression and Anti-Blasphemy Laws

13. The limitations on expression are restricted only in so far as these are 'are necessary for respect of the rights or reputations of others or for the protection of national security or public order (order public) or of public health or moral'.[16] Furthermore, any advocacy of national, racial or religious hatred that constitutes incitement to discrimination, hostility or violence shall be prohibited.[17] Religion and religious expressions can provide significant challenges to international law and international human rights law, when they claim to have a complete monopoly over truth and to determine the path to salvation. It is problematic, if religions are critical of other competing philosophies or ideologies. The domineering force of a particular religion or ideology when combined with the authority of the State can result in discrimination against other religions or religious expressions. Such discrimination can be manifested in the control of expressions and manifestations through substantial and draconian anti-blasphemy laws. As has been pointed out by a former Special Rapporteur of the Sub-Commission on Prevention of Discrimination and Protection of Minorities, Arcot Krishnaswami,

> 'Unfortunately, in some cases the laws against blasphemy have been framed in such a manner that they characterize any pronouncement not in conformity with the predominant faith as blasphemous. Under such laws, censorship of books, pamphlets and newspapers, as well as control of the media of mass communications such as films, radio, television and the like, have sometimes been used to limit unduly—or even to prohibit altogether—the dissemination of beliefs other than those of the predominant religion or philosophy'.[18]

14. The concept of blasphemy and anti-blasphemy laws is *per se* not endorsed by international law. Neither is there a complete and absolute prohibition. In its most recent General Comment, the Human Rights Committee notes:

> 'Prohibitions of displays of lack of respect for a religion or other belief system, including blasphemy laws, are incompatible with the Covenant, except in the specific circumstances envisaged in article 20, paragraph 2, of the Covenant. Such prohibitions must also comply with the strict requirements of article 19, paragraph 3, as well as such articles as 2, 5, 17, 18 and 26. Thus, for instance, it would be impermissible for any such laws to discriminate in favour of or against one or certain religions or belief systems, or their adherents over another or religious believers over non-believers. Nor would it be permissible for such prohibitions to be used to prevent or punish criticism of religious leaders or commentary on religious doctrine and tenets of faith.[19]

15. Notwithstanding this apparently restrictive interpretation provided by the Human Rights Committee, the continued applicability of blasphemy laws in all continents and amongst many jurisdictions raise deeply troubling issues. The application of

[19] General Comment No 34, above n 14, para 48.

anti-blasphemy laws is not exclusively a preoccupation of States with Muslim majorities, as according to research conducted by the Pew Research Centre, as of 2012, anti-blasphemy laws existed in nearly a quarter of all of the world's States.[20] Nevertheless, it also remains the case that anti-blasphemy have been applied by a number of States that belong to the Organisation of Islamic Cooperation (formerly Organisation of the Islamic Conference, hereinafter OIC).[21] According to the aforementioned Pew Research Centre, anti-blasphemy laws are applicable in 14 out of 20 (nearly 70%) of all States from the Middle-East and North Africa, as well as in 12 out of 50 States from Asia Pacific. Nigeria and Somalia also have anti-blasphemy laws.[22]

Expression and the Prohibition of Defamation of Religions

16. Several member States of the United Nations (led by States belonging to the OIC) consider it insufficient to have anti-blasphemy laws at the domestic, constitutional level. Rather, efforts have been made to elevate anti-blasphemy as an offence within international law. There began a campaign at the end of the previous millennium to establish a norm prohibiting defamation of religions and protecting Islam from insults and ridicule. Ever since 1999 – when the official campaign was launched with the adoption of Human Rights Commission Resolution 1999/82, entitled 'Defamation of Religions'[23] member States belonging to the OIC have campaigned for the prohibition of defamation of religions. In addition to resolutions passed by the Human Rights Commission (replaced by the Human Rights Council in March 2006) and the UN General Assembly, various human rights Special Rapporteurs, the UN High Commissioner on Human Rights as well as the UN Secretary General also participated in establishing a normative framework for the prohibition of 'defamation of religions'.[24]

17. As these efforts to introduce the international norm of prohibition of 'defamation of religions' were being conducted in the United Nations, innumerable conceptual and substantive complexities emerged. The phraseology that focuses upon, inter alia, 'the negative stereotyping of religions'[25] and the association of Islam with human rights violations and terrorism,[26] highlights the complex debate as to whether religions could seek protection of human rights law. National laws may provide for the protection for the reputation of individuals. However, it is difficult to see how national norms could protect religions or religious ideologies from insults, offence or ridicule. As the former UN Special Rapporteur on Freedom of Religion or Belief, Asma Jahangir has noted '[t]he

[26] Ibid, para 2.

right to freedom of expression can legitimately be restricted for advocacy that incites to acts of violence or discrimination against individuals on the basis of their religion. Defamation of religions may offend people and hurt their religious feelings but it does not necessarily or at least directly result in a violation of their rights, including their right to freedom of religion'.[27]

18. Notwithstanding the observations of the Special Rapporteur, the OIC members not only actively propagated the prohibition of defamation as an international offense analogous to domestic anti-blasphemy laws, but also conflated the subject of insult of religions with that of persecution and intolerance towards Muslim minorities in the Western world. This was particularly evident in the resolutions that were adopted after the tragic events of 9/11 to address the ensuing growth of Islamophobia and hatred against Muslim. Thus a number of post 9/11 resolutions on defamation of religions conflate the subject by raising concern over inter alia 'the ethnic and religious profiling of Muslim minorities the ethnic and religious profiling of Muslim minorities';[28] 'physical attacks and assaults on businesses, cultural centres and places of worship of all religions, in particular of Muslims in many parts of the world';[29] hatred and discrimination;[30] 'laws or administrative measures that have been specifically designed to "control" and "monitor" Muslim and Arab minorities';[31] and the 'deliberate stereotyping of religions, their adherents and sacred persons in the media and by political parties and groups in some societies'.[32]

19. The campaign led by the OIC and its allies was played out for many years within the UN General Assembly as well as the UN Human Rights Council. The ideal of the universal prohibition of defamation of religions was also supported by various UN Special Rapporteurs and UN bodies to the extent that every year numerous resounding resolutions were passed upholding the principle of the prohibition of defamation of religions. The high-water mark of this phenomenon can be envisaged by the UN General Assembly Resolution 65/224, entitled 'Combating Defamation of Religions' and adopted on 21 December 2010. In this resolution, the General Assembly, *inter alia*:

> 2. Expresses deep concern at the negative stereotyping of religions and manifestations of intolerance and discrimination in matters of religion or belief still evident in the world; […]
> 5. Notes with deep concern the intensification of the overall campaign of vilification of religions, and incitement to religious hatred in general, including the ethnic and religious profiling of religious minorities; […]

> 16. Urges all States to provide, within their respective legal and constitutional systems, adequate protection against acts of hatred, discrimination, intimidation and coercion resulting from vilification of religions, and incitement to religious hatred in general;

20. To fully appreciate the contents of Resolution 65/224, it is important to be aware of its context and background. This Resolution was adopted at a time when many member States of the UN were active in the domestic application of anti-blasphemy laws. The primary organisation supporting the subject of prohibitions on defamation of religions, the OIC had in its revised Charter of 2008 stated 'combating defamation of Islam' as one the organisation's primary objectives.[33] By 2009, the OIC and its members had been emboldened to make a declaration that the defamation of religions as a norm had

> '[r]epeatedly been observed to command support by a majority of the UN member states–a support that transcended the confines of the OIC Member States. The succession of UNGA and UNHRC resolutions on the defamation of religions makes it a standalone concept with international legitimacy. It should not be made to stand out by creating the impression that it somehow encroaches upon freedom of expression.
> […]
> Any denial of these facts constitutes a contradiction of the established position of the international community, the international legitimacy and above all the main provisions of international law and international humanitarian law [sic].[34]

21. At that time, OIC members States had also been embroiled in a number of controversies surrounding defamation of religions. This included, for example, the *Jyllands-Posten* Muhammad cartoons controversy emergent after the publication of cartoons of Prophet Mohammad in Denmark and republished in other parts of the world,[35] Pope Benedict's quotation of a fourteenth-century Byzantine emperor's allegation that Mohammed was 'bad and inhuman' for commanding his followers to spread Islam by the sword, and comments critical of Islam,[36] naming non-humans after holy personalities,[37] desecration or destruction of holy scriptures or documents.[38] Pakistan had invoked international

criticism for draconian punishments for anti-blasphemy laws as exemplified by the Aasia Bibi case. In November 2010, the case of Aasia Bibi, a Christian woman, gained international attention after she was sentenced to death for blasphemy under article S.295-C of the Pakistan Penal Code for insulting the Prophet Mohammad. The impact of this incident has been dramatic since both the Punjab Governor, Salman Taseer and Shahbaz Bhatti, the Christian Federal Cabinet Minister of Minority Affairs, who defended her case (and campaigned for the reform of Pakistan's anti-blasphemy laws) were assassinated. [39]

22. Notwithstanding the substantial emphasis on anti-blasphemy laws to curb freedom of expression domestically, the official campaign to fully develop an international norm on the prohibition of defamation of religion came to a hiatus in 2011 – at least within the United Nations. Many possible political and diplomatic reasons have been given. Intense efforts were made by the United States administration to reach a consensus between the OIC and Western countries. With the adoption of Human Rights Council Resolution 16/18 (which omitted any explicit references to the defamation of religions), the United States and a number of Western liberal democracies were able to claim 'historic'[40] success with the 'pledge to protect the freedom of religion for all while also protecting freedom of expression'.[41] Human Rights Council Resolution 16/18 '*[e]xpresses deep concern* at the continued serious instances of derogatory stereotyping, negative profiling and stigmatization of persons based on their religion or belief'.[42] Yet, Resolution 16/18 also

> *'Recognizes* that the open public debate of ideas, as well as interfaith and intercultural dialogue, at the local, national and international levels can be among the best protections against religious intolerance and can play a positive role in strengthening democracy and combating religious hatred, and convinced that a continuing dialogue on these issues can help overcome existing misperceptions.'[43]

23. Resolution 16/18 thus recognises that stifling legitimate criticism of religions does not protect religious groups and that, instead, the open discussion of contentious issues is to be encouraged as a method of protecting individuals and minorities from religious intolerance. By legitimising 'open public debate of ideas' the UN Human Rights Council can be seen to move away from the controversial concept of 'defamation of religions' which seeks to restrict freedom of expression in order to protect religions from criticism. On the other hand, members of the OIC have continued to interpret Resolution 16/18 and subsequent resolutions as an endorsement of the organization's efforts to prohibit

[41] Ibid.

[42] Human Rights Council Resolution 'Combating intolerance, negative stereotyping and stigmatization of, and discrimination, incitement to violence and violence against, persons based on religion or belief' A/HRC/RES/16/18 (27 March 2011) para 1.

[43] Ibid, para 4.

'defamation of religions.'[44] HRC Resolution 16/18 was presented by Pakistan on behalf of the OIC.[45] The sponsoring state, Pakistan, has argued forcefully that Resolution 16/18 does not replace the previously adopted resolutions on 'defamation of religions'. After the adoption of Resolution 16/18 on March 24, 2011, Pakistan's Ambassador and representative to the OIC, Zamir Akram, made an unequivocal assertion that 'this resolution does not replace the OIC's earlier resolutions on combating defamation of religions which were adopted by the Human Rights Council and continue to remain valid'.[46] Similar views were echoed by other members of the OIC.[47] Whilst acknowledging Resolution 16/18 as an arrangement to explore an 'alternative approach' members of the OIC appear to have conveniently side-stepped from a confrontational agenda. The OIC and its members states (within the OIC as well within the various regional blocks) continue to vigorously pursue to legitimise an international ban on the defamation of religions. Professor Blitt makes a valid comment that:

> '[b]y shifting this debate to an ambiguous and under-theorized area of law in the name of pursing and validating 'international consensus,' these new resolutions risk creating an opportunity for certain states to prosecute perceived affronts to religious belief with renewed vigor under the imprimatur of international law. The likelihood of such a scenario is only heightened by the fact that the OIC – the world's largest international organization after the UN – continues to actively identity and endorse defamation of religion as a lawful and recognised international norm inexorably and legitimately linked to the goal of combating intolerance'. [48]

24. Events, subsequent to the adoption of the Human Rights Council Resolution appear to have vindicated the doubts of critics as to whether 'defamation of religions' was passé?[49] The considerable unrest and violence that ensued after the release of the 14-minute trailer, Innocence of Muslims (2012)[50] and more recently, the tragedy in the aftermath of the *Charlie Hebdo massacres* in January 2015 (and the support for the murderers in many parts of the world)[51] reconfirms the deep divisions in the Western world and in Muslim majority societies as to the extent and limits of free expression.

The Right to Freedom of Expression: The Islamic Regional Human Rights Models

25. Having considered the debacles on freedom of expression that have pervaded the UN General Assembly and the Human Rights Council, it is instructive to establish the position on this subject as espoused by regional Islamic human rights models. This section

therefore briefly assesses the position adopted by three organisations that have been at the forefront of advancing Islamic human rights law. These are the Islamic Council of Europe, the League of Arab States and the OIC. They articulate the normative approaches in relation to the right to freedom of opinion and expression within the *Sharia*. Having been particularly active since the last quarter of the twentieth century, they have attempted to present an 'Islamic response' to international human rights norms, especially the International Covenants. Within these responses, however, there are noticeable differences over key controversial areas: these include, inter alia, the limits of the right to freedom of opinion and expression, the right of individuals to hold adverse opinions about religions, and the boundaries of freedom to expression towards religions, religious leaders, and Prophets of religions.

The Islamic Council of Europe

26. The Islamic Council of Europe was formally established in London in 1973 with strong affiliations with the Muslim World League, a conservative State-led Saudi organisation.[52] The Islamic Council of Europe is accredited with drafting two instruments, *The Universal Islamic Declaration of Human Rights* (UIDHR), adopted in 1981, and *A Model of an Islamic Constitution* produced in 1983.[53] The apparent rationale of the UIDHR was to prepare and develop an indigenous Islamic document providing a response to the Universal Declaration of Human Rights of 1948. The *Model of an Islamic Constitution* was aimed at incorporating and advancing Islamic principles in association with democratic principles of governance of modern States.[54] As a product of the same psyche, the UIDHR and the *Model of an Islamic Constitution* characterise similar shortcomings and limitations. In relation to freedom of expression, Article 8 of *A Model of an Islamic Constitution* provides '[e]very person has right to his thought, opinions and beliefs. He also has the right to express them so long as he remains within the limits prescribed by law'.[55]

27. The working group that drafted UIDHR included the former Sudanese Prime Minister Sadiq Al-Mahdi, two prominent Pakistani constitutional lawyers, AK Brohi and Khalid Ishaque, and the Egyptians Dr Kholi and Judge Midhat Azzam. The Declaration, was presented as the preeminent Islamic human rights instrument to UNESCO in Paris on 19 September 1981.[56] The Secretary General of the Islamic Council of Europe, Salem Azzam, in presenting a foreword to the text noted that the Declaration was 'compiled by eminent Muslim scholars, jurists and representatives of Islamic movements and thought'.[57]

28. The attendees of the ceremony included such important figures from the Muslim world as Prince Muhammad al-Faisal of Saudi Arabia, Ahmad Ben Bella the first elected President of Algeria and Mukhtar Ould Daddah the former President of Mauritania, and

an advisor of General Zia-ul-Haq of Pakistan.[58] The ceremony and the pomp accompanied by the presentation betrayed the context and content of the Declaration. Ostensibly, the UIDHR provides rights that parallel the provisions of UDHR and provide an Islamic response to Western, secularised versions of human rights. Closer examination of the two documents, however reveal, significant differences. There are also differences in the English and the Arabic versions. The considerable equivocation and ambiguity in the various provisions of UIDHR have allowed critics to suggest that the drafters of the Declaration were not able to agree on many of the provisions and therefore sought to resort on ambiguous terminology.[59]

29. Amidst the numerous ambiguous provisions, none are more problematic than those relating to freedom of expression. The UIDHR, in engaging with the right to freedom of expression, conflates this right with other rights and freedoms, such as the freedom of belief. Article XII provides as follows:

> 'Right to Freedom of Belief, Thought and Speech
> a) Every person has the right to express his thoughts and beliefs so long as he remains within the limits prescribed by the Law. No one, however, is entitled to disseminate falsehood or to circulate reports which may outrage public decency, or to indulge in slander, innuendo or to cast defamatory aspersions on other persons.
> b) Pursuit of knowledge and search after truth is not only a right but a duty of every Muslim.
> c) It is the right and duty of every Muslim to protest and strive (within the limits set out by the Law) against oppression even if it involves challenging the highest authority in the state.
> d) There shall be no bar on the dissemination of information provided it does not endanger the security of the society or the state and is confined within the limits imposed by the Law.
> e) No one shall hold in contempt or ridicule the religious beliefs of others or incite public hostility against them; respect for the religious feelings of others is obligatory on all Muslims.'

30. The provisions vividly capture the ideology and mentality of the architects of the right to freedom of expression within UIDHR. Everyone, according to the Declaration, has the right to expression so long as expression is within the remit of legal limits which is prescribed by the public authorities. In making it impressible to 'hold in contempt or ridicule the religious beliefs of others' the UIDHR represented the initial though significant steps towards legitimising the criminal offence of blasphemy laws within domestic legislations. Although initially the work of private actors, the UIDHR was subsequently embraced by several Islamic States, including Pakistan, Saudi Arabia and Egypt, as a document symbolising human rights within Islam.

The Organisation of Islamic Cooperation (OIC)

31. As noted earlier, the OIC is constituted and operational on the basis of a revised charter adopted in 2008. Before the incorporation of the revised charter, the OIC had adopted the Cairo Declaration on Human Rights in Islam at the 19th Islamic Conference of Foreign Ministers in Cairo on 5 August 1990, which continues to represent the guiding

[58] See David G Littman, 'Universal Human Rights and Human Rights in Islam' Europe News (1 December 2007), available at http://en.europenews.dk/Universal-Human-Rights-Human-Rights-in-Islam--78273.html.

[59] Ann E Mayer, *Islam and Human Rights: Tradition and Politics* (5th edn, Westview Press 2013) at 30.

principles on human rights for the OIC member States.[60] The Declaration was adopted by 45 Foreign Ministers of the OIC subsequent to the dissemination of a report of the Committee of Legal Experts conducted in December 1989. The primary objective of the Declaration was to provide guiding principles on issues of human rights. Even though the Declaration is non-binding, it nevertheless constitutes an important document in the armoury of members of the OIC. According to its Article 24, in ensuring human rights within Islamic constitutional systems, the exclusive yardstick is *Sharia* law as 'the only source of reference'. The Declaration engages with the right to freedom of expression in Article 22, according to which:

> '(a) Everyone shall have the right to express his opinion freely in such manner as would not be contrary to the principles of the Shari'ah.
> (b) Everyone shall have the right to advocate what is right, and propagate what is good, and warn against what is wrong and evil according to the norms of Islamic Shari'ah.
> (c) Information is a vital necessity to society. It may not be exploited or misused in such a way as may violate sanctities and the dignity of Prophets, undermine moral and ethical Values or disintegrate, corrupt or harm society or weaken its faith.
> (d) It is not permitted to excite nationalistic or doctrinal hatred or to do anything that may be an incitement to any form or racial discrimination.'

32. The Declaration carefully sets out the parameters of free speech. The limits of expression are defined by the Islamic Sharia and any form of exploitation or misuse in such manners as violating 'sanctities and the dignity of Prophets, undermine moral and ethical Values or disintegrate, corrupt or harm society or weaken its faith' should be prohibited.[61] The Declaration thus forcefully asserts the prohibition of defamation of religion in so far as the OIC member States are concerned.

The League of Arab States

33. Stretching over a regional landscape of predominantly Arabic speaking States of North Africa, the Levant and the Arabian Peninsula, the common cultural, language and religion betrays the deep divisions over human rights psychology of the Arab League (also known as the League of Arab States).[62] In May 2004, the League adopted a revised version of the Arab Charter on Human Rights that entered into force in March 2008.[63] It was the second attempt by the League to adopt such a document since 1994, when the Arab League attempted to adopt the first Arab Charter of Human Rights. There are significant differences between these two versions, reflected in differences in provisions and the expanded nature of the revised Charter (with its 53 Articles as opposed to the previous 43 Articles).[64] To its credit, the Arab League, in drafting the Charter, adopted an inclusive process actively engaging in consultative process both with NGOs as well as Inter-governmental organisations. The revised Charter was a product of efforts on the

[60] The Cairo Declaration on Human Rights in Islam of 5 August 1990, Annex to Resolution No 49/19-P, available at http://www.oic-oci.org/english/article/human.htm; see also UN GAOR, World Conference on Human Rights, 4th Session, UN Doc A/CONF.157/PC/62/Add.18 (1993).
[61] Ibid, Article 22(c).

[64] Mervat Rishmawi, 'The Revised Arab Charter on Human Rights: A Step Forward?' 5 Human Rights Law Review (2005) 361, at 363.

part of the League to 'modernise' existing institutions.[65] While the ideal of establishing additional institutions and revamping the human rights systems appears attractive, in reality many of these proposals have not been welcomed by members of the League. Hence, it is not surprising to note that, thus far, the only concrete achievement is the production and the enforcement (since March 2008) of the revised Arab Charter. The Arab Charter contains the right of information and liberty of opinion, expression and research in its Article 32:

> '(1) The present Charter guarantees the right to information and to freedom of opinion and expression, as well as the right to seek, receive and impart information and ideas through any medium, regardless of geographical boundaries.
> (2) Such rights and freedoms shall be exercised in conformity with the fundamental values of society and shall be subject only to such limitations as are required to ensure respect for the rights or reputation of others or the protection of national security, public order and public health or morals.

34. The provisions within Article 32 tend to follow Article 19 of the ICCPR. The Article guarantees the freedom of opinion and expression to everyone. There are, as such, no specified limitations of respecting religions or ensuring respect for religious feelings of others. Yet, the possible interpretation and subsequent applicability of 'morals' and 'public order' is likely to result in restricting freedom of expression especially in cases where such expression is critical of religions or religious-based practices.

Conclusions

35. This section of the ILA report has examined a number of issues regarding the freedom of expression within the Muslim world. Having largely accepted the provisions of Article 19 and Article 20 of the ICCPR, Muslim majority states generally adhere to the accepted norm on freedom of expression. There are nevertheless substantial disagreements on various facets: sensitivities and concerns abound. The controversial issues include, inter alia, aspects of public morality, public order and national security. More significantly, as this discussion has elucidated, the Muslim-majority States have a sensitive approach towards the protection of religion. Domestic anti-blasphemy laws have been deployed to curb expressions that oppose the main-stream religious narrative. Furthermore and notwithstanding the apparent hiatus to the subject of defamation of religions within the United Nations, members of the OIC insist on the continuing validity of the concept of the prohibition of defamation of religions as norm of international law.

Freedom of Expression in Islamic, Arab and Asian Organisations

Introduction

36. The importance of the freedom of expression, as one of the fundamental human rights, is recognised in most countries in the Islamic, Arab and Asian realm as matter of principle. Most governments have ratified without any specific reservation the ICCPR which guarantees in its Article 19 that everyone shall have the right to freedom of expression. However, as this right is not absolute and is subject to limitations,[66] the challenge

[65] See the Statement by Amr Mousa, the then Secretary-General of the Arab League in Resolution of the Council of Ministers of the Arab League 6184, March 2002, and 6243, September 2002 (available in Arabic).

[66] In particular Article 19 (3) and Article 20 ICCPR.

has always been of how to determine permissible restrictions and still safeguard the core of this important human right. This is not only the case in the above-mentioned countries, but in view of the particular qualities of Islam, which is the dominant religion in the region and at the same time a normative system, becomes particularly sensitive. In the following the approach taken in regional organisations, such as the OIC, the Arab League and ASEAN, in particular through their newly established human rights institutions, will be examined.

The OIC and its new Independent Permanent Human Rights Commission

37. As part of its 'Ten-Year Programme of Action', aimed at the reform and modernisation of the organisation,[67] the OIC decided to establish an 'Independent Human Rights Commission (IPHRC)' in 2005. Its main scope and objectives are contained in Article 15 of the revised OIC Charter of 2008:

> 'The Independent Permanent Commission on Human Rights shall promote the civil, political, social and economic rights enshrined in the organisation's covenants and declarations and in universally agreed human rights instruments, in conformity with Islamic values.'[68]

38. The new Commission is thus entrusted with the promotion of human rights 'in conformity with Islamic values'. Whether this should be a restriction or, on the contrary, an affirmation of the aforementioned human rights is not entirely clear and needs interpretation. The enumeration of various human rights texts, OIC's covenants and declarations as well as the universally agreed human rights instruments, without any order of priority, does not provide an unequivocal answer to this question.

39. The Statute of the IPHRC, which was adopted in 2011 in Astana, Kasakhstan, also reflects the dual foundation of its work, when it recalls the Cairo Declaration on Human Rights in Islam adopted in 1990 and the relevant international instruments, charters and conventions in its preamble.[69] It therefore depends to a large extent on the Commission itself and its practice to assess the relationship between the various normative frameworks.

Practice of the IPHRC on the interpretation of Islamic human rights documents

40. In the first years after its creation, the IPHRC appeared to favour an interpretation of human rights documents which could be described as a combined and universalist approach, focusing on the compatibility of Islamic and international human rights. The then Secretary General Ekkmeledin İhsanoğlu stated at the Commission's first session that the establishment of the IPHRC 'reflects the ongoing process of "moderation and

[67] In order to meet the challenges in the 21st Century, the Islamic Summit called upon member States to take joint actions within the framework of the OIC 'to revive the Muslim Ummah's pioneering role as a fine example of tolerance and enlightened moderation and a force for international peace and harmony.' See OIC, 'Ten-Year Programme of Action to Meet the Challenges Facing the Muslim Ummah in the 21st Century', http://www.oic-oci.org/ex-summit/english/10-years-plan.htm.

[68] Charter of the Organisation of Islamic Cooperation, adopted on 14 March 2008, available at http://www.oic-oci.org/is11/english/charter-en.pdf.

[69] Statute of the OIC Independent Human Rights Commission, adopted by the 38th Session of the Council of Foreign Ministers (CFM) held in Astana, Kazakhstan, on 28-30 June 2011, available at http://www.oic-iphrc.org/en/data/docs/about/Statute/IPHRC%20Statute%20EV.pdf.

modernization" at the Organization."[70] He noted that Islam was being wrongly associated with human right violations and as being inherently incompatible with international human rights norms and standards. Yet, according to his 'firm belief', exactly the opposite was true:

> 'Islam is not incompatible with human rights standards. It placed Human Rights places a premium on "hukook ul ibad" or "rights of the people" centuries before the Human Rights acquired currency in contemporary human existence. The concept of "ijtehad" lends a dynamism that is unparalleled. Islam in fact has the normative potential to add to the modern values and standards and push for better implementation, both at the social and political levels.'[71]

41. This approach can be regarded as a 'moderate universalist' approach, which argues for the compatibility of Islamic and universal human rights, but prioritises universal human rights and is willing to interpret Islamic value in a way to make them conform to universal rights in case of conflict.[72] In this direction went also İhsanoğlu's vision for the first years of the Commission's work. He noted that the Commission would be complementary to the existing Human Rights mechanisms and providing an added value by bridging gaps. The Commission should use its expertise also to review and update OIC instruments, including the Cairo Declaration and the Covenant on the Rights of the Child in Islam.[73] In a similar vein, the first chairwoman of the IPHRC was Siti Ruhaini Duhayatin, a university professor and human rights activist from Indonesia,[74] also seemed to underscore the universality of human rights, in particular in relation to women's rights.[75]

42. Yet, more recent developments seem to point to another direction. The new OIC Secretary General, Iyad Ameen Madani, said at the opening of the 4th session of the IPRC in 2014 that current human rights law was based on Western values.[76] While many OIC countries had willingly adopted international human rights norms, he noted a number of issues 'that go beyond the normal scope of human rights and clash with Islamic

[72] See Turan Kayaoglu, 'The OIC's Independent Permanent Human Rights Commission: an Early Assessment', in: Matters of Concern. Human Right's Research Papers, No 2015/3, 13. The categorisation is based on Jack Donnelly, *Universal Human Rights in Theory and Practice* (Cornell University Press 2003). Kayaoglu notes, however, that, according to Ann E Mayer, İhsanoğlu's human rights messages were not always consistent with universal human rights.

[73] See Opening Statement by the Secretary General of the OIC at the First Session of the OIC IPHRC mentioned above.

[74] According to her CV on the OIC's website, Prof. Siti Ruhaini Duhayatin is the Vice-Rector for Student and External Relation Affairs and senior lecturer on the Sociology of Law in the Faculty of Syariah and Law at the Islamic State University 'Sunan Kalijaga' Yogyakarta, Indonesia. In 1994, she initiated the First Women' Crisis Center in Indonesia. See http://www.oic-iphrc.org/data/cvs/18.pdf.

[75] Kayaoglu, above, n 72, 13.

[76] Statement of His Excellency Iyad Ameen Madani Secretary General of the Organisation of Islamic Cooperation at the Fourth Session of the OIC Independent Permanent Human Rights Commission (IPHRC), 2 February 2014, quoted by Kayaoglu, above, n 72, 14 (not any more available online).

teachings.'[77] In relation to 'freedom of expression' he criticised that despite repeated incidents of hatred and violence resulting from discrimination based on stereotyping and stigmatization of individuals, communities and religions, some countries continue to refuse any limitations or responsible use of this right. On the other hand, Muslim countries enacting laws to ensure respect for the sanctity and reputation of religious values, scriptures and personalities for promotion of peace in society were blamed for limiting this freedom through blasphemy laws.[78]

43. This presentation of controversies between alleged abuses and the protection of Islam against defamation is representative for the challenge the Commission will be facing with regard to the issue of freedom of expression. Another challenge for the Commission will be that all references to human rights in the OIC documents stipulate that they should be applied in accordance with the member States constitutional and legal systems. This shows a rather traditional understanding of the role of State sovereignty in relation to human rights. The approach to submit universal human rights to Islamic teachings and/or the constitution of States would rather qualify as a 'relativist' approach.[79]

Evaluation

44. While it is still rather early to evaluate the work of the IPHRC, one could raise the question whether it lives up to the promise of a modern and moderate picture of Islam. Some recommendations to improve this situation have been discussed by international human rights experts and presented to the IPHRC.[80] These include:

- Recognition by Commissioners that OIC member states are bound by international human rights obligations;
- Agreement among Commissioners that international human rights treaties constitute minimum standards and that regional human rights instruments must always meet or exceed these minimum standards.
- Agreement among Commissioners to use only international human rights law as the benchmark in assessing all human rights issues, and clarification of the status of the Cairo Declaration to this end.
- Review of existing member states' reservations to international human rights treaties, and an elaboration of recommendations to remove reservations that undermine the object and purpose of the treaty in question.
- Affirmation of Sharia as consistent with international human rights law by rejecting interpretations of Sharia that violate or undermine international human rights law and by elaborating alternative interpretations that respect and further international human rights law.

45. In order to foster a human rights discourse, coordination and cooperation with international and regional governmental and non-governmental human rights institutions

[77] Ibid.
[78] Ibid.
[79] Kayaoglu, above, n 72, 14.
[80] In September 2013, the Danish Institute for Human Rights invited a group of international human rights researchers to a conference focused on the IPHRC which also formulated a number of recommendations for the Commission. See Kayaoglu, above, n 72, 20 f.

should be enhanced. This could also help to move away from the traditional focus on the situation of Muslim minorities in non OIC countries, such as in Palestine, Myanmar and in Western countries, to more introspection.[81]

Independence and Mandate of Commission

46. From the rule of law perspective, it would be important to ensure that the Commission is truly independent and has a mandate that allows it to address existing human rights problems also within OIC member countries. As regards independence and objectivity, the Statute of the IPHRC does not contain any reference to it. Yet, its Rules of Procedures provide:

> 'Rule 6 – Independent status of Commissioners:
> 1. Commissioners shall act in their personal capacity and shall express their own convictions and views.
> 2. In exercising their function, commissioners shall at all times uphold utmost professionalism, truthfulness, independence, impartiality and integrity whilst enhancing their moral authority and credibility, free from any kind of extraneous influence.
> 3. Commissioners shall not receive instructions from any state, including their own, or any other third party.'[82]

47. True independence and impartiality would be necessary to achieve progress in examination of the human rights situation in OIC countries. So far, the Commission consists of persons with different human rights background, diplomats, university professors, lawyers and human rights practitioners. The nomination by governments and the election by the Council of Ministers certainly do not prevent independence. Once the members of the Commission are elected they are protected by their office and are free and flexible to raise issue they find important themselves.

48. The mandate of the Commission as determined by its Statute is, however, so far rather limited. It confines the IPHRC largely to a consultative body for the Council of Ministers.[83] The Commission does not yet have the right to receive complaints by States or individuals or to request reports from member States. The Council may, however, assign to it particular other tasks,[84] which leaves the possibility open to define the mandate more broadly and also to start acting like other regional or universal human rights institutions.

49. A limitation to the independence of the Commission might be its mandate to support 'the OIC's position on human rights at the international level'.[85] It depends whether this is meant to be a lobbying mandate, despite the independent opinion of the Commissioners themselves. A focus of the activities shall be apparently to provide technical cooperation in the field of human rights and awareness-raising about these rights in the OIC countries,

and to offer consultancy on human rights issues.[86] The Commission shall promote and support the role of national institutions and civil society organisations active in the area of human rights[87] and shall conduct studies and research on priority human rights issues.[88]

Recent developments

50. While in the first years, the Commission had a majority of topics addressing countries outside the OIC,[89] topics relevant within OIC member countries have come to the focus of its work rather recently. Furthermore, cooperation with international human rights institutions has increased. Commissioners regularly attend the meetings of the Human Right Council, and human rights experts from UN institutions are invited to participate in events organised by the IPHRC. With regard to the topic of freedom of expression, the IPHRC organised a Thematic Debate on 'Freedom of Expression and Hate Speech' in November 2015. In this Thematic Debate also the UN Special Rapporteur on Freedom of Expression (although only through video link) and the former UN Special Rapporteur on Racism participated.[90]

51. The Outcome Document of this Thematic Debates provides an insight into the current state of affairs with regard to the interpretation of the topic of freedom of expression. It starts by acknowledging that freedom of expression is a key human right, which is vital for development of stable, peaceful and progressive democratic societies.[91] However, it also emphasises that the freedom of expression is not 'absolute' but that its exercise is subject to 'special duties and corresponding responsibilities' based on 'avoidance of harm to others' to ensure societal cohesion. It points out that also in Islam freedom of expression is guaranteed, but that Islam 'makes distinction between criticism or constructive discussion and sheer disrespect, defamation, insult and negative stereotyping that fall into the category of inciting religious hatred.'[92]

52. There is emphasis on 'hate speech motivated by racism, xenophobia and intolerance, coupled with impunity for perpetrators'[93] which create a climate of fear and social exclusion of the targeted persons and groups. Yet, this condemnation is not only directed against the Western countries, but also against terrorist groups, such as Daesh and Boko Haram, who use incitement to hatred and discrimination based on race or religion resulting in devastating and despicable killings of non-Muslims. However, in the same sentence, 'the printing of senseless caricatures of Prophet Mohammad (PBUH)' is also condemned and thereby arguably put on the same level as the killings by Daesh and Boko Haram.[94]

[91] Ibid.
[92] Ibid.
[93] Ibid.
[94] Ibid.

53. With regard to Resolution 16/18 of the Human Rights Council, the Outcome Document expresses its

> 'confidence in OIC sponsored HRC Resolution 16/18 (entitled Combating intolerance, negative stereotyping and stigmatization of, and discrimination, incitement to violence and violence against persons based on religion or belief), repeatedly adopted by the Human Rights Council and UN General Assembly by consensus, which includes substantive, administrative, political and legislative actions to be taken at the national and international levels to address the concerns relating to incitement to religious hatred and discrimination.'[95]

54. The Outcome Document urges the States to address the implementation gaps and provide regular reports on its implementation to the Human Rights Council well as re-dedicate to the agreed ideals in a comprehensive manner involving inclusive approaches provided in the 'Rabat Plan of Action on the prohibition of advocacy of national, racial or religious hatred that constitutes incitement to discrimination, hostility or violence.'

55. The emphasis on limitations of the freedom of expression in this very recent document is striking, because the anti-defamation of religion strategy has allegedly been replaced by the "Istanbul-process" initiated by the above-mentioned Resolution 16/18 which does not focus any more on the need for defamation of religion laws to combat blasphemy, but instead on hate and violence inciting speech – in accordance with the Western grounds for limitations of freedom of speech. The continuing emphasis on limitations is even more troublesome as the Outcome Document is not an official statement of OIC governments, but the result of a Thematic Debate under the auspices of the IPHRC. From the perspective of safeguarding freedom of expression this raises the question whether the Commission exercises its function in a sufficiently independent and impartial manner and whether it is eventually ready to engage also in introspection. Independence and impartiality would be all the more necessary as limitations of freedom of expression are often implemented by governments to limit critical opinions by citizens. It would be an important role for the Commission to carefully analyse the different purposes and means of limiting free speech and their compatibility with human rights standards, in particular also in OIC member countries.

56. There are also some promising outlooks which provide hope for a standardised and rationalised approach, which would reach towards the rule of law concept the ILA Committee has been working with in the last years. For example, the Outcome Document recommends that the OIC commissions a study that analyses the existing legal practices used to combat hate speech and incitement to hatred in different parts of the world. This should be done with a view to suggesting parameters for hate speech and incitement to hatred based on one's race or religion as well as practical steps, in accordance with international human rights law. A comparative analysis of national laws through the lens of international human rights contains the potential of showing the differences and rationalising their bases and goals.

57. Furthermore, the Council of Ministers at its 42nd Meeting in 2015 mandated the IPHRC to Review the Cairo Declaration on Human Rights in Islam.[96] The Commission

[95] Ibid.

[96] See Resolution No 1/42 – Legal Follow-Up and Coordination of Action in the Field of Human Rights, OIC/CFM-42/2015/LEG/DR.RES.1 of 27-28 May 2015, para 12: "[…] request OIC IPHRC

immediately constituted a Committee that met in February 2016 for the first time and formulated preliminary suggestions. An initial report was supposed to be submitted to the next Meeting of Foreign Ministers of the OIC. With this new mandate, a perspective is taken up again that has been formulated by the former SG İhsanoğlu, when he inaugurated the first session of the IPHRC, and alluded to the human rights expertise gathered in the Commission which should be used to review and update OIC instruments, including the Cairo Declaration and the Covenant on the Rights of the Child in Islam. It remains to be seen to what extent this new mandate will be taken up to consolidate the formulations of Article 22 of the Cairo Declaration with the formulation of the freedom of expression in Article 19 of the ICCPR and in several regional human rights documents.

The Arab Human Rights Committee

58. The Arab Human Rights Committee was established in 2011 pursuant to Article 45 of the Arab Charter on Human Rights. It consists of nationals of the States parties who must be highly experienced and competent in the area of human rights. The members of the Committee serve in their personal capacity and shall be fully independent and impartial. The Committee considers reports by State parties that are submitted on the measures they have taken to give effect to the rights and freedoms recognised in the Charter and on the progress made towards their enjoyment. While the first version of the Arab Charter on Human Rights of 1994 has never been accepted by members of the League of Arab States,[97] after an update and amendment by the Arab summit in Tunis in 2004, which was part of an effort to modernise the League of Arab States, it was ratified by a sufficient number of member States and entered into force in 2008.

59. The Arab Charter on Human Rights only contains scarce references to Sharia, in particular in connection with "positive discrimination established in favour of women by the Islamic Sharia, other divine laws and by applicable laws and legal instruments."[98] Otherwise, it contains a rather restrictive "emergency clause" which allows derogation from the obligation of the Charter only in situations that threaten the life of the nation and the existence of which is officially proclaimed, to the extent strictly required by the exigencies of the situation, provided that such measures are not inconsistent with their other obligations under international law and do not involve discrimination solely on the grounds of race, colour, sex, language, religion or social origin.[99] With regard to freedom of expression, the Arab Charter on Human Rights provides:

> 'Article 32
> The present Charter guarantees the right to information and to freedom of opinion and expression, as well as the right to seek, receive and impart information and ideas through any medium, regardless of geographical boundaries.
> Such rights and freedoms shall be exercised in conformity with the fundamental values of society and shall be subject only to such limitations as are required to ensure respect for the rights or reputation of others or the protection of national security, public order and public health or morals.'

---

to review OIC Human Rights Declaration against existing universal human rights instruments and make suggestions for its improvement, if and where necessary."

[97] The League of Arab States was founded in Cairo in 1945 by Egypt, Iraq, Lebanon, Saudi Arabia, Syria, Jordan and Yemen. It has currently 22 member States.

[98] Article 3 (2) of the Arab Charter on Human Rights.

[99] Article 4 (1) of the Arab Charter on Human Rights.

60. While emphasising the importance of the freedom of expression, the limitations are expounded in a manner that mirror the formulations contained in international and other regional human rights treaties, most importantly Article 19 ICCPR. Yet, it is noteworthy that Arab Charter on Human Rights does not contain a provision similar to Article 20 ICCPR directed against 'hate speech'.

61. The Arab Human Rights Committee makes reference to international standards in its work.[100] A remarkable provision in contained in Article 43 of the Charter which even explicitly submits the interpretation and application of the Charter under international and regional human rights instruments which the State parties have adopted or ratified, including the right of women, the right of the child and the rights of persons belonging to minorities.[101]

62. The mandate of the Arab Human Rights Committee is so far, however, limited to discussing the State reports, comment thereon and to make the necessary recommendations in accordance with the aims of the Charter through the intermediary of the Secretary-General.[102] It does not accept complaints by States or by individuals. Yet, some further progress might be observed once the Arab Court of Human Rights, whose establishment was decided at the 2013 Doha Summit.[103] Due to the similarity of formulations and approaches in the Arab Charter on Human Rights with its regional counterparts, for example in Europe, raises high expectations. There is, however, concern that, if the Arab League does not provide adequate resources to the Arab Human Rights Committee, it may become increasingly dependent on donations. This may affect the stability of the Committee's work, its durability, and importantly, its independence.[104]

The Human Rights Mechanisms of the Association of Southeast Asian Nations

63. The Association of Southeast Asian Nations (ASEAN) established the ASEAN Intergovernmental Commission on Human Rights to promote human rights in its member countries, in addition to its goal of regional economic integration.[105] After the Commission's establishment in 2009, its first task was to draft an ASEAN Human Rights Declaration.[106] This Declaration was eventually presented to the ASEAN member countries in Phnom Penh and unanimously adopted in 2012. As a Declaration, it is non-binding and only a first step towards a more effective mechanism for the protection of human rights. The fact that it had been elaborated with little involvement of civil society organisations was criticised, as were some principles and articles that could weaken

and erode universal human rights.[107] Concerning freedom of expression, Article 23 of the ASEAN Human Rights Declaration provides:

> 'Every person has the right to freedom of opinion and expression, including freedom to hold opinions without interference and to seek, receive and impart information, whether orally, in writing or through any other medium of that person's choice.'

64. This very general formulation reflects the words of Article 19 of the Universal Declaration on Human Rights. Yet, some general provisions and principles may limit and qualify this ample formulation. In particular, Article 6, under the heading of "General Principles", raises some concern:

> 'The enjoyment of human rights and fundamental freedoms must be balanced with the performance of corresponding duties as every person has responsibilities to all other individuals, the community and the society where one lives. It is ultimately the primary responsibility of all ASEAN Member States to promote and protect all human rights and fundamental freedoms.'

65. This principle seems to condition the enjoyment of human right on the performance of duties. In addition, it also appears to indicate that the individual rights and freedoms might be depending on domestic laws. This has been identified as another attempt to use the concept of 'cultural relativism' to suggest that international human rights do not apply everywhere and that individual rights might be subject to group veto.[108]

66. It remains to be seen to what extent the ASEAN Intergovernmental Commission on Human Rights will include the discussion of the issue of freedom of expression in its work. It is notable that in the Five-Year Work Plan 2016-2020, this topic is not explicitly mentioned, for example as an issue on which thematic studies shall be prepared.[109]

Conclusion

67. The recent establishment of human rights bodies within regional organisations in the Islamic, Arab, and Asian realm shows that human rights are increasingly regarded as a matter of importance which needs specific attention and dedication. Human rights therefore are not any more regarded as a Western or imperialistic concept, but rather considered as well embedded within the Islamic tradition and culture. However, many challenges remain with respect of implementation and enforceability of human rights in the respective countries. The challenges are both substantive and procedural. The substantive challenges are particularly pertinent with respect to the freedom of expression. The permissible limitations under the pertinent human rights documents on this freedom, arguable necessary for the protection of the rights of others and the protection of certain public interests, leave a wide margin of interpretation. While this is also the case in other regional and international human rights documents, there is a need to monitor the possible

interpretations by a competent human rights body which is independent from the States. Here the procedural challenge comes in. The human rights bodies analysed above do not yet have sufficient independence. Despite its name, the new Independent Permanent Human Rights Commission does not have a mandate to allow it to monitor independently the implementation of human rights obligations within the member States of the OIC. The current mandate is basically limited to give advice to the Council of Ministers, to provide assistance to civil society organisations, and to conduct studies and research on human rights issues. While this is certainly a welcome development, a much stronger mandate would be necessary to effectively ensure that human rights are respected and protected. In the case of the Arab Human Rights Committee, its independent functioning is currently in question due to the limited commitment of the member States of the Arab League to provide sufficient funding. Finally, the ASEAN Human Rights Mechanism, is currently also limited to prepare thematic studies and not to act as an independent human rights monitoring body. It follows that, despite the welcome recent developments within the Islamic, Arab, and Asian organisations recognising the importance of human rights, the establishment of the current institutions can only be regarded as a first step towards a more independent and effective monitoring the implementation by the respective member States.

Summary and Outlook

68. This latest Report of the ILA Committee on Islamic Law and International Law has focused on the implementation of the concept of the rule of law and the freedom of expression in Muslim state practice. It argued with reference to Islamic law sources that both are in principle compatible with Islamic law, or *Sharia*. It depends on the interpretation of the Islamic sources and the use of legal methods and concepts, whether this compatibility is maintained. It has been shown that this is not a merely academic question. The selection of one interpretation over the other is more often than not influenced by political considerations as wells as by historical and social traditions. These do not represent an easy challenge for the respect and the protection of human rights, either. They represent today's reality in which the discourse on the rule of law and freedom of expression takes place, but the challenge can be addressed in a reasoned and rational way and not necessarily by reference to religion. Nevertheless, it has been pointed out that several States use religion and religious arguments to suppress freedom of expression. It seems to be an important task for the future, both in academia and practice, to analyse and distinguish more carefully the different arguments.

69. It has been pointed out in the present Report that the freedom of expression is not unlimited. Limitations are necessary and recognised in the pertinent international human rights documents. States have not only the right but even the duty to protect the rights of others, such as privacy and reputation. They may also limit the freedom of expression to protect certain public interests, such as national security, public order, public health or moral. In addition, limitations to prevent incitement to violence are mandatory (under Article 20 ICCPR). The art of finding a balance between the different obligations of the State is delicate in particular in the realm of the freedom of expression. This Report argues that this task can best be fulfilled within a functioning rule of law system in which the decisions of public authorities are transparent, foreseeable, based on generally published laws and regulations, and subject to accountability.

70. The analysis of several regional human rights bodies recently established in the Islamic, Arab, ad Asian realm has shown that they create the potential for improving the situation of human rights in the respective countries. However, at this point their mandates still remain rather limited and do not allow receiving complaints of human rights violations, including the freedom of expression, in the member countries. They primarily serve as advisory bodies to the respective organisations and their member States. In addition, they engage in conducting research and studies on various issues of human rights, including the freedom of expression. The fact that close cooperation is sought with international human rights monitoring institutions, such as the UN Special Rapporteur on the Freedom of Expression, provides an important signal towards a more independent and universalist approach on this issue in the future.

COMMITTEE ON ISLAMIC LAW AND INTERNATIONAL LAW

WORKING SESSION

Thursday, 11 August 2016, 9.00am

Chair: Professor Nicolaas Schrijver (Netherlands)

The Chair welcomed attendees and thanked the Chair of the Committee for his outstanding work with the Committee.

HE Judge Awn Al-Khasawneh (Jordan) thanked the Chair for facilitating the meeting. He proceeded to thank the Co-Rapporteurs present, Professor Irmgard Marboe (Austria) and Dr Hossein Esmaeili (Australia), as well as Professor Javaid Rehman (UK), who was absent. The report prepared by the Co-Rapporteurs would be presented to the floor for their comments and questions.

Judge Al-Khasawneh mentioned that the Committee was amongst the longest standing committees of the ILA. It began with an attempt to study the primary sources of Islamic Law. The bulk of Islamic Law had largely been, for many reasons, a daunting task to translate. For example, there were some treaties that were written in Arabic script but in the Malagasy language. The Committee would now focus on the rule of law in Islamic law with specific focus on freedom of expression. In addition, the Committee hoped to reach a resolution by the next biennial conference in Sydney, after which the Committee hoped to move to more things, like arbitration in Islamic States and the view of the adoption of treaties and the ideas of trade in Islamic States.

He went on to emphasise that Islamic law, especially today, was pertinent because of the various misconceptions of Islamic law that had taken centre stage. It was unfortunate that a discussion could not be held without referring to these misconceptions. The report was not novel but contained several contemporary issues.

Dr Hossein Esmaeili (Australia) thanked attendees for their interest in the work of the Committee. The Committee was one of the oldest of the ILA and the report to be presented today would be a concluding report. The report focused on the nature and concept of Islamic law and how it worked in over 50 majority Muslim countries and some non-Muslim majority countries like India and Israel. The Committee's report also discussed the concept of the rule of law under Islamic law and then shifted its focus to freedom of expression in Islamic law in particular. Dr Esmaeili explained that at the next conference in Sydney in 2018, there would be a concluding session and further discussion on issues of arbitration under Islamic law.

The draft report was divided into three sections. Dr Esmaeili would present the first two, and the remaining section would be presented by Professor Marboe. The title of the report was "Islamic Law and Freedom of Expression: Challenges and Prospects". The issues covered in this report were contentious issues under international law; however, the CoRapporteurs had attempted to consolidate all the issues together within the context of Islamic law. One of the issues that had to be addressed was the nature of the Islamic law system. Most countries had a system of law which could be a civil or a common law system. Islamic law was the third largest legal system in the world and was applicable in 57-60 countries.

Dr Esmaeili raised questions as to whether Islamic law was a customary law or a religious system, whether it was a comprehensive system of law, and whether it was rigid and fixed, or whether it was civil/written law or common law. The Committee had sought to address these questions in its investigations.

In brief, Islamic law was generally perceived to be rigid and inflexible. This perception was however, far from the truth. Although some principles and sources of law were religious and divine, the system itself was like any other legal system which had gradually developed and matured over the years. In fact, Islamic law used to be the most advanced system of law and predated some of the most prominent systems of today. For example, England did not have a legal system before the 10th Century, yet Islamic law was well developed by then.

He then proceeded to comment that in South Africa, for example, the iconic former President Nelson Mandela changed South African and the world and yet the social injustices that existed before the end of Apartheid were still the same today with the economic structures that were developed during that unjust era remaining intact even today. The same could be said about India who had Mahatma Gandhi and yet the injustices of the colonial period were still evident today. By the same token, Islamic law came from the Qu'ran and the Prophet Muhammed; however, since then, Islamic law had developed.

An important distinction was made between Shari'ah and Islamic law. Shari'ah was broader than Islamic law, because it included religion, rituals and belief. Fiqh was the study of Islamic law jurisprudence. Islamic law, on the other hand, was a system like any other legal system and had a specific function which was not sacred or rigid; it was diverse and its nature was changeable.

The rule of law principle was discussed in the report, which noted that a large number of Muslim countries did not have effective rule of law systems. The Islamic legal system was compatible with conventional rule of law systems. In any case, each country had a system that was different and it was inconceivable that the same system could exist in all countries. Islamic law was compatible with the rule of law principle, albeit in its own distinct way. Dr Esmaeili gave the example of countries such as the United Arab Emirates, Tunisia and Malaysia, which ranked high on the 2015 Rule of Law Index as opposed to Pakistan and Afghanistan, which ranked among the lowest. This example proved that Islamic law was potentially compatible with the rule of law system.

The previous report of the Committee concluded that Islamic law in theory and practice was compatible with the rule of law. For instance, it included the basic principles of property rights of women and the presumption of innocence, just as any other conventional legal system.

Dr Esmaeili gave an illustration of what the Prophet Muhammed did for the rights of women, and stated that this even superseded what President Mandela did for black people in South Africa. These prominent individuals did not completely change the existing legal systems *per se*. An example was that Islam started giving property rights to women by the 14th century yet this did not exist in common law legal systems until recently.

The CoRapporteurs did note, however, that the practice of some Muslim countries was incompatible with rule of law principles, especially freedom of expression. Freedom of

expression was an important aspect of the rule of law and was a principle of customary international law. The Committee even noted that it could be suggested that freedom of expression had obtained the status of *jus cogens*.

The Committee had studied Islamic texts, jurists, history, and caliphate, and had drawn the conclusion that Islamic law and civilisation was not against the freedom of expression. By the same token, Islamic law had several sensitive concepts that were inconsistent with the freedom of expression, such as apostasy and blasphemy.

The second section of the report was concerned with freedom of expression and blasphemy. As a general rule, under international human rights law and customary international law, freedom of expression and freedom of religion were well established. Some limitations were permissible. In the 13th century, moving from one tribe to another was regarded as treason in Islam unless there was a treaty or agreement that allowed it. The apostasy rule was developed to protect Islamic tribes. In the modern age, apostasy had mellowed because of the increase of people who had converted to Islam.

The Committee observed that in several countries, both Muslim and non-Muslim countries, there were anti-blasphemy laws. There had been efforts to make anti-blasphemy a principle of international law. In international law, there was no clear position in this regard, but recently there had been a movement initiated by the Organisation of Islamic Cooperation (which represented 50 Islamic countries) to make anti-blasphemy a principle of international law. In addition, there had also been attempts to make freedom of religion a principle of international law.

Western countries had attempted to make freedom of expression a principle of international law. The concept of freedom of expression was very important and a leading aspect to most democracies in the world and was central to a modern society.

Most importantly, defamation of religion, especially in the context of Islam, had increased over the years and had resulted in what was now known as Islamophobia. Islamophobia presented one of the most sensitive topics today. An example to illustrate the dangers of Islamophobia could be that the Holocaust was a direct result of defamation of religion, specifically the Jewish religion, and the same could be said for the future of Islam.

Dr Esmaeili gave the example of how the current Australian Prime Minister, who used to refer to ISIS as Daésh but had recently changed it to Islamic terrorism for political popularity. The reference to Islamic terrorism did not particularly affect Dr Esmaeili, but it may affect the youths of today as this was a sensitive issue. The use of Islamic terrorism as a term of reference to criminal acts carried out by ISIS had made the subject of defamation of religion very controversial today. Dr Esmaeili referred to a 2010 resolution of the Human Rights Commission that attempted to address and deal with defamation of religion. From 2011 onwards, there had been a break on the issue and, while it appeared that the UN, the Human Rights Commission and Muslim countries had a good initiative, current issues in the world (cartoons of the Prophet Muhammed, Charlie Hebdo, ISIS) had delayed this development.

Generally, many Muslim countries and their regional organisations had tried to promote human rights whilst considering Islamic law as well. Most Muslim countries had, however, been quite vague in their attempt to implement international law within the bounds

of Shari'ah or Islamic law. This was a step in the right direction and was an optimistic view of trying to incorporate international law with Shari'ah and Islamic law.

The principle of equity in the common law system was about justice, yet equity did not apply where a person had dirty hands and did not practise equity themselves. Unfortunately, the reality was that most Muslim countries did not have clean hands with respect to human rights. So when those countries argue in favour of international law, they did not receive as much sympathy or reprise from the international community because of their bad record on international law and human rights. This was very problematic.

Professor Irmgard Marboe (Austria) thanked Dr Esmaeili for his thought-provoking presentation of the first two sections of the report, and proceeded to present the final section. This section covered a new topic, which was not dealt with in previous reports of the Committee. It gave an analytical overview of the human rights work of Muslim or Arab organisations. She identified three Islamic regional human rights models: first, the Organisation of Islamic Corporation (OIC), which had recently established an independent Human Rights Commission; second, the Arab Human Rights Committee; and third, the human rights mechanism of the Association of South East Asian States (ASEAN).

With regards to the *OIC*, Professor Marboe noted that Art 22 of the 1990 Cairo Declaration on Human Rights in Islam provided a mixture of freedom of expression and protection of religious belief. In 2005, the OIC started a reform program (10 year programme of action) aimed at reforming the OIC, in which it was decided to establish a Human Rights Commission (HRC). The HRC would be tasked with the promotion of human rights in conformity with Islamic values. It was unclear whether this was an affirmation of human rights or a limitation of them. On one hand, all the universal human rights treaties were noted by the OIC; on the other hand, it was unclear whether these treaties would take precedence in the event of conflict.

The thenSecretary General of the OIC combined a universal approach and focused on the compatibility of Islam with international human rights law. He noted that there was a common misconception that Islamic law did not function in tandem with international human rights law, but this was untrue. Islam could enrich and supplement international human rights law. The thenSecretary General also stated that, in the event of a conflict between Islam and international human rights standards, an interpretation that favoured universal human rights was to be preferred.

The pertinent question that then arose was whether this still existed in the OIC given the election of a new Secretary General from Saudi Arabia from 2014. From the outset, the new Secretary General criticised the absolute and unlimited implementation of universal human rights. There had been a call for the Human Rights Commission to reform and rewrite the Cairo Declaration, which was a very interesting development for the OIC. It could be deduced that the OIC no longer intended to abide fully by the Cairo Declaration. The OIC had been working with the UN Special Rapporteur on the promotion and protection of the right to freedom of opinion and expression, which showed a growing commitment for this concept and human rights.

With respect to the *Arab Human Rights Committee*, the Arab Charter on Human Rights (pursuant to which the Committee was established) was underfunded and a rather weak body. It did not accept individual complaints against human rights violations. The Charter

made no mention of Shari'ah or any form of religion, and evidenced more of a secular approach to freedom of expression.

With respect to *ASEAN*, Professor Marboe noted that the organisation was primarily aimed at economic cooperation. It promulgated a Human Rights Declaration in 2012, Art 23 of which guaranteed the right to freedom of expression. The only problem was that ASEAN was rather weak, and delegated the protection of human rights to the constitutions of individual members. Each member was therefore left to its own devices in so far as the protection of human rights was concerned.

The Chair commented that this was a very interesting discussion of the three regimes and how each organisation had a unique take on the concept of human rights.

Mr Dipak Bhattacharyya (India) noted his disappointment at the low attendance of the session. He stated that Indian lawyers wanted to attend this kind of session to express their views and to clarify their impressions of this topic. Mr Bhattacharyya was highly impressed with Dr Esmaeili's presentation and commended his objective approach in the report.

He then went on to give a brief background on India from the time of Mahatma Gandhi until independence. India declared itself a secular country in its constitution in 1950. India was divided into India and Pakistan based on religious differences. Many laws from the Indian constitution had since changed, however, out of respect for the minority Muslim population, Muslim laws in India had not been changed and 25% of Indians were now Muslim. It was projected that by 2050 there would be an equal number of Muslims and Hindus in India. The issue of religion, especially regarding Islam, was a very sensitive issue in India. The Indian Supreme Court was to consider setting aside religious scriptures as it was no longer applicable to a secular country in 2016.

Mr Bhattacharyya inquired whether there was a study as to why there was a move to create a bad image of the Muslim population. He also raised the question as to whether the so-called "terrorism" was propaganda or not. In addition, he asked if there was a study to determine why there was a deliberate move to misinterpret Islamic laws and create division in the world. He asked if the current situation in Syria and Iraq was used to create a bad image of Muslims, that all Muslims were bad and the rest of the world was good. He disagreed with this common misconception and knew that Muslims were good people.

In India, there were different hierarchies of Islamic representative bodies and he wanted to inquire if there was a need for a universal Muslim representative body to be the voice of Muslims across the globe. Furthermore, he inquired as to whether the interpretation of Islamic human rights was binding.

Lastly, he suggested that, instead of having several Islamic representative bodies with several Islamic human rights declarations, there be one universal Islamic representative body with one universal Islamic human rights declaration.

Professor M Said El-Dakkak (Egypt) thanked the Co-Rapporteurs for their thorough presentation. The report only dealt with specific and confined aspects of the rule of law, ie, equity and freedom of expression. It must be broader and more wideranging to deal with all the phenomena that might occur especially in the world of today.

Dr Kamal Hossain (Bangladesh) also expressed his concern at the low attendance at the session. He went on to question if it was possible to fulfil Islamic law whilst breaching international law.

He then proceeded to note that there was no established authority in Islam. Conversely, Catholics could turn to the Pope as the authority of the Church; if someone failed to abide by the rules of the Church, they were excommunicated. The same could not be said about Islam.

There was no society that lacked intolerance. There was no basis for distinguishing between religions saying one intolerant the other was not. It was humans who were intolerant not religion. It was therefore unfair to isolate Muslim or Islam and to label it as intolerant.

In today's world, Muslims had been defamed and continued to be defamed. The media played a very big role in shaping perceptions on Islam and Muslims. There were currently a billion Muslims on Earth and there was no media that tried to show what true Muslims are. ISIS was not a Muslim body and yet it received the most media coverage as if it represented the whole Muslim community. To make matters worse, the UN had not spoken against ISIS authoritatively. There was wide scale defamation of Muslims because of a mere 30,000-40,000 ISIS fighters. This was unacceptable because ISIS could not possibly represent a billion Muslims. There should therefore be a new media narrative on what Muslim was and a re-education of society in this respect.

Dr Hossain expressed concern at the sentiments expressed by the US conservative Presidential nominee, Donald Trump, to essentially ban all Muslims. He shuddered to think what the future of Muslims in the US and the world will be. Donald Trump's presence in the US presidential race showed how much money impacted democracies. What needed to be discussed was the unlimited use of money to change political outcomes and to look at ways to save democracies from money.

There must be an effort by all countries to conduct a global study, with all Muslim countries taking the forefront, on how terrorism and extremism had developed, how it was funded, and the causes of what was being called Muslim extremism. These were the burning issues of today and were the issues that the Committee should definitively address. This was because the use of violence was the biggest threat to our society today. We had an obligation to the international community to find the root cause of extremism and terrorism.

Judge Al-Khasawneh responded to Mr Bhattacharyya's intervention by stating that he understood the Indian frustration over the establishment of Pakistan and it being a secular country. The role of religion should not be underestimated. He noted his admiration for the Indian judiciary, which had played a significant role in developing jurisprudence and protecting the rights of Indians beyond what was granted in the Indian constitution. The law relating to the status of Muslims in India had not changed out of respect for the rights of the Muslim minority. This had led to the inevitable consequence that Indian Muslim law was behind the Muslim law jurisprudence of other countries.

With regard to terrorism, the reality was that it had affected Muslims more than anyone in the world. This was without exception in India, Pakistan, Jordan and many other countries.

With regard to the idea of having one body to capture all Muslims, Judge Al-Khasawneh noted that having one universal body was not feasible because Islam and Muslims were diverse and there was a need for more than one point of view. He questioned whether passing laws, treaties and conventions was that important, given that, in most instances, better societies had fewer laws and better traditions because it was so difficult to determine the source of obligations for law as opposed to traditions. He questioned why people felt obliged to follow laws. An example was if people perceived international law as a product of Western culture that was imposed on other cultures, there would be no sense of obligation by other cultures; but if international law was seen as universal law (representing all cultures), there would be a greater sense of following it.

Professor Marboe noted that the report was still in its drafting stage and therefore that there was room for editing. She also added that one of the CoRapporteurs had stated that freedom of expression could not be viewed as *jus cogens* because it did not fit the technical requirement of what a *jus cogens* norm was under international law. The use of the term "*jus cogens*" might have to be changed.

Dr Esmaeili welcomed the interventions from the floor.

With regard to Mr Bhattacharyya's suggestion for a single authority for Islam, Dr Esmaeili echoed the reaction of Judge AlKhasawneh that it would not be practicable given the diversity among Muslim countries.

In response to the intervention by Dr Hossain, a global study on the funding of terrorism was a great initiative. The study however, was easier said than done, especially so far as the financial and intellectual support of extremism was concerned. No one knew definitively whence it came. Trying to find this out was like the proverbial belling of the cat.

The Chair added that it might be important to have a final section on what should be done at the next working session in Sydney.

Dr Esmaeili responded that there would be, hopefully in the next two years, a new report in which the CORapporteurs would look at issues like arbitration, dispute settlement and international trade and investment for Muslim countries. He observed that the Persian Gulf was the fastest growing legal area in the world.

The Chair commented that the 2018 conference was definitely one to look forward to due to all of the issues that were yet to be addressed.

Mr Steven van Hoogstraten (Netherlands) asked if the Panel felt that freedom of expression in Islamic law was comparable to freedom of expression in the Western law and culture. In addition, he inquired whether freedom of expression in Islamic law was more collectively based or individually based.

Dr Esmaeili responded that the reality was that there could never be similar rights in any two countries. There were differences between Islamic law and Western law insofar as freedom of expression was concerned, but such differences were not matters of substance but rather of approach.

The rule of law and freedom of expression were principles that individuals should enjoy subject to limitations. This should be the same everywhere else but there could be differences and this was acceptable. Freedom of expression itself was evolving like any other

norm under a system of law. There were also different views on it within Islamic law and vast differences within Muslim countries. It was therefore difficult to discuss definitively if freedom of expression under Islamic law was different to that in the West. However, the concerted effort of the Committee was to bring the principles of international human rights law within Islamic law.

Professor Marboe stated that the answer to Mr van Hoogstraten's question on the existence of individual human rights under Islam and Muslim could be answered definitively because it depended on who you asked and which organisation you looked at within the Muslim world. The Arab Charter, for example, advocated for individual rights. There was a strong argument that individual and collective human rights were available in Islamic law; whether or not they were applied in practice was a separate inquiry.

Judge Al-Khasawneh thanked attendees for the stimulating debate.

The tension of collective versus individual rights was not peculiar to Islamic law. For example, elsewhere there had been recent debate over the tension between bilateral/multilateral agreements versus community interest in the area of environmental protection. International law is essentially a decentralised system quite like Islamic law. Even the UN Security Council had five permanent members who all had a voice instead of a sole voice. By the same token, a single authority could be expected of Islamic law.

Most importantly, the core values of international law were also evolving and dynamic. For example, homosexuality used to be a crime in most of the Western democracies but was now legal, and Western countries had ample time to evolve and adapt their laws accordingly. It was therefore unfair for Western and European systems, which were evolving and dynamic, to impose their values on Islamic law, which was in the process of evolving at its own pace.

In addition, he clarified that there was no such thing as an "Islamic State" and that it was incorrect to refer to "ISIL" as such.

Professor El-Dakkak stated that the constitution of Iran gave some authority to jurists and questioned to what extent this was binding.

Dr Esmaeili responded that, since 1979, the constitution of Iran had given power to jurists. This was sanctioned by legislation.

Judge Al-Khasawneh thanked the Chair and thanked attendees for their interest.

The Chair closed the meeting and thanked the presenters and attendees for their participation.

CONTENT & EVOLUTION of the RULES of INTERPRETATION

PRELIMINARY REPORT

7–11 August, Johannesburg 2016

Chairs: Professor Photini Pazartzis (Hellenic) & Professor Geir Ulfstein (Norwegian)
Rapporteurs: Dr Panos Merkouris (Hellenic) & Dr Daniel Peat (British)

Members

Dr Eirik Bjorge (Norwegian); Dr Valerie Bore Eveno (French); Professor Laurence Burgorgue-Larsen (French); Professor Jean d'Aspremont (Belgian); Dr Olufemi Elias (HQ); Professor Malgosia Fitzmaurice (British); Professor Andreas Follesdal (Norwegian); Professor Richard K Gardiner (British); Dr Andreas Kulick (German); Professor Joost Pauwelyn (Belgian); Professor Helene Ruiz Fabri (French); Professor Kirsten Schmalenbach (Austrian); Professor Akiho Shibata (Japan); Professor Joel Trachtman (American); Professor Albrecht Weber (German)

I. MANDATE OF THE STUDY GROUP

According to McNair, interpretation is a topic that is approached with the greatest of trepidation,[1] which it is perhaps why it has never formed in and of itself a topic of study of the *Institut de Droit International*, the International Law Association (ILA), or the International Law Commission (ILC). It is always raised in connection with another topic which forms the basis of analysis. Yet, despite the fact that one would be hard pressed to find an international case in which no issue of interpretation has been raised, and that myriad articles and books are written each year on the topic, interpretation still raises complex and unresolved issues.

The present Study Group aims to fill this lacuna. It aims to put the rules of interpretation in the spotlight and research relatively unexplored areas regarding their scope and application. The Study Group will aim for completion of its work by 2018.

Six areas of research were identified as the most apposite for producing meaningful results. These issues were outlined in a document prepared by the *Rapporteurs*,[2] and were the following (hereinafter referred to as topics 1 to 6):

1. Evolution of the Rules of Interpretation
2. Content of the Vienna Convention of the Law of Treaties (VCLT) & Customary Rules of Interpretation: Elements in Need of Clarification & Points of Divergence
3. The Rules of Interpretation Across Regimes
4. Interpretation of Customary International Law
5. Interpretation of Unilateral Acts and Declarations
6. Interpretation of Acts/Secondary Instruments of International Organisations.

These points will be elaborated below in the relevant sections of this Report.

---

[1] Arnold D. McNair, *The Law of Treaties* (Oxford: Clarendon Press, 1961), at 364.
[2] Hereinafter referred to as the 'ILA Study Group Road Map'.

II. THE ROAD SO FAR

The ILA Study Group on Content and Evolution of the Rules of Interpretation was established in May 2015, upon approval by the Executive Council of the ILA. The Study Group held its inaugural meeting on 13-14 May 2016 in Athens, with the generous financial contribution of the *Athens Public International Law Center* (*AthensPIL*) and *PluriCourts - Centre for the Study of the Legitimate Roles of the Judiciary in the Global Order*. It took place at the premises of the European Public Law Organization (EPLO). The following members participated in the meeting: Professor Photini Pazartzis, Professor Geir Ulfstein, Dr. Panos Merkouris, Dr. Daniel Peat, Dr. Eirik Bjorge, Professor Andreas Føllesdal, Dr. Andreas Kulick, Professor Albrecht Weber.[3] The other members of the Study Group offered in advance thoughts and comments on the topics in discussion.

During the Study Group's inaugural meeting, the *ILA Study Group Road Map* was presented and discussed. The members present showed particular interest in certain topics, but it was decided that finalisation of the work agenda of the Study Group should occur after the input of all members of the Study Group and other ILA members at Johannesburg. This Preliminary Report summarises the proposals made in the *Road Map* and the comments of members made at the first meeting of the Study Group in Athens or *in absentia.*

III. RESEARCH POINTS IDENTIFIED IN THE ROAD MAP

1. Evolution of the Rules of Interpretation

i. 'Rules'

One of the first topics of discussion during the first meeting of the Study Group was the use of the term 'rules' in the title of the Study Group. The principal issue discussed was whether the Study Group should take a position on whether the 'rules' of interpretation are in fact rules, or rather whether they are 'principles', 'maxims', 'canons' or the such. Despite different views as to the nature of the 'rules' of interpretation, there was consensus that such a theoretical enquiry was not fruitful at this stage in the project and that, for pragmatic reasons, it would be best to remain 'agnostic' on the matter and use the term 'rules' until the project had progressed.

ii. 'Evolution'

Despite the existence of extensive literature surrounding the role and content of the rules of interpretation of treaties, very little attention has been given to the potentially evolving nature of these rules. International courts and tribunals pay lip service to the customary nature of the rules of interpretation,[4] yet they approach the rules as if they are frozen in time with a clearly defined and unchangeable content. This is somewhat surprising

---

[3] In this context, the authors of this preliminary report would like to thank the research fellows and junior researchers of the *Athens PIL* who took upon themselves the laborious task of keeping the minutes of this meeting: Dr. Nikolaos Voulgaris, Mr. Orfeas Chasapis Tassinis, and Ms. Aikaterini Pitsoli.

[4] *Kasikili/Sedudu Island (Botswana v. Namibia)*, Judgment of 13 December 1999, [1999] *ICJ Rep.* 1045, para. 18; *Territorial Dispute (Libyan Arab Jamahiriya v. Chad)*, Judgment of 3 February 1994, [1994] *ICJ Rep.* 6, para. 41; *Case Concerning Oil Platforms (Islamic Republic of Iran v. United States of America)*, Judgment on Preliminary Objections of 12 December 1996, [1996] *ICJ Rep.* 803, para. 23

considering that, with respect to treaties, considerations of time and change frequently factor into judicial and academic writing, such as the tug-of-war between the principle of contemporaneity and dynamic/evolutive interpretation. A similar process has not been examined with respect to the rules of interpretation themselves. This *lacuna* becomes even more critical since international courts and tribunals often have to interpret 19th and early 20th century treaties.[5] In doing so they apply the customary rules of interpretation as enshrined in Article 31-33 VCLT. This, however, may raise concerns as to the conformity of this practice with the principle of non-retroactivity,[6] as pointed out in academic writing.[7]

A number of questions could fall within this area of research, such as:

- can the rules of interpretation evolve through time, and have they done so?
- what are the critical changes that have occurred through time?
- when interpreting a pre-VCLT treaty (or a treaty where a non-VCLT party is involved), which rules of interpretation are applicable - the rules at the time of the conclusion of the treaty or the rules at the time of the interpretation of the treaty?

The members of the Study Group agreed that this was an interesting topic. Members debated the use of the term 'evolution'. Some members considered that the term 'evolution' had inherent connotations related to the nature of the 'rules'.[8] Others noted that the 'evolution' of the rules of interpretation could also be seen as a matter of divergent 'practice' in the interpretation and application of the rules. Finally, others felt that the term 'evolution' was an apt description as it 'will produce different species of interpretation filling different ecological niches'. Bearing in mind the position of the Study Group to remain 'agnostic' as to the nature of the 'rules of interpretation', it was felt that the term 'evolution' could be retained as a working term for the time being. Discussion on its appropriateness could be revisited once the work of the Study Group had progressed and produced concrete results that would allow it to take a position on the matter.

The ideal structure for this topic of research, as proposed by the Co-Chairs, was to split it into two eras: pre-VCLT and post-VCLT. The former could function as a historical introduction to the body of the research of the Study Group. The post-VCLT research could be integrated into other topics of the *Road Map,* notably topics 2 and 3. All members were in agreement that this was the optimal course of action.

[8] See previous discussion on 'rules', 'principles' or 'maxims'.

2. Content of the VCLT & Customary Rules of Interpretation: Elements in Need of Clarification & Points of Divergence

There has never been a shortage of publications regarding the content of the rule of interpretation as enshrined in Articles 31-33 VCLT. Despite this, to argue that there is nothing further to be clarified with respect to these rules would be far removed from reality. The ILC, for instance, is currently examining the topic 'Treaties over Time / Subsequent Agreements and Subsequent Practice in Relation to Treaty Interpretation'.[9] To attempt an exhaustive examination of all 'grey' areas of treaty interpretation would be an exercise in futility. In the *ILA Study Group Road Map*, the authors suggested that this topic could be divided into several sections, such as:

- examining whether various principles of interpretation,[10] such as the principle of effective interpretation, fit within Articles 31-33 VCLT (e.g. 31(3)(c) or 32 VCLT), or whether they are separate rules of customary international law;
- examining whether the VCLT rules of interpretation and their customary law counterparts have identical content or whether there are points of divergence;
- examining what approaches/solutions have been adopted when textual interpretation conflicts with an interpretation based on the object and purpose of a treaty, or conflicts with the intention of the parties or the preparatory work (as well as any other permutation of these interpretations); and
- whether the structure of Articles 31 and 32 of the VCLT reflects the practice and *opinio juris* of states.

Despite the undeniable utility of this topic, the members of the Study Group were in agreement that three points should be borne in mind.

- Firstly, the members noted that the exact areas of interest of this topic must be clearly delineated prior to inclusion in the Study Group's research agenda.
- Second, instead of focusing on this as a separate point of research, the members felt that it would benefit the Study Group's work if the aforementioned questions were subsumed in the research to be conducted in the context of topics 1 and 3, i.e. pre-VCLT historical research and regime-specific and cross-regime interpretative methods respectively.
- Finally, all the members noted the importance of ensuring the originality of the research and avoiding replication of existing analysis.

3. Evolution of the Rules of Interpretation

Recent work, both within the ILC and the academy, has addressed the topic of treaty interpretation over time.[11] This topic raises myriad questions of interest: why, for example,

[9] G. Nolte, 'First Report on Subsequent Agreements and Subsequent Practice in Relation to Treaty Interpretation', (19 March 2013) UN Doc A/CN.4/660; see also the second and third reports: (26 March 2014) UN Doc A/CN.4/671; (7 April 2015) UN Doc A/CN.4/683 respectively.

[10] Other principles that fit within this category include *in pari materia* interpretation and *ejusdem generis,* to name but a few.

[11] See for example, E. Bjorge, *The Evolutionary Interpretation of Treaties* (OUP 2014); C. Djeffal, *Static and Evolutionary Treaty Interpretation: A Functional Reconstruction* (CUP 2015); G. Nolte (ed.), *Treaties and Subsequent Practice* (OUP 2013); and the work of the International Law

is evolutionary interpretation adopted in relation to some treaties but not others? How might this be justified within the rubric of Articles 31 and 32 of the Vienna Convention? Most importantly, 'faced with the familiar paradox of accounting for difference under the sign of equality, the question of the day is how to *explain* such differential treatment within the law of treaties. What justifies weighing some rules of interpretation more strongly than others (*i.e.* emphasizing object and purpose over text, or vice versa)?"[12]

Whilst evolutive interpretation has been the object of sustained academic commentary in recent times, the broader question of how and why different international legal regimes interpret in different ways has not been subject to the same scrutiny.[13] Interpretation by the Appellate Body of the WTO, for example, is frequently characterised as textualist, whilst that of the European Court of Human Rights is generally seen as teleological. One fruitful avenue for enquiry could be to examine not only how interpretive approaches differ across legal regimes, but also why this occurs. Moreover, if such difference is not only rife, but also inevitable, do the provisions of the Vienna Convention actually tell us anything about how international law is, or should be, interpreted? If we acknowledge that their utility is limited, how are we then to approach the assessment of interpretation?

This proposal was well received by both those present at the Athens conference and those that had submitted comments *in absentia,* with many suggesting that this topic seemed to be the most promising avenue of research for the Study Group. The members present particularly noted that it could be a useful framework within which to also address topics one and two.

The main point of discussion in relation to the third topic was how to define the regimes that the Study Group could compare. Members considered that division by substantive treaty regime was the best approach to take, focusing predominantly – for reasons of practicality – on the practice of judicial bodies. Should the practice of other interpreters (States, international organizations, etc.) be readily available, it was agreed that these too should be examined. Specific regimes that members noted would be of interest include: the law of the sea, international trade law, human rights (national, regional, and international bodies), international investment law, international criminal law, international humanitarian law, environmental law, boundary disputes, international organizations law, and the law of the European Union. Members understood that this list would have to be narrowed down as the work of the Study Group progressed, but that the final selection of case studies was something that could be made with the input of the full membership at the Johannesburg meeting.

4. Interpretation of Customary International Law

From the early writings of Grotius, Vattel and Pufendorf interpretation has always been at the epicentre of academic research and case-law. However, analysis of interpretation has focused mainly on treaties and ignored customary international law. The question

Commission on 'Subsequent agreements and subsequent practice in relation to the interpretation of treaties'.

[12] J. Arato, 'Accounting for Difference in Treaty Interpretation Over Time', in A. Bianchi, D. Peat, & M. Windsor, *Interpretation in International Law* (OUP 2015) 206.

[13] As pointed out by one member of the Study Gro-up present in Athens, a notable exception is the symposium published in the *Revue Générale de Droit International Public* (2011, No. 2).

that arises, then, is whether rules of customary international law can also be subject to interpretation. This issue has not been the subject of any extensive analysis. In fact, the current work of the ILC, although undoubtedly critical in the discourse surrounding the process of formation of customary international law, focuses on the two elements of customary law: *practice* and *opinio juris*.[14]

This leaves an entire stage in the 'life-cycle' of customary international law completely unexplored. Once a customary rule has emerged, and when it is considered for application within a particular case, should it not be open to interpretation similar to any treaty rule? The issue has been debated in academic discourse.[15] It is interesting to note, however, that even in the discussions in the Advisory Committee of Jurists, responsible for drafting the PCIJ Statute, the members clearly acknowledged the interpretability of customary international law.[16] Similarly, Art. 21(2) of the Rome Statute provides that '[t]he Court may *apply principles and rules of law as interpreted* in its previous decision',[17] although a member of the Study Group raised the point that this perhaps is not an acknowledgement of the interpretability of customary international law but rather a linguistic expression without any underlying connotations as to the issue at hand.

In addition to the above, *dicta* on the interpretability of customary international law seem to be contained in several landmark cases.[18] Perhaps the most express recognition of the interpretability of customary international law can be found in Judge Tanaka's Dissenting Opinion in *North Sea Continental Shelf*, where in no uncertain terms he opined that '[c]ustomary law, being vague and containing gaps compared with written law, requires

precision and completion about its content. This task, in its nature being interpretative, would be incumbent upon the Court. *The method of logical and teleological interpretation can be applied in the case of customary law as in the case of written law*'.[19]

Most members of the Study Group agreed that this was a fascinating topic that raised many questions, such as how interpretation of customary law differs from treaty interpretation, whether there is enough evidence on which to base a clear set of rules/principles of interpretation of customary law, and where formation of customary law ends and interpretation begins.[20] However, the main concern raised by members was that, because of the unchartered waters of this research, if this topic was selected it would monopolise the time and resources of the Study Group to the detriment of the remaining points of research.[21] The time-frame of the Study Group's mandate, i.e. until 2018 seemed too restrictive to tackle this broad topic.

An additional point that needs clarification is why the *Road Map* referred only to the interpretation of customary international law. This was not meant to suggest that general principles as a source of international law are not open to interpretation. It was rather a strategic choice on the part of the authors of the *ILA Study Group Road Map* to propose a topic that was feasible within the Study Group's allotted time-frame. It was considered that it made more sense logically and substantively to tackle first the issue of interpretation of customary international law, before attempting to embark on examining the interpretability of the 'general principles'.

On the basis of the above, the Study Group was of the view that on the one hand the topic merited research, but on the other it was too complex for the limited time and resources of the Study Group. It was decided that the issue should be left on the table, awaiting the comments and discussions in Johannesburg, at which time a final decision on its future would be taken. In any event, it was felt that if the Study Group's research was devoted to other areas, a small section in the final report of the Study Group should outline that the importance of the interpretation of customary international law had been identified, but that for practical reasons it may be better suited for future research by another Study Group or Committee.

5. Interpretation of Unilateral Acts and Declarations

The interpretation of unilateral acts is a topic that has attracted scant attention in the literature. Unilateral acts were the focus of a Working Group of the International Law Commission from 1996 to 2006, which culminated in the adoption of ten 'guiding

[19] *North Sea Continental Shelf* (n18), Dissenting Opinion of Judge Tanaka, 181 (emphasis added).

[20] A member of the Study Group was of the view that the 'interpretation' to which the Study Group referred applied only to words, consequently customary international law was not open to interpretation; rather any purported act of interpretation of customary international law is better understood as an act of elaboration, referring to: C.A. Bradley, 'Customary International Law Adjudication as Common Law Adjudication' (*SSRN*, 9 February 2015), available at: http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2559190 (last accessed on 15 July 2016).

[21] Another issue raised was the fear of ending up with an infinite regression argument. The Co-rapporteur suggested that such concerns were not unique to the interpretation of customary international law but were part and parcel of the entire process of interpretation. In addition, he suggested, that in any event the concept of 'constructive rules' of Anzilotti could offer a theoretical foundation to tackle any such concerns.

principles' applicable to unilateral acts,[22] largely focussed on examining when such acts are to be considered as binding.[23] The ILC addressed the interpretation of such acts, notably in Principle 7, which states that "in interpreting the content of such obligations, weight shall be given first to the text of the declaration, together with the context and the circumstances in which it was formulated."[24] The Commentary to this Principle endorses the statement of the ICJ in the *Nuclear Tests* cases, according to which "when States make statements by which their freedom of action is to be limited, a restrictive interpretation is called for."[25] However, whilst the ILC did touch on the interpretation of unilateral acts, its work was mainly based on a handful of cases before the ICJ; an examination of the treatment of unilateral acts outside of judicial proceedings could yield different conclusions.

Rarely, however, are claims brought against States on the basis that they breached a unilateral statement to be legally bound to a certain course of action. The utility of examining the interpretation of unilateral acts in general is therefore questionable, and is likely to be based on sparse practice if pursued. The Co-Rapporteurs suggested that it may be useful to examine the interpretation of two specific kinds of unilateral acts: optional clause declarations made pursuant to Article 36(2) of the ICJ Statute, and schedules of commitments of WTO members. Both have been referred to in the literature as having a 'hybrid' character – they are unilateral acts that gain legal normativity because of (in the case of optional clause declarations) compliance with a conventional procedure, or (in the case of schedules of commitments) the agreement of other States Parties to the treaty. The main question regarding interpretation in this context is whether it is justifiable to accord more importance to the intention of the 'declaring' State than otherwise would be the case for treaty interpretation. A further line of enquiry might be to examine what reasons exist – if any – to differentiate between interpretation of an optional clause declaration and a schedule of commitments, and what this might tell us about the interpretation of unilateral acts more generally.

On the basis of the *Road Map* and presentations by the Rapporteurs, the members present at the Athens meeting noted that this topic was underexplored but generally felt that it was less pressing than the abovementioned topics of treaty interpretation. Some members queried whether acts that were made pursuant to multilateral treaties, such as WTO schedules of commitments, could truly be called unilateral acts. The consensus view was that this topic could not form the focus of the Study Group's work.

6. Interpretation of Acts/Secondary Instruments of International Organisations

Whilst the interpretation of treaties has remained the main focus of academic study, the proliferation of treaty regimes that endow international organizations and treaty bodies with the power to adopt resolutions, decisions, or recommendations suggests that the interpretation of such secondary instruments is growing in importance. The paradigm example – and the one which has attracted most academic commentary – is of

[22] Yearbook of the International Law Commission, 2006, vol. II, Part Two, 369.
[23] *Nuclear Tests case (Australia v. France; New Zealand v. France)*, [1974] ICJ Rep 457.
[24] Yearbook of the International Law Commission, 2006, vol. II, Part Two, 377.
[25] Nuclear Tests case (n23), para. 47.

course the interpretation of UN Security Council Resolutions.[26] But this is clearly not the only example: resolutions of the International Maritime Organization, regulations of the International Seabed Authority, as well as resolutions adopted by conferences or meetings of the Parties to multilateral environmental agreements, the internal practice and rules of an organization, all provide illustrative examples of instruments adopted by an international body which may require interpretation. Considering that international activities are regulated to a significant extent by such secondary instruments, one possible avenue of enquiry for the Study Group would be to explore how these instruments are interpreted and if one could formulate any general principles (or customary rules) that regulate their interpretation.

The general presumption has been to approach the interpretation of secondary instruments by analogy to the rules governing the interpretation of treaties, basing interpretation on Articles 31 and 32 of the VCLT.[27] However, this has been quite rightly called into question. For example, is it appropriate to adopt the Vienna Convention's focus on the intention of the Parties when interpreting secondary instruments? How could the mechanical transposition of the rules of treaty interpretation account for the variations in the institutional, procedural, and legal context in which secondary instruments are adopted? Should the interpretation of constitutive instruments (such as the Statute of the ICTY) differ from the interpretation of other instruments?

Whilst expressing interest in this topic, members considered that it was not an appropriate avenue of enquiry for the Study Group. In particular, it was noted that the topic might prove to be too varied and the contextual differences too significant to draw any general conclusions. It was, however, noted by one member that some elements of this topic may be incorporated in research conducted under topic 3.

IV. MISCELLANEOUS

Various points for consideration were raised orally and in writing by members of the Study Group. Some of these have already been incorporated in the previous Sections, but some defied categorization. For reasons of convenience and in order to assist the discussions in Johannesburg they are reproduced below:

- One member of the Study Group noted that the interpretative authority of various types of commentary on treaties on specialist topics warrants attention. In the view of the Co-Rapporteurs, this could be examined with the context of topic 3;
- The question was raised whether the interpretation of codification treaties should be considered as treaty interpretation or the interpretation of customary international law,

[26] M. Wood, 'The Interpretation of Security Council Resolutions', (1998) Max Planck Yearbook of United Nations Law 73.

[27] Wood (n26), 85 *et seq*; *Responsibilities and Obligations of States Sponsoring Persons and Entities with Respect to Activities in the Area*, Seabed Dispute Chamber of the International Tribunal of the Law of the Sea, Advisory Opinion, 1 February 2011, Case No. 17, paras. 57 *et seq*; ICTY, (interpretation of Statute); *Accordance with International Law of the Unilateral Declaration of Independence in Respect of Kosovo* (Advisory Opinion) [2010] ICJ Rep 403, para. 95; Special Tribunal for Lebanon, Interlocutory Decision on the Applicable Law: Terrorism, Conspiracy, Homicide, Perpetration, Cumulative Charging, 16 February 2011, STL-11-01/I, para 26 *et seq*.

or whether there are special rules on the subject. Again, it is suggested that this could be treated under topic 3 and/or 4;
- In relation to topic 3, it was highlighted that the term 'regime' needs to be clarified in order to determine the methodology to be used by the Study Group;
- It was suggested that topic 3 should be approached in two stages. The first stage would consist of detailing the interpretive approaches adopted in different international legal regimes. This would provide the basis for the second stage, in which the Study Group would explore and identify the reasons for the differences across 'regimes'.
- The Co-Rapporteur suggested that members may find it instructive to consult R.S. Summers & D.N. MacCormick (eds), *Interpreting Statutes* (Dartmouth 1991) as an example of a previous comparative project that examined interpretation across different jurisdictions.

V. CONCLUSION & NEXT STEPS

On the basis of the *ILA Study Group Road Map*, the inaugural meeting in Athens and the comments of the members, there was consensus among the members of the Study Group that the scope of potential topics for the Study Group's attention was currently too broad. Finalization of the research agenda and the division of labour was deferred to the Study Group's meeting in Johannesburg. The Closed Session in Johannesburg should be used to determine the direction of the Study Group's work in light of the Preliminary Report and the comments of the members. Inspiration would also be drawn from the comments of the ILA members present during the Open Session.

In terms of substantive conclusions, some provisional agreements and arrangements have arisen prior to the meeting in Johannesburg. It was agreed that the first part of the *Road Map* would be revised to outline a brief history of treaty interpretation in order to provide context for the subsequent sections. All members expressed willingness to contribute to the work of the Study Group. In their individual comments, some members indicated a preference for specific topics. Once the methodological approach of the Study Group has been determined - in particular in relation to topic 3 of the *Road Map* - allocation of research and output responsibilities will be circulated to the members.

Finally, members were in agreement that the output of the Study Group's research will take not only the form of a final report, but also of an edited volume.

STUDY GROUP ON THE CONTENT AND EVOLUTION OF THE RULES OF INTERPRETATION

WORKING SESSION

Monday, 8 August 2016, 2.00pm

Chair: Dr Charlotte Ku (US)

The Chair opened by emphasising the rules of interpretation in international law. It was surprising that there had not been any systematic report on this issue. This was probably due to the fact that rules of interpretation always related to something else and was not necessarily considered as a topic on its own. She expressed her gratitude to the CoChairs and the CoRapporteurs for all their efforts so far.

Dr Panos Merkouris (Greece) thanked attendees for attending the session. He mentioned that the main point of this session was to receive the input and thoughts of members present. When introducing the topic, he mentioned that the study of the rules of interpretation had never been the main focus of any systematic study. There were rules of interpretation of various regimes which all tended to be fragmented.

The process of preparing the report and the proposal for the establishment of the Study Group had been very challenging because those involved had to constantly correct themselves seeing that they found every point on interpretation interesting and could not narrow down the topic. This resulted in the topic being very broad.

The idea of the topic being broad was to demonstrate how many important and relatively unexplored areas regarding the process of interpretation still existed. The Study Group was established in 2015 and had its first inaugural meeting in May 2016 in Athens. In between times, there had been a few discussions and agreements regarding the way forward. Professor Merkouris wanted now to present the main issues to attendees to hear their thoughts on the various areas of research.

One of the preliminary issues that the Study Group had to deal with was the question as to what were the "rules" of interpretation. This was a very important theoretical issue, but for the purpose of the Study Group, the officers had decided to take an agnostic approach. This meant using the term "rules" as a working term without going into too much debate on the nature of the term. This was also accepted with regards to the idea of evolution, which was also to be used as a working term.

Dr Merkouris made reference to an earlier closed meeting of the officers. The final thing that emerged from that meeting was that it would make more sense for the group to focus on judicial interpretation as evidenced by the case law of international courts and tribunals. He justified this by stating that most of the time, but not all the time, the courts and tribunals might give some indication of the process of interpretation, meaning that they explained why they followed certain rules and what their structure was.

With regards to other sources such as the practice of States, interpretation was usually presented as a given. There was no explanation on the process or the rules. In addition, the officers felt that the focus on international judicial bodies made more sense when attempting to produce results that would benefit the project of the Study Group.

Regarding the particularities of the research, Dr Merkouris said that the Study Group had originally identified six main areas of research. The first area was the evolution of the rules of interpretation, being the reason why the term "evolution" came into being.

The main point was whether international courts and tribunals had the tendency to apply modern rules of interpretation (ie, post the conclusion of the *Vienna Convention on the Law of Treaties* (VCLT)) in order to interpret older treaties. This raised a lot of concern with regards to time and temporality and the correctness of the approach.

The officers felt that this was an area that had not been explored and, for that reason together with the fact that when one looked at the evolution of how the rules of interpretation had changed through time, they felt that this particular area was important in order to create a base for how rules before the VCLT had evolved and to compare their analysis with the post VCLT era.

Dr Merkouris felt that the best way in this regard was to first look at the period prior to the VCLT and then to look at the post VCLT period to see if there was a change in both eras or if the VCLT as such was a critical point of difference or simply crystalised existing rules. The discussion would also help in that, apart from giving them structure in the analysis, it would also help tackle the issue of referring to previous treaties. The discussion would also function as a springboard for the following areas of research, which brought him to the second area.

Dr Merkouris admitted that the Study Group had not done a very good job with the second area of research, for which he blamed himself. He noted that the title of the area was quite long ("Content of the VCLT and Customary Rules of Interpretation: Elements in Need of Clarification and Points of Divergence"). What the Study Group wanted to examine in this area was that were key terms in the rules of interpretation as enshrined in Articles 31 to 33 of the VCLT that were still debatable, namely subsequent agreement and practice, ordinary meaning, whether there was a hierarchy between Articles 31 and 32, and whether preparatory works could be used to correct the text of a treaty. The Study Group would also look at what was meant that by "parties" in Article 31 and other principles of interpretation that were not mentioned specifically but which courts and tribunals sometimes used.

The Study Group felt that this particular area would allow it to clarify the rules of interpretation and also to look at the interaction between the VCLT and customary rules of interpretation. As it emerged from the discussions in Athens and earlier in Johannesburg, the Study Group felt that this area of research overlapped with the previous area on evolution.

As for the third area of research (interpretation across regimes), the Study Group wanted to identify the rules of interpretation and examine whether there were any points of divergence or convergence between different regimes or different judicial bodies. In this regard, the term "regime" was used in an agnostic manner.

Dr Merkouris anticipated come overlap with the second area of research because clarification of the content of the rules of interpretation would emerge as the Study Group looked at the process of interpretation across the various regimes. For that reason, the Study Group felt that the best way to proceed was to create a list of possible questions

that would be constantly updated as their research progressed. Another main point that the officers were struggling with and required input from members was the way to tackle the approach of interpretation across regimes.

One line of thought was to focus on areas of law, such as human rights, trade, and investment, law of the sea and environmental law. The other possibility was to begin by focusing on the judicial bodies such as the European Court of Human Rights or InterAmerican Court of Human Rights. At the end there would be a merging of these alternatives approaches because some bodies had a more general jurisdiction, and did not deal solely with human rights treaties but also with environmental and treaties related to law of the sea. The concern was how the Study Group would start and what were the best ways to tackle these issues.

The third area of research was one that had gained the most interest from members of the Study Group. The reason for this was the fact that they wanted the result of the Study Group to have value and not just be an academic exercise. The idea was for the Study Group to provide some practical value, a clarifying tool that not only academics but also practitioners and State representatives could use to identify what the rules of interpretation were. Besides the process of the rules of interpretation, they were still stumbling in the dark as to what could be argued and what the proper process was.

The fourth area of research was about the interpretation of customary international law. The first question that was normally encountered here was "but why focus on customary international law and not general principles, which are another source of international law". Dr Merkouris responded by saying that it was a strategic kind of selection and that the problems with customary international law were large enough, and in the limited time available the Study Group would not be able to deal with the even greater problems associated with general principles. Indeed, there was some concern that dealing with customary international law was too large. This was a very interesting area of research but could become a very tricky and difficult undertaking based on several reasons, such as the fact that there was very little analysis on the topic. Even when courts and tribunals interpreted customary international law, it tended to be in an automatically hidden fashion and one needed to decipher the process through which a court and tribunal would arrive at a particular interpretation of customary international law. He said that, both doctrinally and practically, it was a very interesting but very tricky area and the general consensus seemed to be, that due to time constrains, it might not be an appropriate area for the Study Group to research. Rather, it could be examined incidentally when the Study Group considered the third area (ie, interpretation across regimes).

The fifth area of research was the interpretation of unilateral acts and declarations. The International Law Commission (ILC) had addressed this issue in its report on unilateral acts. There was a guiding principle that was adopted, which stated that the rules of interpretation of treaties apply *mutatis mutandis*, which helped the ILC solve problems, however there was no substantive analysis of the issue, which was the same with declarations. His concern was that there was very limited practice on the issue, which might not allow the Study Group to get results. That said, the Study Group could add to scope the issue of the interpretation of optional clause declarations. Similar to the fourth area, the idea was that this area of research would be best served if it was integrated into the third

area, especially when discussing and researching the interpretation across regimes, where the Study Group might came across the interpretation of unilateral acts and declarations.

The same kind of considerations emerged with the sixth and final area of research, which was the interpretation of acts or secondary instruments of international organisations. This was another very interesting topic, especially when one looked into Security Council resolutions and the practice for organisations where various memos circulated. But again, it was felt that, for the sake of time, it was best to minimise the overlap by only examining this topic under the lens of the third area of research.

Dr Merkouris invited members to comment on the six area of research. Ultimately, his suggestion was that the best way to proceed was to look at the value of the outcome of the Study Group and for the Study Group to tackle areas of historical evolution of the rules of interpretation as well as areas of divergence and convergence between various regimes regarding interpretation.

The Chair congratulated Dr Merkouris and his fellow Co-Rapporteur, Dr Daniel Peat, for their work in pin-pointing the problems and outlining the direction in which they wanted the project to move forward.

The Chair offered two observations. First, as this topic was being tackled by an ILA Study Group and had a few radical, the Study Group should try to single out the areas that the members would like to consider. Secondly, the work done by an ILA Study Group could be theoretical, general or might not focus on a particular topic. The work of the Study Group could lead to something more concrete, which would become the mandate of an ILA Committee. She gave an example of the interpretation of secondary acts, which was a big topic, and which could be made into the topic of a Committee. The example was to encourage members of the group not to exclude anything that they though would be beneficial to the Study Group.

In order to make this particular project provide positive input, it would be important for the Study Group to listen to the presentation by Dr Merkouris and also to hear from the members of the ILA in attendance.

Apart from the CoChairs and CoRapporteurs (who did most of the work), there were 15 members of the Study Group who had been carefully selected and were experts in their particular field. These 15 members were a sufficient number for a Study Group, although not all of them were in attendance.

The Chair went on to say that there had been one meeting where the officers of the Study Group worked out a road map and presented it to the Executive Council of the ILA. This was at a time when they were applying for the Study Group to be established. Based on that, she shared with attendees that they had a very fruitful discussion where everything that the CoRapporteur was presenting was put on paper for a second round. When the preliminary report was presented in their discussion that morning, the members of the Study Group were very helpful in the process of identifying additional questions and the CoRapporteur summarised them well.

The Chair requested that the Study Group focus on who they want to see as the interpreter of international law, because there were many interpreters of international law. This focus could assist the Study Group avoid getting lost in the topic. She recalled that Professor

Hélène Ruiz Fabri had previously suggested that the Study Group focus on judges and judicial bodies as interpreters, because in that situation there were many reasons to justify it. She invited Professor Fabri to elaborate on this idea during the session. A focus of the judiciary was also based on the fact that they had jurisprudence; most courts and tribunals had publicly available documents and jurisprudence (a notable exception being investment arbitration tribunals).

The Chair then moved from the "who" to the "what". She queried how judges interpreted rules of interpretation. She said that, in order to arrive at a toolkit, the Study Group would have to start by focusing on this issue rather than contextual and content issues. This approach would allow the Study Group to have a much greater output as opposed to doing something that would not yield results.

The Chair stressed the need for the Study Group to get some "mapping". In this regard, the Co-Rapporteurs could focus on establishing a questionnaire on what the Study Group would need to look at once the Study Group had considered and selected the interpreters. The Chair concluded by forecasting that the work of the Study Group would last at least two years and suggesting that, during this time, the Study Group must try to delimit the subject.

Professor Geir Ulfstein (Norwegian) recalled that the Study Group was not a Committee, and therefore had a great flexibility and freedom in choosing its approaches within its mandate. The Study Group had the luxury of having many different possible areas of research. But it had to set priorities. He suggested that the members of the Study Group could elaborate on some areas without going into depth but rather raise some questions and discuss some ideas for further study. In addition to that, the Study Group could also discuss the extent of the interaction between the interpretation of treaties and of secondary acts, unilateral acts by States etc.

Professor Ulfstein stated that, even if the Study Group were to focus on the interpretation of treaties, it could also include, to some extent, the other areas outlined by Dr Merkouris. For instance, the Study Group could investigate whether international courts and tribunals focus on different principles of interpretation or whether they just interpret treaties without really discussing the relevant principles of interpretation. Furthermore, the Study Group could investigate why some courts or tribunals interpret in a certain way as opposed to other courts and tribunals, and whether the difference was based on the fact that they were "old" bodies or "new" bodies, or bodies of a particular substantive regime. It could also investigate why certain interpretations were being used and whether there were consequences for compliance with decisions. It could investigate the legitimacy of the decisions and whether compliance with certain interpretations improved the legitimacy of the relevant court or tribunal. There were therefore several issues that the Study Group should address in addition to the mapping exercise.

The Chair said that the task before the Study Group was to assist the officers of the Study Group in shaping what sounded to her like a feasibility study to detest the potential for studying this subject and then decide on the way in which to study it, in order to produce something that would give rise to additional work or an initial statement on what the mapping exercise would actually reveal and hopefully would turn into something that would provide practical guidance to those in the business of interpreting international law.

There seemed to be two tasks: one was in terms of the content and what would be of great interest; the other was related to the matter that would actually give the richest output. Although there were many possibilities listed, it was equally important to find which approach would produce the greatest value for further understanding.

Professor Hélène Ruiz Fabri (France) started off her intervention by complementing the presentation by Dr Merkouris, which reflected what the Study Group had discussed earlier in its closed meeting. The focus on traditional interpretation was based on previous reflection that was already consolidated in the report. The direction that the Study Group had taken was also based on the consideration of the specifics of judicial interpretation. The Study Group would have to make some comprehensive assessment of each step that it took. The issue was to consider which step to take first, and whether the Study Group would begin by looking at the case law of particular bodies and to select a few issues from there.

Mr Arnold Pronto (US) found the topic very interesting. There were currently some difficulties in terms of the gravitational weight of the VCLT and deciding whether it was about changing the VCLT or reverting back to pure VCLT, although this was just a side note.

Mr Pronto expressed doubts and concerns about the way forward for the Study Group. While understanding that judicial bodies made for an easier focal point, he noted that the constitutive instruments of the relevant body would constrain the outcome or conclusion. Moreover, Mr Pronto was not sure that the toolkit would equally apply to all courts and tribunals. The officers of the Study Group needed not only to focus on the adversarial context, but also the non-adversarial, meaning that they must consider the divergence within regimes as well as across regimes.

Ms Alexia Solomou (Cyprus) favoured studying the interpretation of unilateral acts by international courts and tribunals. She mentioned, in reference to the ICJ case between Colombia and Nicaragua concerning territorial and maritime boundaries, that often when tribunals interpreted international customary law, they did so on the basis of a norm that had been crystallised in a treaty that had not been signed by the States concerned. On that basis, she preferred for the Study Group to give priority to the interpretation of unilateral acts ahead of that of customary law. She also mentioned that if the Study Group focused on interpretation by judicial bodies, then the following factors needed to be taken into account:

- the constitutional documents of the body
- the rules and procedures of international law
- applicable law
- the functions of the body (eg, adversarial or truth finding)

Dr Otto Spijkers (Netherlands) mentioned that he was fascinated by the term evolution and how the rules had evolved over time. He would have liked the Study Group to consider why these rules had evolved over time. He also requested that the Study Group consider the increasing influence of Africa and Asia in the interpretation of international law. He also mentioned that there had been a change in the way in which people researched these days, especially among academics and judges, and he would like to know

the extent to which that had changed the way that those people interpreted and applied international law.

He also asked that, if the Study Group was going to consider the jurisprudence of international courts and tribunals, they must also consider jurisprudence of domestic courts because, for those courts, interpreting and applying international law was something new.

Dr Merkouris mentioned that the road map of the Study Group clearly outlined the roles of the ILC and ILA so it was very important to make sure that the work of the two groups did not overlap. Besides the issue of subsequent agreement and practice, there were many more areas where there was a lot of work to be done. Regarding the adversarial context, the Study Group could end up with many different results if they integrated non-adversarial examinations. The solution was that the Study Group had to make certain choices. Taking into consideration time constraints, he suggested that the Study Group start with the adversarial context to later on include non-adversarial. For now, the Study Group needed to get the discussion rolling. He mentioned that there was already an ILA Committee examining how domestic courts applied international law, so this Study Group needed to avoid stepping onto its territory.

Regarding for the reasons behind the evolution or change, which was discussed by the Study Group at its earlier closed meeting, he said that the Study Group must avoid staying on the surface and start examining the reasons and variables behind particular points of convergence and divergence. However, what made it a little tricky was that the Study Group was still new and needed to first gather data to see whether this was an issue of the VCLT itself, the judiciary, or the nature of the court or the treaty being interpreted.

Regarding unilateral acts and customary international law, unilateral acts needed a good commentary on customary international law. In relation to the ICJ, that became more problematic. Here, Dr Merkouris referred to the *Kasikili/Sedudu Island Case*. In relation to the evolution of the terms themselves, he said that the Study Group would take into account how the rules had evolved through particular courts. There were many things to consider and the comparison of judicial bodies had a lot of things to reveal.

Professor Ulfstein said that the Study Group should further discuss the course of action through a hypothesis, but this must be done in a careful way.

Professor Photini Pazartzis (Greece) found Mr Pronto's remarks to be very helpful, and his comments about adversarial/non-adversarial were noted in particular. She added that it would be a lot more difficult to consider everyone. The outcome was not predetermined by constitutive instruments, because interpretation was an art. In response to Ms Solomou, Professor Pazartzis mentioned that even the esteemed ICJ had recently started considering what other courts were doing and that was an indication that there was something happening.

Professor Locknie Hsu (Singapore) suggested that it might be interesting to examine and compare interpretation by *ad hoc* decision makers and decision makers of standing tribunals.

Professor Susan Karamanian stated that this was a very important project as it was concerned with the legitimacy of international law. The project should therefore be given

great attention. The work of the Study Group should have a strong comparative focus to show the role of treaty interpretation in harmonising perceived conflicting regimes.

Mr Juan Pablo Hugues enquired about the meaning of "evolution". Certain tribunals and precedents seemed to adopt an approach to VCLT's articles 31 and 32 in an involute manner rather than as an evaluator.

In relation to the toolkit, it should also be made applicable to national courts to ensure, among many other things, that national courts take into account international precedents when interpreting international law.

Professor Pazartzis recalled that there was an ILA Committee that is already working on domestic courts and that the work of the two groups could not overlap. However, there was a very close relationship between domestic and international law, and the toolkit could be something that in principle could help domestic judges. The Study Group should not exclude domestic but try not to encroach on the other Committee.

Professor Ulfstein noted, with respect to ad hoc arbitration panels, that it was something that the Study Group must discuss. He went on to say that, in respect to the legitimacy and coherence between the different ways of interpretation across regimes and judicial bodies, the Study Group tended to go beyond the fragmentation debate to ensure more coherence could promote foreseeability of the rule of law to provide more than the old fragmentation debate.

Professor Ulfstein added that national courts should not be a main part of the Study Group's work, but if it was able to develop a toolkit useful for national courts that would be good, but the Study Group must not make that the main focus.

Dr Merkouris agreed that it was good to make a distinction between legal and non-legal variables to see which one would be more conducive to results. There had been an emerging trend in a number of investment tribunals of applying an evolutive approach towards the interpretation of investment treaties. He emphasised that the term evolution was used as a generic term. The fact that everyone agreed to a toolkit was an indication that the Study Group was on the right track.

Mr Pronto requested that Study Group change the title of the topic to indicate a focus on the judicial context. In this way, there would be a clear limitation and it would facilitate more elaborate rules of procedure. He further noted that treaty negotiators might also be potential users of the toolkit. They too were interested in interpretation. Since this was not covered by any study group, it was something the Study Group must look into.

Ms Solomou recalled the factors outlined earlier that the Study Group should take into account when considering judicial bodies.

Professor Ruiz Fabri said that judicial practice came with added motivation in a sense that it explained not only the interpretation but how it was reached.

Mr Andreas Follesdal (Norway) suggested that the Study Group consider the following:

- the trends in judicial interpretative practice that raise larger questions about the nature of international law

- differences in interpretative practice across regimes
- explanations for such differences
- whether such differences and trends could be justified as legitimate.

The Chair indicated that the Study Group might have to look at national bodies due to the availability of data and material to analyse.

Mr Fenghua Li commented on how to handle the tension between international adjudication and national adjudication by making an example of the different approach to interpretation by the Hague District Court and the international tribunals in the Yukos Investment Arbitration regarding the provisional application of Energy Charter Treaty.

Professor Ruiz Fabri added that the relationship between norms could give the Study Group insight into the evolution of international law. Thus far, courts had been able to change the content of treaties through interpretation.

Dr Merkouris expressed his concern that the Study Group would have enough time or resources to look at the difference between national and international courts. However, this would ultimately depend on the choices that the Study Group made at the beginning of its work.

He also clarified that the Study Group was not aiming to harmonise the approach but rather to show the divergence in the approaches to interpretation in order to help people know how courts approach interpretation.

Professor Ruiz Fabri said that if there were no underlying mechanisms then one would be lost in the detail and suggested that there should be a working model to assist in predictions.

The Chair closed the session.

Professor August Reinisch (Austria)
Professor Anthea Roberts (Australia)

FINAL REPORT

Mapping the Engagement of Domestic Courts with International Law

by Antonios Tzanakopoulos[1]
Co-Rapporteur of the Study Group

Introduction

1. This Final Report is the outcome of the work of the Study Group on *Principles on the Engagement of Domestic Courts with International Law*. It draws on previously published work by the officers of the Study Group,[2] as well as from the Preliminary

---

[1] Associate Professor of Public International Law, University of Oxford; and Fellow of St Anne's College, Oxford. Apart from thanking the Chair of the Study Group, André Nollkaemper, its Co-Rapporteur, Yuval Shany, and all the members and researchers who submitted work, views, comments, and participated in the open and closed meetings of the Study Group, the author would like to acknowledge the excellent research assistance of Eleni Methymaki and Anna Ventouratou. Responsibility for all errors and omissions in this Final Report, however, rests with the author.

[2] See generally the work of A Nollkaemper, and especially his *National Courts and the International Rule of Law* (OUP, Oxford 2011); the work of Y Shany, and especially his *Regulating Jurisdictional Relations between National and International Courts* (OUP, Oxford 2007); and A Tzanakopoulos, mainly 'Domestic Courts as the "Natural Judge" of International Law: A Change in Physiognomy' in J Crawford and S Nouwen (eds), *Select Proceedings of the European Society of International Law* (vol 3, Hart, Oxford 2012) 155–68; and 'Domestic Courts in International Law: The International Judicial Function of National Courts' (2011) 34 Loyola of LA Int'l & Comp L Rev 133–68.

Report of the Study Group.[3] It mainly draws, however, on the discussions that took place during a number of both open and closed Study Group meetings since 2011, including in Amsterdam, London, Sofia,[4] Washington DC,[5] and Heidelberg, as well as from a number of thematic and national reports solicited from Study Group members and from scholars from around the world.[6]

2. After introducing the underlying reason for the work of the Study Group, namely the increased relevance of domestic[7] courts for international law (Part A, section I), the Final Report sets out the challenges presented by the different constitutional settings, the different methods and techniques of domestic court engagement with international law, and its different outcomes (Part A, section II). Part B of the Final Report seeks to map the postures or strategies of domestic court engagement with international law by drawing on the work submitted to the Discussion Group by its members and other scholars. Part C then discusses the grounds or reasons that emerge as justifying different strategies or postures of engagement, with a view to laying the groundwork for the normative exercise of compiling a set of principles or guidelines for the engagement of domestic courts with international law. This latter work, however, is one properly mandated to a Committee of the International Law Association, rather than the Study Group, whose work prepared the ground for such a normative exercise.

3. Before launching into the substantive discussion, the term 'engagement', chosen for the title of the Study Group's work, needs to be explained. The driving principle for the choice of the term was to avoid a binary approach (enforcement/application versus non-enforcement/breach) in favour of a functional approach: the term 'engagement' captures, in the Study Group's view, the richness of approaches of domestic courts to international law. The Study Group's aim is to try and extract some general categories of engagement from this diversity.

4. The courts of the European Union are included in the Study Group's understanding of 'domestic courts', at least to the extent that these, as functionally hybrid courts, engage in judicial/constitutional review that is akin to that normally undertaken by domestic courts.[8] This is not to question that EU courts do also operate in 'normal international law mode'.

[4] See ibid, 984–93.

[5] See International Law Association, *Report of the Seventy-Sixth Conference held in Washington, DC* (ILA, London 2014) 900–15.

[6] These reports will be made available on the Study Group's website at <http://www.ila-hq.org/en/study-groups/index.cfm/cid/1039> and a forthcoming publication. A list can be found at the end of this Final Report.

[7] The term 'domestic' is considered as interchangeable with 'national' and 'municipal' in this Final Report.

[8] See further paragraph below.

PART A: THE CHALLENGES OF MAPPING DOMESTIC COURT ENGAGEMENT

I. The Increased Relevance of Domestic Courts for International Law

a. The traditional position

5. International law traditionally treats domestic law, including domestic court decisions, as facts.[9] As a fact, a domestic court decision construing international law may be seen either as being in harmony with the international obligations of the State or as being in breach of them.[10] In the latter case the domestic court decision may create an international dispute (or allow a dispute to 'mature' so as to become internationally justiciable, as for example is the case when the rule of exhaustion of local remedies applies), or it may engage the international responsibility of the State.[11] Furthermore, domestic court decisions are to be considered elements of the practice of States, or ways through which States may express their *opinio juris* or views on the proper interpretation of their international obligations. As such, they may contribute to the formation of customary international law or to the understanding of the scope and content of treaties. This is different from domestic court decisions potentially constituting 'material sources' of international law in the sense of Article 38(1)(d) of the ICJ Statute.

6. There is little doubt that significant areas of public international law have been shaped by domestic court jurisprudence, which provided the requisite state practice and *opinio juris* for the creation of custom—the law of immunity being but one such example.[12]

---

[9] *Certain German Interests in Polish Upper Silesia* (Merits) [1926] PCIJ Ser A No 7 at 19. CW Jenks, *The Prospects of International Adjudication* (Stevens, London 1964) 552, already noted however that the general proposition that national laws are to be treated before international tribunals only as facts is 'at most, a debatable proposition the validity and wisdom of which are subject to, and call for, further discussion and review'.

[10] International courts commonly treat domestic laws, and domestic court decisions, as evidence of the breach by a State of its obligations under an international treaty or under customary law. See J Crawford, *Brownlie's Principles of Public International Law* (8th edn, OUP, Oxford 2012) 52; WTO, India: *Patent Protection for Pharmaceutical and Agricultural Chemical Products* (*India-Patents*)— Report of the Appellate Body (19 December 1997) WT/DS50/AB/R [65]. See however further Article 38(1)(d) ICJ Statute and paragraph below.

[11] See Article 4 of the Articles on the Responsibility of States for Internationally Wrongful Acts (2001), Annex to UN General Assembly resolution 56/83 (12 December 2001), UN Doc A/RES/56/83 and Commentary (2001) II(2) YBILC ('ARSIWA'); and cf generally C Eustathiadès, *La responsabilité internationale de l'État pour les actes des organes judiciaires et le problème du déni de justice en droit international* (vol 1, Pedone, Paris 1936).

[12] See the collection of essays in A Tzanakopoulos and CJ Tams (eds), *Symposium on Domestic Courts as Agents of Development of International Law* (2013) 26 Leiden Journal of International Law 531–665, with contributions by R O'Keefe, R van Alebeek, D Hovell, Y Ronen, S Olleson, and S Wittich. Another area of international law which has been shaped to some extent by the jurisprudence of domestic courts is that of international environmental law. Important cases include the *Minors Oposa* case (*Minors Oposa v Secretary of the Department of Environmental and Natural Resources*, Supreme Court of Philippines, Judgment of 30 July 1993, 33 ILM 173 [1994]) and the *Vellore Citizens Welfare Forum* case (*Vellore Citizens Welfare Forum v Union of India and Ors*, Supreme Court of India, Judgment of 28 August 1996, Air 1996 Sc 2715). See further D Bodansky and J Brunnée, 'The Role of National Courts in the Field of International Environmental Law' (1998) 7 Review of European Comparative and International Environmental Law 11; and M Anderson and P Galizzi (eds), *International Environmental Law in National Courts* (BIICL 2002).

Furthermore, since domestic courts are organs of the State, their decisions may constitute subsequent practice affecting the content of international law norms, within the meaning of Article 31(3)(b) VCLT.[13] Finally, given that domestic courts could be seen as included in the term 'judicial decisions' in Article 38(1)(d) of the ICJ Statute, they may constitute subsidiary means for the determination of rules of international law.[14]

7. The potential for conflict between the courts and the executive in the area of formation of customary international law should be highlighted at this juncture. In principle, it is only when decisions of domestic courts are *not* 'rejected' by the State's executive (in the sense of being considered and outwardly presented as *not* representing the State's practice on the relevant issue) that they are capable of contributing towards the formation or development of customary law.[15] This is because the formation or development of custom arguably requires consistent practice of all branches of government.[16] The requirement of consistency could be seen as a projection of the domestic constitutional principle of separation of powers at the international level. It guarantees that the executive or legislative branch can adopt different approaches than those taken by courts in the course of formation of international law, and thereby they may limit the impact of domestic courts on the formation of that law.[17] Conflicting practice of different branches of government could not constitute the consistent practice required for the emergence of a customary norm. In any event, it also may be that a decision by the executive is annulled or declared to be incompatible with international law by a domestic court, in which case the executive action would not necessarily be considered to express the State's *opinio*

juris. As such, the discussion above does not necessarily imply priority of one branch of government over another in the formation of customary law.[18]

8. Even if not contradicted by the State's executive or other State organs, a domestic court's decision may still be of little or even negligible impact in the formation of customary law. States other than the forum state may also challenge the decision of the domestic court, thereby leading to contradictory State practice or *opinio juris*. Of course, this is in no way peculiar for domestic courts and simply reflects the normal process of the formation of customary international law.

9. The historically limited role of domestic courts in international law is further confirmed by the traditionally bilateralist performance structure of international obligations (*traité-contrat*). International obligations usually demand(ed) performance by one State towards another on the international plane—eg omission from intervention in its domestic affairs, abstention from the threat or use of force, default permission to innocently pass through the territorial sea, etc. Domestic courts would have little to say with respect to the performance of such obligations: the doctrine of immunity or 'act of State' would preclude them from pronouncing on another State's (sovereign) acts, while they would also traditionally avoid pronouncing on the conduct of international relations or foreign affairs of their own State, having developed a number of relevant 'avoidance techniques' to that effect.[19]

b. The reasons for increased engagement

10. The traditionally bilateralist performance structure of international law has been put under constant and significant strain in the last decades.[20] At the danger of stating the trite, more and more regulation is taking place today at the international plane, ie at a level beyond the State. The development of various areas of international law regulated by multilateral instruments, otherwise called 'sectoral regimes', do not fit within this bilateral scheme. The international law on the protection of human rights is the most obvious example of the bilateralist structure breaking down and being replaced by a multilateral framework of protection (*traité-loi*). International environmental law, aspects of the law of the sea, and other areas of international law, including international investment law, international economic law, international criminal law, international humanitarian law, and so forth, also reflect this development. The attempts then to protect general interests through the assumption of international obligations lead, in the event of a violation,

[18] But see the position of the ILA Committee on Formation of Customary (General) International Law, 'Final Report: Statement of Principles Applicable to the Formation of General Customary International Law' in International Law Association, *Report of the Sixty-Ninth Conference held in London* (ILA, London 2000) 712, 729. In discussing principle 9, the Committee notes in paragraph (e) of its commentary that 'since it is the executive which has primary responsibility for the conduct of foreign relations, that organ's formal position ought usually to be accorded more weight than conflicting positions of the legislature or the national courts'. The Committee does however go on to note the point on consistency made just above: 'But it should also be noted that, in such a case, the internal uniformity or consistency which is needed for a State's practice to count towards the formation of a customary rule may anyway be prejudiced'.

[19] See further Part A, section II, below.

[20] See generally B Simma, 'From Bilateralism to Community Interest in International Law' (1994) 250 Recueil des cours de l'Académie de droit international de La Haye 217.

to a lack of any identifiable 'specifically' injured State,[21] and make it more difficult to demonstrate any specific or quantifiable damage—on which all forms of reparation for internationally wrongful acts are predicated under the law of State responsibility.[22]

11. But even in traditionally bilateralist areas of international law, the latter has developed so as to remove the clearly inter-state slant in the implementation of international obligations. Indeed, traditional international law was primarily concerned with the establishment of State-to-State obligations that were to be implemented through conduct on the international plane, that is *outward-looking* obligations. States were then by-and-large free to determine what measures were required within the domestic legal order to implement these obligations, if any were required at all.

12. Today, however, international obligations are increasingly *inward-looking*. This means that they specifically enjoin States to undertake certain conduct *within their own domestic legal order*: to adopt a specific legal framework, to accord individual rights, to abstain from taking specific actions, etc. International human rights law (protection of specific rights) or international environmental law (eg curbing of emissions,[23] or obligations to grant access to information, justice, or obligations to allow participation in decision-making[24]) may be invoked as the obvious example. Still, one may also think of analogous examples from diverse fields, such as WTO law (obligations to regulate subsidies, curb dumping, adopt technical regulations within the domestic legal order in accordance with prescribed processes and on prescribed grounds, and so forth),[25] international investment law (curbing State regulatory power, even in areas of human rights, or environmental protection, in order to grant 'fair and equitable treatment' to investors—or, more simply, being bound to follow particular internationally accepted procedures in order to exercise regulatory power affecting, if only incidentally, foreign investments/investors, and so forth), international criminal law (obligations to criminalise within the domestic legal order certain behaviour defined in international treaties),[26] the international law of the sea, and even diplomatic and consular law, which traditionally required States to adopt certain conduct within their domestic legal order.[27]

[26] For example under the United Nations Convention against Corruption (31 October 2003, entered into force 14 December 2005) 2349 UNTS 41 and the United Nations Convention against Organized Crime (15 November 2002, entered into force 29 September 2003) 2225 UNTS 209.

[27] See eg the ICJ decisions in *LaGrand* [2001] ICJ Reports 466 and *Avena and other Mexican Nationals* [2004] ICJ Reports 12, where the US was required to bring its domestic law and process into compliance with its international obligations to allow consular assistance under the 1963 VCCR. See also the flare-up between the UK and Ecuador regarding the UK's ability to withdraw the qualification of Ecuador's Embassy in London as diplomatic premises under a relevant UK

13. Penetrating the façade of the unitary State, looking at these obligations from within it, ie from the perspective of the individuals within the jurisdiction of the State, these international obligations look merely as constraints on State power: executive or legislative action needs to take place within the limits set by the State's obligations. It is domestic law that in some way enables the 'reception' of international law in the domestic legal system (and it does so in virtually all domestic legal systems, even if with significant differences[28]). Individuals (and legal entities) within the State's jurisdiction will thus regularly challenge executive action for compliance with the limits imposed on such action (challenges against legislative action are, however, more unusual) without necessarily distinguishing whether these limits have their source in domestic or international law (especially in legal contexts where international law can be relied upon before domestic courts). It is also normal for domestic courts to be called upon to police executive compliance with the limits posed on State action—this, in the final analysis, is part of their mandate. As such, individuals will turn to domestic courts employing international legal arguments, and domestic courts will thus be forced to engage with these arguments.

14. The analysis above aims to account for the increased significance of domestic courts in the interpretation, application, but also development, of international law. This significance is mainly asserted rather than proven empirically, as is the increased engagement of domestic courts with international law. It makes sense to assert that this is so, given the high visibility of domestic decisions in the last couple of decades, be it—among others—with respect to sovereign immunity, or with respect to compliance with or disobedience of Security Council sanctions, and given further the increasing interdependence of States and concurrent 'blurring of the dividing line' between international and domestic law due to the new 'directionality' of international obligations described above.[29] While empirical research needs to be undertaken to prove in specific terms this increased engagement, to delineate its scope and impact, as well as to assess the increased significance for international law of domestic court decisions, this is not the mandate of this Study Group.[30]

15. One final note of caution is necessary, however. Even if there is increased engagement of domestic courts with international law in recent years, this may be more the case in some States than in others. A recent study by a member of this Study Group demonstrates that citations to domestic case law in international law textbooks and in judgments of many international courts and tribunals come overwhelmingly from Western liberal

Statute of 1987: see the contributions of 16 and 17 August 2012 by R O'Keefe and D Akande, available at <http://www.ejiltalk.org>.

[28] See further Part A, section II.a, below.

[29] Benvenisti (n 14) 241–242, argues that the increased engagement of domestic courts with international law 'is part of a reaction to the forces of globalization, which are placing increasing pressure on the different branches of government to conform to global standards … Stated differently, most national courts, seeking to maintain the vitality of their national political institutions and to safeguard their one domestic status vis-à-vis the political branches, cannot afford to ignore foreign and international law'; cf Y Shany, 'National Courts as International Actors: Jurisdictional Implications' (2008) Hebrew University International Law Research Paper No. 22-08, available at <http://dx.doi.org/10.2139/ssrn.1292056>.

[30] But see for a classic statement of the assertion JG Collier and V Lowe, *The Settlement of Disputes in International Law* (OUP, Oxford 1999) 5.

democratic States in general and from a handful of those States in particular.[31] Focusing on domestic case law as evidence of the content, or even as a source, of international law may have the effect of rendering the practice of some significant States less visible to the extent that it rarely occurs in their domestic courts, or to the extent that the relevant decisions are rarely reported or not easily accessible (including because of linguistic barriers). It could also result in a disproportionate focus on accessible decisions in the domestic courts of influential, English-speaking, common law States, like the United States and the United Kingdom. A number of points could be made in this respect, drawing parallels to the relative weight to be accorded to practice coming from different States in the process of determining the emergence of customary law, noting the practice of some courts, notably the German and Israeli highest courts, of circulating (partial) translations of important judgments, and so forth. This Final Report is not the place to further discuss these issues, but they should be noted and it should also be highlighted that both the members of the Study Group and the author of the Final Report are acutely aware of such considerations.

II. The Infinite Variety of Engagement

16. The previous section aimed at laying the groundwork which potentially explains—if it does not prove—the increased significance of domestic courts for international law. But how domestic courts actually engage with international law is a perennial question that has yet to be mapped out satisfactorily. One reason for this is the 'infinite variety' of constitutional set-ups regulating the reception of international law within the domestic legal order of any given State, and the subsequent infinite variety of domestic court engagement with these rules of international law. This in part explains, if it does not justify, the application of (and thus arguably also compliance with) international law by the domestic court, as well as the denial of application of (and thus potential breach of) international law. These issues are taken up in turn.

a. Variations in the Reception of international law

17. The traditional distinction between **monism** and **dualism** leads to the two traditional methods of reception of international law into domestic law, thus corresponding roughly to **incorporation** and **transformation** respectively. If the domestic constitution adopts a monist approach, international law is (ideally) 'automatically' considered part of domestic law and thus incorporated in the legal order of the State. If, by contrast, the domestic constitution takes a dualist stance, then international law remains an external body of law that must be transformed into domestic law through the adoption of some domestic (usually legislative) act in order to lay claim to application in the domestic jurisdiction and before domestic courts.

18. This picture is already rather simplified.[32] In reality domestic law, even if it adopts a 'monist' stance, sets a number of prerequisites before 'incorporating' international law, or distinguishes between different sources of international law—eg, treaties ratified by

[31] A Roberts, *Is International Law* International? (forthcoming: OUP, Oxford 2017). References were overwhelmingly made to US and UK case law, followed by French, Canadian, Australian, German and Israeli case law, and to a lesser extent Italian, South African, Dutch, and Belgian case law.

[32] See eg A Paulus, 'The Emergence of the International Community and the Divide between International and Domestic Law', in J Nijman and A Nollkaemper (ed), *New Perspectives on the*

the US explicitly form part of the law of the land, while there is no specific provision for customary law;[33] by contrast, the UK arguably 'incorporates' customary law into the common law, or rather treats it as a source of the common law,[34] but requires transformation of treaties before there can be any domestic application.[35] The position is similar in Canadian law,[36] while a similar position has also been judicially developed in Israel.[37] The Greek constitution provides for the 'incorporation' of treaties ratified by Greece, which however takes place through the adoption of a formal law to that effect each and every time, while it makes little relevant provision for customary law, although it states in general terms that 'generally accepted rules of international law' constitute an 'inalienable part' of Greek law.[38] The South African Constitution determines that both treaties and custom are directly applicable in the South African legal order, but requires transformation of treaties unless they are self-executing, while custom is considered as automatically incorporated only if it is not in conflict with the Constitution or legislative acts.[39] In Germany, general international law is automatically incorporated with precedence over contrary legislation, whereas treaties of a political or legislative nature are incorporated by a law of parliament and share, in principle, their rank.[40] Constitutional orders may introduce distinctions even within the same source of international law: the German,[41] South African and Turkish constitutions distinguish between human rights treaties and other treaties as regards their legal effects in the domestic legal order; the legal position in the Argentinean legal order has nowadays evolved into prioritizing a 'constitutional bloc' consisting of the Constitution and human rights obligations, followed by international treaties and finally ordinary law;[42] the Austrian constitution grants a specific treaty (the ECHR) constitutional rank; the Swiss constitution grants quasi supra-constitutional status to *jus cogens* norms.[43] Notably, the Sri Lankan Constitution subjects all of international

Divide between National and International Law (OUP, Oxford 2007) 228 – 234 for an argument that the juxtaposition between monism and dualism masks the pluralism of legal orders.

[33] The position in Israel is similar: see the *Report on Israel* (2013) [1]–[2].

[34] See in detail for the complex position of customary international law under UK law R O'Keefe, 'The Doctrine of Incorporation Revisited' (2008) 79 British Year Book of International Law 7–85 and cf the *Report on England* (2015) [35]–[39].

[35] See also the *Report on England* (2015) [35]–[39]. See further the *Report on South Africa* (2013) (2)–(3) for the similar position that State.

[36] *See the Report on Canada* (2013) 3–4.

[37] See the *Report on Israel* (2013) [1]–[2].

[38] See Article 28(1) of the Constitution of Greece (2008), available at <http://www.hellenicparliament.gr/UserFiles/f3c70a23-7696-49db-9148-f24dce6a27c8/001-156%20aggliko.pdf>.

[39] See the *Report on South Africa* (2013) (2)–(3).

[40] Cf Articles 25 and 59 of the German Basic Law; and BVerfG, Beschluss des Zweiten Senats vom 15. Dezember 2015 - 2 BvL 1/12 [35]ff, available at <http://www.bverfg.de/e/ls20151215_2bvl000112.html> (partial transl in Press Release No 9/2016 of 12 February 2016, available at <www.bverfg.de>); cf A Paulus, 'Germany' in D Sloss (ed), *The Role of Domestic Courts in Treaty Enforcement* (CUP, Cambridge 2009) 217–219.

[41] Article 1(2) of the German Basic Law provides for a special status of core human rights treaties: see Beschluss des Zweiten Senats vom 15. Dezember 2015 (n 39) [76] with further references.

[42] See generally the *Report on Argentina* (2015).

[43] It should be noted that the 'Swiss' notion of *jus cogens* is broader than that currently acceptable under international law, but Swiss courts will not consider a treaty void for conflicting with the broader notion of *jus cogens*. See generally the *Report on Switzerland* (2013).

law to the Constitution and to ordinary law, but provides that investment treaties are only subject to the Constitution.[44]

19. Within this great variety, many further variations are possible. These relate to the hierarchical standing of international law, or of particular sources of international law, in the domestic hierarchical pyramid, some of which have been incidentally mentioned in the preceding paragraph. International law (or particular sources, or particular elements within sources, such as human rights treaties) may be given a standing equal to that of ordinary law, superior to that of ordinary law, or even superior to that of the domestic constitution. Further, even 'automatic' incorporation does not guarantee the applicability of international law in the domestic legal order, as domestic law may allow 'direct effect' of certain sources of international law only, or of some elements within such sources only (eg self-executing treaties), or may permit the local constitution or even subsequent or more special ordinary law to override international law. This brief sketch demonstrates that the distinction between monism and dualism is simplistic and often unhelpful: not only may both approaches be adopted within a given domestic legal order, but it can be further argued that there is no such thing as 'monism' properly so-called: in all circumstances, and as far as domestic courts are concerned, the reception of international law into the domestic legal order is regulated by domestic law itself, whether more or less stringently.

20. On the other hand, the position of international law on legal hierarchy and relevance is clear, and quite indifferent to any variations in its reception by domestic law. Domestic law (of any importance or hierarchical standing) may never constitute justification for the non-compliance by a State with its international obligations.[45]

b. Variations in the Application of International Law

21. Depending on the relevant domestic constitutional ordering, to which domestic courts are of course bound, the latter may proceed to give effect to international law, relying on relevant constitutional principles, or they may be able to refuse its application for a variety of reasons. Domestic courts have devised[46] a wide range of **blunting rules** or **moderating techniques** that moderate the effects of both **monism**/**incorporation** and **dualism**/**transformation**. To start with incorporation, there is no guarantee that this will lead to direct application of international law by the domestic court. Domestic courts have devised a variety of avoidance techniques, which allow them to blunt the otherwise sharp edge of constitutional requirements to apply international legal provisions: these include the doctrine of **non-justiciability** (wherein one might include the **political question** doctrine), the **act-of-State** doctrine, denials of **standing**, and the doctrine of **non-self-execution** of treaties, among others. Even the avoidance of substantive international law questions through **according immunity** (whether to a foreign State under international law or to the forum State under domestic law) may be seen as such a blunting technique,

[44] See the *Report on Sri Lanka* (2013) 6.

[45] See Article 3 ARSIWA and cf Article 27 of the Vienna Convention on the Law of Treaties (23 May 1969, entered into force27 January 1980) 1155 UNTS 331.

[46] Though the position may be taken that the blunting or moderating techniques 'stem' from domestic law and its provision as to the position of international law in the domestic legal system, and thus domestic courts merely apply, rather than devise, these techniques.

even though of course we have to recognize that respecting immunity itself may be a form of application of international obligations.

22. The increase in inward-looking norms of international law creates a larger contact area between domestic and international law, which in turn has the potential of leading to greater conflict between the two sets of rules. The importance of this development is illustrated in recent domestic cases which might be taken as signaling a '**reactive turn** (of domestic courts) **to domestic law**' in the face of 'inconvenient' international law. This 'reactive turn' might be considered another blunting technique, similar in function to the ones described above. The difference here is that the domestic court does not refuse to pronounce on a matter involving international law (as for example in cases of non-justiciability or act-of-State), but rather may accept that international law is implicated but deliberately—if sometimes implicitly—reject its application. A number of recent cases can be seen as falling in this category: reactions to Security Council sanctions, such as *Kadi*[47] in the EU courts and *Ahmed*[48] in the UK courts, form one such group; while cases like *Medellín*[49] in the US Supreme Court form another, to the extent that the latter court refuses to apply the binding decision of an international court. The constitutional acceptance of 'treaty override' by contrary domestic legislation provides another example of the 'reactive turn to domestic law'.[50] Whether these groups of cases do indeed form separate categories, or belong in the same category, is something that requires further study.[51] We may be dealing here with a type of constitutional review where fundamental values are invoked against (other) international law rules as part of a process of normative contestation. Such an approach would seem to conceive the legal order as unitary and attempt to hierarchically order various rules and principles within the unitary legal system. Or we may be dealing with a claim of hierarchical structuring of separate legal orders, whereby the international legal order is subjected to the court's domestic legal order (which from the perspective of the international legal order would be a clear breach of international law as indicated in paragraph above).

23. Conversely, there are ways in which domestic courts may give indirect effect to international law even if the latter has not been **transformed** through a domestic act as required by the relevant constitutional framework. This is mainly done through the principle of **consistent interpretation**, which has been introduced through judicial practice,[52]

[47] Joined Cases C-402/05 P and C-415/05 P [2008] ECR I-6351; cf Case T-85/09 *Kadi II* [2010] ECR II-5177; and Joined Cases C-584/10 P, 593/10 P and C-595/10 P *Kadi II* [2013] ECLI:EU:C:2013:518.

[50] BVerfG, Beschluss des Zweiten Senats vom 15. Dezember 2015 (n 39).

[51] Some views are set out in Part B below.

[52] For reasons of space, only a brief overview will be given here. The *locus classicus* is the US Supreme Court's *Charming Betsy* principle: *Murray v The Charming Betsy* 6 US 64, 118 (1804); see also *MacLeod v US* 229 US 416, 434 (1913); *F Hoffmann-La Roche Ltd v Empagran SA* 542 US 155, 163 (2004). See further on this C Bradley, *International Law in the US Legal System* (2nd edn, OUP, New York 2015) 15–18. In Germany the rule of consistent interpretation is seen as flowing from the *Völkerrechtsfreundlichkeit* of the Basic Law, and has been reiterated by the Federal Constitutional Court in 74 BVerfGE 358, 370; see also 128 BVerfGE 326, 367–372. In Switzerland the principle of consistent interpretation is called '*Schubert-Praxis*' and flows from the relevant practice of the Federal Supreme Court. A principle of consistent interpretation exists in Australia, as enunciated by the High Court in *Kruger and ors v Commonwealth of Australia*

or even through constitutional entrenchment,[53] in a significant number of domestic legal orders. Taking a fairly broad-brush approach to the principle, it effectively institutes a presumption in favour of harmony of domestic law with international law. The domestic court will presume that the domestic legislator did not mean to introduce legislation in breach of the State's international obligations, and will thus seek to interpret domestic law 'in the light of' or 'in accordance with' the State's international obligations, ie with international law. The presumption is of course rebuttable, but the difficulty of rebutting it fluctuates between different legal orders, some making the presumption virtually irrebuttable, others allowing its rebuttal even by necessary implication, as discussed below.

24. Consistent interpretation typically requires at least some ambiguity in domestic law, which needs to be construed, in order to invite the application of international law. However, different domestic courts have taken a variety of positions on the degree of ambiguity required to initiate the interpretative process, some requiring none at all.[54] Further, consistent interpretation in some cases refers merely to treaties, or it excludes from application constitutional texts, and so forth. A field of domestic law where the interpretative application of international law may be of particular interest is administrative law. If statutes authorizing administrative actions are subject to a presumption of consistency with international law, then so is the relevant administrative action, which may be challenged and brought under judicial scrutiny.

25. Domestic courts have also sought to apply other interpretative principles which are similar to the principle of consistent interpretation. One such principle is that of **legitimate expectations**, which has been used by Australian and Scottish courts and by the Privy Council.[55] It effectively construes treaty ratification (among others, possibly)

reported in 118 ILR 371, 374, 377–379. In New Zealand there exists a very strong presumption of conformity with international law: see P Sales and J Clement, 'International Law in Domestic Courts: the Developing Framework' (2008) 124 LQR 388, 393–394; as it does in Canada, both with respect to treaty obligations and obligations under general international law: *R v Hape* [2007] 2 SCR 292; 2007 SCC 26 [53]; *B010 v Canada (Citizenship and Immigration)* 2015 SCC 58 [47]–[48]; cf K Knop, 'Here and There: International Law in Domestic Courts' (1999-2000) 32 New York University Journal of International Law and Policy 501. South African courts also employ the principle of consistent interpretation: *AZAPO and ors v South Africa and ors* [1996] ZACC 16 [26]. Italian courts engage in a rather peculiar construction with results similar to those when adopting a principle of consistent interpretation: they consider international law rules as special norms who are not superseded by later (domestic) general norms. See B Conforti, 'National Courts and the International Law of Human Rights' in idem and F Francioni (eds), *Enforcing International Human Rights in Domestic Courts* (Martinus Nijhoff, The Hague 1997) 3, 11–12. As to the United Kingdom, there is (a) a presumption of compatibility in the common law regarding unincorporated treaty obligations; and (b) a statutory provision in the Human Rights Act 1998, which transforms the ECHR, which imposes a similar presumption. Finally, the ECJ has adopted a principle of consistent interpretation of EU law with international obligations of the EU: see Cases C-286/90 *Poulsen* [1992] ECR I-6019 [9]; and C-308/06 *Intertanko* ECR I-4057 [51].

[53] See the *Report on South Africa* (2013) (3)–(4).

[54] See for example the *Report on England* (2015) [27]–[31]; the *Report on South Africa* (2013) (5); and the *Report on Canada* (2013) 20.

[55] See for example *Minister for Immigration and Ethnic Affairs v Teoh* (1995) 183 CLR 273. There have been contradictory decisions in English courts regarding the doctrine of legitimate expectations deriving from the signature and ratification of an unincorporated treaty, see *Report on England* (2015) [33.3].

as a promise on which it allows basing some doctrine of promissory estoppel. Finally, what may be seen as a most potent principle of interpretation is that of **legality**. It holds that the domestic legislature may not be considered as derogating from or abrogating an international right or duty save when it does so explicitly. In effect, this principle may lead to an almost irrebuttable presumption of conformity with international law, though in practice the strength of the presumption again varies.[56]

26. Finally, domestic courts may use international law as a way to '**understand**' the world, and thus domestic legislation, and not just as a method to interpret domestic law in order to avoid a breach of the State's international obligations.[57] In this conception of interaction between international and domestic law, international law provides a set of definitions which help the domestic court *understand* domestic legislation rather than *override* it. Examples could include the (controversial) use of international materials to understand the content of 'cruel and unusual punishment' in domestic law[58] and to interpret a presidential authorization to use force.[59] Another such example is the use of the Alien Tort Claims Act, a one-sentence long statute almost two centuries old, as a vehicle for examining the human rights-related practice of other States in US courts.[60]

27. All of the techniques described in paragraphs – above (which can also be positioned on a spectrum ranging from more to less rigid techniques) we may still call **blunting techniques**, as we did with the techniques described in paragraphs – (which we also called 'avoidance' techniques). This is because both sets of techniques each blunt the sharp edges of incorporation and transformation respectively.

28. To summarize, the main scheme so far positions the two **main techniques**, that of **incorporation** and that of **transformation**, at the opposite ends of a spectrum; but a number of **blunting rules** or **moderating techniques** immediately come into play and position the various legal orders all along the spectrum: **a first set of blunting rules** mainly moderate the impact of **incorporation**, pushing towards the transformation end of the spectrum, while **a second set of blunting rules** moderate the impact of the requirement for **transformation**, and pull towards the incorporation end of the spectrum.

29. An observation is called for with respect to the paradoxical counter-move indicated in paragraph above: it refers precisely to the seemingly paradoxical moderation of the opposing main positions of incorporation and transformation, so that irrespective of the local constitutional set-up, blunting or moderating may lead to similar outcomes in differently internationally inclined domestic legal orders. This paradoxical counter-move is revealing, and perhaps points towards blunting or moderating as dependent not on the local constitutional set-up, but rather on the substance of the relevant domestic and international rules at stake in each instance of engagement. Once again then, the substance of the rules at stake seems to be decisive as regards the engagement of the domestic court with international law. This is not meant to ignore that, in some cases, other factors, such

[56] See the *Report on England* (2015) [27]ff, [33.3].

[57] See for example ibid, [33.2] citing *McIntosh v HM Advocate* [2003] 1 AC 1078, in which an unincorporated international treaty was used to 'illuminate' the object and purpose of the relevant domestic legislation.

[58] See *Roper v Simmons* 543 US 551 (2005).

[59] See *Hamdi v Rumsfeld* 542 US 507 (2004). See further Bradley (n 51) 309–311.

[60] See the litigation under the *Alien Tort Claims Act* 28 USC §1350 (1789); cf Roberts (n 13) 76–77.

as the individual preferences of specific judges, may also explain some of the inclination or disinclination to apply international law. An attempt to discuss such factors is made in Part C, after the engagement of domestic courts with international law has been mapped in Part B.

30. To the operation of these main and moderating techniques we should add another interesting variation which also heavily depends on the substance of the rule at stake and is currently understudied: this is the use of '**consubstantial norms**'. Consubstantial norms are norms which happen to exist both at the international and at the domestic level, and provide for the same substantive regulation (ie, they have the same substance).[61] One example of such a norm could be the right to an effective remedy for violation of a vested right; or other fundamental human rights[62] which are guaranteed at both the international and most domestic levels.[63] In that sense 'consubstantial norms' could be likened to 'multi-sourced equivalent norms', which have been argued to exist at the international level.[64] The commitment of domestic constitutions to international law and human rights[65] as well as the references by domestic courts to their domestic and international counterparts[66] can be relevant to the concept of consubstantial norms. The reason for including the impact of such consubstantial norms in the Study Group's consideration of the various methods of engagement of domestic courts with international law is that they may serve to both align with and to contest international rules—as will be demonstrated in Part B, below.

---

[61] The term 'consubstantial' is originally a theological term which seeks to describe the Holy Trinity as being 'of the same substance', ie 'consubstantial' (ομοούσιος). See further Tzanakopoulos, 'Domestic Courts in International Law', 142–4. The reference to 'same' substantive regulation need not (and probably should not) be understood as implying identical regulation—sometimes the domestic norm may be more protective of a particular right or value, but in order to be considered 'consubstantial' with an international norm it may not be *less* protective or may not strike a *different balance* from the one struck by the international norm. International law thus serves as the minimum standard of protection.

[62] For a discussion of the term 'fundamental rights' and its relationship to 'human rights' from an international-domestic comparative law perspective, see A Tzanakopoulos, 'Judicial Dialogue in Multi-level Governance: The Impact of the *Solange* Argument' in OK Fouchald and A Nollkaemper (eds), *The Practice of International and National Courts and the (De-Fragmentation) of International Law* (Hart, Oxford 2012) 185, 210–15.

[63] Indeed there is a feedback loop in the protection of fundamental human rights, with the American and French declarations of the eighteenth century influencing both the Universal Declaration of Human Rights and the first international treaties for the protection of human rights. These international documents then influenced the adoption of human rights protections in constitutions of States emerging from colonial rule or dictatorships. See ibid, and for examples see the *Report on Anglophone Africa* (2015) 10: many Anglophone African constitutions contain human rights protections influenced by international human rights instruments. See also the *Report on Sri Lanka* (2013) 2–3.

[64] See generally for the concept T Broude and Y Shany, 'The International Law and Policy of Multi-Sourced Equivalent Norms' in eidem (eds), *Multi-Sourced Equivalent Norms in International Law* (Hart, Oxford 2011) 1–15.

[65] Cf Article 6(3) TEU; Article 1(2) German Basic Law; Preamble and Article 1(a) South African Constitution.

[66] Cf PM Huber and A Paulus, 'Cooperation of Constitutional Courts in Europe' in M Andenas and D Fairgrieve (eds), *Courts and Comparative Law* (OUP, Oxford 2015) 281.

Before turning to this point, however, the variations in the outcome of domestic court engagement with international law must be briefly mentioned.

c. Variations in Outcome

31. A crucial aspect of the engagement of domestic courts with international law is whether, in the final analysis, the domestic court's 'intervention', as it were, leads to alignment with, or rather to breach of, international law. This is also a most difficult field of study. Not only does such an enquiry assume that international law always has fixed and objectively ascertainable contents;[67] it also ignores the fact that every purported violation of international law has within it the seeds of a potential change in the law. In customary law, a 'violation' by a domestic court may lead to the emergence of a new customary rule, or to the modification of an existing one. In treaty law, a 'violation' could evolve into a 'subsequent practice' which establishes the agreement of the parties regarding the interpretation of the treaty (in the sense of Article 31(3)(b) VCLT respectively) or causes the treaty to fall into desuetude or obsolescence.[68] This creates an interesting feedback loop, where domestic court engagement may both violate and develop international law. One crucial question then is how to distinguish between breach of the law and its development, or the emergence of new law. In addition, to the extent that rules of international law are invoked to challenge other rules of international law, a breach of one set of norms may promote compliance with another set of norms, and may even have implications for their hierarchical standing.

32. There are examples of instances that can be cited as substantiating the feedback loop referred to in paragraph above: the Greek and Italian courts' jurisprudence on sovereign immunity could (and perhaps sought to) effect a change in the customary law of immunity, and it may have been successful were it not for conflicting practice of other domestic courts and finally for the intervention of the International Court of Justice, which put an end to the discussion for the foreseeable future.[69] Similarly, Greek court jurisprudence on the definition of 'ship' under the 1992 CLC/FUND Conventions has caused the States parties to consider adopting the Greek courts' interpretation over the one they preferred earlier (and on the basis of which the Greek court decisions were in clear violation of the relevant instruments).[70] The jurisprudence of UK courts has led the European Court of Human Rights to change its interpretation of provisions in the ECHR in some instances.[71]

33. It thus appears that in a number of cases it will be very hard to determine with any certainty whether a particular domestic court decision is in alignment with or in breach of international law—much will depend on other States' reactions (or lack thereof) to

[67] On this see further paragraphs and below.

the decision, as well as to the possibility of 'corrective intervention' or 'monitoring' by an international judicial organ, such as the International Court of Justice (but also the European Court of Human Rights, or the WTO dispute settlement organs, or an ad hoc or ICSID arbitral tribunal, among other possibilities).

PART B: MAPPING ENGAGEMENT

34. The difficulty in discerning any single principled approach to the engagement of domestic courts with international law is obviously the result of the great variety of domestic constitutional treatment of international law as to its position within the domestic legal framework, and the subsequent variations in the engagement of domestic courts with international law and in the outcome of such engagement, as described in Part A above. The most crucial part of the Study Group's work was to map the practices and methods of engagement and their potential outcomes. The main part, Part B, of this Final Report is concerned with mapping the relevant variety in domestic court engagement with international law, rather than seeking to explain what might be made of that variety. Part C then proceeds to identify the possible grounds behind domestic courts opting for one or the other strategy of engagement described in this part. But before moving on the mapping exercise, some preliminary comments are in order.

35. In the first phase of the work, members of the Study Group agreed that, in the interest of making the project manageable, the Study Group should focus on norms 'at the edge', that is to say on norms of international law that seem to suffer from 'legitimacy' deficits and are thus likely to provoke and encounter the resistance of domestic courts. While the term 'legitimacy' is itself contested, what is meant here is norms of international law that may be seen as problematic in three aspects: (a) **source legitimacy concerns**—such as those created by norms emerging from a vague law-making process, such as that of customary international law, or decreed by non-elected international organs, such as the secondary law of international organizations; (b) **procedural legitimacy concerns**—such as those created by norms produced in some manner which is procedurally incompatible with national traditions or otherwise problematic; and (c) **outcome/content legitimacy concerns**—such as those created by the potential or perceived conflict of international norms with deeply rooted local constitutional sensitivities.

36. The focus on norms 'at the edge' pulls with it the focus of the elaboration of principles of engagement of domestic courts with international law: problematic rules make for problematic responses by the organs charged with their interpretation and application, and thus the Study Group sought to focus on instances of domestic court resistance to, contestation of, but also development of international law. However, it became clear, in view also of the work submitted to the Study Group in the course of its operation by its members and by other scholars, that an exclusive focus on problematic norms 'at the edge' might present a skewed picture of the engagement of domestic courts with international law, overemphasizing resistance and contestation as a form of engagement. As such, the following three sections of this Part B generally map the engagement of domestic courts with all possible norms of international law, viewed statically (section I), dynamically (section II), and finally from the perspective of monitoring (section III). The concept of norms 'at the edge', however, continues to play a role in this analysis, as indeed it does in the context of identifying reasons for particular strategies or postures of engagement discussed in Part C.

I. Engagement Viewed Statically: Postures or Strategies

37. Whatever the contents of any norm of international law may be, there are broadly three **ideal types** of **strategy** or **posture**[72] of domestic court engagement with international law, qualified by the outcome of such engagement. These are: the **posture** or **strategy of avoidance** (where the question of international law is altogether dodged); the **posture** or **strategy of alignment** (where—irrespective of the prescription of the constitutional framework, or even on the basis of an interpretation of such prescription which, on its face, seems to point towards avoidance—an attempt is made to align with international law or at least to harmonize domestic law or practice with international regulation); and the **posture** or **strategy of contestation** (where domestic law is ostensibly used as a method to contest the generally accepted content of existing international law, such as in cases like *Kadi* and possibly *Medellín*).

38. The three ideal types described above and elaborated on further below match Hirschmann's three categories of **exit** (avoidance), **voice** (contestation), **loyalty** (alignment).[73] However, further differentiation is required within each ideal type, and this is the purpose of the subsections that follow.

a. Avoidance

39. **Avoidance** is the general posture or strategy of a domestic court avoiding the application of international law in circumstances where the latter may be applicable. Such avoidance can be **evasive** or **affirmative**. It should be noted at the outset that the legislature or executive may also adopt a practice of avoidance by delaying ratification of treaties which would require changes in domestic law, or by allowing ratification/ratifying only with broad reservations which aim to shield domestic law from change.[74] In any event, the term avoidance should not be considered as being necessarily negative. The court may be forced by its own domestic law to avoid or refuse the application of international law, as described below. And delays in ratification or the making of reservations may be designed to ensure full compliance with all applicable international obligations.

40. **Evasive avoidance** is where international law is not applied without any relevant argument being made and without any discussion by the court. The court simply remains silent where the application of international law is plainly called for (and may even have been pleaded by the parties),[75] in a sort of 'willful blindness'.[76] An instance where this might be the case is where the legislature has passed a relevant law which

[72] The difference between 'strategy' and 'posture' is that the former term conveys a sense of genuineness in the approach, whatever the underlying purpose, while the latter term may convey a more rhetorical, rather than genuine, position. The two terms however are used interchangeably in this Final Report.

[73] See generally AO Hirschman, *Exit, Voice, and Loyalty: Responses to Decline in Firms, Organizations, and States* (Harvard University Press 1970).

[74] See the *Report on Switzerland* (2013) 6.

[75] For examples see the *Report on Israel* (2013) [31]–[32]; the *Report on Belgium* (2014) 9–10; the *Report on Canada* (2013) 19; the *Report on International Human Rights Law* (2015) 10; and the *Onondaga* litigation, reported in ILA Committee on the Implementation of the Rights of Indigenous Peoples, *Johannesburg Conference Draft Report* (2016) 18–19, available at <http://www.ila-hq.org/download.cfm/docid/22EA2347-3AC2-41A0-849732487DA9A7C4>.

[76] For the expression see the *Report on Canada* (2013) 19.

may not fully reflect or may diverge from applicable international law. The domestic court may be bound to apply the relevant domestic law and may thus choose to silently ignore relevant international norms. An example is where States have passed immunity legislation, such as for example the UK, the US, Argentina, Japan, India, and so forth, with the expected result of prompting reliance on the domestic rather than the relevant international norms.[77] A countervailing trend which has been noted in some jurisdictions is for the executive to (be allowed to) intervene in order to prompt the domestic court to comply with international obligations on immunity.[78]

41. Avoidance can also be **affirmative** (or **professed**). This is the case when the court considers the application of international law but explicitly rejects it, as this is, in the court's view, the appropriate position under domestic law. Some of the blunting or moderating mechanisms described above, such as non-justiciability or non-self-execution, may well lead to affirmative avoidance.[79] For example, the finding by a domestic court that internationally binding norms protecting social rights are programmatic and non-executable norms will lead it to determine that it is not up to it to apply these norms and to ensure compliance with them.[80] Similarly, the adoption of a dualist position with respect to treaties will allow (or impose on) courts to disregard international law, as compliance with it is seen as the responsibility of other State organs.[81] This will essentially leave it to the executive to comply with these norms uncontrolled by the domestic court, or to the legislature to produce consubstantial obligations which will allow the domestic court to weigh in. This can also be the outcome of the application of the principle of consistent interpretation, another moderating or blunting mechanism, when the presumption that the principle establishes is relatively weak and can be readily resisted by an argument that the law being interpreted is not ambiguous (or, for common law jurisdictions dealing with customary international law, that the common law does not require development).[82]

42. Affirmative is also the avoidance that ostensibly relies on international law to argue, though clearly wrongly, that on its own terms the latter is not applicable. A historical example of such affirmative avoidance is apartheid South Africa, where the application of customary law was rejected through the denial of its customary status: domestic courts would require 'universal' acceptance for a rule to be considered customary international law.[83] By setting the bar so high, it was virtually guaranteed that almost no norm would be granted customary international law status by a South African court.

[83] See the *Report on South Africa* (2013) (11)–(13).

b. Alignment

43. **Alignment** can come in a number of variations: **simple** or **'fair weather'** alignment; **overriding** alignment; **consubstantial** alignment; and **'hyper'**-alignment (or alignment 'on steroids'). Alignment, and in particular hyper-alignment is a strategy or posture particularly favoured by newer or smaller States that may wish to not appear parochial.[84] It is instructive in this connection that the US in the eighteenth century could be considered as 'bending over backwards' to (be seen as) align(ing) with international law. But it is by no means exclusively so, and much will depend on the particular variation of alignment in each case. The variations outlined above are now examined in turn.

44. **Fair weather alignment** is basically alignment with international law in run-of-the-mill, politically unproblematic situations. It is difficult to report on such alignment as examples abound in day-to-day life but, having no 'special' characteristics, they do not necessarily constitute 'newsworthy' instances. These may include instances where international law is cited explicitly in support of relevant domestic law, as well as other cases where the perceived content of the international and domestic law converge. Fair weather alignment becomes meaningful only when seen against the background of other types of alignment, and most crucially against the light of avoidance or contestation in politically charged circumstances. This is much like an omission, which becomes evident and meaningful only against the light of an obligation to act.[85] By contrast, the need to engage with politically charged rules, such as for example the rules of international humanitarian law in the context of an armed conflict in which the State whose courts are called upon to apply it is engaged, may well lead to (affirmative) avoidance or contestation.[86]

45. **Overriding alignment** consists in the application of international law by the domestic court over conflicting domestic law. Determining the existence of normative conflict is in itself a very difficult matter, as 'apparent' conflicts may be resolved through interpretation, leading some to only consider irresolvable conflicts as 'genuine'.[87] However, interpretation being an art rather than a science, it is difficult to draw a bright line between 'apparent' and 'genuine' conflicts. A rather large area could be said to be gray between the two extremes.

46. Consistent interpretation can be seen as a technique for producing consubstantial alignment, when a domestic court interprets domestic law in conformity with international obligations of the State (generally if a statute or domestic law is at least somewhat ambiguous). But in some instances a very strong presumption of consistency of domestic law with international obligations, even in the face of little or no ambiguity in domestic law, may produce overriding alignment. This is for example the case in Belgium, where domestic courts have resorted in consistent interpretation in circumstances where the

[84] See the *Report on Albania* (2013) 1. See further Part C below.

[85] Cf V Lowe, *International Law* (OUP, Oxford 2007) 41, 92, on *opinio juris* shedding light on the practice of 'not doing something' in the context of customary international law formation.

[86] See the *Report on International Humanitarian Law* (2013) 2–9. See further paragraphs above and below respectively.

[87] See generally E Roucounas, 'Engagements parallèles et contradictoires' (1987) 206 Recueil des cours de l'Académie de droit international de La Haye 9; and M Milanovic, 'Norm Conflict in International Law: Wither Human Rights?' (2009) 20 Duke Journal of Comparative and International Law 69.

domestic norm being interpreted did not at all seem ambiguous,[88] as well as in South American States where international human rights law has been relied upon even to change a given Constitution (or its up to that point predominant interpretation).[89] It is also the case in South Africa where the Constitutional Court has taken the position that the only reasonable interpretation of domestic legislation is an interpretation that is consistent with international law.[90]

47. Further, it can be argued that allowing challenge of domestic law or domestic normative acts on the basis of international law despite the availability of blunting rules which could lead to avoidance (and so would not avoid the challenge to domestic law) also produces overriding alignment. This is again the case in Belgium, where non-self-executing international law norms have been relied on in order to seek annulment of domestic normative acts, to seek compensation, and even to challenge criminal charges.[91] Similar examples can be found in the area of international investment law, where certain domestic courts have applied the provisions of an international investment agreement in order to reverse conversion of contracts from one currency to another (though there is practice on the part of domestic courts for either evasively avoiding these issues, or affirmatively avoiding them by reference to blunting techniques).[92]

48. Both consistent interpretation and the non-invocation of blunting techniques leading to avoidance have also shaped the position in Argentina, which may be seen as having transitioned from a period of affirmative avoidance to one of overriding alignment.[93]

49. **Consubstantial alignment** is the application by the domestic court of domestic norms that are consubstantial with the international norms. As already mentioned above, the strategy or posture of consubstantial alignment can be independently adopted by a domestic court,[94] but it can also be forced upon it by the executive or legislature producing consubstantial obligations (ie ratifying a treaty only once they have changed domestic law to reflect the relevant international obligations, producing consubstantiality, in particular leading to *preemptive* consubstantial alignment).[95]

50. The question that emerges is *when* the action of the legislature or executive in producing domestic norms leads to (evasive) avoidance (see paragraph above) rather than consubstantial alignment. One could easily argue that the passing of domestic law is a

[88] See the *Report on Belgium* (2014) 4–5.

[93] See generally the *Report on Argentina* (2015), esp 5ff.
[94] See the *Report on India* (2013) 15–17 [34]–[37].
[95] See the *Report on Switzerland* (2013) 6 and consider the practice of Eastern European States in bringing their domestic law in conformity with the ECHR prior to joining the Council of Europe and having the obligation to do so. See also the practice of the UK where some statutes do not directly incorporate a treaty but are meant to give effect in whole or in part to the provisions of an unincorporated treaty. (Note that here the term 'incorporation' is meant to signify transformation into domestic law in the terminology used in Part A of this Report.) These statutes are meant to be interpreted with reference to the unincorporated treaty, producing consubstantial alignment. See the *Report on England* (2015) [21]–[23] and cf the *Report on Canada* (2013) where a similar approach of both full transformation and consubstantial transformation is used.

method for applying international law in the domestic legal order rather than for avoiding it (or for contesting its content). No easy answer can be given to this question, ie the distinction between evasive avoidance and consubstantial alignment is not easy to draw in these circumstances. Much will depend on what we consider the *content* of the specific international norm to be, and on whether we consider that the relevant domestic norm is consistent with that content. This highlights the potential for all categories to collapse into another or to alternate depending on context and perhaps also on the particular reader's viewpoint. It is however no reason not to undertake the mapping exercise, and to argue whether a particular domestic court engagement falls within one or the other category. Any such argument is essentially an argument as to the content of the relevant norms or (which amounts to the same thing) their interpretation, and this will always be an issue on which views will occasionally diverge, sometimes widely.[96]

51. Consubstantial alignment primarily takes place when the domestic court applies domestic law in a way that is aligned with what is required of the relevant State under relevant international law, even without any reference to such international law. The domestic law applied is consubstantial with the State's international obligations, and so the outcome is one of alignment with these international obligations. It should be noted that international law does not require that it be either incorporated or transformed into domestic law, and generally makes no provision on the way in which States will elect to comply. What is required is simply that compliance ensues, by whatever means. This is evident, for example, in the way the European Court of Human Rights has treated exhaustion of local remedies: the Court does not require that specific ECHR rights be explicitly pleaded before domestic courts. It only requires that the *substance* of these rights has been pleaded, even if solely under domestic law.[97]

52. However, because of this peculiar characteristic of consubstantial alignment, ie that no explicit reference to international law is required for consubstantial alignment to take place, showcasing examples may be difficult at times. Much will depend on the analysis of the specific case, of its result, and of the requirements of international law, by each scholar or commentator.[98] An example, however, could be the *Tsilhqot'in* case in the Supreme Court of Canada: while the domestic court did not refer to international law, its analysis of the concept of indigenous rights over land was seen as being substantively in line with relevant international law.[99] Another example could be the approach of some Russian courts to indigenous peoples' rights.[100] Similarly, the US Supreme Court's approach in *Roper v Simmons* on the application of the death penalty to minors could be seen in this light.[101] Further examples can be seen essentially in many cases in which an international court, say the ECtHR, has reviewed the action of domestic courts and has

[101] See *Roper v Simmons* (n 57).

found no violation of an international obligation, say the ECHR, even if these courts did not explicitly refer to international law in the context of the relevant case. In many cases the domestic law that was applied will be considered consubstantial with the international obligations of the State under the ECHR, or the domestic court will have interpreted that law in consubstantial alignment with the ECHR, so as for alignment to ensue.

53. The principle or technique of consistent interpretation may also produce consubstantiality and thus consubstantial alignment. This will be the case where the domestic courts see no reason to depart from the plain meaning of legislation if it is consistent with international law, or where they engage in broad interpretation of domestic legislation by relying on relevant (not directly applicable or unincorporated) international law.[102]

54. Domestic courts have on occasion confirmed the 'consubstantiality' of domestic and international norms, in particular in the area of fundamental human rights: examples include the Swiss Federal Tribunal in *Nada*,[103] as well as the Canadian Federal Court in *Abdelrazik*,[104] and the German Federal Constitutional Court in the 'student fees' and 'forced treatment' cases.[105] In other cases, domestic courts will often give preference to 'consubstantial' domestic law over applicable international law, but will clearly indicate that applicable international norms will be taken into consideration in the construction of the consubstantial domestic norms.[106] This is likely to produce consubstantial alignment; but when it deviates from or challenges the generally accepted content of an international norm it will constitute affirmative or consubstantial contestation, on which see further in the next subsection.

55. **Hyper-alignment** is a particular category of alignment where the domestic court may go beyond what international law actually requires (even though relying explicitly on international law), finding international obligations where none actually exist or are at least debatable.[107] An example of such alignment 'on steroids' can be seen in the case of Albania, where the domestic criminal law did not provide for a reopening of proceedings

[102] See for example the *Report on Sri Lanka* (2013) 6, 8; the *Report on Canada* (2013) 11–15; and the *Report on England* (2015) [24]ff with respect to fully unincorporated treaties. See also ILA Committee on the Implementation of the Rights of Indigenous Peoples, *Johannesburg Conference Draft Report* (2016) 7–8, for examples of Chilean courts 'completing' the understanding of indigenous peoples' rights under domestic law by reference to international treaties, to some of which Chile had not even become a party; see further at 11–12 for the similar position adopted by the Supreme Court of Belize.

Cf the practice of EU courts of relying on both the ECHR and the ICCPR (and relevant jurisprudence thereunder) in analyzing fundamental rights under primary EU law, as for example in *Kadi II*: Case T-85/09 *Kadi II* [2010] ECR II-5177 [176]-[177].

[107] See the *Report on Albania* (2013) 1; and the *Report on India* (2013) 18ff [41]ff.

in the case that a violation of ECHR has been found by the ECtHR. This occasioned a split between the Albanian Constitutional Court and the Albanian Supreme Court (of Cassation), with the former ordering the latter to 'legislate' into existence such grounds for reopening proceedings, going beyond what was at the time the accepted interpretation of the ECHR.[108] In similar circumstances the Polish courts adopted the position that the lack of such grounds for reopening proceedings was regrettable, but also that it was not up to the domestic court to create such grounds.[109] Albanian courts have also relied on treaties not binding on Albania or on soft law in order to disregard domestic law in other instances of hyper-alignment,[110] while the Kosovo courts have also taken similar positions.[111] Sri Lankan courts also refer to regional instruments that are not binding on Sri Lanka, such as the ECHR.[112] Sri Lankan courts also can be considered as engaging in hyper-alignment in those cases where they have determined that soft environmental principles establish binding obligations on governmental authorities and become part of the common law.[113] Chilean courts and the Supreme Court of Belize have relied on international instruments not binding on the relevant States in the construction of indigenous peoples' rights under domestic law.[114] Other relevant examples of hyper-alignment are provided by African courts,[115] in particular Kenyan courts since the adoption of the 2010 Constitution.

56. One final such instance, which goes clearly beyond even consubstantial alignment to alignment on steroids is provided by Albanian courts in the context of the question whether the Rome Statute of the International Criminal Court is compatible with the Albanian Constitution. In responding to the question, the Albanian courts not only found the Rome Statute to be so compatible, and protecting human rights as the Albanian Constitution does, but went so far as to consider the ICC as the highest criminal court in the *Albanian* legal order.[116]

c. Contestation

57. Contestation also comes in a fair number of variations: **affirmative**; **negatory**; and **consubstantial**. Notably, contestation can refer to applicability or to content (interpretation): as such, affirmative contestation refers clearly to content; negatory contestation refers clearly to applicability (but this may be so due to the perceived content of the norm); and consubstantial contestation requires going beyond the posture of the court to determine whether what may seem as negatory contestation is in reality partial consubstantial alignment, using the contestation of the rule as a means for affecting its content. These are dealt with in turn below.

58. **Affirmative contestation** consists primarily in the domestic court accepting the validity or applicability of the international law norm but giving it a meaning different from that which is generally accepted, indicating thus that it wishes to change the content of the norm or that it perceives it as different from what is generally accepted. An example of such practice could be that of Israeli and Indian courts formally accepting the applicability of international law in a number of instances, but effectively rejecting its full application by diverging from the perceived as generally accepted meaning.[117] This may well be the result of the court explicitly or implicitly deferring to the position of the executive on the matter (of the interpretation of the international rule).[118] A special type of such affirmative contestation can appear when a domestic court diverges from the interpretation of international law given by an international court in a judgment, even when that is binding on the State, as sometimes happens in UK[119] and US practice.[120] Finally, attempts at consistent or harmonious interpretation may result in affirmative contestation as described here, when the court can be seen as diverging from the generally accepted content of an international norm in order to avoid conflict with a domestic norm.[121] This could be seen as 'reverse' consistent interpretation in that domestic courts tend to interpret international law in a manner consistent with the provisions of domestic law (and even sometimes policy) rather than the other way around.

59. Another instance of affirmative contestation could be the one where a domestic court contests the content of an international rule by relying on another international rule. This is the case for example in the practice of Belgian courts that challenges the content of the rules of immunity of international organisations in cases where their application would result in breach of the international obligation to respect the right to a fair trial and / or to an effective remedy.[122] Similar (though far more isolated) examples can be found in the practice of UK courts,[123] which may have been influenced by the practice of the Belgian courts. The decision of South African courts to find a decision of the Tribunal of the Southern African Development Community directly applicable domestically, and to ignore the immunity of Zimbabwe in the process,[124] is also a potential example of affirmative contestation pitting one international rule against another, as are the South African cases regarding the arrest of Bashir on the basis of an arrest warrant issued by the International Criminal Court.[125] The debate between Human Rights Monitoring Bodies,

[125] *Southern Africa Litigation Centre v Minister of Justice and Constitutional Development and Ors* (27740/2015) [2015] ZAGPPHC 402 (High Court) (24 June 2015); and *Minister of Justice and*

such as the HRC or the CAT as to the proper interpretation of international human rights norms (and their relationship to rules of immunity) can also be seen in the light of affirmative contestation.[126] A rare example of affirmative contestation of this sort could be the decision of the Albanian Constitutional Court to review an international agreement for the delimitation of maritime zones between Albania and Greece not only against the Albanian Constitution (which would properly come under the preceding paragraph), but also against the general international law of the sea.[127]

60. Finally, domestic courts called upon to recognize and enforce foreign arbitral awards may engage in such types of contestation when reviewing international law application in the award, in accordance with rules of international law such as those under the 1958 New York Convention.[128] Notably, when review takes place not on the basis of the New York Convention but on the basis of domestic law which reflects, for example, the relevant UNCITRAL Model Law (which in turn reflects the New York Convention to a large extent), the type of contestation produced is consubstantial contestation,[129] on which see further below.

61. **Negatory contestation** consists in the denial of the validity or applicability of an international law norm, perhaps due to its (perceived) content. The principle of consistent interpretation may lead to negatory contestation of international law. As explained above, the strength of the interpretative presumption that the legislature did not mean to violate international law in making domestic law varies. For example in Switzerland, while consistent interpretation is used successfully in order to achieve alignment, occasionally it may be hard to apply in the context of federal acts (whether stemming from the legislature or the people through referenda) which clearly meant to disregard or violate applicable international obligations of the State.[130] In particular, if the legislator was aware of the conflict between international law and a proposed domestic law, and chose to legislate in breach, consistent interpretation will not be able to produce alignment, but the court will have to adopt a position of negatory contestation.[131] The position is similar in the UK, as well as other States.[132]

Constitutional Development and Ors v Southern African Litigation Centre and Ors (867/15) [2016] ZASCA 17 (Supreme Court of Appeal) (15 March 2016).

[126] See the *Report on International Human Rights Law* (2015) 9.

[127] *See the Report on Albania* (2013) 10.

[128] See the *Report on International Investment Law [Kulick]* (2015) 6–7; for an example see the decision of The Hague District Court in the *Yukos* case, where as the court of the seat of the arbitration it quashed a US$ 50bn arbitral award for lack of jurisdiction: *The Russian Federation v Veteran Petroleum Ltd* (Case No C/09/477160 / HA ZA 15-1); *The Russian Federation v Yukos Universal Ltd* (Case No C/09/477162 / HA ZA 15-2); and *The Russian Federation v Hulley Enterprises Ltd* (Case No C/09/481619 / HA ZA 15-112), Hague District Court, Judgment of 20 April 2016, available at < http://deeplink.rechtspraak.nl/uitspraak?id=ECLI:NL:RBDHA:2016:4230>.

[129] Cf the *Report on India* (2013) 14–15 [33].

[130] See the *Report on Switzerland* (2013) 11ff.

[131] Ibid.

[132] But see *Report on Canada* (2013) 11, noting the Supreme Court of Canada's requirement in *R v Hape* (n 51) [53] of 'unequivocal legislative intent to default on an international obligation' to support an argument that the presumption of conformity is rebutted.

62. Further – and clearer – examples of negatory contestation can be seen in the practice of domestic courts ignoring clearly applicable international law norms, perhaps due to the fact that they find their application objectionable in the circumstances. An example is the *Yahoo* case in Belgian courts, where the bilateral US-Belgium treaty on mutual assistance in criminal matters is systematically ignored, despite being clearly applicable.[133] An even clearer example can be seen in the area of international investment law where the application of an international investment agreement would result in the breach of state aid rules also applicable in the host state under EU law (which in this connection can be seen as domestic law).[134]

63. **Consubstantial contestation**: What may look at first as negatory contestation may in reality involve partial consubstantial alignment with one rule of international law, thereby seeking to affect the content of another rule of international law, namely the rule whose application or content is contested. An example of such consubstantial contestation is provided in the reactions of some domestic courts and the EU courts to targeted anti-terrorist sanctions imposed by the UN Security Council under Chapter VII of the UN Charter. These sanctions obligate UN member States to, among others, freeze the assets and ban the travel of individuals and legal entities designated by the Security Council through the relevant Sanctions Committee.[135] However, there was at first, and for some significant period of time, no way for those subjected to the sanctions to challenge their designation. Attempts to challenge the sanctions in domestic courts were normally bound to fail for lack of jurisdiction of domestic courts over the UN, or because of UN immunity, and so forth. At some point, nonetheless, domestic courts started considering the challenges, directed as they were against the domestic acts implementing the sanctions rather than directly against the UN act. In cases like *Kadi* in the Court of Justice of the European Union[136] (as well as *Kadi II*)[137] and *Ahmed* in the UK Supreme Court,[138] these courts reviewed the impugned domestic acts for compliance with the courts' domestic law (EU primary law and UK law respectively), and annulled them for violating fundamental human rights guaranteed under that law. This effectively forced the relevant States into an impossible situation: deprived of the domestic legal basis for implementing the UN measures, they had to either disregard their own courts or disobey the Security Council. From the perspective of international law this is clearly a problematic result: domestic law cannot serve to justify the breach of an international obligation.[139] However, the domestic law relied on in these cases, the protection of the fundamental human right to

[138] [2010] UKSC 2.

[139] See paragraph above.

a fair trial and to an effective remedy, also constitutes international law. The contestation mounted by the domestic courts thus can be seen as consubstantial contestation: contesting the content of one rule of international law (the obligation imposed by the Security Council) because of the application, even if indirect, of the substance of another rule of international law (the right to a fair trial and to an effective remedy).[140]

64. A similar analysis can be made of the decision of the Italian Constitutional Court that found the ICJ Judgment in *Jurisdictional Immunities of the State* contrary to the Italian Constitution.[141] It is beyond question that the Italian Constitutional Court's decision constitutes a challenge to the ICJ's determination of the content of the international law of immunity on the basis of domestic constitutional law.[142] The contestation was founded, however, on the substance of the universally protected right of access to a court, even if by reference to its protection under the Italian Constitution. Essentially the Italian court can be seen as attempting to re-open the debate regarding the relationship between the international rule of sovereign immunity and internationally protected human rights, offering an alternative reading based on consubstantial domestic law. By contrast, the decision of the US Supreme Court in *Medellín* cannot be likened to the examples above, and does not constitute consubstantial contestation, based as it is on the peculiarly American 'procedural default' rule, which finds no corresponding rule (in substance) in international law.[143]

65. Following the discussion on consubstantial contestation above, it can be argued that all types of contestation here examined may be also distinguished on the basis of whether they constitute **local contestation** or **internationally-minded contestation**. In the former case the domestic court is contesting the international rule by reliance on a domestic law principle which finds no corresponding principle in international law (thus 'local' contestation).[144] In the latter case the domestic court contests the content of an international rule by reliance on another international rule (affirmative contestation as described in paragraphs – above). Or it contests the content of an international norm by reliance on domestic law, but in cases where a parallel can be drawn between the domestic law relied on and international rules which are 'consubstantial' with that

[140] See generally A Tzanakopoulos, 'Collective Security and Human Rights' in E de Wet and J Vidmar (eds), *Hierarchy in International Law: The Place of Human Rights* (OUP, Oxford 2012) 42–70, for the argument that in relying on the right to a fair trial and to an effective remedy, cases like *Kadi* and *Ahmed* are effectively resolving a conflict between international norms (Chapter VII UN Security Council decisions and fundamental human rights) or alternatively reinterpreting Article 103 of the UN Charter.

[141] See Decision 238/2014 of the Italian Constitutional Court, available at <http://www.diritticomparati.it/2014/10/sentenza-n-238-anno-2014-repubblica-italiana-in-nome-del-popolo-italiano-la-corte-costituzionale-composta-dai-signori.html> [in Italian].

[142] See M Lando, 'Intimations of Unconstitutionality: The Supremacy of International Law and Judgment 238/2014 of the Italian Constitutional Court' (2015) 78 Modern Law Review 1028, 1038–9.

[143] *Medellín* (n 119) could be seen as an example of local contestation.

[144] Which could also be regarded as a form of avoidance, the difference being however that contestation indicates some discomfort with the content of the international rule while avoidance merely ignores the international law rule.

domestic law (consubstantial contestation).[145] Or, finally, the contestation may focus on the question of who is the authoritative interpreter of rules of international law, with the domestic court claiming—even if implicitly—a privileged role in this connection.[146] This final example could also be deemed as constituting affirmative contestation as described in paragraphs – above.

II. Engagement Viewed Dynamically: Development

66. Courts, as organs of the State, necessarily affect the content of norms of international law whenever they engage with them. They serve as agents of development (or harbingers of corrosion and decay) of international law norms. This is the dynamic aspect of their engagement with international law. All the strategies or postures discussed in section I above may also reflect a **strategy or posture of development** of international law, as they may either seek or achieve to set in motion the process of adjustment or change of the relevant international rules. Domestic courts do not single-handedly develop international law: they merely may set that process in motion, or continue it and consolidate change. But this they can do, and it is then up to other actors to weigh in (on which see paragraph below).

67. One question that immediately comes up in the context of discussing domestic courts as agents of development of international law is whether the domestic court should be cognizant of its role as such an agent of development. This question cannot be answered with a high degree of certainty, however: it is difficult enough to determine what the domestic court is doing, and how it is engaging with international law, let alone to determine what it thinks it is doing (except on rare occasions where courts explicitly articulate their views on their role in developing international law[147]). Further, it cannot be excluded that for a number of reasons domestic courts may not wish to engage in brazen statements as to their role and purpose. And even if they make statements as to what they think they are doing, these may well be geared towards shielding them from criticism or appeasing the various direct and indirect addressees of the decision. Thus, when called upon to choose between **what domestic courts are saying they are doing** and between **what they are actually doing**, the approach of this Final Report has generally been to assess what the court was actually doing. For example, there are instances where the domestic court may be paying lip service to an international legal rule, but then proceed to merely apply domestic law, or to avoid the relevant question altogether, thereby resulting in a violation of international law. Conversely, there are arguably instances where the domestic court, even though it makes no reference to international law, and even explicitly rejects its application, may be actually applying an international norm in deciding a case, even if only in its 'consubstantial' incarnation.

---

[145] Eg in *Kadi* and *Ahmed* discussed above (see text at nn 135–137) domestic courts relied on constitutional rules protecting the right of access to a court and to an effective remedy, ie recognized aspects of the internationally protected right to a fair trial.

[146] The example here could be *Sanchez Llamas v Oregon* 548 US 331 (2006), where the domestic court claimed that it was the ICJ that read a provision in an international treaty wrongly, whereas the domestic court was reading it correctly (in the instance reference was to Article 36 VCCR).

[147] See for example the Israeli Supreme Court in *Ajuri* [40], available at <http://elyon1.court.gov.il/Files_ENG/02/150/070/A15/02070150.A15.pdf>.

68. Even when domestic courts do not consciously engage in development as a strategy or posture, development of the law may still ensue. This is because domestic courts engaging with international law rules may set in motion a process which will call for and perhaps lead to the reaction of (a) **other domestic courts**, so as for practice to accumulate either for or against the position taken by the domestic court (also: *horizontal dialogue*, ie between courts in different domestic legal orders); (b) **international courts**, which may be seen as 'monitoring' the engagement of domestic courts with international norms (also: *vertical dialogue*, see further section III below); and finally (c) **States**, who are the principal lawmakers and the ultimate monitors of the engagement of both domestic and international courts with international norms that they (the States) have made (on which see also further section III below).

III. Informal 'Monitoring' of Engagement

69. The engagement of domestic courts with international norms, and the consequent impact on the content of such norms, is subject to an informal process of '**monitoring**', ie to decentralised **control** and **corrective intervention**. Domestic courts are accustomed, when acting within the domestic legal order, to functioning under the corrective control of the legislature. This sort of corrective intervention is far less ubiquitous in the decentralised legal system that is international law. Informal processes of monitoring domestic court engagement with international law are varied and diffuse, but such informal monitoring may be undertaken by international courts. An example is the *Jurisdictional Immunities of the State* case before the ICJ:[148] here the actions of Greek and Italian courts led to a dispute which was submitted to the ICJ. The ICJ reversed an attempt at the development—or erosion—of the international law of immunity that had been initiated by the domestic courts or by States (eg through reaction to and protest against the decision of a domestic court of another State).[149] But this may still not be the final word, as further reaction on the part of domestic courts has followed, with the Italian Constitutional Court engaging in (consubstantial) contestation.[150]

70. Given the paucity of international judicial settlement of disputes, judicial law-making by domestic courts that impacts on international law, while subject to informal and diffuse international monitoring, requires much more vigilance in order to be kept within acceptable limits, and in order to have a **developing** rather than a merely **corrosive effect** on international regulation (which could be cast as a form of fragmentation).[151] In the final analysis, the ultimate guardians will be the actual law-makers, the States, which also 'monitor' the engagement of domestic courts with international law. The State can seek to influence (by intervening in a case) or finally reject the position of its own domestic courts (by legislating to overrule it) or of the domestic courts of other States (by making protests or presenting claims to their States for violation of international law).

PART C: PRINCIPLES OF ENGAGEMENT?

71. Elaborating a set of principles of engagement would require, in addition to several other considerations, a determination of the **reasons** behind the choices of domestic courts with regard to their techniques and strategies of engagement with international law. Establishing the reasons for domestic courts opting to avoid or to contest or to align with international law in given circumstances, evaluating them as positive or negative from an international law perspective, and considering the costs of each strategic choice, would allow the elaboration of guidelines and practice directions for domestic courts. Significant work needs to be done in order for such guidelines, principles or practice directions to be elaborated, and this is beyond the remit or capacity of the Study Group.

72. As a contribution to the mapping exercise as to the engagement of domestic courts with international law, this Final Report presents some thoughts on the reasons for the adoption of the various strategies or postures of engagement, and the role of the various techniques developed by domestic courts in this respect. This is meant to assist further work in the direction of setting out a set of principles on the engagement of domestic courts with international law, possibly by a Committee to be established by the International Law Association.

73. Before giving some thoughts on the reasons, it should be mentioned (as it already has been in the other parts of the Final Report)[152] that the mapping of strategies or postures in Part B is not open and shut, as it depends on consensus regarding the content of the various rules of international law. The various categories may even collapse into one another depending on the observer's viewpoint and in particular her conception of the content of the international rule at stake. Just as it was highlighted in paragraph above that the passing of domestic law could be seen as both a method for applying international law in the domestic legal order and as a method for avoiding it (or for contesting its content), it could equally be argued that deference by the domestic court to the executive's interpretation of a particular treaty can be cast as avoidance (avoiding to engage with applicable international law) as easily as it can be cast as alignment (it is the executive that negotiated and concluded the treaty and thus has a better understanding of its content). Much will depend on one's evaluation of the content of the relevant law and the decision of the domestic courts. Some of these considerations may be imposed by virtue of constitutional provisions or principles in the domestic legal order, but they also constitute reasons why the domestic court has opted for a particular strategy or posture. But it is difficult to determine whether a court is 'hiding behind' constitutional constraints in order to avoid engagement with international law, or whether it is convinced that this is the correct position under its domestic law. What remains clear, from the perspective of international law, is that domestic courts can take widely diverging positions on the same issue. In the context of the exercise of discretion given to the State under international law, for example, some domestic courts may refuse to exercise that discretion, as they do not see themselves as the appropriate organ for this;[153] other courts may step up to the plate to obligate the State to exercise its discretion under international law in

[152] See paragraphs and above.

[153] See *R v Keyn (*The *Franconia* case) (1876) 2 Ex D 63.

the particular manner decided by the court.[154] But this does not mean that the mapping exercise is pointless, nor does it mean that one should not attempt to set out the potential reasons for the adoption of the various strategies or postures adopted by domestic courts.

74. The strategy or posture adopted by domestic courts will depend to some degree a number of variables, partly identified in Part A of this Report as the challenges for mapping domestic court engagement with international law. The first such variable, as evident also from the preceding paragraph, is the domestic constitutional provision on the relationship of international and domestic law, and the various blunting mechanisms developed by and available to the courts for moderating the effects of these provisions. These can be used by domestic courts to shift the posture more towards avoidance or more towards alignment than a plain reading of the constitutional instrument or rules would suggest.

75. Another variable is the relative position of the State concerned in the international community or its strategic choice about approach to international law. Newer, smaller, or developing States (and their courts), as well as States that place a high premium on their reputation as supporters of the international 'rule of law' and international cooperation, may wish to promote or consolidate their position as well respected members of that community by adopting and encouraging their courts to adopt a strategy or posture of alignment, occasionally even going into hyper-alignment. The same goes for States emerging from the status of pariah States, such as South Africa post-Apartheid. By contrast, powerful States, who are long-standing members of the international community may engage in contestation in its various guises, whether mounting local (constitutional) resistance and turning away from international law, or seeking to influence its content and development (occasionally also through consubstantial alignment rather than open contestation). Further, domestic courts in States undergoing radical (if still constitutional) change may look to international law as a way to protect themselves against themselves—ie to resist or to calm down constitutional but radical change. This may occasion a strategy or posture of alignment, perhaps even hyper-alignment.

76. A further variable, also identified as a challenge in Part A, is the type of rules involved in the adjudication. It has become apparent in Part B of the Report that the domestic courts of particular State do not exclusively conform to one particular strategy or posture, but may shift between them. These shifts can be explained in various ways, including by determining how politically or otherwise problematic the international rule and compliance with it is. It may be relatively easy to adopt a strategy or posture of alignment to politically unproblematic rules (or in circumstances which make alignment with the rules unproblematic) (fair weather alignment). In more problematic cases of politically- or value-laden rules, such as human rights or international humanitarian law rules, domestic

[154] See the *Korean 'Comfort Women'* case, Korean Constitutional Court (Judgment of 30 August 2011) 2006Hun-Ma788: Korean courts force Korea to pursue dispute settlement with Japan on the matter: this is because the discretion given to the Korean State under international law has to be structured in accordance with the Korean constitutional provisions on human rights. Cf the decisions of the Canadian courts in *Canada (Prime Minister) v Khadr* [2010] 1 SCR 44; 2010 SCC 3; and *Abdelrazik* (n 103).

courts may be more inclined to engage in avoidance or contestation.[155] It should be noted however that there are examples of domestic courts engaging with politically problematic international rules, such as those on the rights of indigenous peoples, in a manner which produces consubstantial alignment.[156]

77. Occasionally, strategies or postures of engagement may also roughly map on to the type of rule involved in terms of its 'directionality' (see Part A section I.b above). It is easy to surmise that avoidance will be the preferred strategy of engagement with outward-looking, horizontal rules of international law.[157] But within inward-looking norms things are less clear: whereas rules that obligate the state to regulate cross-border private relations[158] may occasion a larger degree of alignment (and development), vertical inward-looking norms which regulate the relationship between the State and those within its jurisdiction may occasion all types of engagement depending on their (perceived) specific content and the interests at stake. This is so in part because transnational rules are rather laxly supervised by either international courts or States. Domestic courts are in fact the main agents applying treaties including such rules, and indeed the treaties themselves envision domestic courts as the main agents of enforcement. As such, domestic courts are relatively comfortable interpreting the sometimes vague language of these rules (eg child 'in intolerable situation'), which in a purely horizontal or vertical context they might have found simply too vague, and opted to defer to the executive.

78. A number of other variables may play a role in this respect, and they have been identified by the Study Group, but may be too difficult to study in any exhaustive manner. These include whether and to what extent counsel have pleaded international law before the domestic court, and the quality of these pleadings. Anecdotal evidence suggests that domestic courts rely heavily on good argument on the part of counsel, and this would make sense: domestic court judges are not international law scholars and good argument will assist them in properly dealing with the international law issues in the case (and vice versa). A related factor is the way that international law is employed by counsel before the court: it may be used by the claimant or applicant as a sword to attack a normative act or government position; but it may also be used by the government as a shield to defend against an attack by the claimant or applicant. The way that international law is used, against the background of the relative merits of the case, may affect the disposition of the domestic court towards it. A further factor is the general disposition of the domestic court or judge towards international law in general. A most important factor relates also to the

[155] See generally the *Report on Israel* (2013) and cf the Swiss courts' position that the ICESCR is not directly effective, in contrast to most other human rights instruments in the domestic legal order, in the *Report on Switzerland* (2013) 8.

[156] See n 101 above.

[157] Note however that some seemingly outward-looking, horizontal rules are actually also inward-looking, and indeed specifically addressed to domestic courts (at least in part). The rules of immunity are such an example, and they occasion both alignment and contestation in their various incarnations.

[158] Sometimes called 'transnational rules', these inward-looking rules are found in numerous international treaties such as the Convention on the International Sale of Goods, the Hague Convention on the Civil Aspects of International Child Abduction, the Montreal Convention for the Unification of Certain Rules for International Carriage by Air, or the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards, among others. Countless domestic court decisions refer to the rules in these treaties, while in dualist States they always get transformed into domestic law, even if simply by scheduling.

independence of the judiciary in the relevant State. The problem with all these factors, however, is that they are all to some extent subjective. Hence the difficulty in studying them in an exhaustive manner.

79. A final variable is the certainty and frequency of supervision or monitoring, in particular by international courts. While in general international law there is the possibility of supervision or monitoring being exercised very occasionally, in the context of regional human rights treaties, especially those establishing courts with quasi-compulsory jurisdiction as their monitoring organs, supervision is much more certain and frequent. This, in large part, will occasion more alignment (as avoidance will not be appreciated by the monitoring court), though it also has the potential of leading to contestation.

STUDY GROUP ON THE PRINCIPLES ON THE ENGAGEMENT OF DOMESTIC COURTS WITH INTERNATIONAL LAW

WORKING SESSION

Monday, 8 August 2016, 2.00pm

Chair: Professor Mary Footer (UK)

The Chair welcomed attendees and introduced the panel, composed the Chair of the Study Group and the CoRapporteurs.

Professor André Nollkaemper (Netherlands) described the circumstances under which the Study Group was established six years ago. Since its inception, the Study Group had been mandated to explore and evaluate the principles that govern domestic courts (both technique and procedure). Through its work in evaluating these principles, the Study Group had come up with elements or questions. These included the question on how to assess the work of domestic courts, the reasons behind the choice of a particular technique or a specific alignment, how to evaluate these practices, and whether it was possible to establish guidelines which would confront the work of national courts.

Professor Nollkaemper indicated that, in order to evaluate or provide guidelines on the work of domestic courts, it was appropriate to look at what domestic courts were doing by engaging them. Domestic courts needed to be engaged to determine the reason why some courts were more affirmative while other courts rejected international law. He stressed that the mandate on evaluation and assessment was not discharged and he indicated the reasons for this.

Before concluding his remarks and handing over to first CoRapporteur, Professor Nollkaemper introduced the first challenge, being the difference of practices on the reception of international law in a domestic system. He indicated that what needed to be done to surmount this challenge was a matter to be decided at the present session.

Professor Antonios Tzanakopoulos (UK) presented the final report of the Study Group entitled "Mapping the Engagement of Domestic Courts with International Law."

During his introductory remarks, Professor Tzanakopoulos described how the report was compiled. He stressed that the report was compiled by taking into account various materials from previously published works by the officers of the Study Group, as well as from the preliminary report of the Study Group. He indicated the discussions that took place during a number of both open and closed meetings of the Study Group since 2011, including in Amsterdam, London, Sofia, Washington DC, and Heidelberg, as well as from a number of thematic and national reports solicited from Study Group members and from scholars from around the world.

After underlining reasons for the work of the Study Group on principles on the engagement of domestic courts with international law, namely the need to assess what domestic courts were doing, the reason behind the practices of the various States, and the need to evaluate these practices and to develop principles or guidelines for guidance to domestic courts, Professor Tzanakopoulos described four important points set out in the final report which constituted the challenges faced by the Study Group. These included the different constitutional settings, the different methods and techniques of domestic court

engagement with international law, and the different outcomes set in Part A of the final report.

Another challenge was the question of the mapping of the postures or strategies of domestic court engagement with international law. This was based on the work presented by members and other scholars. He also described Part C of the final report, which discussed the grounds or reasons that emerged as justifying different strategies or postures of engagement. As previously indicated, the reason for the mapping was to provide a groundwork for the normative exercise of compiling a set of principles or guidelines for the engagement of domestic courts with international law. He also highlighted that the duty to develop a set of principles or guidelines was among the tasks of an ILA Committee, rather than a Study Group, whose work was to prepare the ground for such a normative exercise.

Challenges in mapping the engagement

Having highlighted the structure of the report and described the challenges faced by the Study Group, Professor Tzanakopoulos presented the first challenge, namely "Mapping Domestic Court Engagement". He highlighted that this challenge was based on the increased relevance of domestic courts for international law.

He explained this challenge by demonstrating the fact that traditionally international law considered domestic law, including domestic court decisions, as facts. A domestic court decision applying international law might be seen either as being in harmony with the international obligations of the State or as being in breach of them.

When a domestic court decision was in breach of international law, such a decision might create an international dispute or engage the international responsibility of the State. Explaining the role that domestic courts might play, Professor Tzanakopoulos stressed that, since domestic courts were organs of States, their decisions translated the ways in which States expressed their *opinio juris* on the interpretation of international law.

Professor Tzanakopoulos then moved on to the increased engagement of States with international law. He pointed out that the constant and significant strain of the traditional bilateralism performance structure of international law was being replaced by a multilateral framework of protection (*traité-loi*). In this regard, he stressed that more and more regulations were being adopted in the international sphere because of the development of its various areas regulated by multilateral instruments. He pointed out areas such as international law on the protection of human rights, international environmental law, the law of the sea, international investment law, international economic law, international criminal law, international humanitarian law, among other areas of international law.

Comparing the nature of the international law obligation, Professor Tzanakopoulos indicated that there had been a development to remove the clearly inter-state slant in the implementation of international obligations. He indicated that, under the traditional bilateralism structure, States had the discretion to determine what measures were required within the domestic legal order to implement these obligations.

Professor Tzanakopoulos noted that there had, however, been a change, and international obligations were now more inward-looking than outwardlooking. This meant that international law today required States to undertake certain action within their own domestic

legal order, including the adoption of a specific legal framework, respect and promotion of individual rights (international human rights law), the undertaking of specific actions such as the curbing of emissions (international environmental law), granting access to information or to justice, or allowing participation in decision-making.

Professor Tzanakopoulos indicated that the foregoing analysis was needed to explore the reason behind the increased significance of domestic courts engagement with international law.

Professor Tzanakopoulos then moved on to stress the last of the challenges for the application of international law. He pointed out the infinite variety for the reception of international law by domestic legal orders. He indicated that the traditional distinction between monism and dualism, which required the incorporation and transformation of international law respectively, were among the challenges for the implementation of international law. He explained that domestic constitutions that adopted a monist approach applied international law "automatically" and considered it as part of domestic law. By contrast, domestic constitutions that took a dualist stance considered international law as a different system of law that must be transformed or adapted through the adoption of some domestic (usually legislative) act before its application or introduction into domestic law.

Professor Tzanakopoulos indicated that State practices for the reception of international law was even more challenging because even monist countries set a number of prerequisites before applying international law or distinguished between different sources of international law. For instance, in the United States, treaties formed part of the law of the land, while there was no specific provision for customary law. This was different from the United Kingdom, where customary law was incorporated into the common law and was considered as a source of the common law, but act of transformation was required before the domestic application of any treaty.

The situation was also different in South Africa, where the constitution provided that both treaties and custom were directly applicable in the South African legal order, but required transformation of treaties unless they are self-executing, while custom was considered as automatically incorporated only if it was not in conflict with the constitution or any legislation.

Professor Tzanakopoulos stressed that domestic courts had developed various techniques that moderated or blunted the effects of both monism and dualism systems. These included the doctrine of non-justiciability (wherein one might include the political question doctrine), the act of state doctrine, denials of standing, and the doctrine of non-self-execution of treaties. The avoidance of substantive international law questions through affording immunity (whether to a foreign State under international law or to the forum State under domestic law) might also be seen as such a blunting technique.

Recalling the ways in which international law was received in the domestic legal system, Professor Tzanakopoulos indicated that there was a way in which domestic courts might apply international law indirectly, even if the State opted for a dualist system. This is possible through the principle of consistent interpretation, which had been introduced through judicial practices or constitutional entrenchment. He explained that this principle constituted a presumption in favour of harmony between domestic and international law

in that a domestic court would presume that the domestic legislator did not mean to introduce legislation in breach of the State's international obligations. The domestic court would thus seek to interpret domestic law "in the light of" or "in accordance with" the State's international obligations.

Other interpretative principles which are similar to the principle of consistent interpretation, such as the principles of legitimate expectations and the principle of legality were also explained. Professor Tzanakopoulos explained that the principle of legality presumed that the domestic legislature may not be considered as derogating from or abrogating an international right or duty, except when it did so explicitly.

In addition to the above techniques, Professor Tzanakopoulos indicated that another practice existed, which, although currently understudied, depended on the substance of the rule at stake. This was the use of "consubstantial norms", which were norms which happened to exist both at the international and at the domestic level, and provided for the same substantive regulation.

Finally, before mapping the practices and methods of engagement and their potential outcomes, Professor Tzanakopoulos explained the reason why the Study Group was considering the various methods of engagement of domestic courts with international law. He explained that this was because they provided the basis of State's attitude on whether to align with or to contest international rules.

Mapping engagement

Professor Tzanakopoulos then moved on to explain Part B of the final report. He indicated that the mapping of the relevant domestic system engagement with international law was the most crucial part of the Study Group's work. However, he stressed that the mapping had, to some extent, helped to identify the possible grounds behind domestic courts opting for one strategy of engagement over the other.

Professor Tzanakopoulos indicated that there were broadly three ideal types of strategy of domestic court engagement with international law. These were:

- the strategy of avoidance (where the question of international law was altogether dodged);
- the strategy of alignment (where, irrespective of the prescription of the constitutional framework, or even on the basis of an interpretation of such prescription, domestic courts would attempt to align with international law or at least to harmonise domestic law or practice with international regulation); and
- the strategy of contestation (where domestic law was ostensibly used as a method to contest the generally accepted content of existing international law.

In describing the first strategy, Professor Tzanakopoulos defined avoidance as the situation where a domestic court refused to apply international law, even when it was applicable. He stressed that avoidance had various forms: evasive or affirmative or by delaying the ratification of treaties which would require changes in domestic law, or by allowing ratification only with broad reservations which aimed to shield domestic law from change.

"Evasive avoidance" was a situation where the court simply remained silent where the application of international law was necessary. He described evasive avoidance as a situation of "willful blindness". This was a situation where the legislature passed a law which might not fully reflect or might diverge from applicable international law. He further explained that a domestic court might be bound to apply the relevant domestic law and might thus choose to silently ignore relevant international norms. This was the case where a State deliberately passed immunity legislation and avoided applying international law. Such countries include the United Kingdom, the United States, Argentina, Japan and India (among others).

"Affirmative avoidance" was a situation where a court recognised the existence of international law, but explicitly rejected the application and applied the appropriate position under domestic law. He stressed that a moderate mechanism of affirmative avoidance could be seen in the case of non-justiciability or non-self-execution. A practical example of affirmative avoidance was the requirement of universal acceptance set up by the apartheid regime in South Africa. Here, the application of customary law was rejected through the denial of its customary status; domestic courts would require "universal" acceptance for a rule to be considered customary international law. In this case, no norms would be granted customary international law status by South African courts because the bar was both too high and vague.

Moving to the second strategy, Professor Tzanakopoulos defined "alignment" as a posture whereby domestic courts simply referred to international law without complying with it. He indicated that this practice was mainly favored by newer, smaller, or weaker States that might wish to avoid appearing parochial. However, the application of this strategy might vary significantly.

For instance, it was explained that "fair weather alignment" was used when a State made use of (referred to) international law in run-of-the-mill, politically unproblematic, situations. In these cases, States would explicitly make reference to international law in support of a relevant domestic law or when a specific rule or content of the international law was in accordance with domestic law. Professor Tzanakopoulos indicated that the alignment with international law became meaningful when defending a politically charged circumstance and avoiding or rejecting the need to engage with politically charged rules, such as the rules of international humanitarian law in the context of an armed conflict in which the State whose courts were called upon to apply it was engaged.

Another variation of alignment was "overriding alignment". This type of alignment consisted of the application of international law by the domestic court over conflicting domestic laws. However, given the difficulty in determining apparent and genuine normative conflict, consistent interpretation had always been seen as a way to achieve this technique, and especially consubstantial alignment.

Professor Tzanakopoulos defined "consubstantial alignment" as a situation where a domestic court interpreted domestic law (whether there were ambiguities or not) in conformity with the international obligations of the State. A case in point was that of Belgium, where domestic courts resorted to consistent interpretation in circumstances where the domestic norm being interpreted did not seem ambiguous. South American States provided another example where international human rights law was relied upon to

change a given constitution. It was explained that this was also the case in South Africa, where the constitutional court had taken the position that the only reasonable interpretation of domestic legislation was an interpretation that was consistent with international law.

To highlight this, Professor Tzanakopoulos indicated that consubstantial alignment primarily took place when the domestic court applied international law in a way that was in accordance with that State's obligations under relevant international law, even without reference to such international law. At this point, he reminded attendees that international law made no provision for the way in which States would chose to comply with its norms; it did not specifically require its norm to be incorporated or transformed into domestic law, it simply required compliance.

This was also evidenced by the practice of some courts, including the European Court of Human Rights, which did not necessarily require the specific rights (on the exhaustion of local remedies) to be pleaded before domestic courts. Instead it only required the substance of these rights to be pleaded, even if solely under domestic law.

In addition to the previous variation of alignments, Professor Tzanakopoulos indicated that there was another particular type of alignment called "hyper-alignment". He explained this as a situation when a domestic court went beyond what international law actually required (even though relying explicitly on international law).

Albania was used as an example of such alignment "on steroids". In Albania, the domestic criminal law did not provide for a reopening of proceedings in the case that a violation of European Court of Human Rights had been found. This occasioned a split between the constitutional court and the supreme court, with the former ordering the latter to "legislate" into existence such grounds for reopening proceedings.

Professor Tzanakopoulos pointed out numerous other cases of over interpretation (or "hyperalignment") such as where Albanian courts relied on treaties that were not binding on Albania or on soft law in order to disregard domestic law. Sri Lankan courts had also found that soft environmental principles established binding obligations on governmental authorities and became part of the common law.

The third strategy of engagement was contestation. This was a situation whereby domestic courts deviated or refused to agree with a rule of international law, whether through the application or by altering the content (interpretation) of international law. He stressed that there were different forms of contestation. One form was "affirmative contestation", which referred to a situation where a domestic court accepted the validity or applicability of international law but gave it a different meaning or a different interpretation to the one generally accepted (the contestation of the content of the norm). A second form was explained as "negatory contestation". This referred to the contestation of the applicability of an international law. The third form of contestation was "consubstantial contestation" which was where a domestic court altered or contested a rule of international law by affecting its content.

Finally, Professor Tzanakopoulos explained that, since courts were organs of the State, they might necessarily affect the content of norms of international law whenever they engaged with them. Domestic courts served as agents of development of international

law norms. In this regard, one needed to ask whether domestic courts should be cognizant of their roles an agents of development of international law. It was difficult to answer this question with certainty, but indicated that it was perhaps even more difficult to determine what domestic courts were doing, and how they were engaging with international law. This was the approach that the final report had itself taken to assess what domestic courts were actually doing.

Principle of engagement

Having highlighted the various strategies, Professor Tzanakopoulos moved on to discuss the reasons why a State might choose a particular strategy over the other. The analysis of the reasons behind the choice of domestic courts as to whether to avoid, contest or align with international law in given circumstances, evaluating them as positive or negative from an international law perspective, and considering the costs of each strategic choice, would allow the elaboration of guidelines and practice directions for domestic courts.

At this point, Professor Tzanakopoulos emphasised the need for significant work to be done in order for such guidelines, principles or practice directions to be elaborated. He explained that this was beyond the capacity of the Study Group, which only facilitated the elaboration of a set of principles on the engagement of domestic courts with international law.

Elaborating on the reasons or strategies, Professor Tzanakopoulos indicated that these reasons or strategies depended on a number of variables such as the domestic constitutional provisions which determined the relationship between international and domestic law, as well as the status of a State as a newer, weaker, or developing State or the State's consideration of international law (there were some States that placed a high premium on their reputation as supporters of the international "rule of law" and international cooperation). This latter category of State, including those emerging from the status of pariah States, such as South Africa post-Apartheid, might especially engage in hyperalignment while powerful States, which had had a long-standing membership in the international community might engage in contestation in its various guises, whether mounting local (constitutional) resistance and turning away from international law, or seeking to influence its content and development (occasionally also through consubstantial alignment rather than open contestation).

Professor Tzanakopoulos identified another variable that might induce States to adopt a particular attitude towards the application of international law. This variable was the type of rules involved in the adjudication. He stressed that, since domestic courts were not usually bound to one particular strategy or posture, they might shift between different strategies depending on how politically or otherwise problematic the international rule was, as well as compliance with it. Oftentimes, such a shift would happen in the case of rules of human rights or international humanitarian law rules, in respect of which domestic courts might be more inclined to engage in avoidance or contestation.

Professor Tzanakopoulos concluded by indicating that the manner in which counsel pleaded international law before the domestic court, the quality of such pleadings, the quality of the domestic court, and the independence of the judiciary might also induce the court to adopt a particular approach.

Professor Yuval Shany (Israel) indicated that the most pertinent part of the final report, which he wanted to discuss, was the part relating to reasons why domestic courts chose a particular strategy over the other one. He stressed that there were several other limitations in this regard, including:

- limited exploratory powers of legal doctrine in international law – countries that occupied a vast place always refused to apply international law.
- judges' motivation – a judge's motivation to behave in a particular way towards the application of international law might influence States or allow some flexibility on how they should regard international law. He went further to distinguish motivation between normative references and incentive motivation. Professor Shany then explained that, in the former case of motivation, commitment might motivate the application of international law, while in the latter, the application of international law was incentivised by a particular event, occasion or opportunity.

The question became even more complex when assessing the unit of the study. He indicated that institutional legitimacy was lacking and many States were not able to apply international law just because international law was already covered. Emphasising the motivation factor, he explained that there were two levels of motivations. On the one hand, some States wanted to be upfront and decide to align their national law with international law, while on the other hand, some States simply refused to play a role in the international sphere and were not motivated by the application of international law.

Addressing the term consubstantiality, Professor Shany indicated that it required a normative exercise to determine whether a court which did not apply international law was in violation of international law or not.

Professor Shany also addressed the contestation approach. He indicated that the approach in the *Kadi* case might provide the key exercise. In that case, a domestic court engaged so as to apply an international rule. Whether there was something unique about the judicial motivation from the court was the question of consideration of the national legal system. He called upon members of the Study Group to think about the judicial motivation behind this, and to put forward a question on whether and to what extent national courts were lawmakers.

Professor August Reinisch (Austria) thanked and congratulated the Study Group for the final report and the attempt to overcome the issue surrounding the monist and dualist approaches (constitutional requirements). He then criticised the report for having mixed strategies or a different conceptual framework. He indicated that, on the one hand, the report offered some valuable points such as the underlined mandate of the Study Group, especially Part C of the final report, which explained the reason why domestic courts pursued these strategies. On the other hand, there were some speculations, such as the discussion on how young States might show interest in international law.

Professor Reinisch then asked whether domestic courts or judges had sufficient knowledge of international law before they contested or aligned with international law. He indicated that the answer was no, as sometimes these strategies (contest or align) were adopted solely out of frustration. Lastly, he indicated that the other specific value or

normative question that needed to be discussed was the issue on the contestation of international law by other rules of international law or by domestic rules.

Professor Yuji Iwasawa (Japan) indicated that, although he joined the Study Group late, he would like to congratulate the members for an excellent final report, which at least provided a framework within which domestic courts could be engaged. The report did not contain data from East Asia and Africa, while it claimed to have covered a variety of areas. Furthermore, some parts of the report needed further attention. Professor Iwasawa indicated that Part A of the final report emphasised different constitutional setups, which he considered to be a "big mess" and an overemphasis. He suggested that Part A could be characterised or grouped into two systems, namely the monist and dualist systems. Professor Iwasawa then indicated that Part B of the final report was the most crucial part. He explained that the final report provided true contribution by engaging domestic courts. The terms used regarding the alignment categorisation were a bit difficult. The same applied with the term "affirmative contestation". He stated that the categorisation was good but questioned whether the terminology used conveyed the message or not.

With regard to Part C of the final report, Professor Iwasawa indicated that, when he recalled the findings of Study Group on the variables (constitutional setup and the position of States in international law), he found again that the categorisation was good but the terms confusing. He concluded his intervention by indicated that the variables relating to the independence of the judiciary was most important.

Lady Justice Arden made one comment and asked one question. First, she asked if the report could provide guidance to domestic courts on questions where the rules of international law were not clear, for instance a question of international law not previously considered by the International Court of Justice, or a question of interpretation of the Refugee Convention. She also commented that an investigation into the preferences of individual judges might divert from the main purpose. She indicated that, within the judicial practice, there were some judges who were more conservative and others that were more progressive, and that the personality or the education of a judge might direct the position of such judges towards the application of international law.

Mr Isye Gobann (Uganda) commented and built on the previous comment indicating that a judge's lack of knowledge in international law might be the main reason why a domestic court might adopt a particular strategy or position towards the application of international law.

Mr Mohan Katarki (India) indicated that the subject was more of a subject for study in comparative law than in international law, because it looked into the practices and principles on how domestic courts applied international law.

Professor Nollkaemper responded to the last intervention on the need for a comparative study to articulate domestic practices. He indicated that the problem or barrier in conducting this study was that international law could not say what domestic law was or should be doing. The role of interpretation was to assess how domestic courts applied international law. From an international law perspective, many international lawyers agreed with the *Kadi* case but also acknowledged that many judges could deviate from the application of international law. He added that the comparative analysis might be used

to explain why international law was not applied and that national comparative analysis was also necessary.

Professor Shany also responded to these comments. He indicated that the Study Group was not as much concerned about the outcomes but rather the engagement which was broader and captured other issues. The Study Group was also focused on the scope. He noted the comment on individual judges who sometimes drove courts to adopt a specific strategy for the application of international law. The lack of knowledge of international law among judges was a critical issue. While legal education was important, international lawyers took it for granted and assumed that judges on national courts knew international law, which was not always the case. The more judges that were engaged in international law the more they would be familiar with it.

Professor Tzanakopoulos responded to the first question on the terms used in the report. He explained that the terms were used to put ideas into a box and they were assumptions not exact things. He added that the report was a collective efforts and the terms used were not the product of one person. He then commented on the question regarding the lack of data for Africa and India in the report, and requested that material and comments on the report might also be sent via email.

Commenting on the issue of the education of judges, Professor Tzanakopoulos agreed that the role of judges in international law was very important and different from the civil and common law systems. He indicated that the role of judges also differed with their ranks and whether their decisions were formally binding or not. He stressed that the role of the Study Group was to create a database for judges but that challenges of organising conferences when everyone could attend hindered this.

Professor Tzanakopoulos then commented on the question of the several interpretations of the norms. He indicated that formally this was wrong because a judge's interpretation of international law did not change the normative fact that in the case of a breach of international law the State would be internationally responsible.

Ms Marija Đorđeska (Slovenia) stressed the need for more scientific approaches and empirical method of research. She also indicated that if a domestic court interpreted an international norm, that norm became or went into a domestic reserve (in addition to its international existence).

Dr Rob McLaughlin indicated that most avoidance took place on the procedural grounds rather than in the substance, and gave the example of the different difficulties faced by Australian and German judges in this regard.

Professor Shany intervened and indicated that the context was very important because criminal cases were different from civil ones. He gave an example of customary law which many States refuse to apply because of the lack of legal precision. He further indicated that the issue was more the selection of how much attention should be given to international law and if we were dealing with human rights or criminal law. All these issues might affect the motivation of the judges.

With regard to methodology, Professor Shany said that it required time and financial support to review the different approaches in civil and criminal procedures. He also

indicated that when a norm was incorporated under national law, it might develop its own identification and in this case customary law would be above the national law.

Professor Shany continued to comment on the interpretation of international law, which he said could be reversed. He also responded to the idea on visual presentation but indicated that there was a lack of resources for such an exercise.

Professor Shany made references to Professor Tzanakopoulos's presentation with regard to the review of the judiciary and indicated that oftentimes, national courts had no other choice but to apply international law. He indicated that some national courts might refuse to apply international law in order to avoid political repercussions. At other times, domestic courts might refer to international law without deciding whether they were bound or not. Thus, the use and the existence of reviewing the judiciary was also a good process.

Professor Nollkaemper added that the application of international law was the subject of national procedural law. He indicated that the question of whether national courts must apply international law depended on the procedure or the context.

Ms Đorđeska made a further comment on the domestication of international law. Some States had taken the position that they would be affected by international law once it became part of national law. Que questioned what role the executive should play in determining whether international law should come into the national system.

Dr Hannah Woolaver (South Africa) raised a concern regarding the role of domestic courts in the development of international law. She stressed that it would be important to explore the Study Group's conception of this if, in the future, it sought to set out normative principles of how and when domestic courts should engage with international law. In addition, when domestic courts (exceptionally) articulated how they conceived of their role in developing international law, this could be a variable that explained why they chose to align with, contest, or avoid international law.

Mr Dipak Bhattacharyya (India) also raised a concern about rules of interpretation. He indicated that the interpretation of law differed depending on judicial discretion. In the jurisprudence of India, the dictum of *ratio decidendi* was followed. He also indicated that a law followed in terms of national customary law might eventually be annulled for public good. This would not be a wrong interpretation of the codification of law but the correct use of judicial discretion. He questioned this position with regard to how it would be viewed from an international law perspective.

Professor Shany responded to the question on the role of domestic courts in the development of international law. He indicated the importance of the question but highlighted that it was not really on the side of judges to decide this but it was rather the role of the jurisprudence to advance international law. But if judges did indeed have the capacity or expertise required, the Study Group needed to consider whether they had a role to play in developing international law or not. He stressed that the complexity of the issue was that the courts were part of the State. If that court, as part of a State, adopted an interpretation of international law knowing that it would be in violation of international law, the question arose regarding who should be engaged to resolve this. Professor Shany further indicated that if people were aware of the existence of international law, then it was not a shameful thing to apply it.

Professor Tzanakopoulos responded to the intervention of Dr Woolaver. A domestic court might set a process of development. The perception of judges was a difficult issue and that perhaps this should help explain whether national courts played a role or not.

Responding to Mr Bhattacharyya, Professor Tzanakopoulos indicated that the ILA strove to be inclusive, and there were reports from India included in the study. On the question of judicial discretion and judicial interpretation, it was difficult to draw the line between whether customary law could become public good. He indicated that customary laws were not codified and could change over time. He indicated that only *jus cogens* could resolve the conflict by taking prevalence.

Professor Nollkaemper added a comment on the development of international law by domestic courts. He indicated that the Italian courts provided a good example in this regard.

Dr Jie Huang (HQ) commented on the status of *ad hoc* investment arbitration in the mapping of domestic application of international law.

Dr Gentian Zyberi (Albania) asked about the engagement of domestic courts with different sources of international law. He raised the issue of what contestation was more serious or grave, that of formal sources or that of enforcement mechanisms. Secondly, he looked at whether more or less immunity for State officials was positive or negative from the perspective of international law.

Mr Yota Negishi (Japan) asked how the practice of contestation should be evaluated. He put forward that local contestation was negative, and consubstantial contestation was positive.

Professor Tzanakopoulos responded to some of these interventions. In response to Dr Huang, he indicated that international investment law had also been cited in the report. In response to the intervention of Dr Zyberi on immunities, he stressed there should be some sentences on the final report on this issue, but it was difficult to make this evaluation.

Professor Tzanakopoulos also responded to the question on how to normatively evaluate contestation. He indicated that consubstantial contestation could be both good and bad, depending on one's personal views. What was good or bad would also depend on whether international law was defined superficially.

Professor Nollkaemper intervened on the question of whether particular contestation was good or bad. He indicated that the domestic legal order needed to align with international law, but also that international law needed to recognise its limitations. International law must recognise the fact that norms might conflict. He emphasised that both legal systems must acknowledge their limitations.

Professor Shany added that international law must be sensitive to the concept of effectiveness and legitimacy. On the issue of good and bad, Professor Shany stressed that one could not contest the form of the source because it was good or bad. It was better to ignore it by avoiding and not contesting the sources. It was better that the two systems (international and national) cooperated together.

Dr Hilly Moodrick-Even Khen (Israel) asked a question about the issue of contestation between domestic and international law in *jus cogens* and how to compel a domestic court to abide with international law in the context of a conflict.

Professor Shany responded that the purpose of the project was not to compel, although given that there are instances of contestation with *jus cogens*, there was a need to create cooperation. Professor Yuval further emphasised that there was no international law legal system to compel national cooperation. The obligation was directed to the State and the State was the only one that could determine how to apply international law. He noted that the final report could only highlight good practices and explore motivation. There was no channel on how international law was created. This is the role for the Vienna Convention on the Law of Treaties.

Professor Tzanakopoulos added that if a domestic court did not comply with international law that was contestation and that the final report did deal with the issue. In cases where domestic courts, although applying international law, did so in their own way, this was also affirmative contestation. On the issue of *jus congens*, when domestic courts faced contestation between two norms, it was better to evaluate whether they contested international law or whether they contested the *jus cogens*. This normative assessment might depend on the nature of the rules.

Professor Shany then asked the members of the Study Group to consider what the next stage for the project should be. He indicated that there were three options:

- establishment a commitment of the ILA to articulate principles to be adopted by an ILA Committee;
- have a new Study Group based on the prior works but aim to establish normative principles;
- leave further work to the academics.

Professor Shany stated that the challenges of the Study Group were more financial than anything else. He suggested the possibility of getting member funding and re-establishing a new Study Group.

Dr Zyberi (Norway) responded that the current Study Group must continue.

There was consensus from the audience who agreed to continue to contribute to the work of the Study Group. There was also a request that the ILA make recommendations and provide guidelines for the engagement of domestic courts.

Professor Andre indicated there was also an agreement to establish or meet online to discuss the final report. He further indicated that the members would be informed on the next step, and that, if the Study Group could not continue, a Committee could be set up. He added that the study would be left incomplete if it were to stop now.

Reporters: Kandala Lupwana and Nicholas Kassier

STUDY GROUP ON SOCIALLY RESPONSIBLE INVESTMENT

WORKING SESSION

Monday, 08 August 2016, 3.00pm

Chair: Eduardo Grebler (Brazil)

The Chair welcomed all the attendees to the working session, then proceeded to explain the change in the schedule of the meeting (invitation by the Johannesburg Stock Exchange) and apologised for the inconvenience.

He explained that this Study Group is relatively new and small, but that it is growing. He introduced the Chair of the Study Group, Ms Ida Levine who prepared an agenda for the meeting. The Chair asked Ms Levine to provide details on the agenda for the day.

Ms Ida Levine (UK) introduced herself and proceeded to indicate that during the meeting, they intended to discuss the growing number of statutory, regulatory and other initiatives in this area. Ms Levine pointed to the fact that these measures cover not only asset owners (such as sovereign wealth funds, pension funds and insurance companies) but also their agents – the asset managers. In her opinion, this is a welcome trend – and is only likely to expand given the focus on climate change post-Paris, and the vigorous fight against modern slavery, bribery and corruption and the growing focus on the responsibility of investors across a range of environmental, social and governance (ESG) topics. But, there are a number of key ingredients missing:

- There is no overall master plan and coherence between the growing number of supra-national, national and non-governmental/private initiatives.
- There is no agreed methodology to test the effectiveness of these measures or publicise concrete, positive results.

On the first point she noted that the field presents a plurality of sources (law, regulation and soft law) and actors (state and non-state actors). She stated the lack of coherence between the various initiatives and regulations, there are lots of things happening in many different places. Ms Levine indicated that in spite of this there is not really any master plan. There is nothing that is comprehensive. Therefore, Ms Levine considers that the Study Group could aim to bring some order to the field.

Furthermore, Ms Levine noted—related to the second point—that there is no methodology to test or monitor the effectiveness of the various measures. There are a number of initiatives, but so far there is no methodology to determine if and how these are affecting behaviours. Ms Levine proceed to address these recent different initiatives:

UN Extractive Industries Initiative (EITI) (2007–15)

Comes under the heading of supra-national initiative. EITI is a global standard to promote the open and accountable management of natural resources – it seeks to address the governance of the oil, gas and mining sectors through disclosure and other tools. This growing transparency movement has now been implemented in 49 countries (including a number of emerging markets). The US is in very early stages of implementing this initiative.

UN Convention on Cluster Munitions (2008)

A cluster munition is a form of air-dropped or ground-launched explosive weapon that releases or ejects smaller sub-munitions. Because cluster bombs release many small bomblets over a wide area, they pose risks to civilians both during attacks and afterwards. Cluster munitions are prohibited for those nations that ratify the UN Convention on Cluster Munitions, adopted in May 2008. The Convention entered into force and became binding upon ratifying states on 1 August 2010.

As of June 2016, a total of 119 states have joined the Convention. By way of example, the Convention was ratified by the Luxembourg government through the law of the 4 June 2009 that prohibits all use, stockpiling, production and transfer of cluster munitions, hence the impact on Luxembourg funds. Although the convention does not explicitly prohibit investment in cluster munitions, the prohibition on assistance should be interpreted by states to include investment in cluster munitions producers. Fund managers in Luxembourg have implemented compliance measures to comply with this measure.

Ms Levine said that compliance procedures in relation to this Convention have been implemented by many investment funds due to its adoption in fund jurisdictions – particularly Luxembourg. It would be a good candidate to test the impact of this type of measure on companies' behaviours – will this impact investment behaviour and cause them to discontinue the manufacture of cluster munitions? This points out the role of the investor as a possible "private attorney general" given the obligation to act as a fiduciary and comply with applicable rules and regulations.

UN Sustainable Development Goals (2015)

At the United Nations Sustainable Development Summit on 25 September 2015, world leaders adopted the 2030 Agenda for Sustainable Development, which includes a set of 17 Sustainable Development Goals (SDGs) to end poverty, fight inequality and injustice, and tackle climate change by 2030. The goals contain 169 aspirational targets. These follow the Millennium Development Goals that were established in 2000 with goals to be achieved by 2015. There is global commitment to achieve these goals however as they are aspirational and are not enforced, the level of implementation may be variable.

Bloomberg Task Force on Climate-related Financial Disclosures (2016)

At the request of the G20, the Financial Stability Board (FSB) engaged the private/public sector to review how the financial sector can incorporate climate-related issues in financial reporting. In December 2015, the FSB established the Task Force on Climate-related Financial Disclosures headed by Michael Bloomberg (former major of New York) to assess what disclosure should look like and design recommendations for voluntary company financial disclosures of climate-related risks. It has delivered its Phase I report[1] and is scheduled to deliver Phase II – its final recommendations - by the end of 2016.

Ms Levine stated that this Task Force will provide investors with enhanced disclosure of climate risks. Investors take their due diligence seriously; they are required to read the disclosure and analyse the investment in light of this disclosure in order to invest in the best interests of their clients.

[1] https://www.fsb-tcfd.org/wp-content/uploads/2016/03/Phase_I_Report_v15.pdf

On the national level, Ms Levine discussed the following initiatives:

Stewardship Code – UK (2010), Japan (2014), Hong Kong (2016), other versions exist

Ms Levine noted that there are several jurisdictions that have incorporated Stewardships Code and she proceeded to explain the UK Code.

The UK Stewardship Code is a set of principles or guidelines released in 2010 by the Financial Reporting Council directed at institutional investors who hold voting rights in United Kingdom companies. Other countries have followed this example. In all cases the goal is to promote sustainable growth of companies through investment and dialogue, promoting companies' "good governance". Usually operating as "comply-or-explain" principles, investors are encouraged or required to publish a response explaining their approach to stewardship. The reports of investment firms and asset owners are made publicly available so that their commitment to stewardship of the companies in which they invest can be tested. They provided disclosure on e.g., proxy voting practices, engagement with companies, and collective engagement.

Investor Forum – UK (2015)

Ms Levine explained that she is on the board of this forum that is mix of a state and non-state actors initiative. Ms Levine explained that Professor John Kay made a recommendation to create this forum and subsequently laid the building blocks for the forum. The forum was eventually created by the industry. Following the Kay Report (that suggested the creation of the forum), the Investor Forum was set up with the encouragement of the UK Government. It is an investment industry initiative designed to position stewardship at the heart of investment decision-making by facilitating dialogue between UK corporates and their owners. To date, it has facilitated nine engagements with significant FTSE 100 companies, and become self-sustaining.

Bribery and Corruption – UK (2010, 2016; other jurisdictions

Within the UK, there have been a number of significant laws passed that look to tackle the scourge of corruption. Most notably in 2010 the Bribery Act gained royal ascent to the statute book in addition to a raft of other codes, laws, and patch-work of legislation. However not all poor, fraudulent and corrupt behavior was legislated against and this has led to the further development of the 2010 Act by way of extension to some sections of the Act but also the introduction of the Bank of England and Financial Services Bill which achieved royal ascent in May 2016. This law seeks to make senior managers responsible for taking steps to prevent regulatory breaches in the areas of the firm for which they are responsible. In other words, it seeks to ensure that individuals can be made culpable for poor behavior.

Conflict Minerals Disclosure – USA (2012)

On August 22, 2012, the US Securities and Exchange Commission adopted a new rule under the Dodd-Frank Act to require companies to publicly disclose their use of conflict minerals that originated in the Democratic Republic of the Congo ("DRC") or an adjoining country. The rules require certain companies to disclose their use of "conflict minerals" if those minerals are "necessary to the functionality or production of a product" manufactured by those companies or contracted by those companies to be manufactured.

Under Section 1502, the term "conflict minerals" includes tantalum, tin, gold, or tungsten. Congress enacted Section 1502 because of concerns that the exploitation and trade of conflict minerals by armed groups is helping to finance conflict in the DRC region and is contributing to an emergency humanitarian crisis. This was subject to judicial challenge, but has now been implemented.

National Low-Carbon Strategy – France (2015)

The National Low-Carbon Strategy (SNBC), introduced by the energy transition for green growth act, outlines the approach to be adopted in order to reduce greenhouse gas emissions. It sets in motion the transition to a low-carbon economy. This sets targets for reducing the national carbon footprint, and provides sector specific recommendations that outline the pathway to a low-carbon economy. "An 'energy transition for climate' label will help identify investment funds that are funding the green economy, promote the creation of new green funds and encourage businesses to highlight the green aspects of their operations."

Modern Slavery Act – UK (2015)

The Modern Slavery Act 2015 is an Act of Parliament designed to tackle slavery in the UK and consolidates previous offences relating to trafficking and slavery. The act extends to England and Wales. It received Royal Assent and became law on 26 March 2015.

Ms Levine noted that the new UK PM Theresa May has put this on her agenda. Ms Levine continued to address national initiatives and referred to the non-governmental/private initiatives.

Commonsense Principles of Corporate Governance – US (2016)[2]

Ms Levine said that recently a group of 13 top executives at leading US public companies and institutional investors released the "Commonsense Principles of Corporate Governance" for public companies, their boards of directors and their shareholders. The Principles are described as being intended "to provide a basic framework for sound, long-term-oriented governance" and to "promote further conversation on corporate governance." Full-page ads summarizing key parts of the Principles were published in national and international newspapers.

Ms Levine pointed out that there is really a mixture of initiatives and the Study Group could contribute with its work to this very important field. She stated that coming from the Johannesburg Stock Exchange, the members of the Study Group were very interested in learning that they were one of the leaders in establishing criteria and measuring the companies. She noted that emerging economies seem to be ahead on these issues.

She opened the floor to the attendees for further contributions on the topic.

The Chair mentioned that the Socially Responsible Investment Study Group is a relatively new group and as such, is still on the way of shaping its work. He posed the question whether the name of the group is sufficiently clear for everyone to know exactly what the group will tackle. The current name is "Socially Responsible Investment Study Group". The Chair pointed to the fact that in other places the same subject has been referred to

[2] http://www.governanceprinciples.org/

as Environmental and Social Governance (ESG). The Chair noted that environment and corporate governance have their own field of studies. He raised the following questions:

- Should we think of socially responsible investment in the same way or would some of us prioritise environment? Or social? Or governance?
- What is the importance of the issue of corruption? Is it one more aspect or should it be given priority in this Study Group?

Ms Levine said that the Study Group welcomes questions and suggestions on the name.

Dr Kamal Hossain (Bangladesh) noted that the ILA came a bit late on the topic. He recalled a case in which the CFO and the CEO of a company (both of them have now been criminally prosecuted) discussing this topic and one said that what has been done "may have been immoral but was not illegal". He pointed to the fact that younger lawyers are taught to believe that this is true, that when something is not technically illegal however immoral it is still permissible. He made the point that members of the ILA need to be considered and consider ourselves as socially responsible lawyers. He noted that there have been big stock exchange scams such as the one in India (multibillion dollar scam involving owners of big hotels around the world). In this case, the Indian Supreme Court ordered that the money should be refunded and the responsible people criminally charged. The response of the Court was to deny bail until a percentage of the money had been refunded. Dr Hossain considers this to be a very innovative response.

Dr Hossain noted that people in jail are sometimes the brightest products of top universities and he pointed to a meeting where the Deans of these universities wondered what had they been doing wrong. They concluded that they must strengthen their ethics courses.

The Chair asked if there were any more comments or questions.

Dr Markus Gehring (Germany) stated that while there is a lot of research out there very little is legal research. He encouraged the audience to search for the international law dimension. He mentioned that he recently published a study analysing Canada's language in its investment treaty highlighting corporate social responsibility as a common endeavour. There are many questions one could analyse in this regard. If an individual is claiming unfair treatment but has not lived up his/her own voluntary commitments and social responsibility commitments, can he/she legally claim unfair treatment if the treaty makes reference to such commitments? He noted that we should try to focus on those kinds of questions, particularly on the international law aspect. He proposed that it would be interesting to focus on how to elevate the political commitments to more of legal commitments. He referred to the Kimberly Process as a good example of that as it links to the World Trade Organisation.

Ms Levine expressed her interest in the idea.

Dr Markus Gehring (Germany) stated that CSR needs to be given more of a legal framework. If you disclose wrongly on your environmental impact report you could be prosecuted in different jurisdictions. He noted that now we have a situation in which an investor goes to a country and develops its own CSR standards and doesn't live up to it. He asked what would be the consequence of that and he suggested to study it from the International Law Perspective.

Dr Damilola S. Olawuyi (Nigeria) noted that the notion of responsible investment has found its way to climate finance. He mentioned that a very good example of this is Shell sponsoring a carbon project in Nigeria and he stated that this has triggered all kind of reaction. Similarly, in Honduras, Panama, and Indonesia where the civil society denounces human rights violations. He asked whether the Study Group would be looking at the interaction of CSR and the emerging obligations of the Paris Climate Agreement. Dr Olawuyi asked how these evolving norms could be mainstreamed in the context of trade and investment. Trying to combat climate change through carbon projects; he noted that we seem to neglect how the UN system will need to reflect these norms. He referred to the carbon projects in many parts of the world and the problems they carry (land grabs, people losing forest, no due process, civil society protesting). The civil society denounces that these cannot be UN projects because they are irresponsible projects. He said that we seem to be looking at SRI outside the UN system and he wondered whether the Study Group would be interested in looking closely at these topics.

He posed a second question asking whether this Study Group plans to integrate its views to the UN Business and Human Rights Agenda that is getting a lot of momentum. He considered that it is tough to discuss SRI without engaging with this UN agenda.

Dr Marcis Menkes (Poland) commented on the name of the committee indicating that the name wasn't clear enough to understand which perspectives are being considered. He also stated that the outline seemed to convey a concern for the issue of legitimacy and embrace the financial sector's point of view. He asked whether the Study Group would consider the work of the non-governmental sector, either directly or indirectly. He also remarked that to everyone it is quite clear what the environmental dimension is, but the social agenda seems to be slightly vague. Given the context of the current crisis, he asked whether it would be useful to take into account labour issues. He also mentioned that it would be interesting – in order to have an impact on investment policies – to engage in dialogue with the Bretton Woods institutions and most importantly with the IMF's idea or policy on suggestions to the state for investment purposes.

Ms Levine addressed the questions posed by the attendees. Firstly, with regards to the scope of the Study Group, Ms Levine mentioned that the group started with a narrower scope and expanded afterwards. In the beginning they were focusing on the rules and regulations on investment but they immediately acknowledged that there are many facets – not only institutional investors, monitoring and supervisions, treaties and more.

Secondly, with regard to the question on the possible overlap with the Study Group on Business and Human Rights, Ms Levine noted that the Study Group has discussed the possibility of merging the two groups. However, there was no agreement as the topics – albeit related – do not overlap and have different focus. She made it clear that both Study Groups would have to coordinate and collaborate, as dialogue is necessary.

With regard to the question on the IMF, IFC and Bretton Woods and how these supranational institutions view investment, Ms Levine suggested that the Study Group should engage with them. She mentioned that the group was in Washington D.C. two years ago and they met with people from the IFC and they discussed some of the criteria they looked for. Ms Levine stated that looking at the supranational organization and what they are doing with regard to investment is highly relevant and an interesting avenue to pursue.

Ms Levine explained that the reason why they started from the investment side was that she worked in this industry and she believed it could play a role as a powerful private attorney general. It is important to get investors behind various initiatives, rules and regulations because they have the obligation and means to research and analyze them in order to fulfill their role as fiduciaries acting in the best interests of their clients. This responsibility is particularly important in the case of the bigger global investors as their reputation is so important to them. However, she noted that there are many other ways to approach this issue and they are all very interesting and they are welcome to the Study Group.

The Chair pointed that some of the comments made by the attendees raised some concerns. He said that in its inception the Study Group was motivated by the hope that the institutional investors could be stimulated to be more socially responsible investors. But he acknowledged that this is one of the facets of the problem, not the entire problem.

The Chair referred to the comment made by Dr Gehring and flagged the connection with the treaty obligations as an example of the complexity of the topic.

The Chair noted that one of the ideas behind the Study Group was to find ways to encourage investors (institutional or even investors of the standard of the IFC) to be aware of the need to be socially responsible. This is one way of putting the problem, but that would be a much more market-based approach than hard-law approach. He noted that institutions such as the IMF may have some rules; the IFC does have rules; some governments have rules (i.e. the Brazilian Development Bank); and several other financial institutions have rules with regard to environmental issues. However, he noted that these are not legal standards but policy standards. He referred to the comment made by Dr Gehring and asked whether the Study Group is dealing with this issue from the perspective of international law or from the perspective of economic policies. He then asked the attendees about the best approach for the subject. He asked whether it makes more sense to focus on soft-law, recognising that soft law may or may not be effective, or whether the Study Group should strive for hard-law solutions. He then proceeded to open the floor for discussion.

Dr Sharif Bhuiyan (Bangladesh) stated that both the study of soft-law and hard-law should be done in parallel. He noted that often times to arrive to hard law solutions there is a need for lots of work and practice to create the ground work for them. He said that in other areas of international law, as experience indicates, the practice started as a soft-law issue. Investors would have their own internal control systems to not fund investment projects that were not environmentally sustainable.

Ms Levine, in agreement with Dr Bhuiyan, stated that soft law reached places where hard law might, in the first instance, find slightly more difficult.

Dr Bhuiyan added that in relation to issues that are new, such as this one, one cannot resort to a hard law solution right away. It would be necessary to have a period of soft law activities in order to create the groundwork for other, creative situations.

Ms Levine argued that issues such as corruption and ethics have to be incorporated into the equation and that necessarily is the essence of soft law. She point to the work currently being done on culture, corporate culture and culture in the financial services

industry, which is extremely important. When one problem is solved by a hard law solution, another problem might arise. As such, not all problems would be covered until there is a cultural change and people are focusing on the right things and finding some responsibility for the world we are in.

Ms Levine further explained that while the soft law element is important, there will be some instances where hard law is essential. For example, in the area of climate one was never going to be able to kick off anything seriously until the Paris Accord. She added that it was a wonderful platform for soft law and for other solutions but one cannot get away from the issue of culture in corporations and financial firms. There is still work to do in this area.

The Chair noted that the very purpose of the Study Group was to encourage the topic to go further and deeper.

Ms Levine highlighted that she was interested in hearing what people from outside of the financial services and the corporation would like to contribute to the dialogue because contributions from the side of the argument are necessary for a balanced discussion.

Mr Oyeniyi Abe (Nigeria) asked, in the context of extractive resources, who determines the kind of investment that will have impact on the local communities - considering the fact that even the local communities (the individual or citizen) are not even parties to these treaties? As such, people are producing contractual agreements where local communities can sue on the contract. One example is the West African gas pipeline. Mr Abe posed some critical questions on this note:

- Who determines the kind of investments; how they will be invested; the kind of impact they will have; and what will be needed?
- How do we incorporate people in the debate about CSR – keeping in mind the element of human rights as the world is moving beyond corporations solely focused on profit-making?
- What about detriments to human life? There should be a link between business and corporations making investments and the human rights obligation or human rights impact assessment requirement.

The Chair said that there is, unavoidably, an overlap between what the Study Group talks about from the perspective of investor and what other Committees and Study Groups can also approach from different perspectives. The issues are connected and intertwined. He announced that this Study Group proposes to look at the problem from one perspective and perhaps other Committees or Study Groups could look at the same problem from a different standpoint. Inevitably, they would be dealing with problems which are partly common to both approaches and perspectives.

Dr Damilola S. Olawuyi (Nigeria) discussed analysis of the problem from the perspective of industry. He notes that there is no manual on what socially responsible investors should do to be fully compliant with international law. On the one hand, scholars argue that there is a need for responsible investment. However, people who need to know do not know enough. Consequently, there is a perception that corporations are not ready to be socially responsible. On the other hand, corporations are uncertain about how to be responsible under international law. Many of these norms have not been put together

as guidelines on social responsibility. He proposed that one of the key contributions of the Study Group could be to draft practical guidelines on how to be responsible for corporations.

Ms Levine stated that the lack of coherence was one of the issues identified and discussed with another ILA colleague. It was proposed that this committee could take steps to developing a framework for responsibilities.

Ms Levine highlighted the fair amount of work in area of government, particularly in the UK where there is a Stewardship Code, investor forum, and the Financial Reporting Council (FRC) as a supervisory body for the governance of the Stewardship Code. This has been seen from the governance side with clear requirements. However, this is lacking in other areas. There are the Principles of Responsible Investment (PRI), for instance, but they also lean mostly towards governance. Returning to Dr Olawuyi's suggestion, she noted that a guideline would be a good outcome.

Dr Hossain argues that the subject has been alluded to but not touched upon since some of the investments are done on the basis of long-term contracts. As such, the framework of negotiations is worth further investigation in the context of something that could go wrong. Brazil offered a lesson learned but more so in African countries. In some instances investment agreements are unbalanced, overlook certain issues and may cause adverse impact on the recipient. The African Development Bank (AfDB), for example, highlighted that in the context of negotiations, different elements need to be reflected and incorporated in the agreement itself. This is an ongoing endeavour, which the AfDB is engaged in.

Dr Hossain proposed that it would be useful to look at what the provisions and mechanisms that need to be incorporated for monitoring the provisions are. There is more concern in ensuring that the regulatory framework is reflected in agreements. This is because many countries, with the exception of Nigeria, have little experience, which can have adverse impact.

The Chair asked whether this forum might well be the source for certain suggestions, rules or standards that could be imparted to countries or companies that have not reached the level of experience to defend themselves.

Dr Hossain in response suggested that this Study Group provides an open-ended opportunity to produce this kind of material, which would be very useful for lawyers. There is that capacity to negotiate effectively and deal with matters that create adverse impacts.

Ms Levine further noted that the investment community needed to be aligned to the abovementioned problems. If one does not invest in safety infrastructure, one is likely to encounter problems. There are lessons to be learned within the business community. For example, BP, which was running a company with inadequate investment in safety standards.

Siemens, for instance, had a policy of determining how expensive it was to pay all the fines and decided that they could continue with their business and pay the fines. This practice was eventually exposed by the US, which came in under the Foreign Corrupt Practices Act. The fine for Siemens was the largest fine by a very large measure. This was truly a wake up call for other companies that they could not just incorporate paying bribes or fines into their business models.

Dr Hossain commended the Siemens judgement for the amount of information that was uncovered. In this context, comprehensive material on malpractices is useful, as the safety environment cannot be dealt with summarily.

Ms Levine agreed that this would not work out in the long term.

Dr Hossain argued that companies would be far more willing to sit and think through these issues. The ILA offers a good forum for the different bodies to interact and share their views and insights.

The Chair noted that he could not miss the opportunity, from all the discussions, to bring to everyone's consciousness of one particular situation that is being undertaken in Brazil. In the past two years, there have been enquiries and a large number of scandals with contracts being concluded between private contractors and government have been disclosed. That involved practically all contractors – companies that have services in construction and supply and several sectors of the government. Many of those companies have had their CEOs imprisoned. A legal issue was raised – whether the companies themselves should be put on a blacklist and prohibited from contracting with governments. This is something that, for a legal mind, makes sense. However, one should consider how this might affect the entire construction sector of a country or that it may put in jeopardy works and contracts, which are underway. Thus, the social harm that would originate from such heavy sanctions would be possibly greater than the advantages of resorting to the sanctions.

In the Chair's opinion, the legal community in Brazil or perhaps in other parts of the world never considered such a situation where an entire sector of the economy was involved in corrupt practices. He questioned what one would do in those instances, as going for hard law provision there is a possibility of shooting one's foot because works that would benefit the population itself would have to stop.

The Chair noted that this is an ongoing debate in the legal community, but there is a trend to relieve some of the sanctions as a means to allow companies to continue their works to avoid problems of layoffs, unemployment and other difficulties, which have to be dealt with. This is the kind of experience that very few countries might have faced in the past.

Ms Levine emphasised that it is about culture.

Dr Menkes returned to the issue of corporate culture and lack of coherence in terms of new guidelines. Perhaps with corporate culture, one should not focus a lot on the substantive issues, but rather on procedural issues. He raised some questions to consider in this regard:

- To what extent is there a compliance officer?
- How is he positioned in the corporate structure?
- To what extent do we take into account new developments?

Dr Menkes concluded that CRS substantive issues cannot be scheduled together. There are dozens of CSR guidelines from NGOs and national committees. However, there is a lack of guidelines or a general framework for establishing CSR compliance.

Ms Levine noted this as another good idea.

The Chair proposed exploring future work and the way forward.

Ms Levine noted that good suggestions were identified during the discussions. She then asked how the Study Group should operate given large amount of detail needed and extracting of information from different sources. Before asking the audience for their suggestions for increasing visibility of the Study Group to make it more effective, she pointed out some of the suggestions for the way forward including, a blog or frequent posts on the ILA website.

The Chair proposed that the first thing would be to have as many members involved as possible. He then invited members of the audience who were not members of the Study Group to become members.

Ms Levine agreed that it would be great to have new members in the Study Group. She further noted that there was a number of members who could not attend the session.

The Chair highlighted that while Study Group meetings take place every two years, communication among the Study Group would be a continuous process. He welcomed individuals who are interested in making contributions, making themselves available and joining the Study Group.

Dr Menkes asked whether the Study Group had considered the possibility of interacting with different institutions that come up with CSR initiatives on different stock exchanges.

Ms Levine in response noted that they had not yet considered this. However, they had discussed a number of topics in a meeting with the Johannesburg Stock Exchange. In the context of SRI Indices, she was of the opinion that there is no coherent structure and they are possibly not used a lot by the broader investment community. This could be a good starting point but there was a concern in understanding what the criteria for the indices are.

Ms Levine noted that all the information from the session would be processed and circulated to members. She also reminded the audience of the Study Group website on the ILA website and suggested that some of the material from the session, including the suggestions made in discussions and the session report would be posted on the website as a port to channel information.

The Chair announced that the Study Group is in the range of 15 members and that perhaps this could be expanded to 20 members – allowing more critical mass of ideas and suggestions and at the same time motivate those who could make it to the session to participate over the internet.

Ms Levine added that the members could have a conference call – bearing in mind the possibility that not everyone would be available. Perhaps the starting point could be using the website as a port. She welcomed younger members to join the Study Group as part of the leadership of the Study Group. This would entail shadowing herself as the Chair and Dr Myriam Senn as the Rapporteur of the Study Group.

The Chair in closing noted the great contribution of ideas during the session and thanked everyone in the audience for their participation.

TEACHING OF INTERNATIONAL LAW (INTEREST GROUP)

WORKING SESSION

TUESDAY, 9 AUGUST 2016, 9:00 am

Chair: Professor Math Noortmann (UK)

The Chair opened the session, noted with satisfaction the high number of attendees interested in the topic, and introduced the Chair of the Interest Group, Professor John Gamble. Teaching, he added, was a state of mind, and tended to be underestimated. At every ILA conference, however, they looked at better ways of teaching international law.

There would be three presentations addressing the topic of "Teaching International Law Better and to More People: Goals and Prospects". Professor Gamble, who had set up the Interest Group, would speak on "(Re) Conceptualising International Law Teaching"; Professor Annelize Nienaber, from the University of Pretoria, would address "Teaching International Law in (South) Africa: New Demands and New Insights" and Professor Charlotte Ku, who had taken part in work on these topics from the very beginning, would speak on "Remarks Prepared for the Interest Group on Teaching of International Law".

The Chair gave the floor to Professor Gamble.

Professor John Gamble (US) said that his experience had broadened his interest in teaching beyond his position as professor. The conclusion was that huge opportunities to teach international law better and to more people had not been seized.

Professor Gamble had been challenged to think more broadly about teaching by Judge Manfred Lachs and Professor Wilhelm von Humboldt. Judge Lachs, in his book entitled *The Teacher in International Law*, highlighted that international law should be understood not just by law students but by a much broader public, and argued for a balanced view of international law. Professor von Humboldt had described, two hundred years ago, a model university with "the unity of teaching and research" and "an organic link between the creation of knowledge and its transference".

Professor Gamble had had a long-standing interest in international law. As an undergraduate in Ohio, he had been intrigued by the UN Charter. Later, during graduate school at the University of Washington, he had worked as a research assistant at Treaty Research Center in Seattle – the first endeavour of its kind in the world – and Professor Peter Rohn, its director, had become his mentor and lifelong friend.

Professor Gamble then worked for the UW Law School on the law of the sea and oceanrelated treaties. The UN, at the time, was discussing the future of the 1982 *UN Convention on the Law of the Sea*.

Later, as Assistant Professor at the University of Rhode Island and Director of the Law of the Sea Institute, he watched the 1982 Convention develop. In 1976 he joined Pennsylvania State University and had taught international law regularly and written about it. His interest in teaching changed drastically in 1989 when the Ford Foundation, funding a major new survey on international law teaching carried out by the American Society of International Law (ASIL), selected him to head the survey as he was a recognised scholar and the only ASIL member with a background in statistics and survey research. He became the reference person for international law teaching in professional

associations and, over the years, had published books and articles on the teaching of international law and detected areas and strategies needing improvement.

Two examples illustrated the urgency to change attitudes and approaches towards teaching. First, the neglect from professional associations. The last time a global international law professional association held a plenary on teaching was in 1991, at the ASIL annual meeting. There had been over 350 participants, Professor Ku had chaired, and Professor Gamble had presented findings from the survey sponsored by the Ford Foundation.

The second example referred to the unchallenged gross distortions by public figures (mass media and government officials). An illustrative example was comments made by US Senator Dan Quayle during the 1988 presidential campaign on the Russians breaking their treaties; that was, in fact, an erratic statement.

Professor Gamble turned to the preoccupation with text in a visual cyberspatial world. Most international law research and scholarship avoided quantification and texts had limitations. International law – by nature detail-oriented and concentrating on the written word – in the 21st century operated in a digital/information age with increasing visualising modes in college classes. The international law scholarly community, not having responded to the tools and techniques of the information age, should adapt. The most important question was whether international law should move towards a practical accommodation in order to thrive in the information age. Graphics, for instance, were hardly used.

The most radical reaction to the textual orientation of law was that students and legal professionals never acquired the skill to recognise the ethical complexity of a given situation. Diagrams and other visual and audiovisual representation – in contrast – assisted in developing stylised sensitivities to certain historical structures or patterns of facts. How to visualise information was a central issue. Professor Edward Tufte, who had been a great influence in this area, described his work as "analytic design".

Professor Gamble's work at the TRC – in the first ever project to use computer storage of information on treaties – made him reflect on the statistical analyses of treaties and for almost 15 years he had developed the Comprehensive Statistical Database of Multilateral Treaties (CSDMT), a macroscopic, statistical approach. Treaties, he noted, were a good example of graphical representation of international law, and diagrams and graphic illustration in international law were rare.

Professor Gamble showed attendees examples evolved from his own teaching and the difficulties students had with certain concepts. They represented the nature of law and its effect on State behaviour, treaties and custom as sources of international law, regional and global treaties over time and signed at different time intervals, and the years needed to reach one thousand new treaties.

As to the concrete actions and suggestions, he mentioned the creation of a 21st century introductory course which left out details of treaties and court decisions. This, he observed, might make professors uncomfortable. The other option was having a multilateral treaty database (CSDMT), reaching new groups of students and which had proved an excellent teaching and research tool. It provided a framework for a broader audience and included virtually all multilateral treaties in force over the last 600 years. The CSDMT could

become a widely-available teaching tool for international law. A third option was having a quick, permanent response team for international law, which might be taken over by a professional association, to educate people more broadly in international law. In this way, the media's errors would be corrected in a clear, polite manner.

In conclusion, Professor Gamble stressed that international law was different to other subjects and a wide public around the globe could understand its basics and action for a better world. The ILA and ASIL should find ways to teach and explain international law to a wider audience. This, he added, needed to be done systematically and in an understanding of the audience.

Professor Annelize Nienaber (South Africa) said that she had an interest in university teaching and student learning and therefore followed different journals on international law teaching methods and the debate around the perspective from which international law should be taught.

She would be addressing the international law teaching from a (South) African perspective, dealing with:

- the issues arising in response to calls for a "new" international law to be taught representing a "decolonised" curriculum after the "fees must fall" student protests in South Africa in 2015/16 and radical voices calling for the "transformation" of the curriculum;
- the difficulties law students experienced with the subject of international law; and
- linked to the above, her experiences teaching on issues in international law of special interest to Africa.

First, the issues arising in response to calls for a "new" international law to be taught representing a "decolonised" curriculum. The 2015 student campaign to halt the customary annual increase in university fees across South Africa was supported in social media under the hash-tag #FeesMustFall. Students around the country took part in protests, which at times turned violent. The campaign was not just concerned with the increase in student fees but also with student accommodation, low-paid support staff, and objections to Afrikaans as a medium of instruction. Underlying these protests, there seemed to be legacies of racial discrimination and colonialism, high levels of unemployment, and the increasing income inequality in South Africa.

South African President Jacob Zuma, in response, announced a zero increase of university fees for 2016 and discussions on broader issues. A commission of inquiry was appointed and university authorities had tried to accommodate the needs of the students, but protests were likely to continue as they were rooted in economic realities and in South Africa's past and politics. Debates on university campuses showed the disillusionment and anger of some young black South Africans with a curriculum which they considered narrow and unreformed, and on university cultures where they felt like unwelcome outsiders. There had been attempts to renew the South African higher education system and several universities were revising their curricula.

Professor Nienaber had found it hard to comply with some calls for a "decolonised" international law curriculum, as they went beyond the four "drivers", ie responsiveness to

social context, epistemological diversity, renewal of pedagogy and classroom practices, and an institutional culture of openness and critical reflection. Some demands called for an academic application to purely political demands.

At the University of Pretoria, the under- and post-graduate international law curricula incorporated aspects of the "theory" of international law, including the so-called "Third-World Approaches" to international law (TWAIL). Students were taught different views on the forces and functions of the international legal system, and approaches emphasising that the law was an ideology for the purpose of gaining, cementing and justifying the exercise of power were highlighted. Throughout the curriculum, they sought to unveil the partial character of international law. However, some individuals calling for a 'decolonised' international law curriculum had in mind that international law must be taught from a "decolonised" perspective and that TWAIL should not only be part of the theory section of the international law curriculum, but it must be the curriculum; international law should be taught solely as substantially as a representation of the imperialist-colonialist hegemonic agenda, thus from a certain political viewpoint.

Three issues arose. First, the actual meaning of "decolonising" the curriculum. Second, if it were accepted that international law was taught as an ideology furthering the imperialist-colonialist hegemonic agenda, and there were attempts to address this by presenting an anti-colonialist TWAIL approach to the law, it would be a "slanted" view. Third, the international law curriculum did not exist in a vacuum; outside realities dictated its content and shaped the law, and in some parts of the international law curriculum, TWAIL gave little or no insight into the forces that shaped the law.

Professor Nienaber considered that rethinking the curricula and altering teaching approaches might be necessary, but should this be done in response to demands of a political nature?

Her second topic was on the reasons international law posed difficulties for students and it contained a suggested approach to overcome such difficulties.

In South Africa, international law was part of an undergraduate degree in law (LLB) or a BA in political science, and was taught as a content-based or doctrinal subject. Pedagogic methods were confined to those traditionally employed in law schools or faculties and the reason students found the study of international law difficult was not only bad teaching but also defective student learning.

The more "traditional" methods of communicating knowledge had been criticised as imparting the substance of law in a vacuum, ie, removed from the real lives of people and the everyday practice of law. The first problem that arose was that students perceived the study of international law as remote from their everyday lives. If they were not interested in international affairs, the subject matter of international law was seen as alien to the law that they intended to practice. The second problem was that, contrary to other doctrinal subjects, the approach in international law did not orient students to the reality of unfolding problems in international law. The subject matter did not fit neatly into a mould and therefore students should change their approach to studying.

Regarding context matters, and the difficulties related to student "learning", there were various theories. Professor Nienaber focused on the Gestalt learning theory and the

constructivist learning theory. The former emphasised the importance of the whole learning experience and the notion that what one saw and heard was determined by what one already knew (a pre-existing context). The latter argued that students learned by building patterns to interpret the world around them. In this case – constructivism – knowledge was not transmitted from lecturer to student but was built into the student's mind as a consequence of learning. The lecturer transmitted information to the student but the transformation of information into knowledge was an internal process by the student and presupposed that new knowledge was acquired in relation to prior knowledge.

Professor Nienaber addressed the implications of the Gestalt theory and constructivism for student learning in international law. She said that her students' difficulties with international law sprang from their inability to assign new information to any pre-existing context because in lecturing from an international law perspective she failed to show its synergy with the municipal legal system, a system with which the students were well acquainted. So the students in her course found it hard to fit the new information on international law into their existing schemata. She therefore looked for ways to present information in connection with what students already knew about the law generally, ie, she attempted to build on existing knowledge of the South African legal system in order to make sense of the international legal system. Students fared much better this way.

Based on her lecturing experience, Professor Nienaber concluded that a viable method of teaching international law at senior undergraduate level was by building on students' prior knowledge of (municipal) law. Not all aspects of international law – diplomatic protection, for instance – fit into this theory.

Next, Professor Nienaber addressed her experience teaching issues of special interest to Africa. Both in the undergraduate and postgraduate curricula at the University of Pretoria, much time was spent on the topic of South Africa's failure to arrest Omar alBashir during his visit to the country in 2015. Both the trial and appeal court cases were dealt with extensively in the module. Because it was a very topical issue, most students had followed the events as reported by the press. At times, what they had read in the press get in the way of the law. She called this problem "ideology over substance", the tendency of some students to uncritically believe what they read in the press. The only remedy for this was to keep recalling students to the law.

As a general conclusion, Professor Nienaber said that her position was that university should be an independent organisation that taught a variety of approaches to the law, including a variety of approaches to international law. University should not be dominated by a political agenda.

The Chair reflected on his experience as research professor in Transnational Law and Non-State Actors and the importance of keeping the teaching of international law free from curriculum politics He then gave the floor to Professor Ku for her presentation.

Professor Charlotte Ku (US) said that Professors Gamble and Nienaber brought a wealth of information and experience to the challenge of getting international law taught at universities and schools of law. As educators and practitioners, they detected the importance of international law to world order and the many opportunities globalisation offered to illustrate its relevance. But international law was often perceived both by students and many faculty alike as too distant from daily work and events to make it a priority. This

perception could be underscored by the mode of teaching which might make the subject appear esoteric and disconnected by reference to daily activity.

Professor Ku had worked at this puzzle over twelve years as Executive Director of ASIL and through her involvement with the ILA Committee on the Teaching of International Law and the present Interest Group. As a political scientist who had done most of her international law teaching in international relations or political science programmes, she worked hard to convey how the anarchy of a system of sovereign States was nevertheless regulated by rules and practices to allow for international activity. With the advent of increasingly localised effects of international law through human rights, trade, and environmental agreements, international law facilitated and gave rise to globalisation.

Two additional features of this teaching/learning puzzle were to consider the backgrounds of those teaching international law classes and how they could motivate students to go beyond national jurisdictions in their thinking. As to faculty background, the Professor Ku drew on the work and findings of Milan Markovic (Texas A&M University) and Ryan Scoville (Marquette University), who examined the backgrounds of faculty teaching the general international law class – to the extent that schools even taught a general international law class. Their study revealed that only 19% of US law schools offered a general international law class in both semesters of the typical law school academic year; 62% offered it in one semester and another 19% did not offer the course at all. The study further revealed that the majority of those teaching international law (66%) did not have experience outside the US. This included experience studying or working outside the US. Where there was international experience, it was limited. A further finding was that, of those who had studied outside the US, 32% had experience in Europe, Australia, New Zealand or Canada; 19% outside Europe; and 15% spent time in both western and non-western countries.

This could lead to a more national worldview of international law as faculty work within what was familiar to them. Further encouraging a national focus was to facilitate communication with students by using domestic concepts acquired in law schools and analogising or comparing those to international law. Another reason for looking at international law through a national lens was to show students where and how international law intersected with the domestic legal system in which most students would be working.

Another approach to demonstrating the significance and fundamental character of international law was to get students to work outside their national legal systems. This could work in a professional education setting like law education in the US. Adding a skillset or developing some other competitive advantage was of interest to students, their career counsellors, and employers.

At the Texas A&M University School of Law, their goal would be to have all students working in individual or group settings outside the US for a short period of time (4-12 weeks). These externship experiences would be accompanied by coursework to introduce international law and comparative legal systems, as well as creating awareness of professional cultures, practices, and standards outside the US. An important piece of this project was to get faculty out of the US, accompanying the students and working through the puzzle of what to teach and how to learn. The experiential piece provided an opportunity for active learning while equipping faculty to teach and motivate students.

Professor Ku concluded by informing attendees that the Texas A&M University programme would be piloted starting August 2016 with the goal of phasing in this requirement for all School of Law students in 2-3 years' time. If successful, this would be an important new initiative in law teaching in the US. The ultimate objective was to expand awareness and knowledge of international law among both students and faculty.

The Chair made brief reference to the presentations. The issue was how to teach international law. There was a new generation of students who no longer read articles but searched media files and professors and educators must adapt to the new requirements and present teaching materials in different ways. Professor Gamble's presentation stressed the importance of teaching international law better and to more people and, to do so, provided examples and suggestions for international law to thrive in the information age. Also, the new generation was no longer an observant one. It was critical and questioned teachers. Professor Nienaber illustrated this in her presentation when she referred to the student protests in South Africa and the calls for a "decolonised" international law curriculum. Professor Ku, for her part, had an interesting experience combining the political sciences with international law. It was extremely useful for students to be sent abroad to gain new experience. However, this was not always possible and might become a challenge.

The Chair highlighted the value of analysis and discussion – such as those within this Interest Group – on how better to teach international law, and invited comments from the floor.

Dr Charles A. Khamala (Kenya) said that, although international lawyers aspired to universal ideas, and despite international law having been incorporated in the Kenyan Constitution, it remained an alien notion to Kenyan practitioners and even more so to the public. Professor Gamble had referred to gross distortions by public figures and the teaching of simplified concepts of international law. This would be useful, especially in cases like the Kenya cases before the International Criminal Court, where the public opinion had initially favoured intervention but, after sustained negative publicity by the political class (including the executive and legislature), it was made to believe that the ICC was a neo-imperial institution engaged in "race hunting". It was therefore necessary for institutions to engage in outreach programmes, whether through civil society or academic institutions to inform the public about "universal" values.

Dr Busineje Kabumba, a non-ILA member from Uganda, referred to the need for contextual approaches to international law teaching. Based on his experience and the impossibility of obtaining a scholarship for study abroad, he drew attention to the situation of Ugandan students who might never interact with reality. This raised serious issues as – the subject being international law – detaching from reality was not an option. A fine line had to be drawn between the teaching objectives and the local context. In his case, to achieve this, Dr Kabumba focused on the issue of legitimacy, the idea of reclaiming a part of international law, and the contribution by Africa.

Professor Gamble said that these were very good questions and noted the usefulness of talking to people in practical ways, for instance, telling a person purchasing a tin of tuna that this was a protected species and, in this way, raising awareness. Information and communication had to be clear and in the US some popular ideas and attitudes were based on errors and needed to be corrected. The best way to clarify and correct was to proceed in a gentle, persuasive manner.

Professor Ku stressed the importance of the outreach of international institutions and organisations. The challenge was the financial side. However, experience could also be gained without travel. Conferences like the present one were important to see the outside world, interact and learn together.

Professor Nienaber noted that international law was actually breaking her students' perceptions.

Dr Pauline Collins (Australia) was surprised that, in Australia – a common law country – international law was not a core subject. She suggested developing a scheme for international law teachers to be integrated into schools to enrich dialogue, engagement, and learning for students around the world. Teachers would also benefit from this experience.

Dr Manuel Almeida Ribeiro (Portugal) said that he was a member of this Interest Group since it used to be an ILA Committee, and that discussing ways of teaching international law deserved a permanent effort. It would be useful to have a permanent forum for discussion, questioning, and exchange of experiences. This could be done through a blog, website, or any other way of putting the members in communication on a permanent basis. The conference sessions could form part of a digest based on the exchange of ideas during the previous years.

The Chair said that the problem was that the method of the teaching of international law did not seem to be a priority topic with the teachers of international law.

Professor Gamble answered that, according to the ILA statutes, nominations for new membership had to be made by the different branches of the ILA. This was a procedural matter that had to be observed.

Dr Almeida Ribeiro suggested, as member of the Executive Council of the ILA, raising this question at future Council meetings.

The Chair said that the discussion encompassed teaching in general, and not only the teaching of international law. As to financial aspects, they represented a challenge. Most western students had a wealthy basis and access to learning materials whereas, in developing countries student lacked access to important publications. That circumstance required a rethinking of the teaching international law and the absence of funding made it even harder.

Ambassador Ihor Turyanskiy (Ukraine) said that Ambassador Oleksandr Kupchyshyn, President of the Ukrainian Branch, had observed that Ukraine had long historical traditions in the field of international law, which substantially contributed to development in this field. They also made a substantial contribution teaching students from Ukraine and other countries around the world. After the Second World War, the International Relations Faculty and Chair of International Law were established at Kyiv State University, and many of its Ukrainian and Eastern European graduates held high positions in their respective countries. Graduates from the Institute of International Relations attached to Kyiv National University had become, among others, ambassadors, lecturers and professors in Kyiv and other Ukrainian universities, teaching public and private international law. The Research Institute of State and Law, for its part, with its International Law Department, had been long-standing within the framework of the Ukrainian National Academy of Sciences.

Ambassador Turyanskiy observed that this was an era of globalisation in which international relations – both in politics and economics – were increasingly important and required qualified specialists.

The Chair opened the floor to concluding remarks.

Professor Gamble reiterated the need for international law teaching to adapt to the new times and stressed the importance of having good teaching methods and experienced educators.

Professor Ku considered that the ILA could contribute to create opportunities for formal mechanisms and stressed the importance of using technological devices for teaching and training and collecting information in a more visible way.

The Chair thought that it was a very good idea to further the discussion and efforts on international law teaching. Input from colleagues around the world would no doubt be helpful, and technology should be available to all universities. They should aim to find ways to give the poorer universities access to technology to enable a better teaching and learning of international law.

The Chair thanked Professors Gamble, Nienaber and Ku for their presentations, and attendees for their comments.

Reporter: Viviane Contin-Williams (UK)

STUDY GROUP ON DUE DILIGENCE IN INTERNATIONAL LAW

SECOND REPORT

July 2016

Chair: Duncan French
Rapporteur: Tim Stephens

INTRODUCTION

The ILA Study Group on Due Diligence was established to consider the extent to which there is a commonality of understanding between the distinctive areas of international law in which the concept of due diligence is applied.[1] The members of the Study Group are listed in the Annex at the conclusion of this Second Report.

The First Report (2014) set out the initial work of the Study Group. It provided a summary of the history of due diligence in international law, the development of due diligence in the context of State responsibility, and the role of due diligence in several specific areas of international law. The First Report examined in some detail a number of disciplinary areas where due diligence has been deployed to supply content to obligations of conduct, namely international investment law, international human rights, transnational criminal law and international environmental law. The primary purpose of the First Report was to map how due diligence is utilised in those selected fields of international law.

This Second Report is not intended to be a continuation of this mapping exercise. It undertakes a thematic and analytical, rather than sectoral, approach. It is therefore concerned less with *how* due diligence is used in specific fields and more with broader, analytical questions, concerning *what* functions due diligence serves, and *why* it is employed as a standard of conduct in many and varied areas of international law.

The Second Report is divided into three Parts. Part 1 introduces overarching issues and questions, such as the relevance and appeal of due diligence across international law, whether as a result it constitutes a broader principle, and whether it is susceptible to clear and concise definition in these terms. Part 2 turns to operational issues, namely the normative content of due diligence in terms of standards of good governance and administration, and the factors that may influence variability in this standard (such as levels of economic development). Part 3 considers specific areas of contention where some of these normative and operational issues are being played out and are most visible, including in relation to the performance and responsibility of business enterprises and international organisations.

In compiling the Second Report the Rapporteur has had the benefit of significant contributions from several Study Group members, and these are acknowledged in footnotes accompanying those sections of the Second Report that draw from these contributions.[2]

PART 1 – OVERARCHING ISSUES AND QUESTIONS

A – Why due diligence is (so regularly) employed as a standard of conduct in various areas of international law

At its heart, due diligence is concerned with supplying a standard of care against which fault can be assessed. It is a standard of reasonableness, of reasonable care, that seeks to take account of the consequences of wrongful conduct and the extent to which such consequences could feasibly have been avoided by the State or international organisation that either commissioned the relevant act or which omitted to prevent its occurrence. The resort to due diligence as a standard of conduct should be seen against the backdrop of general approaches to accountability in international law.

Due diligence is core to many areas of international law for the primary reason that there is no uniformity in the standard of conduct expected of States or international organisations in discharging their international legal responsibilities that range across a wide arena of obligations and potential harms to other actors. With limited exceptions (for instance in relation to the management of hazardous materials or activities[3]) international law has not embraced strict or absolute liability. And as international law develops into new, more complex, areas (e.g., in response to cyber-attacks), due diligence is increasingly viewed as an important tool in responding to such challenges.[4]

In international law obligations of conduct are far more common than obligations of result. This means that international law tends to focus primarily on the behaviour of States rather than the outcomes of that behaviour. Due diligence standards preserve for States a significant measure of autonomy and flexibility in discharging their international obligations. Rigid application of international rules, mandating results, or imposing liability in the event of breach in any circumstance cuts against the grain of notions of State sovereignty and domains of non-interference.

The use of due diligence makes the international legal system adaptable to meet particular needs of States within a diverse international community. Akin to the margin of appreciation (*marge d'appréciation*) concept developed in European human rights jurisprudence,[5] due diligence avoids perfect parity of obligations in favour of a more flexible approach to performance so as to encourage broader participation in treaty and customary regimes. In doing so it is a strategy to avoid oscillation between apology and utopia. As Koskenniemi has observed in relation to 'particularism' within customary international law standards:

> It is commonplace to read the most varied kinds of contextual determinants into the ascertainment of [a] State's customary obligations. Classically, this has been so in respect of rules of State responsibility and especially the customary standard of due diligence. More

[3] See, for example, the Convention on International Liability for Damage Caused by Space Objects 1972, article II of which provides that 'A launching State shall be absolutely liable to pay compensation for damage caused by its space object on the surface of the Earth or to aircraft in flight.'

[4] See further the work of the ILA Study Group on Cybersecurity, Terrorism and International Law, available at http://www.ila-hq.org/en/committees/study_groups.cfm/cid/1050, and the Tallinn Manual on the International Law Applicable to Cyber Warfare, available at https://ccdcoe.org/research.html.

[5] See Yuval Shany, 'Toward a General Margin of Appreciation Doctrine in International Law?' (2005) 16 *European Journal of International Law* 906.

> recently, the search for equitableness has affected the law on, for example, natural resources, treatment of individuals, State succession or the status of non-State actors.[6]

Due diligence as an open-ended standard or principle therefore avoids difficulties that can arise in agreement on precise rules (which may be impossible to achieve) and in the enforcement of such rules (which may be controversial if indeed achievable). Again, borrowing from Koskenniemi, due diligence can be seen as a technique of proceduralisation, deferring controversial inquiries as to the content of substantive rules regulating wrongdoing to less controversial questions relating to informed decision-making and process. Rather than posing answers to questions of breach, due diligence instead tends to inquire whether States have taken reasonable and appropriate steps to avoid or mitigate injury to other States.

The effect of due diligence is therefore, in some contexts, to dilute the stringency of State obligations. However, there may be sound reasons for this. Less rigid focus on the equivalence of obligations may encourage broader participation in an international regime, and thus, paradoxically, over time the regime may be strengthened (or, in relation to customary rules, State practice and *opinio juris* might develop the necessary extent and clarity to support its crystallisation). Moreover, and as a related point, the content of due diligence duties themselves are not fixed. They can and do evolve over time. Hence while a broad due diligence obligation may be an initial strategy to promote participation, once involvement increases the strictness of the applicable standard can be enhanced and mature into a more demanding system of legal accountability. An example of this is the obligation to undertake environmental impact assessment which has now been considered by the ICJ on several occasions and progressively strengthened.[7]

There are stark disparities in the capacity of States to fulfil international obligations and, appropriately, States from the Global South may appeal to the apparent forgiving character of due diligence as a benchmark for the performance of obligations. Due diligence introduces flexibility in this respect to serve a broader international community objective to ensure that States with limited economic capacity can participate in the international legal system without being burdened by unreasonable normative demands.

However there are a number of contexts in which such exceptionalism has its limits or does not apply at all. For instance in the law applicable to diplomatic missions and diplomatic immunity, special duties of protection apply irrespective of the capacity of the receiving State.[8] Crawford explains that this 'creates a special standard of care over and above the normal obligation to show due diligence in protecting aliens within the State.'[9]

[7] *Pulp Mills on the River Uruguay, Case Concerning (Argentina v Uruguay)* (Merits) [2010] ICJ Rep 14 (*Pulp Mills Case*); *Certain Activities Carried out by Nicaragua in the Border Area (Costa Rica v Nicaragua)* and *Construction of a Road in Costa Rica along the San Juan River (Nicaragua v Costa Rica),* Judgment of 16 December 2015 (cf. the Separate Opinion of Judge Donoghue's in which she observed that due diligence and environmental impact assessment should not be fixed and prescribed, and that there should be 'scope for variation in the way that States of origin conduct the assessment').

[8] Vienna Convention on Diplomatic Relations 1961, Article 22(2).

[9] James Crawford, *Brownlie's Principles of Public International Law* (8th ed, 2012), p. 403.

Another example is in relation to the law of the sea. In *Responsibilities and Obligations of States Sponsoring Persons and Entities with Respect to Activities in the Area (Seabed Mining Advisory Opinion)*[10] the Seabed Disputes Chamber of the International Tribunal for the Law of the Sea (ITLOS) rejected the argument that the stringency of marine environmental protection obligations could be adjusted according to the level of development of a State. It would 'jeopardize uniform application of the highest standards of protection of the marine environment' if 'sponsoring States "of convenience"' became prevalent.[11] This decision can be seen as one that balances two competing community objectives in relation to due diligence. On the one hand an objective, enshrined in the notion of common but differentiated responsibility, which takes account of the historical and economic disadvantages faced by developing States, with, on the other hand, the collective community interest in protecting global environmental commons.

Due diligence is imbued with differing content according to the specific area of international law in which it is invoked. This is illustrated in the most recent decision of the ICJ concerning transboundary environmental damage: the joined proceedings in *Costa Rica v Nicaragua; Nicaragua v Costa Rica*.[12] These proceedings concerned two separate claims:

1. By Costa Rica against Nicaragua, for Nicaragua's military occupation of Costa Rican territory and for Nicaragua dredging a channel in the occupied area, as well as a separate claim that Nicaraguan dredging works on the San Juan River was in violation of international law;
2. By Nicaragua against Costa Rica, for Costa Rica carrying out major road construction works in the border area between the two countries on the San Juan River, in violation of international law.

In the first claim, the Court found that Nicaragua had breached Costa Rican territorial sovereignty and awarded reparations on that basis. In relation to the environmental claim, however, after affirming previous ICJ jurisprudence on the need for environmental impact assessments and for consultation with affected States, the ICJ found that Nicaragua did not breach international environmental law obligations by engaging in dredging activities, as it did not give rise to a risk of significant transboundary harm and thus did not activate the need to carry out an environmental impact assessment.

In the second claim, the Court reaffirmed the need for environmental impact assessments where there is a risk of significant transboundary harm. The Court ruled that Costa Rica had failed in its obligations to engage in a proper environmental impact assessment, as it did not make its assessments prior to construction but rather did so after construction, thus not satisfying the requirements for environmental impact assessments at customary international law. However, the evidence did not ultimately show that the construction of the road caused significant transboundary harm to Nicaragua.

Thus this most recent decision of the ICJ affirmed the following principles:

---

[10] (2011) 50 ILM 458.

[11] Ibid, para. 159.

[12] *Certain Activities Carried out by Nicaragua in the Border Area (Costa Rica v Nicaragua)* and *Construction of a Road in Costa Rica along the San Juan River (Nicaragua v Costa Rica),* Judgment of 16 December 2015.

- That due diligence involves an obligation to carry out an environmental impact assessment if there is a risk of significant transboundary harm (following *Pulp Mills*);
- That where the environmental impact assessment confirms a risk of significant transboundary harm, due diligence requires that the State planning to undertake the activity notify and consult in good faith with the affected State, where that is necessary to determine the appropriate measures to prevent or mitigate that risk;
- The obligation to carry out an environmental impact assessment requires the assessment to be done ex ante, not post hoc after construction has already started;
- The procedural obligation to undertake environmental impact assessment is distinct from the substantive obligation (not to cause transboundary harm).

It remains to be seen however, whether due diligence is strengthened or diluted by this apparent move to separate procedural and substantive obligations. As Brunnée notes, 'it appears as if the ICJ distinguishes between the duty to take diligent steps to *prevent* significant transboundary harm, which it then deals with under the rubric of separate procedural obligations, and the duty to take diligent steps not to *cause* harm, which it considers cannot be violated simply by a failure to act diligently'.[13]

B – Whether due diligence embraces/constitutes a broader principle of international law[14]

The core content of the due diligence principle was articulated in the *Corfu Channel* case,[15] namely 'every State's obligation not to allow knowingly its territory to be used for acts contrary to the rights of other States'. This principle has developed over a lengthy period, is now clearly a part of customary international law, and reflects cornerstone concepts of international law (including State sovereignty, equality, territorial integrity, and non-interference).

The tri-partite core of the due diligence principle is as follows:

- A sovereign State is obligated to ensure;
- That in its jurisdiction (which includes all those spaces where the sovereign exercises formal jurisdiction or effective control[16]);
- Other States' rights and interests (including those with respect to the protection of their citizens and companies) are not violated.

This broad principle of due diligence can be understood as underlying more specific rules of due diligence. Hence, it can be viewed as a default standard that is triggered in operation if no more specific elaboration of due diligence or stricter standard is in existence.

Subject to specific primary rules, this general principle of due diligence remains applicable and requires active (though not easily identified) measures of due diligence by States

[14] This section is based upon a submission to the Rapporteur by Study Group Member Eric De Brabandare.

[15] *Corfu Channel Case* (United Kingdom of Great Britain and Northern Ireland *v.* Albania), [1949] ICJ Rep 4.

[16] *Al-Skeini v UK* [2011] ECtHR 55721/07.

in their own territory. Even if the content of due diligence is very general, it is clear that its requirements are defined at the level of international, rather than national, law. Today, of course, many areas of State behaviour are covered by more detailed primary rules of international law. An example is the treatment of aliens, which was once a major arena for the application of due diligence but is less so today because of the application of human rights and investment protection law.

The question was raised in the First Report of the Study Group as to whether it would be desirable to interpret and understand the due diligence standard only within its particular context. As was stated in the First Report:

> Normative and institutional fragmentation has revealed significant divergences in the application of due diligence, both in terms of the scope of its application, and also seemingly its content. Nevertheless, the idea that there is a common standard persists. To mention one contemporaneous example; the obligation on States "to refrain from…acquiescing in organized [terrorist] activities within its territory directed towards the commission of such acts [in another State], when the acts referred to in the present paragraph involve a threat or use of force". How should one approach such an obligation? If it is accepted for the moment that the standard required of the host State is that of due diligence, to what extent is this an obligation that flows from the Court's comments in *Corfu Channel*? Or must the application of the due diligence standard be interpreted and understood only within its particular context?

Given the generality of the due diligence principle, as articulated in the *Corfu Channel* case, it may be argued that there is no contradiction between the general standard and more specific expressions of due diligence in sub-branches of international law. The broader obligation of due diligence underlies the more specific instances of due diligence, which will become operational if they apply in a given situation. As there is no norm-conflict between the very general due diligence and these more specific manifestations, it seems also justified to say that no conflict of law rules are needed to resolve these (such as *lex generalis* and *lex specialis* rules).

PART 2 – OPERATIONAL ISSUES

A – Matters affecting whether the standard of due diligence is met[17]

This section of the Second Report addresses the substantive content of due diligence, that is what can be expected of a State which has assumed a due diligence obligation.

The issues addressed in this section are linked to the issues covered in Part 2.B below ('Whether there are factors that can vary this standard'). The question is also closely linked to the objectivity or subjectivity of the standard of conduct. It is acknowledged that a primary rule may set out one or more elements to assess in determining whether a State has met a due diligence obligation.[18]

---

[17] This section is based upon a submission to the Rapporteur by Study Group Member Eric De Brabandere.

[18] For example, article 18 of the International Convention for the Suppression of the Financing of Terrorism 1999, 2178 UNTS 197, requires States parties to adopt domestic legislative measures directed at 'financial institutions and other professions involved in financial transactions to utilize the most efficient measures available for the identification of their usual or occasional customers, as well as customers in whose interest accounts are opened, and to pay special attention to unusual or suspicious transactions and report transactions suspected of stemming from a criminal activity.'

It is suggested that it is possible to identify a number of elements that may be considered core to due diligence as a standard of conduct. Precisely how the due diligence standard is applied is still subject to considerable discussion and debate (as befits a principle which derives much of its utility because of its general character). Courts and tribunals often provide little in the way of detailed analysis of the standard and whether it has been met in the circumstances.[19] There is an important secondary issue here; due diligence is a positive obligation on States but will tend to be assessed on an *ex post facto* basis to determine compliance and responsibility. For obligations of result, ascertaining (il)legality – though often not without uncertainty – is usually less problematic. But in terms of due diligence, how can States ascertain clearly, and in advance, that they are satisfactorily meeting – and continuing to meet – their obligations of conduct?

'Reasonableness' as the overarching standard

It is difficult to define the standard in absolute terms, as was acknowledged in the *Seabed Mining Advisory Opinion*:

> The content of "due diligence" obligations may not easily be described in precise terms. Among the factors that make such a description difficult is the fact that "due diligence" is a variable concept. It may change over time…[20]

At the same time, the difficulty in defining the standard does not imply that the obligation to act in due diligence has no content. The due diligence standard, from this perspective, bears some resemblance to those rules of international law which leave States discretion in deciding which specific measure can be taken in order to comply with an obligation. States have significant latitude in the choice of means they employ when taking all measures they could reasonably be expected to take. However, discretion in the choice of means can be limited either because (1) the primary norm in itself may explicitly prescribe certain means, such as specific duties to legislate in order to prevent and repress certain conduct, or (2) a specific type of measure is indispensable to avoid harm. Where regulation is necessary for States to meet an international obligation effectively, custom may develop into an express duty on States to regulate (e.g. in order to regulate potentially harmful activities). As such, due diligence has been described as 'a flexible reasonableness standard adaptable to particular facts and circumstances, provid[ing] the underlying legal framework. It amounts to "due, or merited, care"'.[21]

Although difficult to define in precise terms, several elements can be derived from case-law and treaty practice to identify core features of due diligence as a concept and principle.

Another example is article 7 of the United Nations Convention against Transnational Organized Crime 2000, 2225 UNTS 209, requiring imposition by parties of a 'comprehensive' domestic supervisory and regulatory regime for banks and non-bank financial institutions.)

[19] See, for example, *National Grid plc v. The Argentine Republic*, UNCITRAL, Award, 3 November 2008, paras. 189-190.

[20] (2011) 50 ILM 458, para. 117.

Reasonableness

'Reasonableness' is a golden thread in determining which measures States should take to act in a duly diligent manner.[22] Indeed, one might describe a due diligence obligation as an obligation for the State to take *all measures it could reasonably be expected to take*.[23] Even in the instance of preventing a gross violation of international law from occurring, such as the commission of genocide, the standard articulated by the ICJ in order to incur international responsibility was that a State 'manifestly failed to take all measures' that were 'within its power' to take.[24]

In the history of international law, due diligence in the context of the protection of aliens was expressed as the need for States to take all measures it could 'reasonably' be expected to take.[25] For example, in the *Wipperman* case it was stated that no State is responsible for acts of individuals 'as long as *reasonable diligence* is used in attempting to prevent the occurrence or recurrence of such wrongs.'[26] In the *Neer* case, often quoted as representing the international minimum standard, the Claims Commission described the international minimum standard in these terms:

> the propriety of governmental acts should be put to the test of international standards, and (second) that the treatment of an alien, in order to constitute an international delinquency, should amount to an outrage, to bad faith, to wilful neglect of duty, or to an insufficiency of governmental action so far short of international standards that every *reasonable* and impartial man would readily recognize its insufficiency.[27]

Reasonableness has echoes in subsequent practice, well beyond the treatment of aliens and diplomatic protection. In relation to the UN Guiding Principles on Business and Human Rights,[28] developed by John Ruggie as Special Representative of the Secretary-General on the Issue of Human Rights and Transnational Corporations and Other Business Enterprises, similar references to 'reasonableness' can be found. In this context the concept of due diligence, applicable to transnational corporations, is defined as:

> Such a measure of prudence, activity, or assiduity, as is properly to be expected from, and ordinarily exercised by, *a reasonable and prudent [person or enterprise]* under the particular circumstances; not measured by any absolute standard, but depending on the relative facts

> of the special case. In the context of the Guiding Principles, human rights due diligence comprises an ongoing management process that *a reasonable and prudent enterprise* needs to undertake, in light of its circumstances (including sector, operating context, size and similar factors) to meet its responsibility to respect human rights.[29]

Similar references are found in corporate due diligence obligations in transnational criminal law,[30] and in relation to the progressive realisation of human rights.[31] The Draft Articles on Prevention of Transboundary Harm from Hazardous Activities also contain references to 'reasonableness'.[32]

Yet, the term 'reasonable' is, as the due diligence standard itself, difficult to determine *in abstracto*, and leaves States much discretion in the choice of means. Reasonableness implies an evaluation of the measure taken by reference to what could be *expected* from a State. And this is problematic to define, since what could be *expected* from a State cannot be ascertained in general terms. The assessment of the reasonableness of the measures taken depends also, *inter alia* on the question whether 'what is reasonable' is assessed through a standard which takes into account the level of development of a State.

Good government

The expectation of 'good government' as an element of duly diligent behaviour finds some support in the writings of publicists and in international case law. The parameter here is closely linked to the general standard of 'reasonableness' and the potential variability of the due diligence standard according to the State's level of development.

In his 1955 Hague Academy lecture, Freeman noted that the standard of due diligence requires 'nothing more nor less than the reasonable measures of prevention which a well-administered government could be expected to exercise under similar circumstances.'[33] Some investment tribunals have posited the need for States to act 'in accordance with the parameters inherent in a *democratic* State',[34] in order to delimit what could reasonably be expected from a State. In *AAPL v. Sri Lanka*, the Tribunal noted

> A number of other contemporary international law authorities noticed the "sliding scale", from the old "subjective" criteria that takes into consideration the relatively limited existing possibilities of local authorities in a given context, towards an "objective" standard of

> vigilance in assessing the required degree of protection and security with regard to what should be legitimately expected to be secured for foreign investors by a reasonably well organized modern State.[35]

Such an approach also is implicit in the *Seabed Mining Advisory Opinion*.[36]

International minimum standard and national treatment

Notwithstanding the ascendance of the international minimum standard, a matter sometimes referred to in mistreatment of alien cases in assessing whether a due diligence standard is met, and whether the acts taken by the State are 'reasonable,' is how a State has treated its own nationals. Treatment of a foreign national may be considered unreasonable if it is of a lesser quality and degree than that normally provided to nationals.[37]

In the *Alabama Claims Arbitration,*[38] the British government argued, unsuccessfully, for a (restrictive) national standard, contending that a lack of due diligence meant 'a failure to use…such care as governments ordinarily employ in their domestic concerns, and may reasonably be expected to exert in matters of international interest and obligation.'[39] Max Huber in *British Property in Spanish Morocco* case[40] observed that:

> Vigilance, which from the point of view of international law the State is required to guarantee, can be characterized by applying by analogy the Roman law term of *diligentia quam in suis*. This rule, consistent with the overriding principle of the independence of States in their internal affairs, in fact offers States, for their nationals, the degree of security which they can reasonably expect. As long as the vigilance exercised clearly falls below this level *compared to nationals of a foreign State*, the latter is entitled to consider this to be an injury to its interests which should enjoy the protection of international law.[41]

This element implies that at least some account is taken of the capacities of the relevant State and its relative level of development.

Control over territory and non-State actors

International humanitarian law contains specific due diligence obligations within both treaty and customary international law, and in some situations it requires, for the standard to be applied, that the State should have control over its territory.[42] Also connected to the

issue of control, which goes to the reasonableness of State action (or inaction) in some circumstances, is the degree of influence a State has over non-State actors.

In the *Nicaragua* case the ICJ applied the 'effective control' test for determining whether the United States was responsible for the actions of a paramilitary force.[43] In *Prevention and Punishment of the Crime of Genocide (Bosnian Genocide* case) the ICJ reaffirmed the 'effective control' test.[44] In contrast, the ICTY in *Tadić* contended that the less demanding 'overall control test' ought to apply both in determining whether a conflict was international in character, and whether the actions of the Bosnian Serbs could give rise to the international responsibility of the Former Republic of Yugoslavia.[45] Given that the application each test turns on the level or degree of control exercised then due diligence is relevant to both. In the *Bosnian Genocide* case the ICJ explained the operation of the due diligence principle in relation to the obligation to prevent genocide:

> In this area the notion of "due diligence", which calls for an assessment *in concreto*, is of critical importance. Various parameters operate when assessing whether a State has duly discharged the obligation concerned. The first, which varies greatly from one State to another, is clearly the capacity to influence effectively the action of persons likely to commit, or already committing, genocide. This capacity itself depends, among other things, on the geographical distance of the State concerned from the scene of the events, and on the strength of the political links, as well as links of all other kinds, between the authorities of that State and the main actors in the events. The State's capacity to influence must also be assessed by legal criteria, since it is clear that every State may only act within the limits permitted by international law; seen thus, a State's capacity to influence may vary depending on its particular legal position vis-à-vis the situations and persons facing the danger, or the reality, of genocide. On the other hand, it is irrelevant whether the State whose responsibility is in issue claims, or even proves, that even if it had employed all means reasonably at its disposal, they would not have sufficed to prevent the commission of genocide. As well as being generally difficult to prove, this is irrelevant to the breach of the obligation of conduct in question, the more so since the possibility remains that the combined efforts of several States, each complying with its obligation to prevent, might have achieved the result — averting the commission of genocide — which the efforts of only one State were insufficient to produce.[46]

Degree of risk

As noted in the *Seabed Mining Advisory Opinion*, '[due diligence obligations] may also change in relation to the risks involved in the activity.'[47] This is also reflected in the ILC's

Draft Articles on the Prevention on Transboundary Harm. The Commentary to Article 3 of the Prevention Articles explains that due diligence standard should be 'appropriate and proportional to the degree of risk of the transboundary harm'. [48] The UN Guiding Principles on Business and Human Rights also accepts that due diligence requirements increase in situations in which the risks of harm are known to be particularly significant.[49]

Knowledge of an activity or potential risk

States can usually only be expected to act in accordance with a due diligence obligation to prevent harm if the State has knowledge of the situation which requires action.[50] However, in some circumstances a State may be under a specific obligation to use best efforts to gain knowledge of activity within its territory or jurisdiction.

The State has a due diligence obligation to monitor certain kinds of activities taking place on its territory or under its jurisdiction. As observed in the *Corfu Channel* case, 'the fact of…exclusive territorial control exercised by a State within its frontiers has a bearing upon the methods of proof available to establish the knowledge of that State as to such events.'[51] It may allow the State which is the victim of an international wrong 'a more liberal recourse to inferences of fact and circumstantial evidence.'[52] In that case, the Court concluded that the laying of the minefield in the channel 'could not have been accomplished without the knowledge of the Albanian Government.'[53] Albania was held responsible because it either knew or should have known about the activity.

Bad faith/absence of any measure

A State cannot be considered to have acted diligently when the State has acted in bad faith or has knowingly refused to take any measures whatsoever. This was the case, for example, in *Wena v. Egypt[54], in which the Tribunal found that the failure by the State to take any action against those responsible for the forceful seizure of Wena's property constituted a breach of the full protection and security standard.[55] This idea is very much*

in conformity with due diligence as understood in international environmental law, to the extent that a State has to act diligently in the event of foreseeable harm.[56]

B – What factors, if any, may vary a due diligence standard[57]

It is useful to consider due diligence standards in light of both objective and subjective criteria. An objective standard of due diligence means that all States are held to the same standard, irrespective of their individual characteristics. Subjective standards of due diligence allow for varying expectations of States, taking into account considerations such as the level of development of a State, the degree of control a State has *de facto* over its territory if subject to alien occupation or territorial control by guerrilla forces, or other characteristics that put a State in a unique position at a given time.[58]

Subjective Variation in Due Diligence Obligations

The level of a State's economic development can have a bearing on the operation of due diligence obligations in some circumstances. For instance, the World Trade Organisation allows States to self-identify as 'developing countries' but reserves the designation of 'least developed countries' to those accepted by the United Nations Development and Policy Analysis Division.[59] The World Bank relies on its own World Development Indicators to distinguish low, lower-middle, upper-middle, and high income countries.[60]

In international environmental law, the language and concept of "common but differentiated responsibilities" emerged from the Rio Conference on Environment and Development in 1992 and the treaties it produced.[61] Three factors justify such an approach in environmental law. The first is the need to balance environmental protection with economic development of all States on an equitable basis. Measures of environmental protection should be designed and implemented in such a way as to support rather than inhibit States in achieving human development objectives. The second factor is the historical responsibility of developed States for environmental damage since the industrial revolution and their continuing, vastly disproportionate, consumption of the Earth's resources and contributions to the biggest environmental threat of the Anthropocene: climate change. The third factor is the greater financial and technological capacity of more developed

[61] Rio Declaration on Environment and Development (1992) 31 ILM 876, principle 7; Convention on Biological Diversity 1992 (CBD), 1760 UNTS 79, article 6; United Nations Framework Convention on Climate Change 1992 (UNFCCC), 1771 UNTS 107, article 3(1); United Nations Convention to Combat Desertification 1994 (UNCCD), 1954 UNTS 3, article 6 (this latter does not use the terms "common but differentiated responsibilities" but the concept is implicit).

States to shoulder the costs of transition towards more environmentally sustainable use of resources. Reflecting these considerations, the Rio Declaration provides:

> States shall cooperate in a spirit of global partnership to conserve, protect and restore the health and integrity of the Earth's ecosystem. In view of the different contributions to global environmental degradation, States have common but differentiated responsibilities. The developed countries acknowledge the responsibility that they bear in the international pursuit to sustainable development in view of the pressures their societies place on the global environment and of the technologies and financial resources they command.[62]

Elsewhere, the Rio Declaration requires States to apply the precautionary approach 'according to their capabilities.'[63] The precautionary approach was analysed by the Seabed Disputes Chamber in the *Deep Seabed Mining Advisory Opinion*. On the one hand, the Chamber held that the general provisions of the UN Convention on the Law of the Sea (UNCLOS), especially Part XI, should be objectively defined (i.e. the standard of the good government) as the relevant Part does not explicitly provide for a variable standard.[64] On the other hand, the Seabed Disputes Chamber held that it was possible that specific Regulations established by the International Seabed Authority under the authority of Part XI, could allow for variable degrees of diligence according to a State's capabilities.[65] However, the Chamber was unwilling to read "capabilities" as a reference only to the level of economic development of a State, but rather considered 'capabilities' in light of all the circumstances, including the resources, knowledge and technological capability available in fact in each case.[66] The Chamber no doubt had in mind the scientific expertise of the private contractors that the State in question sponsors.

The Chamber's reasoning indicates its view that whether or not the degree of diligence required varies between developed and developing States pivots on the applicable primary rules. Developing States will only be subject to a reduced standard if provided for in the treaty, binding secondary norms established under the treaty, or in customary law in the relevant, narrow context. Part XI of the UNCLOS contains no such provision. Alternatively, it may be that the common heritage character of the deep seabed and its superjacent high seas preclude the application of common but differentiated responsibilities. The same (common) resources should be treated with the same degree of care by all States.

Within international human rights law, in respect of *some* human rights, there are variable expectations on States according to their economic circumstances. States should take 'all appropriate means' to achieve progressively certain rights, in particular, but not exclusively, economic, social and cultural rights.[67] Developing States are also permitted to restrict certain economic, social and cultural rights to nationals and exercise a lower

standard of diligence in respect of non-nationals.[68] There may also be a *limited* scope for States at any level of development to reduce human rights protection in times of economic crisis.[69]

International humanitarian law contains specific due diligence obligations both within treaty and customary international law. Nonetheless the extent of control that parties have over territory, whether effective or overall control, as well as the role of non-State parties, including private military contractors and international organisations, results in varying standards of due diligence being applied depending on the circumstances.[70]

Different views are held regarding international investment law as to whether developing States may exercise less diligence than more developed States.[71] One view is that due diligence in this context may be a variable standard for some aspects, such as in the application of the 'full protection and security' (FPS) standard of treatment in relation to acts of third parties, also considered part of the international minimum standard of treatment. However, a common, objective standard of diligence for other aspects applies, such as the State's due diligence obligation in the case of harm caused by acts of third parties, to apprehend and punish those responsible for the acts. This is also part of the FPS standard, an obligation with parallels to the customary norm on the prohibition of a denial of justice, which is considered part of the international minimum standard of treatment.[72] The scant attention given by arbitral tribunals to this question however leaves much ambiguity as to the objectivity of the applicable due diligence standard.

As States develop economically and their capacity increases, so too are the requirements of diligence heightened. Furthermore, States do not all develop at the same rate. This has proven controversial in the context of international climate law. Some of the obligations under the Kyoto Protocol were obligations of result (e.g. emissions limits) but the Protocol contained also obligations of due diligence.[73] Fast-developing (and high carbon-emitting) China and India maintained that they should be treated as developing

[73] Kyoto Protocol to the United Nations Framework Convention on Climate Change 1997 (Kyoto Protocol), 2303 UNTS 162, article 2.

countries subject to lower expectations while many Annex B countries rejected what they saw as unfair latitude. This tension was an impediment to effective negotiations under the 1992 UN Framework Convention on Climate Change (UNFCCC) and the 1997 Kyoto Protocol, hampered the setting of targets for the period 2013-2020. The issue of differentiation has been at the heart of negotiations for emission cuts in the post 2020 period. It was resolved to a large extent in the Paris Agreement,[74] which significantly reduces the differentiation between developed and developing countries in recognition of the need for urgent, global, concerted action to address rapidly unfolding climate crisis.

Another aspect of the common but differentiated responsibility concept is the enhanced duties of developed States. This was a position promoted by developing countries at the Rio Conference but has remained controversial.[75] It is implicit in Principle 7 of the Rio Declaration but also appears in the UNFCCC according to which developed countries "should take the lead" and the performance of developing countries is made conditional on financial support and technology transfer from developed countries.[76] The UN Convention to Combat Desertification establishes special obligations of developed country parties, including provision of financial support.[77] The Convention on Biological Diversity has quite detailed provisions on financial assistance according to which developing States' performance is made contingent on transfer of financial resources and technology from developed States parties.[78] The duty to transfer technology and scientific knowledge to developing countries is also found in UNCLOS in the context of exploitation of the deep seabed.[79]

Under human rights law, States' obligations are primarily to persons within their territory or jurisdiction but the 1966 International Covenant on Economic, Social and Cultural Rights is not jurisdictionally limited.

> Each State Party to the present Covenant undertakes to take steps, individually and through international assistance and co-operation, especially economic and technical, to the maximum of its available resources, with a view to achieving progressively the full realization of the rights recognized in the present Covenant by all appropriate means, including particularly the adoption of legislative measures.[80]

This could be read to mean that developed States parties should exert best efforts to secure the Covenant rights to all people in all other States parties as well as their own.[81] At the very least, they should exercise due diligence to ensure that activities under their

control, including through international organisations in which they play a leading role, do not detract from economic, social and cultural rights abroad.[82]

Subjective factors aside from economic development can also enhance the degree of diligence required of States. In the *Bosnian Genocide* case, the Court held that the geographical proximity and "political, military and financial links" between the organs of Serbia and the génocidaires in Bosnia meant that Serbia's duties to take measures to prevent the genocide could be distinguished from those of all other States parties to the Genocide Convention.[83] An enhanced degree of diligence can also result from a Court order (as in the case of the two Provisional Orders in the *Bosnian Genocide* case proceedings[84]) or a Chapter VII Security Council resolution directed at a particular State.

Where a State does not have effective control over the entirety of its territory, the degree of diligence expected may also be mitigated accordingly. International law presumes, whether accurately or not, that a State has control over its territory and holds that 'responsibility is the corollary of sovereignty.'[85] (The proceedings in the European Court of Human Rights against Ukraine in relation to the shooting down of MH17 is arguably an example of this). However, in reality, situations such as alien occupation or control by a guerrilla force, mean that States cannot provide the same protections to, *inter alia,* their own nationals, aliens, investors or even the environment of neighbouring States under such conditions.

It is not clear, however, that this is truly a question of requiring less *diligence* or instead is a matter of *force majeure* as a (temporary) circumstance precluding wrongfulness.[86] However conceptualized, such circumstances would have no effect on States' duties to uphold norms of *ius cogens,* for instance duties to prevent acts of genocide or torture committed within their territories. On the other hand, occupying States also have due diligence obligations within the territories that they occupy and the extent of their obligations will vary according to the degree of control they exercise.[87] International organisations, particularly those administrating territories or engaged in long-term peacekeeping

operations will also hold similar due diligence obligations with regard to *ius cogens* and other human rights and international human rights norms.[88]

Corporate human rights due diligence, as expressed in the UN General Principles, also provides for variable standards of diligence taking into account both the size of the corporation as well as criteria relating to the nature of the company's operations and the risk to human rights.[89]

Objective Due Diligence Obligations

There are some obligations of due diligence for which the same standard is required of all States and no account is taken of the economic resources of a State, its degree of control over its territory or other special characteristics. Here we can consider, *inter alia,* the provisions of the minimum core of economic, social and cultural rights;[90] certain aspects of the international minimum standards in international investment law;[91] the prevention of terrorism,[92] international humanitarian law,[93] and certain obligations to protect the environment of areas beyond national jurisdiction.[94] As discussed above, the *Deep Seabed Mining Opinion* concluded that developing States are not to be held to a lower standard in their governance of contractors engaged in deep seabed exploration and exploitation and that they should apply best environmental practices, although it allowed more latitude in respect of the application of the precautionary approach.[95]

ITLOS followed the Seabed Dispute Chamber's interpretation of due diligence in its 2015 advisory opinion on illegal, unreported and unregulated fishing (IUU fishing).[96] In this advisory opinion, ITLOS did not contemplate the possibility of common but differentiated responsibilities in respect of flag States' obligations 'to ensure' that vessels flying their flag were not engaged in IUU fishing in light of their obligations to preserve and protect the marine environment under Part XII of UNCLOS.[97] This would seem to support the interpretation that if the primary rule does not explicitly concede a lesser expectation of diligence from developing States, an objective, international standard is to be preferred. Whereas article 194 of UNCLOS requires states to take measures to prevent pollution of the marine environment 'in accordance with their capabilities', UNCLOS does not explicitly differentiate States' duties in relation to prevention of IUU fishing.

The Tribunal in the *South China Sea* arbitration between the Philippines and China agreed with the ITLOS *SRFC Advisory Opinion, and noted that* 'anything less than due diligence by a State in preventing its nationals from unlawfully fishing in the exclusive economic zone of another would fall short of the regard due pursuant to Article 58(3) of the Convention.'[98] The Tribunal observed that '[i]n many cases, the precise scope and application of the obligation on a flag State to exercise due diligence in respect of fishing by vessels flying its flag in the exclusive economic zone of another State may be difficult to determine.'[99] This is because, the Tribunal said, unlawful fishing will often take place covertly, far from any official presence, and in such circumstances it will be 'far from obvious what the flag State could realistically have done to prevent it.'[100] This was not the situation with this case, however, as Chinese fishing vessels were escorted into the Philippines EEZ by Chinese government vessels.

Due diligence also emerged in the *South China Sea* arbitration in the context of the obligations to protect the marine environment. In interpreting Articles 192 and 194 of UNCLOS, the Tribunal referred approvingly to the *Pulp Mills* case and the *Deep Seabed Mining Opinion,* and noted that the obligation to protect the marine environment entails a duty of due diligence. The evidence disclosed that China's activities, including the poaching of endangered species in the South China Sea which was tolerated and encouraged by the Chinese government, clearly fell foul of the due diligence obligations under Articles 192 and 194.[101]

Another area in which common but differentiated responsibilities appear to be excluded is in the facilitation of remedies. Commonalities can be seen across international investment law, procedural environmental law, international human rights law, international humanitarian law, and international institutional law, in this regard.[102] The maintenance

of competent investigatory bodies, such as police services, criminal courts and tribunals to resolve private law disputes is an obligation of result and hence not a matter of due diligence at all.[103] Similarly, the provision of reparation and the punishment of those who have been found guilty under criminal law of human rights violations is a strict obligation and not subject to due diligence.[104] However, the quality of any investigation depends on the subjective competence and efforts of individuals working in the institutions. That the investigation be *effective* is a duty of due diligence: the State's organs must exercise their responsibilities *diligently.*[105] *A failure to convict a perpetrator according to the rigorous standards of criminal law despite the exercise of best efforts will not constitute a violation of a State's international responsibilities. Nevertheless, there does not seem to be the same scope for reduced effort* on the part of developing States (or States otherwise constrained by circumstances) in the provision of investigation and remedies.

Significantly, where subjective factors affect the degree of diligence required of States, *this is nevertheless still a standard of international law* and does not relate to the standard of care States exercise in their own domestic affairs.[106]

Variability between Primary Obligations of Objective Due Diligence?

Even where an objective standard of due diligence applies (i.e. all States are treated the same), the degree of diligence required of States varies according to the primary rule in question. In other words, there is not one single standard of diligence that applies to all primary norms (although as discussed elsewhere in this report, there may be a single *baseline* standard of due diligence that underlies all positive obligations that applies in the absence of more specific (and demanding) requirements).

For example, what is considered to be reasonable in exercising diligence to prevent genocide (a violation of a norm of *ius cogens*) will obviously be more demanding than that which is expected for the prevention of harm to property or financial interests.[107] In this

case, the degree of diligence varies according to the importance of the interest requiring protection.[108]

In international environmental law, a higher standard of care is required when inherently hazardous activities are undertaken; here, the degree of diligence varies in light of the level of risk.[109] Advances in scientific understanding and technological capabilities can also increase the degree of care required *over time.* The extent of risk or advances in scientific knowledge that allow us to *perceive* more accurately the extent of risk (either higher or lower) will also influence the degree of diligence required.[110] This can also be seen in the relationship between the principles of precaution and prevention. States should take a precautionary approach to 'threats of serious or irreversible damage.'[111] They must take 'cost-effective measures' in light of those threats and 'must not disregard those risks'.[112]

However, if science shows that the risk of damage is not merely theoretical but a causal link can be proven, the principle of prevention takes over: where there is a likelihood of significant harm, a State that permits an operation to proceed is acting wrongfully.[113] Thus as scientific understanding advances over time there are two distinct shifts in the due diligence standard: first of all, the damage decreases in severity from 'serious or irreversible' (precautionary approach) to (merely) 'significant' (principle of prevention). Secondly, while States should only give due regard to uncertain risks and are encouraged to take 'cost-effective measures' to reduce the risk (the precautionary approach), where there is a known risk or likelihood of negative transboundary impact, a State must exercise a much higher degree of diligence to prevent the damage (the principle of prevention). Physical changes beyond a State's control, such as an earthquake, a flood or volcano, may also render an activity more hazardous and hence increase the degree of diligence required of a State (if it is aware – or should have been – of the possibility of such hazards occurring).[114] Furthermore, technological advances can enhance States' capacities to reduce negative impacts or render them cheaper (i.e. 'cost-effective'). This is reflected in the standards of 'best available technology' and 'best environmental practices', where the 'best' is likely to evolve over time.[115] International organisations are also subject to similar requirements when undertaking territorial administration.[116]

Since the degree of diligence pivots on the primary rules, changes to the primary rules will also affect the standard of care expected. This can take place over decades under

customary international law or it can take place through the entry into force of a treaty or even a Security Council Resolution.[117] For example, accession to the 1970 UNESCO Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property[118] or the 1966 International Covenant of Economic, Social and Cultural Rights would increase the degree of diligence expected of States in the protection of culturally significant antiques and of human rights respectively well above the standards of customary international law. Security Council Resolutions 1373 and 1540 (on the prevention of terrorist financing and the prevention of the transfer of weapons of mass destruction to terrorists) also had the immediate effect of increasing the degree of diligence required of UN Member States.[119]

Due diligence duties can increase (and, at least in theory, also decrease) through changes in customary international law, although this is likely to occur over a longer period of time.

Differentiated Responsibilities Viewed as Differentiated Results

Common but differentiated responsibilities under the UNFCCC and the Kyoto Protocol include different *results* expected of States at different stages of development.[120] Obligations of result are not normally conceived of as due diligence obligations but are obligations which the State must achieve by means of its own choosing. For such obligations a defence of 'best efforts' – either subjectively or objectively defined – is unavailable.

It is possible to view differentiated responsibilities in a number of areas of international law not as variable standards of due diligence but rather as differentiated results. For this, it is necessary to consider what is intended by the term 'diligence'. If diligence only means 'effort' then the different results expected of States at different levels of economic development may not be an indication of a lower standard of diligence at all.

The different timescales in the fulfilment of socio-economic rights can also be viewed as differentiated results rather than a lesser degree of diligence. With fewer resources the same effort will produce lesser outcomes. If a State is indeed applying 'all appropriate means' it can hardly be said that they are exercising less diligence, less effort than any other State. 'Realisation' may be an obligation of result but the duty to take steps – indeed all appropriate steps – is immediate.[121] While the content and nature of those steps will differ depending on the resources and needs of each State, each State must exercise equal diligence in selecting and implementing the most appropriate measures.

---

[117] Compare, for example, the gradual increase in the requirements of due diligence in environmental law from *Trail Smelter Arbitration (United States v Canada)* 1941, 3 RIAA 1905 to *Pulp Mills* [2010] ICJ Rep 14.

Conclusions

Just as the degree of diligence required varies between different areas of international law and is given content by the primary rule, so the scope for a subjective standard of due diligence also pivots on the primary rule. In other words, in some cases, the primary rules permit a lesser standard of conduct for developing States or States otherwise possessing limited capacities while in others the same degree of care is required of all States. Under treaty law, such a variable standard can be identified in the treaty provisions; but in the absence of any such provision, an argument can be made that the presumption is for an objective standard of due diligence.[122]

It is more difficult to evaluate whether standards of due diligence are subjective or objective with regard to duties under customary international law. This reflects the perennial problem of identifying with sufficient clarity the precise contents of customary international law in any area and is not peculiar to the evaluation of due diligence. At a high level of abstraction, the same principle applies, that is to say that the primary (customary) rule will determine whether an objective or subjective standard applies. Recent research in international investment law indicates that the presumption in that area of law is for a subjective standard but there remains some older case-law, which is indicative of an objective approach.[123] Soft-law instruments in international environmental law which often stimulate the crystallisation of customary international law in this field also seem to prefer the subjective standard.[124] However, this apparent presumption in favour of a subjective standard of due diligence cannot be straight-forwardly extrapolated to customary norms in other areas of international law.

C – What of unavoidable loss and damage? [125]

Being quintessentially an obligation of conduct rather than result, it is quite possible that a State will act with all due care and diligence and yet this will nonetheless result in some level of loss or damage being caused to another State.

In fashioning a due diligence standard applicable to a specific issue area (such as transboundary harm) it is important that regard is had both to the *level of effort* required of States to meet the requisite duty and also to the *degree of harm* that would be occasioned even if the State fulfills this standard. That is to say that there is a balancing process in which both the onerousness of the due diligence obligation and the effects of the activity or omission upon a victim State are considered.

[125] This section is based upon a submission to the Rapporteur by Study Group Members Sara L Seck and Evelyne Schmid.

This was an issue of concern for the ILC during the more than 50 years that it was engaged in the codification of the law of State Responsibility.[126] In the 1970s, more than 20 years after beginning its work on State responsibility, the ILC decided to start work on a second parallel track on State liability for the injurious consequences of acts not prohibited by international law.[127] While initially conceived as an alternate conceptual basis necessary for the imposition of liability on States for 'lawful' activities causing environmental harm (absolute or strict liability) this approach was critiqued by Ian Brownlie among others as 'fundamentally misconceived' for confusing primary and secondary rules.[128] In 1996, draft Articles and Commentary dealing with prevention, co-operation, and strict liability for damage were proposed by the ILC, but the strict liability articles were said to be too controversial as a 'progressive development' of international law.[129] Ultimately, the ILC divided this work plan into what became 2001 Draft Articles on Prevention of Transboundary Harm from Hazardous Activities (the 'Prevention Articles'),[130] and the 2006 Principles on the Allocation of Loss in the Case of Transboundary Harm Arising Out of Hazardous Activities ('Loss Allocation Principles').[131]

The Prevention Articles provide 'an authoritative statement on the scope of a State's international legal obligation to prevent a risk of transboundary harm'[132] and provide in Article 3 that a State of origin 'shall take all appropriate measures to prevent significant transboundary harm or at any rate to minimize the risk thereof'.[133] According to the Commentaries, this obligation is one of 'due diligence' that requires the State to 'exert its best possible efforts to minimize the risk.'[134] The standard of due diligence is that which is 'generally considered to be appropriate and proportional to the degree of risk

[133] ILC Draft Articles on Prevention of Transboundary Harm from Hazardous Activities 2001, above n 32, article 3. A "State of origin" is defined in article 2(d) as "the State in the territory or otherwise under the jurisdiction or control of which the activities referred to in draft article 1 are planned or carried out."

[134] Ibid, Commentary to article 3, pp. 391-396.

of transboundary harm in the particular instance.'[135] While the 'operator of an activity is expected to bear the costs of prevention,' the State of origin is to put in place 'administrative, financial and monitoring mechanisms.'[136] To this end, the State of origin is to require its prior authorization for activities, and must play an active role in regulating them.[137]

According to Article 15, natural or juridical persons at 'risk of significant transboundary harm' are to be provided access to justice in the courts of the State of origin, unless the States agree on alternate means of redress through, for example, a bilateral agreement.[138] Neither access to justice in State of origin courts, nor the alternate agreement on redress are said to be conditional upon the State of origin failing to meet its due diligence obligation in Article 3; indeed, it could be said that the provision of access to remedy in Article 15 may itself be part of the due diligence obligation to prevent or minimize the risk of harm, at least to the extent that access to courts could be used to seek injunctive measures designed to prevent harm.

The ILC's 1996 Draft Liability Articles would have imposed strict liability on a source State for significant transboundary harm that it could not prevent by exercising due diligence.[139] When the ILC resumed work on liability for environmental harm in 2002, it moved away from strict liability of States to a focus on 'loss allocation among different actors involved in the operation of hazardous activities.'[140] The rationale for this move was an assessment that State practice did not reflect strict liability for transboundary harm arising from activities that are within the lawful sovereign rights of States to pursue within their domestic jurisdiction.[141] Instead, the aim of the Loss Allocation Principles is for States to apply national laws to private actors so as to provide compensation. Drafted as a non-binding declaration of principles, the Loss Allocation Principles indicate that they are without prejudice to rules relating to State responsibility and any claim that might arise in the event of a breach of an obligation of prevention.[142]

The assumption under the Loss Allocation Principles is that the due diligence and other duties under the Prevention Articles have been fulfilled, so the focus is specifically upon damage that has occurred despite the exercise of due diligence.[143] This is conceptualized as liability for risk, rather than State responsibility[144] and is focused upon providing compensation to victims. Victim is defined in Principle 2(f) as 'any natural or legal person or State that suffers damage.' The underlying motivation for this conceptualization is the need to create mechanisms for addressing losses that would remain uncompensated if we were to leave them to the traditional analysis of State responsibility for which legal con-

sequences are only available where there is an internationally wrongful act attributable to a State.

Principle 3 of the Loss Allocation Principles provides that the dual purposes are to 'ensure prompt and adequate compensation to victims of transboundary damage' and 'to preserve and protect the environment in the event of transboundary damage, especially with regard to mitigation of damage to the environment and its restoration and reinstatement.'[145] Principle 4 outlines in five headings the nature of State measures necessary to ensure prompt and adequate compensation, including the imposition of strict liability upon the operator of the hazardous activity, although liability may be limited by, for example, compliance with a compulsory measure of a public authority.[146] Principle 4 also emphasises avenues to prevent and address loss that would otherwise remain unremediated – either because its extent surpasses the capacities of the actor(s) responsible for the damage or because liability and/or attribution cannot be established. The Principle provides that the operator or other entity should be required to 'establish and maintain financial security such as insurance, bonds or other financial guarantees to cover claims of compensation.'[147] Moreover, in appropriate cases, the establishment of national-level industry-wide funds should be required.[148] Finally, should insufficient adequate compensation be available despite implementation of the earlier recommended measures, the Loss Allocation Principles explicitly state that the 'State of origin should also ensure that additional financial resources are made available.'[149] However, according to the Commentaries, a 'central theme' of the Loss Allocation Principles is that each State has the freedom to choose 'one option or the other in accordance with its particular circumstances and conditions' and these are to be treated as best practice guidelines for States.[150]

The issue of uncompensated loss has also arisen under the UNCLOS deep seabed mining regime.[151] In the *Seabed Mining Advisory Opinion,* the Seabed Disputes Chamber of ITLOS considered the liabilities of States sponsoring deep seabed mining operations, including in situations where States fulfilled their due diligence obligations. The Chamber concluded that there was a distribution of "responsibilities" for deep seabed mining activities 'between the contractor, the Authority and the sponsoring State,'[152] with the main liability for wrongful acts committed by the contractor or the Authority resting with the contractor or Authority rather than the sponsoring State. Existing in parallel is the liability of the sponsoring State, which would arise from its own failure to carry out its own responsibilities, provided that a causal link could be established between the

[151] The following analysis is drawn in part from: Anna Dolidze and Sara L Seck, "ITLOS Case No. 17 and the Evolving Principles for Corporate Responsibility under International Law" in *Responsibilities of the Non-State Actor in Armed Conflict and the Market Place*, edited by Noemi Gal-Or, Math Noortmann, and Cedric Ryngaert, (Brill Publishers, 2015, in press) at 235-259. See further UNCLOS, article 156.
[152] *Seabed Mining Advisory Opinion,* (2011) 50 ILM 458, [200]

sponsoring State's failure and the existence of damage caused by the contractor.[153] As described by the Chamber, a 'gap in liability' might arise despite the sponsoring State taking 'all necessary and appropriate measures', when a sponsored contractor causes damage but is unable to pay its liability in full.[154] In addition, a gap may occur 'if the sponsoring State failed to meet its obligations but that failure is not causally linked to the damage.'[155] The Chamber concluded, however, that there was no room for residual State liability under the regime established by UNCLOS Article 139 and related instruments.[156] To address these situations, the Chamber recommended that the ISA consider establishing a trust fund.[157] The Chamber indicated, however, that UNCLOS specifically refers to the development of further rules on responsibility and liability, either within the deep sea mining regime (including through new ISA rules) or customary international law.[158]

Interestingly, the Chamber did not specifically consider the consequences in a situation where harm to the international deep seabed might arise despite no wrongdoing on the part of the contractor (as opposed to the sponsoring State). The UNCLOS deep seabed mining regime specifically contemplates that a contractor must engage in wrongful conduct in order to be liable; yet by contrast, the ILC's Loss Allocation Principles contemplate that the 'operator or, where appropriate, other person or entity' should be liable even without proof of fault, with the responsibility to implement measures to ensure prompt and adequate compensation placed upon the State of origin.[159] The Chamber's omission may be explained if attention is given to the standard clauses for exploration contracts recommended by the ISA, as it would appear that coverage for harm in the case of non-wrongful conduct may be captured by contractual requirements for contractors to hold insurance coverage.[160] The Chamber's silence about the issue is especially noteworthy, considering that IUCN explicitly touched upon the issue of fault in the conduct of the

---

[153] Ibid, [166]-[184]. Under customary international law, state liability would arise even though no material damage resulted from the failure of the state to meet its international obligations.

[154] Ibid, [203]. Note, however, that the use of terms such as "liability" and "responsibility" is inconsistent and potentially leads to confusion. See on this point the suggested distinction between responsibility and liability in Anna Dolidze and Sara L Seck, "ITLOS Case No. 17 and the Evolving Principles for Corporate Responsibility under International Law" in *Responsibilities of the Non-State Actor in Armed Conflict and the Market Place*, edited by Noemi Gal-Or, Math Noortmann, and Cedric Ryngaert, (Brill Publishers, 2015, in press) at 235-259.

[155] *Seabed Mining Advisory Opinion,* (2011) 50 ILM 458, [203].

[156] Ibid, [204], [184], [166]. UNCLOS Article 139 states explicitly that while "damage caused by the failure of a State Party … to carry out its responsibilities … shall entail liability," a "State Party shall not however be liable for damage caused by any failure to comply … by a person who it has sponsored… if the State Party has taken all necessary and appropriate measures to secure effective compliance…". This is bolstered by Annex III, Article 4, paragraph 4.

[157] Ibid, [205]. While the ILC Loss Allocation Principles would have provided residual state liability here, the Chamber did not refer to them here. *See also* Donald K. Anton *et al*., *Advisory Opinion on Responsibility and Liability for International Seabed Mining, (ITLOS Case. No. 17): International Environmental Law in the Seabed Disputes Chamber*, (Austl. contractor and pointed to the ILC's Loss Allocation Principles as applicable international law.[161]

PART 3 – PARTICULAR ISSUES OF CONTENTION

The Second Report now considers two specific areas in which due diligence has been in contention: (i) due diligence duties arising from business activities and (ii) due diligence obligations as regards international organisations. Together, they provide a number of important insights into the development of due diligence in international law in fast-moving areas of normative evolution.

A – Due Diligence and Business Activities[162]

International law relating to due diligence in the business context has received much attention since 2011, as a result of developments in international human rights law. And as discussed in the First Report of the Study Group, another area of international law where businesses (as foreign investors) may be required to exercise due diligence is in international investment law. Nevertheless, this part will focus on non-binding due diligence obligations on businesses broadly under the remit of corporate social responsibility.

International human rights law applies binding legal obligations directly on States alone. Despite a number of attempts, and some statements by the human rights treaty bodies, to apply these obligations to non-State actors, the international human rights framework (outside international criminal law and international humanitarian law) has not yet developed this aspect. However, there are some developments in the area of the obligations of corporations that indicate a way forward, and these include considerations of due diligence.[163]

In 2011 the UN Human Rights Council adopted the UN Guiding Principles on Business and Human Rights (UNGPs),[164] which had been developed by Professor John Ruggie as Special Representative to the Secretary-General on the Issue of Human Rights and Transnational Corporations and Other Business Enterprises (SRSG). These create a framework of three pillars, being a State duty to protect human rights, a corporate re-

[162] This section is based upon a submission to the Rapporteur by Study Group Members Robert McCorquodale, Mary Footer, Sara Seck and Lise Smit.

[163] See Robert McCorquodale, 'International Human Rights Law Perspectives on the UN Framework and Guiding Principles on Business and Human Rights' in Lara Blecher, Nancy Kaymar Stafford and Gretchen Bellamy (eds), *Corporate Responsibility for Human Rights Impacts: New Expectations and Paradigms* (2014), pp. 51-78, from which some of this section is drawn. Negotiations are currently taking place at UN level regarding a possible binding treaty to regulate corporate human rights impacts. If any such treaty is adopted and based on the terminology of the UNGPs, human rights due diligence will presumably form part of the treaty provisions. See Robert McCorquodale and Lise Smit 'Human Rights Due Diligence: A Responsibility, A Defence or A Mirage?' in S. Deva and D. Bilchitz (eds), *A Treaty on Business and Human Rights? Exploring its Contours* (forthcoming, 2016)

[164] SRSG, 'Guiding Principles on Business and Human Rights: Implementing the United Nations "Protect, Respect and Remedy" Framework' UN Human Rights Council, UN Doc. A/HRC/17/31 (March 21, 2011) ('Guiding Principles')

sponsibility to respect human rights, and the need for access to a remedy. Importantly, the SRSG clarified that corporations ('business enterprises') can abuse all types of human rights – economic, social, cultural, civil, political, and collective – and that all business enterprises, no matter their size, nature, or location, should be subject to the Guiding Principles.

The concept of due diligence is used throughout the second pillar. Guiding Principle 15, being one of the foundational principles, provides the following:

> In order to meet their responsibility to respect human rights, business enterprises should have in place policies and processes appropriate to their size and circumstances, including:
> (a) a policy commitment to meet their responsibility to respect human rights;
> (b) a *human rights due diligence process* to identify, prevent, mitigate and account for how they address their impacts on human rights;
> (c) processes to enable the remediation of any adverse human rights impacts they cause or to which they contribute.

This responsibility placed upon business enterprises to respect human rights is not a legal obligation, unlike the obligation of States. There may be a great deal of pressure from inside and outside a business enterprise, including from its own sector, to comply with this responsibility, but it is not legally binding under international law.[165]

Guiding Principles 17 to 21, which discuss the practical steps that business enterprises should take to discharge this responsibility, appear under the heading of 'Human rights due diligence.' These steps include having a human rights policy; assessing human rights impacts of business activities; integrating those values and findings into corporate cultures and management systems; and tracking as well as reporting on the effectiveness of the actions taken.

This concept of due diligence is defined as follows:

> Such a measure of prudence, activity, or assiduity, as is properly to be expected from, and ordinarily exercised by, a reasonable and prudent [person or enterprise] under the particular circumstances; not measured by any absolute standard, but depending on the relative facts of the special case. In the context of the Guiding Principles, human rights due diligence comprises an ongoing management process that a reasonable and prudent enterprise needs to undertake, in light of its circumstances (including sector, operating context, size and similar factors) to meet its responsibility to respect human rights.[166]

The use of the term 'due diligence' in the Guiding Principles appears to be an integration of the international human rights legal obligation of due diligence in relation to the actions of non-State actors,[167] and the general voluntary business practice of due diligence, such as in mergers and acquisitions.[168] In relation to the general business practice, the SRSG has stated:

---

[165] See Robert McCorquodale, 'Pluralism, Global Law and Human Rights', (2013) 2 *Global Constitutionalism* 287.

[166] UN Human Rights Office of the High Commissioner, The Corporate Responsibility to Respect Human Rights: An Interpretive Guide (2012), at p. 4.

[167] See *Velasquez Rodriguez v. Honduras*, (1989) 28 ILM 294.

[168] See, e.g., Jeffrey Perry and Thomas Herd, 'Mergers and Acquisitions: Reducing M&A Risk through Improved Due Diligence' (2012) 32 *Strategy & Leadership* 12, p. 12.

> Businesses routinely employ due diligence to assess exposure to risks beyond their control and develop mitigation strategies for them, such as changes in government policy, shifts in consumer preferences, and even weather patterns. Controllable or not, human rights challenges arising from the business context, its impacts and its relationships, can pose material risks to the company and its stakeholders, and generate outright abuses that may be linked to the company in perception or reality. Therefore, they merit a similar level of due diligence as any other risk.[169]

Thus, the Guiding Principles cleverly (though potentially misleadingly) aim to use a terminology that is familiar to both human rights law and business management practices. When the Guiding Principles refer to processes to 'identify, prevent, mitigate and account for … adverse human rights impacts' (as in Guiding Principle 15(b) above), the term due diligence is used in the business-practice sense of the term, being about the management process.[170] In contrast, the general foundational statement in Guiding Principle 11 is as follows:

> Business enterprises should respect human rights. This means that they should avoid infringing on the human rights of others and should address adverse human rights impacts with which they are involved.

This approach in Guiding Principle 11 uses the term due diligence as a standard of conduct and so is used in the human rights law sense of the term. Thus there is some confusion in the application of the term due diligence in the Guiding Principles.

The context for the operation of due diligence in the corporation's responsibility to respect human rights is explained in Guiding Principle 13:

> The responsibility to respect human rights requires that business enterprises:
> (a) Avoid causing or contributing to adverse human rights impacts through their own activities, and address such impacts when they occur;
> (b) Seek to prevent or mitigate adverse human rights impacts that are directly linked to their operations, products or services by their business relationships, even if they have not contributed to those impacts.

A clear distinction is made in Guiding Principle 13 between the responsibility of a business enterprise to *avoid* causing or contributing to its own human rights impacts (13 (a)) and the responsibility to *seek* to prevent or mitigate impacts by third parties (13 (b)). Therefore, two different standards of due diligence are operating in the application of Guiding Principle 13 to a business enterprise: a stricter standard of avoiding its own impacts; and a leveraged standard for seeking to prevent others' impacts. This is discussed further below.

The Guiding Principles provide some guidance on what corporate human rights due diligence entails. Guiding Principle 17 provides the following:

> In order to identify, prevent, mitigate and account for how they address their adverse human rights impacts, business enterprises should carry out human rights due diligence. The process

> should include assessing actual and potential human rights impacts, integrating and acting upon the findings, tracking responses, and communicating how impacts are addressed.
> Human rights due diligence:
> (a) Should cover adverse human rights impacts that the business enterprise may cause or contribute to through its own activities, or which may be directly linked to its operations, products or services by its business relationships;
> (b) Will vary in complexity with the size of the business enterprise, the risk of severe human rights impacts, and the nature and context of its operations;
> (c) Should be ongoing, recognizing that the human rights risks may change over time as the business enterprise's operations and operating context evolve**.**

Thus appropriate due diligence should consist of four components:

- Assessing actual and potential human rights impacts;
- Integrating and acting upon the findings;
- Tracking responses; and
- Communicating how impacts are addressed.[171]

Guiding Principle 17(a) also continues the distinction drawn in Guiding Principle 13 between human rights due diligence for adverse human rights impacts that the business enterprise may cause or contribute to through its own activities, and human rights due diligence for adverse human rights impacts of third parties.

It is of note that the Guiding Principles make clear, correctly, that corporate human rights due diligence is an obligation which exists independently of States' human rights obligations, and over and above compliance with national laws.[172] Therefore, in assessing its impact, a business enterprise should take into account all internationally recognised human rights obligations, such as those contained in the Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights, and the International Labour Organisation's Declaration on Fundamental Principles and Rights at Work.[173] For practical reasons, certain rights may be prioritised for due diligence purposes, in accordance with the severity of the risks,[174] and provided all human rights impacts are periodically reviewed.[175]

The scale and complexity of the due diligence required will depend on various factors, such as the 'size, sector, operational context, ownership and structure'[176] of the business entity, as well as the nature of the business and the risk of severe human rights impacts.[177] Potential adverse human rights impacts should be prevented or mitigated, whereas actual adverse impacts, which have already taken place, should be remedied.[178]

177 Ibid, Guiding Principle 17(b).
178 Ibid, Commentary on Guiding Principle 17.

As mentioned above, a lesser standard of control is required in relation to the actions of third parties with which the business enterprise has business relationships. The commentary to Guiding Principle 17 provides:

> Where business enterprises have large numbers of entities in their value chains it may be unreasonably difficult to conduct due diligence for adverse human rights impacts across them all.

The level of control over the third party will depend on the amount of 'leverage' which the business entity has over the relevant third party. For example, Guiding Principle 19(b)(ii) provides that appropriate action by a business enterprise will depend on the 'extent of [the business enterprise's] leverage in addressing the adverse impact.' Leverage is defined as 'the ability to effect change in the wrongful practices of an entity that causes a harm,'[179] and leverage is 'considered to exist where the enterprise has the ability to effect change in the wrongful practices of an entity that causes a harm.'[180] This applies even where the business entity has *not* contributed to a harm, in what has been described as '*leverage-based* negative responsibility'.[181] Appropriate action will be determined by such factors as 'how crucial the relationship is to the enterprise, the severity of the abuse, and whether terminating the relationship with the entity itself would have adverse human rights consequences.'[182]

In international human rights law the State's obligations in relation to the actions of third parties are often expressed in terms of due diligence. For example, in *Velazquez Rodriquez v Honduras,* the Inter-American Court of Human Rights found that a State may be held liable for human rights violations caused by a third party where the State has failed to exercise due diligence to prevent the violation or to respond as required.[183] The Guiding Principles, similarly, refer to the corporate obligation to exercise due diligence to 'seek to prevent or mitigate' adverse impacts caused by third parties. States and business enterprises therefore have similar due diligence obligations with respect to third parties' actions.

However, according to Guiding Principle 17, business enterprises also have due diligence obligations in relation to their own conduct. In contrast, where a human rights abuse is a direct result of a State's own conduct, due diligence would not ordinarily be the applicable standard. Instead, national and international human rights law provide States with other forms of tests or 'justifications' where their own conduct has adverse human rights impacts, such as necessity, proportionality, and legislation of general application aimed at a legitimate purpose. These mechanisms of justification are not available to business enterprises, which are private entities without any legal or territorial jurisdiction.[184]

In certain contexts, corporate due diligence is required by domestic (including EU) legislation.[185] In some cases, proving due diligence affords a defence against liability[186] or provides for a reduction in sentence.[187] In other cases due diligence may be essential to enforcement measures in pursuit of a broader set of socio-economic policy goals, such as climate change mitigation, as under the EU Timber Regulation.[188] In the latter case, due diligence is used to address the effects of illegal logging, which brings about risks linked to environmental and societal changes, e.g. deforestation that contributes to desertification and soil erosion, or local forest-dependent communities whose livelihoods are threatened.[189]

Similarly, the Guiding Principles' due diligence requirements which regulate corporate human rights impacts are increasingly finding their way into statutory instruments, even if not always phrased in human rights language. Examples include §1502 of the US Dodd-Frank Act,[190] the US Department of State's reporting requirements for US firms in Burma,[191] as well as the EU Directive on the disclosure of non-financial information by certain large companies.[192] The Council of Europe has adopted Recommendations which include that member states apply measures which 'encourage or, where appropriate, require' mandatory human rights due diligence of companies domiciled or conducting substantial activities within their jurisdiction.[193]

[193] Recommendation III. 20 of Council of Europe, Recommendation CM/Rec(2016)3 of the Committee of Ministers to members States on human rights and business, adopted on 2 March 2016.

Beyond statutory requirements, the corporate responsibility to respect human rights is increasingly embedded in international standards that are promoted by States and industry associations to business enterprises operating internationally, particularly in the extractive industries context.[194] For example, the responsibility to respect is embedded in the 2011 revisions to the OECD Guidelines for Multinational Enterprises (OECD Guidelines),[195] as well as in the revised Sustainability Performance Standards of the International Finance Corporation (IFC),[196] both of which are briefly analysed below. These standards could also inform the standard of care for the purpose of establishing domestic law tort liability, and thus become legally binding within domestic legal systems.[197] The standards, and thus the corporate responsibility to respect human rights through due diligence, may also become legally binding through incorporation in financing or investment contracts.

Business due diligence is often conducted voluntarily to avoid certain risks. The incentive to conduct due diligence may be the avoidance of legal liability, both civil and criminal, such as for corruption or money-laundering, the costs of remedying environmental contamination, a reduction in creditworthiness, or other forms of operational, reputational or financial damage.[198] In cases where are there are no fixed legal requirements, the scope of the due diligence is determined by the business enterprise. It has to ask itself whether its due diligence is sufficiently comprehensive to protect it against the risks it seeks to avoid. Resources and time will be decisive factors, and will be weighed up against the likelihood and severity of the risks. However, the commentary to Guiding Principle 17 explains that business enterprises conducting appropriate human rights due diligence 'should not assume that, by itself, this will automatically and fully absolve them from liability for causing or contributing to human rights abuses.'

There is one other difference between business and human rights due diligence. Business due diligence is most often a once-off investigation aimed at providing a business enterprise with necessary information, for example before a merger or acquisition is negotiated, or before a large transaction or financing of a project takes place. Human rights due diligence, however must be ongoing. The Commentary to Guiding Principle 18 states:

> Because human rights situations are dynamic, assessments of human rights impacts should be undertaken at regular intervals: prior to a new activity or relationship; prior to major

> decisions or changes in the operation (e.g. market entry, product launch, policy change, or wider changes to the business); in response to or anticipation of changes in the operating environment (e.g. rising social tensions); and periodically throughout the life of an activity or relationship.

This approach is similar to a State's human rights due diligence as action to protect human rights is not a once-only protection.

OECD Guidelines for Multinational Enterprises[199]

The OECD Guidelines state that business enterprises should conduct 'risk-based due diligence' by, for example, 'incorporating it into their enterprise risk management systems, to identify, prevent and mitigate actual and potential adverse impacts'.[200] While they should 'avoid causing or contributing to [such] adverse impacts … through their own activities' they should also 'seek to prevent or mitigate an adverse impact where they have not contributed' to it but where that impact is nevertheless 'directly linked to their operations, products or services.'[201] The latter is an oblique reference to the responsibility of business enterprises for impacts arising in all their business relations, including supply chains,[202] an issue which is explored below. Due diligence, for the purposes of the OECD Guidelines is defined as "the process through which enterprises can identify, prevent, mitigate and account for how they address their actual and potential adverse impacts as an integral part of business decision-making and risk management system.

A new chapter on human rights was inserted in the OECD Guidelines in response to the developments in the Guiding Principles. This sets out a business enterprise's duty to respect human rights, which is aimed at limiting adverse human rights impacts, and includes human rights due diligence:[203]

> [Business enterprises should] within the framework of internationally recognised human rights, the international human rights obligations of the countries in which they operate as well as relevant domestic laws and regulations … [ensure that they] carry out human rights due diligence appropriate to their size, the nature and context of operations and the severity of the risks of adverse human rights impacts.[204]

The Commentary recommends that business enterprises implement a process of human rights due diligence, which may fall within their broader enterprise risk management system, which should include assessing 'the actual and potential human rights impacts' of the business activity, integrating and acting upon the findings, tracking responses and communicating how such human rights impacts are addressed.[205] In this regard,

due diligence should be an 'on-going exercise, recognising that human rights risks may change over time as the enterprise's operations and operating context evolve.'[206]

There is also a business responsibility that runs with a transnational supply chain to 'seek ways to prevent or mitigate adverse human rights impacts that are directly linked to their business operations, products or services by a business relationship, even if they do not contribute to those impacts.'[207] This includes 'complex situations where an enterprise has not contributed to an adverse human rights impact', including 'relationships with business partners, entities in its supply chain, and any other non-State or State entity directly linked to its business operations, products or services.'[208] One of the factors to take into account in determining 'the appropriate action in such situations" is "the enterprise's leverage over the entity concerned',[209] which resonates with the UNGPs.[210]

OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas

Due diligence, as part of responsible supply chain management, has also received specific attention where it concerns the sourcing of minerals from conflict-affected and high risk areas. In 2010 the OECD developed a collaborative, government-backed, non-binding instrument called the Due Diligence Guidance for responsible supply chains of minerals from conflict-affected and high-risk areas (OECD Due Diligence Guidance).[211] Built on a multi-stakeholder initiative for the responsible supply chain of minerals from conflict-affected areas, it initially involved OECD Members and eleven member States of the International Conference on the Great Lakes Region ICGLR. It was later supported by Brazil, Malaysia and South Africa, as well as industry and civil society organisations.

In its 2012 revision the OECD Due Diligence Guidance,[212] benefitted substantially from John Ruggie's work on due diligence in the supply chain[213] and the UNGPs more gen-

[210] Guiding Principles, above n 164, Guiding Principle 19(b)(ii), discussed above.

[211] The original OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, 2010, was approved by the OECD Investment Committee, the OECD Development Assistance Committee (DAC) and was endorsed by the 11-Member strong International Conference on the Great Lakes Region (ICGLR) in the Lusaka Declaration, 15 December 2010.

[212] The revised (second edition) of the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (hereinafter OECD Due Diligence Guidance), was approved through the OECD Recommendation on the Due Diligence Guidance, adopted by the Council at Ministerial level on 25 May 2011 and subsequently amended on 17 July 2012 to include a reference to the Supplement on Gold (hereinafter 'Gold Supplement'), pp. 61-118. The 3'T's Supplement was retained as a supplement to the second edition of the OECD Due Diligence Guidance at 631-60 (hereinafter '3'T's Supplement'). The second edition of the OECD Due Diligence Guidance was adhered to by Argentina, Brazil, Latvia, Lithuania, Morocco, Peru, Romania, South Africa and the eleven member countries of the ICGLR. Details are available at <http://oecd.org/daf/inv/mne/GuidanceEdition2.pdf>

[213] See, for example: the SRSG's Discussion Paper, "'he Corporate Responsibility to Respect Human Rights in Supply Chains', 10th OECD Roundtable on Corporate Responsibility, 30 June 2010; available at <http://oecd.org/dataoecd/17/50/45535896.pdf>

erally. It further builds on, and is consistent with, the principles and standards contained in the OECD Guidelines. Significant too is the fact that OECD Due Diligence Guidance contains a detailed Supplement on Tin, Tantalum and Tungsten, which updates the original Supplement,[214] and a new Supplement on Gold was added in 2012 (hence 3TG).

The OECD Due Diligence Guidance provides a framework for detailed due diligence as a basis for responsible global supply chain management of tin, tantalum, tungsten, their ores and mineral derivatives, and gold. Its main emphasis is on conducting due diligence throughout the 3TG supply chain, involving all the processes from extraction through to transport, handling, trading, processing, smelting, refining and alloying, manufacturing, or the selling of products that contain minerals from conflict-affected and high risk areas.[215]

The concept of risk-based due diligence in OECD terms is understood as 'the steps companies should take to identify and address actual or potential risks in order to prevent or mitigate adverse impacts associated with their activities or sourcing decisions.' This is very much in line with UNGP's Guiding Principle 17, urging business enterprises to engage in an active and reactive process to ensure that 'they respect human rights and do not contribute to conflict.'[216]

In theory, the OECD Guidelines and the OECD Due Diligence Guidance remain non-binding.[217] However, they have potential to contribute to the emergence of hard law norms in the area of business responsibility, including as part of a regulatory "smart mix".

IFC's Performance Standards on Environmental and Social Sustainability

The most recent 2012 edition of the IFC's Policy on Environmental and Social Sustainability has also been influenced by the UNGPs. It refers specifically to 'the responsibility of business to respect human rights independently of the State duties to respect, protect, and fulfil human rights'.[218] This means the need to 'avoid infringing on the human rights of others and to address adverse human rights impacts business may cause

[214] The first 'Supplement on Tin, Tantalum and Tungsten' was issued as a Supplement to the original 2010 version of the OECD Due Diligence Guidance, supra, p. 19 ff.

[215] OECD Due Diligence Guidance, above n 212, p. 14.

[216] Ibid, p. 13.

[217] The OECD Guidelines remain voluntary for companies but the actual 'Declaration on International Investment and Multinational Enterprises', of which they form part, is a decision of the OECD Council, which is binding upon OECD Members under Article 5(a) of the OECD's founding instrument, the Convention on the Organisation for Economic Co-operation and Development, 14 December 1960, entry into force 30 September 1961, 888 UNTS 179. It means that OECD Members are obliged to implement this decision and to take such measures as are necessary for its implementation under the OECD Guidelines, such as the establishment of National Contact Points (NCPs). In practice, however, this has not always happened; see further Jernej Letnar Černič, 'The 2011 Update of the OECD Guidelines for Multinational Enterprises', (February 10, 2012) 16(4), *ASIL insights*, under 'Analysis and Conclusion', noting also the weaknesses in the actual NCP process, which OECD Members are bound to implement.

[218] International Finance Corporation's Policy on Environmental and Social Sustainability (2012), available at < http://www.ifc.org/wps/wcm/connect/7540778049a792dcb87efaa8c6a8312a/SP_English_2012.pdf?MOD=AJPERES>, para, 12.

or contribute to.'[219] The IFC's Policy is further elaborated throughout eight specific Performance Standards on Environmental and Social Sustainability.

Performance Standard 1 (PS1) on the Assessment and Management of Environmental and Social Risks and Impacts, reiterates the IFC's Policy Statement.[220] It makes clear that there are human rights dimensions to many of the types of projects that the IFC finances. Due diligence is seen as a means for the client to address relevant human rights issues in its project,[221] which should be sufficient to 'identify risks and impacts at a point in the future when the physical elements, assets, and facilities are reasonably understood.'[222] There is, however, a specific footnote to the text, which acts as a reminder that '[I]n limited high risk circumstances, it may be appropriate for the client to complement its environmental and social risks and impacts identification process with specific human rights due diligence as relevant to the particular business.' In other words, human rights due diligence is seen as exceptional action rather than a mainstream activity in the IFC review process.[223]

Significantly, the borrower's (or client's) compliance with the IFC Performance Standards on Environmental and Social Sustainability, including whether human rights due diligence has been conducted under PS1, may be challenged before the IFC/Multilateral Guarantee Agency (MIGA) Compliance Advisor Ombudsman (CAO).[224] The CAO is a grievance mechanism that investigates complaints from project-affected communities under IFC financing or MIGA investor insurance-guarantee schemes.

The Equator Principles

The IFC Performance Standards on Environmental and Social Sustainability have influenced the formulation of the Equator Principles (EP), on which they are drawn and to which they refer. The EP 'is a risk management framework, adopted by financial institutions, for determining, assessing and managing environmental and social risk in projects and is primarily intended to provide a minimum standard for due diligence to support responsible risk decision-making'.[225] Although a set of voluntary guidelines, as of 2014 some 80 financial institutions (so-called 'Equator Principles Financial Institutions' or EPFIs) from 34 States had officially adopted the EP, accounting for 70% of international project finance indebtedness in emerging markets.[226] The latest and third revision to the original EP dates from 2013 and is known as EPIII.[227]

[226] Ibid.

[227] The third edition of the Equator Principles or EP III is available at <http://www.equator-principles.com/index.php/ep3>.

Unlike the IFC Performance Standards and PS1, the EPIII specifically recognises the role of the EPFIs, as financiers, to 'promote socially responsible development, including fulfilling our responsibility to respect human rights by undertaking due diligence'. There is specific reference to the UNGPs in a footnote.[228] Principle 2 on Environmental and Social Assessment in EPIII closely resembles IFC PS1, which considers 'limited high risk circumstances' as warranting 'specific human rights due diligence' to complement the so-called Assessment Documentation.[229] Furthermore, human rights due diligence is listed as one potential environmental and social issue to be addressed in the 'Environmental and Social Assessment Documentation', which appears in Exhibit II to the EPIII.[230]

However, the EP, although now in their twelfth year of existence, remain opaque in their execution. To date, they have been monitored by a single NGO, known as BankTrack,[231] but there is no remedial mechanism for those affected by an EPFI's non-compliance with the EP.

Conclusions

The adoption of the UN Guiding Principles on Business and Human Rights has brought about a significant shift in the international consensus on the duty of business enterprises to undertake due diligence for its human rights and environmental impacts. This has flowed into other international regulation, such as in the OECD Guidelines, IFC Performance Standards and the Equator Principles, all of which now include human rights due diligence requirements, although of varying levels of compliance monitoring. There have also been clarification of the due diligence requirements of contractors, as business enterprises, in relation to their activities on the deep seabed.

Increasingly, domestic jurisdictions are incorporating human rights due diligence standards into regulatory provisions such as reporting requirements. The role of legal advisers, who are often responsible for undertaking other types of corporate due diligence, is being explored by law societies and bar associations, with guidance being issued on how to advise corporate clients on their human rights impacts.[232] Business entities, civil society and academics are exploring questions around corporate human rights due diligence, ranging from what it entails in practice to how to apply it as a legal standard.[233] Industry bodies are issuing sector-specific guidance, and local experts are publishing country-specific risk analyses[234]. Many businesses have started to report on their human rights due diligence, in varying detail, and many more are expected to do so in terms of the growing number

of regulatory requirements.[235] There is also the possibility of an international treaty on this area.[236]

It is anticipated that clearer legal standards will be developed by courts and tribunals, both domestically and internationally, as well as through corporate practice. Human rights due diligence requirements on business are likely to be increasingly a matter of legal regulation.

B – Due diligence, State conduct and international organisations[237]

The rise of multilateralism in the 20th Century has led to an ever increasing range of rights and responsibilities for international organisations and this has, in turn, resulted in the establishment of both positive and negative due diligence obligations.[238] Within the range of their own competences, the imposition of conditionality by the World Bank Group or the International Monetary Fund, the activities of UN Security Council, the administration of territory by the UN or the actions of the European Union the range of international human rights, humanitarian, investment, environmental and other legal obligations that now extend to international organisations is substantive. Whilst international organisations employ due diligence obligations in their dealings with States, for example requiring States to engage with due diligence in administrative functions or within domestic legal reform, they have been less consistent in the application of due diligence to their own activities.[239] That said, the role and scope of due diligence is of increasing importance and reach within institutional contexts. This is in part attributable to growing expectations that international organisations, as with States, will be accountable and responsible for their acts and omissions constituting wrongful acts under international law. This is reflected in the International Law Commission's work to develop the 'Draft Articles on the Responsibility of International Organizations 2011' (DARIO)[240] which, in contrast to the parallel Draft Articles on the Responsibility of States 2001, is generally regarded as progressively developing rather than codifying international law.[241]

Sources and Potential Parameters of Due Diligence Obligations

A starting point to determining the existence of due diligence obligations for international organisations is that like States they possess international legal personality under international law.[242] In contrast to sovereign States though, the nature and scope of their accompanying rights and duties will be more limited since they do not possess the same degree of powers and functions, reflected too in the principle of speciality.[243] The ILA's 2004 Report on Accountability of International Organisations makes clear links to due diligence and utilises both constituent documents and general international law as sources of accountability.[244] While due diligence and accountability are not synonymous both are intertwined in governance. The ILA Report on the Accountability of International Organisations makes specific reference to decisions regarding the use of force, peacekeeping or enforcement operations, the imposition of coercive measures, structural adjustment programmes and development projects during the temporary administration of territory in the context of international human rights and humanitarian law obligations. While the ILA Report does not utilise due diligence in all strands of accountability it does state that a lack of standing mechanisms for private claimants against international organisations leave the sole route State jurisdiction, making accountability of international organisations conspicuously lacking.

One overarching challenge for identifying specific obligations of due diligence for international organisations is that they do not fit neatly into more traditional sources in Article 38(1) Statute of the International Court of Justice 1945.[245] This is important since 'the nature of the due diligence obligation is a matter to be resolved by the underlying primary rules, not the secondary rules of State [or institutional] responsibility'.[246] It is of the essence, therefore, that primary rules establishing obligations under international law[247] are identified before there can be any suggestion that these have been breached, including for the purposes of establishing the existence of a wrongful act (or omission) as understood under Article 1 DARIO which would trigger secondary responsibility.

There would appear to be four potential sources of due diligence obligations for an international organisation. The first is obligations arising under an international treaty with accompanying due diligence obligations. This is likely to be the most limited origin of institutional due diligence obligations since international organisations are not generally

[242] It is for this reason too that the ICJ has held that international organisations can be responsible for their acts and omissions in international law. See eg *Reparations Suffered in the Service of the United Nations* (Advisory Opinion) [1949] ICJ Reports 174, and *Certain Expenses of the United Nations* (Advisory Opinion) [1962] ICJ Reports 151, 167-68.

parties to international treaties with accompanying due diligence obligations, particularly in the sphere of international human rights and environmental law. Even where there are treaty obligations, normally the constituent treaty, controversies and uncertainties remain as to whether, how and to what extent the organisation itself is bound by its own outputs, such as human rights,[248] even though a significant element of its activities and outputs is the development of such norms.

There are circumstances though where an international organisation is expected to respect, and so far as is possible abide by, treaty standards even though it is not a party to the relevant instruments. This is true of territorial administration which is probably the most significant situation of direct governance by an international organisation in which it comes closest to acting as a *de facto* State.[249] Consequently, it is likely to possess more extensive due diligence obligations akin to those of a State, such as those accompanying the protection of basic human rights as a minimum. That said, the identification of primary obligations will not always be clear and, to some extent, will depend upon the legal basis of a specific international territorial administration situation. Often this emerges from Security Council Resolutions but may also derive from peace agreements amongst interested parties.[250] If the legal basis is a peace agreement, a key challenge here is that it will often be vague as to the obligations it imposes on international organisations and will rarely mention standards or positive legal obligations on which to adjudge whether international organisations act or fail to act on the basis of due diligence. As such, where and when the duties of States and international organisations may be different or identical and, thus, overlap, is unclear. In contrast, where the legal basis is a Security Council resolution, the obligations will generally be easier to discern, including the expectation that the interim authorities will abide by international obligations notably basic human rights standards – particularly those of *jus cogens*[251] - though the exact accompanying parameters of this may not be entirely clear either.[252] Furthermore, the context of territorial administration offers some examples of due diligence obligations being embedded within an international organisation's own activities, such as the UN's Third Party Claims Process in Kosovo, the Kosovo Ombudsman, the Kosovo Human Rights Advisory Panel that investigates potential violations of human rights by UNMIK, and the ICCPR Human Rights Committee Reports on Kosovo though this latter example has been filtered through Serbia's State obligations. Peacekeeping (considered below) is another example. Certainly, it is evident that to a large extent international organisations are left to determine for themselves their own applicable legal frameworks in such contexts, subject to their other existing international legal obligations.

Another potential source is due diligence obligations accompanying obligations sourced in general customary international law. Once again, there is lingering disagreement regarding the exact parameters of its application to an institutional context.[253] For example, whether only norms with *jus cogens* status apply here or customary norms more generally; and whether they apply to only some organs of an international organisation, but not to others notably in relation to the Security Council when exercising its Chapter VII powers to maintain international peace and security.[254] Certainly, there is a strong argument to be made that international organisations are bound by those international obligations, such as human rights ones, existing under customary international law to the extent that they are relevant to their conduct and functions.[255] Therefore, for example, in the context of territorial administration where an international organisation is directly engaged in the governance of territory, there is a strong argument to be made that it should consider itself bound more extensively by customary international law obligations compared with its more routine activities. As a minimum, international organisations as legal actors are bound by those *erga omnes* obligations on the international community accompanying norms of *jus cogens*[256] in all of their activities.

A third source is general international law which has a number of very established principles ('general principles of law') which have been consistently applied and developed since they were referred to in early arbitration cases.[257] More specifically, these are the principles of protection, prevention, investigation, punishment and ensuring redress as also exist for States. The key difference between their application to international organisations compared with to States is that in practice what is required to meet the reasonableness standard of conduct by the latter is generally likely to be less due to the more limited powers and functions, and therefore control over a situation including jurisdictionally, that an international organisation possesses compared with a State.[258] Significantly too, due diligence obligations sourced in general international law exist independently of other international obligations, though they will often inform those due diligence obligations sourced in more conventional sources. Therefore, their existence is not dependent on the identification of primary rules binding on an international organisation sourced in treaty or customary international law which, as just noted above, can be accompanied by much uncertainty and controversy. It is further suggested that due diligence obligations sourced in general international law have further, currently not fully realized, potential to

[253] For a detailed discussion of the issues in the context of the UN see eg C Michaelsen, 'Human Rights as Limits for the Security Council: A Matter of Substantive Law or Defining the Application of Proportionality?' (2014) 19 JSCL 451.

[258] Eg to prevent the commission of gross human rights violations.

form the basis of a wrongful act triggering secondary rules of international responsibility. This has the potential to bridge some current impunity gaps where the identification of primary rules existing under a treaty or customary international law is not possible.

The final source of institutional due diligence obligations are the 'rules of the Organization'.[259] These are broadly defined by DARIO to incorporate not only more conventional Article 38(1) ICJ sources, notably constituent instruments as treaties, but also 'decisions, resolutions and other acts of the international organization adopted in accordance with those instruments, and established practice of the organization'. Importantly, all of these institutional outputs have the potential to create international obligations for the purposes of attribution of conduct under Article 4 DARIO, 'whether they are regarded as binding or not, insofar as they give functions to organs or agents in accordance with the constituent instruments of the organization'.[260] That said, as the Commentary to DARIO recognises, not all of these instruments will create international obligations.[261] Significantly too, over time, such rules may become part of customary international institutional law[262] affording them increased weight within that particular international organisation.

An example of such institutional rules are the key documents issued by the UN Secretary-General governing peacekeeping missions where UN troops are deployed on the ground. It is likely that the Bulletin issued by the UN Secretary-General in 1999[263] and the Capstone Document issued in 2008[264] - which states that '[a]ll United Nations entities have a responsibility to *ensure* that human rights are *promoted* and *protected* by and within their field operations'[265] - now constitute rules of the UN, probably customary institutional ones. Together with internal legal advice issued by the UN Office of Legal Affairs stating that it considered the UN institutionally to be bound by human rights – presumably those reflected within peace support operations guidelines and standards - 'as a general matter',[266] such language as 'ensuring', 'promoting' and 'protecting' all point to due diligence obligations. Certainly, when one considers the UN's consistent policy of reiterating the importance and applicability of international human rights and humanitarian law to the peacekeeping context, including to its own deployed UN troops, and the gravity associated with the protection of civilian populations including from sexual

violence by UN peacekeeping troops, it would be difficult to argue that no accompanying institutional sense of obligation exists to abide by these standards.

Indeed, such institutional rules will often exist alongside and/or reflect other sources of due diligence obligations. For example, Common Article 3 of the Geneva Conventions 1949 and other elements of international humanitarian law are certainly part of customary international law and so too create due diligence requirements for international organisations. The ICRC argues that '[g]iven that multinational forces are more often than not deployed in conflict zones it becomes essential to determine when a situation is an armed conflict in which IHL will constitute an additional legal framework governing a specific operation' and so too, due diligence.[267] In the *Akayesu* case the Tribunal found that Common Article 3 of Geneva Conventions (forming part of customary international law) and Additional Protocols I and II 1977 set the minimum and unconditional standard of duty for States and non-State actors engaged in the use of force.[268] *Yeager v Iran* established that private actors carrying out State functions, in the absence of regular State authorities, could be attributable to the state and arguably, by extension to an international organisation.[269] Private entities/non-State actors or individuals may violate international humanitarian law derived due diligence obligations even if their conduct is not attributed to the State which also arguably extends to international organisations even if this is the shared duality of State/institutional governance. In such instances, an international organisation may incur responsibility if it is not diligent in pursuing and preventing acts contrary to international humanitarian law by prosecuting and punishing private perpetrators. Yet, this does not mean that the international organisation is inevitably required to exercise due diligence no matter the connection to the armed group; the degree of attribution and impact of the overall or effective control test will be pertinent here.[270]

In addition, the 2013 UN Human Rights Policy on Due Diligence includes specific steps to be taken before providing support to non-UN forces.[271] This policy requires the UN's support to be 'consistent with the purposes and principles as set out in the Charter of the

IT-94-1-A); *Case Concerning the Application of the Convention on the Prevention and Punishment of the Crime of Genocide (Bosnia and Herzegovina v. Serbia and Montenegro)* Judgment [2007] ICJ Reports 43.

[271] 'Human rights due diligence policy on United Nations support to non-United Nations security forces', Annex to Identical letters dated 25 February 2013 form the Secretary-General addressed to the President of the General Assembly and to the President of the Security Council, A/67/775-S/2013/110 dated 5 March 2013.

United Nations and with its responsibility to respect, promote and encourage respect for international humanitarian, human rights and refugee law' while also asking that both the Security Council and General Assembly utilise the guidelines when either mandate action.[272] The policy regards due diligence as risk assessment, transparency and effective implementation with more detailed requirements under each category. Nonetheless, such institutional approaches remain *ad hoc*[273] and have yet to make a significant impact in practice. In contrast with the 1999 Bulletin and Capstone Document 2008, though this 2013 policy is considered to now form part of the UN's rules, it is not yet considered to form part of UN customary international institutional law, including as to the most recent addition to due diligence related documents.

Due diligence can play a role in the context of other legal regimes and institutional settings too. For example, the roles of both the International Monetary Fund (IMF) and the World Bank Group can have significant impact upon governance within States. In particular, the 'right to development' is critical in understanding the methods by which these organisations go about achieving their aims.[274] Both the IMF and World Bank Group deploy due diligence in their agreements with States and the conditionality they impose. The character of these "letters of intent" or memorandums of understanding that both the IMF and World Bank Group set with States means review of the obligations created therein is difficult. Usually these "letters of intent" require States to take due diligence into their practice albeit this is rarely replicated within organisations.[275]

Under its Articles of Agreement, the IMF must establish adequate safeguards to ensure that loans are repaid and this is a duty the IMF owes to its own members, but this has

Lucas, 'The International Monetary Fund's Conditionality and the International Covenant on Economic Social and Cultural Rights' (1992) 25 RBDI 104.

largely has been interpreted as outward facing.[276] Within the IMF the most obvious use of due diligence is the instigation of a safeguards assessment. The aim of these is to guarantee the repayment of loans by ensuring a client State's central bank's governance is at the necessary standard. These safeguards require external audit mechanisms, legal structures and autonomy, financial reporting, internal audit mechanisms and a system of internal controls.[277] These due diligence procedures extend into processes to ensure that policies on Longer Term Programme Engagement ensure a State maintains its economic reforms.[278] All contemporary agreements with States contain due diligence provisions that also form part of the reviews of States' implementation. The creation of the Independent Evaluation Office in 2001 to appraise the IMF introduced a form of due diligence internal review.[279]

The World Bank's constituent organisations take a pro-active approach to due diligence, but as with the IMF this is largely State focused. For instance, as part of its due diligence process the International Financial Corporation in facilitating investment examines the 'environmental and social risks and opportunities' in a company's process of investing including corruption and fraud but also human rights impact assessments.[280] The World Bank Group also requires environmental impact assessments and have a due diligence checklist for aspects such as public-private partnerships.[281] As with the IMF, the World Bank constituent organisations are also bound by its Articles of Agreement to adequately safeguard its resources and have taken this as paramount in the conditionality they extend.

CONCLUSIONS

Due diligence has a significant pedigree in international law, recognising the long-standing desirability that States adhere to certain behavioural standards, or to seek to achieve certain outcomes, but without prescribing either the precise result or timeframe by which this is to occur. It is thus unsurprising that due diligence has not only remained an influential standard of conduct in international law, but that its influence and appeal has spread beyond the confines of the mistreatment of aliens and transboundary harm. Certainly,

what was previously perhaps implicit in the judgments of international courts and tribunals when addressing State wrongs is now increasingly been made explicit, particularly through the work of the International Tribunal for the Law of the Sea, though not by it alone. The 2015 *ITLOS Advisory Opinion on IUU fishing* is a very good example of the way in which ITLOS can utilise due diligence to give substance and meaning to obligations and commitments, which until this point had remained somewhat indeterminate or unclear. Equally, new global challenges – presenting new areas of transnational and global regulation – are (at least in the absence of specific primary rules) often finding in the standard of due diligence a useful yardstick by which to hold all States (to varying degrees) to a minimum standard of conduct.

Thus, this Second Report has sought to identify why due diligence is employed, the normative core of its content and the factors that might influence the variability in its operation. As the Second Report has shown, although being able to take into account the level of a State's economic development is an oft-expressed example of the flexibility inherent within due diligence (a flexibility which due diligence does, but will not always, incorporate) there is a wider range of factors at play, including but not limited to the overall reasonableness of State conduct, the degree (and knowledge) of the risk, an expectation of good government (of some form), control over territory, and the existence (or absence) of bona fides acts. Nor is due diligence static, but what it requires of States – of *all* States – may become more demanding overtime.

To the extent that due diligence is not one, but many standards of conduct, all premised on the same one idea – that States are expected to strive to achieve certain common goals and, in the spirit of good neighbourliness, to prevent problems especially of transboundary and global harm (be it environmental, economic, military (including non-State terrorism), kinetic, or other) – due diligence is an evolving principle of international law. To refer to it merely as a standard of conduct is not inaccurate, but nor does it capture its central place in the operation of a wide array of international obligations and global governance, more generally. As the Second Report finds, there is no norm-conflict between the very general standard of due diligence perhaps best encapsulated in *Corfu Channel* and more specific manifestations.

The Study Group has found due diligence to be an expansive, sectorally-specific yet overarching concept of increasingly relevance in international law. Its application in the related, yet distinct, field of business operations and human rights (and the overlap between the two) thus highlights both its importance, but also the concomitant risk of conceptual confusion. The Study Group has now concluded its work, but it would *recommend* to the Executive Committee that if the International Law Association considers further work on due diligence were deemed appropriate, it may wish to establish an international committee, with the mandate to undertake further study and to propose a resolution identifying the material factors and underlying principles helpful in the identification and operation of due diligence as a standard of conduct in international law.

STUDY GROUP ON DUE DILIGENCE IN INTERNATIONAL LAW

WORKING SESSION

Tuesday, 9 August 2016, 2.00pm

Chair: Professor Irmgard Marboe (Austria)

The Chair opened the session by welcoming attendees and introducing the Chair of the Study Group, Professor Duncan French (UK), who was to lead attendees through the second report of the Study Group. She encouraged attendees to visit the ILA website, where the report was available. She then conveyed the apologies of the Rapporteur, Professor Tim Stephens (Australia), who was unable to attend the session.

Professor Duncan French (UK) provided a brief summary of the history of the study group. He noted that the concept of the due diligence obligation was under-theorised. It was accepted as a standard of conduct that was applicable in different branches of international law, but there was no real sense of clarification as to the outer limits – or parameters – of the obligation, or the factors involved in its application. Against this background, Professor French made reference to the 2011 *Seabed Mining Advisory Opinion* of the International Tribunal for the Law of the Sea (*Responsibilities and Obligations of States Sponsoring Persons and Entities with Respect to Activities in the Area*), which unpacked the content and scope of the due diligence obligation. The issue of content and scope of the due diligence obligation was at the heart of the two reports of the Study Group. He explained that the first report of 2014 was a sectoral report, describing what due diligence meant in different branches of international law. The second report was more analytical in nature, concentrating on questions such as the functions that due diligence served, and the reason for which it was employed as a standard of conduct in different areas of international law. The two reports were to be read together in order to get a solid grasp of the subject matter.

Professor French proceeded to give an overview of the second report. He quoted from Oscar Wilde's *Lady Windermere's Fan*, in which Lord Darlington says "I think life is too complex a thing to be settled by these hard and fast rules". He viewed this quote as an appropriate summation of what due diligence was in international law. He once again recalled the *Seabed Mining Advisory Opinion*, in which ITLOS stated that the content of the due diligence obligation might not be easily described in precise terms. A series of factors might be taken into account in determining the content of the obligation. Among the factors that made such an activity difficult was the fact that due diligence was a variable concept that might change over time and in relation to the risk involved.

The concept of due diligence was an interesting area of law not only because of the fact that it was understudied, but also because of the problems associated with the concept. As an example, due diligence as a standard of conduct was a positive obligation on States which was normally assessed on an *ex post facto* basis to determine compliance and responsibility before an international court or tribunal. The problem that arose was how State could ascertain clearly in advance it was satisfactorily meeting and continuing to meet that obligation of conduct. There was thus a tension between the *ex post facto* review and the positive obligation on States.

The first part of the second report was concerned with the question of why due diligence was so regularly employed as a standard of conduct in various areas of international law. He noted that Judge Donoghue's separate opinion in the Border Area and Road Case before the International Court of Justice (Certain Activities carried out by Nicaragua in the Border Area (Costa Rica v Nicaragua); Construction of a Road in Costa Rica along the San Juan River (Nicaragua v Costa Rica) (2015) had correctly picked up on the balance between State sovereignty and territorial integrity. In addition, the second report stated that due diligence standards preserved a significant measure of flexibility and autonomy for the State in discharging its international obligations. In other words, it was for the State to decide, at its discretion, how it could meet its obligations. The international community did not prescribe to States how to achieve a certain result. Furthermore, due diligence was very much tied with the obligation of conduct. What one was assessing was how far, how reasonably States had achieved that standard of conduct. Whether harm or damage was necessary for due diligence to be triggered was an interesting question, especially in light of the Border Area and Road Case case and the SS I'm Alone Case (Canada v United States).

Professor French also noted that due diligence required more of States than simply the formality of containing relevant provisions in their statute books. What really mattered was what States were doing in practice (ie, their administrative actions). It was noble to have good environmental impact assessment provisions on the statute books but those provisions had to be properly implemented and enforced.

One of the questions raised in the first report was whether it was desirable to interpret and understand the due diligence standard only within a particular context. The terminology or words used to describe due diligence was confusing. The conflation of terms could be attributed to international courts and tribunals, especially when one analysed the Corfu Channel Case (United Kingdom v Albania). The Study Group had endeavoured to avoid such conflation. The report made a point that the broad obligations of due diligence underlined the more specific instances of due diligence, which would become operational if applied in a given situation. In this regard, there was no conceptual tension between the general principle as laid down in the Corfu Channel Case and the way in which due diligence was applied. Moreover, due diligence seemed to apply broadly in new areas of regulations such as cyber governance. Due diligence had an innate quality to it, but which commensurately raised questions as to its parameters.

Professor French then listed factors that determined whether the obligation of due diligence had been met, namely:

- reasonableness of what measures States must and should take to act in a duly diligent manner (see the *Neer Case*);
- degree of risk (see the *Seabed Mining Advisory Opinion*, in with ITLOS stated that the due diligence obligation might "also change in relation to the risks involved in the activity");
- there is a debate as to whether knowledge of an activity or potential risk was a requirement (for the knowledge requirement, see the *Corfu Channel Case*);
- control over territory and non-State actors (see *Prosecutor v Tadić*);
- international minimum standards and national treatment (see comments by Max Huber in the *British Property in Spanish Morocco Case*).

- good governance – another factor, particularly in the environmental field, was the existence of regulations, laws and good governance; in this regard, due diligence, as A V Freeman noted in his 1955 lecture at Hague Academy of International Law, required "nothing more nor less than the reasonable measures of prevention which a well-administered government could be expected to exercise under similar circumstances"
- bad faith/absence of any measure (see *Wena v Egypt*).

Professor French also mentioned factors that might vary the due diligence standard. This area was greatly contested. He examined due diligence standards in light of both objective and subjective criteria. Under the subheading of subjective variation in due diligence obligation, he stated that the level of a State's economic development could have a bearing on the operations of due diligence obligations in some circumstances. International law could allow for a variable degree of due diligence according to State's capabilities. However, with regard to objective due diligence obligations, international law required the same standards of all States and no account was taken of a particular State's economic resources. Upon close inspection of the case law, an objective standard of due diligence appeared to be widely applied. In support of this claim, Professor French referred to the *Seabed Mining Advisory Opinion* and the *South China Sea Arbitration (Philippines v China)*, in which the arbitral tribunal had also positively affirmed ITLOS's views in *SRFC Advisory Opinion*.

Professor French went on to consider one aspect of due diligence in the environmental field in relation to unavoidable damage and loss. What would happen if a State was shown to have met its due diligence obligations but loss nevertheless occurred? The International Law Commission had looked into this matter and had developed a legal framework to address such situations, which resulted in the 2006 *Principles on the Allocation of Loss in the Case of Transboundary Harm Arising Out of Hazardous Activities*.

Professor French concluded by examining two areas in which due diligence have been in contention, namely:

- due diligence in business activities – this area was a new development with a different kind of due diligence, and in this regard, referenced the 2011 *United Nations Guiding Principles on Business and Human Rights* (2011);
- due diligence of international organisations – due diligence was a very important principle in holding international organisations to account, though the difficulty was that the 2011 *Draft Articles on the Responsibility International Organisations* were, in many ways, still evolving.

The Chair thanked Professor French for his presentation and then opened the floor up discussion.

Professors Hennie Strydom (South Africa) commended Professor French and Professor Stephens for the excellent work that they had accomplished. The work of the Study Group might be the most comprehensive account on the subject of due diligence that the international community had at the present moment. He acknowledged that there was no parity obligations for the States under the due diligence principle and the way which it was applied under international law. He furthermore stated that there was a commonality in due diligence irrespective of the State, thus the State must act depending on what was

required of it under its own national laws or international law. If a State failed or refused to act, then it was in breach of its due diligence obligations. He gave an example of the South Africa case decided by the Constitutional Court on diplomatic protection (*Kaunda v President of the Republic of South Africa* CCT 23/04 (2004). In this case, a group of mercenaries were arrested in Zimbabwe en route to Equatorial Guinea to participate in a military coup. They wanted to avoid extradition to Equatorial Guinea on the basis of potential violation of due process in Equatorial Guinea. The issue before the court was the duty to provide diplomatic protection. The court decided that the provisions in the South African Constitution on citizens' rights applied. Article 3 of the Constitution was applied in arguing that, in the circumstances of the case, the South African government was not to remain silent in the matter, and had to take action. The court held that the State, by either doing nothing or refusing to act, was breaching its due diligence obligation. The term "due diligence" in this case was given a broader application.

Professor French mentioned that the issue of incorporation of international law within domestic law would have been an interesting matter for the court to address. He asked Professor Strydom if the individuals in the case were of South African nationality.

Professor Strydom responded in the affirmative.

Professor French then went on to ask whether there were issues of human rights protection raised in that case as well.

Professor Strydom replied that human rights issues featured strongly in the case, as well as international human rights obligations imposed under South African law.

Professor French noted that this case was context specific, but completely agreed with Professor's Strydom observation.

Professor Cymie Payne (US) expressed her appreciation for the work of the Study Group, and highlighted the importance of ITLOS advisory opinions on the subject of due diligence.

Professor French concurred with Professor Payne, and noted the importance of recent case law on the subject matter particularly on the law of the sea. He referenced the *Sub-Regional Fisheries Commission (SRFC) Advisory Opinion* and commended the way in which ITLOS had utilised the concept of due diligence. In addition, he acknowledged that the recent case law of ITLOS was of great significance and a positive development to the jurisprudence.

Professor Payne expressed that she shared the views of Professor French. What was of particular interest to her was how Professor French framed the two advisory opinions (ie, the *Seabed Mining Advisory Opinion* and the *SRFC Advisory Opinion*). In the former, Professor French had a feeling that due diligence had left a gap in the law, whereas in the latter, ITLOS outlined and made the due diligence obligations stronger. One fact that caught her attention on the discussion of the advisory opinions was the difficulty that States faced. States needed to know what was required of them in advance in order to satisfy the due diligence obligations, and to conduct themselves with due diligence. The advisory opinions were particularly important in that context.

Professor French noted that the arbitral tribunal in the *South China Sea Arbitration* had recognised State responsibility in a situation where the State in question had not only failed to effectively regulate but had arguably acted with complicity with the unlawful acts of its nationals; in such a case, State could not be deemed to have achieved due diligence. He added that the jurisprudence of due diligence was being built up with every case adjudicated upon by courts and tribunals that raised the matter.

Professor Makoto Seta (Japan) asked two questions. First, he queried why ITLOS and arbitral tribunals used the term "due diligence", even though the term was not used in the *UN Convention on the Law of the Sea* with regard to obligations by States. He noted that, in the arbitral award in the *South China Sea Arbitration*, the obligation of China was to protect the maritime environment. So much was clear. What Professor Seta did not understand was why the tribunal had to use the term due diligence. Could it have been that the term due diligence was convenient to specify the obligation of due diligence and to make an image of an obligation? Secondly, he questioned the difference between due diligence and due regard, which had historically been used in the context of the law of the sea.

Professor French addressed the first question by noting that there was no express method to due diligence, and in some way there was some history to take note of in terms of how the jurisprudence of due diligence had developed. In regards to the second question, there was a difference between due diligence and due regard, depending on context of the case. Due regard might not always be due diligence. He highlighted that there might be a need to explore the distinction further.

Judge Danilo Suarez (HQ) suggested that maybe due diligence was more than due regard. If that was the case, could one say that due diligence referred to an extraordinary diligence?

Professor French responded that he did not think so.

Judge Suarez suggested that if one was to enhance the international protection of consumers then one should certainly raise the standard of due diligence to the category of "extraordinary diligence".

Professor French asked Judge Suarez in what context was he talking about due diligence.

Judge Suarez replied that he was referring to it in a business context.

Professor French referred him to the *UN Guiding Principles on Business and Human Rights*. He noted that it was not extraordinary due diligence. He furthermore stated that the report points out that due diligence was used in two different contexts, including in the business and human rights context. In this regard, due diligence was used in the manner in which it was understood in public international law as well as in business practice.

Professor Payne queried the issue of international standards versus due diligence against the background of the *Pulp Mills Case*. She asked whether these two concepts could be regarded as equivalent.

Professor French responded by briefly analysing the *Border Area and Road Case*, which had overtly moved from due diligence as an ephemeral idea to a sequential procedural

model. He recognised that that ICJ in that case had provided a model of what due diligence resembled, thus a model that States could internalise.

The Chair drew attendees' attention to the *Spanish Zone of Morocco Case* as a classic text book case on due diligence. In that case, it was stated that treatment of foreign nationals might be considered unreasonable if it was of a lesser quality and degree than that normally provided to nationals. She observed that the standard applied in that case was inherently a subjective standard because it differed according to the State's level of development. She then asked if national treatment standard was still applicable in the current international law realm considering that the *Spanish Zone of Morocco Case* was an old case. If it was still applicable, was it not interfering with State sovereignty to try to define due diligence on an international law level?

Professor French responded by stating that due diligence was an obligation of conduct more than result and did not interfere with State sovereignty to a large extent. He referred the Chair to the fist report, in which the Study Group dealt with international minimum standard of national treatment in more detail. He wondered if the standard had moved significantly from the *Spanish Zone of Morocco Case* especially bearing in mind the evolution of human rights standards. Since the *Spanish Zone of Morocco Case*, international law had moved away from a distinction between developed or developing states purely based on economic development. There were other considerations that a tribunal might take into account such as capabilities and control of a territory etc. The whole nature of the scope of due diligence was that it gave States the flexibility to implement it in their own terms. He posed the question of where due diligence stood in terms of international minimum standards and national treatment. He acknowledged that Professor Eric De Brabandere had done extensive work in this field.

Professor Strydom noted that the international standard for the treatment of aliens had been marginalised or rendered irrelevant in the wake of the *Spanish Zone of Morocco Case*. This was mainly because of the development of customary international law on the protection of human rights and the large number of States that had signed international human rights treaties. Invariably, a State's conduct would be tested either against customary international law or treaties to which it was a party.

Professor French recalled as an aside the 2012 judgment of the ICJ in the *Case of Questions Relating to the Obligation to Prosecute or Extradite* (Belgium v Senegal), in which the court did not take into consideration Senegal's economic capacity as an excuse for its failure to either prosecute or extradite. In that case, the point was that Senegal had not met the conditions.

Judge Suarez observed a disturbing trend whereby developing countries were being flooded with merchandise that was substandard from developed countries. He queried if there was a United Nations declaration or any treaty in place to protect consumers in developing countries.

Professor French noted that due diligence was a generic concept and as a legal term it had become conflated. He agreed that States should act more diligently to prevent such actions. In addition, he noted that, from a legal perspective, due diligence was a standard of care in meeting various primary obligations. One had to identify the primary

obligations; due diligence was, in many respects, best viewed as an element of the secondary rules on State responsibility. Until one could find that primary rule of customary international law or of treaty law, due diligence would be incorrectly applied. He said that due diligence may be a standard to apply in a situation like the one described by Judge Suarez only when there was a primary obligation in place that tried to regulate the relevant conduct.

The Chair thanked Professor French for delivering the second report asked about the future of the Study Group.

Professor French responded that the second report was a document that had been brought into existence by a group effort. There were further areas to develop the concept of due diligence, especially in the field of climate change.

The Chair thanked all the participants and closed the session.

Professor Sienho Yee (HQ)

I. INTRODUCTION[1]

I.1 Background

1. Increasingly complex and vital international relations keep international law moving into new domains and require steady development. However, in many cases (e.g. sovereign insolvency), due to the lack of corresponding institutions of international law, there is a need to borrow principles from the domestic legal systems (see article 38.1.c of the Statute of the International Court of Justice).[2] As the International Court of Justice (ICJ) emphasized in the *Barcelona Traction* case,

> if the Court were to decide the case in disregard of the relevant institutions of municipal law it would, without justification, invite serious legal difficulties. It would lose touch with reality, for there are no corresponding institutions of international law to which the Court should resort.[3]

---

[1] The Rapporteur would like to thank Ms. Isabella Conoscente for her useful comments.

Gaja, "General Principles of Law", Max Planck Encyclopaedia of Public International Law, 2013.

[3] *Barcelona Traction (Belgium v. Spain)*, Second Phase, Judgment, I.C.J. Rep. 1970, 3, at para. 50.

2. The reference to the ICJ Statute[4] should not be misunderstood. Those general principles are not to be exclusively used in the adjudication process, but also in any decision-making process when the resort to such principles is necessary. Nevertheless, when international courts and arbitral tribunals have resorted to domestic principles in their legal reasoning, they seem to have done so cautiously, indirectly, and without clarifying how those principles were identified and how are they to be correctly applied. On the other hand, when considering domestic principles for drafting hard and soft law instruments, it has not always been clear whether all main forms of civilization and of the principal legal systems of the world were considered.

3. Therefore, the objective of the Study Group was (i) to survey and understand how domestic principles are currently identified and applied, as well as (ii) to consider whether it could be possible to provide some general guidelines to serve as a practical reference for those involved in the adjudication or other decision-making process, as well as for those concerned with the development of international law. Those guidelines could facilitate a more uniform, predictable and reviewable recourse to the general principles of law, reducing the high degree of subjectivity and potential misuse in applying this source of law.

4. Apart from holding two open working sessions (one in The Hague in 2010 and another in Sofia in 2012), the Study Group met twice, one in Cambridge (at the Lauterpacht Centre for International Law) in 2012 and another in Madrid (at the offices of Cuatrecasas, Gonçalves Pereira) in 2013. The Study Group is made up of members coming from several states in an attempt to have proportional geographic representation to the extent possible (China, South Africa, Argentina, United Kingdom, Israel, Iran…). This diversity of cultures and legal backgrounds was considered even more important in a study dealing with the general principles of law. Some members provided a substantive contribution. The other members of the Study Group were invited to comment on the drafts of the contributors. The present report takes into account their comments.

5. It is expected that the present Draft report will be considered and commented upon by participants at the 77th ILA Biennial Conference in Johannesburg. In the light of the comments received, it will be refined and expanded for the purpose of a final Report.

I.2 Methodology

6. Instead of a theoretical exercise of trying to establish those uniform guidelines at the outset of the work, the main part of the report has been concerned with identifying, summarizing and explaining the 'current practice' in identifying and applying domestic principles, both at the adjudication phase (criminal and hybrid courts, World Trade Organization, ICJ, International Administrative Tribunals, and international arbitration) and the law-making phase (International Law Commission, criminal law, global administrative law and financial/trade). The report will focus on the current practice or 'modern' use of domestic principles, rather than explaining the influence of domestic principles in the formative period of public international law. The topics covered were the result of

[4] A. Pellet, "Article 38" in A. Zimmerman et al. (eds), *The Statute of the International Court of Justice*, 2012. H. Thirlway, *The Sources of International Law*, OUP, 2014; S. Yee, "Article 38 of the ICJ Statute and Applicable Law: Selected Issues in Recent Cases", paper delivered at the ICJ seminar in April 2016 to celebrate its 70th anniversary (forthcoming in Journal of International Dispute Settlement).

a balance between the aspiration to address some of the main areas of potential use of domestic principles and the particular expertise of Study Group members. The result is, of necessity, selective, but it is hoped provides a broad enough sample to derive some useful conclusions.

7. One of the initial tasks of the Study Group was to limit the scope of the work. After some discussion, it was decided to focus primarily on those principles derived from domestic legal systems, including both private and public law principles. As was observed by Judge Tanaka in his dissenting opinion to the *South West Africa* judgment (second phase) of 1966, where the phrase 'general principles of law' is not qualified, the 'law' must be understood to embrace all branches of law, including municipal law, public law, constitutional and administrative law, private law, commercial law, substantive and procedural law, etc.[5] This approach allowed the Study Group to have a broader coverage (e.g. by including criminal law).

II. ANALYSIS OF CURRENT PRACTICE

II.1 ADJUDICATION

II.1.a International Court of Justice[6]

8. During the past 70 years, 134 contentious cases have been brought before the International Court of Justice (ICJ) – since the report tries to focus on the 'current practice', the decisions of the Permanent Court of International Justice, PCIJ, (1922-1946) have not been taken into account -. General principles of law have been invoked before the ICJ and employed by the Court or its judges in a reduced number of those cases. So far, in no case has the Court based an essential part or holding of a decision on general principles of law. Furthermore, references to domestic principles are generally brief, lack substantial legal citations in support, and do not clearly explain how those principles have been identified and can be applied. This is probably because in most of the cases domestic principles seem to have been invoked as a mere ancillary or corollary device to gain legitimacy or strengthen an already agreed point. While the ICJ Handbook[7] contains a full chapter focused on the application by the Court of treaties and conventions, custom, judicial decisions, and even on its power to decide *ex aequo et bono*, there is no particular discussion on the use of general principles of law.

9. The present section analyses the judgments and orders published by the Court as well as all declarations, separate and dissenting opinions given by its judges before March 2015. Every document was scanned for references to the term 'principle' with a digital search function. Whenever such a reference appeared, its relevance was scrutinized. Ambiguous references were excluded from the results of the research since it is difficult to confirm whether the Court was actually referring to general principles of law. As a result, the section does not include some references, such as the one contained in the

[5] *South West Africa (Ethiopia/Liberia v. South Africa)*, Second Phase, Dissenting Opinion of Judge Tanaka, I.C.J. Rep. 1966, p. 294.

[6] Based on the analysis provided by Robert Pfeiffer (external collaborator, enrolled at the U. of Postdam) and peer review from Junichi Eto and Sienho Yee. For an analysis regarding references to Islamic principles before and by the ICJ, see section 6 (prepared by A. Carballo) of the 2010 Report of the ILA Committee on Islamic Law & International Law.

Corfu Channel case regarding use of indirect evidence (which is 'admitted in all systems of law, and its use is recognized by international decisions').[8]

10. Once a reference was identified as such, it was categorised as either relying upon, merely affirming or even negating a general principle of law. 'Reliance' is self-explanatory. Mere affirmation occurs when the existence of a general principle is acknowledged even if it is not considered relevant to the specific dispute. For the purpose of this analysis, negation means that an alleged general principle is negated as such, i.e. not considered a source of law in terms of Art. 38 (1) (c) ICJ Statute.

II.1.a.i References to General Principles of Law by the Court

11. It has been suggested that the ICJ as a judicial body has remained rather cautious in its application of the general principles of law for a number of reasons: According to ICJ Judge Giorgio Gaja, when writing as commentator, the 'difficulty of engaging […] in a comparative analysis'[9] may be a factor as well as the 'risk of transgressing into the application of equity'[10], which pursuant to Art. 38 (2) ICJ Statute requires the parties' particular consent. Moreover, he emphasized the need for decisions' continued predictability. An unexpected reliance upon a general principle of law intended to fill in *lacunae* in the law may decrease the parties' willingness to subject themselves to the Court's jurisdiction.[11]

12. The Court has arguably referred to general principles of law at least nine times, mainly in relation to issues of procedure or evidence (not as a direct source of rights and obligations). Nevertheless, in a recent case (*Timor-Leste v. Australia*) the order of the Court in 2014 regarding provisional measures considered plausible the existence of a cause of action based on a general principle of law.[12] However, while the claimant argued such principle to be derived from a domestic principle (confidentiality of communications between legal counsel and client covered by legal professional privilege), the Court refers to the international principles of the sovereign equality of States (Article 2.1 of the UN Charter) and amicable settlement of international disputes (Article 2.3 of the UN Charter) to establish the right to conduct arbitration proceedings or negotiations without interference of another State, which includes the right of confidentiality of and non-interference in its communications with its legal advisers.[13]

- *South West Africa (Ethiopia/Liberia v. South Africa)*[14]

13. In its first reference to an alleged general principle of law, in the *South West Africa* case, the ICJ negated its applicability:

> Looked at in another way moreover, the argument amounts to a plea that the Court should allow the equivalent of an "*actio popularis*", or right resident in any member of a community

[14] Second Phase, Judgment, I.C.J. Rep 1966, 6.

> to take legal action in vindication of a public interest. But although a right of this kind may be known to certain municipal systems of law, it is not known to international law as it stands at present: *nor is the Court able to regard it as imported by the* "*general principles of law*" *referred to in Article 38, paragraph 1 (c), of its Statute*.[15] (emphasis added)

- *Barcelona Traction (Belgium v. Spain)*[16]

14. In the *Barcelona Traction* case, the Court affirmed the procedure of 'lifting the corporate veil' to be a principle of international law, originating from domestic legal systems. After referring to the 'wealth of practice accumulated on the subject in municipal law', it stated that 'in accordance with the principle expounded above, the process of lifting the veil, being an exceptional one admitted by municipal law, is equally admissible to play a similar role in international law.'[17] As the relevant passage lacks a reference to Art. 38 (1) (c) ICJ Statute and does not employ its wording, the reference to the municipal origin of the principle is the only indicator, which justifies the assertion that the Court may have affirmed a general principle of law. The reference is thus somewhat ambiguous:

> It is in this context that the process of "lifting the corporate veil" or "disregarding the legal entity" has been found justified and equitable in certain circumstances or for certain purposes. The wealth of practice already accumulated on the subject in municipal law indicates that the veil is lifted, for instance, to prevent the misuse of the privileges of legal personality, as in certain cases of fraud or malfeasance, to protect third persons such as a creditor or purchaser, or to prevent the evasion of legal requirements or of obligations. Hence the lifting of the veil is more frequently employed from without, in the interest of those dealing with the corporate entity. However, it has also been operated from within, in the interest of – along others – the shareholders, but only in exceptional circumstances. *In accordance with the principle expounded above*, the process of *lifting the veil*, *being an exceptional one admitted by municipal law* in respect of an institution of its own making, *is equally admissible to play a similar role in international law*. It follows that on the international plane also there may in principle be special circumstances which justify the lifting of the veil in the interest of shareholders.[18] (emphasis added)

The Court also considered international instruments and judgments of international tribunals (since both parties relied on them during the proceedings) dealing with (i) the treatment of enemy and allied property, during and after the First and Second World Wars, and (ii) the treatment of foreign property consequent upon the nationalizations carried out at that time in several countries. However, the Court considered those two developments arising out of special and very peculiar circumstances. Due to their character as *lex specialis*, no analogies or conclusions could be generally drawn from them in other fields of international law.[19] Similarly, the Court also concluded that the general arbitral jurisprudence cited by the parties could not be generalized since it rested upon the instruments establishing the jurisdiction of those tribunals or claim commissions and the protected rights.[20]

After considering potential exceptions to the principle, the Court declined to 'pierce the corporate veil' and to allow Belgium to defend the rights of its shareholders in a Canadian company against Spain.[21]

- *Continental Shelf (Tunisia v. Libyan Arab Jamahiriya)*[22]

15. In 1982, in a case concerning maritime delimitation, the Court proclaimed 'the legal concept of equity [as] a general principle directly applicable as law.' The Court neither cited Art. 38 (1) (c) of its Statute, nor referred to domestic legal systems. Nevertheless, the Court made an effort to distinguish the application of said legal norm from a decision *ex aequo et bono* pursuant to Art. 38 (2) of its Statute.

> *Equity as a legal concept is a direct emanation of the idea of justice. The Court whose task is by definition to administer justice is bound to apply it*. In the course of the history of legal systems the term "equity" has been used to define various legal concepts. It was often contrasted with the rigid rules of positive law, the severity of which had to be mitigated in order to do justice. In general, this contrast has no parallel in the development of international law; *the legal concept of equity is a general principle* directly applicable as law. Moreover, when applying positive international law, a court may choose among several possible interpretations of the law the one which appears, in the light of the circumstances of the case, to be closest to the requirements of justice. Application of equitable principles is to be distinguished from a decision *ex aequo et bono*. The Court can take such a decision only on condition that the Parties agree (Art. 38, para. 2, of the Statute), and the Court is then freed from the strict application of legal rules in order to bring about an appropriate settlement. The task of the Court in the present case is quite different: it is bound to apply equitable principles as part of international law, and to balance up the various considerations which it regards as relevant in order to produce an equitable result. While it is clear that no rigid rules exist as to the exact weight to be attached to each element in the case, this is very far from being an exercise of discretion or conciliation; nor is it an operation of distributive justice.[23] (emphasis added)

16. It is admitted, however, that this reference is both ambiguous and abstract. Judge Oda criticized the Court in his Dissenting Opinion: '[…] in saying that "delimitation is to be effected in accordance with equitable principles" (para. 38), the Court cannot be regarded as suggesting principles and rules of international law, for it is simply stating a truism.'[24] Equity is used by the Court in this case as part of a particular rule, not as a general principle of law.

- *Continental Shelf (Libyan Arab Jamahiriya v. Malta)*[25]

17. In 1985, the Court reaffirmed its previous, arguably ambiguous reference to equity as a 'general principle directly applicable as law.'[26]

> Thus the justice of which equity is an emanation, is not abstract justice but justice according to the rule of law; which is to say that its application should display consistency and a degree of predictability; even though it looks with particularity to the peculiar circumstances of

[21] Id., paras. 64 ff.
[22] Judgment, I.C.J. Rep. 1982, 18.
[23] Id., para. 71.
[24] Dissenting Opinion of Judge Oda, I.C.J. Rep. 1982, pp. 157, para. 155.
[25] Judgment, I.C.J. Rep. 1985, 13.
[26] Id., para. 45.

> an instant case, it also looks beyond it to principles of more general application. This is precisely why the courts have, from the beginning, elaborated equitable principles as being, at the same time, means to an equitable result in a particular case, yet also having a more general validity and hence expressible in general terms; for, as the Court has also said, "*the legal concept of equity is a general principle directly applicable as law*"(I.C.J. Rep. 1982, p. 60, para. 71).[27] (emphasis added)

18. Judge Oda reiterated his criticism, calling equity a 'blanket concept susceptible of diverse interpretations.'[28] In any case, the Court based its delimitation upon equitable principles, but not as 'general principles of law' but as customary international law.

- *Military and Paramilitary Activities (Nicaragua v. USA)*[29]

19. In its 1986 Judgment in the *Nicaragua* case, the Court relied upon 'general principles as to the judicial process,'[30] as it determined the permissibility of evidence. While the Court neither referred to Art. 38 (1) (c) ICJ Statute, nor to domestic legal systems, the wording and content of its reference suggest that it relied upon a general principle of law.

> *The Court holds that general principles as to the judicial process require that the facts on which its Judgment is based should be those occurring up to the close of the oral proceedings on the merits of the case.* While the Court is of course very well aware, from reports in the international press, of the developments in Central America since that date, it cannot, as explained below (paragraphs 62 and 63), treat such reports as evidence, nor has it had the benefit of the comments or argument of either of the Parties on such reports.[31] (emphasis added)

- *Armed Activities on the Territory of the Congo (New Application: 2002) (Democratic Republic of the Congo v. Rwanda)*[32]

20. In 2002, the Court reaffirmed a finding of its 1951 Advisory Opinion,[33] namely that 'the principles underlying the [Genocide] Convention are principles which are recognized by civilized nations as binding upon States, even without any conventional obligation.'[34] As the term 'principles […] recognized by civilized nations' resemble the wording of Art. 38 (1) (c) ICJ Statute, a reference to general principles of law seems arguably a reference to international custom in terms of Art. 38 (1) (b) of the ICJ Statute.[35] This assumption is strengthened by the broad and generic nature of the invoked principles, which the Court in its Advisory Opinion also referred to as the 'moral and humanitarian principles which are at [the Convention's] basis.'[36] Yet, the Court's ambiguous reference once again leaves room for interpretation.

[36] *Supra* note 32, p. 24.

> The Court will begin by reaffirming that "*the principles underlying the [Genocide] Convention are principles which are recognized by civilized nations as binding on States, even without any conventional obligation*" and that a consequence of that conception is "the universal character both of the condemnation of genocide and of the co-operation required 'in order to liberate mankind from such an odious scourge' (Preamble to the Convention)" […][37] (emphasis added)

- *Sovereignty over Pedra Branca (Malaysia/Singapore)*[38]

21. In 2008, the Court unambiguously relied upon a 'general principle of law […] that a party which advances a point of fact in support of its claim must establish that fact.'[39] While the Court had previously referred to this procedural principle before,[40] this is the first time that it used the term 'general principle of law.'

- *Navigational and Related Rights (Costa Rica v. Nicaragua)*[41]

22. One year later, in 2009, the Court reaffirmed this 'well-established general principle'[42] concerning the burden of proof, hence invoking the same general principle of law.

> The Court notes that Costa Rica, in support of its claim of unlawful action, advances points of fact about unreasonableness by referring to the allegedly disproportionate impact of the regulations. The Court recalls that *in terms of well-established general principle it is for Costa Rica to establish those points* [...][43] (emphasis added)

- *Territorial and Maritime Dispute (Nicaragua v. Colombia)*[44]

23. In 2011, the Court (quoting its 1954 Advisory Opinion on the effect of awards of compensation made by the UN Administrative Tribunal) relied upon the 'well-established and generally recognized principle of law that a judgment rendered by a judicial body has binding force between the parties to the dispute,'[45] i.e. the principle of *res judicata*.

> *It is a well-established and generally recognized principle of law that a judgment rendered by a judicial body has binding force between the parties to the dispute* (Effect of Awards of Compensation Made by the United Nations Administrative Tribunal, Advisory Opinion, I.C.J. Rep. 1954, p. 53). The Court notes that in ascertaining the scope of res judicata of the 2007 Judgment, it must consider Honduras's request in the specific context of the case. […] In order to assess whether Honduras has an interest of a legal nature in the area south of the bisector line, the essential issue for the Court to ascertain is to what extent the 2007 Judgment has determined the course of the single maritime boundary between the areas of territorial sea, continental shelf and exclusive economic zone appertaining respectively to Nicaragua and Honduras.[46] (emphasis added)

24. The Court had previously referred to this procedural principle before,[47] but in a more ambiguous way.

II.1.a.ii References to General Principles of Law by in Separate and Dissenting Opinions

25. The general principles of law which were relied upon in separate and dissenting opinions predominantly concerned procedural law, state responsibility, and the law of treaties.

26. The views of individual judges differed with regard to the existence of certain general principles of law. For instance, in the *Case concerning the Application of the Convention of 1902 Governing the Guardianship of Infants*, Judges Lauterpacht and Moreno Quintana, in their separate opinions, both relied upon the notion of *ordre public* as a general principle of law,[48] the existence of which was however negated by Judge Spencer.[49]

27. On a more fundamental level, judges have entertained divergent views regarding the nature and origin of general principles of law as a source of international law. Some judges have been in favour of a naturalist interpretation of Art. 38.1.(c) of the ICJ Statute: e.g. Judge Tanaka stated in his dissenting opinion to the *South West Africa* judgment of 1966 that 'it is undeniable that in Article 38, paragraph 1 (c), some natural elements are inherent […] the provision does not require the consent of States as condition of the recognition of the general principles. States which do not recognize this principle or even deny its validity are nevertheless subject to its rule. From this kind of source international law could […] assume an aspect of its supra-national and supra-positive character.'[50] In 2010, Judge Cançado Trindade went even further in his separate opinion to the decision in the *Pulp Mills* case asserting that '[g]eneral principles of law emanate […] from human conscience, from the universal juridical conscience, […] the ultimate material "source" of all law.'[51]

28. More judges, however, have referred to municipal legal systems as the origin of the general principles of law which they invoked. Some judges have deemed it necessary to conduct a comparative analysis of domestic legal systems, such as Judge Ammoun, who stated that 'the general principles of law mentioned by Article 38, paragraph 1 (c), of the Statute, are nothing other than the norms common to the different legislations of the world, united by the identity of the legal reason therefor.'[52] Relying upon the general

[47] E.g. in *Application of the Genocide Convention* (*supra* note 39, para. 116), the Court referred to the 'principle of *res judicata*, internationally as nationally.' See also dissenting opinion of Judge Owada in the same case, which regarded the rule of res judicata as 'a general principle of law recognized by civilized nations.' (para. 14).

[48] *Application of the Convention of 1902 Governing the Guardianship of Infants (Netherlands v. Sweden)*, Judgment, Separate Opinions of Judges Sir Hersch Lauterpacht and Moreno Quintana, I.C.J. Rep. 1958, pp. 79, 91 f.; pp. 102, 105.

[51] *Pulp Mills on the River Uruguay (Argentina v. Uruguay)*, Judgment, Separate Opinion of Judge Cançado Trindade, I.C.J. Rep. 2010, pp. 135, 156, para. 52.

[52] *North Sea Continental Shelf (Germany v. Denmark)*, Judgment, Separate Opinion of Judge Ammoun, I.C.J. Rep. 1969, pp. 101, 134, para. 33.

principle of equity, Judge Ammoun traced its origins to several legal systems.[53] Similarly, in his separate opinion to the 2003 *Oil Platforms* judgment, Judge Simma compared 'various common law jurisdictions as well as French, Swiss and German tort law'[54] in order to identify the principle of joint and several responsibility as a general principle of law.

29. This voluntarist-naturalist divide among judges of the ICJ may be yet another reason for its reluctance to explicitly affirm and apply general principles of law.

II.1.a.iii Interim Conclusion

30. Throughout the past seven decades, the Court has indeed been rather cautious in its explicit proclamation of general principles of law. Its unambiguous affirmative references can be counted on one hand and they concern procedural law. Individual Judges, however, have been more inclined to invoke general principles of law and their understanding of the nature and origin of this source of law has varied greatly.

31. One may tentatively draw the conclusion that the Court has been more inclined confidently to enunciate rather technical and predictable general principles of procedural law than general principles of a substantive nature.

II.1.b International Criminal Courts and Hybrid Courts[55]

II.1.b.i International Criminal Courts[56]

32. The International Criminal Tribunals, in particular the International Criminal Tribunal for the former Yugoslavia (ICTY), have often invoked the concept of general principles of law to address substantive and procedural issues - mainly to bridge the gaps because international criminal law was undeveloped at the time of the establishment of these tribunals. In doing so, international criminal courts have contributed to the development of this branch of international law. However, when the courts have looked into municipal legal systems to find general principles, there are scarce mentions of the methodology used.

33. As an example, in the *Erdemović* case, the Trial Chamber of ICTY had sentenced the accused to ten years' imprisonment for crimes against humanity following a plea bargain. The accused appealed the decision, asking the Appeals Chamber to revise the sentence, on the grounds that the crime had been committed under duress. As treaty and custom were silent on the elements of the crime, the Appeals Chamber drew on general principles, and found that no principle existed to support duress as a complete defence to a charge of crimes against humanity.[57] However, Judges McDonald and Vohrah, after

[53] Id., p. 139 f., para. 38.

[54] *Oil Platforms (Islamic Republic of Iran v. USA)*, Judgment (Merits), Separate Opinion of Judge Simma, I.C.J. Rep. 2003, pp. 324, 358, para. 74.

[55] For additional reference, see F. Raimondo, *General Principles of Law in the Decisions of International Criminal Courts and Tribunals*, Brill/Martinus Nijhoff, 2008 (providing a comprehensive analysis of the use of general principles by international criminal tribunals, including the ICTY); N. Jain, "Comparative International Law at the ICTY: the General Principles Experiment", 109 Am. J. Intl. L. (2015), 486.

[56] Based on the analysis provided by Fabian Raimondo.

[57] ICTY, *Prosecutor v. Erdemović, Judgment,* Case No. IT-96-22-A, App. Ch., 7 October 1997, para. 19.

comparing thirty national legal systems (which covered civil law systems, common law systems, and a hybrid category which they called 'criminal law of other states' –China, Ethiopia, Japan, Morocco and Somalia), concluded that under domestic law, duress was a mitigating factor in sentencing.[58] Judge Li was of the same opinion in that regard.[59] Since the majority of the Appeals Chamber did not consider that duress was a complete defence, but only a mitigating factor, the sentence was reduced to five years.[60] The *Erdmović* case reveals that even if general principles were subsidiary in nature, they could play an important role, at least so far as international criminal trials were concerned.

34. But international criminal courts and tribunals have not only applied general principles as gap-fillers of the law but also as value-oriented principles to interpret international rules (for example, the ICTY has used the principles of human dignity to define the crime of rape under international law). By doing so, the courts tried to avoid any charge of arbitrary interpretations. In addition, general principles have had a supplementary function of reinforcing legal reasoning. For example, in the *Blaškić* case, the Trial Chamber of the ICTY expressed the view that the accused could be held responsible under any of the heads of individual criminal responsibility in Article 7(1) of the ICTY Statute, adding that this 'was consonant with the general principles of criminal law and customary international law.'[61]

35. Regarding the issue of the identification of general principles, international criminal courts and tribunals have sometimes relied on decisions of other international courts and tribunals (for example, they have often relied on decisions of the ICJ to argue that the court or tribunal had the ability to determine its own jurisdiction). At other times, the courts and tribunals relied on scholar writings to determine the scope (though not the existence) of particular principles. Most interestingly, some courts and tribunals, particularly the ICTY, used comparative law to ascertain general principles using the following two operations: first, the 'vertical move', which involved a process of abstracting legal rules from domestic legal systems in order to derive an underlying principle; second, the 'horizontal move', which involved a process of comparing domestic legal systems in order to verify that the principle was recognised by the generality of nations.

36. With respect to the horizontal move, most courts and tribunals would proclaim that a particular principle was recognised by 'most' or 'civilised' nations without providing evidence. Sometimes, on important issues, the court or tribunal would undertake an empirical study and provide evidence of this study in the reasons for its decision. For these studies, the court and tribunals tended to refer to the same common and civil law systems. Almost half of the domestic legal systems referred to belonged to just seven jurisdictions: United States, England and Wales, Germany, Canada, Italy, France, and Belgium. All other legal systems of the world were more often than not ignored. In the 21st century, with domestic criminal laws available online, this approach could, arguably no longer be

[58] ICTY, *Prosecutor v. Erdemović, Judgment, Joint Separate Opinion of Judge McDonald and Judge Vohrah*, Case No. IT-96-22-A, App.Ch., 7 October 1997, § 40, 55-72.
[59] ICTY, *Prosecutor v. Erdemović, Judgment, Separate and Dissenting Opinion of Judge Li*, Case No. IT-96-22-A, App.Ch., 7 October 1997, § 3.
[60] ICTY, *Prosecutor v. Erdemović, Sentencing Judgment*, Case No. IT-96-22-T bis, T.Ch. II ter, 5 March 1998, disposition.
[61] ICTY, *Prosecutor v. Blaškić*, *Judgment*, Case No. IT-95-14-T, T.Ch. I, 3 March 2000, para. 264.

justified on the grounds of access to law. Nevertheless, the approach was due to judges tending to defer to their own legal systems, and the fact that most judges – and most legal officers working at the courts and tribunals – were from these jurisdictions. Although a likely justification for that course of action could be that some of those legal systems have influenced others beyond Europe via colonisation, it is worth noting that, over time, the staff of international courts and tribunals has become more geographically representative and the comparative law research more varied.

37. With respect to the vertical move, the ICTY would sometimes identify the principle that it was looking for to begin with, noting as an example the principle that courts had an inherent power to deal with contempt of court. In the *Tadić* case, the accused argued that successive amendments to the Rules of Procedure and Evidence that expanded the types of conduct amounting to contempt infringed his rights. In response, the Appeals Chamber of the ICTY looked at the 'general principles of law common to the major legal systems of the world, as developed and refined (where applicable) in international jurisprudence'[62] and found that while the power to deal with contempt in common law legal systems is part of the inherent jurisdiction of the courts, in the civil law legal family the power comes into existence only if enacted by legislation.[63] Despite this, the Chamber proceeded to find that the ICTY did have an inherent power to deal with contempt.[64] This could lead to the conclusion that the ICTY was determined to find a solution regardless of its comparison of domestic legal systems.

38. In the early years of the ICTY, Antonio Cassese had expressed concerns about automatic transposition of national law concepts, including general principles of law.[65] A number of persuasive reasons had been given, such as a difference between States and international society concerning legal subjects and sources of law.[66] In practice, however, international criminal courts and tribunals did not challenge the transposition of principles in light of structural issues. For example, in the first case before the ICTY (the *Tadić* case), the accused challenged the legality of the ICTY's establishment on the basis that it was contrary to the general principle whereby courts must be 'established by law'. The Appeals Chamber responded that this principle could not be applied in an international setting as it was domestically, as the legislative, executive and judicial division of powers which prevails in the generality of national legal systems does not apply to the international setting.[67] Therefore, the Appeals Chamber did not reject the application of the principle but rather adjusted its meaning to the special characteristics of the international setting. Following the adjustment, the principle meant for the Appeals Chamber that an international criminal court or tribunal is 'to be rooted in the rule of law and offer all guarantees embodied in the relevant international instruments.'[68]

39. In *Boškoski & Tarčulovski,* the Tribunal did not base its decision on general principles of domestic law but rather used these principles to reinforce its decision.[69] Tarčulovski claimed that the Tribunal violated national rules of evidence when admitting into evidence certain out-of-court statements made during the national investigation of suspected war crimes. Even though the Appeals Chamber pointed out that pursuant to its Statute, the Tribunal is not bound by national rules of evidence, and hence evidence inadmissible by national rules of law is not necessarily inadmissible under international rules of law.[70] It added that Tarčulovski failed to identify a specific 'general principle of law' to support his argument. In other common law and civil law jurisdictions, out-of-court statements are admissible. The Tribunal also referred to the principle of *lex mitior* (the principle by which a person is to benefit from the lighter penalty set by a law posterior to the incriminated act). It relied on this principle as it was enshrined in the law of the Former Yugoslav Republic of Macedonia, to which the ICTY was invited to revert to when sentencing.[71]

40. In *Haradinaj,* the Appeals Chamber stated that the prosecution was not entitled to a right of appeal in many domestic jurisdictions –without mentioning which - for it was seen as a breach of the principle of *non bis in idem*. Arguably, in light of the gravity of the crimes prosecuted at the Tribunal and the horrific circumstances surrounding their commission, there is some justification for granting the prosecutor a right of appeal. However, the Appeals Chamber must have a clear and unequivocal basis for overturning an acquittal.[72]

41. In *Strugar,* the Appeals Chamber referred to the principle of fitness to stand trial (in particular, on minimum age or mental incapacity), 'drawing upon general principles of law recognized by all nations.'[73] First the chamber reviewed *international* jurisdictions, (previous decisions of the ICTY, the International Military Tribunals, the European Court of Human Rights, the International Criminal Court, the Extraordinary Chamber in the Court of Cambodia, the Special Court for Sierra Leone and Special Panel for Serious Crimes in the District Court of Dili), and then some *national* jurisdictions.[74] In the absence of express provisions in the statute regarding various personal defences which may relieve a person of individual criminal responsibility such as minimum age or mental incapacity, the Appeals Chamber approved the Trial Chamber's reliance on general principles of law recognized by all nations. It distinguished between common law and civil law jurisdictions, and then gave a brief overview of the procedures in the former Yugoslavia and a recent judgment by the War Crimes Chamber of the District Court in Belgrade which rejected an indictment against Kovacevic. The Chamber referred to the national criminal jurisdictions of: Australia, Canada, India, Malaysia, the UK, the USA, Japan, Korea, the Netherlands, Germany, Belgium, and the Russian Federation.[75] It analysed the tests for fitness to stand trial in common law and in civil law jurisdictions, and on this basis defined the applicable standard for fitness to stand trial as that of meaningful

[73] ICTY, *Prosecutor v. Strugar*, Case No. IT-01-42-A, AC, 17 July 2008, paras. 44 (quoting the decision of the Trial Chamber of 26 May 2004, para. 20).
[74] Id., paras. 45 ff.
[75] Id., paras. 52-54.

participation which allows the accused to exercise his fair trial rights to such a degree that he is able to participate effectively in his trial, and has an understanding of the essentials of the proceedings.[76]

42. In *Brima* the Appeals Chamber of the ICTY distinguished the application of the principle of specificity in international criminal jurisdictions from that in domestic jurisdictions.[77] It stated that the pleading principles that apply to indictments before international criminal tribunals differ from those in domestic jurisdictions because of the nature and scale of the crimes, different from those in domestic jurisdictions. For this reason, there is a narrow exception to the specificity requirement for indictments before international criminal tribunals. In some cases, the widespread nature and sheer scale of the alleged crimes make it unnecessary and impracticable to require a high degree of specificity.

43. In *Popović*, the Trial Chamber of the ICTY discussed the question of cumulative convictions of conspiracy and an underlying offense.[78] Under the tribunal's case law, cumulative convictions are permissible if each statutory provision involved has a materially distinct element not contained in the other. In the case of the crime of genocide, the Chamber noted that the Genocide Convention defined conspiracy in accordance with the common law notion of the term. In most common law countries, convictions may be entered for both conspiracy and the underlying substantive offence, but this approach had been roundly criticised. The Trial Chamber also noted that in civil law countries, convicting for both conspiracy and underlying offence is not possible. Given the variety of approaches, the Trial Chamber found resort to national jurisprudence to be of limited utility.[79] Hence, it turned to the principle of fairness to the accused[80] which is also relevant regarding multiple convictions for the same act. It noted that this principle was also applied by the ICTR jurisprudence which stated in the *Musema* Trial Judgment that the position most favourable to the accused must be paramount.[81]

44. The principal conclusion is that while there is indeed a major tendency of the international criminal courts to base some parts of their decisions on general principles of law, it is done mostly by resorting to the practice and jurisdiction of other international tribunals (either the legacy of each tribunal or mostly that of the ICTY jurisprudence). The courts and tribunals seem to find less of a need to transpose those principles from national jurisdictions. This seems to mean that these principles are regarded more as an integral part of international criminal law and less as domestic law principles that need to be transposed into international criminal law.

II.1.b.ii Hybrid Courts[82]

45. The term internationalized or hybrid criminal bodies (hereinafter 'hybrid courts') has been used to identify a new generation of international criminal courts. Contrary to the previously mentioned international criminal courts (*section II.1.b.i*), their nature is

[76] Id., para 55.

[78] ICTY, *Prosecutor v. Popović*, Case No. IT0588T, Trial Chamber, Judgement, 10 June 2010.
[79] Id., para. 2122.
[80] Id., para. 2123.
[81] Id., para 2127.
[82] Based on the analysis provided by Hilly Moodrick-Even Khen.

a mix of international and national features (e.g. international and local staff, as well as international and national substantial and procedural law).

46. There are four hybrid courts: Bosnia and Herzegovina War Crimes Chamber (BWCC), the Special Panel for Serious Crimes in the District Court of Dili (East Timor Court- SPSC), the Extraordinary Chamber in the Court of Cambodia (ECCC) and the Special Court for Sierra Leone (SCSL). Hybrid courts have been travelling the path marked by international criminal courts and tribunals, using similar approaches to apply general principles, and giving them the same gap-filling and interpretative function. However, the hybrid courts did not deal so much with general principles of domestic legal systems. Instead, they relied on the jurisprudence of international criminal courts and tribunals as well as international instruments, and the jurisprudence of the European Court of Human Rights (ECtHR). This was done in order to obtain more legitimacy for their decisions.

47. In addition, the hybrid courts studies have been mindful of the fact that they were under a statutory obligation to apply international law as well as their own domestic law, but also took into account the characteristics of their own legal system when dealing with general principles. As an example, in the *Mitrović* case, the BWCC addressed the treatment of testimony given by a witness pursuant to a plea agreement.[83] Here, the Chamber drew connections between the obligation to evaluate each item of evidence and the right to a fair trial, as understood in civil law systems. Another example would the ECCC dealing with the standard of proof in criminal trials in circumstances where the English and Khmer text of its statute required the standard of 'beyond reasonable doubt', yet the French text and civil law jurisdictions, like Cambodia, recognised the notion of 'intimate conviction'.[84] Despite these conceptual differences, the Chamber adopted a common approach to evaluating the sufficiency of the evidence.

48. One of the major issues on the agenda of a hybrid court is the principle of legality (including the specificity of crimes, which requires that a criminal rule be detailed and indicate in clear terms the various elements of the crime). As pointed out by the SPSC, quoting Prof. Bassiouni and the brief historical overview of the permissibility of analogy in several criminal law systems,[85] the use of analogy is necessary 'because traditionally, international criminal law has lacked the specificity of national criminal law in defining crimes.'[86] However, the SPSC referred to the use of analogy 'in applying customary definitions', without any reference to domestic principles.

49. Sometimes references to domestic principles are quite vague and general, with reference to international decisions in support, even if the Statutes and Rules of Procedure of the hybrid courts contain a similar institution. E.g:

---

[83] BWCC, Case No. X-KR-05/24-1, *Prosecutor's Office of Bosnia and Herzegovina v. Petar Mitrović*, 29 July 2008 (First Instance).

[84] ECCC, *Prosecutors v. Kaing Guek Eav alias Duch*, Case No. 001/18072007/ECCC/TC, Judgment (Trial Chamber, 26 July 2010), paras. 44-45.

[85] M. Cherif Bassiouni, *Crimes Against Humanity in International Criminal Law*, 2nd revised ed., Martinus Nijhoff, 1999, 143-144.

[86] SPSC, *Prosecutor v. Joao Franca da Silva Alias Jhoni Franca*, Case No. 04a/2001, Judgment, 12 December 2002, paras. 74-75.

- the SPSC considered (with reference to ICTY, in *Tadic*)[87] that 'there can be no violation of *non-bis in-idem, under any known formulation of this principle,* unless the accused has already been tried.*'* (emphasis added)
- Similarly, a SCSL Trial Chamber arrived at the conclusion (after examining Canadian law and decisions of the ICTR)[88] that a trial *in absentia* in the context of the SCSL was permissible and lawful under certain circumstances (in fact, Article 17 of the Statute and Rule 60), and that in most national law systems, 'exceptionally, courts of justice can have recourse to trial of an accused person in his absence where such an option becomes imperative but in limited circumstances'.[89]
- In another SCSL decision, the Trial Chamber examined the nature and scope of 'judicial notice' under national and international laws (even if already covered by Rule 94(A) of the Rules of Court) concluding that the notion enjoyed universal recognition.[90] The Trial Chamber referred to the German and the Russian penal codes as national criminal laws recognizing judicial notice, while mentioning the Austrian Penal Code and the Slovenian Criminal Act as examples of the contrary.[91] In addition, the Trial Chamber examined only judgments of English courts and the US procedural law (and no other common law jurisdiction).[92] Yet, in the end, it relied upon the relevant jurisprudence of the ICTR.[93]

50. In some cases, the local legal system is resorted to for 'establishing that the accused could reasonably have known that the offense in question or the offense committed in the way charged in the indictment was prohibited and punishable'[94] (as required by the international principle of legality); or to establish some limitations (e.g. in relation to conditions for the admission of witnesses or for the hearing of witnesses for their protection)[95] or deviations (e.g. the BWCC in relation to the general principle of *lex mitior* with reference to the Criminal Code of Bosnia and Herzegovina, which was adopted the provisions contained in the European Convention on Human Rights and the ICCPR, and the jurisprudence of the Court of Bosnia and Herzegovina, following international

[95] See BWCC, *Prosecutor v. Nedo Samardzic*, Case No. X-KRZ-05/49, 7 April 2006, Trial panel 1, with reference also to ECtHR decision in the case of *Doorson v. The Netherlands* of 26.3.1996, at 70.

jurisprudence).[96] Similarly, the Appeals Chamber of the SCSL confirmed that '[a]s essential elements of all legal systems, the fundamental principle *nullum crimen sine lege* and the ancient principle *nullum crimen sine poena*, need to be considered.'[97] It also recognized the requirement of *lex certa* as being an essential element of the *nullum crimen sine lege* principle, by pointing to the jurisprudence of the ICTY.[98]

51. Only in some cases there is a more clear reference to domestic principles. E.g. the Trial Chamber of the ECCC in the *Duch* Case found it necessary to discuss the legal standard required for the establishment of guilt under the different legal families, since the Cambodian legal system belongs to the civil law one, and yet, the ECCC established a standard of proof of guilt as accepted in the common law system (apparently it has done so following the legacy of the international criminal tribunals, such as the ICTY). The Court sustained that 'the basis of the finding that "[i]n order to convict the accused, the Chamber must be convinced of the guilt of the accused beyond reasonable doubt" is expressed differently in common law and civil law systems, and within the different language versions of Internal Rule 87(1).' Cambodian law derives from civil law and, in particular, from the notion of the judge's *intime conviction.* This notion was retained in the French version of Internal Rule 87(1), whereas both the Khmer and English versions of this Internal Rule stated that a finding of guilt against the accused requires the Chamber be convinced beyond a reasonable doubt. Despite these conceptual differences, the Chamber adopted a common approach that has evaluated, in all circumstances, the sufficiency of the evidence.[99]

II.1.c International Arbitration[100, 101]

52. For the purposes of this report the overview of cases will include inter-State arbitration (*ad hoc*, Annex VII of the UN Convention on the Law of the Sea –UNCLOS-, and Ethiopia-Eritrea Commission) and mixed arbitration (Iran-US Claims Tribunal and investment treaty tribunals under the arbitration rules of ICSID -the International Centre for Settlement of Investment Disputes-, UNCITRAL –UN Commission on International Trade Law-, or the SCC -Stockholm Chamber of Commerce-). Purely commercial international arbitration is excluded. This section will examine the manner in which domestic law principles have been used in publicly available recent decisions of international arbitration (rendered from 1980s onwards).

[100] Based on the analysis provided by Yas Banifatemi and Martins Paparinskis. They are grateful for the research support of Ira Ryk-Lakhman.

[101] In relation to International Investment Law, see T. Gazzini, "General Principles of Law in the Field of Foreign Investment", 10 J. of world Investment & Trade (2009), 103; S.W. Schill, "General Principles of Law and International Investment Law" in T. Gazzini & E. de Brabandere (eds.), *International Investment Law - The Sources of Rights and Obligations*, Martinus Nijhoff, 2012, 133.

53. While the terminology of 'principles' is often encountered in contemporary international arbitration, many of these decisions do not engage with domestic law principles in the technical sense.

54. Some of the cases rather address primary rules of international law (with 'general' often signifying the abstractness of expression of the rule or its importance in the particular area). One line of authorities relating to fair and equitable treatment may be found in decisions of investment treaty tribunals, relying on the various ways that general principles (particularly good faith) interrelate with fair and equitable treatment.[102] Another line of cases relates to different aspects of the law of expropriation, mostly rendered by the Iran-US Claims Tribunal (IUSCTR).[103] These cases directly engage with international law, rather than domestic principles, and therefore are of no direct relevance for this report.

55. Other cases address the law of treaties and secondary rules of State responsibility (particularly in relation to the remedial aspects of content of responsibility), both bodies of law mostly expressed at the level of general international law:

– The law of treaties, as expressed in the 1969 Vienna Convention on the Law of Treaties (VCLT), is, for modern international arbitration, a statement of general *international* law on most issues likely to arise, and therefore will very rarely require the arbitrator to go back to domestic law.[104] There are many instances where 'principles' of treaty interpretation have been referred to by arbitral tribunals, both by the IUSCTR[105] and investment tribunals.[106]
– Many awards refer to 'principles' in relation to remedies, often explicitly situating themselves within the line of authority of *Chorzow Factory* or the 2001 ILC Articles on State responsibility. As is not uncommon in the law of State responsibility, it

[102] M. Paparinskis, "Good Faith and Fair and Equitable Treatment in International Investment Law" in A. Mitchell et al (eds), *Good Faith and International Economic Law*, OUP, 2015.

[103] To consider some of its foundational decisions, in *American International Group, Inc. and American Life Insurance Co. v Iran and Central Insurance of Iran* (1983) 4 IUSCTR 96, para 2a, the Tribunal stated that 'it is a general principle of public international law that even in a case of lawful nationalization the former owner of the nationalized property is normally entitled to compensation for the value of the property taken.'; similarly, *James M Saghi et al v Iran,* (1993) 29 IUSCTR 20, para. 71.

[104] Although the VCLT is considered to reflect general international law, it was based on general principles, rather than customary law, e.g. in relation to the loss of right to terminate, see M. Kohen and S. Heathcote, "Article 45: Convention of 1969" in O. Corten and P. Klein (eds), *The Vienna Convention on the Law of Treaties: A Commentary*, OUP 2011, 1066; and fraud, G. Niyungeko, "Article 49: Convention of 1969", id., 1145-46.

[105] *Agrostruct International Inc v Iran State Cereals Organization (1988) 18 IUSCT 180*, Arbitrator Noori's concurring and dissenting opinion, para. 28: 'the fundamental principles of international law requiring that conditions governing the competence of an international tribunal be interpreted restrictively' – 'the Tribunal should not, without giving sufficiently careful attention to the nature of the evidence submitted by the Claimant, accept its United States nationality as proved.'

[106] *Petrobart Limited v The Kyrgyz Republic*, SCC Case No. 126/2003, Award, 29 March 2005, 23; *Eureko B.V. v Republic of Poland,* Partial Award, 19 August 2005, para 177 ('Without deciding whether the exception of non performance is a maxim of interpretation or a rule of international law, the Tribunal is of the view that the exception cannot assist Claimant because it essentially applies to cases of simultaneous or conditional performance').

> may be hard to draw the line between arguments regarding secondary rules of State responsibility and regarding primary rules. But whatever the precise character of the rules that the legal argument addresses, the *source* of those rules is treaty or custom, and thus is of no direct relevance to the present inquiry into domestic law. For example, in *Iran v US (A27)*, Chamber Two of the IUSCTR relied on the 'well-settled principle of international law that every international wrongful act of the judiciary of a state is attributable to that state'.[107] In *Petrobart v Kyrgyz Republic*, the SCC tribunal referred to '[t]he relevant general principle of international law […] stated clearly in Article 12 of the' 2001 ILC Articles that *mens rea*/intention is irrelevant for assessing breach of an international obligation. [108]

56. A fourth category deals with general principles of international law. While some of those principles have originated in domestic legal traditions, they have been long become solidly anchored in the international legal order, and therefore do not require contemporary arbitrators to engage with domestic law to develop international law. A number of arbitral tribunals have referred to general principles of international law in that sense, particularly in relation to good faith[109] but not exclusively.[110] Estoppel is a clear example: as the Annex VII arbitral tribunal in the *Mauritius v UK* case suggests, estoppel in international law might have originally emerged from domestic law, but is now a principle of international law that has its own terminology and distinctions that are no longer dependent upon domestic law:

> Estoppel is a general principle of law […] Estoppel in international law differs from "complicated classifications, modalities, species, sub-species and procedural features" of its municipal law counterpart […] but its frequent invocation in international proceedings has added definition to the scope of the principle. […] Additionally—and in contrast to at least some forms of estoppel in municipal law—the principle in international law does not

[109] *Vigotop Limited v Hungary,* ICSID Case No. ARB/11/22, Award, 1 October 2014, para 310 ('it is undisputed that the principle of good faith is a fundamental principle of international law'); *Gustav F W Hamester GmbH & Co KG v Republic of Ghana,* ICSID Case No. ARB/07/24, Award, 18 June 2010, paras. 123-24 ('An investment will not be protected if it has been created in violation of national or international principles of good faith […] These are general principles that exist independently of specific language to this effect in the Treaty'); *Phoenix Action Ltd. v Czech Republic*, ICSID Case No. ARB/06/5, Award, 15 April 2009, paras 77-8, 110, 113 ('In the instant case, no question of violation of a national principle of good faith or of international public policy related with corruption or deceitful conduct is at stake. The Tribunal is concerned here with the international principle of good faith as applied to the international arbitration mechanism of ICSID); *Quiborax S.A., Non Metalic Minderals S.A. and Allan Fosk Kaplun v Plurinational State of Bolivia*, ICSID Case No. ARB/06/2, Decision in Jurisdiction, 27 September 2012, para. 298; *Plama Consortium Limited v. Bulgaria*, ICSID Case No. ARB/03/24, Award, 27 August 2008, paras. 142-44.

[110] Consent as a basis of international arbitration, *pacta sunt servanda,* and deciding like things alike, *Daimler Financial Services A.G. v Argentina,* ICSID Case No. ARB/05/1, Award, 22 August 2012, paras. 174, 146, 52 (respectively); inter-temporal law, *Eritrea v Yemen, Award on Territorial Sovereignty and Scope of the Dispute* (1999) 119 ILR 1, para. 444; scope of sovereign rights of the State in relation to pension systems, *Catherine Etezadi v the Government of the Islamic Republic of Iran* (1994) 25 IUSCTR 264, para. 75; *res judicata, Petrobart* (*supra* note 105), 64 ('The Treaty contains no provisions about *res judicata*, but the notion of *res judicata* is undoubtedly recognised in international law').

> distinguish between representations as to existing facts and those regarding promises of future action or declarations of law.[111]

57. Sometimes it is unclear what type of legal argument the Tribunal is employing but it appears to be (in its own view) related to general principles of international law. E.g. in the *Final Award: Pensions: Eritrea's Claims 15, 19 & 23,* the Eritrea Ethiopia Claims Commission considered 'Eritrea's invocation of the customary law doctrine of unjust enrichment', viewing it as a 'doctrine predicated upon general principles of international law', noted that 'it must be applied cautiously', and did not find it applicable.[112] In the *Duke Energy v Ecuador* case, an ICSID arbitral tribunal observed that 'although increasingly common in ICSID practice, the award of compound interest is not a principle of international law'.[113] The challenge of drawing the line between general principles within international law and those derived from domestic law is illustrated by the *Yukos v Russia* case, where an Energy Charter Treaty Tribunal considered the submission by the respondent that the 'clean hands' doctrine constituted a 'general principle of law recognised by civilized nations.' The Tribunal noted that

> General principles of law require a certain level of recognition and consensus. However, on the basis of the cases cited by the Parties, the Tribunal has formed the view that there is a significant amount of controversy as to the existence of an "unclean hands" principle in international law.[114]

58. In ultimately rejecting Russia's argument, the Tribunal emphasised that

> Respondent has been unable to cite a single majority decision where an international court or arbitral tribunal has applied the principle of "unclean hands" in an inter-State or investor-State dispute and concluded that, as a principle of international law, it operated as a bar to a claim.[115]

59. The Tribunal discussed various *international* judgments and opinions but did not engage with or cite approaches taken by *domestic* legal orders and courts. This suggests, by necessary implication, that it was not examining the possibility of deriving general principles from domestic law. Overall, cases examined in this section, while engaging

---

[111] *Chagos Marine Protected Area Arbitration (Mauritius v United Kingdom)* Final Award, ICGJ 486 (PCA 2015), paras. 435-37; In *Grynberg et al v Grenada,* ICSID Case No. ARB/10/6, Award, 10 December 2010, para. 7.1.2, the Tribunal noted that 'it is also not disputed that the doctrine of collateral estoppel is now well established as a general principle of law applicable in the international courts and tribunals such as this one.' In *Canfor Corporation v US, TEMBEC v US, Terminal Forests Products Ltd. v US*, UNCITRAL/NAFTA, Order of the Consolidation Tribunal, 7 September 2005, para. 168, the Tribunal noted that '[e]stoppel is a recognized general principle of law that has been applied by many international tribunals.'

[112] *Final Award: Eritrea's Claims 15, 19, and 23*, 19 December 2005, RIAA XXVI, para. 43.

[113] *Duke Energy Electroquil Partners et al v Ecuador,* ICSID Case No ARB/04/19, Award, 18 August 2008, para. 473. Before making that point, the Tribunal stated that 'the prohibition of compound interest contained in local law must be enforced especially considering Article VIII of the BIT which specifies that the Treaty shall not derogate from the laws and regulations of the host State', so it appears that the Tribunal was contrasting a (properly) international principle with a domestic rule here, rather than deriving the former from the latter.

[114] *Yukos Universal Limited (Isle of Man) v The Russian Federation*, UNCITRAL, PCA Case No. AA 227, Final Award, 18 July 2014, para. 1359.

[115] Id., para. 1362.

with 'general principles' in the technical sense, are not (any longer) directed at principles of domestic law. They are thus just as irrelevant for the present inquiry as the cases considered above.

II.1.c.i 'Principles' that Engage with Domestic Law of a Single State

60. Even when arbitral tribunals do use domestic law, they are not necessarily engaged in the use of domestic law principles for the development of international law. In certain regimes of international arbitration, particularly international investment arbitration, interpretation and application of international law may require close engagement with domestic law of a particular State. For example, arbitral tribunals may have to consider whether an investment has been made in accordance with domestic law of State A, or whether State B has provided process due under its domestic law. There may be ground for reasonable disagreement over the precise legal characterisation of these arguments.[116] But it is tolerably clear that they engage with domestic law of a single State and do not attempt to use domestic law principles for broader purposes, and are thus irrelevant for this inquiry.

61. A slightly more complicated challenge is presented by certain cases, particularly in the IUSCT, where tribunals consider principles that are both general *and* belong to the legal order of State that is a party to arbitration. For example, in the *Pomeroy v Iran* case, the Tribunal stated in relation to judicial estoppel that '[i]t is both a general principle of law and a principle embodied in Articles 247 and 248 of the Civil Code of Iran, that a party may not deny the validity of a contract entered into on its behalf by another if, by its conduct, it later consents to the contract'.[117] Closer examination of particular awards is necessary to identify the precise character of the legal argument. For the purposes of this report, these cases have been treated as relating to general principles of (at least in part) domestic law, and will be discussed in the next section.

II.1.c.ii 'Principles' that Engage with Domestic Law Principles

A. Reliance upon general principles

62. International arbitral tribunals have relied upon general principles in a variety of cases. One area where reliance on general principles may be particularly fruitful is international procedural law (even if it may be complicated to determine whether tribunals are relying on general principles in the technical sense, or rather elaborating their statutory or inherent powers, or applying customary law or general principles of international law).[118] To select a few examples: in the *Fritz v Iran* case, the IUSCT relied on the 'accepted principle that an adverse inference may be drawn from a party's failure to submit evidence likely to be at its disposal. In weighing the evidence before it, the Tribunal must therefore

[116] E. Gaillard and Y. Banifatemi, "The Meaning of 'and' in Article 42(1), Second Sentence, of the Washington Convention: The Role of International Law in the ICSID Choice of Law Process", 18 ICSID Review (2003) – FILJ 375; Z. Douglas, *The International Law of Investment Claims*, CUP, 2009, ch 2.

[117] *R.N. Pomeroy,* et.al. *v Government of the Islamic Republic of Iran* (1983) 2 IUSCTR 372, para V(1).

[118] C. Brown, *A Common Law of International Adjudication*, OUP, 2007, 85-90.

take into account the Respondents' omission to produce the directors' reports'.[119] In *American Bell International v Iran,* the Tribunal relied on 'a general principle of law that a party which at some stage of judicial or arbitral proceedings admits that certain legal conclusions can be drawn from some facts or circumstances is thereafter estopped from arguing otherwise in the same proceedings'.[120] In the *Futura v NIOC,* the IUSCT relied on the principle *actio non datur non damnificato* to dismiss the claim because the claimant had suffered no damage.[121]

63. In the *Economy Forms Corporation v Iran,* the IUSCT relied on 'a generally accepted principle of private international law' that the formation of and the requirements as to the form of a contract are governed by that law which would be the proper law of the contract, if the contract was validly concluded (however, there are only two quotes).[122] In the *AAPL v Sri Lanka* case, an ICSID arbitral tribunal confirmed that it was a general principle of law that the claimant bears the burden of proof.[123] In the *US v Iran (B36)* case, the IUSCT relied upon 'the public international law principle of extinctive prescription', noting that '[n]o rule of international law specifies the time period which must elapse in order to render extinctive prescription operative. The principle is flexible and the decision as to its applicability is left at the discretion of the Tribunal' (and the particular claim was allowed).[124] In the *Waste Management II,* an ICSID arbitral tribunal stated that '[t]here is no doubt that *res judicata* is a principle of international law, and even a general principle of law within the meaning of Article 38 (1) (c) of the Statute of the International Court of Justice', considered various international authorities and judgments of two domestic courts in elaborating its content, and applied it in rejecting an objection by Mexico.[125]

---

[119] Even an adverse inference was not in fact made against Iran: 'the Tribunal finds that insufficient evidence has been presented that on 19 January1981 STSS was an entity controlled by Iran as required by the Claims Settlement Declaration. Consequently, the Tribunal dismisses the claim against STSS for lack of jurisdiction', *Arthur J. Fritz & Co. v STSS and the Government of the Islamic Republic of Iran* (1989) 22 IUSCTR 170, paras 42 and 48.

[120] *American Bell International Inc. v the Islamic Republic of Iran,* et.al (1986) 11 IUSCTR 320, para. 16. See also *Pomeroy* (supra note 130), para V(1).

[121] *Futura Trading Incorporated v the National Iranian Oil Company* (1986) 13 IUSCTR 99, para. 62.

[122] *Economy Forms Corporation v the Government of the Islamic Republic of Iran* (1983) 3 IUSCTR 42, para III(1), quoting Dicey & Morris, The Conflict of Laws Rule 146 at 775 and Rule 148 at 784 (10th ed. 1980); O. Lando, Contracts, in III International Encyclopedia of Comparative Law, Chapter 24 at 102-103.

[123] *Asian Agricultural Products Ltd. v Republic of Sri Lanka*, ICSID Case No. ARB/87/3, Award, 27 June 1990, para. 56. In *Middle East Cement Shipping and Handling Co. S.A. v Arab Republic of Egypt,* ICSID Case No. ARB/99/6*,* Award, 12 April 2002, para. 89, the arbitral Tribunal relied on *AAPL* and noted that '[t]he respective provisions of the BIT confirm what can be considered as a general principle of international procedure - and probably also of virtually all national procedural laws - namely that it is the Claimant who has the burden of proof for the conditions required in the applicable substantive rules of law to establish the claim.'

[124] *The United States of America v the Islamic Republic of Iran (B36)* (1996) 32 IUSCTR 162, paras. 72 and 74. In the *Iran National Airlines Company v the Government of the United States of America (B8)* (1987) 17 IUSCTR 187, paras. 6 and 11. The Tribunal accepted that the principle, which the US invoked by reference to statutes of limitation in the US and Iran, is 'an established principle of public international law', but did not apply it to the commercial transactions in the case.

[125] *Waste Management, Inc. v United Mexican States ('Number 2')*, ICSID Case No. ARB(AF)/00/3, Decision as to Mexico's Preliminary Objection, 26 June 2002, paras. 39-47.

64. There is a significant corpus of decisions relating to general principles in contractual and other private law matters, particularly rendered by the IUSCT in light of its broad jurisdiction that included contractual claims. Some decisions are directed at principles that are general in the sense of underpinning the legal systems. In the *Amoco v Iran* case, the IUSCT stated that '[t]he principles of good will and good faith apply in practically all systems of law to contracts as well as to treaties'.[126] In the *Mobil v Iran* case, the IUSCTR noted that '[i]t also is admitted generally that *force majeure*, as a cause of full or partial suspension or termination of a contract, is a general principle of law which applies even when the contract is silent'.[127] In the *Sea-Land Service v Iran* case, the IUSCT identified and relied upon the principle of unjust enrichment,

> The concept of unjust enrichment had its origins in Roman Law, where it emerged as an equitable device 'to cover those cases in which a general action for damages was not available.' It is codified or judicially recognised in the great majority of the municipal legal systems of the world, and is widely accepted as having been assimilated into the catalogue of general principles of law available to be applied by international tribunals.[128]

65. In the *Inceysa v El Salvador* award, an ICSID arbitral tribunal relied upon unjust enrichment in a similar vein, noting that '[t]he written legal systems of the nations governed by the Civil Law system recognize that, when the cause of the increase in the assets of a certain person is illegal, such enrichment must be sanctioned by preventing its consummation.'[129]

66. In the *Questech v Ministry of National Defence of Iran* case, the IUSCT identified and relied upon change of circumstances principle, noting that

> This concept of changed circumstances, also referred to as clausula rebus sic stantibus, has in its basic form been incorporated into so many legal systems that it may be regarded as a general principle of law; it has also found a widely recognized expression in Article 62 of the Vienna Convention on the Law of Treaties of 1969. While it might be argued that, in view of wider and narrower formulations of the clausula in different legal systems and of certain differences in its practical application, it would not be easy to establish a common core of such a general principle of law, the consideration of changed circumstances in the present context is warranted by the express wording of Article V of the Claims Settlement Declaration.[130]

[130] *Questech, Inc. v the Ministry of National Defence of the Islamic Republic of Iran* (1985) 9 IUSCTR 170, pt 2(c).

67. The Tribunal found that the change of circumstances principle applied in the case, and ordered compensation for damages.[131] In his separate opinion, Judge Holtzmann disagreed with the application of principle of changed circumstances, explaining that

> Concepts by which parties are excused from contractual obligations by certain changed circumstances are found in many legal systems and are known by various names. In common law systems they are embraced within doctrines of 'frustration' and 'impossibility'; in the civil law they are often known as clausula rebus sic stantibus. All of these doctrines excuse parties in case of supervening circumstances caused by outside events beyond their control that have made continued performance of a contract unreasonable. All of these doctrines are seen as exceptions to the paramount rule of pacta sunt servanda ('agreements are to be observed'). Because they are exceptions to the contractual obligation to perform they must be proven and applied with care.[132]

68. In other decisions, the IUSCT identified general principles of a more technical character. In the *Dames & Moore v Iran* case, the IUSCT relied on the principle of payment upon invoice (albeit rejecting it in the particular case).[133] In the *Schering Corporation v Iran* case, the IUSCT stated that '[i]t is a generally accepted legal principle that when a promissory note is given for an obligation, the obligation is, unless otherwise agreed, at least suspended until the note matures'.[134] In the *Morrison-Knudsen Pacific Limited v Iran,* the IUSCT rejected Respondents' submission that the remedy provided in article 16 of the contract which was the subject-matter of the claim constituted an exclusive remedy for termination, relying on the 'general principle of law [that] a party may recover losses suffered as a consequence of contract breach irrespective of whether a right also exists to terminate a contract.'[135] In the *Reynolds v Iran* case, the IUSCT noted that '[u]nder generally accepted principles of contract law, a contractually stipulated rate of interest is normally binding on the parties', although it is true that '[a]n international Tribunal will not enforce the provisions of a contract stipulating that a highly unreasonable or usurious rate of interest should be paid', which was not the case in that instance.[136] In the *DIC v Iran et al,* the IUSCT relied on general principles regarding the existence ofcontracts ('is widely accepted by municipal systems of law that one can prove the existence of an enforceable oral contract through evidence demonstrating part […] Such a principle must be taken to constitute a general principle of law')[137] and recovery for work performed ('It is well established under Iranian law and general principles of law that under the

[131] Ibid; see also *Rockwell International v The Government of the Islamic Republic of Iran* (1989) 23 IUSCTR 150, para 92 ('The concept of "changed circumstances," also referred to as clausula *rebus sic stantibus*, in its basic form, has been recognized in Tribunal practice as a general principle of law').

[132] *Questech* (*supra* note 129), pt I.

[133] *Dames & Moore v the Islamic Republic of Iran*, et.al. (1983) 4 IUSCTR 212, para 4.b.ii ('It is a well-established general principle in various legal systems that in commercial relationships one party may be obligated to pay another party, with which it has been doing business, a sum specified in an invoice if it receives the invoice but does not object to it within a certain period of time').

[134] *Schering Corporation v the Islamic Republic of Iran* (1984) 5 IUSCTR 361, pt VI.

[135] *Morrison-Knudsen Pacific Limited v the Ministry of Roads and Transportation and the Islamic Republic of Iran* (1984) 7 IUSCTR 54, pt 3(b).

[136] *R.J. Reynolds Tobacco Company v the Government of the Islamic Republic of Iran and Iranian Tobacco Company (ITC)* (1984) 7 IUSCTR 181, pt IV(4).

[137] *DIC of Delaware Inc., Underhill of Delaware, Inc. v Tehran Redevelopment Corporation, the Government of the Islamic Republic of Iran* (1985) 8 IUSCTR 144, pt B(1).

doctrine of *quantum meruit there may be a recovery for work performed'*).[138] In the *Iran v US (B1-5)* case, the IUSCT relied on the general principle of the allocation of risks and obligations between buyer and seller in a purchase/sale contract.[139] In the *Middle East Cement Shipping* case, an ICSID arbitral tribunal noted that '[t]he duty to mitigate damages […] can be considered to be part of the General Principles of Law which, in turn, are part of the rules of international law which are applicable in this dispute according to Art. 42 of the ICSID Convention'.[140] In the *Saluka v Czech Republic* partial award, an UNCITRAL arbitral tribunal relied upon the 'general principle of company law that a company is a legal entity separate from its shareholders', applying it to find that anything acquired by CSOB was not acquired by the State.[141]

69. In several investment arbitration awards, the UNIDROIT Principles of International Commercial Contracts (which are essentially a restatement of general principles found in major domestic law traditions) have been invoked as a source of general principles of contract law derived from the domestic legal systems. Some examples are: *Joseph C. Lemire v. Ukraine* (interpretation of contracts),[142] *Petrobart v. Kygyz Republic* (interests),[143] *Eureko Bv v. Poland* (the application of the *exceptio non adimpleti contractus*),[144] *PSEG Global v. Turkey* (the validity of contracts),[145] *African Holding et Al. V. Congo* (non performance and conclusion of contracts).[146]

70. Finally, in a number of decisions in international investment arbitration, Tribunals have relied upon general principles to elaborate primary obligations. In the *Saluka* case noted above, the Tribunal identified the general principle of unjust enrichment and applied it as part of fair and equitable treatment.[147] In the *Total v Argentina* case, an ICSID arbitral tribunal engaged in 'a comparative analysis of the protection of expectations in domestic jurisdictions', concluding that '[w]hile the scope and legal basis of the principle varies, it has been recognized lately both in civil law and common law jurisdictions

[147] *Supra* note 140, paras 449-50.

within well defined limits.'[148] Other decisions relate to proportionality. In the *Occidental v Ecuador* case, an ICSID arbitral tribunal observed that '[t]he application of the principle of proportionality may be observed in a variety of international law settings', and further noted that

> On the application of proportionality generally in the context of administrative action, the most developed body of jurisprudence is in Europe. It is very well-established law in a number of European countries that there is a principle of proportionality which requires that administrative measures must not be any more drastic than is necessary for achieving the desired end. The principle has been adopted and applied countless times by the European Court of Justice in Luxembourg, and by the European Court of Human Rights in Strasbourg.[149]

71. Ecuador's annulment challenge on the issue was rejected because, in the opinion of the annulment committee, 'the Tribunal has convincingly explained that the principle of proportionality between intensity and scope of the illicit activity, and severity of the sanction is a general principle of punitive and tort law, both under Ecuadorian and under international law.'[150]

B. Affirmation of general principles

72. A considerable number of decisions that rely upon general principles and are discussed in the previous section also affirm and explain, in general terms, why they count as general principles. In some cases, the affirmation may stand on its own (or be expressed in terms so broad that may be relating to general principles of international law). In the *Amco v Indonesia* case, an ICSID arbitral tribunal discussed the approach to be taken to interpretation of an agreement to arbitrate and noted that 'the fundamental principle *pacta sunt servanda*, [is] a principle, common, indeed, to all systems of internal law and to international law.'[151] In the *Inceysa v El Salvador* case, an ICSID arbitral tribunal made a sweeping statement

Without attempting to define what the general principles of law are, the Tribunal notes that, in general, they have been understood as general rules on which there is international consensus to consider them as universal standards and rules of conduct that must

---

[149] *Occidental Petroleum Corporation et al v Ecuador*, ICSID Case No. ARB/06/11, Award, 5 October 2012, paras. 402-3.

[150] Id., Decision on Annulment, 2 November 2015, para. 350. Other authorities are more cautious, e.g. *Adel A Hamadi Al Tamimi v Oman,* ICSID Case no ARB/11/33, Award, 3 November 2015, para 261 ('the minimum standard of treatment under customary international law, the United States submitted, does not include a general obligation of proportionality. Proportionality is not a self-standing obligation.'); M. Paparinskis, *The International Minimum Standard and Fair and Equitable Treatment*, OUP, paperback ed., 2014, lv ('*Occidental* is a complex case, both at the level of domestic law as well as primary and secondary rules of international law, and one should evaluate its reasoning with great care, but there is something to be said for pausing before one substitutes and rewrites contractual terms and consequences by reference to such a general and vague standard as proportionality.')

[151] *Amco Asia Corporation et al v Indonesia,* ICSID Case No. ARB/81/1, Decision on Jurisdiction, 25 September 1983, para 14.

always be applied and which, in the opinion of important commentators, are rules of law on which the legal systems of the States are based.[152]

C. Negation of general principles

73. In a limited number of cases, arbitral tribunals have explicitly rejected arguments for the existence of general principles. In the *US v Iran (B36),* the IUSCT (possibly) rejected the argument that there was a general principle of international law setting a time period within which claims could be made, noting that it

> is not aware of State Practice clearly supporting the period of four years, especially with regard to intergovernmental contract…the period is much longer, though the length of such period is difficult to define and may vary in different circumstances. […] there is no rule of general international law that would fix a time period. In the absence of specific guidance the international judge or arbitrator enjoys a measure of discretion restricted by his duty to give due regard to the facts of the particular case.[153]

74. In the *Canfor v US* case, the consolidation Tribunal was unimpressed by the investor's argument that the US request was barred by laches, noting that:

> the general principle underlying the Anglo-American doctrine of laches has been invoked before international tribunals, and that a number of international legal scholars have argued for its existence of the doctrine in the context of the present request for consolidation. […] While there is a borrowing of principles derived from domestic legal systems in public international law, this takes the form of general principles of law that do not necessarily replicate the rules of domestic law from which they derive their common origin.[154]

75. In the *Final Award on Eritrea's Damages Claims,* the Eritrea-Ethiopia Claims Commission rejected the proposition that consequential damages were a general principle of law, by noting that

> international law does not recognize a separate category of compensable "consequential damages" involving different standards of legal causation or other distinctive legal elements. The concept of consequential damages has a significant role in some national legal systems, but does not exist in others, and so cannot be viewed as a general principle of law.[155]

76. In the Partial Award on the Merits in the *Chevron v Ecuador* case, an UNCITRAL arbitral tribunal rejected 'loss of chance' as a general principle of international law (responding to Ecuador's arguments regarding reparation for loss caused by undue delay by Ecuador's courts):

> [T]he 'loss of chance' principle does not have wide acceptance across legal systems such that it can be considered a 'general principle of law recognized by civilized nations.' At most it can be said that the 'loss of chance' principle is applied in exceptional situations where there exists a 'harm whose existence cannot be disputed but which it is difficult to quantify,' (sic) as noted in the commentary to the UNIDROIT Principles cited by the Respondent. In this case, the Tribunal finds no exceptional difficulties in coming to a conclusion as to what

[154] *Canfor* (*supra* note 110) paras. 165-66.

[155] *Final Award: Eritrea's Damages Claim (Eritrea v Ethiopia)*, Eritrea Ethiopia Claims Commission, 17 August 2009, 26 RIAA 505, para 203.

> should have occurred but for the breach of the BIT and what damages result therefrom. The Tribunal therefore declines to apply the 'loss of chance' principle.[156]

77. There may be other cases where reliance on domestic law principles has been negated by implication. Decisions in investment arbitration that do not find unjust enrichment, legitimate expectations, or proportionality to be elements of particular primary obligations may be counted as rejecting the reliance on these principles in *Saluka, Total,* and *Occidental* cases discussed in the previous section.

II.1.c.iii Interim Conclusion

78. Domestic law principles play a role in modern international arbitrations, and it is not an insignificant one. But it is important to be clear about whether tribunals are really relying on domestic law principles in the technical sense of the term, and why they are doing it. In many – most – cases where the term 'principles' is employed, they are not domestic law principles but rules expressed directly at the level of international law, be they rules of treaty law, the law of State responsibility, particular primary obligations, or principles of general international law. Similarly, in many cases where 'domestic law' is relied upon, it is not used to develop international law but to resolve a particular dispute that partly hinges on the domestic law of a litigating party, particularly likely in investor-State arbitration.

79. Once these irrelevancies are disposed of, it is possible to concentrate on the cases that actually engage with general principles of domestic law. There are several strands of cases where tribunals have *relied* upon such principles. They may be loosely divided into principles of procedural law, principles of contractual/private law (both of general and more technical nature), and principles elaborating the content of primary obligations, particularly likely in investment law. There is also a number of cases where domestic law principles have been *negated* explicitly, and there may be more, again particularly in investment law, where it has been done by necessary implication. At the end of the day, principles of domestic law have a role to play -- sometimes a very important one – but one that should not be viewed in isolation from the development of international law that takes place directly at the international level through treaties, customary law, and general principles of international law.

II.1.d WTO dispute settlement[157]

80. One would have expected private law analogies to have been particularly influential in WTO law given the private law character of the trading regime. However, private law analogies seem to have played a surprisingly small role. Beyond some brief and informal discussions on the relevance of domestic law among WTO committees, it is within the framework of the dispute settlement system that WTO tribunals have assessed in a small number of cases the potential use of domestic rules and principles in the context of WTO law. This limited role is in large part due to the last sentence of Article 3 (2) of the Dispute Settlement Understanding (DSU) ('Recommendations and rulings of the DSB cannot add to or diminish the rights and obligations provided in the covered agreements').

---

[156] *Chevron Corporation (USA) and Texaco Petroleum Company (USA) v Ecuador,* UNCITRAL, PCA Case No. 34877, Partial Award on the Merits, 30 March 2010, para 382.

[157] Based on the analysis provided by Régis Bismuth with peer review of Michael Waibel.

81. Although the DSU does not make an explicit reference to the general principles of law, the Appellate Body had early recognized that WTO agreements '[are] not to be read in clinical isolation from public international law'[158] since Article 3.2 of the WTO DSU provides that the dispute settlement system of the WTO 'serves […] to clarify the existing provisions of those agreements in accordance with customary rules of interpretation of public international law.'

82. Among these customary rules of interpretation, Article 31.3.c of the 1969 Vienna Convention on the Law of Treaties stipulates that, for the purpose of interpreting a treaty, '[t]here shall be taken into account together with the context […] any relevant rules of international law applicable in the relations between the parties.' On this basis, the Appellate Body has recognized that its task is to interpret the language of the agreements 'seeking additional interpretative guidance, as appropriate, from the general principles of international law.'[159] The WTO website lists several 'principles and concepts of general public international law' contained in the WTO Appellate Body Repertory of Reports and Awards (1995-2013).[160] However, no specific mention is made to general principles of *domestic* law.

83. While several WTO rulings have discussed, mentioned or referred to 'general principles of law'[161] such as 'good faith',[162] '*res judicata*',[163] 'estoppel'[164] or 'non-retroactivity',[165] they have done so by relying – *inter alia* – on international instruments, the writings of international law scholars or previous decisions of the ICJ and PCIJ, but not by assessing how these principles were understood in domestic law.

84. Beyond this general overview suggesting the irrelevance of domestic law principles in the context of WTO dispute resolution, two issues deserve to be highlighted:

– the interpretation of the principle '*onus probandi actori incumbit*' for which WTO courts have expressly referred to domestic law;
– the specific case of the use of domestic law for the interpretation of WTO agreements.

II.1.d.i The interpretation of the principle 'onus probandi actori incumbit'

85. In *United States – Shirts and Blouses*, the Appellate Body addressed the issue of the allocation of the burden of proof between the parties in a dispute. Without explicitly

mentioning the principle '*onus probandi actori incumbit*', the Appellate Body implicitly referred to it when it stated:

> [T]he issue in this case is which party must first show that there is, or is not, a violation. More specifically, the issue in this case is which party has the burden of demonstrating that there has, or has not been, an infringement of the obligations […] In addressing this issue, we find it difficult, indeed, to see how any system of judicial settlement could work if it incorporated the proposition that the mere assertion of a claim might amount to proof. It is, thus, hardly surprising that various international tribunals, including the International Court of Justice, have generally and consistently accepted and applied the rule that the party who asserts a fact, whether the claimant or the respondent, is responsible for providing proof thereof (15).[166]

86. It is beyond doubt that the Appellate Body implicitly referred to this principle (it is noteworthy to mention that the Latin expression has to date never been expressly cited in the WTO case-law but is an 'entry' in the WTO Analytical Index). Indeed, the writing on which the Appellate Body relied mentions at the cited page:

> A study of the practice of international tribunals shows that it could easily be concluded that, in spite of variety of approaches and differences of opinions as to the legal degree of applicability of the rule under different circumstances, the logical and legal concept of *actori incumbit probatio* has generally been accepted and applied by international tribunals.[167]

II.1.d.ii The use of domestic law for the interpretation of WTO agreements

87. States involved in WTO dispute settlement proceedings have occasionally invoked various concepts or principles of domestic law in order to suggest an interpretation of some provisions in WTO agreements. In a few cases, panels and the Appellate Body discussed the relevance of domestic law in interpreting such provisions, the meaning of which being potentially clarified by way of analogy with domestic concepts and principles.

88. In *US – Countervailing Measures*, the United States sought to interpret the terms "benefit" and "recipient" mentioned in the Agreement on Subsidies and Countervailing Measures (SCM) in order to determine the recipient of the benefit in the case of a change in ownership. It did so by using the traditional distinction in domestic law between a corporation as a distinct legal person and its shareholders.[168]

89. The panel did not follow the argumentation put forward by the United States. Rather, it considered

> that the distinction between a company and its shareholders as used by the United States is not appropriate in the context of the SCM Agreement. We agree that for the purpose of the

[167] M. Kazazi, *Burden of Proof and Related Issues – A Study of Evidence Before International Tribunals*, Kluwer International, 1996, 117. The expressions '*onus probandi actori incumbit*' and '*actori incumbit probatio*' are understood as equivalent. See, A.X. Fellmeth & M. Horwitz, *Guide to Latin in International Law*, OUP, 2009, 13. See also, C.F. Amerasinghe, *Evidence in International Litigation*, Martinus Nijhoff, 2005, 95.

[168] Panel Report, *United States – Countervailing Measures Concerning Certain Products from the European Communities*, 21 July 2002, WT/DS212/R, at 7.49. (Footnotes omitted)

> national corporate law of the United States and many other WTO Members, a distinction may be drawn between shareholders and the company. However the SCM Agreement does not make any reference or any distinction between shareholders and the company when it discusses the need to establish the benefit. Articles 1, 10 and 14 of the SCM Agreement make references only to 'recipient' (or 'benefit to recipient') and to 'producer.' The concept of benefit is independent of the legal business structure established pursuant to national corporate law.[169]

90. While the panel dismissed *in casu* the argument of the United States, interestingly, it did not reject *per se* the potential relevance of domestic law concepts and principles for the purpose of interpreting the provisions of the SCM Agreement.

91. Perhaps more relevantly, in *US – FSC*, the Appellate Body had to interpret the meaning of the expression 'foreign-source income' included in the SCM Agreement. Although it did so *prima facie* by having recourse to State practice as stemming from international tax treaties or model conventions, it also relied on national laws implementing a different standard in order to identify the 'lowest common denominator' of State practice and, eventually, these 'widely recognized principles of taxation'. The following excerpt[170] best encapsulates the reasoning of the Appellate Body

> 141. Although there is no universally agreed meaning for the term 'foreign-source income' in international tax law, we observe that many States have adopted bilateral or multilateral treaties to address double taxation. The United States, for instance, has more than fifty bilateral tax treaties addressing double taxation. […]
>
> 142. *Although these instruments do not define 'foreign-source income' uniformly, it appears to us that certain widely recognized principles of taxation emerge from them (121).*[171] In seeking to give meaning to the term "foreign-source income" in footnote 59 to the *SCM Agreement*, which is a tax-related provision in an international trade treaty, we believe that it is appropriate for us to derive assistance from these widely recognized principles which many States generally apply in the field of taxation. In identifying these principles, we bear in mind that the measure at issue seeks to address foreign-source income of United States citizens and residents – that is, income earned by these taxpayers in "foreign" States where the taxpayers are not resident.
>
> 143. *We recognize, of course, that the detailed rules on taxation of non-residents differ considerably from State-to-State, with some States applying rules which may be more likely to tax the income of non-residents than the rules applied by other States (122).*[172] *However, despite the differences, there seems to us to be a widely accepted common element to these rules. The common element is that a 'foreign' State will tax a non-resident on income which is generated by activities of the non-resident that have some link with that State.* Thus,

---

[169] Id., at 7.50.

[170] Appellate Body Report, *United States – Tax Treatment for "Foreign Sales Corporations"* (Recourse to Article 21.5 of the DSU by the European Communities), 14 January 2002, WT/DS108/AB/RW, 141-142.

[171] '(121) We observe that, before the Panel, the United States provided examples of the source rules applied by Brazil, Canada, Chile, Malaysia, Panama, Saudi Arabia, Taiwan, the United Kingdom and the United States. The widely recognized principles of taxation appear to be reflected in these domestic rules of taxation […]'

[172] '(122) The *O.E.C.D. Model Tax Convention* itself, therefore, admits of differing standards to determine whether business income was generated by activities linked to the territory of a "foreign" State.'

> whether a 'foreign' State decides to tax non-residents on income generated by a permanent establishment or whether, absent such an establishment, it decides to tax a non-resident on income generated by the conduct of a trade or business on its territory, the 'foreign' State taxes a non-resident only on income generated by activities linked to the territory of that State (123).[173] As a result of this link, the 'foreign' State treats the income in question as domestic-source, under its source rules, and taxes it. Conversely, where the income of a non-resident does not have any links with a 'foreign' State, it is widely accepted that the income will be subject to tax only in the taxpayer's State of residence, and that this income will not be subject to taxation by a 'foreign' State. (emphasis added)

92. In *Mexico-Telecoms*, the Panel was called upon to interpret provisions of the Telecommunications Reference Paper, which formed an integral part of Mexico's schedule of liberalisation commitments under the GATS.[174] The Panel considered that some technical terms may have a special meaning (in the sense of Article 31.4 of the VCLT) of common use in the telecommunications sector, and which the parties can be presumed to have been aware of. In particular, regarding the special meaning of the term 'cost-oriented' the Panel refers to a comparative report made by the International Telecommunications Union (ITU)

> *ITU, Trends in Telecommunications Reform: Interconnection Regulation*, 3rd edition, sec. 4.2.1.2, p. 40. This paragraph also states that countries that apply long run incremental cost methodologies include United States, Australia, EC, Colombia, and South Africa, and that "numerous developing countries have adopted or proposed" some form of this model.[175]

93. In addition, the Panel stated that 'the term "interconnection" appears as a technical term with a possible "special meaning" in national laws and regulations'.[176] However, in doing so, the Panel only refers to Mexico's Federal Communications Law since

> [w]e have not been provided evidence of laws or regulations of other Members which offer definitions or usage that indicate that the definition of "interconnection" is inconsistent with the ordinary meaning of the term "linking" in Section 2 of Mexico's Reference paper. We note that under EC law, the term "interconnection" is defined comprehensively in a manner that is consistent with the ordinary meaning of the term "linking" […]
> 7.112 A "special meaning" of the term "interconnection" in Section 2, inconsistent with the ordinary meaning of this term, is also not evident from an examination of the differences between domestic and international interconnection from *commercial, contractual, or technical* points of view.[177]

94. These cases deserved to be examined separately since they are not related to 'general principles of law' already used or identified by other international tribunals (notably the PCIJ and the ICJ). Rather, they implement another way of using domestic law in

---

[173] '(123) We note that the *Andean Community Agreement*, the *CARICOM Agreement*, and the *Andean Community Model Tax Agreement and the O.E.C.D.* and *U.N. Model Tax Conventions* describe a variety of situations in which a "foreign" State is entitled to tax a non-resident on income generated through activities which are linked to that State.'

the context of WTO dispute resolution for the interpretation – beyond what is literally prescribed by the 1969 Vienna Convention on the Law of Treaties – of ambiguous terms in WTO agreements.

II.1.e International Administrative Tribunals (IATs)[178,179]

95. International Administrative Tribunals (ITAs) are independent judicial bodies established by international organisations to settle the disputes between them and their employees on labour issues. In the *Judgments of the ILO Administrative Tribunal* case, the ICJ confirmed that '[t]he Court does not deny that the Administrative Tribunal is an international tribunal.'[180] IATs enjoy the limited jurisdiction given by their statutes. Over the years they have created a mature body of law which has a distinctive character and does not duplicate any national law.

96. Due to the lack of clarity in their statutes, IATs decisions have accepted an amalgamation of sources of law. In particular, general principles of law have been applied by most IATs as early as 1929 (by the then Administrative Tribunal of the League of Nations –LNT–).[181] The Administrative Tribunals of the World Bank (WBAT),[182] UN Dispute Tribunal (UNDT) and Appeals Tribunal (UNAT),[183] the International Labour Organisation (ILOAT),[184] the NATO Administrative Tribunal,[185] the Administrative Tribunal of the Organization of American States (OASAT),[186] and the OECD Administrative Tribunal[187] have all applied general principles of law –without any reference to Article 38.1 of the ICJ Statute– usually as a way of interpreting and filling the gaps of internal regulation of the organisations (which were initially derived from national systems). For instance, in *Wakley*, the ILOAT mentioned that 'in the absence of relevant provisions in the staff rules, the general principle of law according to which the payer is entitled to pursue the recovery against the payee of sums paid in error is applicable to the present case.'[188]

97. Usually, IATs try to interpret existing internal rules in conformity with general principles of law but in case of direct conflict between the internal written regulation and

---

[184] *Ferrechia*, ILOAT judgment No. 203 [1973] and *Gubin and Nemo*, ILOAT judgment No. 429 [1980].

[185] Formerly, NATO Appeals Board. See *Warren*, NATO Appeals Board, Decision No. 57 [1974].

[186] *Alanitz*, OASAT Decision no. 13 [1975]; *Bauta*, OASAT judgment No. 25 [1976] at 21: 'this is a general principle imported from national laws.'

[187] Formerly, OECD Appeals Board. See *Angelopoulos*, OECD Appeals Board Decision No. 57 [1976].

[188] ILOAT judgment No. 53 [1961].

general principles, usually the latter prevail (only in a few cases the opposite approach has apparently been adopted):[189]

a. in *Ferrechia*,[190] the ILOAT confirmed that: 'A staff member against whom disciplinary proceedings are taken has the right to be heard before a sanction is imposed on him. This right includes inter alia the opportunity to participate in the examination of the evidence. *Deriving as it does from a general principle*, it must be respected *even where contrary provisions exist* or in the absence of any explicit text.' (emphasis added).

b. in *Callewaert-Haezebrouck*,[191] the ILOAT stated that: 'The Director-General contends that that text explicitly applies only to […] The Director-General so interprets Article 28 as to discriminate between male and female staff members, only the wives of male staff members being entitled to benefit from the insurance of their husbands. *Such discrimination offends against the general principles of law, and particularly of the international civil service, and the Tribunal cannot allow application of a text which so discriminates*.' (emphasis added)

98. IATs have also applied general principles as a way of controlling the exercise of administrative powers and discretions by the international organisations; including procedural irregularities (with particular reference to the principle of due process)[192].

99. However, there is lack of clarity on the methods used for identifying general principles and on whether those principles come from domestic law or form international law. Nevertheless, most of the general principles applied are found in domestic administrative or civil service regimes of many civil law systems (but also, in both civil law and common law countries, in the area of contract law –e.g. *force majeure*, [193] unjust enrichment,[194] or estoppel–[195] or even of conflict of laws[196]). In some cases, the IATs just refer to previous decisions of other administrative tribunals.

II.2 International Law-Making

100. In the case of international law-making, there seems to be more room for flexibility (in the way domestic principles are used) than in the case of adjudication. There is also the need to rely more on those particular legal systems which are more advanced in dealing with the specific problem at hand.

---

[189] In *Di Palma Castiglione*, supra note 194, the LNT made clear that only in case of absence of internal rules the application of general principles could be considered.

[190] *Supra* note 187.

[191] ILOAT judgment No. 344 [1978].

[192] E.g. in *Kissaun* (ILOAT judgment no. 69 [1964]), the ILOAT confirmed that the right to be heard is a *principle* 'which applies even in the absence of express texts'.

[193] *Mayras* (LNT judgment No. 24 [1946] at 5) although it was found to be inapplicable in the case.

[194] *Wakley*, *supra* n. 191; *Ogle*, OASAT judgment No. 34 [1978] and *Reeve*, OASAT judgment no. 59 [1981].

[195] *Smith*, UNAT Judgment no. 249 [1979], JUNAT Nos. 231-300, p. 202; *Waghorn*, ILOAT Judgment No. 28 [1957] at p. 7.

[196] In *Hatt and Leuba* (ILOAT judgment No. 382 [1979]), the ILOAT invoked the principles of *forum conveniens* and of comity in order to apply a decision of the UNAT on a matter within the competence of UNAT.

II.2.a International Law Commission[197]

101. In its founding statute, no reference is made to the sources of public international law the International Law Commission can turn to. In practice, the Commission has looked to the list of sources of the law provided in article 38 of the Statute of the ICJ. This is perhaps not surprising given its close institutional relationship with the International Court.

102. Since its creation, the Commission has had over 200 members from all over the globe. This means that it has served as a microcosm of the various approaches to international law found throughout the world. Such variation in approach to international law has also extended to the understanding of the importance of domestic law principles as potential sources of the law. The variation of position within the Commission simply mirrors the variation of view which already exists in international law. Nonetheless, the work of the Commission over more than sixty years of existence provides a useful repository of material for illustrating the various approaches taken to domestic law principles.

103. It is also worth recalling the distinction between the position taken by the Commission as a whole, and that taken by its individual members. The working methods of the Commission are based on deliberation and negotiation. It is in the former, involving the exposition of views by individual members, where the bulk of references to domestic law principles are to be found. On the other hand, it is rare for some statement as to, for example, the applicability of such principles to be found in the negotiated outcome of the deliberation. To the knowledge of the present writer, the Commission has never taken a general position as to the relevance of domestic law principles, even if, in some topics, some such discussion has found its way into the final commentaries.

104. In most cases, a consideration (if any) of domestic law principles typically arises as part of the background to the work of the Commission on this or that topic, sometimes only in connection with a specific rule or aspect thereof. It may be one of several considerations taken on board during the deliberations, and not always or consistently the most important such consideration. This means that it is difficult to undertake a definitive assessment of the impact of domestic law principles on the development of international law by the Commission. No such assessment will be attempted here.

105. Nonetheless, a review of the records of the Commission reveals the fact that references to the significance (or not) of domestic law principles have, on numerous occasions, been part of the argumentation pattern, usually associated with certain members. In some cases, several such arguments have enjoyed sufficient general support to find their way into the common view of the Commission as typically reflected in its commentaries.

106. An essentially inductive approach is taken here, whereby the Commission's records (including the reports of the Special Rapporteurs, as well as the final texts and the commentaries adopted by the Commission) have been reviewed for references to domestic law principles. Those references found have been analysed, and several categories of positions or stances taken were identified. Such categories are presented below with a description and illustrative examples drawn from the records of the Commission. The

[197] Based on the analysis provided by Arnold Pronto.

research was undertaken on the basis of a search for the term 'private law', which is the phrase commonly used by the Commission in its work to denote domestic law.

II.2.a.ii Positions identified

A. General statements about the relationship of domestic law principles with international law

107. An inference as to the view taken regarding the structural relationship between domestic law principles and international law can be drawn from the willingness (or not) of the Commission or one of its members to accept the relevance of the former in the formation, interpretation or application of the latter. In some cases, however, the position expressed is more direct, in the sense that Commission members have sought to express their views, or to take a position, at the level of the *relationship* between the two bodies of law. Different views, both in favour and against, have been expressed, indicating a difference of perspective as to the relevance of domestic law principles to international law. The following are a sample of the views expressed.

A.1. *Favourable statements*

108. In his report of the Sub-Committee on State Responsibility, in 1963, Mr. Ago recorded an exchange of views in which Mr. Gros indicated that '[i]nternational law was not a totally different technique from private law and it was impossible to regard it as an island by itself.' In turn, Mr. De Luna, 'agreeing with Mr. Gros, said that many of the rules formulated in the course of the development of international law had had their origin in municipal law.'[198]

109. During the debate on the topic of succession of States, the previous year, Mr. Pessou expressed the view that 'it would be difficult to avoid reasoning by analogy with existing rules of law, even if those rules belonged to private law.'[199] In 1963, in the context of the debate on the law of treaties, Mr. Paredes confirmed that 'he held to the view that international law had been greatly influenced in its formation and development by the principles of private law, which had stimulated and guided it within the limits imposed, of course, by the differences between those two branches of law arising from the subjects they governed', and that 'he was not afraid to seek clarification of international law in the principles of internal law.'[200]

110. In 1977, Sir Francis Vallat, in the context of the work on succession of States in respect of matters other than treaties, was of the view that there existed

> *a very subtle relationship between public international law and internal law*. It could be affirmed that matters which might have been regarded 50 years ago as falling under private law had now entered an area in which they were protected by public international law and, in principle, he saw no reason why that should not apply in the case of State debts towards private creditors.[201] (emphasis added)

[198] A/CN.4/152, p. 234.
[199] A/CN.4/SR.633, para. 36.
[200] A/CN.4/SR.679, para. 63.
[201] A/CN.4/SR.1424, para. 30.

111. He had occasion to repeat the point, in an indirect way, two years later, in the context of the work on jurisdictional immunities of States and their property, when he referred to the 'difficult task of isolating the concepts of public international law from those of […] private law.'[202]

A.2. *Unfavourable statements*

112. In some cases, doubts as to the relevance of domestic principles were expressed in a more nuanced manner, subject to qualifications, and leaving room for the possible applicability of domestic principles. Other statements reflected a more emphatic rejection of the analysis that such principles may be of relevance to the study of international law.

- *Qualified statements*

113. In his 1963 working document, reproduced in the report by the Chairman of the Sub-Committee on State Responsibility, Mr. Tsuruoka took the view that

> [i]n international law, the question of due diligence is not necessarily related to the notion of negligence. International responsibility may sometimes arise from the mere fact that injury has been caused. In some cases, therefore, we would have to recognize an objective responsibility related to the injured right. *But I do not go so far as to say that the principle of responsibility without fault recognized in some national laws should be generally recognized in international law*.[203] (emphasis added)

114. The same year, during the consideration of the law of treaties, Mr. El-Erian, indicated that

> he did not favour undue analogy to rules of municipal law in international law. International law had developed its own jurisprudence and there was no need to indulge in drawing analogies to private law, which did not take into proper account the different nature of international relations. However, since the end of the second world war, a number of constitutions had been enacted which incorporated principles of international law […] That interaction of international law and municipal law showed that the two were not separate, but closely interrelated.[204]

115. Sir Humphrey Waldock, in turn, indicated that he felt it 'unwise to assume that concepts applicable in private law would necessarily be relevant to international relations, though they would provide some broad indications of what was understood by "fraudulent conduct" and to that extent could be helpful.'[205]

116. The following year (1964), Mr. de Luna expressed the view that

> Mr. El-Erian had […] been right in saying that it was dangerous to carry the analogy between private law and international law too far. Nevertheless, it was noteworthy that article 1119 of the French Civil Code, which had inherited formalist concepts from Roman law, laid down that a person could normally enter into an undertaking or make a stipulation in his own name only for himself — a principle to which it then admitted exceptions — whereas article 328 of the German Civil Code and article 112 of the Swiss Code of obligations laid down that

[202] A/CN.4/SR.1575, para. 21.
[203] A/CN.4/152, at para. 13.
[204] A/CN.4/SR.676, para. 42.
[205] Id., para. 102.

> a contract could create a right in favour of a third party direct, without its knowledge or consent.[206]

117. During the same debate that year, Mr. Tunkin stated that '[a]dmittedly, some rules might occasionally be borrowed from private law; but, in [the] particular case, the rule did not fully cover the situation.'[207]

118. Several years later, Mr. Ramangasoavina, during the debate on the question of representation of States in their relations with international organizations, expressed the view that '[a]lthough it was sometimes a mistake to borrow from private law, it might be worth considering the notion of the "universal legatee", an expression used to denote a person who inherited a share of the whole of an inheritable estate.'[208] Nevertheless, in 1970, Mr. Tammes expressed the view, during the debate on the succession of States in respect of treaties, that 'all analogies with the private law governing inheritance were tending to disappear.'[209]

119. In its 1971 survey of international law, the Secretariat of the International Law Commission, indicated that the rules of international law applicable to the acquisition of territorial sovereignty were

> [h]istorically […] based on institutions of private law, developed and amplified to fit the circumstances of a society of independent States. Any attempt to codify those rules which might be undertaken at the present time would need, however, to reflect the progress made in the development and application of a number of fundamental principles of international law—in particular the principle of the prohibition of the threat or use of force and the principle of equal rights and self-determination of peoples—and to assess their effect upon the rules relating to the acquisition of territory by a State.[210]

120. In 1973, in the context of discussing whether, in the event of a succession of States, there was a transfer of property or only extinction of the right of the predecessor State and creation of the right of the successor State, Mr. Castañeda qualified his reference to the example of sale under domestic law with the statement that 'analogies with private law were often misleading.'[211]

121. In 1976, Mr. El-Erian, in discussing the concept of responsibility under international law expressed the view that 'it was not possible to use the analogy of the private law system of responsibility, which drew a distinction between criminal liability and liability at tort, to use the common law terminology. The position in municipal law was less complex than in international law.'[212] For his part, Mr. Quentin-Baxter put the matter more succinctly when he stated that, in his view, 'because international law in general lacked a system of compulsory jurisdiction, analogies from private law must be considered sparingly.'[213] In 1979, also in the context of the work on state responsibility, Mr. Sucharitkul, indicated that while 'he had mentioned the danger of adopting private

[206] A/CN.4/SR.737, para. 28.

[208] A/CN.4/SR.972, para. 87.
[209] A/CN.4/SR.1068, para. 25.
[210] A/CN.4/245, para. 42.
[211] A/CN.4/SR.1227, para. 27.
[212] A/CN.4/SR.1370, para. 7.
[213] A/CN.4/1369, para. 28.

law terminology in international law […] as a general reminder', he, nonetheless, could accept the use of the phrase 'force majeure'.[214]

122. In his second report on State responsibility, issued in 1989, Special Rapporteur Arango-Ruiz, after analysing the views of academic writers as to the extent to which claims commissions and arbitral tribunals had had recourse to rules of private law in the ascertainment of damages, drew the conclusion that

> [a]s noted by Anzilotti and Reitzer, the rules and standards applied by international judicial bodies are often very similar to, if not identical with, the corresponding rules and standards of municipal law (Roman law, civil law or common law). This means, in the opinion of the Special Rapporteur, not so much an application of municipal legal rules by mere renvoi; it means rather that, through the work of international judicial bodies and the agreed settlements achieved directly between themselves, States have gradually worked out and accepted rules and standards on compensation. Even where such rules and standards were originally modelled partly on municipal law, they may well be found to be now in existence as part of general international law.[215]

- *Unqualified statements*

123. On several occasions, members of the Commission have expressed a more categorical rejection of the applicability of principles of domestic law to international law. As early as 1951, Mr. Hudson, in the context of the law of treaties, expressed the view that 'nothing was more dangerous than an attempt to draw analogies between the two types of law […] The discussion should keep to matters of public international law.'[216] Several years later (1963), Mr. Gros took the position that a theory of nullity of treaties on the ground of defective consent was unnecessary in international law, and expressed the view that

> one should not automatically transfer to international law concepts recognized in private law, that was to say in a society organized round an authority recognized by everyone and enforced by the courts. International law, having no common authority and no compulsory jurisdiction, was more flexible, and should remain so.[217]

124. Similarly, in the context of the discussion of whether acts performed prior to a treaty's annulment retained their full force and effect, Mr. Bartos, in the same year, confirmed that 'he wished to rule out any analogy with private law, for relations between sovereign States raised problems different from those of private law.'[218] This position was also maintained by Mr. Tunkin who in 1966, also in the context of the law of treaties, expressed the view that '[t]o draw analogies with private law was usually dangerous, because the position of third States on the international plane was so different from the position of third parties in municipal contract law.'[219]

---

[219] A/CN.4/SR.854, para. 59. See also his statement in 1964 ('[t]here appeared to be a tendency to discuss representation on the analogy of private law, but the situation in international relations was completely different from that obtaining under municipal law'), A/CN.4/SR.733, para. 19.

125. Mr. Yasseen, in 1970, in expressing support for the definition of succession being proposed in the context of the succession of States in respect of treaties, expressed the view that it 'avoided the enormous difficulties which would have arisen if the definition had been based on traditional considerations of private law.'[220] Several years later, during the debate on the second succession topic, namely that in respect of matters other than treaties, Mr. El-Erian stated that

> [g]reat care should be exercised in drawing analogies between private and international law, for while the former was at the origin of the latter, international law had now become a separate science and obligations under it differed from the obligations between individuals governed by private law.[221]

126. In 1990, Mr. Barsegov expressed a similar view when, in commenting on the report of the Special Rapporteur on State responsibility that year, he 'warn[ed] against introducing too many concepts and rules of private law—particularly Roman law— into political and public-law relations between States.'[222] More recently (2003), Mr. Pellet, in the course of the work on the responsibility of international organizations, expressed the view that 'it was ill advised to refer, even implicitly, to concepts of internal law in an international legal instrument […] International law was neither civil, criminal, Romano-Germanic nor common law, and he saw no reason to refer to concepts of internal law in the draft articles.'[223]

B. Statements concerning the applicability of domestic law in particular cases

127. The second set of statements identified are those which go further than the first, in the sense that they are aimed less (or not only) at the *general* relationship between domestic and international law, and more directly at the applicability of particular domestic principles or rules in international law.

B.1 *Favourable statements*

128. From the official records of the Commission it is clear that statements asserting the applicability of domestic rules and principles in international law have been made on numerous occasions.

- *Statements citing domestic rules in support of an international rule*

129. Favourable statements, in their most affirmative form, cite domestic rules directly in support of the existence of their counterparts under international law. Early examples are to be found in the work on the law of treaties. Hence, Sir Gerald Fitzmaurice, in his third report on the law of treaties, proposed dealing with fraud or misrepresentation, which 'correspond[ed] with the relevant rule of private law and seem[ed] necessary.'[224] Some years later (1963), during the debate on the doctrine of *rebus sic stantibus*, also in

[220] A/CN.4/SR.1071, para. 50.
[221] A/CN.4/SR.1417, para. 23.
[222] A/CN.4/SR.2172, para. 19.
[223] A/CN.4/SR.2753, para. 33.
[224] A/CN.4/115 and Corr.1 (English and French), para. 59. See also para. 60, where Fitzmaurice deals with the concept of 'undue influence', which he suggests 'is perhaps mainly a doctrine of Anglo- American jurisprudence.'

the context of the work on the law of treaties, Mr. Pal pointed to its domestic law origins when he recalled that

> Gentilis was generally credited with having introduced the maxim *omnis conventio intelligitur rebus sic stantibus* in the sixteenth century, when he had asserted the existence of a tacit condition in the treaty itself that treaties were binding only if circumstances remained unchanged. In developing that theory he had drawn upon the writings of the civilians, but the theory was in fact older still and had originated in canon law, which had sought to temper the rigour of Roman private law with considerations of equity. Suarez had also recognized the doctrine of *rebus sic stantibus*.[225]

130. Similarly, several years later (1966), Mr. Ago considered the comparison between international law and private law to be 'a perfectly valid comparison, since error, fraud and coercion were also grounds for alleging the invalidity or nullity of acts in private law.'[226]

131. Mr. Yasseen, in 1968, during the debate on the question of the succession of States in respect of matters other than treaties, expressed support for the use of the term 'succession', since, in his view, 'it was not the only case in which public international law had borrowed an expression from private law. Everyone knew what was meant and there was no risk of confusion […]'[227] The following year, Mr. Ago, in introducing his first report on State responsibility recalled that, when codifying the law of treaties, it had been possible for the Commission 'to refer quite extensively to the general theory of obligations in private law.'[228]

132. In 1972, when dealing with the question of treaties establishing boundaries, in the context of the consideration of the succession of States with respect to treaties, Mr. Ramangasoavina noted that most members had agreed that a treaty establishing that a boundary should not be affected by a succession of States since

> a State possessed 'title' to a certain territory with well defined boundaries. *It was the same in private law,* under which, when property was transferred, the change of ownership in no way affected the previously established boundaries.[229] (emphasis added)

133. The following year, Mr. Ramangasoavina, this time in the context of the discussion on State responsibility, observed that '[i]n private law, any act causing injury involved the responsibility of the person who committed it, and required reparation, even if the act causing the injury was not intentional. Similarly, a State might, without any intention to harm, and even in a humanitarian spirit, carry out scientific experiments the consequences of which caused injury requiring reparation.'[230]

134. In 1975, Mr. Sette Camara, in the context of the work on the succession of States in respect of matters other than treaties, noted that the right of eminent domain 'which corresponded to the *nuda proprietas* of private law', would conceivably pass to the successor

[230] A/CN.4/SR.1202, para. 44.

State.[231] In 1979, when discussing consent as a circumstance precluding wrongfulness, Mr. Pinto observed that the draft article in question 'was firmly rooted in concepts of private law.'[232]

135. In 1980, the Special Rapporteur on the topic 'treaties concluded between States and international organizations or between two or more international organizations', Mr. Reuter, in explaining his use of the term 'succession', indicated that '[i]n private law, succession related to rights and obligations; as applied to States, it was also connected with the transfer of rights and obligations.'[233] Mr. Arangio-Ruiz, when commenting on the duty to provide reparation in 1990, pointed to the fact that various authors had, in his view,

> Persuasively […] applied international legal principles modelled on municipal principles or rules. In other words, on the basis of what Lauterpacht had called 'private-law analogies' in international law, States had, through case-law and their own diplomatic practice and through the process known as international custom, developed rules that were part and parcel of international law, however similar to rules of municipal law they might be…[and that]… [i]t was mainly in relation to patrimonial injury that judicial decisions and doctrine had had recourse to distinctions and categories typical of private law—whether civil or common—and had adapted them to the peculiar features of international responsibility.[234]

136. Two years later, also during the debate on State responsibility, Mr. Al-Khasawneh observed that

> […] the principle *inadimplenti non est adimplendum* was known to have evolved by analogy from private law and it was also known, thanks to Anzilotti, when the transformation had taken place. In the *Diversion of Water from the Meuse* case, Anzilotti had said that the principle was " … so just, so equitable, so universally recognized, that it must be applied in international relations also".[235]

137. In some cases, the applicability of domestic law was anticipated in the form of an express renvoi to the internal law of the State. For example, in his fifth report on jurisdictional immunities of States and their property, the Special Rapporteur, Mr. Sucharitkul, indicated that the acquisition by one State of property in the territory of another State 'was made possible only by virtue of the application of the internal law or private law of the State of the situs.'[236] Another example is to be found in the seventh report of the Special Rapporteur on the responsibility of international organizations, Mr. Gaja, in which it was indicated that:

> The fact that a rule of the organization 'bound, or granted rights to, persons or entities that were subjects of international law' cannot be a decisive criterion for identifying which rules of the organization pertain to international law, because certain relations between subjects of international law could well be regulated by private law.[237]

[235] A/CN.4/SR.2278, para. 16.
[236] A/CN.4/363 & Corr.1, para. 112.
[237] A/CN.4/610, para. 41 (footnote omitted).

- *Statements referring to domestic rules or concepts by way of providing guidance in the formulation of international rules*

138. More prevalent are statements in which private law rules are referred to by way of guidance as to which rule to adopt at the international level. Admittedly the difference between supporting and guiding statements is relatively slight, and merely a matter of degree. With the former, the claim being made is more emphatically that international law has to adopt the domestic law rule, while with statements falling into the latter category the emphasis is placed on the usefulness of domestic rules in guiding an outcome at the international level -the assumption being that the lawmaker at the international level is not constrained to follow the domestic rule, regardless of how influential it might be.

139. In 1950, Mr. Yepes, in dealing with the question of the legal status of the continental shelf, in the context of the work on the law of the sea, indicated that '*[j]ust as in private law*, accession was a legitimate source of increment to property so, in international law, the conclusion must be reached that the continental shelf "must belong to the countries with whose coasts it was contiguous".'[238] (emphasis added) References to private law principles or rules, by way of providing guidance, are also relatively easy to find in the official records of the debates on the law of treaties. Hence, in 1950, Mr. Hudson, cited the consequences of the private law concept of a deed of transfer of title of land to illustrate his doubts with the description of a treaty being 'an agreement recorded in writing.'[239] The following year, Mr. Sandstorm drew an analogy with the rules governing contracts under private law by way of confirming the significance of ascertaining the intention of the parties.[240] Mr. Scelle pointed to the wide connotation of the concept of abuse of rights that existed under private law.[241] Several years later (1956), Bey El-Khouri drew the analogy with contracts between individuals in private law, which was limited to adults, in support of his argument that inter-State treaties should be concluded between equal and independent States and not between such a State and, for instance, a Protectorate.[242] That same year, Mr. Bartos, commenting on different types of treaty clauses, remarked that

> [i]t was possible in multilateral conventions to draw a distinction between those clauses which admitted reservations and those to which reservations were clearly impossible. On the analogy of private law, the latter could be considered as in the nature of *jus cogens* and the former as in the nature of *jus dispositivum.*[243]

140. Similarly, Sir Gerald Fitzmaurice, referring to certain aspects of the law of treaties, in his second report issued in 1957, expressed the view that

> [a]nalogous principles—or principles leading to very similar results—have received a wide degree of recognition in private law. While this is not conclusive (see for instance the different treatment given by private, as compared with international law, to the question of duress as a ground voiding contracts), it suggests that there is a case for some degree of recognition of the principle under international law.[244]

[238] A/CN.4/SR.67, para. 1(b).
[239] A/CN.4/SR.52, para. 3.
[240] A/CN.4/SR.86, para. 99.
[241] A/CN.4/SR.86, para. 116.
[242] A/CN.4/SR.369, para. 30.
[243] A/CN.4/SR.651, para. 42.
[244] A/CN.4/107, in *Yearbook of the International Law Commission*, 1957, Vol. II, p. 57, para. (3).

141. Likewise, when drawing a distinction between the object of the treaty itself, and what may have been the motives of the parties in entering into it, Fitzmaurice remarked that 'such distinction [was] fully recognized in private law.'[245] Two years later, in his fourth report, he again cited the private law analogy in support of a contention as to prevailing rule of international law, when he noted that the principle that reparation by way of payment of damages was not necessarily sufficient was 'well known in private law.'[246] In his fifth report, issued the following year, Sir Fitzmaurice expressed support for the recognition in international law of the *stipulation pour autrui* in the following terms: '[w]hen international law in so many ways contains analogies with private law, and reflects or applies private law doctrines, it is difficult to see why that possibility should be regarded as wholly excluded in the case of the *stipulation pour autrui*.'[247]

142. Mr. de Luna, in 1962, also in the context of the consideration of the law of treaties, discussed the different doctrines relating to the ratification of treaties, and observed that

> the first of those doctrines was the historical one which treated ratification by a Head of State of the signature of his representative almost on a par with ratification by a principal of his attorney's act when executing a power-of-attorney in private law. Grotius and many other early writers had viewed ratification in that light. Under that ancient doctrine, subsequent ratification could be held to have a retroactive effect, because it confirmed and validated the signature given by the representative. The consent given to a treaty by the signature was deemed to be conditional upon ratification.[248]

143. In 1963, Mr. Liang, Secretary of the Commission, also in the context of the work on the law of treaties, indicated '[b]y way of analogy […] that, in private law, the validity of a contract depended on such matters as the legality of the object, the reality of consent and the question of capacity.'[249] In turn, Mr. de Luna 'endorsed Mr. Liang's remark concerning the principles of private law. The doctrine in question was the broad doctrine of *falsus procurator*, where there was not merely usurpation, but also an act *ultra vires*; it was not possible, however, to transpose all the demands of the *falsus procurator* doctrine into international law by analogy.'[250] The same year, Mr. Bartos, when considering the issue of error, also looked to private law for guidance when he observed that '[h]aving regard to the stability of contractual relations, all errors could not be regarded as reasons for invalidation. Moreover, they were not so regarded either in Roman law or in comparative private law.'[251]

144. The following year, Mr. de Luna when confronted with the question of the acquisition of a right by a third State through the effect of a treaty, observed that:

> [i]t had also been asked how a third State, which was absent and unaware of the proceedings could acquire such a right. That was certainly what happened in private law— in testamentary disposition, for example, though it was true that in that case there was a legal norm. In

[251] A/CN.4/SR.680, para. 40.

> international law the norm was the *pacta sunt servanda* principle, and the right derived from the reciprocal undertaking entered into by the parties to the treaty.[252]

145. Mr. Briggs, the same year, observed that '[i]n private law, stipulation on behalf of another or the concept of trust had been found serviceable, even if not always theoretically satisfactory from the point of view of legal logic. In international law, past practice and possible future needs suggested that it might be useful to include in the draft on the law of treaties an article setting out a comparable concept […]'[253]

146. In 1966, Mr. Bartos again looked to private law for guidance, this time in the context of the discussion on the termination of treaties, when he observed that

> it sometimes happened that, without any intention by the parties to terminate the earlier treaty, the actual object of the second treaty conflicted with that of the first. If a conflict of objects appeared in one and the same instrument, that instrument would be void; but if the conflict appeared between successive instruments, it was the later instrument which prevailed, just as in private law the testator's last will prevailed.[254]

147. The following year, Mr. Bartos, in his quality of Special Rapporteur for the topic 'special missions', looked again to private law for guidance, this time in connection with the expression 'third State'. He noted that '[i]n private law the analogous expression "third party" denoted a person who was not a party to a juridical relationship but who might in certain cases have certain rights and obligations by virtue of that relationship.'[255] In 1968, the Special Rapporteur on the question of the succession of States in respect of rights and duties resulting from sources other than treaties, Mr. Mohammed Bedjaoui, in his first report, dealt with some of the theories that sought to justify succession to debts, and observed that '[a]ccepted rules of private law, such as those relating to unjustified enrichment and the maxim "*res transit cum suo onere"*, and considerations of equity had also been cited.'[256] The following year, Mr. Reuter, on the same topic, called for a study of the consequences of changes made by a State in its economic policy or structures, which established 'a case for application of the *rebus sic stantibus* clause, a legitimate case for the modification of certain contractual balances. In private law and in collective property relationships, amendments to contracts were common, and examples could also be found in public international law.'[257]

148. In 1977, Mr. Bedjaoui, in his ninth report on succession of states in respect of matters other than treaties, analysed the concept of debt under private law, *inter alia*, as follows: '[i]n private law, only the estate of the debtor, as composed at the time when the creditor initiates action to obtain performance of the obligation due to him, is liable for the debt […] In short, the relationship between debtor and creditor is personal, at least in private law', but then added that '[o]ne of the problems that will arise in the course of this

[255] A/CN.4/SR.908, para. 74.
[256] A/CN.4/204 and Corr.1 (French only), in *Yearbook of the International Law Commission*, 1968, Vol. II, p. 109, para. 97.
[257] A/CN.4/SR. 1005, para. 2.

study is whether this also applies in international law.'[258] For his part, Mr. Ago, in his sixth report on State responsibility, issued the same year, analysed the distinction between obligations of conduct and those of result as 'simply […] following the model furnished by the systems of internal private law originating in Roman law.'[259]

149. In its study on '*force majeure'* and 'fortuitous event' as circumstances precluding wrongfulness, issued in 1978, the Secretariat of the Commission noted that the defining features of the exception of *force majeure* were 'underlined [inter alia] by private law writers.'[260] In 1979, Special Rapporteur Ago, in his eighth report on State responsibility grappled with the excuse of necessity in international legal relations. In expressing the view that the issue could not be resolved 'solely on the basis of general principles of internal law', he indicated, generally, that

> *such principles can no doubt be of some help to us,* provided, however, that it is borne in mind, firstly, that determining their existence in this matter is by no means as easy as one might wish, and, secondly, that transferring them from the field of relations between individuals to that of relations between States is a dubious undertaking.[261] (emphasis added)

150. Sir Francis Vallat also looked to private law for guidance when he observed, during the debate on the same topic, that

> [u]nder private law in common-law countries, it was clear that, in the event of damage to property or injury to life caused by the negligent act of a lorry driver employed by a company, the lorry driver incurred personal responsibility or liability for his own negligent act, and the employer also incurred vicarious responsibility or liability if the driver had been acting within the scope of his employment. The position in international law was not exactly the same, but analogous situations might nevertheless arise.[262]

151. Mr. Reuter, also in the context of the debate on State responsibility in 1979, referred to the 'idea of an act of State, taken from private law, where it described the act of a State that prevented the performance of private contracts.' In his view, '[s]uch a situation could in fact arise in international relations, especially where treaty implementation was prevented by an international decision.'[263]

152. In 1983, Mr. Riphagen, Ago's successor as Special Rapporteur on State responsibility, pointed to the domestic law analogy when confronting the question of fact that

> [t]he insistence, in international law, even in its present-day stage of development, on the international right of sovereignty of States and on international obligations of a State as resulting, in the final analysis, from the consent of that State, seems to exclude the construction of a (primary) rule of general international law, to the effect that the fault of one State, causing damage to another State, entails a duty of the first State to make reparation to the second. At any rate *it is significant that, in municipal law systems which contain such a rule for private*

[263] A/CN.4/SR.1573, para. 16.

> *law relationships,* the courts feel the need for a legal analysis of its three elements—'fault', 'cause', and 'damage'—which, apart from liability for injurious consequences of acts not prohibited by law, comes close to stipulating rights and obligations.[264] (emphasis added)

153. In 1989, during the debate on the topic international liability for injurious consequences arising out of acts not prohibited by international law, Mr. Al-Baharna referred to private law in the context of the discussion on the concept of reparation, when he indicated that '[i]n private law, reparation meant payment for an injury and redress for a wrong. Thus defined, reparation was probably not confined to pecuniary damages.'[265] That same year, Mr. McCaffrey, during the debate on the law of the non-navigational uses of international watercourses, referring to the question of compensation by States benefiting from measures of protection adopted by other States, expressed the view that '[s]uch compensation could indeed be envisaged, provided that it was based on the principle of equitable distribution, […] A problem akin to the private-law notion of unjust enrichment was, after all, involved.'[266]

154. In 1991, Mr. Arangio-Ruiz, Special Rapporteur on State responsibility, pointing to the difficulties posed by the question of countermeasures, noted 'a total absence, of any similarities with the regime of responsibility within national legal systems which would make it relatively easy to transplant into international law, in the area of substantive consequences […] private law sources and analogies.'[267] Yet another Special Rapporteur on State responsibility, Mr. Crawford, in his third report, issued in 2000, referred to the phenomenon of 'the language of national law (the so-called "private law analogy") quite often creep[ing] into international judicial decisions', in the context of a discussion on the remedies being envisaged in what became the articles on the responsibility of States for internationally wrongful acts.[268]

155. In 2004, in his second report on responsibility of international organizations, the Special Rapporteur, Mr. Gaja, referring to private law claims against the United Nations for the conduct of peacekeeping forces, noted that 'the same principle concerning attribution of conduct would apply in relation to responsibility under international law.'[269]

- *Statements pointing to domestic rules to fill lacunae in international law*

156. Perhaps more interesting are statements suggesting the function of domestic rules or principles as potential sources to draw upon in filling lacunae in international law. For example, in 1966, Mr. Jimenez de Arechaga, in the context of the debate on the law of treaties, made the following statement:

> [t]he complete nullity of a treaty as a whole should be the rule in cases where the offending clauses formed its object, but if the clauses in question were accessory stipulations,

[264] A/CN.4/366 and Add.1 & Add.1/Corr.1, in *Yearbook of the International Law Commission*, 1983, Vol. II (Part One), p. 21, para. 113

[265] A/CN.4/SR.2113, para. 50.

[266] A/CN.4/SR.2124, para. 13.

[267] A/CN.4/440 and Add.l, in *Yearbook of the International Law Commission*, 1991, Vol. II (Part One), p. 7, para. 2.

[268] A/CN.4/507 and Add. 1–4, in *Yearbook of the International Law Commission*, 2000, Vol. II (Part One), p. 13, para. 7.

[269] A/CN.4/541, in *Yearbook of the International Law Commission*, 2004, Vol. II (Part One), p. 11, para. 36.

> separability could be allowed; in that regard *the Commission might follow private law* where a contract was void if its object were found to be illegal but where an accessory clause contrary to public order would be regarded, to use the French expression, as "réputée non écrite" and would not render the contract as a whole void.[270] (emphasis added)

157. In 1969, Mr. Bartos, while discussing the question of the representation of States in their relations with international organizations indicated that, in his view, '[i]t would be enough to specify in the commentary that the term "civil jurisdiction" was to be understood in the old private law sense […]'[271]

158. An even clearer example is to be found in the second report on State responsibility of the Special Rapporteur, Mr. Arangio-Ruiz, issued in 1989, in which he stated

> [i]t follows, in the Special Rapporteur's view, that whenever the study of the doctrine and practice of pecuniary compensation indicates a lack of clarity, uncertainty or, so to speak, a 'gap' in existing law, it should not be inevitable for the Commission to declare a *non liquet.* An effort could and should be made to examine the issue *de lege ferenda* in order to see whether, in what direction and to what extent the uncertainty could be removed or reduced or the 'gap' filled in as a matter of development. This should be done, of course, in the light of a realistic appraisal of the needs of the international community, of *available private law sources and analogies,* and under the guidance of realism and common sense.[272] (emphasis added)

159. In 1999, Mr. Al-Khasawneh, commenting on the report of the Special Rapporteur on the unilateral acts of States, expressed the view that the 'Special Rapporteur's attempt to draw analogies with the law of treaties was not always convincing. For example, concerning the concept of promise, he might have done better to seek private-law analogies.'[273]

- *Statements in which deference is given to domestic rules*

160. A particularly strong form in which statements in favour of the applicability of domestic principles and rules arise is that in which specific deference is given to such principles and rules. While relatively rare, examples do exist. Hence, during the debate on State responsibility, held in 1990, Mr. Tomuschat commented on the requirement to pay compensation that such 'compensation would be reduced in cases where the victim had contributed to the emergence of the damage. The rule corresponded to established principles of private law from time immemorial and no different solution could be applicable in public international law.'[274]

B.2. *Statements disputing the applicability of domestic rules*

161. As in the case of statements about the *general* relationship between international and domestic law, the records of the International Law Commission also reveal numerous instances where members expressly ruled out the application of domestic principles or rules *in specific contexts*. In 1951, Mr. Scelle, during the initial discussions on the law of

[274] A/CN.4/SR.2170, para. 9.

treaties, discussed the wide connotation enjoyed by the doctrine of the abuse of rights: '[a]buse of rights occurred not only where there was an intent to cause harm, but also in the case of merely frivolous acts. In international law it might perhaps be going too far to admit such an extension.'[275]

162. The same member expressed a similar concern in the context of the work on the law of the sea, five years later (1956), when he indicated his inclination to correct an erroneous impression given by the Special Rapporteur and Mr. Sandstrom 'both of whom had based their argument on a concept of private law.'[276]

163. In his second report on the law of treaties, of 1957, Sir Gerald Fitzmaurice remarked that

> [t]here are few questions of treaty law more controversial, and more controverted, than that of the place to be given to essential (or vital) change of circumstances as a ground of termination, on the basis of the principle of *rebus sic stantibus (conventio omnis intellegitur rebus sic stantibus).* Within certain limits, analogous principles find a place in many systems of private law, but in the international field, although much discussed in the literature of treaty law, the doctrine is accorded a mixed reception, compounded of attraction in theory and fear as to the practical consequences of admitting it.[277]

164. He took a similar position the following year, in his third report, when dealing with the question of the essential validity of treaties, when he observed that 'a large part of the private law on the essential validity of contracts—which has been evolved mainly with reference to the position and actions of individuals rather than of corporate entities—is inapplicable or inappropriate to the case of States, international organizations and other entities that may possess a certain treaty-making capacity […]'[278] In his fourth report, issued in 1959, Sir Gerald Fitzmaurice also cast doubt as to the applicability of private law concepts when coming to the doctrine of legitimate self-redress: '[…] analogies drawn from private law do not hold in this case, for private law has nothing corresponding to the international law doctrine of legitimate self-redress in certain circumstances, by way of counter-action or reprisals.'[279]

165. In 1963, the Special Rapporteur Waldock, in his second report, explaining his proposal for the effect of treaties void *ab initio*, indicated that

> It could perhaps be urged that in the case of a treaty void *ab initio* for conflict with a rule of *jus cogens,* the private law principle *in pari delicto potior est conditio defendentis* should be applied. But it is believed that a rule requiring the parties to be restored as far as possible to their previous positions would be more suitable for treaties between States and more conducive to the general international interest.[280]

[280] A/CN.4/156 and Add.1-3, in *Yearbook of the International Law Commission*, 1963, Vol. II, p. 94, para. 2.

166. Several further examples of similar stances being taken vis-a-vis the applicability of private law are to be found in the debate on the law of treaties that year. Hence, Mr. Gros, indicated that '[t]here seemed to be no justification for transferring to international law a case of defect in consent in private law […] It would indeed be hazardous to take rules applicable to contracts between private persons and apply them to treaties between States which, as the Commission's discussions in 1962 had shown, were not the same as ordinary contracts.'[281] Mr. Ago was of the same opinion, when he stated that 'there was a great temptation to transfer to international law the principles of private law relating to unreality of consent. But there were wide differences between the practical situations to which private law and international law applied[…]'[282] For his part, Mr. Amado, when considering the question of error, indicated that '[t]he parties' intentions, which were a key factor in private law, could not carry equal weight in international law.'[283]

167. The following year (1964), Sir Humphrey Waldock, in his third report, considered the origin of exceptions to the rule *pacta tertiis nec nocent nec prosunt*, and indicated that

> it is by no means clear that the admission of exceptions to the *pacta tertiis* rule in State practice or in the jurisprudence of international tribunals has been based directly upon an analogy from private law rather than upon the consent of States and the requirements of international life…while taking due note of the analogies which exist in national systems of contract law, the Commission should base its proposals on State practice and on the jurisprudence of international tribunals.[284]

168. That year, Mr. Tunkin, who doubted that representation of one State by another in the conclusion of treaties was a normal practice, indicated that '[t]here appeared to be a tendency to discuss representation on the analogy of private law, but the situation in international relations was completely different from that obtaining under municipal law.'[285] On the question of the rights of third parties, Mr. Ago expressed his view that '[i] n private law, the right of the third party derived from the law, not from the contract. He himself did not believe that practice proved the existence of such a rule in international law.'[286] Mr. El-Erian further stated that '[t]he starting point should not be the principle of a stipulation in favour of another, drawn from private law.'[287] On the question of amendment of treaties, Mr. Rosenne, also in 1964, noted that '[a]lthough a strict parallelism between rights and obligations was a concept that was deeply rooted in private law, in the present context it was not really necessary, because the process of amendment was essentially one that was governed by political considerations.'[288]

169. During the second reading of the articles on the law of treaties, held in 1966, Mr. Rosenne 'suggested that the Commission refrain from introducing […] any subtle distinctions drawn from private law, and from requiring any investigation into the state of

[288] A/CN.4/SR.744, para. 28.

mind of a State.'[289] Mr. El-Erian recalled the debate held during the first reading on the effects of treaties vis-a-vis third parties, and observed that 'while the principle *pacta tertiis nec nocent nec prosunt* appeared originally to have been derived from Roman law, in international law the justification for the rule did not rest simply on a general concept of the law of contract, but on the sovereignty and independence of States.'[290] Mr. Pessou, in referring to general principles of law such as *lex posterior derogate priori* or *pacta sunt servanda*, considered them to be 'principles […] taken from private law [which] were not very apposite.'[291] For his part, Mr. Tunkin, on the question of restitution, indicated that '[s]ome members might have had in mind obligations of a type to be found in private law when the rule of complete restitution would be relevant, but treaties could impose obligations of a very different character […]'[292]

170. Several years later (1968), Mr. Bedjaoui, Special Rapporteur for the work on succession of states in respect of rights and duties resulting from sources other than treaties, referred to the inherent differences between succession under private law, and that as conceived in international law.[293] In his second report, issued the following year, Mr. Bedjaoui, in considering the possibility of an acquired right to compensation and the doctrine of unjust enrichment, noted that '[t]his doctrine, which has been carried over from municipal private law, is open to methodological objections based on the principle of such transposition. Above all, however, it is largely inapplicable in the case of succession resulting from decolonization.'[294]

171. A similar discussion was held that year (1969), in the context of the work on State responsibility. Mr. Kearney, discussing the question of available remedies for harm caused by transboundary pollution, stated that '[t]he usual procedure for righting wrongs of that kind was to restore the situation to what it had been before; under the common law system of private law, that might take the form of issuing injunctions to prevent persons from taking certain undesirable kinds of action. It was extremely difficult, however, to construct such a system of remedies at the international level […]'[295] The following year (1970), Mr. Yasseen, during the debate on the succession of States with respect to treaties, expressed support for the proposed definition of succession, because 'it avoided the enormous difficulties which would have arisen if the definition had been based on traditional considerations of private law.'[296]

172. In 1976, Mr. Kearney expressed the view, during the debate on State responsibility, that 'it did not appear appropriate to import into international law as an analogy the private law antithesis between tort law and contract law […]'[297] Mr. El-Erian agreed that 'it was not possible to use the analogy of the private law system of responsibility, which

[297] A/CN.4/SR.1365, para. 26.

drew a distinction between criminal liability and liability at tort, to use the common law terminology. The position in municipal law was less complex than in international law.'[298] A decade later, Mr. Calero Rodrigues expressed the same view when he stated that '[i]t should be remembered […] that the position was very different from that obtaining under a system of private law, where the injured party could sue the author of the wrongful act directly in the ordinary courts. Where a State claimed to be injured by an internationally wrongful act committed by another State, it was necessary to enter into negotiations.'[299] Two years later (1988), Special Rapporteur Arangio-Ruiz, in his preliminary report on State responsibility, confronted the complexities arising from the question of legal impossibility, and noted that 'municipal law is not part of international law and its rules are not really relevant as legal rules.'[300] During the ensuring debate, he explained further that 'the validity of the [private law] analogy was reduced very considerably by the high degree of relativity of international legal rules, situations and relationships.'[301]

173. The following year (1989), Mr. Barsegov, also in the context of the work on State responsibility, referred to the difficulties arising from the concept of restitution as follows:

> [s]pecific problems arose from the private-law form of the institution, which led in his view to some confusion between the notions and institutions relevant to legal relations of a public character and those relevant to private civil law. Although he had reverence for the legal genius of Rome and the highest regard for Roman civil law, the possibility of importing the concepts of that law into the totally different area of inter-State relations had its limits as considerable difficulties would arise with respect to the content of those concepts.[302]

174. For his part, Mr. Al-Baharna, in 1990, remarked that '[h]e had occasionally noticed in the Commission's deliberations a tendency to look to the law of torts for guidance in developing the international rules of State responsibility and he was somewhat skeptical about the value of that tendency.' His doubts were rooted elsewhere however. In his view,

> [t]he law of torts, as it had developed, was for the most part a Western contribution, and even in the West it differed from country to country, depending on the state of the economy, industrial growth, trade unionism, group action, judicial review, etc. In developing countries, the law was still in its primitive stage and it would therefore be injudicious to develop international rules on State responsibility by analogy with the present principles of tort law. Such development would run counter to the interests of the developing countries, which formed the overwhelming majority of nations.[303]

175. In 1996, Mr. de Saram, commenting on the work of the Working Group on international liability for injurious consequences arising out of acts not prohibited by international law, was of the view 'that there had been excessive reliance on procedures of consultation and private law remedies.'[304]

[303] A/CN.4/SR.2174, para. 37. See also the view of Mr. Koroma, at para. 57 ("[i]nternational law did not, of course, make the same sharp distinction between private-law and public law remedies as did municipal law.").
[304] A/CN.4/SR.2472, para. 62.

176. In his fourth report on diplomatic protection, issued in 2003, the Special Rapporteur, Mr. Dugard, referred to the doubts that had been expressed among authorities 'as to whether it would be appropriate to apply […] private law tests [concerning the nationality of corporations] to a problem of public international law.'[305] The Special Rapporteur on unilateral acts of States, Mr. Rodríguez Cedeño, in his ninth report (issues in 2006), made a similar observation as to the points of view among authorities, when he indicated that 'attempts to extrapolate certain concepts emanating from internal law have given rise to some doubts in the literature.'[306]

II.2.b Criminal law[307]

177. Criminal law is public law *par excellence*. On the understanding, however, that the reference in the Study Group's mandate to 'private law principles' is to the 'general principles of law recognized by civilized nations' referred to in article 38(1)(*d*) of the Statute of the ICJ, it is possible to seek to identify in the field of international criminal law some reliance on general principles of criminal law more or less common to national criminal justice systems.

178. The focus of this section of the study is on the reliance in treaties and other international instruments, as well as in draft international instruments, law reform proposals and the like, on such general principles of criminal law.[308]

II.2.b.i International treaties and draft instruments

179. The ILC's commentary to the *Draft Statute for an international Criminal Court* (as finally adopted in 1994) points out that[309]

> In drafting the statute, the Working Group did not purport to adjust itself to any specific criminal legal system but rather, to amalgamate into a coherent whole the most appropriate elements for the goals envisaged, having regard to existing treaties, earlier proposals for an international court or tribunals and *relevant provisions in national criminal justice systems within the different legal traditions*. (emphasis added)

180. However, the commentary mainly refers to international instruments and decisions of international criminal tribunals. As an example, the commentary to Draft Article 42.1-2 ('*Non bis in idem*'), which is almost identical to article 20.2-3 of the eventual Statute of the International Criminal Court (ICC), provides in relevant part:[310]

> (1) The maxim *non bis in idem* […] is an important principle of criminal law, recognized as such in article 14, paragraph 7, of the International Covenant on Civil and Political Rights.

---

[305] A/CN.4/530 and Add.1, in *Yearbook of the International Law Commission*, 2003, Vol. II (Part One), p. 12, para. 33.

[306] A/CN.4/569 and Add.1, in *Yearbook of the International Law Commission*, 2006, Vol. II (Part One), p. 153, para. 13.

[307] Based on the analysis provided by Roger O'Keefe.

[308] No position is taken here on whether the principles discussed are indeed general principles of law within the meaning of article 38(1)(*d*) of the ICJ Statute. What matters for present purposes is that they could reasonably be claimed to be so.

[309] *YILC 1994*, vol. II/2, 26, para. 84.

[310] Id., 57.

> (2) Article 14, paragraph 7, of the International Covenant has been interpreted as limited to trials within a single jurisdiction. The Commission believes that a greater degree of protection against double jeopardy is required under the statute and article 42 gives effect to this view, drawing heavily on article 10 of the statute of the International Tribunal [for the former Yugoslavia], with minor modifications to take account of the possibility of a previous trial in another international court or tribunal.

181. Similarly, the commentary to Draft article 39, on the 'Principle of legality' (*nullum crimen sine lege*), provides in relevant part:[311]

> (1) The principle *nullum crimen sine lege* is a fundamental principle of criminal law, recognized in article 15 of the International Covenant on Civil and Political Rights. Article 39 gives direct effect to this principle in the particular context of the statute.
> […]
> (4) Having regard to subparagraph (a), there may be circumstances in which an individual could be convicted for a crime under international law in an international court although the same person could not be tried in a national court—although these cases will be rare. The position is different in the case of treaty crimes under subparagraph (b), since the mere existence of a treaty definition of a crime may be insufficient to make the treaty applicable to the conduct of individuals. No doubt such cases (which are also likely to be rare, and may be hypothetical) might raise issues of the failure of a State to comply with its treaty obligations, but that is not a matter which should prejudice the rights of an individual accused.

182. Also the ILC's commentary *Draft Code of Crimes against the Peace and Security of Mankind* (as finally adopted in 1996) contains only a minor reference to domestic legal systems. E.g., when dealing with Article 11 on 'judicial guarantees':[312]

> The difficulty of reconciling the different rules for conducting criminal proceedings in the civil law and the common law systems has been encountered by the Commission in elaborating the draft statute for an international criminal court.

183. The commentary mainly refers to general principles of public international law as recognized by international instruments and decisions of some international criminal tribunals. As an example, the commentary to draft article 12 ('*Non bis in idem*') reads in relevant part (without reference to domestic principles but to 'justice' and to the ICCPR):[313]

> (2) […] The possibility of multiple trials conducted in the national courts of different States as well as an international criminal court raises the question of whether the *non bis in idem* principle should be applicable under international law. The Commission recognized that this question involved theoretical and practical issues. In theoretical terms, it was noted that this principle was applicable in internal law and that its implementation in relations between States gave rise to the problem of respect by one State for final judgments pronounced in another State, since international law did not make it an obligation for States to recognize a criminal judgment handed down in a foreign State. […]
> (3) […] This fundamental guarantee protects an individual against multiple prosecutions or punishments by a given State for the same crime and is reflected in the International Covenant on Civil and Political Rights (art. 14, para. 7). […] To impose such a punishment on an individual on more than one occasion for the same crime would exceed the requirements of justice.

---

311 Id., 55–56.
312 *YILC 1996*, vol. II/2, p. 34.
313 Id., para. 50.

> (4) The Commission decided to include the *non bis in idem* principle in the article subject to certain exceptions which were intended to address the various concerns regarding the principle. […]

184. Similarly, the commentary to Article 13 ('Non-retroactivity') contains no reference to domestic principles but to several international instruments:

> The prosecution and punishment of an individual for an act or omission that was not prohibited when the individual decided to act or to refrain from acting would be manifestly unjust. The prohibition of the retroactive application of criminal law is reflected in the principle *nullum crimen sine lege.* This principle has been embodied in a number of international instruments, such as the Universal Declaration of Human Rights (art. 11, para. 2), the International Covenant on Civil and Political Rights (art. 15, para. 1), the European Convention on Human Rights (art. 7, para. 1), the American Convention on Human Rights (art. 9) and the African Charter on Human and Peoples' Rights (art. 7, para. 2).[314]

185. Also the comments and observations received from Governments on the draft Code mainly quote international instruments and the references to general principles of criminal law do not clearly involve domestic principles. As example, regarding comments to Draft Article 14 as adopted on the first reading by the Commission:

- Paraguay stated that[315] '[d]efences (justifications, grounds for inculpability and for non-imputability) are so important a matter in criminal law that to refer to "general principles of law", thereby leaving a great deal to the judge's discretion, seems inappropriate.'
- Brazil stated that[316] '[a]s far as article 14 is concerned, what is stated about the "defence and extenuating circumstances under the general principles of law" seems to be insufficient. The provisions are somewhat vague since it is difficult, based only upon "the general principles of law", to indicate which circumstances should be taken into account. As a matter of fact, the large number of such broad-ranging provisions seems to be one of the most difficult problems hampering the Commission's effort to codify.'
- Belgium stated that[317] '[t]he question thus arises whether it would be preferable to delete article 14. Hypothetically, a judge could invoke the general principles of criminal law, such as extenuating circumstances, when having to assess the situation in which the crime was perpetrated.'

186. Nevertheless, there are references to domestic principles of criminal law in the preparatory works of the ILC to the draft code. E.g. in the fourth report on the draft code, by Mr. Thiam, Special Rapporteur,[318] it is mentioned (with a single footnote quoting only one book),[319] in relation to the content of attempt in internal law:[320]

> 137. The question then arises whether it is commencement of execution which constitutes attempt. That is the solution adopted, for example, in the French Penal Code, which regards

[314] Id., 38–39, para. (1).

[316] Id., 73.
[317] Id., 71.
[318] A/CN.4/398 and Corr. 1-3, in *YILC 1986*, vol. II/1, 53 ff.
[319] I. Andrejew, *Le droit pénal comparé des pays socialistes*, Pedone, 1981.
[320] *Supra* note 321, 68-69.

as attempt any commencement of execution which failed or was halted only because of circumstances independent of the perpetrator's intention. Even so, it is necessary to determine what constitutes commencement of execution. It is not easy to draw a distinction between commencement of execution and preparatory acts. Some turn to objective criteria: the acquisition of the physical means for committing the crime, for example, would constitute a preparatory act, but when one "starts to make use of them", that is the commencement of execution. Others turn to subjective criteria: the intention to use those means.

138. Certain national legislations did not, at first, concern themselves with these subtleties. Soviet law, for example, in the Leading Principles of Criminal Legislation of the RSFSR (1919) specifically stated that "the stage of execution of the intention of the perpetrator does not in itself influence the penalty, which is determined by the extent of the danger which the offender" (art. 20) "and the act he has committed represent" (art. 21). In a circular relating to the draft penal code of 1920, it was stated that "the outward forms of execution of the act, the degree to which intentions were realized, the forms of complicity in violating the law lose their meaning as limits necessarily defining the extent of the punishment or the penalty itself". Today, the Fundamental Principles of Criminal Legislation of the USSR and the Union Republics (1958) provide for the penalization of both attempt and preparatory acts, and the court is obliged to take into consideration "the nature and degree of social danger of the acts committed, the extent to which the criminal intent is realized and the factors which prevented the offence from being perpetrated" (art. 15)

139. As regards the penalization of attempt, the socialist countries can be divided into three groups. The first group consists of those which abide by the general principle of penalizing attempt and preparatory acts. Apart from the USSR, these include Albania, Czechoslovakia, the Democratic People's Republic of Korea and Poland. In the second group, attempt is penalized as a general rule, but preparatory acts are penalized only in the cases provided by law: this is the case, for example, of the Bulgarian Code (art. 17) and the Hungarian Code (art. 11 (1)). In the last group, attempt and preparatory acts are penalized only in the cases stipulated by law. For example, in Yugoslavia, the 1951 Penal Code (art. 16) and the 1976 Penal Code (art. 19) penalize attempt to commit offences that are punishable by imprisonment of five years or more.

140. This is a solution closely related to that adopted in the French Penal Code, which lays down the general rule that attempt is punishable only in the case of criminal offences, but that attempt to commit correctional offences may be qualified as an offence only in the cases stipulated by law.

141. It is clear, therefore, that legal systems vary. As for the content, some legislations draw a distinction between attempt and preparatory acts, with each category being the subject of separate provisions. Other legislations do not draw this distinction and make attempt a crime only in the case of serious offences; others make attempt a crime without drawing a distinction between serious offences and other offences. All, however, recognize attempt as a juridical concept.

187. In the same report, it is mentioned in relation to the principle of *nullum crimen sine lege, nulla poena sine lege*[321]

151. The content of the rule *nullum crimen sine lege, nulla poena sine lege* may vary according to the sources of law cited.

152. According to a legalistic conception preferred in certain systems of law, the only law is written law. According to this school of thought, a system of law based on custom necessarily ignores the principle *nullum crimen sine lege*, because custom is not law, just as general principles, natural law and moral or philosophical maxims and prescriptions are not law. […]

[321] Id., 70.

> 153. The rule first appeared in France during the Revolution, and spread throughout Continental Europe. Even though it disappeared for a time in certain countries (in Germany, for example, under the National Socialist regime, with the application in 1935 of article 2 of the Penal Code, which introduced "the sound instinct of the people" as the source of criminal law),or underwent certain changes when recourse was made to interpretation by analogy, the rule *nullum crimen sine lege* has remained a fundamental principle of Continental criminal law and of the legal systems based on it. […]

188. In addition, while several international treaties contain an express reference to general principles of criminal law, or incorporate a similar content without mentioning the principle, it is not clear to what extent domestic principles where considered. E.g.:

a. Regarding the principle of ('*Ne bis in idem*'):
   - Article 20 of the Rome Statute of the ICC;
   - Article 10 ('*Non-bis-in-idem*') of the Statute of the ICTY, which terms are identical, *mutatis mutandis*, to Article 9 ('*Non bis in idem*') of the Statute of the International Criminal Tribunal for Rwanda (ICTR);
   - Article 9 ('*Non bis in idem*') of the Statute of the Special Court for Sierra Leone (SCSL);
   - Article 5 ('*Non bis in idem*') of the Statute of the Special Tribunal for Lebanon (STL);
   - Several instruments adopted by the Council of Europe such as: Article 9 ('*Ne bis in idem*') of the European Convention on Extradition[322] and the European Convention on the Punishment of Road Traffic Offences,[323] Article 7 of the European Convention on Supervision of Conditionally Sentenced or Conditionally Released Offenders 1964,[324] Article 8 of the European Convention on Insider Trading 1989,[325] Article 18 of the European Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime 1990,[326] Article 28 of the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime and on the Financing of Terrorism 2005,[327] Section 1 ('*Ne bis in idem*') of Part III ('International effects of European Criminal Judgments') of the European Convention on the International Validity of Criminal Judgments,[328] Part V ('*Ne bis in idem*') of the European Convention on the Transfer of Proceedings in Criminal Matters 1972[329] and Section 4 ('*Ne bis in idem*') of Part V of the European Convention on offences relating to Cultural Property 1985[330] (not in force);
   - Chapter 3 ('Application of the *ne bis in idem* principle') of Title III of the 'Schengen Convention' contains a detailed regime of horizontal *ne bis in idem*. In 2009, the Council of the EU adopted Council Framework Decision

2009/948/JHA of 30 November 2009 on prevention and settlement of conflicts of exercise of jurisdiction in criminal proceedings. As among the member states of the European Union (EU), extradition has now been replaced by the regime of the 'European arrest warrant', as provided for in Council Framework Decision 2002/584/JHA of 13 June 2002, which articles 3.2 and 4.2-5 contain provisions dealing with the *ne bis in idem* principle.

- Article 9(*a*) The Inter-American Convention on Mutual Assistance in Criminal Matters 1992;[331]
- African union (formerly Organization of African Unity), Article 8(3) of the Convention on the Prevention and Combating of Terrorism 1999;[332]
- Bilateral extradition treaties between certain states contain provisions on prior prosecution in another state. For example, Article 5 ('Prior Prosecution') of the Extradition Treaty between the Government of the United Kingdom of Great Britain and Northern Ireland and the Government of the United States of America 2003;[333] or Article 11(1)(*d*) of the Agreement between the European Union and Japan on mutual legal assistance in criminal matters 2009;[334]

b. Articles 22 ('*Nullum crimen sine lege*') and 23 ('*Nulla poena sine lege*'), ICC Statute;
c. Article 22(2) of the ICC Statute, regarding the principle of *in dubio pro reo*;
d. Paragraph 2 of Article 24 ('Non-retroactivity *ratione personae*') of the ICC Statute.

189. The same problem can be found in several draft international instruments. E.g.:

a. Articles 3 and 4 of the 1990 UN General Assembly so-called Model Treaty on Extradition.[335]
b. Paragraph 1 of Principle 9 ('*Non Bis In Idem*/Double Jeopardy') of the Princeton Principles on Universal Jurisdiction,[336] developed by the Princeton Project on Universal Jurisdiction, a private initiative of scholars and other jurists. The commentary to such Principle reads:[337]

> There was no objection among the participants as to desirability of such safeguards. Several of the participants, however, questioned whether the prohibition on double jeopardy—*non bis in idem*—was a recognized principle of international law. Under regional human rights agreements, *non bis in idem* has been interpreted to apply within a state, but not between states. It was noted, however, that the importance of the doctrine of *non bis in idem* is recognized in almost all legal systems: it qualifies as a general principle of law and, as such, could be said to apply under international law.

[337] Id., page 54.

c. In its resolution entitled 'International crimes and domestic criminal law' adopted at the XIV[th] International Congress on Penal Law (Vienna, 1989), the International Association for Penal Law (*Association Internationale de Droit Pénal* or AIDP) stated that 'multiple prosecutions before domestic courts of different states for the same offence should be avoided by international recognition of the principle *ne bis in idem*'.[338] At the XVI[th] International Congress, in a resolution entitled 'International Criminal Law', the AIDP took the view that '[t]he principle of *ne bis in idem* should be regarded as a human right that is also applicable on the international or transnational level'.[339] Finally, at the XVII[th] International Congress, the AIDP adopted a resolution entitled 'Concurrent National and International Criminal Jurisdiction and the Principle "*Ne bis in idem*"'.[340]

II.2.b.ii International instruments establishing national courts

190. Pursuant to its Regulation 2000/15 of 6 June 2000, the United Nations Transitional Authority in East Timor (UNTAET) established panels within the District Court in Dili with exclusive jurisdiction over the offences of genocide, war crimes, crimes against humanity, murder, sexual offences and torture (in many cases, the wording is similar to the ICC Statute).[341] It contains references to several general principles of criminal law but, once again, is not clear to what extent domestic principles where considered:

a. Section 11 ('*Ne bis in idem*');
b. Sections 12 ('*Nullum crimen sine lege*') and 13 ('*Nulla poena sine lege*');
c. The second sentence of Section 22.2 ('*in dubio pro reo*');
d. Paragraph 2 of Article 3 ('Applicable law');

II.2.b.iii Discussion

191. It is not obvious that the various principles relied on in the above contexts are always or, for that matter, ever relied on specifically in their putative quality as 'general principles of law recognized by civilized nations' within the meaning of article 38(1)(d) of the ICJ Statute – still less as general principles of domestic law as such. When it comes to the unadorned provisions of treaties and other international instruments, there is no explicit indication of why a particular principle has been incorporated in the text. As for those instances in which a commentary or some other discursive text is available, the indications are ambivalent. Reference is commonly made to terms like 'general principle', but the meaning remains unstated.

[341] See UNTAET Regulation 2000/15 on the Establishment Panels with Exclusive Jurisdiction over Serious Criminal Offences, UNTAET/REG/2000/15, 6 June 2000, s. 1.

192. Moreover, and more significantly, the confounding factor in any analysis in this regard is that two major principles —*nullum crimen sine lege* and *ne bis in idem*—are also international human rights guarantees, as expressly recalled in the relevant commentaries and similar documents. As such, it would be more likely than not that the aforementioned principles are being relied on in this more specific and more overtly normative quality of international human rights guarantees, rather than in their arguable quality as general principles of criminal law.

193. The method (for want of a better word) of reliance on general principles of law in the context of international criminal law is significantly different from the method of such reliance in other fields of public international law. Reliance in other fields of public international law is traditionally by way of analogy between the position of natural and legal persons under domestic private law and the position of states under public international law. A degree of modification of the relevant principles is required for them to fit within the interstate environment. In the criminal context, however, no recourse to analogy is needed. Under both national and international criminal law, the subject-matter of the relevant rules is the repression of punishable conduct committed by individuals; as such, principles pertinent in the domestic legal sphere can be more directly translated to the international one. That being said, questions always remain as to how these principles ought to apply within a system of overlapping competences (i.e. overlap amongst respective national jurisdictions, amongst respective international jurisdictions, as well as between national and international jurisdictions), and within a system where the relevant rules may apply only as amongst States parties to a particular treaty.

194. The role of reliance on general principles of law in the development of international criminal law is significantly different in the context of prospective law-making via treaties and similar international instruments than in the context of the essentially retrospective exercise that is adjudication. In the prospective law-making context, reliance on general principles does not perform a gap-filling function. Rather, general principles serve merely as the inspiration for positive rules, in the same way elementary notions of justice or specific international human rights standards may do. In this context, general principles signal desirable policy—policy which may eventually be embodied in a binding legal form.

195. There are no specific problems implicated in the reliance on general principles of law in the context of prospective law-making in the field of international criminal law. In most instances, it comes down to a simple policy choice by the drafters as to whether and how the principle in question is to be reflected. This is often as much a question of competing views on the precise content of the general principle in the first place as it is of its appropriate translation to the international plane. Specific principles may pose specific challenges, but these are not challenges inherent in the reliance on such principles for the prospective development of international criminal law.

II.2.c Financial/Trade[342]

196. Domestic law principles are also used to develop new international/transnational rules[343] in fields where domestic legal systems have gathered extensive experience and where an international regulation is needed; in particular in the financial/trade area (intellectual property,[344] financial regulation, etc.). The chances of general acceptance by States are greater if established domestic practices support the content of the international rule. In a 1992 ILA Resolution, the term 'transnational law' is equated, among other things, to 'general principles of law and principles common to several jurisdictions' and juxtaposed to particular national law. However, in this context the approach appears to be more of looking for the lowest common denominator or the recognized best practices among domestic legal systems. As a consequence, the role and weight of each domestic legal system may vary considerably depending on the subject matter.

197. Some relevant examples would be:

– the OECD Anti-Bribery Convention,[345] which is the result of a comparative legal analysis of a domestic institution to address an international problem;
– the UNCTAD's Principles on Promoting Responsible sovereign Lending and Borrowing.[346] The project, launched in 2009, aimed to develop a set of principles to establish internationally recognized principles that promote and reinforce responsible sovereign lending and borrowing practices. Those principles (the result of collaborative effort involving experts from the academia, civil society and financial institutions, as well as governments) relied on existing domestic legal concepts (such as insolvency) and agency patterns, while still going beyond a mere codification of existing practice (which is rarely consistent).[347]

II.2.d Global Administrative Law[348]

198. Domestic public law principles are also progressively implemented at the international level in particular following the institutionalization of international relations and the growing powers of international organizations. International institutions have an incentive to comply with domestic standards if non-compliance induces a risk that their

Goldmann, "Responsible Sovereign Lending and Borrowing: The View from Domestic Jurisdictions", 2012, available at http://unctad.org/en/PublicationsLibrary/gdsddf2012misc3_en.pdf

[348] Based on the analysis provided by Régis Bismuth and Diana Louise.

decisions might be challenged or ineffective at the domestic level. An illustration of such a risk refers to the implementation of UN Security Council sanctions in Europe and their subsequent challenges before European courts because of due process deficiencies.[349] Therefore, particularly in relation to certain international standard-setting processes, international institutions that have increased the transparency of their functioning tend to implement administrative consultation procedures similar to those existing at the domestic level.

199. This 'Global Administrative Law' system (in the context of global governance) differs from what traditionally was considered as 'international administrative law' (dealing with the internal law of international organisations, mainly in relation to employment relationships).[350] The structure of this growing field has developed an irregular shape. While domestic experiences of public authority were used as a model, the relevance of domestic principles is not absolute. As argued by Von Bogdandy, '[t]here is a presumption that an established principle of domestic public authority raises an issue to which the law of an international institution should provide a principled answer, which, however, in most cases will differ from that given in domestic legal orders.'[351]

200. As an example, the operation of a pluralist model in the governance of international trade can be traced in the regulation of genetically modified organisms (GMO). The regulation provides how accountability mechanisms in global administrative law differs from these of domestic settings. The United States adopted a 'permissive approach' which opposes restrictions on the production unless there are scientifically proven risks for human health. Meanwhile, Europe adopted a 'precautionary' approach insisting restriction in production because of uncertainty and potential serious risk. Nevertheless, those two approaches co-exist and only conflict in trade-related institutions.[352] However, there is no overarching, hierarchically ordered scheme as would exist in domestic administrative law systems.

201. The constraints weighing on international institutions involved in standard-setting processes in the field of international financial regulation have driven them to gradually implement domestic administrative rules and principles at the international level. As an example, the Basel Committee on Banking Supervision (BCBS), the International Organization of Securities Commissions (IOSCO) and the International Associations of Insurance Supervisors (IAIS)[353] all decided to follow UK and US administrative procedures that are considered as the most stringent in this area. Arguably, they have done so because there is an inherent incentive to comply with the strictest procedures in order to

ensure the effectiveness and a smooth implementation of their international standards at the national level.

III. PROVISIONAL CONCLUSIONS

202. As a result of the empirical study of the current practice, the Study Group reached the following provisional, tentative conclusions:

- *Clear reference*

203. It will often be helpful if decisions of the relevant decision-maker(s) make it clear that it is referring to the general principles of domestic law, avoiding ambiguities. An example of such ambiguity could be found in the *Klöckner* case, as pointed out by the *ad hoc* committee on annulment:

> Furthermore, the reference to "other national codes which we know of," to the "particularly appropriate" character of the rule "in more complex international ventures, such as the present one" (p. 105) and to the particular importance that "universal requirements of frankness and loyalty … be applied in case such as this one" *seem to indicate* that the Tribunal *may have wanted to base, or thought it was basing, its decision on* the, general principles of law recognized by civilized nations, as that term is used in Article 38(3) of the Statute of the International Court of Justice.[354] (emphasis added)

- *How to identify the principles*

204. The comparative method could be used. In doing so, however, the interpretative evolution of the principles should also be considered. One of the primary comparative law methods is functionalism:[355] comparisons should focus on legal institutions with similar functions within the legal system (regardless of their external characteristics, the compared legal institutions are designed to address similar legal problems). More importantly, all the reasoning process should be summarised in the decision, including supporting evidence, in order to facilitate a later review.

> It is impossible to answer this question by reading the Award, which contains no reference whatsoever to legislative texts, to judgments, or to scholarly opinions. In this respect the contrast is striking between Section 2 (on the "duty of full disclosure") and Section 3 (on the *exceptio non adimpleti contractus*, pp. 109-114 and pp. 118, 124, 126, etc). Section 3 contains a great number of references to scholarly opinion (doctrine) as well as, directly or indirectly, to case law (jurisprudence). One could therefore assume that in the case of Section 2, regarding the duty of frankness, the arbitrators either began a similar search for authorities but found it unproductive or, more likely, thought that a search for positive law was unnecessary.[356]

205. In addition, the identified general principle should fit into the international context and be able to address the specific legal problem at international level. As an example, in the *Status of South West Africa*, the ICJ stated that

[356] See *Klöckner*, *supra* note 357, at 71.

> The mandate was created, in the interest of the inhabitants of the territory, and of humanity in general, as an international institution with an international object […] It is therefore, not possible to draw any conclusion by analogy form the notions of mandate in national law or from any other legal conception of that law.[357]

206. International courts and tribunals seem to rely quite often on previous decisions of other international courts and tribunals that have declared the existence of a general principle of law, without discussing such categorization and without further analysis. Some arbitral tribunals had also referred (of their own motion or at the request of the parties) to some useful compilations of principles of contractual obligations, such as the UNIDROIT Principles of International Commercial Contracts. While previous decisions and internationally recognised compilations could be useful as supporting evidence, it should not excuse the absence proper discussion by the adjudicating body explaining how they reach to the confirmation of the general principle and its fitness to the specific legal problem.

- *The problem of their universality*

207. It could be argued that the search of unanimity is a utopia. The analysis must be extensive (widespread) and representative, without necessarily being universal. The general principles should reflect the main forms of civilization and of the principal legal systems of the world (a general principle could be deemed to exist if it is recognized by a prevailing - or at least a significant - number of nations within each legal culture). This dichotomy – required reflection of the main forms of civilizations and legal systems - influenced article 9 of the ICJ Statute and was recognised by Judge Weeramantry ('the integrated values of any civilization are the source from which its legal concepts derive […] international law would require a worldwide recognition of those values')[358] and Judge Jennings ('[…] important to stress the imperative need to develop international law to comprehend within itself the rich diversity of cultures, civilizations and legal traditions[…]').[359]

208. Therefore, it is also not enough to 'identify' a general principle among the main legal systems if there is not enough civilizational representation, e.g. a general principle shared by Civil Law countries in Europe, should also be identified in other Civil Law countries located in different geographical areas and belonging to different civilizations.

209. While Article 38(1)(c) literally refers to principles as such, not to their expression in specific legal rules, in 1984 the ICJ stated that in its opinion the terms 'rules' and 'principles' can be considered as 'a dual expression to convey one and the same idea.'[360] Therefore, it could be argued that if there is a specific legal rule generally accepted, then there is probably also some common principle behind it. The particular common legal rule could thus be seen as an expression of the common principle.

210. Similar to the existence of regional customary law, there could also be considered the existence of regional general principles. As an example, the European Court of Justice often refers to principles found in the domestic legal systems of its Member States.

- *How the principles should be applied*

211. There is a general understanding that the principles should sometimes be adapted since the conditions of the international legal system sometimes differ from those prevailing in the domestic systems. As suggested by Judge McNair in his much-quoted separate opinion to the International Status of South West Africa Advisory Opinion:

> the way in which international law borrows from this source is not by importing private law institutions "lock, stock and barrel," ready made and fully equipped with a set of rules [...] the true view of the duty of international tribunals [...] is to regard any features or terminology which are reminiscent of the rules and institutions of private law as an indication of policy and principles rather than as directly importing these rules and institutions.[361]

212. In addition, general principles of law - unless and until reflected in a specific rule of customary international law convincingly evidenced by sufficient and sufficiently representative state practice and *opinio juris* - remain general principles of law. They are not, once identified, transmuted into rules of customary international law.

STUDY GROUP ON THE USE OF DOMESTIC LAW PRINCIPLES FOR THE DEVELOPMENT OF INTERNATIONAL LAW

WORKING SESSION

Wednesday, 10 August 2016, 2.00pm

Chair: Professor André Nollkaemper (Netherlands)

The Chair welcomed attendees and introduced the panel, composed of the Rapporteur (Dr Alejandro Carballo) and three other members of the Study Group (Ms Diana Constantinidou, Dr Hilly Moodrick-Even Khen and Mr Arnold Pronto.

The Chair marked the borders of the work of the Study Group by stating that, while there were sometimes general principles of law that were used as analogies in the international law space, the aim of the Study Group was to articulate the use of domestic principles in the development of international law. There was an interaction between domestic law and international law, to the extent that international law had sometimes borrowed domestic legal principles such as the principle of responsibility, force majeure and good faith. Sometimes, these principles were used as general principles and at other times as analogies. That said, the focus of the Study Group was to critically analyse the use of domestic principles in the development of international law. During the session, the panel would present on aspects of the report of the Study Group's work. The Chair called on the Rapporteur to introduce the Study Group, the background to its work, and the methodology that the Study Group employed.

Dr Alejandro Carballo (Spain) noted that the purpose of the study group was to survey and understand if still nowadays domestic principles were identified and applied by international adjudicating bodies and law making bodies, and if so, how it was done. The Study Group focused on domestic legal principles and conducted a survey to ascertain what was going on in practice, focussing on what principles were being used, and how they were being used by international adjudicating and law making bodies. The Study Group also aimed to reflect the current use of domestic principles and their influence in developing new rules of international law with the view to develop some general rules or guidelines in the use of domestic principles. The result of these guidelines would be to have a more uniform and predictable application of general principles derived from domestic law. With regard to terminology, the Study Group had avoided the use of the term "private principles" to define their work since the study also covers principles derived from the public domain of domestic legislation.

The composition of the Study Group was broad and reflected geographical diversity. It had members from South Africa, China, Argentina, Israel, and the United Kingdom, among others. It also had members with diverse backgrounds and expertise and included people who viewed the subject of the Study Group in different ways. He traced the working journey of the Study Group, which held open sessions in The Hague in 2010, and in Sofia in 2012, as well as other working sessions in Cambridge in 2012 and Madrid in 2013. The group prepared a preliminary report stating what the current situation is, the general problems it observed, and how domestic principles were used in specific areas like the judgments of the ICJ, in international criminal law, and international law making. The Rapporteur noted that the number of members of the group, though diverse, was

small and the expertise was limited so they could not address all areas of international law. Still the group managed to cover those areas that were considered more relevant for the study. The group therefore looked forward in the discussion segment to receive criticisms, comments and suggestions about what the group was missing in its work and what could be improved.

The Chair explained that the conclusions of the report, which were very interesting, would be shared and discussed after the presentations. He requested that questions and comments be limited to the mandate or working methods of the Study Group.

Ms Mariija Đorđeska (Slovenia) asked the Study Group to elaborate on the methodology it used for its study since there were only two paragraphs in the report that discussed it. She was concerned that the Study Group relied on the individual opinion of Judge Tanaka of the ICJ in the *South West Africa Case* determining its methodology.

Dr Carballo responded that in different sections of the report, different methodologies are used. Each section explained the methodology used, while the introduction contain a simple overview. In particular, he explained that a different methodology was used in respect of international bodies that focused on international adjudication and those involved in the law-making phase at international level. Reference to Judge Tanaka's dissenting opinion was just to outline why the group did not focus only on "private" principles but also considered "public" principles derived from domestic legislations.

Mr Arnold Pronto (US) explained that the Study Group had to conceptualise its work and tighten its scope, focusing primarily on domestic principles. There were a series of forks in the road during the research. The focus of the Study Group was domestic law principles, however there was a difference of approach in typology but a necessity in choosing a path between general principles of international law and principles of law. It was clear from the presentations that there were different views on this and there was an intensive debate about whether they were actually different. The work of the Study Group could be likened to throwing the net, catching some fish or the information, and organising all of the information obtained. The Study Group discovered that the same typology could not be used to analyse all the information that was gathered, hence the use of different methodologies to analyse the information gathered.

The Chair stated that the Study Group focused on identifying and analysing the use of domestic principles at the adjudication phase and at the law-making phase. It did not look for particular principles, rather it tried to ascertain whether there was an explanation or reasoning behind the use of general principles and the approached that was adopted by the particular body. He introduced Dr Hilly Moodrick-Even Khen to present on the application of domestic principles in international adjudication.

Dr Hilly Moodrick-Even Khen (Israel) began her presentation by noting that she would be examining international law making as well as adjudication.

She emphasised that the international criminal law should be distinguished from other branches of international law when analysing the topic of general principles of law. The difference is that reference to general principles in other fields of law was done by analogy. However, in international criminal law, an approach using analogy was very often not required because the subject matter of the relevant rules of international criminal law

was punishing the conduct of individuals. Thus the principles of domestic criminal law could be transposed into international criminal law.

Another difference could also be seen from the approach adopted by international tribunals and international courts. There was a tendency for these international tribunals and courts not to extrapolate principles from domestic legal systems, but from the rich corpus of international criminal law. The courts had seized the opportunity to craft those legal principles. The outcome was that most of the general principles were extrapolated from other international courts and tribunals. Hybrid courts had gone even further. These courts, which had mixed characteristics and features of domestic and international law, included Bosnia and Herzegovina War Crimes Chamber (BWCC), the Special Panel for Serious Crimes in the District Court of Dili (East Timor Court- SPSC), the Extraordinary Chamber in the Court of Cambodia (ECCC) and the Special Court for Sierra Leone (SCSL). There was a tendency for these courts to use similar approaches and go further to refer to the jurisprudence of the International Criminal Court. The hybrid courts were neglecting the idea that general principles should come from domestic courts because they were striving for legitimacy. Dr Khen noted that the Study Group discovered that there were a lot of instruments in international law and human rights law that contained general principles of law, for example, the principle of *nullum crimen sine lege* in international criminal law.

With regard to lawmaking in international law, she noted that there were many instruments in international law that contained these general principles and that emphasised the need to apply domestic principles.

Ms Đorđeska asked how it was possible to look at domestic principles if the Study Group was considering, as a base of the survey, the jurisprudence of international courts and tribunals.

Dr Rob McLaughlin (Australia) shared his understanding of the methodology to be a cross- pollination between the international criminal courts and tribunals. But what about the initially used general principles drawn from domestic legal systems at the stage of setting up the international criminal law? International Law did not have a strong tradition of criminal law concepts relevant to individual criminal responsibility. The ICC Statute and other instruments of international criminal law had to draw on domestic criminal law principles to set up the basics. Examples included the concepts of individual self-defence, of physical and fault elements in criminal offences, and the defence of duress.

Dr Moodrick-Even Khen (Israel) noted that the focus of the Study Group was on general principles of law, not on domestic law *simpliciter*. In international criminal law, one could not really talk about domestic principles. In international criminal law, domestic principles might be directly transposed into international law. There were some domestic principles, for instance the principle of "conviction beyond reasonable doubt", which might have different interpretations and application in common law systems, in a manner different from how it was applied in the civil law systems. For this reason, the Study Group preferred to focus on general principles instead of on domestic law principles. In this regard, she referred to the practice of international criminal tribunals detailed in her earlier intervention.

The Chair invited Mr Pronto to present on the lawmaking aspects of the report.

Mr Pronto stated that the purpose of the Study Group was not to find a uniform approach to the question but rather to match the different views and draw conclusions from what already existed. It was clear that there were many differences of opinion regarding the role of general principles and the role of domestic law principles. Thus, the Study Group agreed to respect diversity.

He noted that the part of the report devoted to lawmaking focused on the work of the ILC, particularly the influence of "private law principles" (domestic law) on its lawmaking process. He emphasised that this part of the report did not involve a study of general principles but rather a study of domestic principles. The idea here was that there had been some influence of private law sources on the work of the ILC. It was a short paper that attempted to find out if there were references to private law in the work of the ILC. The findings of the study was that it was very rare to find any references to private law principles in the working of the ILC. ILC commentaries on its texts tended to forget about the origin of the idea and described the concept in terms of international law.

Mr Pronto said he looked at the "background views" of the ILC members and whether or not there was any evidence of reliance on private law in the eventual outcome of the international law decisions. He emphasised that he could not make a definitive statement at this stage that the ILC depended on domestic law principles. As a matter of methodology, Mr Pronto specified that he was reluctant to draw general conclusions from individual opinions because this was dangerous. From the research done, he stated that he could not say that the ILC depended on domestic law principles and as a result he used an inductive approach to examine the work of the ILC.

In terms of typology, the word "private law" was used as the search word because it produced the most hits. This was not private law in the Roman Law sense.

Mr Pronto listed several examples from different texts where the ILC referred to private law in its work. He noted that, going through the typology and the examples, there was an overlap between the general views on private law sources as well as the applicability of private law principles in international law, which led to favourable and sometimes unfavourable outcomes. He noted that the words "private law" had a special meaning and he used private law in that sense throughout this report. Delving further into the typology, he stated that there were general statements which were made by members of the ILC which were either favourable or unfavourable to the applicability and use of domestic law principles in international law. He referred to some of these statements, which were extracted in the report.

The idea was to try to flesh out the various views in one body in relation to private law. The Study Group tried to focus on principles and to identify them, but it was not clear whether what was being studied was a rule or a principle. The rules in each country were different but principles could be the same. It was difficult to sort out the difference.

Mr Dipak Bhattacharyya (India) stated that if the meaning of "private law", "domestic law principles" and "international law" was referring to private international law outside the purview of international law, then private law principles underlying the domestic law principles should be dealt with under domestic law principles. For example, the domestic law principles of matrimonial law in India did not envisage "irrevocable breakdown of marriage" as a ground of divorce, whereas it was accepted as a ground of divorce. His

intervention was to request that this should be examined in the background of the topic of discussion.

Ms Đorđeska emphasised that when referring to private international law, courts or bodies might also be referring to customary international law not only to general principles.

She further questioned the relevance of looking at what the ILC members said rather than looking at the drafting of the policy statutes where the general principles were first used as a source of international law. The reason for drawing attention to this was because the title of the Study Group was domestic principles and their contribution to the development of international law. If one did not have a definition of what domestic principles were, how could the Study Group see whether they had developed the law or not?

Mr Pronto responded to these interventions by flagging that the ILC had a mandate to work in private international law but it had never done so. It had only worked in public international law. Therefore, the Study Group did not look at private international law. Further, for clarification, the purpose of the Study Group was not an attempt to see how specific national rules had influenced international law. It was a study on how domestic principles had influenced international law. If it was to focus on national rules, the mandate would have been too broad. The scope of the study was narrowed to domestic principles. The idea was to take an inductive approach and gather different opinions and find a definition through what existed in practice.

With regards to customary international law, Mr Pronto said that it was possible for private law principles to influence the existence of customary law rules. This question, however, was another layer of analysis which was most certainly interesting but was not something which the Study Group had the capacity to focus on or assert.

The Chair introduced Ms Constantinidou to present on the part of the report relating to the findings of international administrative tribunals and global administrative law.

Ms Diana Constantinidou (Cyprus) informed attendees that one of the questions that had engaged the attention of the Study Group was whether domestic public law principles were being implemented at the international level. It was clear that global administrative law was not yet a very tangible area.

Ms Constantinidou introduced the International Labour Organisation Administrative Tribunal. Over time, the ILOAT had applied general principles of law without reference to Article 38 of the ICJ Statute. There was therefore a need to fill the gap in the absence of relevant principles in the internal regulations/statutes of the organisation, which stipulated the application of international law. In the absence of relevant principles, then the general principles would apply. However, if there was a conflict between the existing internal rules and general principles, they would attempt to interpret it, and it was likely then that general principles would prevail.

Ms Constantinidou concluded her presentation by asking attendees for examples of general principles and enquiring where they came from. For her part, Ms Constantinidou considered that a survey of practice indicated that general principles came from domestic administrative law or principles of other area of domestic law, such as force majeure, unjust enrichment and estoppel.

Ms Đorđeska made three points. First, she queried whether this part of the report was talking about domestic principles or about general principles of law. The use of the term "principles" in the report was not quite clear. Secondly, courts usually did not refer to Art 38 of the ICJ Statute when citing treaties and customary international law. It should therefore not be surprising that administrative tribunals were not referring to it in the context of general principles. Ms Đorđeska suggested that this could clarify exactly whether the report sought to portray in making the observation about the lack of reference to Art 38. Thirdly, in connection with the principle of estoppel, Ms Đorđeska queried whether Ms Constantinidou was using the same methodology that Dr Carballo explained earlier, noting that estoppel was not necessarily referred to as a principle in ICJ jurisprudence. She expressed concern that the methodological approach within the report was not consistent.

Dr McLaughlin queried whether there was any evidence of the whole concept of administrative law being based around domestic law concepts of due process, or whether there was international law that underpinned it.

Ms Constantinidou responded to these interventions by stating that the report presented was not the final work of the Study Group and that constructive criticism was welcome. With regards to terminology, nothing was crystallised and there was nothing that could be categorised as a definition.

Dr Carballo emphasised again that the study group had not made a comprehensive overview of every single instance where a body used general principles even without referring clearly to them. The group mainly looked generally at cases where institutions referred somehow to principles/general principles (or used similar formulations). Only in some cases, it was possible to identify additional situations where the institution invoked (or pretended to invoked) a general principle without clearly stating so. The key question was whether the reference to general principles was consistent and whether there was a systematic approach to the use of general principles.

Mr Pronto observed that the research so far might not be comprehensive but it was clear that the concept varied. The Study Group had included many examples of this in its report to illustrate this. It was discernible from the research that the relevant bodies, such as the ILC, adopted a much more fluid, dynamic approach. They did not characterise the use of the term "principle", and it was hard to learn from the record whether they were referring to domestic principles. He opined that they might be tactically avoiding a direct reference to domestic principles lest their audience not be receptive to what they were saying. On the issue of estoppel, Mr Pronto noted that the Study Group was not saying that it was a principle; rather, they were giving examples of domestic principles used. The Study Group had emphasised the descriptive element of the work of the ILC and tried not to impose their own views so that they did not miss a lot of "stuff".

Ms Constantinidou added that the issue of a definition was whether in practice there was a need to have a definition. The Study Group had noted that in practice that was important, and would take these interventions into consideration in carrying out its further research.

The Chair requested Dr Carballo to state the conclusions of the Study Group so far.

Dr Carballo noted that the conclusions could be the basis for the final report of the group. These were very broad, general conclusions. First, decisions of the relevant

decision-maker(s) should make it clear that there is a reference to the general principles of domestic law, avoiding ambiguities. Secondly, in identifying common principles, we should not focus on the names used but look closely at the function that the particular principle invoked is performing, and whether they are used in a common or similar manner in other jurisdictions. More importantly, all the reasoning process should be summarised in the decision, including supporting evidence, in order to facilitate a later review. While previous decisions and internationally recognised compilations could be useful as supporting evidence, it should not excuse the absence of proper discussion by the adjudicating body. Thirdly, there was a need to ask the question whether these potential principles fit into the international law context and are able to address the specific legal problem at international level. There was no uniform approach to the use of principles. It could be argued that the search of unanimity is a utopia. The analysis must be extensive (widespread) and representative, without necessarily being universal. The general principles should reflect the main forms of civilization and of the principal legal systems of the world. There was also the need to consider the probability of having regional principles. Finally, he noted that there was a general understanding that the principles should sometimes be adapted since the conditions of the international legal system sometimes differ from those prevailing in the domestic systems. In addition, general principles of law - unless and until reflected in a specific rule of customary international law convincingly evidenced by sufficient and sufficiently representative state practice and *opinio juris* - remain general principles of law. They were not, once identified, transmuted into rules of customary international law.

The Chair invited opened the floor for further interventions.

Dr Pauline Collins (Australia) commented that Dr Carballo mentioned taking domestic principles and *applying* them in international law. She stated that the focus of the group should be on how domestic principles *developed* international law, not just whether or not they were applied.

Mr Bhattacharyya encouraged the entire topic to be viewed from a holistic approach. The recommendations of the Study Group should be only on the consideration of the interests of justice, defined as per the views of the sample who were working on it.

Ms Đorđeska asked the Study Group to explain the relationship between the sources of international law. She stated that general principles of law could also be part of customary international law. This was in response to Dr Carballo's remark that a general principle of customary international law could be either customary international law or a general principle. In her view, the ICJ cited general principles which were not necessarily found in domestic law. That meant that the research of the Study Group was not representative of the entirety of the third source of international law. In her two and a half years of research, she had applied the inductive method and found a definition of general principles by surveying the entire jurisprudence of the ICJ and the Permanent Court of International Justice, as well as decisions of the ICTY. It was therefore possible to have greater clarity and it was not as complicated as it was made out by the panel.

Dr Gentian Zyberi (Albania) posed three questions. The first was whether, according to the research done by the panel, the use of domestic legal principles was more an individual or an institutionally sanctioned choice. Some lawyers seemed to use domestic legal principles as a matter of course (comparative approach); some used them in extreme

situations (to avoid a *non liquet*); some contended that private law was not suitable for use in developing international law. Secondly, he asked whether it was more substantive principles or procedural principles that were being taken up from the domestic to the international level. Thirdly, he asked whether domestic legal principles were "meta" general principles of international law.

Dr Carballo clarified the point about general principles and customary law and stated that what he meant was that when you find a general principle, it just should not be directly equated to be customary international law. Of course in some cases a general principle could also reflect customary law, but not automatically. He also noted in response to other questions that the study group focused on how domestic principles are identified and applied, and clearly, there is a difference between international law making and adjudication. He stressed that the group did not focus on principles derived from international law but rather on principles coming from domestic systems. He added that most of the principles invoked were procedural though there were still some of substantive nature.

Mr Pronto stated that, anecdotally, there was a sense that the subject of "principles" was seen or used more in the process of formulating rules of international law. For instance, if there were fifteen people who had spoken about a principle, two of them might have used the term "domestic principles" while thirteen might have completely ignored it.

It might be interesting to look at a sociological study, but the members of the Study Group were not experts in every field. There was a belief that international law had matured to a level that it did not rely on domestic law, or that international law was so technical and detailed that decision makers did not need to turn to the domestic law.

All member of the Study Group wanted to focus on some aspects of the work, so a compromise was struck and the Study Group focused on the breath of the work to be covered rather than the depth. Essentially, each person would have had to write a thesis on each area if the necessary depth was considered for each section. The Study Group might not have done this, and there was a bit of extrapolation going on, but this was by design not by defect. There was enough information and research gathered in order to gather the trends. The Study Group was not able to state that its report was a definitive matrix. This was reflective of a broad trends and the aim was to present a broader understanding.

Ms Đorđeska made her final comment, which drew the session to a close. She clarified Dr Carballo's statement on her comment regarding customary law. She stated that a rule which was a general principle could also be part of customary international law simultaneously, whereas the report stated (at para 212) that a norm could either be a general principle or customary international law.

STUDY GROUP ON THE CONDUCT OF HOSTILITIES AND INTERNATIONAL HUMANITARIAN LAW

WORKING SESSION

Thursday, 11 August 2016, 9.00am

Chair: Professor Noam Lubell (UK)

The Chair welcomed attendees and invited Dr Robert Heinsch (CoRapporteur) to present an overview of the recent work of the Study Group.

Dr Robert Heinsch (Germany) explained that, at the Sofia Conference in 2012, the Study Group had identified three main areas of interest in modern warfare:

- the relationship between international human rights law and international humanitarian law in the conduct of military operations;
- the use of new technologies, drones, lethal weapon systems, cyber warfare; and
- the general principles in the conduct of hostilities (i.e., Hague Law).

A 2013 workshop of the Study Group at Leiden University (Netherlands) mapped the field and highlighted various questions. 25 colleagues and expert guests participated in the workshop, with each colleague covering specifically the areas of interest identified in Sofia.

At the Washington Conference in 2014, the Study Group presented a report that included feed-back from participants. A subsequent twoday workshop took place in Berlin (Germany) where participants presented papers with the aim of finding solutions to the challenges previously identified. The main topics included:

- temporal and geographical scope of application of the law of armed conflict;
- the relationship between IHL and international human rights law; and
- general principles of the conduct of hostilities.

At the Berlin workshop, the Study Group decided to narrow the focus to one of those areas. Given the work of other ILA Committees and expert processes, the most valuable contribution would be in the area of the classic principles of the conduct of hostilities, which had not been done in a comparative way for a long time. Later on, the Study Group organised a meeting at the University of Oslo (Norway), where attendees were divided into three groups to discuss on the topics of military objectives, proportionality and precautions.Representatives from the military and the International Committee of the Red Cross (ICRC) participated and all attendees had the chance to comment on the papers presented.

A detailed report of the work of the Study Group should now be ready for publication within the next two or three months.

Professor Heinsch explained that in general it had been discussed over the last four years whether new approaches were needed as the type of conflict had changed while the written rules had not always been adapted; rules which originally were designed to regulate classic conflict situation between States, whiletoday, we are facing new actors,

new technologies, and the "war on terror". There were also new concerns relating to law enforcement involvement and human rights issues. However, it is important to stress that overall the study group came to the concusion that notwithstanding the challenges posed by contemporary types of conflicts, IHL is applicable and capable of adequately addressing these challenges.

Professor Robin Geiss (Geiss) said that the program of the Study Group was ambitious in scope but modest because it had not aimed to present a set of rules agreed to by all members of the group but rather a clear assessment of contemporary challenges, the status quo of the legal debate and options to move forward.

There were a number of manuals touching upon the conduct of hostilities all having standing and reason. However, the total sum of manuals intending to clarify the law added to the complexity of the law. So the Study Group did not aim to add another version of consensus. Instead, the idea was to identify areas to move forward after interacting with the various players. The Study Group concluded that the issue of precautions was under-researched and was an area where added value lay.

Professor Geiss recalled how, during the International Conference of the Red Cross and Red Crescent in December 2015, the ICRC proposed modest compliance projects with regard to detention, which were rejected by States. Ambitious projects regarding the conduct of hostilities would likely have the same fate. In light of this context, the Study Group remained modest in its approach.

Professor Geiss presented some examples of the analysis done by the Study Group with regard to the question of "military objectives". In Art 52 of *Additional Protocol I to the Geneva Conventions* (AP I), the definition of "military objectives" was twofold: (i) contribution to the military objective; and (ii) whether there was a military advantage. Professor Geiss questioned whether these were two different questions or, for practical purposes, whether they were one and the same question. He then asked where the two questions might arise as a different issue. He explained that it would be great to have a two-fold definition as this way there would be greater limits on the use of force. He cited some examples to think about the question: (i) the case of the bombing of a bridge where there was no hostility; (ii) in cyberspace, destroying one server where there was an endless number of servers. In this case, the attack would not necessarily bring a military advantage. The ICRC promoted a two-fold definition. The question was complex. Various considerations came into play, like the purpose of the location or the objective, whether its purpose was defined by its nature or the intrinsic characteristics of the object, or by the use given to the object. Was the object military by nature, or intrinsically military like a war plane?

Professor Geiss mentioned that the *HPCR Manual on International Law Applicable to Air and Missile Warfare* said that there were two subsets to this question: objects could be temporarily military by nature or permanently military by nature. He added that there was the default "use" criteria, i.e., whether the object served a military objective like the use of a bridge by armed forces to cross a river in a military endeavour. The difficulty in this case was that as it referred to future use, it remained a subjective analysis and more questions followed: What evidence served to make the assessment? What would be the standard? Was there a reasonableness test to assess the decisions of the commander?

These were very problematic questions, particularly in the current contexts where civilians were mixed in conflict.

Professor Geiss mentioned current situations adding to the complexity, namely asymmetric warfare, urban violence, and the blurring of civilian and military objectives.

Professor Geiss offered some examples. The first example was a situation in which part of a school was being used as an arms depot. The Study Group found that, if making the distinction was feasible, when the depot was separable, it was possible to look at the specific part of the school rather than the whole school for the purposes of the qualification as a military objective and the proportionality assessment. The second example concerned the use by armed forces of a certain percentage of capacity of the electricity grid. The marginal use of electric wires could turn the object into a military objective but the loss of civilian functionality should be taken into consideration in the proportionality analysis.

Professor Geiss mentioned that the Study Group found the principle of distinction in the realm of cyberspace to be potentially difficult. In cyberspace, an entire area could be turned into a military objective. There was unease about this reflected in the ICRC reports. The ICRC was no longer ruling out new rules to address this reality. Some scholars held the view that data should be considered a military objective, but others believed it to be intangible and beyond the scope of IHL. Data should be protected. If there was a protected person, like a wounded soldier, then the data of that protected person was also protected.

Professor Geiss noted that war sustaining elements did not constitute a military objective. He referred to economic elements or economic actions related to the conflict. With regard to the destruction and seizure of property, if military necessity required, Art 52 AP I was the applicable provision. He clarified that there was no override to Art 52 AP I, and one could not turn to Art 23 of the Hague Regulations.

Professor Geiss proceeded to examine the question of precautions. Precautions, compared to proportionality and distinction, were not much researched. One issue was whether it was feasible to take precautions, if practically possible given military and civilian considerations. When making the assessment, what were the considerations? Did finances play a role? What if, for example, precaution indicated that it was best to use a more sophisticated weapon but it was costly to acquire it?

Professor Geiss referred to Professor Marco Sassòli, who argued that financial considerations should not be considered because they were too broad. But were these not strategic considerations? This was an area of ambiguity which could not be easily resolved. These considerations were dangerous to make.

Professor Geiss then posed the question as to whether one could consider force protection in assessing feasibility of precautionary measures. This was the case when the measures would put military forces at risk. But even if self-protection is a relevant consideration it is only one of the factors to be considered and it cannot automatically override the protection of civilians.

Professor Geiss said that the Study Group considered that precautions could be taught differently in the training of soldiers. Now, they were presented in opposition to the

military objective. It might be of military advantage to avoid hurting civilians to win their hearts and minds. This should be emphasised in the training of troops.

As regards precautions in attack, there was a general obligation to exercise care to spare civilians and there was a requirement to make warnings to keep collateral damage to a minimum. Little emphasis was placed on the first aspect of this obligation which was a mistake. The emphasis was usually placed on the warning aspect of the obligation. Broader security measures should be highlighted during the conduct of hostilities as a whole.

Professor Heinsch discussed the proportionality principle. Here, the Study Group was dealing with attacks that were prohibited even when targeting a military objective, because the collateral damage was anticipated to be excessive in relation to the military advantage. Some actors say that they the proportionality is so complicated that they only can judge disproportionate attack in the moment when they really see it, which illustrated how subjective the test was. The question is nevertheless based on customary and treaty law.

The components of proportionality are as follows:

1. damage to civilians and civilian objects (AP1, Art 51); which is
2. excessive compared to the military advantage anticipated (AP1, Arts 51 and 57).

Professor Heinsch noted that the term "disproportionate" was not the choice of word used in the treaty text but "excessive". There were discussions and disagreement during the negotiations about the use of proportionality. He queried what was to be included in this calculation (e.g., the military advantage anticipated?), including the question of force protection. The different types of conflict were also a consideration and that the incidental loss of civilian lives and damage to civilian objects were part of this analysis. Proportionality referred to damage of a nonmilitary nature. It was necessary to look at the effects of an attack. The opinions given were: (i) strict view – to consider only the direct effects, such as death, physical injury, destruction of the civilian object etc.; and (ii) to include indirect effects which only developed after the attack in the long run. These effects could be equally dramatic for the population, such as water pollution, and the destruction of medical systems. The Study Group did not develop a consensus in this context. Considering that one of the key components of proportionality was the protection of civilians, this was however a crucial element.

Professor Heinsch concluded that foreseeability was necessary to assess the proportionality of the attack, but there was a certain disagreement so far. Even an object which did not qualify as a military object might be taken into account with respect to the proportionality test. But if it was not a military objective, it could not offer a military advantage, and therefore the test could not be applied. The situation was different if the non-military objective could become a military objective in the future.

Professor Heinsch raised the question of other groups of protected persons like medical personnel, soldiers hors de combat, and civilians participating in hostilities. Civilians losing the protection for participating in hostilities would not count as civilians for the purposes of the proportionality test and were therefore not considered as collateral loss.

Professor Heinsch referred to the case of prisoners of war and injury to mental health. There was the suggestion that psychological injury should be taken into account. Not merely psychological trauma, but rather something like terrorising the civilian population. Reference was made to a report published by the New York University on the suffering of civilians caused by drone strikes, their constant fear, and the effects on their mental health.

Professor Heinsch then mentioned the case of human shields. What if a civilian acted voluntarily? If there had been a warning, for example, was the civilian excluded from the proportionality count? The precaution measures might help assess the situation. This was in contrast with the general rule, in Article 52(1) of AP I, that everything that was not a military objective is a civilian object. Therefore, it is rather doubtful whether civilians would lose their protection under the proportionality principle, even when they are seen as (voluntary) human shields. In addition, it was stated that the environment was a civilian object, for example.

Professor Heinsch addressed the issue of excessiveness in the attack. He queried what quantified as excessive, and whether it was the same as disproportionate at a high level. The principle of proportionality was relative, and there were two elements to it, namely injury to civilians, and military advantage. Comparing them was difficult, like comparing apples and oranges. The Study Group agreed that it was not as simple as comparing five civilians against five soldiers. Equal proportionality did not always work. If the soldiers were strategic leaders, an equal count might work, but this was not necessarily the case. Qualitative factors should be taken into account. If there was only very little military advantage, an equal count would not prevail. It was difficult (and maybe dangerous) to list indicators to assist the military.

Professor Heinsch spoke about concrete and direct military advantage. “Substantial and close” might have a higher threshold in the proportionality analysis than the standard when assessing military objectives.

Professor Heinsch said that the majority of the Study Group had concluded that force protection was a factor to be considered in assessing proportionality, but not as an overriding force crashing the protection of civilians. Others wanted to exclude force protection from the equation because the aim of the principle was to protect civilians, and it would be cynical to exclude their protection. Yet the majority was clear that the principle inherently balanced military necessity and the protection of civilians, and force protection would be part of this analysis.

Professor Heinsch added that proportionality applied equally in different types of conflict, and that the sudy group also discussed whether, in law enforcement situations, human rights aspects played a role in the proportionality test.

Professor Heinsch concluded that there remained areas of disagreement alongside other areas of consensus among members of the Study Group after four years of work.

The Chair opened the floor to interventions:

One attendee (US) suggested including the environment in the “use” criteria.

Professor Heinsch replied that the environment was both part of the background and at times the military objective.

Another attendee (Germany) suggested that the Study Group improve the example of the sniper on the hill.

Professor Heinsch replied that the only point of the example was that self-preservation was one (of several) element(s) in the equation. It was difficult to do an academic analysis with such technical and singular precision.

The attendee then commented that, if it was difficult for academics to reach agreement, imagine what it would be like for armed forced in the field under pressure. He then queried whether, given the omnipresence of satellites, States were obliged to use satellites as a means of precaution? Médicins Sans Frontières recently claimed that members of the Security Council attacked medical installations. Should these members not have used satellites?

Professor Geiss replied that military legal advisers had a dilemma. Today, thanks to technology, armies had more readily available access to advice. This was not the case for soldiers in the battle field. The precautions obligations were due diligence obligations, which also depended on the resources available. The degree of responsibility was not always the same.

Professor Heinsch noted that the responsible commander had to implement the decision from above, and even if on the ground, he would have to take all elements into account when deciding. Legal academics would necessarily have different opinions because they were discussing the principle in the abstract. In the end, the way that proportionality was formulated entailed a certain amount of openness. The lack of certainty should however not discourage armies from using strict definitions to apply to concrete situations. ICRC had started a project to find positive examples of compliance with IHL, which might help in the future to give more concrete examples.

Professor Geiss added that a lack of certainty was not always disadvantageous for civilians. Rules of engagement and policy considerations were in fact often stricter than what IHL required.

The Chair pointed out that there was a spectrum of reasonableness in the analysis.

An attendee (Australia) asked about the definition of warship, and whether this covered training ships or ocean cartographic vessels. The final issue was whether there was combat at sea. What if people were rescued by a warship? If they were no longer shipwrecked, were they entitled to protection?

Professor Heinsch said that the aggressive and defensive aspects of the action were relevant in the analysis. The hors de combat ship might equally be a plausible example, though not all examples could be analysed as there was a page limit to the report.

Professor Geiss reiterated that the two-fold question in the military objective test was really just onefold. However, in cyberspace and urban warfare, the twoprong test might be relevant. High altitude attacks were still subject to proportionality rules. High altitude attacks risked causing more collateral damage. Long distance attacks saved ground

forces. The issue was to balance force protection and collateral damage of choice of attack. Self-preservation versus civilian protection.

The Chair noted an example of relevance for the question in relation to the two-part test for military objectives: if there was a specific civilian home regularly used for command meetings of an armed group, then the first premise might be satisfied. But if the armed group would simply be able to move their meetings to the house next door, would the second part have been satisfied?

An attendee (US) suggested effectiveness, temporality, and contingencies as other elements which assisted in analysing particular situations. Was effective contribution a criterion to add? Economic considerations inspired policy decisions. Why not consider compensation to collateral damage regardless of proportionality? This would be an incentive to reduce collateral damage as it would be a strategic consideration. A good idea since it was difficult to offer clear criteria. It was a practical way of accomplishing the objective to protect civilians without having to engage in long studies which could not provide clear answers because they depended on contextual and varied circumstances on the ground.

Professor Geiss mentioned that procedural aspects were looked at, and the conclusion was that not all substantial problems were solved through the procedure. The Study Group even looked at the entire process. The attack started from the moment that the soldiers were being trained.

As for economic considerations, they were indeed always relevant. But war sustaining economics did not determine the military advantage of an attack. Therefore, compensating victims would not necessarily work for the purposes of the test. As for military assets far away from the zone of combat, they were a valid target, but might not offer a military advantage because they are too far away. Under IHL, could not destroy the tanks of the adversary unless they were posing a threat. One could attack if there was a military advantage.

Professor Heinsch said, regarding the financial implications of warfare, that they were valid questions, but beyond the scope of work of the Study Group. Military advantage was not necessarily mostly qualitative. But the point was not to focus on just one aspect, but to include both qualitative and quantitative considerations.

Professor Heinsch thanked the members of the Study Group who participated in all sessions. Their work contributed immensely to the results. There had been a great working atmosphere. He informed attendees that the three officers of the Study Group were stepping down as the report was finished and the Study Group might engage in different questions.

The Chair thanked the CoRapporteurs and attendees for their participation and closed the session.

INTRODUCTION

This paper presents some high level conclusions and recommendations of the Sovereign Bankruptcy Group of the International Law Association as to the way forward for the legal approach to sovereign bankruptcies. The paper follows on work done some years ago by the Sovereign Insolvency Study Group of the International Law Association, which had a somewhat different makeup from the present group. The predecessor Group

presented an interim paper at the Hague Conference of the ILA in 2010 setting out some issues but without coming to a conclusion on how they should be dealt with. The purpose of this paper therefore is to produce so far as we can more specific proposals. It is not a final report.

You may say that bankruptcy policy should find a balance between protecting creditor rights and enhancing the prospects of the debtor's recovery. A platitude, for sure, but still true, even though its implementation has to be worked out.

Our approach

Our Group is composed of leading practitioners, academics in this field and other experts representing a variety of opinions. We however share some common beliefs, one of which is that the law is one of the most important ideologies in the world and that it is not possible to have a society without law. The law is one of the moral regimes which sets the credentials of a civilisation and what it stands for.

We regard the field of sovereign bankruptcy of major importance for the world and certainly one of the most difficult of all the arenas of the law.

We suspect that not all of the members of the Group share all of the views expressed in this paper but are too courteous to say so and we nevertheless hope that the paper will be a useful contribution to the state of the art and the Group has benefited enormously from the diversity of opinion.

It is with these considerations in mind that we approach our topic.

Hague Report 2010

The Hague Report 2010 of our predecessor Sovereign Insolvency Study Group noted that there was no international bankruptcy law covering the insolvency of sovereign states. The outcome therefore depended upon negotiations between the parties. In most cases the negotiations were successful. The paper identified some of the main differences between a sovereign bankruptcy and the prescriptive rules for domestic corporate bankruptcy in order to contrast the two traditions, while noting the principal differences between the status of sovereign states and the status of ordinary domestic corporations.

In particular, the paper noted that two of the major differences between the law governing sovereigns and that governing private law corporations were that the assets of sovereign states were in practice mainly immune from creditor attachment or realization. Domestic assets are immune because they are usually made immune by a domestic statute. Most foreign assets are de facto immune because these assets are typically held by separate state-owned corporations, such as a central bank, which are not responsible for the debt of the sovereign and protected by the veil of incorporation. In addition, apart from IMF conditionality, it is not feasible for an independent person analogous to an insolvency administrator to take over the financial affairs of the sovereign state. In these two respects, sovereign states are to some degree immune and protected from the law applicable to private parties and are therefore in a privileged position legally in relation to bankruptcy compared to ordinary subjects of the law. It would not appear to be possible in practice to bridge that gulf, but the disparity affects debtor-creditor positions.

The disparity affects debtor-creditor positions because creditors argue that their legal position as against debtors is much worse than is the case with the bankruptcy of individuals or corporations. Creditors further argue that it follows from this that the immunities of sovereign debtors should not be increased. They say it is a general principle of the rule of law that nobody, including sovereigns, should be immune from the law applicable to other debtors. They would further maintain that the principle underlying the de-immunisation of sovereigns in commercial transactions is that if sovereigns descend to the market place, they should accept the sanctions of the market place like the rest of us. The sovereign states would argue that they are different and need to maintain their protections against creditors, eg because they can represent a very large number of people and because of the damage a sovereign bankruptcy can do to those people. They say that the fact that sovereigns have more room for manoeuvre is justified by their special position.

In this context, it is ultimately the task of lawyers to justify why the immunities given to sovereign states (in terms of de facto and legal immunity from creditor attachments and immunity from absolute control from an insolvency administrator) should be maintained or decreased in the case of bankruptcy.

The Hague Report broadly identified four ways forward:

1. A voluntary, contractual regime leaving the resolution for sovereign insolvency to contracts adopted by issuers and bondholders, with or without some official prodding.
2. The adoption by treaty or statute of a limited provision for creditor voting on a plan
3. The adoption by treaty or statute of a wider bankruptcy regime that so far as possible reflected the relevant aspects of corporate insolvency reorganisation practice and statutes.
4. The adoption of measures to strengthen creditor positions and to dilute the protections for insolvent states.

These options were accompanied by a list of the advantages and disadvantages of each proposition and, in the case of statutory or treaty regimes, by outline drafting of what the articles of agreement might say, plus commentary.

We shall see later that the increasing use of collective action clauses in bonds is a major step forward in the effective resolution of sovereign bankruptcies and dramatically changes the landscape.

WHAT HAPPENS IN PRACTICE?

Introduction

This section sets out the typical course of events where a sovereign state becomes bankrupt, ie when it is unable to pay its debts when they fall due, usually its debts expressed in a foreign currency. Naturally, each case tends to be different but there are some classic patterns and generally the International Monetary Fund ("IMF") seeks to distinguish between cases where the problem is one of liquidity only and cases where the debt stock is too high (a "solvency problem"). An example of a case which did not follow this pattern was Greece in 2012 because of the involvement of the euro area states, as well as the IMF. There have been other departures. The reason that we tell this story is that it makes

the understanding of the realities of a sovereign bankruptcy easier to understand and identifies where the problems are which call for a solution.

Most sovereign bankruptcies result from a quite slow accumulation of financial adversities over a number of years or even longer including typically such matters as fiscal deficits and over-borrowing, often exacerbated by prejudicial economic conditions, rises in interest rates or the like. It does not often happen that a sudden cataclysmic event out of the blue destroys the finances of a state, although this has happened.

When the situation becomes so serious that the sovereign is unable to meet its obligations on its bonds, the politicians and officials in the sovereign state are typically in a state of denial, notwithstanding urgings by the IMF that they need to take action immediately.

Entry of the IMF

If the IMF thinks that the financial problems can be overcome if the sovereign state adopts corrective measures in consultation with the IMF and receives short term funding from the IMF to tide the debtor over its immediate problems, then there is no need to involve either other official sector creditors (namely other governments who have lent money to the debtor) or to involve the private sector, typically bondholders.

However, if the IMF thinks that, notwithstanding an austerity programme and some interim funding from the IMF, the sovereign state will still not be in a position to meet its debt obligations, i.e. the debt load is unsustainable, then the IMF will conclude that the official sector and the private sector have to be involved. This usually means they have to provide some debt relief by way of extension of maturities (reprofiling) or reduction of the amount owing, commonly called "haircuts". The IMF has policies about the circumstances in which they will lend into arrears and about the evaluation of sustainability. One of their concerns is that their money will simply be used to pay off private creditors and there is no burden-sharing.

In some cases the debtor sovereign approaches the private sector bondholders before the IMF, especially if it thinks that the bondholders will accept a reduction of principal (a haircut) in a case where the IMF will propose a rescheduling without principal reduction.

However, it should also be noted that sovereign debt restructurings may proceed without IMF and Paris Club involvement. Noteable examples are Argentina in 2005 and 2010 and Ecuador in 2009.

Paris Club

In cases where the IMF is involved, what happens next is important in practice because it tends to determine everything else which follows. The IMF consults with the Paris Club (see below) about the depth of the problems being encountered by the sovereign debtor and what needs to be done in terms of rescheduling and haircuts. Practically every state in the world is a member of the IMF which therefore is the representative of the official sector. Its advice carries great weight with creditor countries and the on-going economic surveillance role played by it is generally accepted as being both important and helpful by its members. The IMF is generally seen as experienced, notwithstanding the reservations some governments have about voting control in the IMF and its corrective programmes

for sovereigns experiencing a financial crisis. Others have complained that its operations are insufficiently "transparent".

The Paris Club was set up initially in 1956 under the chairmanship of the Minister of Finance of France as an informal arrangement to deal with the insolvency of Argentina and is composed of significant creditor nations, mostly the developed countries. It was not established as a standing institution and yet has become a central player in sovereign debt restructurings through the creation of soft law norms. Many members of the Paris Club will hold claims against the sovereign debtor arising either from bilateral loans or more typically from guarantees by their export credit agencies which have been called by the beneficiaries so that the exporting countries are left with a claim for reimbursement against the sovereign debtor.

The IMF makes available to the Paris Club members its analysis of the situation, including its view of what is needed for debt sustainability. The Paris Club holds a meeting attended by representatives of the sovereign debtor and the official creditors at this meeting inform the sovereign debtor of their proposals for the rescheduling of their official sector debt. Often there is little negotiation because over many years the Paris Club has developed standardised approaches to rescheduling. Deviations from standardised approaches are unusual (e.g. Poland 1991 and Iraq 2004).

The proposals are then recorded in a minute which is agreed by the Paris Club creditors and the sovereign debtor setting out the terms of the rescheduling, including the necessity for the sovereign debtor to enter into a standby or other financing arrangements with the IMF whereby the IMF will make available funds on prescribed terms and the sovereign debtor will agree to carry through an economic programme agreed with the IMF which usually includes structural reforms.

This agreed minute contains an extremely important clause which provides in effect that the sovereign debtor must not give any of the other creditors involved in a rescheduling, whether official or private, a better deal. A typical clause will read as follows:

> 'In order to secure comparable treatment of its debt due to all its external public or private creditors, the Government of the Republic of Sealandia commits itself to seek promptly from all its external creditors debt reorganisation arrangements on terms comparable to those set forth in the present Agreed Minute, while trying to avoid discrimination among different categories of creditors.

Consequently, the Government of the Republic of Sealandia commits itself to accord all categories of creditors and in particular creditor countries not participating in the present Agreed Minute, and private sector creditors treatment not more favourable than that accorded to the Participating Creditor Countries for credits of comparable maturity.'

Thereafter the members of the Paris Club enter into their own bilateral treaties with the sovereign debtor setting out the commonly agreed terms of the rescheduling.

The effect of the above clause is that the IMF via the Paris Club has committed the sovereign debtor to a rescheduling of other official creditors and the private sector bond-holders on terms that the sovereign debtor will not give a better deal to any of these other creditors from their point of view. There must be equality of burden-sharing. Hence, when the other creditors approach the Ministry of Finance of the debtor, he or she has to

explain that he or she has no choice in the matter. They will all have to be rescheduled and the terms of their rescheduling are not to be more favourable to the creditors than what the Paris Club has required. At least this is the result which the IMF would typically enjoy, but is not always able to achieve.

One of the features which has changed over recent years is that the Paris Club creditors often do not include other governmental creditors, e.g. China (which is however an observer) and those from mid-range or developing countries who may have advanced large sums to the sovereign debtor, e.g. for the purposes of defence or to shore up a political ally. It may be that one or more of these creditors might join the Paris Club so as to fall in with the Paris Club consensus. But sometimes this is not the case and so these other official creditors are not bound by the rescheduling and on occasions have refused to be rescheduled, i.e. they become an official "hold-out" creditor. One result of this is that the negotiation of a rescheduling can get delayed. Another result is that the IMF has now developed policies as to whether in this situation it is prepared to still lend to the sovereign debtor even though the sovereign debtor is in arrears. The previous policy was that the IMF would not lend to a sovereign debtor if the sovereign debtor had not agreed a rescheduling with the official creditors. The object was to ensure that the sovereign debtor did comply with the Paris Club requests and did enter into a standby with the IMF. But now the IMF is prepared to do so subject to various conditions in order to ensure that the IMF can provide the necessary funding to preserve stability, even though an official creditor is holding out.

Some complain that non-Paris Club, sovereign creditors and also the private sector have not been heard in the decision as to the extent of the rescheduling.

Moratorium

Occasionally at this point, but not always (Greece in 2012 for example), as debts mature for payment, the sovereign debtor declares a de facto moratorium for, say, 90 days. This declaration states that the sovereign debtor will not pay any of the relevant creditors within those 90 days and will in the meantime negotiate with its creditors in order to arrive at an agreed solution.

This statement of a moratorium is the functional equivalent of an order for a corporate bankruptcy in the sense that they both impose a freeze on creditors. The difference is that the corporate freeze or stay on creditor actions has legal force whereas the moratorium declaration by the sovereign does not have legal force in any sense: creditors are not bound by the moratorium. One of the issues therefore is whether there should be the possibility of a moratorium which has legal force: we discuss this question later. In practice creditors do not usually take enforcement action at this stage – even if there were any assets to attach – provided that the debtor is negotiating in good faith.

IMF standby

A further feature to note is that the official sector will usually not agree to any form of rescheduling unless the sovereign debtor has signed up to a standby with the IMF which contains conditions ("conditionality"), especially conditions about an austerity programme. We use the term "standby" to include other facilities and credit lines. The power of the IMF accordingly stems from the fact that generally official creditors will

insist on the IMF programme which has the effect that there is a degree of creditor intervention via the IMF over the fiscal affairs of the debtor. It has already been noted that one of the major differences between a sovereign bankruptcy and a corporate bankruptcy is that, in the case of a corporate bankruptcy, the creditors can appoint an insolvency administrator over the debtor and this administrator runs the finances of the debtor either totally or by having a veto over significant decisions. The IMF is therefore a very broad equivalent of an administrator exercising surveillance powers, notwithstanding that the powers actually exercised by the IMF are substantially less than the powers which would be exercised by a corporate insolvency administrator. This flows from the principles of national sovereignty which play a major role in the political attitudes of sovereign powers and their relative refusal to permit any interference in their internal affairs from other sovereign states.

An IMF corrective programme will typically require a reduction in welfare spending and subsidies, better tax collection, an increase in taxes or reduced exemptions, the privatisation of state-owned businesses, decreases in state employees and pensions and better governance, plus a number of quite micro reforms. These programmes are commonly contentious, particularly with the domestic population of the sovereign and the government in power.

IMF policies

The IMF has recently been implementing changes to some of its policies as they relate to sovereign debt. In December 2015 the IMF introduced some tolerance of official sector arrears where, inter alia, there is a need for prompt IMF assistance, the debtor country is making good faith efforts to reach agreement with the creditor and the absence of a debt restructuring is due to the unwillingness of the creditor to reach an agreement consistent with the parameters of the IMF-supported programme. Prior to this change, the IMF was prevented from lending to countries if they owed unresolved arrears to official bilateral creditors, unless the arrears were covered by a Paris Club agreement or the creditor consented to the IMF providing financing.

Furthermore, the IMF has also introduced changes to its exceptional access lending framework which deals with circumstances where the requested financing amounts exceed normal IMF lending limits. Under the old framework, the IMF could lend above its lending limits under exceptional circumstances when certain conditions were met, one of which was that there was a "high probability" that the member country's debt was sustainable. If the high probability bar was met, the IMF could lend without requiring any debt reduction operation. In the case of Greece in 2010, because the IMF did not assess Greece's debt to be sustainable with high probability, the framework required an upfront debt reduction. Due to concerns about severe contagion in the euro area and beyond, at the time the IMF created a "systemic exemption" for cases where there were significant uncertainties around debt sustainability. In January 2016, this systemic exemption was removed on the basis that it could encourage moral hazard and did not mitigate against the contagion the systemic exemption was meant to address. Furthermore, a reprofiling option which extended debt maturity without an upfront reduction was proposed for cases where debt is assessed to be sustainable but not with high probability.

Currently, the IMF is continuing its work on the reform of the lending into arrears policy in respect of private sector debt.

Private sector

The private sector creditors are commonly bondholders holding bonds originally issued by the sovereign debtor. These holders are mainly in the typical case banks and insurance companies. Their underlying importance is that they hold the savings of the citizen, either in the form of deposits or in the form of pension pots or pension commitments, so that a loss to them is ultimately a loss to the citizen. In particular, a threat to banks can become systemic by contagion so that a large sovereign insolvency or series of insolvencies can have a domino effect in creditor countries.

At this point, hedge funds may well buy bonds at a very low price resulting from the financial crisis in the hope of recovering substantially more in due course: effectively they provide liquidity, enabling holders to sell out. The tactics of these hedge funds generate much controversy but in practice the usual experience is that hedge funds do not take enforcement action at this point unless the sovereign debtor refuses to negotiate reasonably. Any enforcement action would be disruptive and prejudice a successful deal.

Negotiations generally commence between the bondholders and the sovereign debtor. In some cases, discussions involve a steering committee of the bondholders and a sovereign debtor. Occasionally several competing committees spring up when the sovereign debtor admits its inability to pay, or even before, but these committees often, after the initial shock, coalesce into a single committee broadly representing the largest bondholders by amount. The members are usually a mix of banks and insurance companies and may include hedge funds. Occasionally a set of procedural rules are agreed but more generally the creditors reserve their legal rights and act by consensus. The sovereign debtor, sometimes only after initial skirmishing, typically recognises the committee as a negotiating party but often argues about the payment of their fees and those of their advisers.

Negotiating the financial terms

The deal agreed with the bondholders and the sovereign debtor may comprise a simple extension of the maturities of principal without a reduction in nominal amount or a reduction in the principal amount ("haircut"), a change in the interest rate, occasionally a change in the currency and very occasionally the issue of GDP warrants whereby the holders are paid more if the debtor's GDP goes over certain thresholds showing it is recovering from the debacle. Often bondholders are presented with a menu of options. We call all of these methods a restructuring.

A common approach of creditors is to argue that they should suffer the minimum losses and also that the losses should not be suffered all at once but rather bit by bit. The purposes of this "short-leash" approach is that in practice debt sustainability is impossible to forecast with precision and that the debtor will not comply with corrective policies unless it requires extra relief or new money in the future, although as mentioned later, GDP-linked payments could offer a way out by simulating equity. The short-leash approach helps creditors maintain bargaining power. In contrast, sovereign debtors obviously seek the largest possible relief and seek to escape austerity policies. Debt sustainability (meaning that the sovereign will as a result of the restructuring be able to pay its debts as they

fall due) needs to be viewed in this light. In addition, these are hard negotiated positions when so much is at stake for either party. Exactly the same process occurs in most corporate work-outs and judicial restructurings and so this process is completely routine. It may be added that the above approach of creditors is not merely that of private creditors but is very often the approach taken also by official creditors. A dramatic example of the short-leash approach was that adopted by official euro area creditors in the case of the Greek bankruptcy starting in 2010.

Later we will discuss market clauses for the appointment of these bondholders committees and the delineation of their powers. All that we need to say here is that the negotiations are carried out directly between the steering committee of creditors and representatives of the sovereign debtor (including their financial advisers) as well as bilaterally. The IMF does not formally participate in these negotiations since, as shown, the IMF has already set the rules so that the shadow of the IMF is cast over the negotiations. The governments having jurisdiction over bondholders may assert official pressures if they can which can sometimes be done in the case of large banks and insurance companies but not hedge funds.

If any of the bonds contain provisions for meetings of bondholders whose resolutions on a rescheduling can bind the minority, then the meetings are duly called by the issuer and the bondholders to vote. The majority may therefore get their way and bind the dissentient bondholders.

Exchange of bonds

The next step is that, with the help usually of an offering circular containing a description of the deal and a description of the sovereign debtor and its finances, the issuer offers to exchange existing bonds for new bonds reflecting the new deal e.g. the re-profiling or rescheduling, the changed interest rate or currency and any haircut. The offer may have minimum participation thresholds to encourage acceptances.

Subsequently, if there have been no provisions for binding minority bondholders or the resolution has failed to pass in respect of one or other bond issue, creditors who have not accepted the exchange offer will take whatever action they can, including the obtaining of enforcement orders in the courts of any countries having jurisdiction. They are usually able to do this because of express jurisdiction clauses in the bonds and because of express waivers of immunity in the bonds. But, as discussed, there are usually no or very small available assets to satisfy the claims of these holdout creditors outside the debtor's country. They can, however, chill the return of the sovereign debtor to the capital markets by virtue of the fact that they are taking legal proceedings to enforce the debts and by virtue of the fact that technically they may be able to levy attachments over the proceeds of fresh issues of bonds by the issuer or any return payments of interest or principal, unless some method of shielding these proceeds has been set up.

In practice most of these exchanges have been accepted by more than 90 per cent of bondholders with very few exceptions. Argentina was one such exception because in the initial stages Argentina declined to negotiate and imposed a haircut on creditors of 75 per cent or so which creditors considered to be too steep.

It would be seen therefore that the actual transaction is extremely simple – just an exchange of bonds. This transaction is vastly simpler than a typical corporate work-out or reorganisation which is far more complicated by a large measure. There are various reasons for this including the fact that corporate reorganisations often involve many classes of creditor other than bondholders and creditors, e.g. employees, suppliers, pensioners, the tax authorities, lessors of land or equipment, tort claimants and so on.

Points to note on the process

There are a number of comments that we can make at this stage upon the above recital of the practice.

Sovereign bankruptcy involves a workout

The first relevant point is that a sovereign bankruptcy is resolved by a negotiation over a contract, not a judicial proceeding. In fact, it is probably the case that ordinary corporate bankruptcies are in 90 per cent of the cases resolved by private negotiations and not by a judicial proceeding. There is a judicial proceeding in two main cases, namely, when the position is quite hopeless in which case the debtor must be liquidated: this is not applicable to sovereign states. The second case is where a private workout is solemnised by a judicial order in a short form judicial reorganisation, often called a pre-packaging. The judicial stamp gives greater legal validity than would be the case with a private agreement. Again in the case of sovereign states there is no background bankruptcy law which compels the parties to adopt certain positions in their agreed workout, e.g. to respect a ladder of priorities.

Bargaining power

It follows from the fact that the ultimate resolution is negotiated that the bargaining position of the parties is crucial.

It is almost invariably the case that each side thinks they have the worse negotiating position. Creditors tend to think that they have got no leverage whatsoever over a recalcitrant sovereign debtor. Debtors similarly think that they are exposed and vulnerable to predatory creditors.

The facts are rather different, i.e. that in this game of cards, neither side has any aces. At most, they have a two of diamonds or a three of spades. Everybody's cards are poor so that at least there is an equality of misery. On the creditors side, they have virtually none of the legal rights which a creditor of a bankruptcy corporation has. They cannot force a liquidation or a judicial corporate reorganisation. They cannot attach assets of any significance belonging to the sovereign debtor. As mentioned, domestic assets are invariably immunised, and the foreign assets are typically held by state-owned corporations, such as the central bank which are protected by the veil of incorporation from seizure to satisfy the debts of the states. In the absence of sovereign guarantees, these state owned corporations are not responsible for the debt and therefore creditors cannot seize their assets to pay the debts of someone else. In addition, it is not possible for creditors to appoint an insolvency administrator to take control of the sovereign debtor's financial affairs. Therefore you could say that creditors have thin legal rights and that sovereigns are

relatively immune as regards these points in a way that other debtors whether individual or corporate, are not.

Other creditor risks are that the insolvency may give rise to contagion and that official pressures are brought to bear on creditors to settle by reason of the political importance of the country.

On the debtor side, unlike corporations, the debtor has limited protections against hold-out creditors who refuse to accept the exchange offer and whose litigation effectively closes out the debtor from future public international borrowings.

The debt is perpetual and there is no bankruptcy release, subject to the expiry of limitation periods. Interest does not stop on the declaration of bankruptcy, as it effectively does in the case of corporation (where post- commencement interest is generally subordinated to other claims and therefore in practice never gets paid). In the case of sovereign states, the capitalised interest can mount up to large sums, eventually exceeding the principal. In addition, the sovereign debtor can have problems importing essentials such as medicines, food and oil. The banks may collapse. There may be civil disorder. Inflation may break out and unemployment increases. Public services almost invariably need to be cut. Many corporations slide into bankruptcy. The citizens may suffer losses and in extreme cases be thrown into destitution. The sovereign will be excluded from the public market and sometimes obliged to borrow, if at all, from private sources at very high interest rates, thereby exacerbating the problem.

Classes of sovereign debt

It is usually only the foreign bonds held by bondholders and payable in a foreign currency which are rescheduled, as well as official debt. Nowadays, the amount of bank debt under syndicated credits tends to be small, but there may be some, especially where banks lending to a state-owned company, such as a project company, are guaranteed by the state.

It is less usual for domestic currency sovereign debt to be rescheduled, even if held by foreigners, unless, say, the currency is the euro, as in the case of Greece. The reason for this exclusion is that firstly the sovereign can print enough money effectively to pay the debt, although with inflation and other consequences. This monetary solution may be prohibited by an IMF standby. Further, since the domestic debt is generally in the local currency and governed by local law, the debtor can impose a legally binding moratorium or write-down which will be recognised in most foreign countries by reason of the fact that creditors contracting under a specific system of law are subject to changes in that law and their recognition. Thus, an exchange control would generally be recognised elsewhere. The rule in the United States is somewhat different but often to the same effect. Hence, the purpose of a foreign governing law is to insulate the debt from exchange controls, moratoriums and write-offs legislated into force unilaterally by the sovereign debtor.

Nevertheless there have been cases of the restructuring of local currency, even when the external debt is left untouched, eg Jamaica.

Degree of disorganisation

It is often said by commentators on this subject that sovereign bankruptcies are chaotic and long drawn out and that therefore an iron statute is needed to introduce discipline.

This is considered doubtful. Corporate bankruptcy laws are generally highly prescriptive with precise and disciplined procedures. Nevertheless it is common experience that any large bankruptcy in its initial stages is characterised by resentment and rancour on both sides and by every signs of anarchic disorder. It is often only later in corporate reorganisations that the parties ultimately settle down to the realities of the situation. For example, the work-outs which preceded the judicial prepackaging in the case of General Motors and Chrysler went on for many years, characterised by disagreeable arguments and controversy. The judicial corporate run-downs of Enron and the Emirates-based bank BCCI went on for many years (25 years in the case of BCCI) and it has been estimated that the judicial bankruptcy of Lehmans will take in excess of 15 years.

The Argentinian pari passu case

We should mention the "pari passu" case in the New York courts between Argentina and a hedge fund around 2012 which caused much disarray in the sovereign bond markets and had a major adverse impact on the attitudes of sovereign debtors. To cut a long story short, a hedge fund bought up Argentinian bonds from holders who had not accepted the Argentine exchange offer in the 2000s whereby Argentina offered bonds worth only about 25 per cent of the outstanding defaulted bonds. They persuaded a New York court, upheld on appeal, that Argentina had violated a standard pari passu clause in the bonds which provided in effect that the bonds ranked pari passu with other external indebtedness of Argentina because Argentina had not paid those holding original bonds (which contained the relevant pari passu clause) equally with the new bonds issued as part of the restructurings in 2005 and 2010. Part of the reasoning was that Argentina had done so because it had passed a law – the Lock Law – declaring it illegal to pay the hold-out creditors who did not accept the exchange offer and because the clause meant that Argentina must pay its external creditors equally. The court ordered in effect that Argentina must not pay any of the new bonds issued in 2005 and 2010 unless it also paid the hedge fund holding original unpaid bonds. So when the debt of the exchanged bonds fell due, the order was that Argentina had to pay the hedge fund in full.

The first surprise in this case was the court's interpretation of the pari passu clause as an equal *payment* clause as opposed to – as the market had hitherto believed – a clause requiring only that the claims *ranked* legally equal by rule of law and would not be subordinated by a legal rule. The second surprise was that the court in effect enjoined a sovereign state – which became therefore subject to contempt of court penalties if it disobeyed the injunction – to pay a creditor if it paid another creditor. Normally a breach of a bond clause just gives rise to an event of default and a claim for the debt, not a semi-criminal penalty.

Commentators pointed out that if a court interpreted the clause that way and issued that kind of injunction it would be very difficult to carry through an agreed exchange because the hold-out creditors holding a non-exchanged bond could force the debtor to pay them in full if it paid the exchanged bonds. So nobody would agree to a rescheduling. There were other adverse effects too.

Some commentators would argue that this case is of reduced significance because the court emphasised that it was not a precedent but a special case justified by Argentina's behaviour and because Argentina had by the Lock Law technically breached the pari passu clause. It is also considered that the English courts would not interpret the clause in the

same way as the New York court and would not issue that kind of injunction. However, be that as it may, the case is at the heart of recent policy developments in this area. Together with lessons learnt from the Greek debt crisis, it led to a major collaboration between relevant stakeholders, including the IMF, US Treasury and the International Capital Market Association ("ICMA") in strengthening the contractual framework to address collective action problems in sovereign debt restructuring.

Despite this major collaboration between the public and private sector (see Collective action clauses with aggregation below), the view remains, in some quarters, that the Argentinian case is typical of all sovereign bankruptcies, e.g. involving very aggressive tactics by hedge funds and very aggressive judgements by a foreign court. Whilst the Argentinian case is not typical of sovereign bankruptcies but rather an exception, it has also framed renewed interest among other multilateral institutions such as the UN and UNCTAD (see Anti-vulture statues and UN resolutions below).

The outcome of the Argentina case was ultimately settled by agreement in 2016, after Argentina elected a new president. More broadly in the sovereign debt sphere, the impact of the Argentinean case is effectively overridden by the new pari passu and collective action clauses discussed below so hopefully the case is likely increasingly to become of historic interest only. That said, there is still a significant transition period before all outstanding sovereign debt features the new pari passu and collective action clauses.

Contract or treaty

There has been considerable discussion as to whether the objectives of a regime for sovereign bankruptcy should be achieved by contract in the bonds themselves or should be achieved by treaty or some other legislative method.

It has often been pointed out that a treaty solution could be achieved by, for example, an amendment to the IMF Articles of Agreement, to which nearly all countries are a party, or by a model law or by an international treaty or at least an international treaty between the main creditor nations. There could be a half-way process whereby a model bankruptcy law is imported into bond issues by agreement between the issuer and the bondholders. Many commentators have pointed out also that the US has a blocking veto to amendments of the IMF agreement and appears presently to oppose an international bankruptcy set of clauses. Some think that the negotiation of a treaty would take many years, even if agreement could be reached at all.

Further, it has been noted that a treaty solution should bind all creditors, including official creditors and not just private bondholders. An example of an official creditor seeking judgment for sovereign debt is Russia against Ukraine in 2016.

Legislation proposed to cover the financial difficulties of Puerto Rico in 2016 show how bankruptcy legislation can replicate corporate bankruptcy statutes. In the Puerto Rico case the legislation proposed that external officials should be mandated to run the financial affairs of Puerto Rico and to override Puerto Rican laws and that these independent officials should be able to dispose of Puerto Rican assets by privatisations. Although an IMF programme may intervene in the financial affairs of sovereign states and propose privatisations, the appointment of independent administrators actually to take over the

financial operations of sovereign states would presumably be difficult to negotiate as a remedy of general application.

We doubt that we would need to debate these points because we think that the method for the procedural achievement of the desired result is a secondary issue. The first issue is to decide what the rules for the resolution of state bankruptcies should be in substance and then, if relevant, to debate the mechanical procedure of how they would be achieved. As shown, the achievement of a proper regime for state bankruptcies could well be a mix of contract and model law or treaty law which in turn would depend on the agreement of the parties to the substantive provisions of the regime. This mix is in fact typical of the famous pre-packagings in corporate work-outs which are then statutorily solemnised by a court order under a judicial reorganisation statute.

In addition, the contract/treaty contest has to a large extent been rendered of much lesser concern because of the advent of creditor voting on a plan under collective action clauses as discussed below.

Bankruptcy is ferocious, splitting those involved into bitter and passionate opposition. Drafting a bankruptcy treaty is not like drafting an investment treaty or a free trade agreement. Thus, the Europeans took only a few years to draft a treaty on civil jurisdiction and the mutual recognition of civil judgments. The EU insolvency treaty took 40 years.

For those interested in what a full-scale sovereign bankruptcy law might look like, there is a suite of articles in the Hague Report of 2010 which cover the main aspects of a rescue bankruptcy regime on the lines of prescriptive corporate judicial reorganisations, with commentary. The articles cover the initiation of bankruptcy, the stays or freezes on creditor actions, disclosure of the debtor's financial affairs, the appointment of a creditor committee, voting on a reorganisation plan, the scope of a plan and the debt which can be covered and the establishment of a resolution institution.

COLLECTIVE ACTION CLAUSES WITH AGGREGATION

Background

Collective action clauses ("cacs) are terms whereby bondholders can vote by majorities so as to bind all bondholders. These clauses have been routinely used in English law governed sovereign bonds for many years. Following an industry initiative launched after IMF staff proposed a Sovereign Debt Restructuring Mechanism in 2001, collective action clauses in New York law governed bonds because the norm for new issuances from mid-2003 onwards.

Cacs in this form involved voting on a basis confined to a particular series of bonds, thereby still leaving a sovereign vulnerable to individual bondholders building a blocking position within individual series of bonds (as occurred in the Greek case). The Argentine and Greek crises led to a renewed focus within the euro area and more broadly on the possibility of aggregating multiple series of bonds to make it more difficult for blocking positions to be acquired.

Following work undertaken after the Greek crisis the members of the euro area committed themselves to including the area's form of aggregated cac in all new government securities issued after 1 January 2013 with a maturity above one year. ICMA also published

in 2014 a new model form of cacs with aggregation features that can be used by any sovereign issuer issuing instruments under English or New York law. The publication of these standard form cacs followed two consultations amongst ICMA's members, as well as extensive discussions with other key stakeholders, including the Institute for International Finance ("IIF") and the working group referred to earlier convened by US Treasury staff consisting of representatives from the official sector, including the IMF, legal experts, market participants, practitioners, academics and issuers.

Use of ICMA's cacs is not an overnight solution to all the problems in sovereign debt restructuring. Amongst other matters, it will take some years before a critical mass of any sovereign issuer's bonds contains the cacs. But, with the passage of time, the use of ICMA's cacs should assist countries facing financial difficulties to seek an accommodation with their bondholders and should facilitate debt restructuring while minimising the risks posed by holdout creditors.

In 2014, the IMF published a paper (*Strengthening the Contractual Framework to Address Collective Action Problems in Sovereign Debt Restructuring*) recognising that, while it cannot mandate the use of cacs, it would play an active role in promoting their inclusion in international sovereign bonds. The IMF concluded that the design features in ICMA's cacs address collective action problems effectively while affording adequate safeguards for bondholders. The G20 has also endorsed the use of cacs with aggregation as has the IIF.

Pros and cons of cacs

The arguments in favour of collective action clauses included: improved creditor equality: if there are no cacs binding holdouts, holdouts would be paid in priority to accepting bondholders; holdouts have little incentive to accept offers without a mechanism for binding minorities; although holdouts may have to accept the prospect of years of litigation, if the issuer is prepared simply to default on the claims of the holdouts, minority holders can chill future access to the market by issuers; the clauses prevent holdouts from claiming rateable payment on the basis of the pari passu clause (if successfully operated for all eligible claims); market clauses reduce the need for a treaty solution; and the clauses reduce the risk of the IMF or other official sector creditors having to pay holdouts to preserve stability.

Arguments put forward against collective action clauses have included: the threat of holdouts may induce the issuer to make a better offer; the clauses might further weaken creditor bargaining power; holdouts are not considered by everyone to be a major problem (between 1997 and 2013, hold-out creditors exceeded 10% of total debt in only two or three cases out of nearly 20 and in most cases creditor participation was for 90% or more); and the clauses would not bind all creditors, e.g. official creditors or bank lenders, leading to potential discrimination.

These arguments have now been overtaken by the widespread adoption of cacs in new issues.

The new market cacs are a fundamentally important advance and solve a great many of the problems. These cacs are basically the equivalent of creditor voting on a corporate reorganisation plan. They install a financial democracy which vests the power to decide

in a super-majority of creditors in a manner consistent with domestic reorganisation practice. Where available and if used to the full, they overcome the problem of hold-out creditors and in that case surmount the problems of the Argentinian pari passu case. They can function like a no-action or standstill clause (discussed next).

Description of clauses

ICMA's cacs offer a sovereign three options to restructure its debts, a choice it would make at the time of restructuring:

- modification of a single series of bonds;
- modification of multiple series of bonds, with a requirement that the restructuring be approved both by all bondholders voting together and by bondholders voting within their particular bonds ("two limb voting");
- modification of multiple series of bonds, with one aggregated vote amongst all bondholders ("single limb voting").

In all cases the voting is different for **reserved matters** and ordinary matters. Reserved matters include such items as changing or rescheduling principal or interest.

The ICMA **voting majority for a single series** on reserved matters is at least 75% of the total principal amount of the outstanding bonds (same for a written resolution). The euro area voting for reserved matters is not less than 75% of the aggregate principal of the bonds represented at the meeting (66⅔ for written resolutions).

Both the euro area and ICMA clauses provide for an **aggregate vote** on all affected bond issues. They each have protections to ensure there is no discrimination against a particular single series. In the case of the euro area aggregated clauses, a resolution is passed by two sets of voting, one by 75% of all bonds affected and represented at separate meetings (66⅔ for written resolutions) plus a vote of 66⅔% of those represented at a meeting of each separate series affected (50% for written resolutions). This is called "two limb" voting to make sure that each separate series has a vote and is not overruled by all the other series. Each such cross-series modification can be of some or all of the various series of bonds, as selected by the issuer in advance, but each holder must get the same menu of options.

As mentioned above, the ICMA cacs are more comprehensive. All series can be bound by a single vote provided the proposal is Uniformly Applicable to all the affected debt securities. The protection for bondholders against a majority imposing on any particular series that might be unfair or oppressive to that series, is that any proposal with single limb aggregated voting must meet the Uniformly Applicable requirement. This requirement is that the terms offered to the holder of the bonds affected by the restructuring must be the same or, at least, involve a choice from the same menu of options. As a result, the holders of bonds in a series that form an overall majority cannot vote that their series should receive, say, new bonds equal to 80% of the face value of their existing holding while other series receive only 1%.,

The Uniformly Applicable requirement does not mean that a net present value calculation must be made in order to ensure that the financial outcome for the holders of each series of bonds is identical. That would have been complicated given the infinite number of

possibilities and would leave a risk of disputes. Rather it means that, after the restructuring, all bondholders must hold the same instruments (or have had the option to hold the same instruments).

In the case of both the ICMA and euro area cacs the issuer and certain parties related to the issuer are disenfranchised from voting.

In addition the general law of many countries imposes other bondholder protections, e.g. to prevent oppression of the minority by the majority and to invalidate votes procured by secret bribes. Disputes in this area can be decided by the applicable courts stated in the bonds.

Gaps in cacs

There are gaps in the coverage of these cacs, including:

- **The legacy bond issues**. It is thought that legacy bonds amount to about $900 billion. But many of these have single series cacs and a large proportion of these bonds may be bonds issued by countries not likely to suffer financial problems. Exit consents (changes to the non-financial terms so as to depreciate the bond) can be used for US legacy cases if they have cacs allowing changes other than to principal or interest. Exchange offers can also be used under which legacy bonds can be exchanged for new bonds containing the new cacs.
- **Only private bondholders are bound**, not the official sector or bank loans, etc.
- The ICMA clauses only apply to **English and New York international bonds** of over one year, not where the governing law is Japanese, German or Swiss.
- **Domestic law debt** is not covered by the new ICMA aggregated cacs. Domestic debt is divided into two main classes – domestic bonds which are bought by international investors and those which are held mainly by residents. One solution is for sovereigns to apply ICMA or euro area type clauses to domestic debt. Another is for sovereign states to pass bondholder community statutes for their domestic debt on the same lines as the ICMA clauses, as was done in the case of the euro area. The euro area clauses were in fact legislated into member state law in a number of cases. Domestic debt is usually less important for various reasons compared to foreign currency debt (e.g. the sovereign can change its terms by unilateral statute).
- The euro area cac requires a vote in favour under each individual series as part of the "two limb" approach and euro area members are therefore more vulnerable to the risk of blocking positions being acquired in individual series of bonds.
- A country may have a **small number** of bond issues (e.g. emerging countries), therefore facilitating blocking by hedge funds.
- **Pre-emptive strikes** by bondholders. Until satisfied by an attachment of assets, the judgment debts could be bound by the voting if so provided (in practice, unusual).
- **Pari passu clauses** As of 2014, there is also an ICMA model clause clarifying the meaning of the pari passu clause so that it is clear that it covers only legal subordinations and does not require equal payment in fact. The problems raised by the New York Argentina judgment on pari passu clauses is overcome by bondholder voting, if the requisite voting majority is obtained so that all relevant holders are bound by the restructuring. Accordingly, subject only to the above gaps, this should deal with most of the problems otherwise caused by the New York court interpretation of the

pari passu clause in Argentina's case. Market reaction has been complex. In some cases investors in new bonds do not want a clarifying pari passu clause overriding the New York court interpretation of the Argentina pari passu clause because investors in bonds containing the new pari passu clause think they are worse off than investors in old bonds – without the clarificatory element in the pari passu clause on the basis that the old bondholders have a better litigation advantage. Some solutions proposed have been to just take out the pari passu clause (but there has been market resistance) or for immunity legislation to be amended to prevent injunctions against sovereign states or to leave things as they are. We are doubtful that there is a major problem: the New York Appeal Court said Argentina was a special case, not necessarily a precedent. Under English law pari passu clause are generally likely to have a more limited impact because of the approach likely to be taken by the English courts as to their meaning.

The substantial implementation of the ICMA cacs and the New York equivalent published by ICMA is a market success and should help allay fears that markets are not capable of dealing with this class of problem.

Recommendation

We think that the market cacs with the crucial aggregation clauses have solved a great many of the obstacles in the way of resolving sovereign bankruptcies and we recommend that there universal use should be encouraged in international issues. The utility of cacs in domestic issues should be kept under review.

STANDSTILL CLAUSES

Background

There is quite a variety of clauses under this head.

The typical international bond no-action clause provides that a bondholder vote of 25% is required to accelerate bonds on an event of default. This does not prevent bondholders enforcing for any unpaid amount of an instalment for principal for interest. Nor does the clause require further bondholder voting to take enforcement action after acceleration: each individual bondholder can enforce separately. In practice, acceleration is the key step.

Where there is a trustee, the typical English clause requires a bondholder vote not only to accelerate but also to take enforcement action (20% if the trustee does not act), subject to an indemnity to the trustee. The trustee may act at its discretion but in practice trustees rarely take enforcement action unless directed to do so by a bondholder direction.

It would be possible to draft full standstill clauses which block bondholder action and accelerations without a bondholder vote but these are not currently market practice.

These clauses are the equivalent of corporate insolvency stays on commencement of a judicial insolvency proceeding.

Pros and cons of clauses

The advantages of these clauses include: they prevent the race of the most diligent and potential preferential payments; they avoid multiplicity of suit; and they avoid destabilising

action by holdouts seeking to disrupt a negotiated workout. Effectively they replicate bankruptcy stays and corporate standstill agreements.

The disadvantages of the clauses include: they could tilt bargaining power away from bondholders, a bargaining power which is already often legally weak compared to corporate debtor; their absence might induce issuers to make a better offer and to negotiate in good faith; in practice creditor actions are very unusual, unless the issuer repudiates or fails to negotiate in good faith; not all creditors would be bound, eg, the official sector and bank lenders, thereby possibly leading to discrimination.

The more aggressive freezes and stays, eg, on set-off, on security enforcement and on contract cancellations are not considered appropriate in the sovereign context.

Current no-action clauses probably do dampen down litigation but one view is that they are too weak, e.g. because typically only 25% is required to authorise individual bondholder action or because they only cover accelerations or because there is no pro rata sharing clause unless there is a trustee – which often there is not.

It is argued by some that sovereign states should have the benefit of a unilateral right to be able to impose a legal freeze or enforceable moratorium on certain events such as inability to pay their debts as they fall due. On the other hand experience seems to show that a legal moratorium which precedes negotiations has not in practice been necessary provided that the sovereign debtor is negotiating in good faith. It seems to have been unusual that bondholders take action by attaching assets where negotiations are continuing unless the sovereign debtor refuses to negotiate. Ultimately litigating creditors can be blocked by cacs.

Although many domestic corporate reorganisation statutes allow the debtor to initiate the procedure unilaterally, such as the US Chapter 11, there are disincentives for the debtor, eg they become subject to examination, lose control of the process in whole or in part to independent insolvency administrators and are subject to intrusive court orders. It would be hard to replicate these disincentives in the case of sovereign states so that a self-induced stay would merely become a unilateral right to defeat creditors, a dramatic extension of existing immunities.

Standstill clauses would have significant implications for the triggers in credit default swaps, for credit ratings, for accounting impairment and for the trading of bonds. It can be difficult to set the triggers, to decide how subjective or objective they can be and, where applicable, who makes the determination.

Recommendation

We recommend that further work is done on the possible development of standstill clauses by markets voted on by creditors. At present, creditor litigation prior to an exchange of bonds if the debtor is negotiating with creditors seems very unusual but the situation should be monitored to assess whether or not disruptive and unjustified creditor action becomes a threat to the resolution of sovereign bankruptcies.

We do not think that sovereign states should be entitled to immunise themselves further by unilaterally imposing a unilateral moratorium or stay on creditor enforcements or accelerations of debt.

TRUSTEES

Background

The appointment of a trustee for public debt governed by local law is rare and trustees, if there are any, tend to be confined to international issues governed by foreign law. A minority of bond issues by sovereign debtors have over the past few years been constituted by a trust deed appointing a trustee for the bondholders. Historically the use of trustees was more prevalent in the New York market, although, until recently, this fell out of favour. The euro area model clauses do not require or recommend the appointment of a trustee.

In the English market the most common practice as it relates to sovereign debt is to use a fiscal agent rather than a trustee.

Pros and cons of trustees

The advantages of trustees include: a trustee is useful for carrying out administrative tasks, such as monitoring the issuer, monitoring the no-action clause, convening bondholder meetings, liaising with the issuer and other activities; there is greater flexibility for minor modifications and waivers; trustees can be used to administer pro rata payments to bondholders after a default; and it is easier to add new issues under an existing master trust deed.

The disadvantages of trustees include: in many cases trustees require an additional indemnity before they will act and this can delay the process. The main utility of trustees is to slow down disruptive action by individual bondholders because of the requirement for an indemnity before taking action, the requirement for a bondholder vote and because under trust structures recoveries are distributed pro rata so that individual grabs have to be shared, thereby discouraging the incentives for creditors to act individually.

Trustees in the past have also been criticised for not being pro-active (which has been used by their detractors to undermine one of the advantages of their use). In practice, in pursuing remedies against a defaulted sovereign a trustee will be guided by the instructions it receives from the requisite number of bondholders and if none are forthcoming it will not pursue claims against the sovereign debtor based on any contractual discretions.

Recommendation

We believe that trustees for bondholders play a useful role.

The appointment or otherwise of a trustee should be considered seriously on a case-by-case basis. They are a communication link with the sovereign and can limit maverick litigation. The fact that they have to distribute proceeds pro rata is a disincentive to aggressive action by a bondholder to secure sole recovery.

To do their job, it is sometimes said that trustees should be bolder and that they are disincentivised by liability risks. From the perspective of issuers, the minor additional cost carries with it significant potential benefits in times of financial distress. Further work could be undertaken to standardise documentation in this respect.

Creditor committees and creditor engagement

Some bonds have provided in advance for the mechanics of appointment of a bondholder committee to represent bondholders if the issuer gets into financial trouble, for the role and powers of such a committee, and for information requirements plus a good faith negotiation clause.

Pros

The advantages of a contractual mechanism under which the issue is required to recognise a committee which bondholders from ("creditor engagement clause") include

- A small group recognised by the sovereign debtor is essential for negotiating a deal (some debtors refuse to recognise a committee as being authorised or representative) and the subsequent appointment process of a committee could lead to bureaucratic and delays
- A committee can examine the economics of a deal and reflect bondholder opinion;
- The clause mitigates the risks of competing committees; if not agreed in advance, it is difficult for a self-appointed committee to negotiate a commitment from the issuer to pay its costs at the time.
- The evidence suggests that information sharing and close cooperation are key elements in quick and successful debt restructuring arrangements and this means less time and effort for all involved.
- As sovereign debt restructurings occur frequently it is preferable to put a structure in place for creditor engagement upfront.
- There has been institutional support for "good faith" discussions by the IIF, the IMF, and the UN General Assembly.
- This structure helps ensure that hold-outs do not undermine the outcome.
- Putting a structure in place immediately means that there is more prospect of calm and order rather than trying to build ad hoc committees in times of crisis.
- Engagement by both sides helps to ensure the necessary information is clear and helps maximise successful restructuring.
- The use of a committee should improve take-up of the restructuring proposal.
- The creditor engagement clause specifies that the debtor will only engage with one committee and if multiple committees are formed that a steering group should be established.

Cons

- Debtors do not want to pay the costs of a committee, although though this may be cheaper than the alternative.
- Debtors are worried that bringing creditors together gives them more power.
- Debtors are worried about specifics such as unanimity, though there is no requirement for this to be reached.
- They are also worried about:
  - the determination of "good faith" (though there is much judicial guidance in this area) and whether it binds only the debtor;
  - coordination of the different constituencies of bondholders;
  - membership changing over time;
  - access to price-sensitive information;

– whether committees are representative;
– some debtors wish to have a veto on committee members.

An argument often made against the inclusion of creditor engagement clauses in sovereign bonds is that, unlike the cacs, neither the sovereign nor the bondholders are prevented from the recognition or creation of an ad hoc committee of bondholders if the bonds of the sovereign do not include a creditor engagement clause.

At present the take-up of the ICMA creditor engagement clause updated in 2014 (to take into account the aggregation feature in the enhance cacs) has been patchy (with greater take up under English law governed bond documents). This has probably been because issuers are reluctant to agree to pay expenses in advance or to agree to the extensive disclosure and other obligations, because issuers think that the potential disorganisation of bondholders might favour their position and because arrangers believe that in practice the ad hoc formation of committees at the time has worked reasonably well in practice, though not without some frustrations.

The IIF in its Principles of Stable Capital Flows and Fair Debt Restructuring recommends cooperative and good faith negotiation.

Recommendation

Some members of the group endorse the use of creditor engagement clauses but others are less convinced. We recommend that further work is done to see whether engagement clauses could be adapted so as to be routinely acceptable to issuers and bondholders. The Group considers that creditor engagement clauses should be promoted.

PRIORITIES

Ladders of priorities

In corporate practice, there is typically a bankruptcy ladder of priorities comprising six generic steps or rungs: (1) super-priority creditors, mainly comprising claimants with a set-off or collateral or claim under a trust, (2) priority creditors, typically comprising taxes, employee benefits, occasionally emergency last resort new money and always post-commencement expenses, (3) senior unsecured creditors such as banks, bondholders, trade and others, (4) subordinated creditors, (5) equity shares, and (6) expropriated claimants, eg, claims for foreign taxes or penalties or for foreign currency depreciation.

There is no formal ladder in relation to sovereign bankruptcies although there are practices, eg, that the IMF and other multilaterals have a preferred status. It is not possible for a sovereign bankruptcy to arrange priorities as an entitlement to layers of realisation proceeds. The priorities have to be achieved by an order of maturity. Thus if a debt falls due on Tuesday and is paid, then the debt which falls due on Wednesday may not be paid so that Tuesday's debt has priority in practice. The euro area claims preferred status for emergency bail-out loans to euro area countries by treaty.

Despite the absence of a formal ladder by law, the sovereign priorities are often as follows:

1. Creditors with a set-off or a security interest – usually unimportant in sovereign cases

2. Employees of the state and their pension and domestic trade creditors – if in local currency and if they are paid at all
3. Domestic currency bondholders – they may be paid in inflated currency
4. Foreign currency trade creditors and some small creditors who are typically excluded from a rescheduling
5. Official and private hold-out creditors, if small
6. IMF
7. Other recognized multilateral creditors such as the World Bank and the regional development banks. A number of other multilaterals, such as the European Investment Bank and the European Stability Mechanism, claim this preference
8. Other official creditors for foreign currency loans to bail out the sovereign, if payable before the private sector bonds
9. Rescheduled private sector foreign currency bonds and official sector loans rescheduled by the Paris Club
10. The bonds, if any, of expropriated creditors who are paid compensation in new state bonds.

The fact that there is in practice a long ladder shows that general admonitions that the plan should be fair and equitable or the like are not likely to clarify the situation.

An important issue is whether new money advanced to the sovereign to bail it out should have priority. The desirability of the priority of such funding is controversial in the sovereign context although it is generally accepted in relation to the IMF liquidity assistance. The effect of this financing is to subordinate other senior bondholders if the rescue fails. A few national corporate bankruptcy statutes contemplate the enforced priority of new money subject to conditions, but the general international consensus is that this must be agreed at the time. In recent cases there seems to have been little market appetite for priority new money financing from the private sector but official sector new money was very substantial in the case of Greece: much of it initially ranked prior to the rescheduled bondholders in terms of maturities.

There also does not seem to be market appetite at the moment for sovereign coco bonds of the type developed for banks. These are contingent convertible bonds under the terms of which the bond is subordinated to other bondholders. In addition such instruments would have a number of other features akin to bank or insurance company hybrid capital instruments, for instance, interest or maturity deferral triggers. Further, there would also be a feature comparable to the equity conversion element in the corporate sphere, for instance, issuance of further bonds or a GDP-linked instrument.

Nor is there currently much market appetite for GDP-linked bonds whereby the amount of principal or interest payable varies according to the annual rises or falls in the GDP of the sovereign. These bonds would in function be similar to private equity shares. See also GDP-linked bonds and coco bonds later in this paper.

Recommendation

We recommend with some reluctance that the ladder of priorities be left to negotiation by the official and private sector creditors on a case-by-case basis. In most cases it seems to work satisfactorily or is politically acceptable. If the private sector objects to the ladder in

a particular case, they can decline to participate in an exchange and so in effect have some say on priorities. We believe that international formal agreement on a fixed prescribed ladder involving both official and private debt would take many years to achieve, if it could be achieved at all.

International sovereign bankruptcy court

Many commentators have suggested the establishment by treaty of an international sovereign bankruptcy court or arbitral tribunal or non-judicial venue to engage in sovereign bankruptcies (though with a more agreeable title). So far however there has been little agreement on the scope of the functions of such an institution.

The assumption of functions would oust the jurisdiction of domestic courts chosen by the parties in the bonds. It does not seem to be proposed that the tribunal should have jurisdiction to order payment of a debt by a sovereign and its enforcement.

Financial terms

Some commentators have suggested that an international debt institution should have jurisdiction over the financial terms of a restructuring, e.g. the degree of postponement of maturities, the interest rate, currencies and any haircut or conversion into GDP warrants. The dominant view of our Group is that these economic and political questions are not appropriate for an arbitral tribunal. The tribunal would be ill-equipped to make these decisions in the normal case. The financial terms have to be settled by negotiation of the sovereign debtor and the creditors. For example, debt sustainability (the future ability of the state to be able to pay) involves a somewhat difficult prediction about the future and also a political judgment as to whether the sovereign debtor will carry out a corrective programme.

Domestic bankruptcy tribunals are often mandated to decide whether a bankruptcy rescue procedure is feasible (as in the case of the UK administration) or whether a reorganisation plan is likely to avoid liquidation (as in the case of Chapter 11). But in these broad-brush decisions the court relies on evidence produced by experts and the decision is completely different from deciding the actual financial terms themselves. So far as we are aware no international arbitral tribunal does make decisions of this type – not ICSID and not the WTO. In these latter cases the tribunal typically interprets a treaty.

Domestic bankruptcy courts often decide whether a plan is fair and equitable. This is not a view on the commercial terms, but rather whether the plan satisfies the basic requirements of the law, eg it observes the ladder of priorities and whether there is something hopelessly unconscionable or discriminatory.

It seems doubtful that sovereigns or creditors would agree to submit financial and economic issues to a binding adjudicator. The tribunal would in substance displace a primary role of the IMF.

Arbitration

External lenders, whether governments or banks or bondholders, typically are not generally sympathetic to arbitration as a method of resolving disputes, even in light of the New York Arbitration Convention of 1958. Their view is that there is nothing to arbitrate

and that arbitration leads to delays and costs. International arbitrations in particular may be much slower than proceedings in the English or New York courts. If a sovereign institution had wide jurisdiction, the process might become politicised.

Few non-enforcement disputes

In practice the restructuring of sovereign debt is generally simpler compared to corporate workouts in the private sector in terms of the execution, though it can have large ramifications. It simply involves an exchange of bonds and legal disputes about this process seem to be extremely unusual. We have already pointed out that sovereign restructurings typically are more easily and quickly resolved than very large corporate bankruptcies enacted under the aegis of corporate bankruptcy laws. The number of disputes, apart from enforcement, is tiny. It is hard to see what the institution would have to occupy itself.

Governing law insulation

Both international bond issues and syndicated bank credits generally choose an external governing law and forum with the main objective of insulating the obligations of the sovereign debtor from a moratorium, exchange control, haircut or the like unilaterally imposed by the bankrupt sovereign. This is necessary since most significant domestic courts will recognise a change to the obligations made by a statute of the debtor country if the agreement is governed by the law of the debtor state, although the US position is somewhat more nuanced (the position depends on whether the debt is "located" within the territory of the sovereign debtor).

It would clearly be inequitable if the sovereign debtor by its own law could unilaterally impose a restructuring on creditors. This was a major point in relation to the 2012 Greek restructuring: Greece proposed that the new bonds to be issued under the restructuring in exchange for existing instruments, would be governed by Greek law. The bondholders successfully negotiated for them to be governed by English law so as to protect them against the risk of a unilateral change to the terms (through legislative Greek law changes) as far as feasible. This concern was justified in view of the reliance Greece was placing on change of domestic law to include cacs in its previously issued domestic law governed bonds, a key feature of the Greek restructuring.

This issue of insulation would be a major question in relation to a sovereign debt institution. In the field of commercial arbitration, arbitration rules sometimes prescribe that the arbitrators will apply the governing law of the contract. The issue of the applicable conflict of law rules is often left open and is legally controversial e.g. law of the seat of the arbitration or governing law of the bonds? By contrast, the English courts apply their own conflict of laws rules, regardless of governing law, so that the law of the forum applies.

Domestic courts

The English and New York courts act as international public utilities as an available choice of law and courts for private and official loans, along with other domestic legal systems.

Notwithstanding the Argentine case, these courts are generally regarded as reliable and just.

Recommendation

We believe that a case still needs to be made out for an international sovereign bankruptcy court having jurisdiction over sovereign bonds to pronounce on restructuring terms or to oust the general judicial jurisdiction of the national courts chosen in the bonds.

Other bankruptcy topics

We briefly allude here to a few other bankruptcy topics.

Preferences

One of the most ancient and well-developed principles of municipal bankruptcy law is that relating to the recovery of fraudulent preferences, typically payments or transfers made by the debtor preferentially in the suspect period after the onset of actual insolvency, and sometimes before if made with deliberate intent to prefer, which are prejudicial to creditors, such as a gift or advance payment to one creditor which deprives the others.

There does not appear to be sufficient abuse by sovereign debtors to justify the development of this doctrine in relation to sovereign bankrupts.

Anti-vulture statutes

Some countries have contemplated an anti-vulture fund statute whereby creditors falling within the definition of a vulture fund are not entitled to claim from the sovereign debtor more than they paid for the bond – usually a very low figure since they buy when insolvency is looming. Only Belgium has passed such a statute in its proper sense although a UK statute had a similar but limited effect in relation to the existing debt of highly indebted countries.

So far as we are aware no state has enacted such a statute in relation to corporate debt although complaints that speculators were buying up the debt of bankrupts cheaply with a view to making a large profit go back for centuries.

There are doubtful aspects of statutes on the Belgian lines (though the UK statute is thought to have achieved a useful result). One reason is that bond debt changes in value according to current interest rates and it would be impracticable to trace all these fluctuations in price. Another is that the idea of a claim, whether for debt or equity, is founded on the assumption that the claim is payable in its full principal amount or rather that the full principal amount is the amount of the claim on which dividends are paid in bankruptcy, not some reduced amount. Yet another is that the definition of a vulture fund can be too broad. A further reason is that it seems undesirable to exclude a creditor because of its character.

Odious debt

There has long in this field been discussion as to whether the odious debt of a sovereign is claimable in a sovereign bankruptcy. Odious debt is debt incurred by an unlawful or despotic government or the proceeds of which are used for some wrongful purpose such as the subjugation of the people.

This category of debt has rarely been recognised in modern practice. The invalidation of this class of debt should be left to ordinary principles of law as to unlawful debt which are well developed in relation to ordinary corporate bankruptcies.

Measures to reduce risk

The issue here is whether the architecture for the resolution of sovereign bankruptcies can be mitigated by measures taken in advance. In the case of corporate insolvency, these have included such matters as greater disclosure, rules about corporate governance such the composition of the board, and the personal liability of directors who deepen the insolvency. Most of these measures have not been particularly successful and most are inappropriate for a sovereign. However, a number of other measures could be considered, as discussed below.

Capital adequacy

The risk weights of bonds issued by sovereigns and held by banks, insurance companies and other regulated entities should reflect such matters as large deficits and over-borrowing. At present government bonds of a sovereign belonging to a particular club, such as the OECD, may have a zero risk weight even though the actual credit risk may vary substantially. Some regard this as inconsistent with the object of risk-weighting. Any changes should be considered carefully in view of the implications for financial institutions holding such debt and the extensive use of sovereign debt as collateral.

Disclosure

As regards disclosure, some offering circulars already contain a vast amount of data about the sovereign issuer drawn from many sources, including the IMF and rating agencies while others are extremely thin. The preparation of an offering circular for a new issuer which is an emerging country typically takes between one and two months. In general there is no continuing disclosure obligation either in the bonds themselves or under the listing rules of most exchanges (with a limited SEC exception). This is probably because there is already a wealth of information available from other sources. The time when accurate data is lacking tends to be when the sovereign is in difficulties. Some jurisdictions exempt sovereigns from normal disclosure and market abuse and there is a question as to whether this is appropriate any longer. If there is no disclosure, there is no due diligence.

Probably one of the main problems with disclosure is that the accounting standards may leave considerable gaps and are not uniform, e.g.as regards contingent exposures, provinces and municipalities, and future pension liabilities. It is generally not feasible to include debt for which the sovereign may be de facto responsible, such as by having to bail out the banking system (which usually collapses if the sovereign state is insolvent).

Two other points are worthy of note.

First, one significant problem with disclosures is that in some instances, e.g., in the euro area, there is often virtually no disclosure, even of the terms and conditions of the bonds so that most investors do not know of their legal rights.

Secondly, the IMF has done much work in promoting data dissemination standards. The Special Data Dissemination Standard was established by the IMF to assist its members who raise funds in the international markets in the provision of their economic and financial data to the public. Subscription to the SDDS is voluntary.

Early warning triggers

It is almost a universal complaint that sovereign debtors approach their creditors with a view to rescheduling too late. This has also been a constant complaint over many decades in relation to corporate debtors, i.e. that insolvencies could be mitigated if the corporation stopped early enough and rescheduled its debts in good time. A great many devices have been deployed to deal with this in the corporate sector, usually to no avail, e.g. increased disclosure, senior officer liability for financial statements, personal liability of directors for deepening an insolvency and obligations of management to petition for judicial re-organization or bankruptcy if the company is or is likely to become unable to pay its debts as they fall due or is balance sheet insolvent. These remedies do not appear to be practicable for sovereign states. Too little and too late may therefore just be a reality of human nature, overcome only by pressures at the time.

As regards early warning contract triggers, bonds contain events of default, notably non-payment, non-compliance with covenants, a cross-default relating to other external bonds with thresholds, a moratorium, illegality, repudiation and sometimes an IMF clause (membership of the IMF kept in good standing). Material adverse change clauses in bonds are extremely rare outside World Bank documentation. In general things have to be quite serious before there can be intervention by bondholders as a result of an event of default – impending problems on the horizon are not enough. This balance is probably right and is a matter for the particular circumstances.

Covenants in bonds

The covenants in international bonds are very limited – for most emerging market issues typically only a pari passu clause (sometimes limited to external bonds and the like) and a negative pledge prohibiting the grant of security to other creditors, also almost invariably limited to external bonds and the like (thereby permitting collateral in favour of banks, official creditors and others, although the grant of collateral is rare). The insertion of financial ratios governing, for example, budget deficits and debt to GDP ratios or interest coverage are virtually unheard of in normal bonds. These are regarded as sovereign matters and are generally not acceptable to sovereign issuers. If they were inserted, a great many developed countries would soon find themselves in trouble. However, there is a case for reconsidering the use of financial covenants in appropriate cases, even if they do not lead to an event of default.

In substance, at present the main deterrent is that a worsening financial situation makes it difficult for the sovereign to continue borrowing and ultimately the sovereign is cut off from access to external funds.

Waivers of immunity

Bonds usually contain a comprehensive waiver of immunity clause, but domestic assets are almost invariably exempt from creditor attachment by local law, and foreign assets are typically shielded by the veil of incorporation. The de-immunisation of domestic assets does not seem feasible, nor does it seem appropriate to pierce the veil of incorporation in the case of state bonds.

Listing

It would be theoretically possible to exclude defaulting sovereigns from listing in the main financial centres for a period after the default. This would severely inhibit the access of sovereign issuers to the market because many bonds investors, such as insurance companies, can only invest in listed debt or because listed debt has a more favourable capital treatment.

We doubt that this measure would be to the advantage of bondholders since one of the main objects of a rescheduling is that the sovereign issuer should be rehabilitated.

GDP warrants and coco bonds

We believe that coco bonds and GDP-linked bonds could serve a more useful function and further work should be done on their development. Though different in concept, they could very broadly simulate debt-equity conversions common in corporate restructurings but there are issues to resolve.

A very small number of countries have issued bonds with GDP-linked warrants. Particularly in an era of exceptionally low yields, the possible sweetener may result in enthusiastic take-up. GDP-linked bonds would provide flexibility to the sovereign issuer which would be reflected in a higher cost of issuance. The real challenge will therefore become making them available to middle income and developing countries at a manageable cost.

In the view of the Group, it would be a substantial international public good if a few AAA rated sovereigns were to issue such bonds and begin the creation of a market into which weaker sovereign credits could also issue. If attractively priced, large institutional asset owners that are currently constrained from holding them owing to their equity-like characteristics might see these constraints lifted. For an important study, see the joint Bank of Canada - Bank of England paper "Sovereign Default and State-Contingent Debt" (2013).

UN resolutions

The United Nations and the United Nations Conference on Trade and Development have been active in the area of sovereign debt, in the form of presenting principles of sovereign debt.

The General Assembly passed three resolutions regarding sovereign debt restructuring since 2014:

A/68/304 — "Towards the establishment of a multilateral legal framework for sovereign debt restructuring processes" [Sept. 2014 – 124 votes in favour; 11 against; 41 abstentions]
A/69/247 — "Modalities for the implementation of resolution 68/304, entitled "Towards the establishment of a multilateral legal framework for sovereign debt restructuring processes"" [Dec. 2014 – 128 in favour; 16 against; 34 abstentions]
A/69/L.84 — "Basic Principles on Sovereign Debt Restructuring Processes" [Sept. 2015 – 136 in favour; 6 against; 41 abstentions]

Those voting against or abstaining were mainly advanced countries so that there was a divide between developed and developing countries in the voting, a resurgence of the patterns of the 1970s.

For example, the most recent resolution of the UN, A/69/L.84, sets out nine principles, relating to such matters as the right of sovereigns to design their macroeconomic policies free of abusive measures, good faith and transparency, impartiality, equitable treatment, sovereign immunity, legitimacy, inclusiveness, observance of the rule of law, sustainability, timely and efficient restructuring, human rights and majority restructuring.

In addition to the UN principles, UNCTAD put forward a paper entitled "Roadmap and Guide for Sovereign Debt Workouts" in April of 2015. The paper includes five principles of sovereign debt workouts, namely legitimacy, impartiality, transparency, good faith, and sustainability.

It is not clear at this point what effect – if any – these principles will have upon sovereign debt generally and future restructurings, or the practical implications. They appear to have largely been ignited by the Argentine case which we believe was idiosyncratic. It seems that further work and expertise would be needed to develop the principles into specific proposals

Sovereign Debt Forum

We believe there is scope for the establishment of a forum which would specialise in the study of sovereign debt issues and which would be staffed by persons knowledgeable in this field. The forum would publish papers and organise conferences. It would lobby relevant participants in markets and the official sector. It would lead in the thinking on this topic. It would hold itself ready to advise on particular cases and to offer expert assistance. A forum on these lines has been suggested by Richard Githin and Brett House and we endorse their proposal.

The forum would require funding from official or private sources.

Recommendation

We recommend the establishment of a Sovereign Debt Forum serving the above purposes.

Conclusion

Our overall conclusion is that the introduction of the revised pari passu clauses and aggregated creditor voting via cacs with aggregation features in international sovereign bonds has been a major advance in facilitating orderly future sovereign debt restructurings. The implementation of the clauses not only potentially overrides hold-out creditors but also overcomes the possible major adverse effects of the Argentine case on the pari passu clause. Nevertheless there are still gaps in the coverage of these pari passu and collective action clauses and we think that the situation should be carefully monitored in order to ascertain whether these gaps do in fact turn out to be prejudicial – which is not what we would expect at the moment.

In addition, we believe that further work should be done on other clauses and instruments as discussed above and again that the market situation should be reviewed from time to time with a view to establishing whether further progress is needed. In that event further consideration should be given as to the most suitable method of implementation, that is whether by market contract or, if that fails, by treaty or other similar method. Broader market access implications for sovereigns would also need to be considered.

STUDY GROUP ON UN SANCTIONS AND INTERNATIONAL LAW

WORKING SESSION

Thursday, 11 August 2016, 9.00am

Chair: Professor David Stewart (US)

The Chair welcomed attendees and introduced the panel, comprised of the Professor Larissa J van den Herik (Chair of the Study Group) and Professor John Dugard, Professor Christian Tams, and Professor Antonios Tzanakopoulos.

The Chair expressed his view that the topic of the Study Group was of increasing importance, not just from the UN perspective but also from a bilateral perspective. It was increasingly a matter of discussion among academics as well as government officials.

Professor Larissa J van den Herik (Netherlands) pointed out that the Study Group was only launched a year earlier in June 2015. Consequently, the Study Group did not have a fully-fledged report to present. The purpose of the panel was essentially to introduce the Study Group. Its focus and work so far was to locate UN sanctions in a broader landscape of sanctions, noting the existence of civil society sanctions and third party sanctions. The question was then where did UN sanctions fit, how did they relate to these other sanctions, and what was the future of UN sanctions in this broader setting.

In the last 25 years, there had been approximately 24 UN sanctions implemented with different episodes. Within this time, significant developments and transformations had transpired. First, there had been a move away from comprehensive "erupt" type sanctions to targeted sanctions. Secondly, there have been a diversification of sanctions, which impacted the many types and situations in which sanctions were employed.

Sanctions were still in transition, which could be captured in three ways, namely individualisation, formalisation (regulation) and interplay:

- Individualisation referred to the implication of sanctions directly on the individuals rather than on the States in the form of travel band. Individual sanctions gave rise to various problems. These problems were well known and had been addressed in depth by scholars. Accordingly, it was not necessary for the Study Group to revisit these issues; rather, the Study Group would be addressing new issues. Here, private actors such as banks and insurance companies had become overequipped in dealing with sanctions. In implementation practices, these actors were often guided by different motivations as compared to States. These institutions often adopt a "better safe than sorry" approach, resulting in the phenomenon of over compliance.
- Formalisation of sanctions regarded the insertion of legal standards in sanctions regimes and increased proceduralization. Also, the integration of informal arrangements could be discussed under this heading.
- Interplay concerned the interaction between UN sanctions and with other areas and regimes of international law and its effect on the design and interpretation of the UN sanctions regimes.

Professor John Dugard (South Africa) stated that, because the ILA was meeting in South Africa, something should be said about the South African experience in relation to

sanctions. Sanctions in the South African context contributed to ending Apartheid. The UN was particularly active in opposing Apartheid, as exemplified by the recommendation of the arms embargo on South Africa by the Security Council in 1963 followed by a mandatory arms embargo in 1977. The General Assembly also passed sweeping resolutions in the early 1960s calling on States to impose all sorts of sanctions against the Apartheid regime (such as trade relations and sport and cultural boycotts). The Security Council gave its endorsement towards resolutions of this kind to impose the recommended adoption of sweeping sanctions against South Africa only later in the late 1980s. UN sanctions alone had little impact. On a diplomatic level, African States refused to enter into diplomatic relations with South Africa, but these were recently decolonised States, and therefore such action had very little impact on South Africa itself. South African Airways were prohibited from flying throughout Africa but were able to fly around Africa. Until 1986, the US government adopted measures resulting in the termination of flights between the US and South Africa. These measures had implications for South Africa. But most sanctions during the Apartheid years were carried out and implemented by civil society. Professor Dugard briefly explained how sports sanctions were tremendously important. These were imposed by the non-governmental sporting environment. A similar impact was felt by cultural boycotts.

As a result, South Africa became isolated culturally as well as academically. The years of Apartheid resulted in banks withdrawing credit, and this undoubtedly had a major impact on South Africa. US withdrawal of investments in pension funds had a major impact so the churches, universities and civil society generally mobilised very strongly against apartheid. On the one hand, there were UN imposed sanctions and sanctions imposed by foreign governments, on the other hand there was civil society, which was very actively opposed to Apartheid. It was important to stress that, although UN sanctions alone were not effective, they did authorise the actions of civil society and they encouraged civil society to mobilise against Apartheid.

It was interesting to compare that situation with the present action taken by States to suppress boycotts against Israel, particularly States that had enacted legislation to prohibit advocating boycotts. In the case of South Africa, no such action was taken, and civil society did not have to contend with legislation that prohibited advocating sanctions.

The South African experience showed that UN sanctions and the actions of civil society went hand in hand. UN sanctions needed the support of civil society to be effective. Legislation enacted by States was not really sufficient to implement sanctions. Therefore, it was necessary to mobilise civil society to enable the effective implementation of sanctions. South Africa became completely isolated as the result of the actions of civil society in many European States and in the US. But in order for civil society to be effective, it needed the "blessing" of the UN in the form of UN resolutions authorising actions that prevented States from acting otherwise.

Professor Christian Tams (UK) stated that he approached the topic with much hesitation, partly because the Study Group would not be focusing on countermeasures, something which had divided the international debate for years, partly because he believed his approach was old fashioned after listening to Professor Dugard's presentation on the involvement of civil society in the implementation of sanctions. Professor Tams noted that the theme of his presentation tied in with the presentation of both Professor Dugard

and Professor Van den Herik in so far as they dealt with matters such as interplay and linkage on the various levels. The focus of his presentation was on smart sanctions, and notsosmart sanctions, and on the different layers of legality.

It was safe to say that the legal regime was controversial, complex, and often confusing in respect to sanctions adopted by States in response to breaches of international law by other States. This was an area where the Study Group might make some useful contributions.

Unilateral sanctions were controversial, and it was well established that there was disagreement on this. The South African experience was usually credited for showing promise, concerning international sanctions adopted not only within but going moderately outside the UN sanctions context. The opposite view was that this was a pretext for power; however, this was outside the Study Group's mandate. International debate on this issue had reached a deadlock.

Whereas Professor Van den Herik mentioned category interactions and Professor Dugard mentioned institutional, regional and unilateral level interactions, his presentation would add two more interactions, which he believed could break through the deadlock:

- First, as Professor Dugard mentioned and illustrated, on some level, the UN was not authorising sanctions but rather recommending them. Could that recommendation justify a breach of international law?
- Secondly, the UN or other international institutions could provide factual evidence of breaches which might help overcome the problems that affect the debate and provide some sort of accountability.

He reiterated that the topic was controversial and complex, but emphasised that the Study Group could make good contributions. With regards to the UN sanctions, there was no problem in knowing what they were going to do; the greater problem came from assessing the evidence, and upholding the standards that we wanted to achieve.

Professor Tams finally stated that decentralised sanctions were outside the mandate of the Study Group and that it was important that the Study Group had decided not completely to ignore them but to look at them through the prisms of linkages. This approach had much promise. Further to the conclusion drawn by Professor Dugard, Professor Tams added that decentralised and institutionalised sanctions also went hand in hand.

Professor Van den Herik invited Professor Antonio Tzanakopoulos to deliberate on the future of UN sanctions.

Professor Antonios Tzanakopoulos (UK) started by expressing uncertainty as to whether he could deal with the topic and preferred to adopt a more reactionary approach, joking that his beard was not white enough yet for future gazing.

He continued by playing off a couple of things that Professor Tams had mentioned. The first thing was to emphasise the centrality of the concept of the wrongful act. The whole point was that, whatever measure was taken as a sanction, from a legal perspective, it needed to somehow constitute a wrongful act. Otherwise it was an act of retorsion, which was certainly an unfriendly act, but a completely legal act.

He asked what would happen when one would have to actually violate the law in order to react. The common thing shared by countermeasures and sanctions was that, essentially, they were a sword and a shield. Countermeasures were a sword insofar as an injured State was reacting to the breach of an international obligation. At the same time, countermeasures acted as a shield because they protected a State from responsibility. In reality, however, this was not how it worked.

This was important because the history of UN sanctions had something to tell us about them being used as a sword and as a shield. In the 1990s, the Security Council did not truly realise what it was dealing with. So, instead of using sanctions as a sword, it used them as a sledge hammer and completely crushed Iraq with completely comprehensive sanctions that hurt Iraq's civil society. The reactions of civil society around the world forced the Security Council to consider the introduction of humanitarian exceptions and to target the sanctions so as to limit the "bloodiness" of the sledge hammer approach.

This targeting took place with regards to goods (eg, timber and diamond), but by the end of the 1990s, it was focussing on individuals. Once the Security Council started disconnecting the position of sanctions with a threat to the peace located somewhere specifically but started dealing with global threats to the peace like terrorism and started implementing targeted individual sanctions against those associated with terrorists, it could be said that the Security Council over sharpened the sword and over broadened the shield. One started seeing the States realising what sort of weapon and shield they had in their hands and used the Security Council to do those things that they could not do back home.

Professor Tzanakopoulos affirmed the view that the anti-terrorist sanction regimes were atrocious. It essentially involved the blacklisting of individuals on the basis of a dodgy beard and name. The shield of Article 103 was that it justified State action; "we hate to do this to you, but we have to implement this as mandated by or international obligations". What this essentially meant was that there was nothing inherently good or bad in sanctions and that they could be used for good, but they needed the support of civil society (as in the case of South Africa). They could also be used for dangerous adventures too, but in such cases civil society was needed to stand up and not support sanctions.

Professor Tzanakopoulos concluded by stating that the future of sanctions depended on civil society and the inter-linkage of civil society either supporting them for effectiveness when the consensus was that one actually needed the sanctions to be effective. Furthermore, it depended on civil society, including academic society, reacting and forcing the Security Council to take a step back and think twice about whether it was going the right way. Without civil society, the future would be quite grim.

The Chair thanked the panellists for their presentations and opened the floor to interventions.

Professor Van den Herik added that she was particularly interested in comments pertaining towards the future of the Study Group, but comments did not need to be confined to that.

Jeremy Carver (UK): thanked the panellists for their presentations, adding that Professor Van den Herik had defined very cleverly the scope of the work of the Study Group. He

recommended that the Study Group deal with the lawfulness of UN sanctions. In this regard, Mr Carver drew attention to the drafting of Art 41 of the UN Charter, which contained very clear limitations that had persistently been ignored. He distinguished measures aimed at excommunicating a State deemed to constitute a threat to international peace and security and measures aimed correcting, easing and resolving threats to international peace and security. He also referred to Art 50 of the UN Charter, which acknowledged the damaging effects of such measures on the target States as well as on its neighbours.

Mr Carver suggested that mistakes had been made in implementing UN sanctions after 1990, whereby measures were converted into lawful State measures. He suggested that the Study Group go back to the roots of the limitations in the UN Charter and study what States could do and what the Security Council could not do.

Ambassador Ihor Turyanskiy (Ukraine) drew attention to another violation of international law by Russia, specifically by provocation with the aim to justify its future possible aggressive actions against Ukraine. Concentration of Russian weaponry, armaments and military forces on the temporarily occupied Guinea Donkas as well as along the Ukrainian-Russian border was a cause or particular concern. Ukraine rejected all accusations from Russian, which were completely groundless. It was a threat to peace and stability not only in Ukraine but also in the entire region. Ukraine urged the international community to take all possible political and diplomatic steps to exert the influence on Russia to prevent a new round of aggression against Ukraine and another violation of norms and principles of international law reflected in the UN Charter.

Professor Math Noortmann (UK) noted that the topic of sanctions took him back to the late 1980s, when he was a PhD student researching the concept of countermeasures in international law. He feared that not much had changed as far as the substantial rules and debates on "sanctions" were concerned.

As the Chair of the ILA Committee on Non-State Actors, he applauded the focus of the Study Group on the role of the intergovernmental and non-governmental, which characterised the practice of sanctioning as transnational not international. At the same time, he agreed with Professor Tams that the State could not be completely cut out of a sanctioning process, which started with UN decision-making and ended with civil society implementation.

It was here that the law of State responsibility and ILC discussions on the purpose of and requirements for countermeasures entered the debate once again. Everyone knew that the term 'countermeasures' as used by the ILC in its Articles on the Responsibility of States for Internationally Wrongful Acts was a term of convenience, adopted to avoid the terms "sanction" or "reprisal". The substance of the debate was still relevant, namely the controversies on the functionality of sanctions (symbolic, enforcing or punitive) and such requirements as proportionality and dispute settlement.

The State could be both an enabler and disabler of civil society actions such as boycotts. Moreover, the questions of due diligence could arise if and when the boycotts or embargoes of civil society or other private actors violated relevant UN Security Council resolutions. If there was an interplay between intergovernmental organisations and civil

society organisations including NGOs and multinational corporations, the State would often act as a conduit and questions of State responsibility might enter the debate.

Professor Rainer Hofmann (Germany) congratulated the Study Group for bringing forth the role of civil society in the implementation of sanctions. Civil society was ultimately better situated than States when it came to topping up sanctions and on keeping them more individualist.

Patryk Labuda (Poland) queried whether the Study Group had a mandate to explore the interplay between sanctions in the International Criminal Court and individual criminal responsibility.

Professor Van den Herik responded that when the Study Group was established, there was some discussion about focusing on different types of interplay.

Professor Christina Cerna (US) suggested that, with regards to the future of the UN sanctions regime and perhaps under the heading of prolonged disobedience to sanctions, the Study Group consider international human rights law and specifically the decision of the European Court of Human Rights in *Al-Dulimi and Montana Managment Inc. V Switzerland*, which held that the relevant UN sanctions violated fundamental rights.

Marija Đorđeska stated that she would like to echo the suggestion of Professor Tzanakopoulos that the Study Group address the realities of individuals who might have been unjustifiably placed on sanctions. It would not only produce a great study but would also provide a useful tool to practitioners.

Professor vVan den Herik expressed her appreciation for the final interventions and spoke about the interplay, individualisation as well as delisting of sanctions on specific people. She thanked attendees and panellists for their contributions.

Reporters: Alya Rhode and Charmaine Awolaja

CLOSING SESSION

SANDTON CONVENTION CENTRE

Thursday, 11 August 2016, 3:00pm

The Right Hon Lord Mance, Chairman of the ILA Executive Council welcomed attendees to the closing session. He congratulated the organisers of the conference and thanked them for what had been an excellent programme and a successful conference. He congratulated those Committees and Study Group that had produced reports. He thanked the Steering Committee, which had worked on the reports with the chairs and rapporteurs of the Committees and Study Groups. He thanked Alexander Kunzelmann for coordinating the team of reporters, and thanked the reporters for reporting the open session. Finally, he thanked the indefatigable Juliet Fussell and Natalie Pryor, who received a round of applause from attendees.

Lord Mance then invited the ILA scholars to come forward to receive a certificate. He thanked the scholars for their participation and enthusiasm, and hoped for much fruitful collaboration in the future.

Lord Mance raised a number of additional matters:

1. One vicechair position had been vacated, and two other positions would soon be vacated, with Dr Kamal Hossain and Professor Cynthia Lichtenstein reaching the end of their respective terms. Dr Hossain and Professor Lichtenstein had each been a tower of strength and assistance to Lord Mance and the ILA, and Lord Mance was sorry to see them retire. Lord Mance marked their services my inviting a round of applause. It was open to any branch to nominate a candidate for the position of vicechair. Lord Mance invited the branches and Executive Council members to consider who might appropriately fill the positions. The person occupying the position of vicechair was expected to provide wisdom and support both intellectual and physical (ie, presence at conferences and other events). There was a possibility for the office holder to take on a more active role.
2. With regard to the academic work of the ILA, Lord Mance suggested that it might be necessary for the ILA to consider how the system of quality control over substance and language might be further improved in the future. This might involve encouraging Committees to produce reports earlier, even by the end of year before the biennial conference, to allow a permanent steering committee to review them. This was a tentative suggestion, and Lord Mance welcomed other suggestions. At present, a lot of last minute work was being carried out ahead of the biennial conference.
3. The ILA scholars had proposed establishing a social media network for young lawyers. The network would be of a collegiate nature and would operate as an internal think tank, exchanging ideas, preparing for membership of Committees, and feeding those Committees, entirely consistent with ILA structure. The network would be composed of members, and would be a continuation of the enthusiastic collaboration that scholars had demonstrated during the present conference. It might be known as the “Johannesburg network of scholars”. This was something on which to build. It

pursues a fundamental aim to rejuvenate the ILA and to get younger people involved in international law. The proposal needed to be worked out further, and Mr Bruce Mauleverer (UK) had undertaken to present a more formal proposal at the Executive Council meeting in November 2016.

Lord Mance recounted that he had not had an opportunity to really see Johannesburg, but that he did have the opportunity to visit the Constitutional Court, which was worth visiting. It had a remarkable art collection, whose central theme was art and justice. He recited the following quote from former Justice Albie Sachs:

> *Art and justice are usually represented as dwelling in different domains: art is said to relate to the human heart, justice to human intelligence. Rationality is sometimes seen as inimical to art, and passion as hostile to justice. The [Constitutional Court] shows how art and human rights overlap and reinforce each other. At the core of the Bill of Rights and of the artistic endeavour represented in the Court is respect for human dignity. It is this that unites art and justice.*

There was something adversarial about the law, not necessarily associated with an understanding of diversity or conviviality. These biennial conferences demonstrated the opposite. This was not just a group of academics and practitioners interested in international law. It was a fellowship. All attendees were striving to the aims of international law that sought peaceful cooperation and coexistence worldwide. On that thought, Lord Mance commended the closing of the conference. He offered his best wishes for next two years, and hoped to see attendees at the next conference in Sydney, Australia.

Professor Hennie Strydom, President thanked Lord Mance for his words. Lord Mance spoke of collegiality and friendship; to this, Professor Strydom added solidarity and cooperation. He had received much of that during the conference in the form of pleasant words and words of support, as well as in handshakes and other forms. This meant a lot. A conference could only work if the components worked together. The approximately 400 delegates that attended made this possible. He thanked attendees for their presence, and wished them a pleasant onward stay in South Africa. To those not attending the gala dinner that evening, he wished a pleasant return journey and hoped to see them in Sydney.

Professor Strydom then thanked Juliet Fussell and Natalie Pryor for their support. He thanked Alexander Kunzelmann for coordinating the reporters, and encouraged the reporters to become involved in the ILA.

Professor Strydom noted that it was good to see old friends at the conference and to make new ones. He thanked them all for their support in coming to South Africa. He added that he had been in contact with several scholars from Uganda, who had indicated that they were establishing a branch of the ILA in Uganda. The South African Branch of the ILA (SABILA) would work closely with these individuals to see the branch established and to assist it along the way. He hoped that this example would be followed elsewhere in Africa.

Professor Marcel Brus, Director of Studies made a few brief observations:

1. The conference ran smoothly. All rooms were available and the catering was excellent. This was only possible due to Professor Strydom and the team behind him. He

thanked SABILA for organising a terrific parallel programme. For the ILA, there were 23 Committees holding sessions at the conference, together with eight Study Groups and one Interest Group. There were almost too many to attend; at times, there were eight or nine parallel sessions. These sessions were only possible due to the attendance and preparation of the officers and members of the Committees and Study Groups. Professor Brus thanked them and the session chairs.

2. Six Committees had prepared resolutions. Professor Brus assured attendees that there were many good plans for the coming two years for the development of exciting reports and resolutions. Sydney was therefore set to be a worthwhile event based on those discussions alone.
3. Three Committees would be dissolved after the conference, and three Study Groups had finalised their work. Two more Study Groups were expected to finalise their work in the coming six months. The Committees and Study Groups would be formally dissolved by the Executive Council. As a result, a number of topics would disappear from the ILA work programme. Other topics might return in the form of new Committees or Study Groups, provided that proposals came forward. Professor Brus invited suggestions for new Committees and Study Groups.
4. There had been a small innovation in that Study Group could now put forward brief resolutions, for adoption by the ILA, to finalise their work.
5. The 9 members appointed by the Executive Committee to the Steering Committee were critical to the success of the conference. It was essential that ILA texts withstand international scrutiny and reflect the ILA. The Steering Committee had worked closely and intensely with Committee officers on the proposed resolutions. However, undertaking this scrutiny during the conference was too late. It allowed insufficient time to address any issues of substance that might arise. Professor Brus echoed Lord Mance's call to consider how quality checks could be better done in future. Professor Brus thanked the members of the Steering Committee for the time that they had spent in the boardroom discussing proposed resolutions at the cost of not sitting in on the various sessions of the conference. Professor Brus added that the principal mode of quality control was for the Committee's to prepare their reports well in advance so that members could read and discuss them critically at the conference. Recording interventions during the sessions ensured that those studying the reports afterwards were aware of the differing views expressed thereon. However, with an increase in the number of Committees, critical reflection on the reports was not taking place. This was an issue that needed to be considered seriously. It was in everyone's interest that the quality of the ILA's output was such as to maintain its authority in the future.
6. Finally, Professor Brus thanked the 32 reporters for their work recording interventions during the working sessions of the various Committees and Study Groups. He acknowledged the role of Alexander Kunzelmann in organising the reporters and the assistance of SABILA. Professor Brus also echoed thanks to Juliet Fussell and Natalie Pryor, noting that theirs was a difficult job that was not to be underestimated. He ended encouraging young scholars to come forward to participate in the workings of the ILA. He hoped to continue performing the role of Director of Studies in the coming years, and looked forward to the Sydney conference.

Lord Mance invited the chairs of the various working sessions to put forward the proposed resolutions.

Professor Rainer Hofmann (Germany) introduced draft resolution no 1 that was proposed by the Committee on International Protection of Consumers. He described the history of the Committee under the leadership of Professor Cláudia Lima Marques. The proposed resolution reflected the work of the Committee over the past four years, which was highlighted during the working session of the Committee by presentations given by Ms Ana Cândida Muniz, Dr Luciane Klein Vieira, Ms Maria Goretti Sanches Lima, and Professor Hector Valverde Santana. Clearly, consumer protection was important in Brazil!

The proposed resolution included four recommendations as well as four model rules relating to the law applicable to international consumer contracts. While the Committee preferred the fourth rule, it thought it preferable for States to be presented with all models. The other model rules were based on precedents in the European Union, China and Brazil.

Lord Mance opened the floor to comment before pronouncing the resolution adopted *nem con*.

Professor Willem van Genugten (Netherlands) introduced draft resolution no 2 that was proposed by the International Human Rights Law Committee. The mandate for the present Committee was established at the 2008 conference in Rio de Janeiro. There had always been a Committee on human rights, and would always be one, even though the present Committee would soon be dissolved. The key rapporteur for the latest report of the Committee was Professor Stefan Kadelbach (Germany). The report received the full support of all members attending the working session. Recalling earlier remarks about quality control, Professor van Genugten affirmed that there was a considerable degree of quality control with the report of the Committee, and the working session included a very good Q&A session. The work of the Committee was truly well done.

Lord Mance opened the floor to comment before pronouncing the resolution adopted *nem con*.

Professor Robert Paterson (Canada) came forward, in the absence of the Chair of the session, to introduce draft resolution no 3 that was proposed by the Committee on Cultural Heritage Law. The resolution marked the end of the work of the Committee, which had been established well over 20 years earlier. He commended the productivity of the Committee, which counted among its accomplishments the drafting of the *UNESCO Convention on the Protection of the Underwater Cultural Heritage*. The resolution presently being proposed contained a series of recommendations regarding cultural landscapes.

Lord Mance agreed that the Committee had been constructive. He opened the floor to comment before pronouncing the resolution adopted *nem con*.

Mr Jeremy Carver (UK) introduced draft resolution no 4 that was proposed by the Committee on International Commercial Arbitration. The Committee was one of the ILA's more durable committees that had produced remarkably good work over the years.

Mr Caver added that this area of the ILA's work first engaged Mr Carver some 43 years earlier.

The Committee was in a slightly odd position at the present conference; it had completed its work on the important area of the powers of arbitrators prior to the 2014 conference in Washington, where the report of its work was presented, but its recommendations did not withstand the scrutiny of the Steering Committee. As a result, the work of the Committee had been frozen between the 2014 and 2016 conferences. As the work of the Committee at the Johannesburg conference was substantive, not many members of the Committee attended.

The powers of arbitrators had become increasingly complex and confused as international commercial arbitration had proliferated, grown and diversified, spawning new bodies with new rules. This was one of the most fertile areas of international legal endeavour, attracting an increasing number of lawyers from all over the globe. The emphasis of the Committee on this area was timely, and the report produced by the Committee was commended in Washington as it was in Johannesburg.

The conclusions of the Committee attempted to characterise the powers of arbitrators into three categories, as listed in paragraph 7 of the proposed resolution. The recommendations were addressed to arbitral panels and to courts that had to decide matters concerning the exercise of powers by arbitrators. The Steering Committee at the Johannesburg conference was delighted with the changes that had been made to the resolution.

Even if the work of the Committee at the Johannesburg conference was not substantive, the Committee did not waste any time. It considered 12 topics for future work, and 19 of the 22 members had expressed support for considering the topic of reasoning of commercial arbitral decisions. The situation had changed from the early days, when awards were short and there was a small group of arbitrators who knew one another and just wanted the answer. Now, there was a much bigger pool of arbitrators and an acknowledgment that reasoning must be given. The Committee would produce its work on this topic for discussion at the conference in Sydney.

Lord Mance opened the floor to comment before pronouncing the resolution adopted *nem con*. Before moving to the next proposed resolution, Lord Mance invited Dr Christopher Ward, President of the Australian Branch, to present on the conference in Sydney.

Dr Christopher Ward (Australia) showed attendees a promotional video for Sydney. After the video, Dr Ward, on behalf of the Australian Branch, invited all attendees to attend the Sydney conference, which was scheduled for 2024 August 2018. It was a delight and an honour that Sydney had been allowed to host the conference. It was a great responsibility that the Australian Branch took very seriously. Australia was deeply engaged with international law, through litigation and the provision of lawyers to international institutions. The conference would work many aspects of Australia in a seamless fashion. Dr Ward acknowledged that Australia was a long way from anywhere else, with the exception of New Zealand, but the flight was well worth it. The organisers wanted to bring together many people from many countries in one of the world's most beautiful cities.

As the incoming hosts, Dr Ward added that it was appropriate for the Australian Branch to move a expression of thanks to SABILA for hosting the 2016 conference (even if

South Africa had knocked Australia out of the rugby at the 2016 Olympic Games the night before). He acknowledged that the 2016 conference had been difficult to organise, but Professor Strydom had done a marvellous job. The hosts had looked after attendees superbly and with kindness, and the academic work had been first class. SABILA had set a high bar, but a bar that the Australian Branch looked to meet and exceed!

Professor Andreas Ziegler (Switzerland) introduced draft resolution no 5 that was proposed by the Committee on International Monetary Law. He was impressed by the plethora of topics covered by the Committee during its working session, including the role of the courts in the global financial crisis, the role of central banks as the lender of last resort, the EU Banking Union, virtual currencies, and the regulatory challenges posed by crowd funding. The Study Group on Sovereign Bankruptcy also presented its report during the session.

The resolution proposed was devoted to the ethical culture of financial services. The issue was reported in detail by the Committee. Professor Ziegler read out the action items listed at the end of the proposed resolution.

Lord Mance opened the floor to comment before pronouncing the resolution adopted *nem con*.

Professor Stephan Hobe (Germany) introduced draft resolution no 6 that was proposed by the Committee on Non-State Actors and International Law. Professor Hobe acknowledged the work of the successive rapporteurs of the Committee, Professor Cedric Ryngaert (Belgium) and Dr Veronika Bílková (Czech Repulbic). The Committee had looked into diverse groups of nonState actors, the diverse roles that they played, and their increasing importance in international lawmaking and monitoring implementation and compliance. Discussions at the Johannesburg conference revealed difficulties with finding a legal definition for the term "nonState actor" and the importance of developing a specific typology of nonState actors.

Lord Mance opened the floor to comment before pronouncing the resolution adopted *nem con*. He then invited the Secretary General to introduce the resolutions proposed by the Study Groups.

Professor Antonios Tzanakopoulos, Secretary General explained why the ILA had moved to adopting resolutions regarding the work of the Study Groups. It was an initiative of the Director of Studies that had been endorsed by the Executive Council and the Steering Committee. The proposed resolutions were short and not substantive; the ILA did not adopt the actual work of the Study Groups. The purpose of adopting these short, nonsubstantive, resolutions was essentially to draw the attention of members and stakeholders to the work of the Study Groups in discharging their respective mandates. The resolutions would be published in the report of the conference and would be uploaded to the website. All three resolutions being proposed were not quite boilerplate but were close to it.

The Study Groups concerned were those on the principles on the engagement of domestic courts with international law, on due diligence in international law, and on preferential trade agreements. The proposed resolution with respect to the latter Study Group noted the wish of the Study Group that the Executive Council establish a Committee to

continue the work on the topic of preferential trade agreements. The Executive Council would consider this wish.

Lord Mance added that the resolutions were sensible. He opened the floor to comment before pronouncing the resolutions adopted *nem con*. He then asked the Secretary General to take the floor again to introduce the proposed constitutional amendments.

Professor Tzanakopoulos noted that the proposed amendments introduced relatively minor changes to the ILA's Constitution, some of which were dearly needed. He confirmed that the notice requirements set out in the Constitution for proposed amendments had been met.

Professor Tzanakopoulos went through each amendment:

- the change to Art 3.2.7 acknowledged that the ILA could disseminate relevant documents otherwise than in print (ie, via the website);
- the change to Art 5.4 moved from requiring all Officers to be trustees for the purposes of UK law on charities to requiring that at least three of the Officers be so; this amendment allowed flexibility in case an Officer could not, or did not, wish to be a trustee;
- new Art 6.12 introduced a change to the working methods of the Executive Council; essentially, it allowed the Executive Council to consider and decide matters intersessionally (noting that the Executive Council only met twice each year); and
- the change to Art 11.2 allowed the Executive Council to set not only the amount but also the timing of the annual subscriptions paid by national branches; this would avoid branches taking certain liberties in the timing of their payments.

Lord Mance drew attention to the terms of Art 14 of the Constitution, including the requirement for a vote of two-thirds of the members present for any amendment to the Constitution. He invited members present to vote on the proposed amendments. In the absence of any indication of opposition, Lord Mance pronounced an affirmative vote that met the requirements of Art 14, and thanked Professor Tzanakopoulos and attendees for speedily dealing with this item.

Lord Mance then proceeded to call the conference to a close.
