PART I

PREFACE TO JOHANNESBURG CONFERENCE REPORT

The Rt Hon Lord Mance, Chair ILA Executive Council

It has become almost a ritual to refer to each successive ILA Biennial Conference as a first. But it is tribute to the ILA's spread that this is almost always possible. On this occasion, it is the first conference held in Sub-Saharan Africa. As in Washington in April 2014, so in Johannesburg in August 2016, the conference, our 77th, took place in balmy Spring weather, although much of our time was of course spent in the conveniently arranged Sandton Convention Centre.

Our conference theme was *International Law and State Practice – is there a North-South divide?*, and the conference opened with a keynote speech from Judge Navi Pillay (UN High Commissioner for Human Rights 2008-2014). Responding to the conference title, Judge Pillay gave an inspiring insight into the extent to which the goal of universal, indivisible and interrelated Human Rights has over recent years achieved global acceptance, regardless of, and despite differences in the paths chosen by, political, economic and cultural systems.

After the opening ceremony, the conference proceeded with a rich and skilfully devised mix of special arranged talks and discussions, and sessions devoted to the continuing work of the ILA's committees and study groups. The ILA is grateful for all the arrangements made by the conference organisers, led by Professor Hennie Strydom of Johannesburg University, who now takes on the mantle of ILA President in succession to Professor Ruth Wedgwood of the ILA's US Branch, for whose successful term of office we express our gratitude. The ILA HQ support provided by Juliet Fussell and Natalie Pryer was as effective and welcome as ever.

Although I have mentioned the ILA's spread, its 57 existing Branches (some regional) still only cover about one-third of the world's countries. Before and during the conference, the ILA HQ and Executive Council have discussed how the ILA's reach might be further extended, so that knowledge about and the application of international law might be yet further extended.

The ILA scholarship scheme first launched in 2014 is here relevant. It enabled 11 successful applicants chosen from across the world out of particularly strong group of candidates to attend the Jo'burg conference. In addition, under the leadership of Willem van Genugten of the Dutch Branch, a further 9 scholarships were awarded by the generosity of his family, friends and colleagues together with the Dutch Ministry of Foreign Affairs and Tilburg University as well as North-West University, South Africa, with 8 out of 9 of these scholars coming from Africa.

We must build on such highly encouraging initiatives, drawing the scholarship recipients into a continuing network of young persons engaging in and with international law. I hope that those who read this, or have met some of the scholars in Jo'burg, will also support the HQ Scholarship Fund financially.

The next (78th) conference will again be in the Southern Hemisphere, this time in Sydney, Australia from 19th to 24th August 2018. After that, the 79th conference will be in Kyoto, Japan, from 23rd to 27th August 2020. The work of the ILA, focusing on both public and private international law, is as important as it has ever been since the ILA's foundation in Brussels in 1873. I look forward to working together ensure that it has its maximum potential impact.

RESOLUTION NO.1/2016

COMMITTEE ON THE INTERNATIONAL PROTECTION OF CONSUMERS

The 77th Conference of the International Law Association held in Johannesburg, South Africa, 7–11 August 2016:

HAVING CONSIDERED the Report on the Role of International Law on Contemporary Consumer Protection;

NOTING the book prepared by the Committee as well as its survey of the consumer protection laws and regulations in the global financial crisis;

THANKING the Chair, the Rapporteur and the members of the Committee for the valuable work done;

RECOGNISING the emergence of the international dimension in consumer protection, the role of international law in helping to develop more equitable standards of consumer protection, and the need to take the consumer into account in international trade regulation;

ACKNOWLEDGING that individuals are usually the weaker parties in consumer contracts in general, and in cross-border contracts in particular, most notably with respect to the choice of applicable law and jurisdiction;

CONCERNED about the lack of universal models to protect consumers in cross-border contracts;

AWARE that *ILA Resolution No. 4/2012 - Sofia Statement on the Development of International Principles on Consumer Protection* was utilised by the UNCTAD during the Revision of the UN Guidelines for Consumer Protection in 2015;

DESIRING to contribute to the debate on the creation of fair and equitable principles for international consumer protection;

ADOPTS the Recommendations and Guidelines annexed to this Resolution;

COMMENDS the Recommendations to international organisations, States and consumer groups that are working on national, regional or international initiatives relating to consumer issues, with a view to enhancing international cooperation in such initiatives and to focusing the attention of all concerned on the need to develop fair and equitable standards and models for all consumers in the world, without discrimination;

INVITES the Committee to continue and to complete its work on the development of mechanisms for the international protection of consumers and to focus on the protection of tourists.

JOHANNESBURG RECOMMENDATIONS AND GUIDELINES ON THE BEST PRACTICES ON INTERNATIONAL PROTECTION OF CONSUMERS

RECOMMENDATIONS

1. CONSIDERING that consumers as natural persons acting outside of their professions or trade do not have expert knowledge, and are in an unequal bargaining position making the application of the rules on commercial transactions (which often includes *lex mercatoria*) unfair to them; STRESSING the differences between consumer contracts and other business contracts and the need for special rules to protect consumers not only nationally but also in international contracts and with respect to dispute resolution,

RECOMMENDS acknowledgement of the protection of consumers as weaker parties as a principle in national and international transactions.

2. NOTING that several international law initiatives have been undertaken with respect to the harmonisation of laws relating to cross-border consumer transactions by different international bodies, which have produced conventions, model laws, and legislative guides; ALSO NOTING that the 2015 Revision of the UN Guidelines for Consumer Protection has acknowledged the international dimensions of consumer protection; WELCOMING the efforts of the Hague Conference on Private International Law concerning the necessity to regulate international tourism,

RECOMMENDS the adoption of special rules on applicable law and jurisdiction for cross-border consumer protection.

3. AWARE that foreign tourists demand special protection related to their consumer rights, especially when they are away from their place of habitual residence, culture, and language; ACKNOWLEDGING the efforts made at the UN World Tourism Organisation to enhance the protection of tourists in case of emergency situations and the efforts of the Hague Conference on Private International Law on the field,

RECOMMENDS more international co-operation on consumer protection, especially in the field of international tourism.

4. CONSIDERING the recent efforts to update national and regional laws, regulating international consumer contracts (especially in the EU, Mercosur, OEA, Japan, China, Korea, Brazil, Argentina, Panamá, Dominican Republic),

RECOMMENDS that States consider best practices on international protection of consumers, and to that end also RECOMMENDS the use of the models set out in Guidelines on the Best Practices on the Law Applicable to International Protection of Consumers, with the aim of helping the development of fair and equitable legal standards for all consumers in the world, without discrimination.

GUIDELINES ON THE BEST PRACTICES ON THE LAW APPLICABLE TO INTERNATIONAL PROTECTION OF CONSUMERS

CONSIDERING the 2012 ILA's Sofia Statement on the Development of International Principles on Consumer Protection which acknowledges that "It is desirable to develop standards and to apply rules of private international law that entitle consumers to take advantage of the most favourable consumer protection", the International Law Association RECOMMENDS the following models reflecting the best practices on applicable law to international consumer contracts, selected by the Committee on International Protection of Consumers.

Model Rule 1: Limiting the Chosen Law by Reference to Mandatory Rules

Article [X]. Consumer Contracts

1. An international consumer contract shall be governed by the law of the country where the consumer has his habitual residence, provided that the professional:
   a) pursues his commercial or professional activities in the country where the consumer has his habitual residence, or
   b) by any means, directs such activities to that country or to several countries including that country, and in both cases, the contract falls within the scope of such activities.[1]
2. If the requirements in points (a) or (b) of paragraph 1 are not fulfilled, the law applicable to a contract between a consumer and a professional shall be governed by the law chosen by the parties, or in the absence of a choice, by the law of the country where the goods or services were agreed to be supplied.[2]
3. Where paragraph 2 above applies, a choice of law may not have the result of depriving the consumer of the protection afforded to him by the mandatory rules of his habitual residence.[3]

Model Rule 2: Party Autonomy Limited to Choice of the Law Most Favourable to Consumers

Article [X]. Consumer Contracts

1. An international consumer contract shall be governed by the law of the habitual residence or domicile of the consumer or by the law chosen by the parties, provided that the latter is more favourable to the consumer.
2. The parties may choose between the law of the habitual resident or domicile of the consumer, of the place of the conclusion of the contract, of the place of performance and of the main office of the professional or provider of goods or services.
3. Under paragraph 1 above, the law more favourable to the consumer means the law that, viewed overall when the contract was made, assures the remedies or the redress more protective of the consumer's interests.

---

[1] Adaptation of the European model.
[2] Adaptation of the Argentinean model.
[3] Adaptation of the European model.

Model Rule 3: Limiting Party Autonomy by Reference to Connecting Factors

Article [X]. Consumer Contracts

1. The law of performance, meaning the law of the place where the goods or services were agreed to be supplied, shall govern an international consumer contract, if either (i) the consumer expressly chooses this law or (ii) the supplier/professional has under the contract no duty to undertake any business activities, related to the goods or services to be supplied, in the country of the consumer's habitual residence.
2. Save where paragraph 1 applied, international consumer contracts shall be governed by the law of the habitual residence of the consumer.

Model Rule 4 of the Committee

Article [X]. Consumer Contracts

1. An international consumer contract shall be governed by the law of the country where the consumer has his/her habitual residence, provided that the supplier or professional:
   a) pursues his/her commercial or professional activities in the country where the consumer has his/her habitual residence, or
   b) by any means, directs such activities to that country or to several countries including that country, and in both cases, the contract falls within the scope of such activities.[4]
2. If the requirements in points (a) or (b) of paragraph 1 are not fulfilled, the law applicable to a contract between a consumer and a professional shall be the law chosen by the parties and in absence of choice, the law of the country where the goods or services were agreed to be supplied.[5]
3. Where paragraph 2 above applies, a choice of law may not have the result of depriving the consumer of the benefit of the law of habitual residence where that law is more favourable to the consumer.[6] The law more favourable to the consumer means the law that, viewed overall when the contract was made, assures the remedies or redress more protective of the consumer's interests.[7]

[4] Adaptation of the European model.
[5] Adaptation of the Chinese model.
[6] Adaptation of the Brazilian model.
[7] Adaptation of the Panama model.

RÉSOLUTION NO. 1/2016

COMITÉ SUR LA PROTECTION INTERNATIONALE DES CONSOMMATEURS

La 77ème Conférence de l'Association de Droit International, qui s'est tenue à Johannesburg (Afrique du Sud) du 7 au 11 août 2016 :

AYANT EXAMINÉ le Rapport sur le rôle du droit international sur la protection des consommateurs ;

PRENANT NOTE de l'ouvrage en préparation par le Comité de même que son étude sur les lois et règlements sur la protection des consommateurs dans le cadre de la crise financière mondiale ;

REMERCIANT le Président, le Rapporteur et les membres du Comité pour l'utile travail accompli ;

RECONNAISSANT l'émergence de la dimension internationale de la protection des consommateurs, le rôle du droit international afin de permettre l'élaboration de standards de protection des consommateurs plus équitables, et la nécessité de tenir compte de la protection des consommateurs dans le cadre de la régulation du commerce international ;

ADMETTANT que les individus sont en général les parties faibles des contrats de consommation, plus particulièrement dans les contrats internationaux, surtout pour ce qui concerne le choix du droit applicable et de la juridiction compétente ;

PRÉOCCUPÉE par l'absence d'instruments types universels destinés à protéger les consommateurs dans les contrats internationaux ;

CONSCIENTE que la *Résolution ILA No. 4/2012 – Déclaration de Sofia sur l'élaboration de principes internationaux concernant la protection des consommateurs* a été employée par la CNUDCI au cours de la révision des *Principes directeurs des Nations Unies pour la protection des consommateurs* en 2015 ;

DÉSIREUSE de contribuer au débat sur l'élaboration de principes justes et équitables pour la protection internationale des consommateurs ;

ADOPTE les Recommandations et Principes directeurs annexés à cette résolution ;

PORTE les Recommandations à l'attention des organisations internationales, États et associations de consommateurs qui travaillent sur des initiatives nationales, régionales et internationales concernant des questions liées aux consommateurs, en vue d'améliorer la coopération internationale pour ce qui concerne ces initiatives et d'appeler l'attention de toutes les parties concernées sur la nécessité d'élaborer des standards et instruments types pour tous les consommateurs dans le monde, et ce, sans discrimination ;

INVITE le Comité à poursuivre et achever son travail sur l'élaboration de mécanismes pour la protection internationale des consommateurs et de se concentrer sur la protection internationale des touristes.

RESOLUTION NO.2/2016

INTERNATIONAL HUMAN RIGHTS LAW COMMITTEE

The 77th Conference of the International Law Association, held in Johannesburg, South Africa, 7-11 August 2016:

REITERATES that the Human Rights Law Committee (the Committee) was vested with a dual mandate concerning (i) the impact of international human rights law on the International Court of Justice (ICJ) and (ii) the domestic implementation of judgments/ decisions of courts and other international bodies;

TAKES NOTE of the Interim Reports of the Committee submitted to the 75th Conference held in Sofia, Bulgaria, in 2012 and the 76th Conference held in Washington D.C., USA, in 2014 and the final Report submitted to the 77th Conference;

The impact of international human rights law on the International Court of Justice

ENDORSES the findings of the Committee that the impact of international human rights law on general international law is an on-going process in which the International Court of Justice, as a court of general jurisdiction, has had an important role to play, and that the ICJ has integrated international human rights law into its work and thereby contributed to the effort to define States' obligations under international human rights and other branches of law;

ENCOURAGES international courts and other bodies dealing with human rights issues to ensure the integration of international human rights law in their work and, where relevant, to make explicit the role and significance of international human rights law to their work, regardless of whether the international body is vested with specific or general jurisdiction;

The domestic implementation of judgments/decisions of courts and other international bodies

ENDORSES the findings of the Committee that despite States' obligations to respect and ensure, in good faith, the human rights of all persons within their jurisdiction, significant challenges impede the effective implementation of international human rights law due to the lacuna in international law regarding a State's obligations in the face of an adverse judgment or decision of an international supervisory body;

RECOGNISING the importance of setting forth Guidelines to assist States in carrying out their obligations;

ADOPTS the Committee´s Guidelines on the domestic implementation of international human rights judgments and decisions annexed to this Resolution;

ENCOURAGES States and their organs to take account of the Guidelines in their efforts to give full effect to international human rights law in domestic law;

REQUESTS that the Executive Council dissolve the International Human Rights Law Committee, since it has accomplished its mandate, and that it establish a new Committee on International Human Rights Law with a new mandate;

REQUESTS the Secretary-General of the International Law Association to forward a copy of this Resolution and the Guidelines (annexed to the Resolution), to the UN High Commissioner for Human Rights, the International Court of Justice, the International Law Commission and members of other international and regional courts and other international bodies dealing with international human rights law.

ANNEX

GUIDELINES

The obligations of a state and its domestic courts with respect to a decision issued by an international judicial or quasi-judicial body involving international human rights law

1. States, on becoming parties to human rights treaties, undertake to make such changes to domestic laws and practices as are necessary to ensure their conformity with the treaties and the jurisprudence of any judicial or quasi-judicial body with jurisdiction to interpret and apply the pertinent human rights provisions.
2. States give human rights treaties the force of law, allowing individuals to invoke them before domestic courts, and to take precedence over any conflicting national law.
3. States are under an obligation to organise the governmental apparatus, i.e. all structures through which public power is exercised, including the judiciary, so that they are capable of compliance with international human rights law. This obligation extends to
   a) bringing ongoing violations to a stop,
   b) preventing future violations from occurring,
   c) offering interim measures to prevent irreparable harm to persons,
   d) conducting effective investigation of human rights violations and, if warranted, guaranteeing that criminal proceedings are opened,
   e) providing for the option to re-open closed cases in which judgments and decisions are based on human rights violations and
   f) guaranteeing that restitution for a violation is made and, where such restitution proves inadequate or impossible, that damages are compensated.
4. States are encouraged to recognise individual complaint procedures pertaining to the treaty systems to which they are party. They are under an obligation to provide adequate and effective remedies for violations of international human rights law.
5. The state, in the implementation of a judgment or decision is more apt to render justice to the petitioner under a human rights treaty when that judgment or decision is principled, precise and clearly spells out the state's obligations in its operative paragraphs. In cases where the state has been unable or unwilling to execute the supervisory body's final judgment, the petitioner continues to have standing before the court or body, which delivered the judgment or decision, either by means of a new petition on the failure of compliance or by means of follow-up to the original petition until justice is rendered.
6. States are under an obligation to cooperate with the supervisory bodies in the processing of a case, i.a., by respecting interim measures and providing necessary information. They ensure the right to petition, i.a., by protecting petitioners and their counsel against threats and reprisals for bringing complaints.
7. States and their courts are under an obligation to give full effect to legally binding decisions of competent international courts and give due regard in good faith to all other decisions of competent international bodies.

8. States are under an obligation to cooperate in good faith with the follow-up mechanism developed to ensure compliance with decisions of international bodies.
9. Good practices of states lead to the following recommendations:
   a) Constitutional and supreme courts develop and practice control of conventionality. All courts accordingly interpret domestic law in conformity with international human rights law. They take the pertinent judgments and decisions of courts and quasi-judicial bodies, also in those cases to which the state was not a party, fully into account and integrate them in their reasoning in good faith.
   b) Domestic courts take into account the practice of courts of other states in their implementation of international human rights law. Courts facilitate this practice by translating their judgments.
   c) To avoid norm conflicts before courts, institutions and procedures are in place to review bills to be presented in the legislatures with respect to their compatibility with international human rights law and the pertinent jurisprudence of the competent international bodies.
   d) States establish paths of dissemination, including translation of judgements and decisions in international human rights law to governmental bodies, legislative committees and the judiciary with a view to enhancing awareness of these practices and their impact on domestic law.
   e) States establish independent National Human Rights Institutions (NHRIs), in accordance with the UN Paris Principles.

RESOLUTION NO.3/2016

COMMITTEE ON CULTURAL HERITAGE LAW

The 77th Conference of the International Law Association, held in Johannesburg, South Africa, 7 – 11 August 2016:

HAVING CONSIDERED the Report on the Law Pertaining to Cultural Landscapes Significant to Indigenous Peoples;

RECOGNISING both the challenge and the importance of further developing the disparate authority and commentary from numerous disciplines bearing on the protection of a multifaceted and vulnerable range of cultural heritage closely identified with the interests of indigenous peoples and bearing both tangible and intangible characteristics;

CONVINCED that the Report effectively responds to this challenge and will assist such stakeholders as intergovernmental and non-governmental organisations, regional organisations, organisations of tribal and other indigenous peoples, business interests, environmentalists, planners and others;

ADOPTS the Recommendations annexed to this Resolution;

REQUESTS the Secretary-General of the International Law Association to forward a copy of this Resolution and its annex to the Secretary-General of the United Nations, the Director-General of the United Nations Educational, Scientific and Cultural Organisation, and other appropriate international and regional organisations, especially indigenous organisations, and to circulate the Resolution and annexed Recommendations widely among the community of international lawyers, in particular experts and expert bodies addressing issues of cultural heritage law;

THANKS the Chair, the Special Rapporteurs, and Members of the Committee for the valuable work done;

RECOMMENDS to the Executive Council that the Committee on the Law of Cultural Heritage be dissolved, having accomplished many mandates, including two draft treaties, a book, three sets of guidelines and declarations as well as numerous studies over a period of 28 years.

ANNEX

RECOMMENDATIONS

In light of and by reference to the Report on the Law Pertaining to Cultural Landscapes Significant to Indigenous Peoples by the Committee on Cultural Heritage Law, the International Law Association makes the following recommendations:

A. The United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), though not hard law, establishes a commendable procedure of intercultural collaboration and a set of expectations concerning the protection of indigenous culture as well as land, and hence landscapes and even seascapes, of patrimonial importance to indigenous peoples. But it cannot be the last word because Article 31 of UNDRIP does not explicitly include in its extensive list of cultural heritage phenomena the concept of cultural landscapes discussed in the Report on the Law Pertaining to Cultural Landscapes Significant to Indigenous Peoples. More specific and perhaps divergent initiatives at international, regional, national and local levels may eventually be helpful. For the time being, however, it may be wise to rely primarily on UNDRIP as a chosen instrument to shape general practices. Even in an age of legal pluralism and overlapping normative ordering, the interests of indigenous peoples may be best served by universalising and refining a single regime (UNDRIP) to provide an authoritative common language for protecting cultural landscapes and seascapes of significance to indigenous peoples. An obvious model for such an approach has been the Universal Declaration of Human Rights as a foundation for the progressive development of human rights law in all of its complexity today. Then, as empirical evidence accumulates about both the efficacy and limitations of an UNDRIP-based regime, modifications to it and entirely new initiatives will likely be in order.

B. The established principle of sustainability must guide the formulation of rules to protect cultural landscapes of significance to indigenous peoples and to resolve disputes among diverse stakeholders. Representatives of indigenous peoples must be allowed to participate in global initiatives, such as the preparation of the United Nations Sustainable Development Goals (SDGs 2030) and local efforts so as to take fully into account and apply the experience and contributions of these peoples in promoting harmony with the Earth. By the same token, the United Nations organs and agencies should integrate the emerging regime associated with the Report for protecting cultural landscapes of significance to indigenous peoples. Economic development that encroaches on or impacts such cultural landscapes necessitates careful risk management or assessment.

C. The five distinct categories of cultural landscapes that the Report's typology proposes should inform the development of an effective international regime. Each category can be expected to generate its own normative variations.

D. The Aarhus Convention should be adopted as a model in requests to governing authorities for critical information that will encourage participation by indigenous peoples in decision-making and enable them and other interested parties to undertake good practices and collaborate effectively in making appropriate choices concerning cultural landscapes based on risk assessment and sound policy. The limitations to access of information in the Aarhus model should be modified to improve that access.

E. The UNESCO Operational Guidelines for the Implementation of the World Heritage Convention should be modified to require that all States Parties to the Convention obtain (as opposed to merely being encouraged to obtain) the free, prior and informed consent of indigenous peoples as a condition for seeking inscription on the World Heritage List of a site traditionally belonging to an indigenous community.

RESOLUTION NO.3/2016

COMITÉ SUR LE DROIT DU PATRIMOINE CULTUREL

La 77ème Conférence de l'Association du droit international, tenue à Johannesburg en Afrique du Sud du 7 au 11 Août 2016 :

AYANT EXAMINÉ le rapport sur la loi relative aux paysages culturels présentant un intérêt significatif pour les peuples autochtones ;

RECONNAISSANT tant le défi et l'importance de développer davantage les sources disparates et les travaux de doctrine issus de disciplines scientifiques intéressées par la protection d'un héritage culturel vulnérable et à plusieurs facettes ; que cet héritage culturel présente un lien étroit avec les intérêts des peuples autochtones ainsi qu'un caractère tant matériel qu'immatériel ;

CONVAINCUS que le rapport répond efficacement à ce défi et aidera les parties prenantes telles que les organisations intergouvernementales et non gouvernementales, les organisations régionales, les organisations de populations tribales et autres peuples autochtones, les intérêts économiques, les écologistes, les planificateurs et autres ;

ADOPTE les recommandations annexées à la présente résolution;

PRIE le Secrétaire général de l'Association de droit international de transmettre une copie de cette résolution et de son annexe au Secrétaire général des Nations Unies, au Secrétaire général de l'Organisation des Nations Unies pour l'éducation, la science et la culture, à toutes autres organisations internationales et régionales concernées, notamment aux organisations de peuples autochtones, et de diffuser largement la résolution et les recommandations annexées auprès de la communauté des juristes internationaux, en particulier les experts et les organes d'experts travaillant sur le droit du patrimoine culturel ;

REMERCIE le Président, les rapporteurs spéciaux, et les membres du Comité pour le précieux travail accompli ;

RECOMMANDE au Conseil exécutif que le Comité sur le droit du patrimoine culturel soit dissous, ayant accompli de nombreuses tâches, notamment deux projets de traités, un ouvrage, trois ensembles de lignes directrices et déclarations ainsi que de nombreuses études sur une période de 28 ans.

ANNEXE

RECOMMANDATIONS

A la lumière et en référence au rapport sur la loi relative aux paysages culturels présentant un intérêt significatif pour les peuples autochtones du Comité sur le Droit du Patrimoine Culturel, l'Association Internationale propose les recommandations suivantes :

A. La Déclaration des Nations Unies sur les droits des peuples autochtones (UNDRIP), bien que n'étant pas de droit dur, met en œuvre une procédure louable de collaboration interculturelle et une série de propositions concernant la protection des cultures autochtones aussi bien les sites, que les paysages y compris les paysages maritimes, ayant de l'importance patrimoniale pour les peuples autochtones. Mais cela ne peut être un instrument définitif car l'article 31 d'UNDRIP n'inclut pas explicitement dans sa liste extensive des formes d'héritage culturel, le concept de paysage culturel discuté dans le rapport sur la loi relative aux paysages culturel présentant un intérêt significatif pour les peuples autochtones. D'autres initiatives plus spécifiques et peut-être différentes peuvent être éventuellement opportunes aux niveaux international, régional, national et local. Pour le moment, toutefois, il est peut être sage de se reposer principalement sur l'UNDRIP comme premier instrument de référence pour façonner les pratiques générales. Même dans une ère de pluralisme juridique et d'ordonnancements normatifs qui se chevauchent, les intérêts des peuples autochtones seront peut être mieux servis en universalisant et affinant un régime unique (UNDRIP) afin de fournir une langue commune faisant autorité pour protéger les paysages et paysages maritimes significatifs pour les peuples autochtones. Un modèle évident pour une telle approche est celui de la Déclaration Universelle des Droits de l'Homme en tant que fondation pour le développement progressif des droits fondamentaux dans toute la complexité que nous connaissons aujourd'hui. Dans ce prolongement, au fil de l'accumulation de preuves empiriques relatives tant à l'efficacité qu'aux limites d'un régime fondé sur l'UNDRIP, des modifications à ce régime ou le développement d'initiatives complètement nouvelles seront probablement opportunes.

B. Le principe reconnu de durabilité doit orienter la formulation de règles pour protéger les paysages culturels d'importance significative pour les peuples autochtones et pour résoudre les conflits entre différentes parties prenantes. Des représentants de peuples autochtones doivent être autorisés à participer aux initiatives globales, comme la préparation des objectifs du développement durable des Nations Unies (SDGs 2030), et aux efforts locaux de manière à prendre complètement en compte et à appliquer les expériences et les contributions de ces peuples dans la promotion d'une harmonie avec la Terre. De même, les organes et agences des Nations doivent intégrer le régime réglementaire naissant résultant du Rapport pour la protection des paysages culturels significatifs pour les peuples autochtones. Les développements économiques qui empiètent sur ou affectent ces paysages culturels nécessitent des évaluations et gestions de risques conduits avec soin.

C. Les cinq catégories de paysages culturels que la typologie du rapport propose devraient éclairer le développement d'un régime international effectif. Il peut être prévu que chaque catégorie génère ses propres variations normatives.

D. La Convention d'Aarhus devrait être adoptée comme modèle pour les requêtes adressées aux autorités publiques afin d'obtenir des informations déterminantes pour encourager la participation des peuples autochtones dans la prise de décision et les habilitant, de même que toute autre partie intéressée, à adopter de bonnes pratiques et à collaborer efficacement dans la prise de décisions appropriées relatives aux paysages culturels, c'est à dire fondées sur l'évaluation des risques et des politiques saines. Les limites à l'accès à l'information dans le modèle de la Convention d'Aarhus devront être améliorées.

E. Les Orientations de l'UNESCO devant guider la mise en œuvre de la Convention du patrimoine mondial devraient être modifiées pour exiger que tous les États membres à la Convention obtiennent (contrairement à la simple incitation à l'obtention) le consentement libre, préalable et éclairé des peuples autochtones, et que ce soit une condition pour demander l'inscription sur la liste du patrimoine mondial d'un site appartenant traditionnellement à une communauté autochtone.

RESOLUTION NO.4/2016

INTERNATIONAL COMMERCIAL ARBITRATION

The 77th Conference of the International Law Association, held in Johannesburg, South Africa, 7 - 11 August, 2016:

HAVING CONSIDERED the Report on Inherent and Implied Powers of Arbitral Tribunals by the Committee on International Commercial Arbitration submitted to and discussed at the 76th Conference of the International Law Association held in Washington D.C., United States of America, 7 - 12 April, 2014;

RECOGNISING that powers of arbitral tribunals are an important aspect of the arbitral process in international arbitration but rarely have been analysed as to non-enumerated inherent and implied powers;

ADOPTS the Recommendations annexed to this Resolution;

COMMENDS the Recommendations to parties, arbitral tribunals and domestic courts considering the use of inherent and implied powers by arbitral tribunals;

REQUESTS the Secretary-General of the International Law Association to forward a copy of this Resolution to the Secretary-General of the United Nations Commission on International Trade Law and other appropriate international and regional organisations and circulate it widely amongst the community of international lawyers, in particular expert bodies in the field of international commercial arbitration;

WELCOMES the willingness of members of the present Committee to continue their activities;

RECOMMENDS to the Executive Council to extend the mandate of the International Commercial Arbitration Committee.

ANNEX TO RESOLUTION NO. 4/2016

INTERNATIONAL LAW ASSOCIATION

COMMITTEE ON INTERNATIONAL COMMERCIAL ARBITRATION

INHERENT AND IMPLIED POWERS OF INTERNATIONAL ARBITRAL TRIBUNALS

RECOMMENDATIONS

Considering the following Findings of the Committee's Report:

1. In addition to the powers expressly conferred by the parties' agreement and by the laws and rules governing the arbitration, international arbitral tribunals ("arbitral tribunals") have powers that are inherent and implied.
2. There exists no universal or closed catalogue of such powers, nor any fixed rules governing their invocation. Instead, the powers available and the use to which they may be employed depend substantially on the particular circumstances of the case.
3. Arbitral tribunals have invoked inherent and implied powers in varied situations, involving, *inter alia*, arbitral procedure, interim relief, decision-making, sanctions regarding alleged misconduct and impropriety, and revision of earlier decisions.
4. The arbitral rules and laws that apply to the arbitration constrain the powers that arbitral tribunals may exercise, and meaningful limits on those powers can be expressed by party agreement.
5. Inherent and implied powers have grown in recognition over time, and the historical context in which arbitral tribunals are operating is relevant. Actions that were once considered novel and contentious to take, absent express powers to do so, have now become part of the fabric of international arbitration.
6. The recognition and development of inherent and implied powers have proceeded in tandem with the proliferation of international arbitration, fostering and contributing to its creative development.
7. Inherent and implied powers may be assigned to three potentially overlapping categories:
   a. Powers implied by the parties' agreement and the rules and laws governing the arbitration,
   b. Discretionary powers over procedure, which are related conceptually to both implied and inherent powers, and
   c. Inherent powers necessary to preserve jurisdiction, maintain the integrity of proceedings, and render an enforceable award.
8. Implied and discretionary powers typically stem from and remain subordinate to party agreement.
9. Inherent powers are powers that would be expected to exist absent the clearest agreement, or provision of the *lex arbitri*, to the contrary.
10. Inherent powers will by their nature only arise for use in limited circumstances. They are to be read narrowly and used proportionately and only so far as necessary to meet the exigencies of the particular situation.

11. Categorising powers as implied, discretionary, or inherent helps ascertain the scope of powers that arbitral tribunals enjoy and assists in rendering orders and awards that withstand review.

The Committee recommends as follows:

1. *To Parties:*
   (a) Parties should understand that arbitral tribunals have inherent and implied powers.
   (b) Should parties wish to confirm, expand, or constrict arbitral powers, they should do so by agreement. However, it would be unusual and would at least require the clearest provision if arbitral powers were to be restricted in a manner that undermines an arbitral tribunal's jurisdiction, damages the integrity of its proceedings, or might result in an award liable to setting aside or unenforceability.

2. *To Arbitral Tribunals:*
   (a) In assessing the scope of their powers in any given situation, arbitral tribunals should first look to the arbitration agreement, the rules governing proceedings, and any relevant law.
   (b) If those sources do not adequately resolve the issue presented, arbitral tribunals should consider whether they can act on the basis of their implied, discretionary, or inherent power.
      (i) Implied power: Arbitral tribunals should examine the text of the parties' agreement and the other instruments governing the arbitration to determine if that text implies the power to resolve the particular issue.
      (ii) Discretionary power: Arbitral tribunals should assess whether the issue raised is a procedural question that, in the absence of contrary instruction, they would normally have the discretion to address.
      (iii) Inherent power: Arbitral tribunals should consider whether the issue before them risks undermining their jurisdiction, impugning the integrity of proceedings, or leading to their issuing an unenforceable award.
   (c) In proper deference to party autonomy, arbitral tribunals should undertake the analysis in this section sequentially, first determining whether they have the implied power to act, then whether they may exercise discretion, and finally whether they are to exercise an inherent power.
      (i) Arbitral tribunals may determine that the power to act is supported by more than one type of power. Where there are multiple bases for acting, tribunals should feel more comfortable in exercising power.
      (ii) Arbitral tribunals should feel safer in acting on the basis of implied or discretionary power than in acting on the basis of inherent power.
      (iii) When arbitral tribunals act solely pursuant to their inherent power, they must satisfy themselves that there is a compelling duty to act in order to preserve jurisdiction, maintain the integrity of proceedings, or render an enforceable award.
   (d) Before acting on the basis of any of these powers, arbitral tribunals should give the parties a reasonable opportunity to express their views and provide assistance to fashion the most appropriate solution in the circumstances before them. In doing so, the tribunal should also take into account the following:

(i) The legal background of the parties, and the legal systems under which the parties have chosen to arbitrate. Where the law governing the arbitration speaks clearly as to the permissibility of the exercise of a certain implied or inherent power, that determination must of course govern.

(ii) The appropriate scope of arbitral action, given the interests that a proposed measure might serve or put at risk. The remedy fashioned should be proportionate to the power being exercised and narrowly tailored to the situation presented.

(e) Arbitral tribunals should provide their reasoning for exercising implied, discretionary, or inherent powers, invoking such powers in a deliberate and thoughtful manner that will assist the award or decision in withstanding review at enforcement or set-aside proceedings.

3. *To Courts:*
Courts should appreciate that arbitral tribunals have inherent power as well as power conferred expressly or impliedly, as more fully described in paragraph 2 (b) and (c) above.

RESOLUTION NO.4/2016

ARBITRAGE COMMERCIAL INTERNATIONAL

La 77ème Conférence de l'Association de Droit International tenue à Johannesburg, Afrique du Sud, du 7 au 11 août 2016 :

AYANT CONSIDERE le Rapport du Comité de l'Arbitrage Commercial International sur les pouvoirs inhérents et implicites des tribunaux arbitraux soumis et discuté à la 76ème Conférence de l'Association de Droit International tenue à Washington, D.C., aux Etats Unis d'Amérique, du 7 au 12 avril 2014 ;

RECONNAISSANT que les pouvoirs des tribunaux arbitraux constituent un aspect important du processus arbitral en arbitrage international, mais qui a rarement été analysé du point de vue des pouvoirs inhérents et implicites non-énumérés ;

ADOPTE les Recommandations annexées à cette Résolution ;

PORTE les Recommandations à l'attention des parties, des tribunaux arbitraux et des juridictions nationales confrontés à l'utilisation des pouvoirs inhérents et implicites par les tribunaux arbitraux ;

DEMANDE au Secrétaire Général de l'Association de Droit International de communiquer une copie de cette résolution au Secrétaire Général de la Commission des Nations Unies sur pour le Droit Commercial International, ainsi qu'à d'autres organisations régionales et internationales appropriées, et de les faire circuler largement à travers la communauté des juristes internationaux, en particuliers des groupes d'experts dans le domaine de l'arbitrage commercial international ;

APPRECIE la volonté des membres de ce Comité de poursuivre leurs activités ;

RECOMMENDE au Conseil Exécutif d'étendre le mandat du Comité de l'Arbitrage Commercial International.

ANNEXE A LA RESOLUTION N° 4/2016

ASSOCIATION DE DROIT INTERNATIONAL

COMITE DE L'ARBITRAGE COMMERCIAL INTERNATIONAL

POUVOIRS INHERENTS ET IMPLICITES DES TRIBUNAUX ARBITRAUX

RECOMMANDATIONS

Considération prise des Déterminations suivantes du Rapport du Comité :

1. En plus des pouvoirs expressément conférés par l'accord des parties, comme par les lois et règles qui gouvernent l'arbitrage, les tribunaux arbitraux internationaux (« tribunaux arbitraux ») disposent de pouvoirs qui sont inhérents et implicites.
2. Il n'existe pas de catalogue universel ou limitatif de tels pouvoirs, ni de règles établies qui en régissent l'invocation. Mais, les pouvoirs disponibles et leur usage potentiel dépend en substance des circonstances particulières de l'affaire.
3. Les tribunaux arbitraux ont invoqués des pouvoirs inhérents et implicites dans des situations variées, qui impliques entre autres choses, la procédure arbitrale, les mesures provisoires et conservatoires, le processus de prise de décision, les sanctions de comportements inappropriés ou inconvenants, ainsi que la révision de précédentes décisions.
4. Les règlements d'arbitrage et les lois qui s'appliquent à l'arbitrage restreignent les pouvoirs que les tribunaux arbitraux peuvent exercer, et des limites significatives de ces pouvoirs peuvent être exprimées par accord des parties.
5. La reconnaissance de pouvoirs inhérents et implicites s'est accrue avec le temps, et le contexte historique dans lequel les tribunaux arbitraux opèrent a son importance. Les actions qui en leur temps ont été considérées comme nouvelles ou source de contentieux lors de leur mise en œuvre, en l'absence de pouvoirs exprès, font maintenant partie du processus arbitral international.
6. La reconnaissance et le développement des pouvoirs inhérents et implicites s'est développé en tandem avec la prolifération de l'arbitrage international, favorisant et contribuant à son développement créatif.
7. Les pouvoirs inhérents et implicites peuvent être divisés en trois catégories susceptibles de se recouper :
   a. Les pouvoirs implicites découlant de l'accord des parties et des règlements et lois qui gouvernent l'arbitrage,
   b. Les pouvoirs discrétionnaires sur la procédure, qui sont conceptuellement liés aux pouvoirs implicites comme aux pouvoirs inhérents, et
   c. Les pouvoirs inhérents nécessaires à la préservation de la compétence, au maintien de l'intégrité de la procédure, et au prononcé d'une sentence susceptible d'être exécutée.
8. Les pouvoirs discrétionnaires et implicites résultent généralement de l'accord des parties et y sont généralement soumis.
9. Les pouvoirs inhérents sont les pouvoirs dont on peut supposer l'existence en l'absence d'un accord contraire des plus clairs ou d'une disposition de la *lex arbitri*, qui s'y oppose.

10. Par leur nature, l'utilisation de pouvoirs inhérents ne sera en jeu que dans des circonstances limitées. Ils sont à comprendre strictement, pour un usage proportionnel et à seule fin de satisfaire aux exigences d'une situation particulière.
11. La catégorisation de pouvoirs comme étant implicites, discrétionnaires ou inhérents permet de déterminer l'étendue des pouvoirs dont disposent les tribunaux arbitraux et facilite le prononcé d'ordonnances et de sentences qui résistent à l'examen.

Le Comité recommande ce qui suit :

1. *Aux Parties :*
   (a) Les Parties devraient comprendre que les tribunaux disposent de pouvoirs inhérents et implicites.
   (b) Si les Parties entendent confirmer, étendre ou limiter les pouvoirs des arbitres, elles devraient s'accorder. Cependant, il serait inhabituel et justifierait au moins une stipulation des plus claires si les pouvoirs arbitraux devaient être limités d'une manière qui affecte la compétence du tribunal, comme l'intégrité de sa procédure, ou entraine le prononcé d'une sentence susceptible d'être annulée ou de se voir refuser l'exécution.

2. *Aux Arbitres :*
   (a) Pour déterminer, dans une situation donnée, l'étendue de leur autorité, les arbitres devraient se tourner en premier lieu vers la convention d'arbitrage, les règles qui gouvernent la procédure et tout droit concerné.
   (b) Si ces sources ne résolvent pas de manière adéquate la question qui se présente à eux, les tribunaux devraient se demander s'ils peuvent agir sur le fondement de leur pouvoir implicite, discrétionnaire ou inhérent.
      (i) Pouvoir implicite : les tribunaux arbitraux devraient examiner le texte de l'accord des parties et les autres instruments qui gouvernent l'arbitrage, pour déterminer si ce texte donne l'autorité de résoudre la difficulté en cause.
      (ii) Pouvoir discrétionnaire : les tribunaux arbitraux devraient évaluer si la difficulté en cause pose une question de procédure qu'ils auraient, en l'absence d'instruction contraire, normalement la discrétion de régler.
      (iii) Pouvoir inhérent : les tribunaux arbitraux devraient considérer si la difficulté en cause est susceptible d'affecter leur compétence, de contrarier l'intégrité de la procédure, ou de les conduire à rendre une sentence insusceptible d'exécution.
   (c) Par égard approprié pour l'autonomie des parties, les tribunaux arbitraux devraient conduire cette analyse par étapes, en déterminant d'abord s'ils ont le pouvoir implicite d'agir, ensuite, s'ils peuvent exercer leur discrétion, et enfin s'ils doivent exercer un pouvoir inhérent.
      (i) Les tribunaux arbitraux peuvent décider que leur pouvoir d'action se justifie par plus d'un type de pouvoir. Lorsqu'il y a plusieurs fondements à leur action, les tribunaux devraient se sentir plus confortables de mettre en œuvre cette autorité.
      (ii) Les tribunaux arbitraux devraient se sentir plus sûr d'agir sur le fondement de leur pouvoir implicite ou discrétionnaire que sur le fondement de pouvoirs inhérents.

(iii) Lorsque les tribunaux arbitraux agissent seulement en vertu de leur pouvoir inhérent, ils devraient s'assurer qu'il existe un devoir nécessaire d'agir pour préserver leur compétence, ou pour maintenir l'intégrité de la procédure, ou encore pour rendre une sentence susceptible d'exécution.

(d) Avant d'agir sur le fondement de l'un quelconque de ces pouvoirs, les tribunaux arbitraux devraient donner aux parties l'opportunité raisonnable d'exprimer leur point de vue et de les assister pour façonner la solution la plus appropriée dans les circonstances qui se présentent à eux. En le faisant ainsi, le tribunal devrait aussi tenir compte de ce qui suit :

(i) La culture juridique des parties et le système juridique dans le cadre duquel celles-ci ont choisi de conduire l'arbitrage. Lorsque la loi qui gouverne l'arbitrage couvre clairement la possibilité d'exercer un pouvoir implicite ou inhérent déterminé, cette indication doit bien sûr prévaloir.

(ii) L'étendue appropriée de l'action arbitrale, au vu des intérêts qu'une mesure envisagée pourrait servir ou menacer. Le remède envisagé devrait être proportionné au pouvoir exercé, et être rigoureusement adapté à la situation en cause.

(e) Les arbitres devraient expliquer le raisonnement qui les conduit à exercer des pouvoirs implicites, discrétionnaires ou inhérents, en invoquant ces pouvoirs de manière délibérée et réfléchie, qui permette à la sentence de résister à l'examen à l'occasion de procédures d'exécution ou d'annulation.

3. *Aux juridictions nationales :*
Les juridictions nationales devraient être sensibles au fait que les arbitres disposent de pouvoirs inhérents, ainsi que des pouvoirs conférés expressément ou implicitement comme il est décrit aux paragraphes 2 (b) et (c) ci-dessus.

RESOLUTION NO.5/2016

COMMITTEE ON INTERNATIONAL MONETARY LAW

The Ethical Culture of Financial Services

The 77th Conference of the International Law Association, held in Johannesburg, South Africa, 7 - 11 August 2016:

HAVING CONSIDERED the report on International Monetary Law;

NOTING FIRST that in the aftermath of the recent global financial crisis that has adversely impacted the economies (and societies) in many jurisdictions around the world, many have lost trust in the financial intermediaries that have traditionally bridged the gap between those who have accumulated savings and those who need to borrow;

SECOND that national and international institutions have promoted a range of supervisory and regulatory responses in an attempt to address the causes of that financial crisis and the erosion of public confidence in its wake;

THIRD that there have also been a number of important developments at the national and international level in soft law to address these issues;

FOURTH that these steps alone can only go so far in changing the behaviour of financial institutions operating nationally and internationally and of those working in them;

CONCLUDING that there is a growing recognition of the need for a cultural change to supplement the legal measures that have been and further will be taken;

CALLS ON international institutions, institutions in the financial industry acting internationally, and the international legal community:

A. to devote time and attention to foster an ethical culture to supplement and inform the operation of the law within the national and international financial industry and its institutions.;
B. to take steps designed to restore trust in the financial industry nationally and internationally;
C. to study and implement better practices that will lead those who deal with financial intermediaries to have a higher confidence in their integrity; and
D. to ensure that supervisors of financial intermediaries and financial service providers are adequately resourced to monitor and guide such entities in their implementation of good culture and conduct and to encourage sound standard-setting initiatives.

RÉSOLUTION NO. 5/2016

COMITÉ DE DROIT MONÉTAIRE INTERNATIONAL

La culture éthique des services financiers

La 77ème Conférence de l'Association de Droit International, qui s'est tenue à Johannesbourg (Afrique du Sud) du 7 au 11 août 2016 :

AYANT PRIS CONNAISSANCE du rapport sur le droit monétaire international ;

CONSIDÉRANT qu'à la suite de la récente crise financière mondiale dont maints pays à travers le monde ont subi les conséquences économiques et sociales, nombreux sont ceux qui ont perdu confiance en leurs intermédiaires financiers, lesquels faisaient traditionnellement le lien entre épargnants et emprunteurs ;

CONSIDÉRANT que l'action d'institutions nationales et internationales a permis de prendre une série d'initiatives en matière de supervision et de réglementation pour s'attaquer aux causes de la crise financière et à la perte de confiance qui en résulte ;

CONSIDÉRANT que de nombreuses normes non contraignantes (*soft law*) ont également été adoptées à l'échelon national et international en réponse à ces problèmes ;

CONSIDÉRANT que ces mesures ne peuvent, à elles seules, conduire à un changement de comportement tant des établissements de crédit opérant dans un cadre national et international que de leurs agents ;

ESTIMANT qu'il est de plus en plus reconnu qu'un changement de culture doit accompagner les mesures juridiques qui ont été et seront adoptées ;

INVITE les organisations internationales, les établissements de crédit à dimension internationale, et la communauté juridique internationale :

A. À promouvoir, en y consacrant le temps et l'attention nécessaires, une culture éthique qui complète et éclaire l'application du droit au sein du secteur financier, tant national qu'international, et des établissements de crédit qui en font partie ;
B. À adopter des mesures visant à restaurer la confiance dans le secteur financier tant au niveau national qu'international ;
C. À étudier et à mettre en œuvre de meilleures pratiques qui restaurent, chez ceux qui traitent avec les intermédiaires financiers, leur confiance en ceux-ci ; et
D. À veiller à ce que que les autorités de supervision des intermédiaires financiers et des prestataires de services financiers disposent de moyens suffisants pour suivre et guider ces entreprises dans la mise en œuvre d'une culture éthique adéquate dans ce domaine et pour encourager les initiatives visant au développement de saines pratiques.

RESOLUTION NO.6/2016

NON-STATE ACTORS AND INTERNATIONAL LAW

The 77th Conference of the International Law Association, held in Johannesburg, South Africa, 7 - 11 August 2016:

HAVING CONSIDERED the Reports of the Committee on Non-State Actors and International Law;

NOTING, first, the challenges that a growing and diverse group of non-state actors pose for international law; second, the range of distinctive and dissimilar practices which currently exist with regard to non-state actors; and third, the increasing significance attaching to the legal status, rights and responsibilities of non-state actors under international law;

NOTING IN PARTICULAR the continuing efforts in international humanitarian and human rights law to control the activities of transnational companies and armed opposition groups; the need to regulate the rising cooperation between NGOs and IGOs; and the trend to extend international enforcement, sanctioning and dispute settlement systems to non-state actors;

ACKNOWLEDGING the fact that the Committee has adopted a broad working definition of non-state actors, and that it is not possible to draw general or particular conclusions, in terms of *de lege lata* or *de lege ferenda*, without more specific analysis of individual types of non-state actor;

RECOGNISING a corresponding need for an applied typology of non-state actors and a differentiated examination of the status, rights and/or duties of specific types of non-state actors under international law;

COMMENDS the work of the Committee which introduced the many facets of this topic;

RECOMMENDS that the Executive Council dissolve the Committee which has achieved its mandate, while being prepared to consider favourably proposals for a new Committee with a more focused mandate.

RESOLUTION NO. 6/2016

LES ACTEURS NON ÉTATIQUES ET LE DROIT INTERNATIONAL

La 77e Conférence de l'Association de droit international, tenue à Johannesburg, en Afrique du Sud, du 7 au 11 août 2016 :

CONSIDÉRANT les Rapports du Comité sur les acteurs non étatiques et le droit international,

PRENANT NOTE, en premier lieu, des défis posés au droit international par la multiplication et la diversification des acteurs non étatiques ; en deuxième lieu, du large spectre de pratiques variées et singulières relativement aux acteurs non étatiques ; et en troisième lieu, de l'importance accrue du statut juridique, des droits et obligations des acteurs non étatiques en droit international ;

PRENANT NOTE EN PARTICULIER des efforts soutenus dans le droit humanitaire et dans les droits de l'homme, visant à contrôler les activités des entreprises multinationales et des groupes d'opposition armés ; du besoin de réguler la coopération croissante entre les organisations non gouvernementales (ONG) et les organisation internationales (OI) ; et de la tendance à étendre les systèmes internationaux de mise en œuvre du droit, de sanction et de règlement des différends aux acteurs non étatiques ;

RECONNAISSANT le fait que le Comité a adopté une large définition de travail des acteurs non étatiques, et qu'il n'est pas possible de tirer des conclusions générales ou particulières, en termes de *lege lata* ou de *lege ferenda*, sans une analyse plus spécifique des différents types d'acteurs non étatiques ;

RECONNAISSANT, par conséquent, la nécessité d'une classification des types d'acteurs non étatiques et d'un examen différencié du statut, des droits et/ou obligations des types spécifiques d'acteurs non étatiques en droit international ;

FÉLICITE le travail du Comité qui a présenté les nombreux aspects de ce sujet ;

RECOMMANDE que le Conseil exécutif dissolve le Comité qui a achevé son mandat, tout en étant préparé à considérer de manière favorable des propositions pour un nouveau Comité avec un mandat plus précis.

RESOLUTION NO.7/2016

STUDY GROUP ON PRINCIPLES ON THE ENGAGEMENT OF DOMESTIC COURTS WITH INTERNATIONAL LAW

The 77th Conference of the International Law Association, held in Johannesburg, South Africa, 7–11 August 2016:

ACKNOWLEDGING the increased and increasing engagement of domestic courts with international law;

DESIRING to assist scholars and practitioners, including domestic judges, in dealing with the complex issues that arise in the context of invocation and application of international law before and by domestic courts;

NOTING WITH SATISFACTION the conclusion of the work of the Study Group on Principles on the Engagement of Domestic Courts with International Law;

THANKS the Chair, the Co-Rapporteurs, the members of the Study Group, and the external researchers associated with the Study Group for the valuable work done;

COMMENDS the Final Report of the Study Group to the membership of the Association and to relevant stakeholders, including domestic judges and practitioners;

RECOMMENDS that the Study Group be dissolved.

RÉSOLUTION NO. 7/2016

GROUPE D'ÉTUDE SUR LES PRINCIPES CONCERNANT LE RECOURS AU DROIT INTERNATIONAL PAR LES JURIDICTIONS NATIONALES

La 77ème Conférence de l'Association de Droit International, qui s'est tenue à Johannesburg (Afrique du Sud) du 7 au 11 août 2016 :

RECONNAISSANT le recours accru et croissant au droit international par les juridictions nationales ;

DÉSIREUSE de prêter assistance aux experts et praticiens, notamment les juges nationaux, traitant de problèmes complexes survenant dans le contexte de l'invocation et de la l'application du droit international devant et par les juridictions nationales ;

NOTANT AVEC SATISFACTION la conclusion des travaux du Groupe d'étude sur les principes concernant le recours au droit international par les juridictions nationales ;

REMERCIE le Président, les co-rapporteurs, les membres du Groupe d'étude et les chercheurs extérieurs associés au Groupe d'étude pour l'utile travail accompli ;

PORTE le Rapport final à l'attention des membres de l'Association et aux parties prenantes concernées, y compris les juges nationaux et les praticiens ;

RECOMMANDE que le Groupe d'étude soit dissous.

RESOLUTION NO.8/2016

STUDY GROUP ON DUE DILIGENCE IN INTERNATIONAL LAW

The 77th Conference of the International Law Association, held in Johannesburg, South Africa, 7–11 August 2016:

RECOGNISING the importance of due diligence as a relevant standard of conduct in many areas of international law;

RECOGNISING ALSO the continuing reliance on due diligence by international courts and tribunals;

DESIRING to assist in the clarification of the material factors and underlying principles in the identification and operation of due diligence as a standard of conduct in such areas of international law;

NOTING the conclusion of the work of the Study Group on Due Diligence in International Law;

THANKS the Chair, the Rapporteur and the members of the Study Group for their work;

COMMENDS the Final Report of the Study Group to the membership of the Association;

RECOMMENDS that the Study Group be dissolved.

RÉSOLUTION NO. 8/2016

GROUPE D'ÉTUDE SUR LA « DILIGENCE REQUISE » EN DROIT INTERNATIONAL

La 77e Conférence de l'Association de droit international, organisée à Johannesburg, Afrique du Sud, du 7 au 11 août 2016 :

RECONNAISSANT l'importance de la diligence requise comme norme de conduite pertinente dans plusieurs domaines du droit international ;

RECONNAISSANT AUSSI le recours très fréquent à la diligence requise par les juridictions et tribunaux internationaux ;

DÉSIREUSE de contribuer à la clarification des facteurs matériels et de mettre en évidence les principes régissant l'identification et la mise en œuvre de la diligence comme standard de conduite dans ces champs du droit ;

PRENANT NOTE de la conclusion des travaux du Groupe d'étude sur la diligence requise en droit international ;

REMERCIE le Président, le Rapporteur et les membres du Groupe d'études pour leurs travaux ;

PORTE le rapport final du Groupe d'étude **à l'attention** des membres de l'Association ;

RECOMMANDE que le Groupe d'étude soit dissous.

RESOLUTION NO.9/2016

STUDY GROUP ON PREFERENTIAL TRADE AGREEMENTS

The 77th Conference of the International Law Association, held in Johannesburg, South Africa, 7 -11 August 2016:

ACKNOWLEDGING the increasing relevance of preferential trade agreements;

DESIRING to assist negotiators and scholars in dealing with the various and complex issues that arise in this context;

NOTING WITH SATISFACTION the conclusion of the work of the Study Group on Preferential Trade Agreements;

THANKS the Co-Chairs, the Co-Rapporteurs and the members of the Study Group for the valuable work done;

COMMENDS the Final Report of the Study Group to the membership of the Association and to relevant stakeholders;

TAKES NOTE of the wish of the Study Group that the Executive Council of the ILA establishes a Committee to continue the work on this topic;

RECOMMENDS that the Study Group be dissolved.

RÉSOLUTION NO. 9/2016

GROUPE D'ÉTUDE SUR LES ACCORDS COMMERCIAUX PRÉFÉRENTIELS

La 77ème Conférence de l'Association de Droit International, qui s'est tenue à Johannesburg (Afrique du Sud) du 7 au 11 août 2016 :

RECONNAISSANT l'importance croissante des accords commerciaux préférentiels ;

DÉSIRANT prêter assistance aux négociateurs et aux spécialistes afin de faire face aux problèmes divers et complexes qui se présentent dans ce contexte ;

PRENANT NOTE AVEC SATISFACTION de la conclusion des travaux du Groupe d'étude sur les accords commerciaux préférentiels ;

REMERCIE les co-présidents, les co-rapporteurs et les membres du Groupe d'étude pour l'utile travail accompli ;

PORTE le Rapport final à l'attention des membres de l'Association et aux parties prenantes concernées ;

PRENDS NOTE du souhait du Groupe d'étude que le Conseil exécutif de l'ILA institue un comité afin de poursuivre le travail sur ce sujet ;

RECOMMANDE que le Groupe d'étude soit dissous.

NOTES ON THE BUSINESS OF THE ASSOCIATION

April 2014 – August 2016

(Compiled from the Minutes of the Executive Council Meetings held in October 2014 and in April and November 2015 and in May 2016, and the Full Council meetings in August 2016).

Executive Council, 18 October 2014, London

Lord Mance (Chair) welcomed Members of the Executive Council and in particular, Dr Damilola S Olawuyi (Nigerian) and Charles Claypoole (British) who were attending for the first time. He also congratulated Professor Vanda Lamm (Hungary) and Marcilio Franca Filho (Brazil) who had both been appointed recently as Presidents of their respective Branches.

Professor Torsten Stein pointed out that ILA funds were in a healthy state. The balance held in the recently opened account for the Scholarship Fund was shown. He drew attention to the Branch contributions received thus far which were in excess of the amount received at the same time in 2013. He expressed gratitude to the British Branch for increasing the fee paid to HQ for the administration of the Branch. There had been an encouraging increase in membership numbers in the last 12 months. In particular the rise in membership of the American and French Branches were noted. The opening of 3 new Branches in April had also had an impact on this figure.

The Director of Studies commented on the success of the Washington Conference and thanked all concerned. 3 Committees had completed their mandates and therefore they were wound up: International Trade Law; Reparation for the Victims of Armed Conflict and The Legal Principles Relating to Climate Change. The very active Officers and Members of these Committees were acknowledged. A fourth Committee International Family Law was also wound up to allow the possibility of a new Committee in this field to be established should a new mandate be forthcoming. Extensions to the mandates until 2016 were granted to several committees. The following were appointed as Committee Officers: Alan Ewins (Hong-Kong) as Co-Chair of the International Securities Regulation Committee; Thilo Rensmann (Germany) and Professor Gus Waschefort (South Africa) were appointed Co-Rapporteurs on the International Human Rights Law Committee and Professor Christina Binder (Austria) was appointed as Co-Rapporteur on the Feminism and International Law Committee. Two new Committees were approved: Sustainable Development and the Green Economy in International Trade Law with Professor Mary Footer (UK & Netherlands Branch), Chair and Professor Meredith Kolsky Lewis (New Zealand) and Professor Locknie Hsu (HQ, Co-Rapporteurs; and Global Health Law Co-Chairs: Professor Frederick Abbott (American) and Brigit Toebes (Netherlands).

The Study Group on *Role of Soft Law Instruments in International Investment Law* was wound up. The mandates for the 2 Study Groups were extended to 2016: *Principles of Engagement of Domestic Courts with International Law* and *The Conduct of Hostilities under International Humanitarian Law.*2 new Study Groups were also approved: *UN Sanctions and International Law* Chair: Larissa van den Herik (Netherlands) and Kristen

Boon (*NM)* Co-Rapporteur; and *Individual Responsibility in International Law:* Co-Chairs: Chimene Keitner (American) and Lorna McGregor (British).

To allow work to commence more swiftly in certain particularly topical areas, it was agreed that appointments to Committees might be approved by email circulation to the Executive Council.

It was also agreed that Branches should urge their representatives on the ILA Committees to report back to them regularly.

Lord Mance reported that the papers of the ILA Regional Conference in Cape Sounion, Greece will have its papers published by W G Hart in due course.

Professor Manuel Almeida Ribeiro reported that the recent Regional Conference in Lisbon had been very successful and that the papers presented there will be published by Brill.

Dr Damilola Olawuyi informed the Executive Council that the Nigerian Branch will hold its inaugural meeting at a Conference on 28 October 2014. This will be attended by the Chief Justice of Nigeria and other senior figures. The theme of the event is: *Transnational Threats to Commercial Investment.*

Professor Chun-i Chen confirmed that the 2015 ILA/ASIL Asia-Pacific Research Forum :*Why International Law Matters?* would take place as planned in Taipei on 25 – 26 May 2015.

Professor Hennie Strydom confirmed that the ILA2016 Conference will be held in the Sandton Conference Centre in Johannesburg from 7-11 August. Chris Ward reported that plans for Sydney in 2018 are taking shape and Professor Yuji Iwasawa confirmed that preparations are underway in the Japanese Branch for the Conference in 2020 to be held in Kyoto in August. (The Olympic Games will be staged in Tokyo in July.)

Professor Catherine Kessedjian reported to the Executive Council on the establishment of the Scholarship Fund and the initial awards made. Over £10,000. Just under half this amount had been used to facilitate the attendance of 8 Scholars at the Regional Conference in Lisbon. The balance will be used toward the funding needed for the next Biennial Conference in Johannesburg.

Bruce Mauleverer QC was elected Patron & David Wyld was elected Vice-Chair in his place. Dr Antonios Tzanakopoulos was elected as Honorary Secretary General.

It was agreed that the ILA's mission statement should be reviewed and re-drafted.

Executive Council, 25 April, 2015, London

Lord Mance welcomed Professor Andrea Bjorklund (American & Canadian) who was attending for the first time. Tributes were paid to Dr Ivor Jackson and to Dr Luke Lee

Professor Torsten Stein presented the Annual Accounts for 2014 and said the financial position was good with reserves in excess of the minimum required. Provision for the ILA website & database revamp was included in the budget for 2015 and that these costs would actually come from the reserves.

The Director of Studies, Professor Brus had drafted new Rules & Guidelines for ILA Committees and Study Groups. Xavier Seuba (Spanish) and Ellen 't Hoen (Netherlands) were appointed Co-Rapporteurs of the Global Health Law Committee. Dalee Sambo Dorough (US) was appointed as Co-Chair and Timo Koivurova (Finnish) as Co-Rapporteur of the Committee on Implementation of Rights of Indigenous People. Eronika Bilkova (Czech) was appointed as Rapporteur on the Non-State Actors Committee. A new ILA Committee on the Rule of Law and International Investment Law chaired by August Reinisch (Austrian) with Andrea K Bjorklund (US) and Andreas R Ziegler (Swiss) as Rapporteurs was approved. An extension was agreed to the mandate to 2016 of the Study Group on *Use of domestic law Principles for the development of international law.* A new ILA Study Group on *Content and Evolution of the Rules of Interpretation* was approved. It will be chaired by Professor Photini Pazartzis (Hellenic) with Dr Panos Merkouris (Hellenic) as Rapporteur.

The Treasurer announced he would attend the 2015 ASIL-ILA Asia-Pacific Research Forum in Taipei from 25-26 May. Professor Hennie Strydom confirmed, the 2016 Biennial Conference will take place from 7 – 11 August in Johannesburg at the Standen Conference Centre. Professor Nakatani reported work was well under way for the 2020 Conference to be held in Kyoto at the Kyoto International Conference centre from 23 – 27 August 2020. The Executive Council accepted an invitation from teh Portuguese Branch to host the Biennial Conference in 2022. Professor Catherine Kessedjian (French) formally proposed that festivities be organised by the French Branch in Paris in 2023 to mark the 150th Anniversary of the founding of the ILA. It was suggested that a publication covering the ILA's history should be issued.

Professor Torsten Stein was re-elected as Honorary Treasurer for a further four year term.

A draft of the new Mission Statement had been presented and it was agreed that further consideration was required.

Two new Branches were established: Belarusian and Indonesian. It was agreed that renewed efforts should be made to encourage the establishment of a Branch in the PRC.

Executive Council, 14 November 2015, London

Lord Mance (Chair) expressed condolences to France for the atrocities committed in Paris the previous evening, 13 November. He welcomed Dr David Berry (Caribbean); Professor Alena Douhan (Belorussian); Dr Cemeletin Karadas (Turkish) & Judge Milenko Kreca (Serbian) who were attending for the first time.

Tributes were paid to Mr Barry Sen, who had been responsible for the foundation of the Indian Branch in 1950.

The Hon Treasurer, Professor Torsten Stein said that the ILA funds were again in a satisfactory state. He was hopeful that there would not be a deficit in 2015. Branch contributions received were already almost at the level budgeted for the year and there had been a higher than expected contribution from Hein on Line. The initial instalment to the cost of the website & database developer had been made and was shown as an extraordinary expense, it having been agreed that the costs of the project should come from the general funds. He pointed out that a deficit has again been envisaged in 2016, but that an increase

in ILA membership may ameliorate this. It was agreed that an increase in fees should be avoided if possible.

The Statement of Branch Contributions/Branch Membership as at 12 November (Annex 4) showed an encouraging rise in membership. The Treasurer stressed that Branches should be responsible for paying the fees of the number of Members listed in the branch, not just for those Members who have actually paid their fees. It was noted that the Croatian the Hellenic and the Turkish Branches will be expected to make payments by the end of the year.

The Director of Studies asked that Branches should consider whether they might be able to support Committees by hosting meetings locally, The Dutch Branch had just (financially) supported a meeting in The Hague and Leiden of the Role of International Law in Sustainable Natural Resource Management Committee (12-14 November 2015), as it did in June 2015 when the Study Group on UN Sanctions met in Leiden.

Three new Committee Officers were appointed, Professor Charles Jalloh (US) as Rapporteur on the Committee on Complementarity in International Law, Professor Jan von Hein (German) and Dr Christina Mariottini (American) as Co-Rapporteurs of the Committee on Protection of Privacy in Private International & Procedural Law. It was agreed that the ILA should operate in a transparent manner and that the practices relating to (membership of) Study Groups should be in conformity with the ILA's policies. Study Groups should aim at completing their work within a short life span and their membership should reflect the membership of the ILA. Members wishing to engage in longer term cooperation without having the ambitions of a Committee should consider forming an Interest Group. Professor Brus announced that a draft Programme for ILA2016 in Johannesburg had been circulated to all ILA Committee and Study Group Officers. As a high number of Resolutions were expected at this event, the Steering Committee whose members would be: Lord Mance, Dr Antonios Tzanakopoulos (Chair), Professor Marcel Brus, Professor Cynthia Lichtenstein, a representative from the South African Branch (to be identified), David Wyld, James Green, Dapo Akande and Christian Tam was appointed.

The website for the 2016 Conference in Johannesburg was then displayed and arrangements presented. Professor Chris Ward announced that the Hilton Hotel in Sydney has been provisionally booked from 9-25 August 2018. This Conference will be held jointly with Australian & New Zealand Societies, so a full parallel Programme will be provided. The Japanese Branch has appointed a Conference Committee for the Conference in 2020 in Kyoto.

The Portuguese Branch was considering the location for the 2022 Conference. Professor Kessedjian said it was important that all Branches should be involved and should participate in the 150th Anniversary Celebration to be held in 2023. It was agreed that the occasion would be an ideal opportunity for the history of the Association to be written up & published.

Professor van Genugten reported on progress made by that the Scholarship Fundraising Committee whose Members were: Professor Willem van Genugten (Chair), Professor Catherine Kessedjian, Professor Stephan Hobe and Professor Dapo Akande.

Professor Antonios Tzanakopoulos reported that work was under way on the new integrated system which will operate the HQ database and website. These are being designed to allow individual ILA Members, Branch & Committee Officers to update and post information directly onto the website. Those that already have their own independent site can of course continue to use that & this can be hyper-linked to the ILA central site.

Two additional Branches were approved in Pakistan & Cyprus. A Singaporean branch had been formally established on 30 June. Lord Mance attended and addressed the inaugural meeting in September. The representatives of two recently established Branches, Caribbean and Belorussian, reported on recent activities.

The Policy & Finance Committee was renamed the Management Committee.

Lord Mance reported that additional material would shortly be added to the ILA archives.

Executive Council, 7 May 2016, London

Lord Mance welcomed Ms Valentina Dimitriou (Cypriot); Professor Paul Dubinsky (American); Dr Erick Kassongo (HQ Member from The Congo) Professor Fidelis Oditah (Nigerian); Mr Akis Papastavridis (Hellenic); Dr Christophe Paulussen (Netherlands) & Chen-Yu Wang (Chinese (Taiwan))

Tributes were paid to Professor Luigi Ferrari Bravo, former President Italian Branch had died recently.

The Annual Accounts for 2015 showed a surplus of just over £14,000. On the advice of the Auditor, all costs for the new website/database project would be taken into 2016 and written off as an intangible asset over the course of the next 5 years. The current financial position remains good so both the website/database & archive projects will be comfortably covered by the funds in reserves. The British Branch had contributed to the archive project. A rise in the rent for the HQ office was expected as the University of London had taken control of all the accommodation within the Institute of Advanced Legal Studies.

A new Committee on the Procedure of International Courts and was approved. The Officers were: Co-Chairs: Professor Helene Ruiz Fabri (French); Professor Philippe Sands (UK) & Professor Shotaro Hamamoto (Japan). The Co-Rapporteurs: Dr Arman Savarian (UK) & Dr Fillipo Fonatanelli (Italy).

Professor Hennie reported that the Programme for Johannesburg Conference was almost complete and most speakers had now confirmed their participation. Although fees were low & the destination inexpensive, registration was disappointing. The Sydney Conference will be held in Sydney from 20 – 24 August 2018 and the 2020 Conference will be held at the Kyoto International Conference centre from 23 – 27 August 2020. It was too early at this stage to have any details for the ILA2022 Conference which will be held in Portugal. Plans were in hand for the celebration of the 150th Anniversary of the formation of the ILA which will take place in Paris in 2023.

The Executive Council gave the Chair the mandate to finalise the text of the ILA Missions Statement.

Bruce Mauleverer QC reported on the work of the Scholarship Fund Award Committee (comprising Professor Cynthia Lichtenstein, Dr Sarah Nouwen & Professor Lavanya

Rajamani). The Committee had unanimously selected the 11 individuals from over 40 applicants. They received awards to allow them to attend the Johannesburg Conference.

First Full Council Meeting, 8 August 2016, Johannesburg

The Chairman welcomed Dr Damilola S Olawuyi (Vice-President, Nigerian Branch); Mr Ihor Turyanskiy (representing Ukrainian Branch); Professor Fernando Loureiro Bastos (representing Portuguese Branch) and Dr Veronika Bilkova (representing the Czech Branch) who were all attending for the first time.

He then listed the names of the following notable ILA Members who had died since the previous Conference in Washington DC: Dr Ivor Jackson (American); Mr Barry Sen (founder of Indian Branch); Professor Luigi Ferrari Bravo (former President, Italian Branch); & very recently, in July 2016, Judge Dolliver Nelson (British Branch), *who had been President of ITLOS (International Tribunal of the Law of the Sea dates)* & former Chair of the ILA Baselines Committee.

Lord Mance said that the attendance of 20 award winning Scholars at this Biennial Conference was an unprecedented and most welcome development. He thanked Professor Willem van Genugten (President, Netherlands Branch) for his own generosity & that of his law school, the Dutch Embassy in Pretoria, his friends & other colleagues who had funded 9 of these Scholars. 11 of them had been funded by the ILA's own Scholarship scheme which had been launched in 2014. He particularly thanked Professor Catherine Kessedjian (President, French Branch) as she had been the originator of the entire Scholarship scheme.

Professor Patrick Vranken, behalf of the South African Branch, proposed Professor Hennie Strydom, President of the South African Branch as next President of the Association. This was seconded by Jeremy Carver (President) and Professor Antonios Tzanakopoulos (Joint Secretary) of the British Branch. Thanks of the Full Council were expressed to Professor Ruth Wedgwood as she stepped down as President.

Lord Mance informed the Full Council that the Steering Committee (which had been appointed by the Executive Committee in May) had met the previous evening. He said the role of this Committee had developed at recent Conferences to look more actively and more critically than had been the case earlier, at Committees' Reports and Recommendations before Resolutions were put to the Closing Sessions.

The Members of the Steering Committee at the Johannesburg Conference were: Lord Mance; Professor Antonios Tzanakopoulos; Professor Marcel Brus; Professor Cynthia Lichtenstein; Bruce Mauleverer QC (replacing David Wyld); Professor James Green; Professor Dapo Akande; Professor Christian Tams and Professor Engela Schlemmer.

Professor Torsten Stein presented the Treasurer's Report which covers the full financial years from one Conference to the next and in this case, 2014 and 2015. These showed that the Association was in a healthy position at the end of 2015.

Professor Brus thanked the South African Branch warmly for providing such a full and interesting Programme for the Conference. 23 of the ILA's 24 Committees would be holding Open Working Sessions during the Conference. 8 Study Groups out of the current 12 would also be holding sessions in Johannesburg. The 6 Committees expected to

produce Resolutions at the Closing Session are: International Protection of Consumers; International Human Rights Law; Cultural Heritage Law; International Commercial Arbitration; International Monetary Law and Non-State Actors.

The revised Constitution which had been approved by the Executive Council in May 2016 would be circulated to all ILA Members present at the Conference and then presented for adoption at the Closing Session of the Conference.

Professor Willem van Genugten (President, Netherlands Branch) drew the attention of the Full Council to the joint Conference which had been arranged by the Cypriot & Netherlands Branch, with the financial support of the Dutch Embassy in Nicosia. This demonstrated the effectiveness of collaboration between Branches and said this should be viewed as a good example of outreach. He also said that some structural fundraising should also be attempted in order to further the participation in the work of the ILA from less developed economies and younger people.

Second Full Council, 11 August 2016, Johannesburg

The Director of Studies thanked the organisers for ensuring that the facilities provided were so good and had allowed the ILA Committees & Study Groups to conduct their work with ease. There had been some disappointment with the number of delegates registered, but most meetings had managed to have good discussions in spite of small numbers attending in some cases.

23 Committees, 8 Study Groups & 1 Interest Group had held Open Working Sessions. Several had also arranged closed meetings for their Members. He expressed his thanks to the Officers & Members concerned. 6 Committees had produced Resolutions at this Conference. He announced that Study Groups finishing their work would also be presenting Resolutions to mark the end of their work at this Conference. These Resolutions only take note of and do not adopt as work of the ILA any work of the Study Groups. The Resolutions should make the result of the work of the Study Groups more visible and would be published on the ILA website. He said that perhaps there had been insufficient scrutiny of the Reports & Resolutions during the Working Sessions and the Steering Committee had had to intervene. Finally, he said that the 32 Reporters who had done such challenging work covering all the Working Sessions should be thanked and especially their co-ordinator, Alex Kunzelmann.

Professor Cynthia Lichtenstein (American Branch) proposed a vote of thanks to the Chairs of the Working Sessions. This was seconded by Professor Antonios Tzanakopoulos (British Branch) and warmly approved by the Council. Professor Chris Ward (Australian Branch) proposed a vote of thanks to the South African Branch.

The Chair, Lord Mance drew attention to the success of the Scholarship programmes and the enthusiasm shown by the 20 young individuals who had attended this Conference as a result. Several ideas for future collaboration amongst themselves and with the ILA more generally had been proposed.

FINANCIAL REPORT 2014 – 2015

By the Honorary Treasurer

This report must be seen and read as a continuation of the report included in the report of the 2014 Conference held in Washington DC.

The data set out below, represent a summary of the figures of the main items of income and expenditure as audited for the years 2014 and 2015.

	Total 2014 £	Total 2015 £
Incoming Resources		
Subscriptions		
Branches	100,294	109,043
Headquarters membership	4,135	3,515
	104,429	112,558
Sales		
Publications	2,140	10,370
Deposit interest	238	291
Donation		
Contribution towards the administration of ILA branches	3,000	3,00
Royalties	4,666	6,024
ILA Scholarship Fund	10,535	6,461
	18,439	15,776
Total Incoming Resources	125,008	138,704
Deduct: Total Expenditure	114,817	118,119
Net Income (*Expenditure*) for the year	10,191	20,585
Total funds brought forward	178,203	188,394
Total funds carried forward	188,394	208,979

Expenditure		
Direct Charitable Expenditure:		
Conference report – distribution	1,002	1,393

Funds		
Unrestricted Funds	182,555	196,679
Restricted Funds (Scholarship Fund)	5,839	12,300
Total Funds	188,394	208,979

Notes on Income

ILA receives most of its income from overseas branch subscriptions, following the standing practice such income is accounted for on a receipts basis.

Contributions are based on the numbers of members listed by each branch and recorded on the database maintained by ILA Headquarters. Invoices are sent to Branches annually.

Bank interest and other income are included in the financial statements on an accruals basis.

ILA Scholarship Fund has been established to encourage and facilitate younger persons to participate in the work of the ILA (shown as Restricted Funds).

Notes on Expenditure

Expenditure in 2014 and 2015 was within budget.

General Notes

Pursuant to provisions in the Charities Act 1993 applying to Charities with a gross annual income or expenditure below £ 250,000 in an accounting year, the Officers have elected that the accounts be "examined" rather than "audited", giving rise to a considerable saving in professional fees.

ILA reserves policy

To be able to provide reliable services over a longer period the Association must be able to absorb occasional shortfalls in income.

As the income of the Association comes mainly from its members (branches) from all over the world the annual level of income and the regularity of payment show big fluctuations over the years and as the expenditure in relation to the level of services is already minimal, and no big reductions in expenditure can be made, it is desirable that the Association maintains a reserve at least equal to the expenditure of one calendar year.

Professor Torsten Stein
Hon Treasurer

HISTORY OF THE INTERNATIONAL LAW ASSOCIATION

The International Law Association, originally called The Association for the Reform and Codification of the Law of Nations, was founded in Brussels in October 1873.

From its earliest days, the policy of the Association was one of openness and outreach: there was no fixed number of members but it was open to anyone interested in the improvement of international relations, lawyers or not. Equally the Association has always had a broad view of its mandate, which is not limited to public international law but includes private international law and comparative studies relevant to each. The contributions made to the work of the International Committees by those with a practical knowledge of relevant disciplines have been of enormous value.

Membership of the ILA is organised on a regional basis. There are currently some 50 branches around the world. These may be coextensive with States, but may reflect regional groupings; in any event the branches do not represent governments or national views. The branches are autonomous but work under the approval of the Executive Council, which is elected by the branches. Most branches organise seminars and meetings locally for their members, some also establish committees to study areas of law in parallel with those covered by the international committees.

The objectives of the ILA are: *the study, clarification and development of international law, both public and private, and the furtherance of international understanding and respect for international law.*

These objectives are pursued principally through the work of the Association's international committees, with the focal point of its activities the series of biennial conferences. These provide a forum for comprehensive discussion and endorsement of the work of the committees.

Record of ILA Conferences:

City	*Resolutions*
1st Brussels 1873 *President:* M Auguste Visschers	
2nd Geneva 1874 *President:* Hon David Dudley Field	
3rd The Hague 1875 *President:* Hon David Dudley Field	
4th Bremen 1876 *President:* Sir Travers Twiss QC	Principles for an International Law to govern Bills of Exchange

City	*Resolutions*
5th Antwerp 1877 *President:* Rt Hon Lord O'Hagan	York-Antwerp Rules of General Average
6th Frankfort 1878 *President:* Hon David Dudley Field	
7th London 1879 *President:* Rt Hon Sir Robert Phillimore	
8th Berne 1880 *President:* Dr Friedrich Sieveking	
9th Cologne 1881 *President:* Herr H H Meier	
10th Liverpool 1882 *President:* Rt Hon Lord O'Hagan	
11th Milan 1883 *President:* Sir Travers Twiss QC	Slave Trade; Collisions at Sea; Rules for the Execution of Foreign Judgements
12th Hamburg 1885 *President:* Dr F Sieveking	Code of Affeightment
13th London 1887 *President:* Hon Sir Charles Parker Butt	
14th Liverpool 1890 *President:* Dr F Sieveking	Revised York-Antwerp Rules of General Advantage
15th Genoa 1892 *President:* Commendatore P Boselli	Jurisdiction in Territorial Waters
16th London 1893 *President:* Dr F Sieveking	London Rules of Affreightment

City	*Resolutions*
17th Brussels 1895 *President:* Sir Richard Webster	Rules for Procedure for International Arbitration; Rules of Jurisdiction in Territorial Waters; Resolutions on Collisions at Sea
18th Buffalo 1899 *President:* Hon Mr Justice Kennedy	Resolutions on Marine Insurance
19th Rouen 1900 *President:* Hon Simeon E Baldwin	Immunity of Private Property at Sea from Capture
20th Glasgow 1901 *President:* Rt Hon Lord Alverstone	Rules of Marine Insurance; International Agreement as to Assistance Judiciaire; Proposal for a General Treaty of Arbitration between Great Britain and France
21st Antwerp 1903 *President:* M Auguste Beermaert	British Participation in Conference on Private International Law and Maritime Law; Model Treaty for the Execution of Foreign Judgments; Rule as to Effect of Captain's Fault on Incidence of General Average; Company Law in various countries.
22nd Christiana 1905 *President:* F V N Beichmann	Law of Belligerency and Neutrality; International Prize Court of Appeal; Legal Relations of Charterers and Shipowners; Extension of the Berne Railway Transport of Goods Convention 1890.

INTERNATIONAL LAW ASSOCIATION

CONSTITUTION OF THE ASSOCIATION

(adopted at the 77th Conference, 2016)

1 Definitions

In this Constitution the following words and expressions shall have the following meanings:-

"Branch"	a branch of the Association established in accordance with Article 8 below;
"Conference"	a conference held in accordance with Article 10 below;
"the Executive Council"	the executive council of the Association described in Article 6 below;
"the Full Council"	the full council of the Association described in Article 7 below;
"A Council"	either the Executive Council or the full Council as defined herein;
"Headquarters Member"	those members elected by the Executive Council in accordance with Article 4.1.4 below.

2 Name

The name of the Association is "The International Law Association" ("the Association"). Its seat is in London.

3 Objects and Powers

3.1 The objectives of the Association are the study, clarification and development of international law, both public and private, and the furtherance of international understanding and respect for international law.

3.2 In furtherance of such objects but not otherwise the Association may:-

3.2.1 employ any person or persons to supervise, organise and carry on the work of the Association and make all reasonable and necessary provision for the payment of pensions and superannuation to or on behalf of employees and their surviving spouses and other dependants;

3.2.2 bring together in conference individuals as well as representatives of voluntary organisations, Government departments, statutory authorities and international organisations;

3.2.3 promote and carry out or assist in promoting and carrying out research, surveys and investigations and publish the useful results of such research, surveys and investigations;

3.2.4 arrange and provide for, or join in arranging and providing for, the holding of exhibitions, meetings, lectures, classes, seminars and training courses;

3.2.5 collect and disseminate information on all matters affecting such objects and exchange such information with other bodies having similar objects whether in this country or overseas;

3.2.6 undertake, execute, manage or assist any charitable trusts which may lawfully be undertaken, executed, managed or assisted by the Association;

3.2.7 procure to be written and print, publish, issue and circulate, including through its website or otherwise online, gratuitously or otherwise, such papers, books, periodicals, pamphlets or other printed or electronic media as shall further such objects;

3.2.8 purchase, take on lease or licence or in exchange, hire or otherwise acquire any property and any rights and privileges necessary for the promotion of such objects and construct, maintain and alter any buildings or erections necessary for the work of the Association;

3.2.9 make regulations for any property which may be so acquired;

3.2.10 sell, let, mortgage, dispose of or turn to account all or any of the property or assets of the Association;

3.2.11 accept gifts and borrow or raise money for such objects on such terms and on such security as shall be thought fit;

3.2.12 procure contributions to the Association by personal or written appeals, public meetings or otherwise;

3.2.13 invest the money of the Association not immediately required for such objects in or on such investments, securities or property as may be thought fit, subject nevertheless to such conditions (if any) as may for the time being be imposed or required by law;

3.2.14 enter into contracts;

3.2.15 do all such other lawful things as are necessary or desirable for the attainment of such objects.

4 **Members**

4.1 The members of the Association shall be:-

4.1.1 honorary members elected by a Council;

4.1.2 individuals elected by a Branch;

4.1.3 organisations, whether corporate or unincorporated, elected by a Branch or the Executive Council; and

4.1.4 persons or organisations whether corporate or unincorporated elected by the Executive Council (to be known as “Headquarters Members”).

4.1.5 a Branch, if it is a corporate body, but only on the basis stated in paragraphs 4.5, 8.7 and 10.2 below.

4.2 Each member organisation, elected as aforesaid, may appoint two individuals (the "Appointed Representatives") being members of that organisation to represent it.

4.3 Each member organisation may appoint a deputy to replace either of its Appointed Representatives if either of the Appointed Representatives is unable to attend any particular meeting of the Association.

4.4 Individual members who are engaged in full time study at a school, university, college or other education establishment may be designated student members while they continue their studies.

4.5 Members of the Association have the right to attend conferences and to vote on the affairs of the Association in accordance with and to the extent stated in paragraphs 8.7 and 10.2 only, and not otherwise.

5 **Officers and Assistants**

5.1 At each Conference, the Association shall elect a president ("the President"), who shall hold office until the commencement of the next Conference, and shall, on vacating office become *ex officio* a vice-president of the Association ("the Vice-President" and if more than one "the Vice-Presidents").

5.2 The Executive Council shall elect the following additional Officers and such other Officers and Assistants as the Executive Council shall from time to time decide (together "the Officers") provided, subject to Article 5(3), that 3 months' notice of the proposal to make an election at a meeting of the Executive Council shall have been given in writing by the Secretary General to the presidents of branches and to members of the Executive Council. Nominations for such election may be made by branches and by members of the Executive Council not later than one month prior to such meeting of the Executive Council and shall be circulated by the Secretary General to the presidents of branches and members of the Executive Council as soon as reasonably possible:

5.2.1 An executive chair of the International Law Association ("the Chair");

5.2.2 such number (not exceeding 4) of vice-chairs of the International Law Association as the Executive Council may from time to time elect ("the Vice-Chairs");

5.2.3 a treasurer ("the Treasurer");

5.2.4 a director of studies ("the Director of Studies"); and

5.2.5 a secretary-general ("the Secretary-General").

5.3 The Officers shall hold office for a term of four years subject to the right of the Executive Council to terminate that period of office at any time by a two-thirds majority of those present and entitled to vote at a meeting of the Executive Council. Upon the expiration of a term of office any Officer shall be eligible for re-election provided that no person shall be elected to serve more than a maximum of three full four-year terms in that office. All Officers shall serve until their successors

have taken office. In the event of a vacancy occurring before the termination of an existing Officer's mandate, the Executive Council may fill that vacancy until the end of the period of the previous holder's mandate without complying with the requirements of Article 5.2.

5.4 At least three of the Officers, designated by the Chair after consultation with all the Officers, shall constitute the Trustees of the Association for the purposes of the law regulating charities in the United Kingdom.

6 **The Executive Council**

6.1 The powers of the Association shall be vested in the Executive Council in the intervals between Conferences.

6.2 The members of the Executive Council shall be:-

6.2.1 the President, Vice-Presidents and Patrons;

6.2.2 the Officers;

6.2.3 the ex-Chairs and ex-Vice-Chairs of the Executive Council;

6.2.4 one to three Branch members elected by each Branch in accordance with the following formula: one member for a fully paid Branch membership of fewer than 100, two members for a fully paid Branch membership between 101 and 250, and three members for a fully paid Branch membership above 250; and

6.2.5 individuals co-opted by the Executive Council.

6.3 Members appointed in accordance with Articles 6.2.4 and 6.2.5 above shall be Members for a period not exceeding four years and shall be eligible for re-election or co-option again.

6.4 The Chair shall preside at any meeting of the Executive Council. In the absence of the Chair the Vice-Chair with the longest period in office shall preside.

6.5 If a Member appointed in accordance with Article 6.2.4 cannot attend a meeting of the Executive Council, then the president of the electing Branch may appoint a substitute to attend that meeting only.

6.6 A vacancy in the Executive Council may be filled by election by the electing Branch, if the former member was appointed in accordance with Article 6.2.4, or by co-option, if the former member was appointed in accordance with Article 6.2.5. For the purposes of this Article 6.6 a vacancy shall occur by reason of resignation, death or election of that member as an Officer or President.

6.7 Eight members of the Executive Council shall constitute a quorum.

6.8 The Executive Council may appoint a Finance and Policy Committee and other special or standing committees, and it shall determine their terms of reference, powers, duration and composition.

6.9 The Executive Council shall have regard to any general direction of the Full Council.

6.10 The Executive Council shall, subject to the provisions of this Constitution, have power to settle, adopt and issue standing orders and/or rules for the Association, including standing orders or rules for the conduct of Conferences.

6.11 The Executive Council shall have power to delegate to such person or persons being members of the Association, such powers as it may resolve from time to time and for such period and on such conditions as it may resolve, in furtherance of the objectives of the Association and the conduct of its business.

6.12 The Executive Council shall have the power to consult and decide, in the interval between meetings, by electronic means, as follows*:*

6.12.1 Consultation: The Chair and the Secretary-General may, at the request of any Officer, propose a decision in draft form, including decisions for the approval of constitutions of new Branches in accordance with paragraph 8.5. The proposal shall include all relevant documents, request responses from members of the Executive Council, and set a reasonable deadline which shall not be less than one full week for such responses.

6.12.2 Decisions: After consultation in accordance with paragraph 6.12.1, the Chair and the Secretary-General may solicit a decision by consensus, setting a further deadline of no less than one full week for agreement on a decision in final form. If no objection is received by the deadline from any member of the Executive Council, that decision shall be taken as passed. If any objection is received by the deadline, the matter shall either be subject to further consultation, or shall be put before the Executive Council at a meeting.

6.12.3 Decisions reached by consensus shall be included in the Minutes of the next Executive Council Meeting.

7 **The Full Council**

7.1 The members of the Full Council shall be:

7.1.1 the members of the Executive Council; and

7.1.2 the presidents and secretaries of all Branches.

7.2 The Full Council shall meet at least once during each Conference.

7.3 Twenty members of the Full Council shall constitute a quorum.

8 **Branches**

8.1 Regional Branches consisting of at least ten members of the Association may be formed with the consent of the Executive Council.

8.2 The Executive Council may dissolve any Branch, or in the case of a Branch which is a corporate body may terminate its membership of the Association, where the membership of the Branch has become less than ten or if contributions are more than three years in arrears. Any Branch which has been dissolved or whose membership has terminated in this or any other way shall cease to operate or hold itself out as a Branch of or associated with the Association, and shall if necessary

change its name to make clear that it is no longer a Branch of or associated with the Association.

8.3 Branches are regional. They may be composed of countries within a geographical area, a single country or a geographical area within a country. The members of a Branch may be nationals of the country or countries in their respective region, whether residing or not in such country or countries, and other persons ordinarily resident there and any organisation member which has sufficient interests or presence there.

8.4 A Branch may expel any of its members from the Branch in accordance with the procedure set out in its constitution and such member shall cease to be a member of the Association without prejudice to the position of Headquarters Members. Any expulsion by a Branch shall be reported to the Executive Council as soon as possible.

8.5 The constitutions of the Branches and any amendments thereto must be approved by the Executive Council.

8.6 Each Branch shall appoint a president and secretary and such other officers as are authorised by the constitution of the Branch.

8.7 Individual Members of Branches may attend Conferences and speak and vote there as individuals, each having one vote. The Association does not recognise delegates or delegations as such. A Branch which is a corporate body has as such no right to attend or vote at a conference.

8.8 Branches are not authorised to enter into contracts on behalf of the Association and the Association shall not be bound by any contract entered into by a Branch. The Association shall not be liable for the contracts, debts, torts, civil wrongs or any other acts or omissions of a Branch whether in connection with a Conference organised by a Branch or otherwise.

9 **Patrons**

The Executive Council may appoint persons who have rendered distinguished service to the Association as Patrons who shall be ex-officio members of the Executive Council.

10 **Conferences**

10.1 Conferences of the Association shall be held at such times and places, and on such bases as shall be decided by the Executive Council in consultation with the Branch organising the Conference. Conference agendas shall be examined and settled in consultation between the Branch organising the Conference and the Executive Council prior to the Conference.

In addition to individual Members of Branches (paragraph 8.7 above), individual Headquarters Members, Honorary Members and Appointed Representatives (or deputies of Appointed Representatives) of member organisations may attend, speak and vote at Conferences, each having one vote.

10.2 There shall be paid to the Branch of the Association organising the Conference, by every individual Member and every Appointed Representative or his or her deputy attending that Conference as well as by any non-Member who may be permitted to attend and for each person accompanying such Member, Appointed Representative, deputy or non-Member, such fee as shall be determined by the Branch organising the Conference in consultation with the Executive Council ("the Conference Fee").

10.3 A report of each Conference shall be published as soon as possible after the Conference in accordance with guidelines laid down from time to time by the Executive Council.

11 **Contributions**

11.1 Each Branch member shall pay a subscription to the Branch of such amount as the Branch shall from time to time determine.

11.2 Each Branch shall pay to the Treasurer an annual subscription of such amount and at such time as the Executive Council shall determine in respect of each Branch member.

11.3 The Executive Council may set reduced subscription fees for new Branches or for Branches situated in the less developed countries, and may waive or reduce the fees payable to the Treasurer in respect of student members, on such conditions as it decides.

11.4 Headquarters Members shall pay such annual subscription as the Executive Council shall determine.

11.5 Only Members who have paid their Conference Fees shall be entitled to attend a Conference as Members. Members who are in arrears with their subscriptions may not vote on any resolutions put before that Conference.

12 **Official Languages**

The official languages of the Association shall be English and French. Each Member may write or speak at any Conference or Meeting of the Association or any of its Committees in either of the official languages.

13 **Expenditure**

No expenditure shall be made, and no liability incurred, in excess of the available funds of the Association.

14 **Amendment of the Constitution**

The Constitution of the Association may be amended at any Conference by a vote of two-thirds of the members present, three months' previous notice having been given in writing to the Executive Council of the motion to amend the terms, provided that no alteration shall be made which would have the effect of causing the Association to cease to have the status of a charity at law.

ASSOCIATION DE DROIT INTERNATIONAL

STATUTS DE L'ASSOCIATION

(adoptés à la 77ème Conférence 2016)

1. **Définitions**

Dans les présents statuts, les termes et expressions suivants ont la signification précisée ciaprès :

«Branche»	une branche de l'Association constituée conformément à l'article 8 ci-dessous;
«Conférence»	une Conférence tenue conformément à l'article 10 ci-dessous;
«le Conseil exécutif»	le Conseil exécutif de l'Association décrit à l'article 6 ci-dessous;
«le Conseil plénier»	le Conseil plénier de l'Association décrit à l'article 7 ci-dessous;
«le Conseil»	soit le Conseil exécutif, soit le Conseil plénier, tels que définis au présent article;
«Membre du siège»	membre élu par le Conseil exécutif conformément à l'article 4.1.4. ci-dessous.

2. **Dénomination**

L'Association est dénommée "Association de droit international" (l'"Association"). Elle a son siège à Londres.

3. **Objet social et capacité**

3.1 L'Association a pour objet social d'étudier, de clarifier et de développer le droit international, public et privé et de renforcer la compréhension entre les Nations et le respect du droit international.

3.2 En vue de la réalisation de cet objet et de lui seul, l'Association peut :

3.2.1 employer une ou plusieurs personnes en vue de contrôler, organiser et mener les travaux de l'Association et prendre toutes dispositions raisonnables et nécessaires pour le paiement de pensions et de retraites à ces employés ou à leur profit, ainsi qu'à leurs conjoints survivants et autres personnes dépendantes;

3.2.2 réunir, lors de Conférences, des particuliers, ainsi que des représentants d'organisations bénévoles, d'administrations gouvernementales, d'autorités prévues par la loi et d'organisations internationales;

3.2.3 promouvoir, mener ou contribuer à promouvoir et à mener des recherches, études et enquêtes et publier tous résultats utiles de telles recherches, études et enquêtes;

3.2.4 Seule ou en collaboration, organiser des expositions, réunions, cours, classes, seminaires et sessions de formation ou en provoquer l'organisation;

3.2.5 réunir et diffuser des informations sur toute matière entrant dans son objet social et échanger de telles informations avec d'autres organismes ayant un objet social similaire dans ce pays ou à l'étranger;

3.2.6 entreprendre, mener, gérer ou assister toute fiducie susceptible d'être entreprise, menée, gérée ou assistée légalement par l'Association;

3.2.7 en vue de la réalisation de l'objet social, susciter la rédaction et la publication de tout écrit, livre, périodique, brochure ou autre document, film ou bande enregistrée, et en assurer l'édition, la publication et la diffusion, sous quelque forme que ce soit, y compris sur son site internet ou, plus généralement, en ligne;

3.2.8 acheter, prendre à bail ou sous licence ou en échange, louer ou acquérir de toute autre manière tous biens et tous droits et privilèges nécessaires pour encourager la réalisation de son objet social; construire tout bâtiment ou construction nécessaire aux travaux de l'Association;

3.2.9 prendre toute disposition concernant tout bien ainsi acquis;

3.2.10 vendre, louer, hypothéquer tout bien ou avoir de l'Association, en disposer et en user;

3.2.11 accepter des dons, emprunter ou se procurer des ressources en vue de la réalisation de l'objet social, selon les termes, conditions et garanties que l'Association jugera convenables;

3.2.12 obtenir des contributions à l'Association grâce à la générosité de personnes dénommées ou par des appels écrits, par des réunions publiques ou de toute autre manière;

3.2.13 investir les ressources de l'Association qui ne sont pas immédiatement nécessaires pour la réalisation de l'objet social dans les placements, créances, garanties ou biens qu'elle jugera convenables, sous réserve néanmoins des conditions qui pourraient éventuellement être imposées ou exigées à l'heure actuelle par la loi;

3.2.14 passer des contrats;

3.2.15 mener toute autre action conforme à la loi qui peut être nécessaire ou souhaitable en vue de la réalisation de l'objet social.

4. **Membres**

4.1 Les membres de l'Association sont :

4.1.1 les membres honoraires élus par le Conseil;

4.1.2 les personnes physiques élues par une Branche;

4.1.3 les organisations jouissant ou non de la personnalité morale, élues par une Branche ou par le Conseil exécutif ;

4.1.4. les personnes physiques ou organisations jouissant ou non de la personnalité morale élues par le Conseil exécutif (dénommées «Membres du siège»).

4.1.5 une Branche, si elle jouit de la personnalité morale, ce dans les limites fixées aux paragraphes 4.5, 8.7 et 10.2 ci-dessous

4.2 Chaque organisation membre, élue comme prévu ci-dessus, peut désigner parmi ses membres deux personnes, «les représentants désignés », pour la représenter.

4.3. Chaque organisation membre peut désigner un suppléant pour remplacer l'un ou l'autre de ses représentants désignés pour le cas où l'un ou l'autre serait dans l'incapacité de participer à une réunion déterminée de l'Association.

4.4. Peuvent être nommés membres étudiants les personnes physiques appartenant à l'Association qui poursuivent des études à plein temps dans une école, une université, un collège ou un autre établissement d'enseignement.

4.5 Les Membres de l'Association ont le droit d'assister aux conférences et de voter sur les affaires de l'Association conformément aux paragraphes 8.7 et 10.2 et dans les limites fixées dans ces paragraphes.

5. **Membres du Bureau et adjoints**

5.1. Lors de chaque Conférence, l'Association élit un président (dénommé «le Président de l'Association») qui reste en fonction jusqu'au commencement de la Conférence suivante. A l'expiration de son mandat, le Président de l'Association devient de plein droit Vice-Président de l'Association. Le ou les Vice-Présidents sont dénommés «Le ou les Vice-Présidents de l'Association».

5.2 Le Conseil exécutif élit les autres membres du bureau énumérés ciaprès (ainsi que tout autre membre du bureau ou adjoint que le Conseil exécutif décide de désigner). Sous réserve des dispositions de l'article 5.3, le Secrétaire général notifie par écrit aux présidents des Branches et aux membres du Conseil exécutif, au moins trois mois à l'avance, toute proposition de procéder à une élection par le Conseil exécutif. Les Branches et les membres du Conseil exécutif peuvent présenter des candidatures à une telle élection. Ces présentations doivent être faites au plus tard un mois avant la réunion du Conseil exécutif et diffusées par le Secrétaire général aux président des Branches et membres du Conseil exécutif aussitôt que raisonnablement possible.

5.2.1 un président exécutif de l'association de droit international ("le président de l'association") ;

5.2.2 les vice-présidents de l'association de droit international que le conseil exécutif peut élire au nombre de quatre au maximum ("les vice-présidents de l'association")

5.2.3 un trésorier («le Trésorier»);

5.2.4 un directeur des études («le Directeur des études») et

5.2.5 un secrétaire général («le SecrétaireGénéral»).

5.3. Les membres du bureau sont en fonction pour une période de quatre ans. Toutefois, le Conseil exécutif peut mettre fin à ces fonctions à tout moment à la majorité des deux tiers de ses membres présents et jouissant du droit de vote lors d'une réunion du Conseil exécutif. Tout membre du bureau est rééligible au terme de son mandat, étant cependant précisé que nul ne peut être élu dans les mêmes fonctions pour plus de trois mandats pleins de quatre années. Les membres du bureau restent en fonctions jusqu'à ce que leurs successeurs prennent leurs fonctions. En cas de vacance survenant avant l'expiration du mandat d'un membre du bureau, le Conseil exécutif peut combler cette vacance pour la période de mandat restant à courir sans avoir à se conformer aux prescriptions de l'article 5.2.

5.4. Au moins trois des membres du Comité de Direction, désignés par le Président du Conseil, après consultation de tous les membres du Comité de Direction, seront les fidei commissaires de l'Association pour l'application de la loi encadrants les organismes à but non lucratif au Royaume Uni.

6. **Le Conseil exécutif**

6.1 Le Conseil exécutif a tout pouvoir pour agir pour le compte de l'Association dans l'intervalle des Conférences.

6.2 Les membres du Conseil exécutif sont :

6.2.1 le Président et les Vice-Présidents de l'Association ainsi que les membres bienfaiteurs;

6.2.2 les membres du bureau;

6.2.3 les anciens Présidents du Conseil exécutif et les anciens Vice-Présidents du Conseil exécutif;

6.2.4 un à trois membres désignés par chaque Branche conformément à la formule suivante : un membre pour toute Branche ayant réglé au siège ses cotisations pour moins de 100 membres; deux membres pour toute Branche ayant réglé au siège ses cotisations pour 101 à 250 membres et trois membres pour toute Branche ayant réglé au siège ses cotisations pour plus de 250 membres; et

6.2.5 des personnes physiques cooptées par le Conseil exécutif.

6.3 Les membres nommés conformément aux articles 6.2.4 et 6.2.5 cidessus appartiennent au Conseil exécutif pour une période n'excédant pas quatre années; ils peuvent être réélus ou cooptés à nouveau.

6.4 Le Président du Conseil préside les réunions du Conseil exécutif. En son absence, la présidence est assurée par le Vice-Président du Conseil le plus ancien dans ces fonctions.

6.5 Si un membre nommé conformément à l'article 6.2.4 est dans l'incapacité de participer à une réunion du Conseil exécutif, le Président de la Branche en cause peut désigner un suppléant pour le remplacer à cette seule réunion.

6.6 Toute vacance au Conseil exécutif peut être comblée par désignation de la Branche en cause, si l'ancien membre avait été nommé conformément à l'article 6.2.4 ou par cooptation si l'ancien membre avait été nommé conformément à l'article 6.2.5. Aux fins du présent article 6.6, une vacance survient du fait d'une démission, d'un décès ou de l'élection du membre en cause comme membre du bureau ou Président de l'Association.

6.7 Le quorum au Conseil exécutif est de huit membres.

6.8 Le Conseil exécutif peut créer un comité financier et de politique générale et d'autres comités constitués sur une base permanente ou de manière spéciale. Il détermine leur mandat, attributions, durée et composition.

6.9 Le Conseil exécutif prend en considération toute directive de caractère général émanant du Conseil plénier.

6.10 Sous réserve des dispositions des présents statuts, le Conseil a compétence pour établir, adopter et diffuser des instructions et des règles permanentes pour l'Association, et notamment des instructions et règles permanentes pour la conduite des Conférences.

6.11 Le Conseil exécutif peut déléguer à toute personne membre de l'Association, tout pouvoir qu'il lui semblera opportun de déléguer, le moment venu, pour toute période et dans les conditions qu'il décidera, pour la poursuite des buts de l'Association et la gestion de ses activités.

6.12 Le Conseil exécutif a le pouvoir de prendre ses décisions par consultation électronique, dans l'intervalle séparant ses réunions, de la manière suivante :

6.12.1 Consultation : Le président et le Secrétaire général peuvent, à la requête d'un membre du Comité de Direction, proposent un projet de décision, en ce compris des décisions d'approbation de nouvelle branche conformément au paragraphe 8.5. La proposition doit être accompagnée de tous les documents nécessaires, requérir une réponse des membres du Conseil exécutif et fixer un délai raisonnable pour cette réponse qui ne doit pas être inférieure à une semaine.

6.12.2 Décisions : Après une consultation conforme aux stipulations de l'article 6.12.1 ci-dessus, le Président et le Secrétaire général peuvent demander une décision par consensus sur un document en forme définitive, en fixant un nouveau délai d'une semaine au minimum. Si aucune objection d'aucun membre du Conseil exécutif n'est reçue dans ce délai, la décision sera considérée comme acquise. Si une objection est émise dans ce délai, soit la proposition fait l'objet d'une nouvelle consultation, soit elle est présentée lors d'une réunion du Conseil exécutif.

6.12.3 Les décisions prises par consensus sont incluses dans le procès-verbal de la prochaine réunion du Conseil exécutif.

7 **Le Conseil plénier**

7.1 Les membres du Conseil plénier sont :

7.1.1 les membres du Conseil exécutif; et

7.1.2 les présidents et secrétaires des Branches.

7.2 Le conseil plénier se réunit au moins une fois au cours de chaque Conférence.

7.3 Le quorum au conseil plénier est de vingt membres.

8 **Branches**

8.1. Des Branches régionales comptant au moins dix membres de l'Association peuvent être constituées avec l'accord du Conseil exécutif.

8.2 Lorsque le nombre de membres d'une Branche est tombé au dessous de dix ou lorsque les contributions d'une Branche ont plus de trois années de retard, le Conseil exécutif peut : (a) si cette Branche n'a pas la personnalité morale, en prononcer la dissolution (b) si elle a la personnalité morale, l'exclure de l'Association. Toute Branche ayant fait l'objet de telles mesures ou ayant de quelque manière que ce soit cessé d'appartenir à l'Association, devra cesser de fonctionner ou de se présenter comme une Branche de l'Association ou comme associée à celle-ci. Si nécessaire, elle devra modifier son nom afin qu'il apparaisse clairement qu'elle a cessé d'être Membre de l'Association ou associée avec elle.

8.3 Les Branches ont un caractère local. Elles peuvent être constituées par plusieurs pays dans une même zone géographique, par un seul pays ou par une zone géographique à l'intérieur d'un même pays. Les membres d'une Branche peuvent être des nationaux du ou des pays de la zone (qu'ils résident ou non dans ce ou ces pays), d'autres personnes y résidant de manière habituelle et toute organisation y ayant des intérêts ou une présence suffisante.

8.4 Une Branche peut exclure tout membre conformément à la procédure fixée dans sa constitution; un tel membre cesse d'être membre de l'Association, sans que ceci préjuge de la position des membres au titre du siège. Toute exclusion par une Branche est rapportée au Conseil exécutif aussitôt que possible.

8.5 La constitution des Branches et tout amendement à cette constitution doivent être approuvés par le Conseil exécutif.

8.6 Chaque Branche désigne un Président et un Secrétaire, ainsi que les autres membres du bureau tels que prévus par la constitution de la Branche.

8.7 Les personnes physiques, membres des Branches, assistent aux Conférences, y prennent la parole et y votent à titre personnel, chacune disposant d'une voix. L'Association ne reconnaît pas de délégués ou de délégations en tant que tels. Le droit d'assister aux conférences ou d'y voter étant reconnu aux personnes physiques appartenant aux Branches jouissant de la personnalité morale, ces dernières n'ont pas ces droits.

8.8 Les Branches ne sont pas autorisées à conclure des contrats au nom de l'Association et l'Association n'est pas liée par les contrats conclus par une Branche. L'Association n'est responsable ni à titre contractuel, ni à titre extra-contractuel des actes ou abstentions d'une Branche, que ces actes ou abstentions soient liés à une Conférence organisée par une Branche ou qu'ils y soient étrangers.

9 **Patronage**

Le conseil exécutif peut nommer des personnes ayant rendu des services éminents à l'Association comme membres bienfaiteurs de l'Association. Ceuxci sont de plein droit membres du Conseil exécutif.

10 **Conférences**

10.1 Les Conférences de l'Association se tiennent aux lieux, dates et conditions fixés par le Conseil exécutif, la branche en charge de l'organisation étant dûment consultée. Le programme des Conférences est étudié et établi avant les Conférences par voie de consultation entre la Branche organisant la Conférence et le Conseil exécutif.

10.2 Peuvent assister aux Conférences, y prendre la parole et y voter, outre les personnes physiques membres des Branches (paragraphe 8.7 ci-dessus), les personnes physiques, membres du siège ou représentants désignés des organisations membres (ou leurs suppléants). Chacun dispose d'une voix. Les membres honoraires ont le droit d'assister aux conférences et d'y prendre la parole, mais non de voter.

10.3 Toute personne physique membre de l'Association et tout représentant désigné ou suppléant, qui assistent à la Conférence, ainsi que toute personne non membre de l'Association autorisée à assister à la conférence, règle à la Branche de l'Association organisant la Conférence un droit d'inscription qui est fixé par la Branche en consultation avec le Conseil exécutif («le droit d'inscription à la Conférence»). Il en est de même pour toute personne les accompagnant.

10.4 Un rapport de chaque Conférence est publié aussi rapidement que possible après la Conférence conformément aux directives données par le Conseil exécutif.

11 **Contributions financières**

11.1 Chaque membre règle à la Branche à laquelle il appartient une cotisation d'un montant fixé par la Branche.

11.2 Chaque Branche règle au Trésorier pour chacun de ses membres une cotisation annuelle d'un montant fixé par le Conseil exécutif et dans le délai qu'il fixe.

11.3 Le Conseil exécutif peut fixer des cotisations à un taux réduit pour les nouvelles Branches ou pour les Branches situées dans les pays moins développés; en ce qui concerne les membres étudiants, il peut, dans les conditions qu'il détermine, réduire les cotisations à verser au Trésorier ou en dispenser.

11.4 Les membres du siège règlent une cotisation annuelle dont le montant est fixé par le Conseil exécutif.

11.5 Seuls les membres ayant acquitté les droits d'inscription sont en droit d'assister à la Conférence en qualité de membres. Les membres qui sont en retard dans le règlement de leurs cotisations ne peuvent pas voter sur les résolutions soumises à la Conférence.

12. **Langues officielles**

Les langues officielles de l'Association sont le français et l'anglais. Tout membre peut s'exprimer par écrit ou par oral dans l'une des langues officielles lors de toute conférence ou réunion de l'Association ou de l'un de ses comités.

13. **Dépenses**

Aucune dépense ne sera exposée et aucune responsabilité encourue audelà des fonds disponibles de l'Association.

14. **Amendements aux statuts**

Les statuts de l'Association peuvent être amendés à toute Conférence par un vote des deux tiers des membres présents. La résolution proposant de tels amendements doit être notifiée trois mois à l'avance par écrit au Conseil exécutif. Aucun amendement ne peut être opéré qui aurait pour effet de faire perdre à l'Association son statut d'oeuvre de bienfaisance («Charity at law»).

PATRONS AND OFFICERS OF THE ASSOCIATION
(as of August 2016)

Patron

Mr P B Mauleverer QC (UK)

President

CHAIRS OF THE ILA EXECUTIVE COUNCIL

1875	Sir Travers Twiss
1890	Dr Ernest E Wendt
1892	Sir Richard E Webster
1899	Sir Walter GF Phillimore
1908	Rt Hon Sir Wm Rann Kennedy
1920	Rt Hon Lord Phillimore
1928	Rt Hon Lord Blanesburgh
1938	Rt Hon Lord Alness
1946	Rt Hon Lord Porter
1956	Professor AL Goodhart
1960	Rt Hon Lord McNair
1962	Rt Hon Lord Spens
1964	Rt Hon Lord Wilberforce
1986	Professor Cecil J Olmstead
1988	Rt Hon Lord Slynn of Hadley
2009	Rt Hon Lord Mance

ILA DIRECTORS OF STUDIES

1969–1972	Sir Francis Vallat
1973–1979	Professor DP O'Connell
1980–1982	HE Judge Sir Robert Jennings
1982–1991	Professor Ian Brownlie
1991–1997	Professor James Crawford
1997–2004	Professor Alfred HA Soons
2004–2012	Professor Christine Chinkin
2012–	Professor Marcel Brus

PART 2

OPENING SESSION

SANDTON CONVENTION CENTRE

Monday, 8 August 2016, 11:00am

The Right Hon Lord Mance, Chairman of the ILA Executive Council welcomed attendees to the conference, and noted that it was first ILA conference to be held in SubSaharan Africa. The theme of the conference was *International Law and State Practice – is there a North-South Divide?* This reminded us of how important it was that international law should serve all countries and all the parts and peoples of the world. The ILA aimed to be representative. It had expanded its reach with a number of new branches in recent years, including a new Nigerian branch in 2015. Lord Mance was unable to attend the launch in Nigeria, but did attend and speak at the launch of a new Singapore branch in September 2015, and had, in the last two years, also spoken in Paris and Vienna to the ILA's national branches there. That was how the ILA should work, as an association whose members contacted, met and spoke to local branches when they travelled abroad often for quite different reasons. However, with only four African branches (South Africa, Nigeria, East Africa and Egypt), the ILA still had a long way to go on the continent.

Lord Mance congratulated Professor Hennie Strydom of the University of Johannesburg and his team on organising the conference, noting its rich programme. It was no mean feat to organise the conference, and without doubt a time-consuming and on occasions worrisome one.

Over the last few years, there had been a number of initiatives generated within the ILA. Lord Mance expressed his gratitude to the individuals who stimulated these initiatives, which had sought to evaluate whether the ILA was fulfilling its aims and potential externally, and also to examine whether its internal governance was fit-for-purpose (to use the UK political jargon). The two aspects were of course connected.

The first of these initiatives was software. The ILA's software system operated as an essential tool for head office and increasingly for branches, and provided the external face of the ILA on the web. The ILA determined in 2015 to take the necessary, if painful, financial step of engaging consultants to design and supply a whole new system, which should hopefully serve its purposes for years to come. When fully rolled out later in 2016, it would offer greatly improved facilities and opportunities for the ILA and its branches worldwide.

The second of these initiatives was internal arrangements. In this regard, Lord Mance referred to the proposed amendments to the ILA Constitution, relevantly to Arts 3.2.7, 5.4 and 6.12. The first amendment was to take account of modern methods of communication. The second was to limit the number of trustees required, which would avoid the problem that some officers might not wish to act and ease formalities, when and if signatures were required. The third was to enable a simplified and speedier means of taking Executive Council decisions by consensus between meetings, again using modern communication methods.

Lord Mance urged branches to ensure that their representatives on the Executive Council were chosen from active members who truly represented the relevant branch and were able for that purpose to attend its twice-yearly meetings. These meetings had their social side, but membership of the Executive Council should not be seen as a job for life. Renewal and change brought new ideas. While it remained the primary executive organ, the Council had at the same time been prepared to recognise the need for a smaller more manageable body to deal on a delegated basis with some decision-making matters, and the Policy and Finance Committee (or the General Purposes Committee as it was commonly known) was that body. Again, the ILA needed to keep the membership of that Committee under review, and to ensure that it was refreshed by new blood.

Lord Mance referred to the worldwide spread of the ILA. The ILA was conscious that the world had many more countries than were represented by its branches. At present, there were 57 branches. This included the headquarters branch, which basically accepted members who had no local branch to join. The 57 branches covered rather more than that number of countries, because some branches were regional, for example the East African or the Caribbean Branches. All the same, the ILA could not claim to represent more than about one third of the countries of the world. And its branches and membership were not equally distributed across the world. Lord Mance noted that Professor Lavanya Rajamani had done a helpful analysis of this point.

In this light, it was particularly valuable that the present conference was being held in Johannesburg, to encourage wider awareness of the role of international law and wider interest in supporting it in Africa. It might be no coincidence that the ILA Committee with the highest proportion of developing country members in its composition was working in the area of international criminal law. The Committee was also chaired by a South African, Professor Mia Swart.

The Scholarship Fund

One initiative which had been a resounding success was the ILA Scholarship Fund. This originated in an idea led by Professor Catherine Kessedjian, President of the French Branch. The fund's objectives focussed on younger persons. It aimed to facilitate involvement in the ILA activities of younger people from all over the world, "particularly in countries where the ILA [was] not present", enabling them to attend conferences like the present and intermediate conferences held for example regionally, getting them interested in international law, in the hope that they would be the ILA's future ambassadors in their own countries and that, through them, the rule of international law would be further expanded. As Nelson Mandela said, "education is the most powerful weapon which you can use to change the world".

The Scholarship Fund was launched in 2014. It had received considerable branch and personal support, and Lord Mance commended it to attendees as a charitable fund which surely deserved further and still wider annual support. It enabled a number of students to attend the 2014 Lisbon regional conference, and now was enabling 11 candidates from all over the world to be present at the Johannesburg conference, including four from four countries of Sub-Saharan Africa. Lord Mance referred attendees to the conference booklet for details of the candidates as well as the selection criteria that they had to

meet. It was a particularly strong group of candidates, and their wide geographical spread showed how well the fund was fulfilling its aims.

But that was not all. The conference booklet also described that, under the redoubtable leadership of Professor Willem van Genugten of the Dutch Branch, a further, matching group of 11 scholarships had been made available by the generosity of his family, friends and colleagues in conjunction with the Ministry of Foreign Affairs of the Netherlands, Tilburg University (Netherlands) and North-West University (South Africa). Of these, 10 came from Africa.

Lord Mance introduced each scholar and invited them to stand so that attendees could greet them. He paid tribute to the sponsors of both the ILA fund and of that led by Professor van Genugten, and encouraged attendees who would like to lend further support to do so.

Lord Mance paid tribute to, and thanked, those who gave unstintingly of their time and skill to consider and evaluate the considerable number of applications for funding which were received, particularly Mr Bruce Mauleverer, Professor Cynthia Lichtenstein, Dr Sarah Nouwen, and Professor Lavanya Rajamani. The work of the Scholarship Committee had also drawn attention to another possible need, that was to support more experienced practitioners from developing countries in attendance at ILA events and conferences. This would require a different sort of funding exercise, but one which it would be worth considering.

New President

Lord Mance noted that, over the previous two years, the ILA had enjoyed the always outspoken and energetic Presidency of Professor Ruth Wedgwood of the US Branch, which so successfully organised the joint conference with ASIL in April 2014. On behalf of the ILA, he thanked her for her services, and presented her with a gift. Lord Mance then informed attendees that the Full Council had resolved the day before that Professor Hennie Strydom should be elected as President for the next two years. He invited Professor Wedgwood to hand over the insignia of office to Professor Strydom.

With that, Lord Mance declared the 77th biennial conference open, and invited Professor Strydom in his new capacity to address attendees.

Profess Hennie Strydom, President welcomed dignatories, including the Hon Lord Mance and Lady Justice Arden, the Ambassador of the Republic of Ukraine, Mr Ihor Turyanski, Justice James Crawford of the International Court of Justice, Professor John Dugard, the first President of the South African Branch (SABILA), and Mr Arnold Pronto, representative of the UN Office for Legal Affairs. He also welcomed fellow African scholars from "up north".

Professor Strydom noted that it gave him great pleasure to welcome attendees on behalf of SABILA to the 77th biennial conference. SABILA was grateful for the support of attendees and wished them a memorable stay in South Africa. Hopefully, the conference would meet their expectations.

The planning of an event like the present conferene was not without its highs and lows. That much SABILA accepted from the outset when it submitted its bid some four years

ago to host the conference in 2018. But, as many of the delegates were aware, subsequent developments caused the conference to move closer in time to this year.

Professor Strydom shared some of the challenges that SABILA encountered along the road, which he would balance with an overview of some positive features. Among the challenges were a number of surprises, which, contrary to all outward signs four years earlier, caused SABILA to re-think and re-configure its original plans. What mostly interrupted the initial planning were:

- the wider consequences of a failing national economy, which was now sailing close to "junk" status according to the rating agencies, and a 0% growth rate – these were unfortunate developments that were not unrelated to disconcerting and damaging political conduct in recent years;
- the lower than expected registrations, which, at the start of SABILA's planning, were realistically assessed and adapted from attendance figures at previous conferences; and
- the disappointing responses by the legal profession and government departments, which SABILA had thought would be interested in supporting an international law conference of this magnitude taking place on home soil.

As a result, Professor Strydom asked attendees to excuse the absence of bells and whistles, for SABILA decided to concentrate on the essentials.

What is more, SABILA could not accommodate all requests for parallel sessions. One rather amusing request was the subject of a handwritten fax by an elderly gentleman from the UK. He wrote to SABILA requesting an investigation by the ILA into the effect of botulism on the mental state of Oscar Pistorius at the time of the killing of his girlfriend, a case that seemingly gripped the attention of people far beyond the borders of this country. Professor Strydom admitted that he was not aware of this illness, which, apparently could be caused by a bacterial infection affecting neurotransmissions to the muscles. It also had some link to the word "botch" which referred to a clumsy handling of a matter. Given the tragic event, Professor Strydom left the discussion at that.

On a more serious note, Professor Strydom listed those aspects of the conference that stood out:

1. There were delegates from 58 countries, which include 8 African countries. Not surprisingly, with 44 registrations, South Africa had the largest number of delegates with the majority made up of non-ILA members. SABILA considered this significant for our objective to grow the number of African members in the ILA, given their current under-representation.
2. The programme sessions had attracted a number of outstanding international law scholars, and SABILA was particularly grateful for their support.
3. Thirty ILA Committees and Study Groups would exhibit their work in the form of reports and open discussion sessions. It was the Committees and Study Groups that constituted the engine room of the ILA.
4. There were some twenty young scholars in attendance from different regions of the world. As mentioned by Lord Mance, their attendance was made possible by two separate scholarship funds. The individual ILA members involved in these initiatives

deserved a special word of thanks. SABILA was particularly grateful for the young African scholars on the list of scholarship award winners.

This brought Professor Strydom to another highlight for SABILA. SABILA had decided to announce at this occasion its resolve to honour the legacy of Professor John Dugard, who was SABILA's first president after South Africa re-joined the international community of States in 1994. This would take the form of an annual or biennial John Dugard lecture on international law, the details of which would be decided at SABILA's next AGM. Through his inspiring contributions as an internationally respected scholar, especially during the time of apartheid, and the intellectual legacy he had left behind, Professor Dugard had played a historically important role in the development of international law as a legal discipline in South Africa. The landmarks of his career were defined by: academic appointments at several universities, as visiting professor or fellow at universities in the UK, US, Australia, Netherlands, and Switzerland; his judicial office at the International Court of Justice; his work as a member of the International Law Commission and as a UN Special Rapporteur; and as a member of various international law bodies. SABILA was honoured to have Professor Dugard in attendance, and wished him good health as an octogenarian and beyond.

To conclude his address, Professor Strydom expressed his sincere appreciation to the following (listed in random order):

- Lord Mance, who played a leading role in the life of the ILA and whose presence was important to SABILA;
- Taryn Brooks, who played a key role in the organisation of the event, often under difficult circumstances not of her own making, and for performing a thankless job without losing her cool;
- Juliet Fussell and Natalie Pryor at the ILA HQ, who provided assistance and advice whenever this was needed, and for the functions they still had to perform in the course of the conference;
- Ruth Wedgwood, the outgoing president of the ILA, for coming all the way from the US to perform her ceremonial and other functions;
- the members of the SABILA organising committee, who assisted Professor Strydom in various ways without asking too many questions, and for their role in putting together the panels for the parallel sessions;
- Catherine Kessedjian, President of the French Branch, for various and crucial interventions, now and certainly in the future;
- Christopher Ward, President of the Australian Branch, for his presence – Professor Strydom wished him all the best for the 2018 conference, and looked forward to being in Sydney; and
- Alexander Kunzelmann, for organising the session reporters.

Professor Marcel Brus, Director of Studies started his address by thanking SABILA and Professor Strydom for organising the conference. Having been a member of the organising team of the 2010 conference in The Hague, Professor Brus knew know how much had to be arranged in order to get such a wonderful programme together and to make all the arrangements.

Professor Brus briefly explained the working methods of the ILA. The members of the ILA were convinced of the role that international law had to play in orderly and peaceful international relations. For almost 150 years, the organisation had engaged in studying international law and in formulating proposals to improve it. The ILA Committees were the main instrument of this. In the Committees, the national branches of the ILA were represented by experts in a particular field, like human rights, law of the sea, or international monetary law. Together, members of a Committee studied aspects of international law and developed proposals for improving international law. They reported on their work at biennial conferences like the present one, and submitted their proposals for adoption by the plenary meeting of the ILA members present. The discussion took place in open working sessions of the Committees, whereas the formal adoption of resolutions was taken at the plenary closing meeting at the end of the conference. These resolutions would be widely distributed to relevant international bodies, like the UN or more specific organisations, in the hope and expectation that they would influence the formulation and implementation of international law.

Besides these Committees, the ILA had also established a number of Study Groups, which studied particular issues in international law, but without the specific intention to formulate concrete proposals for implementation.

The role of Director of Studies was to organise and facilitate the work of the Committees and Study Groups as best as possible, with the help of the staff of the ILA HQ in London, Juliet Fussell and Natalie Pryer.

At the present conference, 23 out of the 24 Committees and 8 Study Groups would be presenting their work. Their reports had been published on the website of the ILA, and their members hoped to engage with attendees in a critical discussion in order to ensure that the ideas as finally presented reflected the opinions of the ILA as a whole, rather than the opinion of the experts in the Committee. On the final day of the conference, six Committees were expected to present their resolutions for adoption by the plenary meeting. All delegates were invited to participate in their discussion, but only ILA members had a right to vote. Substantive resolutions would be presented by the Committee on International Monetary Law, the Committee on Cultural Heritage Law, the Committee on International Commercial Arbitration, the International Human Rights Law Committee, and the Committee on the International Protection of Consumers. The text of the proposed resolutions would be available at the plenary session, but were usually also contained in the report as posted on the website by the Committee.

Professor Mia Swart (South Africa) addressed attendees to welcome the keynote speaker, Judge Navi Pillay. Judge Pillay was born in Durban in 1941. Her life paralleled modern human rights. She studied law at the University of Natal before studying at Harvard, where she became the first South African to obtain a doctorate in law. She was the first non-white to open a law practice in Natal Province (as it was at the time) and the first nonwhite woman judge on the High Court of South Africa. She once said that she did not allow any door to be closed in her face. She served on the International Criminal Tribunal for Rwanda, a position she held for eight years, the last four of which she served as president of the Tribunal. After that she became a judge of the International Criminal Court and, from 2008 to 2014 served as the United Nations High Commissioner

for Human Rights. Judge Pillay continued to be active, having recently been appointed Commissioner of the International Commission Against Death Penalty.

Two aspects of Judge Pillay's character interested Professor Swart in particular. The first was judicial innovation. She was credited for having taken the lead – and a progressive lead – in the *Akayesu Case* before the ICTR, where she amended the indictment from genocide to one containing sexual violence and rape as genocide and a crime against humanity. This case continued to be a monumental and proud legacy of Judge Pillay. The second aspect was the fact that British media had described her as an "international troublemaker". This was the result of her views as UN High Commissioner on Human Rights on matters from abortion to the Israel-Gaza conflict. Of all the many honorary doctorates, awards and medals that Judge Pillay had received, international troublemaker was the most significant!

Judge Navi Pillay commenced her keynote address by exclaiming what a daunting privilege it was to address such a distinguished audience, whose members already knew everything that she was about say!

Everyone in the room could agree that the United Nations had advanced resoundingly from a State-centred system of traditional international law based on the pre-eminence of State sovereignty, into a norm-based institution. Its goals were clear: while respecting the freedom of sovereign States, it was also dedicated to protecting and promoting peace, security, development, rule of law and human rights for the people of the world. The Member States of the UN had adopted universal standards of values and norms, as well as the tools to implement them.

International law increasingly played a role in shaping State policy as well as domestic law, to advance, collectively, the protection of human rights. There had also been marked growth in international criminal law, with its emphasis on the criminal responsibility of the individual. Progress in international criminal justice lay dormant for half a century after the Nuremberg and Tokyo Military Tribunals. But the landscape had shifted rapidly over the past twenty years.

The establishment of the International Criminal Tribunal for the former Yugoslavia (ICTY) in 1993, and the ICTR in 1994 was followed by ad hoc tribunals for Timor Leste, Kosovo, Sierra Leone, Cambodia and the courts of Iraq and Lebanon. The African Union (AU) was presently setting up a hybrid court in the Central African Republic. With the adoption of the Rome Statute in 1998, the ICC was now available to render justice for the serious crimes of genocide, crimes against humanity, war crimes, and the crime of aggression.

Yet the idea of developing universal standards of human rights was relatively new, and this use by the international community of judicial power backed by punishment to deter serious violations of human rights, constituting international crimes, was an even more recent development.

International law set clear standards of equality, freedom from discrimination and human dignity for all persons. The UN's Universal Declaration of Human Rights was the foundational framework for human rights, and today, all the countries of the world subscribed to its principles. Most constitutions and national legislations embodied them, and had

been strengthened over seventy years of steadfast activity by States, involving the adoption of conventions, treaties, resolutions, and declarations.

In accordance with the fundamental tenets of international humanitarian law and international human rights law, States accepted that it was *they* that carried the foremost responsibility to protect the human rights of their people – all rights, whether civil, political, economic, social or cultural – and to fulfil their demand to be free from fear and want.

At the same time, the UN subscribed to the principle that when States needed assistance in implementing their responsibility to protect their own people, the international community should assist. This was critical where civilians were at risk. International law was also clear that where a State manifestly failed to protect its population against massive violations of human rights, the international community was required to intervene to protect, using the means prescribed and circumscribed by the UN Charter. Unfortunately, State sovereignty was often invoked to block UN action to protect against serious human rights violations, and governments, themselves, by their actions or omissions, were often culpable of tolerating abuses.

The conflict in Syria had entered its sixth year. It was spreading its tentacles across borders, causing the loss of more than 200,000 lives and displacement of millions of people in the region. The atrocities being perpetrated by the Islamic State in Iraq and the Levant (ISIL) particularly shocked our collective conscience. Employing sophisticated modern technology of the digital era, ISIL had managed to recruit young fighters across the world in a most insidious manner.

One week earlier, the UN Security Council had resolved to send troops into Burundi. Other complex and potentially highly eruptive conflicts were underway in Afghanistan, the Central African Republic, the Democratic Republic of the Congo (DRC), Libya, Mali, the Occupied Palestinian territory, Somalia, South Sudan, Yemen and Ukraine. These crises hammered home the full cost of the failure of the international community to prevent conflict. They combined massive bloodshed and devastation of infrastructure with acutely destabilising transnational phenomena, including terrorism, the proliferation of weaponry, organised crime, and spoliation of natural resources.

None of these crises emerged without warning; they built up over years of human rights grievances, deficient or corrupt governance, and lack of independent judicial and law enforcement institutions, discrimination and exclusion, inequities in development, exploitation and denial of economic and social rights and repression of public freedoms. Although the specifics of each conflict could not necessarily be predicted, many of the human rights complaints that were at the core of a confrontation were known; they could and should have been addressed.

Early actions to address human rights concerns and to protect States by warding off the threat of violence; recognition of this urgent truth, and a broader conception of national interest, would be more appropriate to a century in which a growing number of challenges faced humanity as a whole. A number of good practices that addressed both proximate triggers and root causes had emerged. These included strengthening civil society actors, increasing participation by women in decision-making and dialogue, and addressing institutional and individual accountability for past crimes and serious human rights violations.

While conflicts raging unabated in a small number of countries was concerning, it was nevertheless heartening that the greater number of States across the globe were making serious efforts to advance the UN agenda to advance human rights. Credit for that should go to the countless brave and committed civil society activists, defenders, lawyers and journalists who, over decades, had slowly succeeded in firmly rooting international human rights norms in their societies. It was vital that democratic space for civil society be expanded in international forums and within States.

Many civil society organisations, human rights defenders, journalists and political opponents continued to operate in an increasingly hostile environment in many countries, and to face restrictions in the name of national security, counter terrorism, public order, and regulation of NGOs and the media. The ongoing arrest and detention of a large number of civilians, including judges, in Turkey was deeply troubling, as was the detention of opposition party members in Hungary. In the DRC, there had been an increasing number of arbitrary arrests and disruption of peaceful protest. In Burundi, electoral violence, with protests being violently suppressed by security forces led to more than 400 people being killed and displacement of 145,000 refugees into neighbouring states. Restrictions on fundamental rights also continued in Zimbabwe, Eritrea, Gambia, and Ethiopia.

De facto one-party systems, and a "winner takes all" approach to elections, continued to dominate the political landscape across Africa, with a number of incumbent presidents seeking to prolong their stay in power as witnessed in Congo, Uganda, the DRC, Rwanda, and Burundi. Some signs of progress included the AU's declaration of 2016 as the year of human rights in Africa to mark the 30th anniversary of the entry into force of the African Charter in 1986. It aimed to raise awareness in particular of women's rights and to focus on the progress made across the continent, as well as the major challenges and obstacles encountered. It was also committed to end child marriages by 2030.

The successful trial of the former dictator of Chad, Hissène Habré, set a new benchmark to end impunity in Africa. It marked a significant step forward in holding high profile human rights abusers to account in Africa and could be an important model of how hybrid courts could reconcile the often conflicting demands of international law and national sovereignty. The case was the first exercise of universal jurisdiction on the continent, and the first time a former African head of state had been prosecuted for crimes under international law.

It was disturbing that, in contrast, the AU saw fit to pass a resolution providing immunity from prosecution of serving high level officials. Fortunately, the so-called threat of withdrawal from the ICC had not reached the level of an agenda item at the recent AU summit in Rwanda. The importance of international criminal justice systems was that there should be no impunity for serious crimes, and that justice and the rule of law must be upheld.

In his first address to Parliament as President of democratic South Africa, Nelson Mandela said:

> *The memory of a history of division and hate, injustice and suffering, inhumanity of person to person should inspire us to celebrate our own demonstration of the capacity of human beings to progress and go forward.*

The constitution of South Africa had moved the country away from a culture of violence and retaliation to a society of values and respect for human rights. Mandela signed up to all major human rights treaties and conventions, including the *International Covenant on Civil and Political Rights* and the *International Covenant on Economic, Social and Cultural* Rights. The latter was ratified earlier in 2016. The South African Constitutional Court declared the death penalty unconstitutional and contrary to the values of *ubuntu*. These were important steps and should enable South Africa to take the lead both inside the country and in its exchanges with other countries, especially in Africa, to advance human rights.

The Office of the UN High Commissioner for Human Rights (OHCHR), which Judge Pillay occupied for six years, was well placed to monitor the human rights performance of every State and to offer practical assistance and guidance. Resolution 48/141 of the UN General Assembly (UNGA) charged the office with "principal responsibility" for human rights, with the mandate to promote and protect all human rights for all in all States. The High Commissioner played a crucial role in safeguarding the integrity of the three pillars of the UN: peace and security, human rights, and development.

OHCHR was the secretariat of the Human Rights Council (HRC) in Geneva, and serviced the Special Procedures system of independent experts appointed by the UNGA and the HRC. It also serviced the ten treaty bodies. The office prepared the human rights reports of every State. Through the mechanism called Universal Periodic Review (UPR), the HRC reviewed the human rights record of every State, made recommendations, and reviewed implementation. The process was public and open to NGOs. The reviews were conducted in a universal, impartial and non-selective manner.

The process was now in its third cycle, with 100% participation by States. Judge Pillay informed attendees, from her hands on experience, that no State emerged with a perfect record, and it was completely misguided to entertain the perception that the North was more compliant than the South. It was true that well established democracies had independent mechanisms and active civil society organisations to advance human rights protections, but under the independent scrutiny of the HRC, States received hundreds of recommendations from other States and seriously engaged in addressing them.

The HRC had brought strength and flexibility to the international human rights system. The UPR had had remarkable success in encouraging States to recognise and resolve gaps in human rights protection, with new emphasis on dialogue with civil society.

The Special Procedure (SP) system remained nimble and deployed great expertise. For example, Professor Christof Heyns of the University of Pretoria was the Special Rapporteur on extra judicial executions and arbitrary killings. He had investigated and produced reports on the use of armed robotics or drones, especially by the US, deeming the indiscriminate killing of civilians unlawful executions. Five SPs, including the SP on torture, visited US prisons, and sought access to the Guantanamo facility. They found the imprisonment of individuals in isolation for periods of ten years and over to constitute torture.

The ten treaty bodies also monitored compliance by States with their obligations. Judge Pillay recalled that the Committee against Torture and the Committee on the Rights of

the Child critically reviewed the Vatican's failure to protect children against sexual abuse by priests.

It was axiomatic that every country had a vital interest in defending a principled structure for a common set of global values. Human rights violations and non-compliance with the rule of law were among the root causes of every type of instability and conflict, which meant that every State had an interest in detecting gaps in its human rights protection. Regrettably, the reports and recommendations were frequently met by stone-walling or denial by States, and civil society activists remained under threat in many countries.

The UN Human Rights Commission and the mechanisms described above were an outcome of the world Conference on Human Rights, which was held in Vienna in 1993. At this conference, western countries favoured civil and political rights, whereas the Eastern bloc and many developing countries argued that economic, social and cultural rights, as well as the right to development, had a priority. In addition, a sizeable group of States were vigorously arguing that the Universal Declaration of Human Rights was the product of a specifically western culture, and that, in reality, human rights should be considered relative to the characteristics and traditions of different cultures. And yet, as discussions unfurled, a consensus emerged – the key to this was the universality, indivisibility, and interrelatedness of all human rights. A number of States had been resisting the entire concept of economic and social rights, deeming them aspirations rather than rights intrinsic to human dignity and freedom. The vision of an interrelated and interdependent constellation of human rights allowed for economic and social rights to be on board, as well as the right to development. The debate regarding the so-called cultural specificities of human rights was resolved with an equally deft and inclusive approach. Of course, all countries were indeed not the same, and all voices must naturally be heard, but these cultural specificities in no way eroded the universality of human rights.

The formula that ultimately achieved consensus on this point was the following: you choose your path, but the goal is something we all hold in common; your specificity will influence the way you move forward, but that goal of human dignity and human freedom, via implementation of human rights elucidated in the international "Bill of Rights" was something we all shared.

And so the assembled delegates overcame major differences on contentious issues such as universality, sovereignty, impunity, and how to give voice to victims. The result was a powerful outcome document, the Vienna Declaration and Programme of Action (VDPA). It firmly entrenched the principle of universality by committing States to the promotion and protection of all human rights for all people, regardless of their political, economic and cultural systems.

For a long time, economic, social and cultural rights were not given proper attention and viewed, especially by donor States, as aspirations and not rights. Yet the right to food, to health, clean water and sanitation, housing, education and decent work were priorities for developing countries. Human rights were interdependent and interrelated, and could not be enjoyed without full access to all rights.

Within and among States, acute income inequalities were evidence of failures of social and economic governance. There was a fundamental need for more consistent application

of human rights standards in the economic sphere. The OHCHR made every effort to put forth a robust people-centred set of standards to the sustainable development goals.

Judge Pillay recalled that there was a total absence of the words "human rights" in the original Millennium Development Goals. The new Sustainable Development Goals, adopted in 2015, represented a paradigm shift. They will be universal and not addressed to developing countries alone. It was a more enlightened model of development, offering a balanced framework and human rights approach in which development embraced consideration of decent work, health care, adequate housing, levels of participation, fair institutions of justice, and a sense of personal security.

The new agenda recognised that old boundaries between developed and developing countries were breaking down and that new players from emerging and middle income economies were contributing to redefine the global economy. Growing poverty and inequalities in rich countries were blurring the distinctions between donor and beneficiary countries. Migrants, minorities, indigenous people, women, children, persons with disabilities, vulnerable, excluded and marginalised groups required a specific, equitable, and rights-based development approach wherever they lived, and governments and institutions in all countries and at all development stages had responsibilities in this regard. As such, the universally agreed and universally applicable normative framework for human rights was more relevant than ever to global challenges of development. It was now accepted that a post-2015 development agenda for development must be a global agenda, based on universal norms and universal objectives.

Lord Mance thanked Judge Pillay for a splendid, balanced and powerful overview. If that was troublemaking, there ought to be more of it! The address reminded one and all of what had been done and what could be done. It gave impetus to the ILA's work, and underlined the individual contribution of brave activists. This was seen in action in the DRC some 10 years earlier. But it was also seen remotely through NGOs in various countries and academics. Universality could not be displaced by cultural specificities. This was seen in international and domestic courts. The actions of some States led to individual litigation. Other facts needed to be considered; there was a need to mediate the requirements of national security and the effects of government acts on individuals. Lord Mance invited another round of applause for Judge Pillay.

Professor Strydom concluded the opening session by acknowledging the city of Johannesburg as the host city, and for its support for the conference.

SECOND REPORT ON DISPUTE SETTLEMENT, USE OF SATELLITE DATA, SPACE DEBRIS, SUBORBITAL FLIGHT AND NEW DEVELOPMENTS

PART ONE

By Professor Maureen Williams
Committee Chair

A. The aftermath of the 2014 Washington Conference

A very warm welcome to our new members Mr Félix Menicocci (HQs), Dr Guoyu Wang (HQs) and Dr Cassandra Steer (Canadian Branch) who have joined our Committee following the Washington DC Conference.

We are most grateful to the Committee members and other specialists of great renown who have been cooperating with us in the challenging responsibility of preparing this Second Report and discussing the intricacies brought about by the law of outer space in its recent developments.

The Committee has the sad duty to announce the passing of three of its longstanding members and pioneers of this new discipline from the early stages of its creation. These are Professor Gennady Zhukov from Russia, Professor Bozidar Bakotic from Croatia and very recently Professor Nicolas Mateesco Matte from Canada, in his one hundredth and two year. All three have contributed outstandingly to the work of the Committee with the authority of their experience and scholarly background.

On 23/24 February 2016 this Chair circulated an initial document entitled 'ILA Space Law Committee – A request for views from members in preparation for the Report to be submitted to the Seventy-Seventh ILA Conference on 7-11 August 2016'. We are grateful to all of you who provided excellent and realistic thoughts and very valuable information during March and April 2016. These contributions were duly registered, the authors quoted by name and all forms part of the current Report.

Before going into the discussion of substantial aspects underlying our terms of reference for the current mandate (2012-2016) I shall recall these terms which were drawn by the ILA Council meeting on 9 November 2012. They read as follows.

The Committee has an established and continued relationship with the United Nations institutions dealing with space law and, in addition to its on-going work with these bodies, the topics under the new mandate include:

- *Dispute settlement and the 2011 PCA Rules on Arbitration,*
- *Legal aspects of suborbital flights,*
- *Satellite data in international litigation and*
- *New developments on space debris.*

Moreover, the Committee will keep a general brief over further developments during the four-year mandate.

B. The basic document of 23 February 2016

This initial document circulated by the Committee Chair last February, and the solid answers received from the members, were at the root of this Draft Second Report for the Seventy-Seventh ILA Conference in Johannesburg next August. Following this document a next step was the annual presentation by the Chair to the 55th Legal Subcommittee of COPUOS on 4-15 April 2016 describing the activities of the ILA relating to space law during 2015[1]. This document focused mainly on the preparation of the ILA Report for the Seventy-Seventh Conference, in accordance with its terms of reference and carrying them further. In addition to this document a Conference Room Paper entitled 'Replies from the Chair of the Space Law Committee of the International Law Association (ILA) to COPUOS' on certain legal aspects of suborbital flights' was submitted to this 55th Session of the LSC[2].

In this framework the ILA Committee members participated in a symposium organised by the Permanent Mission of Argentina in Vienna on 8 April 2016 addressing '*The challenges to international law on the threshold of UNISPACE + 50'*. All five continents were represented on the panel and the outcome was seen as a useful, realistic contribution to the remarkably swift development of space law today. It was certainly helpful for the elaboration of our Johannesburg Report in its latest stages[3].

The current terms of reference of the Committee appear broad enough to address not only the topics under permanent review, notably dispute settlement, new applications of satellite data and space debris (in Part One) and the new topic assigned to the Committee for 2012-2016 on the legal aspects of suborbital flight (Part Two). In fact, the mandate of the ILA Executive Council also refers to the need for the Committee to remain on the alert for any new developments on the field.

For example, in this challenge -to be addressed in more detail later in this Report- the ILA Committee draws the attention to questions surrounding space security, cyber security and the risks of latest generation technologies becoming easily available to the civilian sector. There have already been cases of interference to communication networks, and earth observation satellites, among others, become attractive targets. These concerns were highlighted by the Committee Chair in the annual report to the Legal Subcommittee of COPUOS last April, as mentioned above. Another topic topping the current agendas is the legal nature -still undefined- of resources from outer space and

---

[2] A/AC.105/C.2/2016/CRP.10.

[3] The keynote speech of the Symposium was given by the Permanent Representative of the Argentine Republic, **Ambassador Rafael Mariano Grossi.** The specific areas addressed by the speakers were '*Challenges posed for the design of international/national space law as the result of the rapid development of space-related technology*' **(Professor Steven Freeland)**, *'Security in space, cyber security and international law'* **(Professor Maureen Williams),** *'Appropriation of outer space resources'* **(Professor Armel Kerrest)**, *'International mechanisms for space cooperation to promote thematic priorities of UNISPACE + 50'*, (**Professor Setsuko Aoki),** *'The role of customary international law in the future exploration and use of outer space*' (**Dr Tare Brisibe),** *'Private entities as a challenge for outer space governance'* **(Professor Irmgard Marboe)** and *'International law in the XXI Century: Crucial challenges and issues, inter alia the threat of an arms race in outer space and the equitable exploitation of space natural resources. Need to update space law'* ***(Professor José Montserrat Filho).***

the legal status of mining activities on the moon and other celestial bodies, following the United States Act of 25 November 2015 entitled 'The United States Commercial Space Launch Competitiveness Act' (H.R.2262)[4], and the position paper of the International Institute of Space Law (IISL) of 20 December 2015 to which some ILA members -who are IISL board members- have contributed. The working session of our Committee in Johannesburg will include this topic for discussion.

On the basis of the discussion and recommendations stemming from the Washington Working Session on 8 April 2014, and in pursuance of our current mandate, the ongoing work of the Committee has been developing as follows.

C. The central topics[5]

1. Dispute settlement

The Chair

In this field the focal point continues to be the *PCA Rules on Arbitration of Disputes Relating to Outer Space Activities*. The Committee is now involved in creating awareness of these Rules in the various circles and exploring their effectiveness. To date the general view of the Committee is that the Rules should not be modified. Rather, they should remain in their present reading without becoming any stricter. Their procedural nature and flexibility are still their most attractive features, together with the wide space left to the autonomy of the parties. Moreover, the PCA Rules have enriched the existing procedures in the field of dispute settlement relating to outer space activities by envisaging the possibility of both sovereign states and private parties using its mechanisms, thus filling a serious gap in the field left by the UN Space Treaties. The ILA notes with satisfaction that the Chair and General Rapporteur of its Space Law Committee, and some Committee members, have been appointed to the Specialized Panel of Arbitrators pursuant to the PCA Outer Space Rules. This was announced in the ILA presentation to the LSC at its 55th Session on 11 April 2016.

What follows are the answers from Committee members, as requested, on their awareness of whether these Rules had been applied at any time in their own countries or elsewhere. The president of the International Institute of Space Law (IISL), Tanja Masson-Zwaan, will be opening the discussion.

Views from Committee members

Mrs Tanja Masson-Zwaan (Netherlands Branch) expressed that**,** to the best of her knowledge, the Rules have not yet been used but she is regularly alerting organisations and companies to their existence. It seems that some outreach could be done by the PCA itself also to inform organisations such as ESA and companies like SES, Eutelsat and others of their existence. She further believes the Rules might be helpful in case of disputes regarding non-technical (intentional) harmful interference in terms of ITU frequency management, for instance.

---

[4] See https://www.congress.gov.bill/114th-congress/house-bill/2262/text.

[5] The author is grateful to Conicet Argentina (National Council for Scientific and Technical Research) for its support for the research of these topics.

Professor Steven Freeland (Australian Branch) congratulated the Committee members who took part in the development of the Rules and noted that they are a useful addendum to the range of dispute resolution mechanisms that may be available. It is crucial that the PCA have a panel of specialist arbitrators available for any such disputes referred under the Rules, so as to streamline any arbitration proceedings. It would be very useful to gauge whether, and to what extent, the international (commercial) space community is aware of the Rules and have been/are prepared to utilise them in their commercial documents. In particular, it would be important to emphasize precisely what practical and commercial advantages the utilization of the Rules may offer. Moreover, if the Rules are not particularly well utilized, it would be equally useful to understand the reasons for this (apart from the possibility that their existence may not as yet be particularly well-known). Whilst he concurs with the view that the Rules should not be modified at this stage, he also believes that it is important to understand whether any aspects of the Rules are unattractive to commercial space actors (whether States or private entities) or are perceived as a hindrance to ongoing commercial relationships and activities. If that were to be the general perception, then some alteration to the Rules might eventually be deemed appropriate by the Committee.

Professors Aleksander Cicerov (Slovene Branch) and **Dr Y.S. Rajan** (Indian Branch) considered that the Rules on Dispute Settlement should not be modified for the time being and should evolve naturally as done so far. **Professor Marco Pedrazzi** (Italian Branch) observed that he was not aware of any instance of their application**. Professor Irmgard Marboe** (Austrian Branch) suggested exploring the way a '*compromis*' system could work in the context of the PCA Rules concerning, for example, launch contracts and treaties regulating space activities, cooperation agreements on registration, liability, authorisation and other examples such as the QB50-Project, an initiative of the European Union within its Seventh Framework Programme for research and innovation, which provides opportunities for cooperation and launch for up to 500 'CubeSats' for 2016-2017. **Dr Olivier Ribbelink** (Netherlands Branch) concurred, in general, with the views of the Chair and previous commentators on dispute settlement and the PCA Rules. The same may be said of **Mr Ray Purdy** (British Branch) and **Professor Jose Monserrat Filho** (Brazilian Branch) and **Professor Armel Kerrest** (French Branch). The latter, as member of the ILA delegation to COPUOS for several years now has accompanied the Chair and Rapporteur of the ILA Space Law Committee to the Annual Sessions for which we are very grateful.

The Chair points out that it is extremely difficult to prove a universal negative, even more so regarding the application of the PCA Rules. We should therefore continue exploring whether these Rules have ever been made effective, that is to say, if they have ever been applied -for better or worse- anywhere in the world to date. As recommended by **Masson-Zwaan** the PCA could be of assistance in this quest. (In fact, the **Chair** had asked PCA officers about their awareness on the application of the Rules, and they had answered in the negative). She agrees we should approach organisations such as ESA, and private companies as well, to provide them with more information on the Rules, especially their positive aspects which make them consistent with the present scenarios. This is in line with **Freeland's** and **Marboe's** suggestion of further examining the pros and cons of the PCA Rules in certain cases. The recommendation is therefore to continue our task on this matter during the next biennium.

2. Recent developments in the use of satellite data

The Chair

The state-of-the-art was examined and discussed in the 2012 Sofia Report to the ILA Conference and reviewed in the ILA Report submitted to the Washington Conference in 2014. It was agreed that this issue be kept under study by the Committee on the basis of recent case law and development of practices for the production of satellite data in court at the stage of evidence, with special reference to international boundary disputes (disputes between neighbours possibly affecting regional stability)[6]. In this chapter questions concerning privacy -particularly in decisions of courts and tribunals- should take pride of place given the scope and implications of far-reaching technologies such as Google Earth.

At this point in time it remains valid to wonder whether freedom of information is seen today in less absolute terms[7]. If so, would this be due to the need to protect privacy in the present world? A renewed look at the Hague, Sofia and Washington Reports (2010-2012-2014) is recommended. See also, inter alia, The Times**,** London, editorial of 21 April 2011, 2.

In this framework we have worked in cooperation with the ILA Committee on Sea Level Rise where space technologies have an important role to play. Moreover, this natural phenomenon has a strong impact on other areas of international law such as statehood and nationality issues, human rights, state territory and floods affecting the international boundaries causing, among others, migration problems. The ILA Space Law Committee finds that formulating proposals based on the use of space technology to meet the magnitude of this new threat is a realistic course of action.

Please note: Questions on space security in the application of new technologies, including cyber technologies, will be addressed separately at the end of this Report given their growing importance (PART ONE, point 5).

Views from Committee members

Tanja Masson-Zwaan suggested this topic be also considered in the context of 'big data´ and large satellite constellations envisaged, such as OneWeb. She also recommended the Committee follow and compare, in this field, the recent developments of data policy in the European Union regarding Copernicus. **Rajan**, for his part, added that nowadays there is also an important issue of 'national security' taking different shapes and actions carried out by non-state actors frequently supported by states, either tacitly or indirectly. For example, unregistered users of satellite telephony in mobile form are a matter of concern. Similarly, in an era of ultra-high resolution used by EOS, would it be legal to request the satellite data operator to avoid certain regions likely to cause serious panic among its citizens? And what would be the limit to such requests?

---

[6] Brownlie, Ian, 'International boundary and territorial disputes', D J Freeman, London, March 2000.

[7] Possibly a reaction to the 1979 decision of the Court of Strasbourg on the tragedy of thalidomide, currently known as the 'Sunday Times case', where freedom of information was interpreted in extreme terms and the protection of privacy suffered its worst defeat.

Steven Freeland´s answers are based on his vast experience in the field of international criminal law highlighting the increasing importance of the use of satellite data at the stage of evidence in trials of alleged perpetrators of genocide, war crimes and/or crimes against humanity, especially before the various international mechanisms of criminal justice. Such evidence may be crucial to demonstrate, for example, the perpetration of a deliberate act against the natural environment. As in national court systems, issues surrounding the accuracy and integrity of the evidence arise. However, such data is being increasingly used in such trials. The advent of small satellites and drone technology that enables Earth observation will mean that this trend will continue, subject to satisfying basic principles about the admissibility of the evidence.

Marco Pedrazzi focused on the use of satellite data and protection of privacy in what he considers a historical moment where the balance would probably shift increasingly, for reasons of terrorist emergency, in favour of security to the detriment of the protection of privacy**.** He referred to a specific type of data which does not appear to worry national and international judges, notably the GPS positioning data. The European Court of Human Rights, in *Uzun v. Germany* (29 June 2010) held that the surveillance via GPS of a suspect terrorist in order to investigate several cases of attempted murder and to present further bomb attacks 'served the interests of national security and public safety, the protection from crime and the protection of the rights of the victims', adding that the way in which it was carried out was proportionate to these legitimate aims. Therefore the Court found no breach of the right to privacy guaranteed by article 8 of the European Convention. More recently the Court, in *Ben Faiza v. France*, had authorised the use of GPS to track a suspect drug trafficker by means of a device placed in a car. In this case – which is still pending before the Court – GPS was used to track a suspect drug offender – under European law. **Pedrazzi** observed that the Italian Court of Cassation seems to go even further than the European Court -possibly with ensuing compatibility problems with the European Convention. In some recent judgments it has been considered that the determination of the location of a suspect by the police, via a cell phone used as a GPS device, needed no authorisation by a judge –under Italian law- and that surveillance via GPS could be considered a lawful means to be used by an employer in order to verify the faithful performance of tasks by an employee working outside the employer's premises (the employee was found spending many working hours in bars and had been fired). Finally **Pedrazzi** indicated that this description was only one example of the many possible uses of satellite data and that other uses may be much more intrusive. He concluded that these questions certainly merit a permanent in-depth analysis.

Dr Alexander Schaer (Swiss Branch) concurred with the suggestions and perceptions in the initial document. As to the protection of privacy in light of the unlimited possibilities of new technologies he mentioned that in 2012 the Swiss Federal Supreme Court had, for the above reasons, restricted the activities of a far-reaching technology surrounding Google Street View. He added his views on space security and cyber security under point 5.

Ribbelink referred to the reach of the principle of freedom of information suggesting to broaden it in the context of this Second Report so to include other human rights conventions and 'systems'. **The Chair** would like to clarify that the discussion surrounding this principle is definitely restricted, in this context, to a situation described at the 2012

Sofia Conference (see Report, footnote 17, p. 287) and later on at the 2014 Washington Conference (Report p.305) when addressing freedom of information and the right of privacy. This stems clearly from previous ILA Reports. The call of attention was especially registered at The Hague Conference (2010) by Frans von der Dunk and taken up by the Committee Chair a few months later with special emphasis on a particular new situation described by The Times (London) in its editorial of 21 April 2011. It concerns the decision in the 'Sunday Times case' (Strasbourg 1979) which was causing reactions and where freedom of information was taken to extremes and privacy went disregarded (as described at the outset of this chapter). In other words, we are referring to a specific, restricted and interesting situation which is now followed up according to the ILA mandate (last paragraph, *in fine)*. It certainly does not include the universe of human rights, conventions and declarations but is just another angle of the application of latest far-reaching technologies.

3. Space Debris

The Chair

This is an area under permanent review by the Committee since the adoption, by the ILA Sixty-Sixth Biennial Conference (Buenos Aires 1994), of the 'International Instrument on the Protection of the Environment from Damage Caused by Space Debris'. In line with the views provided by the scientists, its clauses continue consistent with the present landscapes. The underlying objective is now to continue opening a new chapter in the field of space debris, not only considering mitigation measures but moving on, as well, towards space debris removal possibilities in the framework of international law. Special attention is being given to state practice and compliance with the *2007 COPUOS Guidelines on the Mitigation of Space Debris*, as also to the domestic measures taken by states to this end.

The Committee continues to recommend a closer cooperation between the LSC and the STSC. Moreover, and given its importance, the STSC Working Group Report on 'Long term sustainability of outer space activities' should be viewed from a legal perspective as well. In this quest it is important to have in mind, *inter alia,* the treatment of this matter by the Sofia (2012) and Washington (2014) ILA Conferences**.**

A realistic step forward, registered in 2015 and followed up in 2016, is the addressing of this topic by the Legal Subcommittee of COPUOS from an intergovernmental perspective. This action was published in a Conference Room Paper (A/AC.105/C.2/2016/CRP.16) on 5 April 2016 entitled *'Compendium of space debris mitigation standards adopted by states and international organizations'.* This Compendium was a contribution from Canada, the Czech Republic and Germany for access to updated information on the measures implemented by states and international organisations on the mitigation of space debris and taking into account the work of the Scientific and Technical Subcommittee of COPUOS. To carry forward these objectives the Secretariat maintains a page on the UN OOSA website[8]. At the fifty-eighth Session of COPUOS, in June 2015, it was agreed that states members of COPUOS and international intergovernmental organisations having permanent observer status with COPUOS should be invited to contribute to the updating of the Compendium (A/7020, paragraphs 247-248).

[8] www.unoosa.org/oosa/en/ourwork/topics/space-debris/compendium.htm1

Views from Committee members

Tanja Masoon-Zwaan, in an optimistic approach to this question , had words of praise for the work of the UN Office for Outer Space Affairs when embarking in the compilation of the space debris Compendium (http://www.unoosa.org/oosa/en/ourwork/topics/space-debris/compendiumhtml) previously referred to and also for the International Academy of Astronautics (IAA) for the reference report 'Situation report on space debris' which updated the IAA position papers of 1993-2001 and included a legal chapter which she had written at the time (see http://iaaweb.org/content/view/569/755/). **Steven Freeland** noted that even though the 2007 COPUOS Guidelines on the Mitigation of Space Debris represent an important step forward, they are not the panacea that will solve the problem because they are recommendatory by nature and assume the continuance of debris creation, albeit at a slower rate than on a 'business as usual' basis. He added that the active removal of space debris -whilst on its surface appearing attractive- brings with it many difficult legal problems and technical/logistical questions, and will require broad international cooperation and a management regime for this to be undertaken safely and as effectively as possible. One important issue to further emphasize the complexity of the space debris problem is to draw the link between increasing space debris and its impacts and conflicts in space that might involve the deliberate destruction of space objects. **Aleksander Cicerov** agreed on this point -as did most of the ILA Space Law Committee members- as well as on the need to encourage a closer cooperation between the LSC and the STSC.

V. S. Rajan foresaw for the coming decade, or perhaps slightly later, the possibility of commercial services for space debris removal, initially on request from some space agencies and later extending beyond, and possibly using some form of guided robots. What would be the situation if they interfered with others' space assets? Many of the debris removing robots would be in a continuing move. **Rajan** added that such services would perhaps be required for the sustainable utilization of space, especially due to the cramming of those regions by thousands of small satellites. **Dr Valnora Leister** (Brazilian Branch) pointed out that space debris causes safety hazards not only to the space environment but also to aviation and transport by sea. Debris generated from launch operations is constantly being collected from the oceans and this environmental impact by space activities is not the object of dedicated attention today. **Olivier Ribbelink** emphasized the importance of pursuing studies in space debris removal possibilities in the framework of international law.

The Chair considers that this topic should continue under review by the Committee, particularly in light of the new possibilities brought about by the Compendium on Space Debris Mitigation mentioned in this chapter.

4. Suborbital flight

The Chair

The Committee Rapporteur, **Professor Stephan Hobe** (German Branch) will be submitting his Second Report to the Seventy-Seventh Conference next August in Johannesburg as a follow up to his First Report discussed at the working session of the ILA Seventy-Sixth Conference, in Washington 2014. Since 2014 not much progress has been registered at international level on these matters. Most issues are strongly linked to questions

of delimitation. The Second Draft Report on suborbital flight appears as Part Two of this Committee's Report to the Johannesburg Conference.

As indicated at the outset of this Report (Part B), a Conference Room Paper on the matter was prepared by this **Chair** for submission to the Fifty-fifth Session of the LSC (4-15 April 2016) entitled 'Replies from the Chair of the Space Law Committee of the International Law Association (ILA) to COPUOS on certain legal aspects of suborbital flights'[9]. It describes the development of suborbital flight issues within the Space Law Committee since 2014.

The initial discussions of the ILA Committee on suborbital flight show a wide range of options on ways and means of examining the topic. Some members favoured the drafting of a set of guidelines from the outset whereas others, in a more cautious attitude, observed the absence of a legal definition for this new technology noting that any action at this stage would be premature. It was widely perceived that this topic would bring back to the fore issues relating to the definition and delimitation of outer space to which the ILA answered in Doc. A/AC.105/1039/Add.3. The majority considers today that realistic answers to questions included in UN Doc. A/AC.105/1090, Annex II, paragraph 17 would go a long way in clarifying conflictive aspects of the topic. Other ILA proposals indicated the need for a substantial analysis of suborbital flight and the national legislations enacted to govern the matter in the aftermath of the Washington Conference. All in all there are many areas under discussion, and also boundary areas in which the Space Law Committee of the ILA is currently involved.

The net conclusion is that suborbital flights are prompting challenging legal issues -so far unresolved- which go back to the very root of both air and space law. Therefore, a recommendation to work jointly with ICAO in this task seems realistic. Without establishing priorities at this stage, questions relating to the applicable law and national space legislations, definitions and/or descriptions regarding space flight, delimitation issues, questions underlying registration, insurance and liability, and some agreement on the legal nature of space tourists should, inter alia, be addressed without delay. In this context the Second Report on the subject is developing as follows.

Views from Committee members

Tanja Masson-Zwaan pointed out that, at this point in time, other organisations are also becoming active on questions of suborbital flight as the industry comes closer to starting actual business, for example, the recent cooperation between ICAO and UNOOSA where two symposia -in which ILA Committee members participated- have now been held (see http://www4.icao.int/space). Moreover, the ITU is considering the issue of frequency use by suborbital vehicles and the WRC-15 has adopted a resolution to conduct research in this context and is planning to add this as an agenda item for WRC-23. The developments of national law on the matter are also of importance. In the UK, for instance, a task force has been set up in the framework of the Civil Aviation Authority (see https://publicapps.caa.co.uk/docs/33/CAP1189_UK_Government_Review_of_commercial_spaceplane__certification_and_operations_technical_report.pdf). She added that the drafting of guidelines by the ILA Space Law Committee for a model law in this field could be an interesting course of action and should take into account these current developments.

[9] A/AC.105/C.2/2016/CRP.10.

Mrs Joanne Wheeler[10] (British Branch) followed up the previous statement with similar views, and added news on the role of national space legislation in connection with the latest technological developments. It concerns a United Kingdom example. Briefly, this expert observed that for many years the UK had excelled in manufacturing small satellites and 'cubesats' and became world leaders in the industry. Yet the country has been missing its own launch capability for placing such small satellites in outer space. On 18 May 2016 the UK Government policy agenda was announced by the Queen and included an innovating proposal consisting of a first commercial spaceport in the country to be set up before the end of the current parliamentary term in 2020. This innovation will mean low-cost access to space for the small and microsatellite industry and space tourism and is seen as a powerful indication of the role national space legislation will come upon to play in the near future. In fact, before too long national laws will be needed for a number of purposes relating to this innovation, such as the certification of space vehicles and their safe operation within UK airspace.

Professor Frans von der Dunk (American Branch) believed that the Committee will inevitably have to revisit the question of delimitation of outer space, as most suborbital flights are aiming for altitudes well above the normal airspaces used for aviation yet well below the orbit of most LEO satellites and the ISS, in other words: the grey zone is most particularly at issue in the discussion on delimitation. This would also require going back to the true origin of the discussion on the so-called Von Karman-line, clearing up the many inconsistencies and obscurities surrounding it. An analysis of the various national space laws and regulations -both in existence and being developed- should be carried out in order to see how they handle suborbital flight and/or any spatial delimitation of outer space.

Steven Freeland considered as an obvious complexity the development of an appropriate management regime for any such activities at national and, in particular, international level. There is significant confusion and a lack of 'ownership' at this stage among the international organisations responsible for commercial air activities (principally ICAO) and those mandated to oversee space activities. Without a dedicated and responsible intergovernmental organisation –either a newly created one or through the expansion of the mandate of an existing one- it will be difficult to develop comprehensive, relevant and appropriate international legal frameworks within which specific countries can then operate through the development of national laws. Whilst, for example, ICAO and UNOOSA have begun to jointly explore this on a cooperative basis, there is much work to be done. The difficulties are compounded by the fact that, as yet, it is difficult for regulators to fully understand the technology and therefore the potential associated risks.

Professor Lotta Viikari (Finnish Branch) viewed any work towards guidelines for a model law certainly as most welcome and ideally as soon as possible. No doubt this requires, in the first place, some kind of definition of what is exactly meant by the term 'suborbital flight'. In this regard, she suggested an approach that intends avoiding -at this point at least- the highly problematic question of delimitation and instead focuses on other relevant characteristics of these flights. For instance, considerations of whether a flight reaches Earth orbit or not might provide the basis for a definition with high enough resolution for many purposes. **Viikari** strongly supported the Committee´s endeavours in

[10] **Joanne Wheeler**, 'UK Spaceports Announcements', Bird & Bird, Satellite Bulletin – May 2016.

this respect. However, she recommended caution when resorting to national legislation as a model for international norms -even those of legally non-binding status. All the more so, given the focal role of the non-governmental sector in this field of activity, whatever states regulate domestically will probably divert considerably from what is feasible within the realm of public international (space) law.

V S Rajan added what he considered 'another' category of 'suborbital flight' originating from the increasing attempts to recover parts of the launch vehicle and also to use them in 'unconstrained' mode of launch and then control and guide the used parts to areas where it will not damage other land mass or coasts. They are actually 'suborbital' in the physics sense. **Aleksander Cicerov**, for his part, fully supported the idea of having guidelines for a model law on suborbital flights as soon as possible.

Rafael Moro Aguilar, LL.M. (American Branch) referred to two recent developments in Europe which were of special interest having in mind the lack of international and/or national regulation on commercial human suborbital flight, as pointed out by the Chair and the Rapporteur of the Committee. One of the two countries was Spain, which dedicated to preparing a draft bill on private outer space activities in 2014-15. **Moro Aguilar** was pleased to report that the draft bill took, as one of its inspiring sources, the 'ILA Guidelines for a Model Law on National Space Legislation' prepared by this Committee. He added that the Spanish draft bill has covered the activity of private human suborbital flight (a future private human orbital transportation was also contemplated). This part of the bill basically follows the example set up by the US CSLAA. It includes a licensing regime whereby these flights would be considered as space flights and, therefore, their launches and reentries would require authorisation from the Spanish government according to Article VI of the Outer Space Treaty. It also includes an "informed consent" regime, whereby spaceflight participants would have to sign a waiver of liability as previous requirement to flying in the private vehicles.

The other country showing an interest in enacting national legislation has been the United Kingdom. A report was prepared by the UK Civil Aviation Authority and the UK Space Agency, published in 2014, under the title 'United Kingdom's government review of commercial space plane certification and operations'. The report admitted that the current legislation does not fully address space planes (either orbital or suborbital). 'Space planes' are considered 'aircraft' by the UK authorities and thus their use would require full certification, just as any other kind of aircraft. However, this would be a long-term approach, as certification in the European Union is now under the competence of the EU authorities. Therefore, to enable space plane operations to start from the UK in the short term, there was a proposal to classify them temporarily as 'experimental aircraft' (which would put human suborbital vehicles back within the power of the UK government) and then follow as well the regulation model set up by the US CSLAA.

It is noteworthy that no new developments have taken place lately with respect to these initiatives, neither in the UK nor in Spain. Nevertheless, this expert thought it interesting to bring them to the attention of the members of the Space Law Committee. These initiatives may give us a hint as to what will be the future regulation of commercial human suborbital flight in countries other than the USA, which for the time being remains the only country in the world to have regulated this activity.

5. New developments

As customary, and in accordance with its terms of reference, the Committee looks into any further developments surfacing during our work adding, if appropriate, introductory remarks on the matter. At this stage, as announced earlier, attention will be drawn to space security and cyber security**.**

Questions relating to space mining, in light of the 2015 US Act on Commercial Space Launch Competitiveness and the IISL Board Statement of 20 December 2015, will be addressed at the working session of the Johannesburg Conference. If unable to attend, members are kindly asked to send in their comments and suggestions on this topic to the Chair not later than 31 July 2016.

5.1 Security in space and cyber security

The Chair

The following lines, with further additions, were part of the ILA Report to the Fifty-fifth Session of the Legal Subcommittee of COPUOS in April 2016[11] so as to highlight certain matters the ILA wished to report to the Legal Subcommittee on the eve of the forthcoming Seventy-Seventh ILA Conference, where further discussion is expected. Not so long ago the doctrine concurred that the major threats to space security were space debris, an arms race in space and natural near-earth objects (NEOs) likely to impact on planet Earth. This was a recurring note, for example, at the UNIDIR Conference in Geneva on 'Security in Space – The Next Generation' (31 March-1 April 2008)[12]. However so, in the current scenarios the threat of a cyber attack should enter this list, and indeed top it, as it means harm on an unprecedented scale.

The importance of looking into security matters lies in the fact that we are living in a very unsafe world where certain situations call for sound solutions. In this particular case the threat of a cyber attack of untold dimensions looms on the horizon. Indeed – as referred to by recent literature- this is a new global security threat (GST). There are already a few examples in the public domain, communications networks for sure -and earth observation satellites as well- are under a serious threat, and appear, inter alia, as attractive targets for a terrorist attack using cyber technology. During the 2015 LSC Session the ILA Report thereto[13] had drawn attention to the question of space crisis management as discussed at a Seminar organised by the Royal Institute of International Affairs (Chatham House, London) on 22 July 2014. A second meeting, entitled 'Space Security and Cyber Security', followed on 16-17 July 2015. At these meetings an important topic on the agenda was cyber threats to satellites, discussed from different angles and country perspectives. One of the participating experts, **David Livingstone** (Chatham House) expressed the view that satellite services are key targets for a number of cyber threats, as they support a critical level -growing yearly- of functionality within a country's national infrastructure. This means that a single successful attack on a critical node can affect a large number of

[11] UN Doc. A/AC.105/C..2/108.

[12] This Conference was published by UNIDIR under that title, New York, Geneva 2008.

[13] UN Doc. A/AC.105/C.2/106, Part C.3 (b).

important national and international capabilities[14]. One of our new Committee members, **Dr Guoyu Wang** (HQs), was guest speaker at one of the 2014 Chatham House meetings where he addressed 'space crises management', gave his views on questions relating to information security and space security policies and highlighted the importance of international cooperation in these very sensitive fields[15].

On these occasions participants addressed the international perspectives resulting from the intersection of cyber security and space security. The standpoints and national legislations of China, France, India, Italy, Japan, Russia, the United Kingdom and the United States were profoundly analysed and compared. Concern was shown that modern technologies were gradually becoming more accessible to the civilian sector and represented a high threat, if misused, as an element for terrorism purposes. The central topic was an analysis of security challenges common to both the cyber and space domains noting, inter alia, an absence of national policy documents in the cyber and space spheres and a lack of agreed definitions of key terminology in both domains[16]. Furthermore, a 'blurring' line was observed between 'offensive' and 'defensive' actions in the cyber and space fields and certain confusion between non-military and military roles in the space and cyber sectors. Moreover, unfortunate asymmetric threats in both these sectors were perceived, such as the idea that 'offence is easier and cheaper than defence'[17].

There are other elements as well singled out in the Chatham House Seminar. Whereas the space sector has a most defined infrastructure at the Office for Outer Space Affairs (OOSA), the cyber sector is in a rather stormy infancy with no clearly defined facilities of the kind. This situation seems to hinder the development of cybernetic policies, especially at security level. The view was expressed that in today's space environment many of the key issues cut across the civil-military spectrum, thus interfering with the effectiveness of future space policies.

The prevailing opinion at the moment is that the United Nations are the natural forum for the development of global cyber policies. It would be desirable for policies on space security and cyber security to be designed in the United Nations given the high dependency of latest generation technologies -such as robots- on both space and cyber areas. In this framework, as **Professor Mahulena Hofmann** (German Branch) is suggesting, the word and experience of the ITU would be of important assistance.

Another threat to environmental security continues to be the loophole left by the 1967 Outer Space Treaty in Article IV which -to follow Bin Cheng´s wording- does not go beyond a limited denuclearisation of outer space and a non-militarisation of celestial bodies (see 'Le Traité de 1967 sur l'Espace', 598-9, Journal de Droit International N°3, 1968, Paris). The drafting of Article IV, by leaving a number of questions open to interpretation,

has been a matter of concern over the years and is certainly inconsistent with the contemporary settings.

One of the recent meetings on these matters, interesting for its implications and similarities with recent space law issues and technologies, was a Cyberspace Conference organised by the University of Sheffield on 18 September 2015 to discuss 'Non-State Actors and Responsibility in International law'. Under this heading state responsibility, individual criminal responsibility and question of evidence were included[18]. The objective was to assess the effectiveness of international law in ensuring responsibility for the injurious cyber activities of non-state actors and it addressed critical international legal questions, such as the following.

- Can states be held responsible for injurious acts committed by non-state actors in or through cyberspace?
- Can individuals be held criminally responsible for malicious cyber operations and how is jurisdiction established in cyberspace?
- What challenges do international courts face when conducting cyber investigations and how do international courts assess the probity of cyber evidence?[19]

To go deeper into doctrinal positions on these matters would be going beyond the scope of this Second Report of the Committee and the introductory document that preceded it. Nevertheless, now seems to be the time to embark in discussions and responses on these topics within the ILA Space Law Committee. They certainly consist of new developments on which we are meant to be on alert.

Views from Committee members

Steven Freeland fully supports the development of a comprehensive and detailed research programme to investigate the plethora issues that arise when considering the impact of cyber security questions on the space domain. There is clearly an interaction and such a study clearly falls within the mandate of the Committee.

Lora Viikari points out that, regarding the issues underlying space security/cyber security, it is striking that both domains apply dual-use capabilities. This obviously makes it very difficult -if not totally impossible- for many states to accept binding international legal instruments. They may not even be desirable as -to be realistic- verification and compliance problems would weaken the effectiveness of such instruments. Instead, it would be wise to concentrate on confidence-building measures in general and a gradual development of non-binding codes of conduct or similar. Some kind of non-mandatory -albeit attractive- set or common rules seems, on the other hand, crucial in the long run as mere national approaches are highly inadequate to address this complex set of questions. **Viikari** adds that it is obvious that cyber security is critical to space security and vice versa and that in this field it would be useful to begin drafting key terminology to provide solid grounds for further discussion.

[18] Among others, this Conference continued discussing specific questions raised in the 'Research Handbook on International Law and Cyberspace', Ed. Tsagourias & Buchan, EDWARD ELGAR 2015.

[19] http://www.sheffield.ac.uk/law/research/conferences/cyberspace

Alexander Schaer agrees that topics as space security and cyber security should enter the list of issues for discussion by our Committee as soon as possible. In his opinion, nobody can deny today the latent threat of cyber-attacks -especially those with a terrorist or political background. He also completely agrees that 'space technology' is a most attractive target which could be caused immense harm with a simple laptop (for example, the shutdown of a communication network or the 'hijacking' and crash of a rocket). He particularly wishes to draw attention to the situation we are facing today with an ever-increasing number of private actors working in the space industry. Theoretically, at least, they appear more vulnerable to cyber-attacks than governmental actors. Nevertheless, they are becoming increasingly important in the space industry, carrying out more public functions and building up enormous data storage. Is there a public need for establishing international guidelines with minimum requirements regarding cyber security for contractors? Does the current legal framework equally cover problems arising from cyber-attacks or is there a need for adjustments? **Schaer** concludes by stressing the fact that various questions, both important and urgent, are growing in geometrical proportions on the international scenes and, for these reasons, security in space and cyber security should continue under discussion by the ILA Space Law Committee with a view to including these matters in its future mandate.

Dr Tare Brisibe (HQs) pointed out that in the framework of security in space and cyber security, whilst efforts at establishing technical means are on-going, including the International Telecommunications Union's initiative towards developing an international registry of interference to space services, it is of importance -amongst others- to address laws applicable to international telecommunications by cyber means relying on space-based and associated ground infrastructure, including private sector participation in operating infrastructure and delivering related telecommunications services. Cyberspace law, referred to the application of norms derived from existing international law relevant to the use of Information and Communication Technologies (ICT's) by States, is essential in reducing risks to international peace, security and stability. **Brisibe** recommended further study to promote common understanding on how far such norms apply to State behaviour and the use of ICTs by States, whose unique attributes may require the development of additional rules over time.

Y S Rajan considers cyber security crucial for space security since many of the space assets on space or on ground for tracking or receiving are heavily dependent on 'information transfer'. They are vulnerable to cyber attacks, especially by so-called non-state actors. Disruption and disability can be caused by elements other than guns and bombs, such as signals or radiation. Can the State where this originates be held responsible? Moreover, since the Internet can also be used to hide the sources of origin, the issues turn complex. If the States do not reach some agreement, space assets can be endangered. This raises questions of sovereignty, human rights, freedom of information and protection of privacy. **Rajan** finds no solutions in sight in this field. However, he observes that the threat should not be considered science-fiction as it could soon become a reality. He shows concern for the wording of the Outer Space Treaty in Article IV as it now stands and clarifies that it would have to go further than only banning 'weapons of mass destruction (WMD) in orbit around the Earth. With thousands of small satellites around, it would be quite easy for a State or non-State actor to place in outer space a few small satellites emitting radio signals, not just aiming at one or two satellites but disrupting, at random,

a whole series of civil and military operational space based systems. Such a situation may be even worse than the case of WMD placed in orbit around the Earth. This expert concludes that the 1967 Treaty needs some addition, such as a ban on anything likely to cause massive disruption on the space-based and/or Earth-based operations.

5.2 Additional Information on new developments

Some Committee members, having in mind the announcement of a discussion on space mining at the Space Law working session of the Johannesburg Conference next August, have sent further comments and information for which we are very grateful.

Tanja Masson-Zwaan would like to inform this Committee on the work of the recently created (October 2015) 'Hague Space Resource governance Working Group'. A symposium was held in Leiden last April and a report thereon has been published. Please see:
https://www.universiteitleiden.nl/en/news/2016/05/the-hague-space-resources-governance-working-group
http://law.leiden.edu/organisation/publiclaw/iiasl/working-group/the-hague-space-resources-governance-working-group.html

Marco Pedrazzi, in his comments to this Second Report of the ILA Space Law Committee notes that, on the recently enacted provisions on space mining in the US Commercial Space Law Competitiveness Act, he shares the view that its legal provisions may be seen as compatible with the 1967 OST. At the same time he holds the opinion that they are in contrast with the Moon Agreement and adds that, of course, the Moon Agreement is not applicable to the US as it has not been ratified by this State. It should be had in mind that the Moon Agreement is not binding on any major space power and is only in force among a limited number of States. However, the mere fact of the coexistence of two incompatible legal regimes is, in his view, highly problematic and it would be desirable that all interested States negotiate a solution to this issue.

Alexander Schaer pays special attention to this topic. Having gone through the U.S. Commercial Space Launch Competitiveness Act and related news articles he is interested in following this question closely.

6. Closing remarks

Johannesburg Working Session

The working session in Johannesburg will continue addressing the above-listed questions with a view to updating and reaching further conclusions and proposals. In addition, a discussion is envisaged on space mining in light of recent major developments in the legal field. In this context the 2015 US Act on Commercial Space Launch Competitiveness and the IISL Board Statement of 20 December 2015 stand out as possible interpretations of the applicable law, highlighting the freedom of space mining. This does not imply discarding any other interpretations brought about at the Johannesburg working session or elsewhere, or initiatives for drafting a -possibly- non-binding instrument (code of conduct, or guidelines, for instance), an option which seems to be gradually gaining ground.

Hence the reason for listing space mining within the working session of the ILA Space Law Committee next August. In spite of the topic not being part of our terms reference, a discussion is consistent with the last paragraph of our mandate for 2012-2016 requesting us to keep on alert over further developments in the field.

PART TWO

SECOND REPORT ON SUBORBITAL FLIGHTS

by Professor Stephan Hobe
Committee Rapporteur[20]

Introduction

This second report elaborates on the points laid down in the first report of 2014 of the Working group on suborbital flight by the Space Law Committee Rapporteur Professor Stephan Hobe to which full reference is made hereby and provides an update in as much as further developments in the field of suborbital activities can be reported with regard to definitional issues, the role of existing technological concepts and projects for determining applicable rules, state practice, liability aspects and the avenues for the possible evolution of commercial suborbital touristic flights to a transportation market.

1. Definition

No legally binding definition of suborbital flights has been accepted yet by the international community. ICAO elaborated that 'A sub-orbital flight is a flight up to a very high altitude which does not involve sending the vehicle into orbit'.[21] However, this definition has been used only as a reference, but has not been accepted in any legally binding document or in international and national legislation. Other propositions include any flight outside the Earth atmosphere with a maximum flight speed below the orbital velocity[22]; a trip to space that does not involve sending the vehicle into orbit"[23]; and "[flights] which involve the launch of an object or objects into outer space without that object or such objects completing one or more orbits around the earth.[24] Although it is difficult to draw a definition from these proposals, one can take as a reference and main characteristic of suborbital flights the fact that they do not reach orbit and thereby only partly take place in outer space. It remains to be seen whether a definition will be required for the establishment of legal rules on suborbital flights.

I. Current concepts for Suborbital Reusable Launch Vehicles (SRLVs)[25]

There are different concepts and technical solutions for sending a vehicle into a parabolic flight which, in the apogee, shall be for a few minutes in free fall and thereby not influenced by Earth's gravity. In order to establish which law should be applicable to suborbital flights a short overview on existing suborbital projects and their main parameters

[20] Special thanks are owed to Rada Popova for her support in the preparation of this report. Furthermore Tanja Masson-Zwaan is thanked for her valuable input.

[21] Concept of Suborbital Flights: Information from the International Civil Aviation Organization (ICAO), paper A/AC.105/C.2/2010/CRP.9, presented at the 49th session of the Legal Subcommittee of UNCOPUOS, 19 March 2010.

[22] Definition used by the company Orbspace, http://www.orbspace.com/Background-Information/Suborbital-vs-Orbital.html.

[23] „What is a Suborbital Flight?", http://www.spacetoday.org/Astronauts/Animals/SubOrbitalFlights.html.

is necessary so as to try to determine in which environment they are taking place. As to the existing concepts, vehicles can either be launched vertically from a launch pad (a spaceport) or horizontally, e.g. by using a carrier craft (a spaceplane) to bring it into higher altitude. Vertical takeoff/vertical landing (VTVL) suborbital vehicles use booster rockets and unlike aircraft which take off and land vertically, they do not use the air for launch support. Secondly, there are concepts for horizontal take off/horizontal landing (HTHL) suborbital vehicles which build upon the mode of operation of vertical take off/horizontal landing (VTHL) space planes such as the NASA Space Shuttle and the Soviet Buran space shuttle. HTHL suborbital craft also use rocket power but are first towed to the end of a runway before the vehicle is thrust by rocket engines to reach higher altitude. After reaching the apogee of its parabolic flight, the vehicle then performs an unpowered horizontal landing on the runway and thereby lands similarly to an aircraft.

II. Overview of existing projects

With regard to the different technological concepts for suborbital flights, in the following a short overview on the currently most relevant projects for suborbital flights shall be made. Virgin Galactic[26] was founded in 2004 and is developing a composite HTHL concept with a carrier craft from which the suborbital vehicle is released. The WhiteKnightTwo/SpaceShipTwo vehicles were planned to start operating private space tourism flights in 2009. However, an unfortunate test flight in 2014 which resulted in a crash, vehicle loss and the death of one of the pilots postponed the planned passenger flights. XCOR[27], a U.S. company which was founded in 1999, undertook first test flights in 2001 and is currently negotiating with the Netherlands to build a spaceport in Curaçao. Its VTVL Lynx reusable suborbital vehicle is planned to provide both touristic and payload delivery flights. Suborbital vehicles are further developed by Blue Origin[28] which was founded in 2000 by Jeff Bezos and flew the first test flights of its VTVL New Shepard vehicle in 2015. They succeeded to land the vehicle twice vertically and prove reusability. After first test flights, New Shepard became the first suborbital vehicle to land successfully vertically in 2015 and 2016. Masten Space[29], a U.S. company founded in 2004, developed the Xaero reusable vehicle which is not planned to carry humans. So far, flight test had taken place between 2006 and 2012. The space launch and flight test service provided UP Aerospace[30] founded in 2004 also has not announced plans to carry humans on suborbital flights. It developed the SpaceLoft vehicle and small sounding rockets for altitudes up to 160 km which can spend up to 6,5 minutes in microgravity. Apart from the SpaceLoft vehicle, all planned suborbital flights take place or are planned to take place in altitudes of about 100 km while the vehicle will be in free fall for around 4 minutes and the passengers and crew can experience the feel of zero gravity.[31]

[31] For further overview on existing suborbital concepts, see „The U.S. Commercial Suborbital Industry“, U.S. Department of Transportation, FAA, 2011, available online at https://www.faa.gov/about/office_org/headquarters_offices/ast/media/111460.pdf.

It can thus be observed that the majority of suborbital projects are based on the HTHL concept. However, two of the companies offering suborbital services with highest landing success rates, SpaceX and Blue Origin, apply the HTHL concept for their launch vehicles. From a legal perspective, the characteristics of these two approaches might be relevant for determining the legal rules to govern suborbital flights as will be shown below.

III. Applicable law

From the concrete functioning of the suborbital flights follows that it is crucial to determine whether air or space law, or both should be applicable.

A. On the international level

No legal definition of a boundary or demarcation between air space and outer space has been yet adopted. The lack of a universal definition and the fact that flights will reach 100 km but will not reach speed high enough to complete an orbital rotation around the Earth leaves the question open whether reaching the van Karman line, seen by many as the border between airspace and outer space[32], but not legally defined as such, shall be a determining argument for the legal nature of suborbital flights. Moreover, as shown above, most of the existing concepts include plans to reach an altitude of not substantially more than 100 km. This does not provide an unambiguous answer for defining suborbital flights either as an air or as an outer space activity according to the environment it is taking place in. Thus, other factors must be assessed in order to look for further arguments supporting the application of air law, the law of outer space or other legal framework on suborbital flights.

Taking into consideration the different technological specificities for HTHL and VTVL suborbital launches, air law seems to be possibly applicable especially for HTHL suborbital craft. Looking at the example of Virgin Galactic's composite vehicle, it can be seen that all flight phases from the launch to the runway landing take place predominantly in air space and up to a maximum altitude of 100 km. The air-launched carrier craft flies only in air space before it releases the spaceplane SpaceShipTwo which then reaches the upper atmosphere under rocket power, glides back to Earth and finally lands on a runway as a plane.

At the same time, there are also a number of arguments which support the applicability of the law of outer space to suborbital flights. Firstly, as can be seen both for HTHL and VTVL launches, the technology applied for construction and propulsion is *per se* rocket technology used also for orbital launches. In addition, outer space is involved at least partly during the freefall stage of the parabolic flight. Furthermore, all objects intended for use in space or intended to reach space are to be considered 'space objects' and therefore space law shall apply to their operation from the launch phase to the completion of the flight[33]. This would mean that suborbital vehicles, because they aim to bring humans or payload to the lowest layers of outer space, shall be subject to space law.

---

[32] On the delimitation question and the van Karman line, see F. Llyall/P. Larsen, Space Law: A Treatise, (2009), p. 168; in 2015, at the World Radio communications Conference, the International Telecommunications Union (ITU) adopted its Resolution 763 (WRC-15) considering the boundary between air space and outer space to be 100 km.

[33] On the legal nature of space objects see, for example, Kerrest/Smith, Article VII OST in: S. Hobe/B. Schmidt-Tedd/K.-U. Schrogl (Eds.), Cologne Commentary on Space Law Vol. I (2009), mn. 51, 54.

Apart from looking for applicable existing rules, a third possibility for regulating suborbital flights may be the development of a *sui generis* legal order. This concept has already been on the agenda in discussions and literature and includes propositions to involve the International Civil Aviation Organization (ICAO)[34] in the legal governance of suborbital activities. ICAO has proven to be very successful in its legislative competence to the development of air law and is established to monitor all uses of air space – including also the access to outer space through air space. Also other international organizations and have been involved in the development of guidelines for suborbital flights in the recent years. In 2015, the International Telecommunications Union (ITU) recognized the necessity for identifying measures to avoid harmful interference through radiocommunication onboard suborbital vehicles.[35] Also in 2015 ICAO and UNOOSA organized a joint symposium on Aerospace travel in which safety management with regard both to civil aviation and to suborbital flights and developments in space transportation was one of the main agenda tasks.[36] This showed, firstly, that the Organization at least recognizes its competence for activities which encompass air travel but reach out of its traditional scope and secondly, that a common understanding for air and space activities and their cross section can be established on the international level. In 2016 there was a follow-up to the 2015 AEROSpace symposium as ICAO and UNOOSA organized a second joint Symposium relating again to suborbital activities on the topic of emerging space activities and civil aviation.[37] These initial cooperation steps might become the basis for coordinating the efforts on the regulation of suborbital flights and lead to some development of legislation. For defining the elements of a possible future international agreement, it might be helpful to look also at the existing state practice.

B. National legislation

On the national level, a few examples show how the application of air or space law is tackled in relation to suborbital projects. Apart from Australia, which is the only state which so far has legally defined the 100 km boundary between airspace and outer space in its Space Activities Amendment Act of 2002, also the 2005 Belgian Law on the Activities of Launching, Flight Operation or Guidance of Space Objects includes a statement regarding the applicability of air and space law to suborbital flights as it explicitly takes them from the applicability of space law. The 1981 German Luftverkehrsgesetz (Air Traffic Act) provides in its §1 that spacecraft, rockets and similar vehicles are considered aircraft as long as they are in air space. The South African Space Affairs Act of 1993 provides that "suborbital trajectory" means the trajectory of any object which leaves the surface of the earth due to a launch, but returns to the surface of the earth without completing an orbit around the earth. The United Kingdom set up a taskforce in the Civil Aviation Authority and reviewed commercial spaceplane certification and operations in 2014[38] and Spain drafted a bill on Outer Space Activities, in which private manned suborbital flights

[38] See the UK Government Review on commercial spaceplane certification and operations, available online at https://publicapps.caa.co.uk/docs/33/CAP1189_UK_Government_Review_of_commercial_spaceplane_certification_and_operations_technical_report.pdf.

are regulated. Currently, the USA remains the only state which has enacted a specific national law on the regulation of suborbital flights by amending its 1984 Commercial Space Launch Act.[39] Thereby, the Office of Commercial Space Transportation of the Federal Aviation Administration (FAA) regulates and issues licenses and permits for commercial launches of orbital and suborbital vehicles.

For the purposes of this paper and with the aim of further clarifying the regulatory domestic situation relating suborbital flights, representatives of several countries have been approached and replies have been received from Australia, France, India and Japan to a questionnaire including the following questions[40]:

1. *Are you aware of any suborbital projects in your country?*
2. *What is the current state of the law with regard to suborbital activities in your country?*
3. *Is there respective national legislation? In case there is no existing national legislation: Are you aware of any coming legislation or pertinent discussion on suborbital flights from a legal angle?*

Add. 1. As to the first question concerning suborbital projects in the respective country one negative answer was received from *Australia* whereas the other three countries were reporting on respective action. In *France*, there is the development of a spaceplane of Airbus Defense and a project involving a composite vehicle with a carrier aircraft and an aircraft separated in flight by Vehra of Dassault Aviation.

In *Japan*, besides the development of some sounding rockets by JAXA (the Japan aerospace exploration agency) three types of suborbital rockets have been deployed: The S-310 cruising at an altitude of 150 km, the S-520 at an altitude for 300 km and the SS-520 at about 800 km. S-310 has been launched 45 times from Japan and 10 times from abroad. JAXA, however, does not have a suborbital flight program for touristic purposes.

India does not have a specific suborbital project but the first experimental suborbital flight was conducted on December 18, 2014 in the framework of the Indian Human Space Programme. It went form the Satish Dhawan Space Center in Shrharikota on late 2014. Previously in the years 2004, 2006, 2008 first attempts had been made and at least some documentation has been forwarded.

Add. 2. In *Australia,* the current state of the law with regard to suborbital activities is entailed in the Space Activities Act of 1998 which contains a licensing (authorization) procedure for operating a launch facility in Australia, launching from Australia and overseas. In *France*, space activities are regulated under the Law on Space Operations of 2008 which foresees that each flight will be subject to authorization. The authorization is issued by the Ministry of Research in consultation with the CNES (French Space Agency). In *India*, there is no national space legislation and therefore no specific regulation on suborbital activities. *Japan* has only general national legislation besides which the Explosives Control Act of 1950 and High Pressure Gas Safety Act of 1951 refer wholly

[39] H.R.5382 – Commercial Space Launch Amendments Act of 2004, full text available at https://www.congress.gov/108/plaws/publ492/PLAW-108publ492.pdf.

[40] Many thanks are owed to Steven Freeland, Australia, Philippe Achilléas and Armel Kerrest, France, Kumar Abhijeet, India and Setsuko Aoki, Japan, for filling out the questionnaire.

or partly to the matter as well as some detailed governmental safety rules for the scientific experiments on suborbital flights conducted exclusively by JAXA.

Add. 3. Finally, with regard to legislative projects of the future no immediate need is seen from the *Australian* perspective. In *France*, in 2015, a study group was set on the law to applicable suborbital flights. This Taskforce brought together representatives of the space community and of the aviation community, as well as academics who came to the conclusion that if France adopts a regulatory framework, air law should apply in the first step, especially the rules on experimental gear and that, secondly, a *sui generis* framework could be set up. *India* is currently in the process of drafting its national space legislation on regulating entry of private players in the space. However, in this respect it seems that suborbital flights are not entailed in the draft law. *Japan* hints to its national efforts to enact a National Space Activity Act in early 2015 which was successfully submitted to the Diet on 4 March 2016. In the discussion on the documentation of such rules it was decided not to include any suborbital flights in the future in any kind of space legislation because of human space program not being provided for and no real need to regulate suborbital flight.

State practice shows that especially in Europe, air law is seen as more relevant to suborbital flights than space law. Currently, the majority of the relevant national laws, without specifically regulating suborbital flights, consider them to be subject to the application of air law.[41] In its position paper on privately-funded suborbital spaceflight of 2008[42], ESA expressed the view that human suborbital flight is to be considered high-altitude aeronautics. In 2008, the European Aviation Safety Agency (EASA) issued a position paper stating that civil suborbital operations shall fall under the competences and certification mandate of the Agency. Generally, suborbital activities are very rarely addressed specifically in national legislation which indicates that states have an interest mainly in the scientific and experimental value of such launches. This underlines the observation that the genesis and further development of suborbital launches and the application of suborbital activities are of private nature and will remain a priority for commercial markets and much less for state stakeholders. Thereby, a legal framework for such activities will necessarily need to be addressed both on the national as well as on the international level.

IV. A liability regime for suborbital flights

As no comprehensive legal regime has been elaborated yet and it is still an open question which law shall be applicable to suborbital flights, it is unclear whether the rules on contractual and third-party liability of air law or the liability rules of the law of outer space should be applicable to passengers of a suborbital flight.

Both air law and space law provide for liability. In aviation, contractual liability for passengers and cargo is established by the Montreal Convention and is regulated also by EU law. Third party liability is governed mainly by national law. In space law, the 1972 Liability Convention addresses damages caused by space objects in outer space, in airspace or on Earth. In order for the Liability Convention to be applicable for damages

[41] For an overview of domestic legislative incentives, see R. Moro-Aguilar, National Regulation of Private Suborbital Flight: A Fresh View, FIU Law Review, Vol. 10 (No. 2), 2015.

[42] Full text available at http://esamultimedia.esa.int/docs/gsp/Suborbital_Spaceflight_ESA_Position_Paper_14April08.pdf.

caused by suborbital flights, the suborbital vehicle must be considered a space object. However, even if it could be applicable, this treaty does not include specific rules for the persons onboard a spacecraft and suborbital passengers would thus be left out of its scope.

Thus, currently, no direct adoption of the existing rules of air and space law to suborbital flights can provide a comprehensive liability regime for suborbital flights. It is to be expected that, as the example of the U.S. shows, specific rules for suborbital flights will evolve from national incentives.

Having in mind the scope of investments and the high risks related to aerospace activities, liability and insurance issues will demand detailed solutions in the course of further development of suborbital markets, be it for human or for cargo transportation. Currently, the less complex licensing approach is preferred to certification models because of concerns that the emerging and still fragile commercial suborbital market might be restrained by the costly and lengthy certification procedures.[43] One possible solution to regulate and even minimize liability of the flight operator in the form of contractual liability is provided for in the 2004 U.S. Commercial Space Launch Amendments Act according to which passengers of suborbital flights need to declare an 'informed consent', a statement of the participant that he/she understands the risk and is voluntarily aboard the licensed launch vehicle.

Some authors[44] consider it vitally important for the emerging suborbital activities to tailor both a liability regime and insurance options for flight operators which entail a realistic assessment of risks related to the technology used for suborbital launches.

Looking at the different aspects of liability, it can be concluded with caution that the existing legal avenues do not seem to provide a comprehensive proposal addressing the liability aspects of commercial suborbital activities. Any further proposal must therefore at least partly deal with the creation of a (*sui generis*) contractual liability regime for suborbital flights. Such *sui generis* contractual liability regime could arguably profit from the experiences of the early times or aviation which tried to protect the airline industry through a fault-based limited liability. Alternatively, one could even discuss a policy of informed consent.

V. Perspectives for suborbital industry markets

The application and demand of suborbital reusable vehicles might create a new spaceflight industry as the demand for suborbital services is expected to grow in the next few years.[45] Suborbital flights can carry passengers into (Low-Earth) space – either for human spaceflight experience or for training purposes. Furthermore, suborbital flights

[43] A state practice is indicated again by the USA in the 2004 Space Launch Activities Amendments Act. For further reference, see for example G. Nield/J. Sloan/M. Touré, Certification versus licensing for human spaceflight in commercial space transportation, paper presented at the 2012 International Astronautical Congress in Naples, Italy.

[44] For example, T. Masson-Zwaan in her paper "Liability and Insurance for Suborbital Flights", presented at the 5th IAASS Conference in Versailles, France in 2011.

[45] Study on Suborbital Reusable Vehicles: A 10-year Forecast of Market Demand, Tauri Group (2012); see also D. Webber, Point-to-point sub-orbital space tourism: Some initial considerations, Acta Astronautica 66 (2010), pp. 1645-1651.

can be used for technology test purposes, for scientific and educational purposes, and will become more relevant as small payloads deployment vehicles into (lower) orbits with respect to upcoming New Space activities involving mass-scale/low-weight launches of mega constellations or large numbers of small satellites providing large-scale internet, broadband and Earth observation services.

Moreover, also other types of suborbital transportation can become relevant, such as point-to-point transportation of cargo and passengers between different locations on Earth by flying a parabolic flight which does not complete a full rotation around the Earth. For such purposes, transboundary suborbital flights will cross more than one national airspace which could pose challenges to the national sovereignty of the states overflown and to the (in) applicability of certain freedoms of the air as provided by the Chicago Convention of 1944. The demand for point-to-point transportation may evolve both for passenger transportation, e.g. for urgent business travel, as well as for fast cargo delivery.

However, these new applications of suborbital travel depend, on the one hand, on technological solutions which are needed to minimize risks of failure. On the other hand, it is questionable whether the advantages of fast suborbital transportation will outnumber the difficulties resulting from the distances to spaceports, such as the timely and costly delivery of cargo and/or passengers to or from a spaceport and the financial burden related thereto as spaceports do not and probably will not build up a thick network comparable to airports. It will be a challenge also for air traffic control on both a national and international level to overlook, coordinate and create standards for spaceports and the suborbital logistic infrastructure and to create an air safety mechanism involving suborbital flights.

Conclusion

The update of the 2014 Report of the ILA working group on suborbital flight provides for the conclusion that in comparison to the results of this first report there has not been much development in terms of imposing legally binding rules on suborbital operators. The main aspects analyzed in the first report (applicability of air law or space law, status of the suborbital vehicle and registration, authorization, legal status of space tourists) are still pending legal issues to be decided. Furthermore, the relevant considerations remain the same. However, with the advancement in technological developments and the growing number of successful test flights, it is to be expected that suborbital activities will evolve into a working market and that space tourism as the initially most highly marketed aspect of suborbital activities will be complemented and possibly even outdone by point-to-point transportation services. This will then require an adequate and detailed legal approach including liability questions and legal issues related to spaceport infrastructure.

Therefore, it is recommended that the open legal issues related to suborbital flight are elaborated further by the Committee, with the aim of drafting Guidelines for a Model Law on suborbital activities. Such Guidelines could build up on the aspects already identified and also include aspects of suborbital transportation which might become one of the main applications of suborbital activities and will thus pose the need to address complex problems such as air and space traffic management aspects, infrastructural legal problems of spaceports, coordination of air traffic and suborbital traffic and air safety.

COMMITTEE ON SPACE LAW

WORKING SESSION

Monday, 8 August 2016, 2:00 pm

Chair: Bruce Mauleverer QC (UK)

The Chair opened the meeting, welcomed the participants and made brief reference to the working procedures for the session. He paid tribute to Professor Mateesco Matte, a widely-known scholar and president of the Canadian Branch, with whom he had the pleasure of working during the 1982 ILA Conference in Montreal. The Chair then gave the floor to the Committee Chair, Professor Maureen Williams (HQ).

Professor Williams asked for a moment of silence in tribute to three Committee members, space law pioneers, who had passed away recently, namely Professors Božidar Bakotić (Croatia), Nicolas Mateesco Matte (Canada) and Gennady Zhukov (Russia). She then thanked the Committee members for their contributions, Professor Stephan Hobe (Germany) for his excellent work as Committee Rapporteur and Mr Bruce Mauleverer QC for accepting to chair the current working session.

Professor Williams referred initially to the Committee's terms of reference. The central topics included dispute settlement, legal aspects of suborbital flights, satellite data in international litigation (new applications) and recent developments on space debris. She reminded attendees that the terms of reference added, *in fine*, a recommendation to "keep a general brief over further developments during the term of the mandate". In this context two items were discussed, namely (a) space security and cyber security, and (b) asteroid mining in light of the US recent Commercial Space Launch Competitiveness Act of 25 November 2015 and a Statement from the Board of Directors of the International Institute of Space Law (IISL) on 20 December 2015, in clear response to the US law.

On dispute settlement, the idea was to explore the effectiveness of the 2011 Optional Rules for Arbitration of Disputes relating to Outer Space Activities, drafted by a group of experts in 2010-1, on which the Committee officers and some of the Committee members had been invited to collaborate. The general view of the Committee was that the Rules should not be modified and should remain in their present reading so far. The Committee members continued to create awareness of the existence of these Rules, highlighting their procedural nature and the wide space they left to respect the autonomy of the parties when applying them. It should also be noted that these Rules covered a gap in the Outer Space Treaties when enabling non-governmental entities to use their mechanism which was not the case in the previous UN treaties. The way a "compromise" system could work within the context of the Rules was currently a matter of discussion by the Committee. This central topic would continue under examination during the next biennium.

Regarding new developments in the use of satellite data which, as with the previous topic, remained under permanent review by the Committee, questions surrounding the protection of privacy continued on the agenda given the general, growing concern about the far-reaching possibilities of the latest space technologies. Relevant case law from the European Court of Human Rights was examined on these matters and from national courts of European countries, including the UK and Italy. In this quest, Professor Williams had joined the ILA Committee on International Law and Sea Level Rise and the

Rapporteur took part in the Committee on Non State Actors to add an interdisciplinary approach to the new developments in the use of satellite data.

As to space debris, also under permanent review by the Committee since the adoption of the *ILA Instrument on the Protection of the Environment from Damage caused by Space Debris* (1994), the scientists – mainly members of the Scientific and Technical Subcommittee of the Committee on the Peaceful Uses of Outer Space (COPUOS) – were consulted to determine its consistency with the current international landscapes. Their reports were most favourable. The Committee noted that, with increasing frequency, reference was made in this field not only to the need for mitigation but also a need for removal. Studies became involved in this new possibility to be carried out in the framework of international law. A slight but important step forward was the involvement of the UN Office for Outer Space Affairs (OOSA) in the compilation of a compendium for access to updated information on space debris. To this end, the OOSA Secretariat maintained a page on its website. Professor Williams recommended space debris to continue under review by the Committee considering the new possibilities stemming from the above-mentioned compendium.

Finally, in the field of new technologies, Professor Williams addressed the issue of space security and cyber security, in line with the terms of reference of the Committee to keep a watching brief on new developments, in this case a new global security threat (GST). Communication networks were an attractive target for a terrorist attack using cyber technology and so were earth observation satellites. The world of today was unsafe and satellite services were key targets. The prevailing opinion was that the United Nations was the natural forum for the development of global policies on space security and cyber security given the close dependency of latest generation technologies, such as robots, on both space and cyber areas. Professor Williams referred to the continuing work that was being carried out by the Royal Institute of International Affairs (Chatham House London) in recent years, where she participated, and the Committee agreed that they should continue focusing on this global threat.

The Chair thanked Professor Williams for her presentation covering the issues contained in Part I of the Committee's report and then gave the floor to Professor Hobe for his presentation of Part II of the report addressing the legal aspects of suborbital flights.

Professor Stephan Hobe (Germany) said that his presentation was actually an update on the report submitted to the 2014 Washington conference. It addressed the definition of suborbital flight, the current concepts for SRLVs (Suborbital Reusable Launch Vehicles), existing projects, applicable law, the liability regime, and the perspectives for suborbital industry markets.

No legally binding definition of suborbital flights had yet been accepted. The definition suggested by the International Civil Aviation Organisation (ICAO) – a flight up to a very high altitude not sending the vehicle into orbit – had not been accepted in any legally binding document, national or international. Their main characteristics were (a) that they were parabolic flights and (b) they had no full orbital rotation. They involved vertical takeoff, vertical landing (VTVL) and horizontal take-off, horizontal landing (HTHL). The most relevant current projects were Virgin Galactic, XCOR, Blue Origin, Masten Space and UP Aerospace. Virgin Galactic and XCOR, VTVL based, were among the most successful flights of the kind.

There were, so far, neither international agreements on suborbital flights nor a legally binding demarcation line between airspace and outer space, the latter having been over the years on the agenda of COPUOS without results. Initiatives by ICAO, the International Telecommunication Union (ITU) and UNOOSA reflected an understanding of the interaction between the uses of airspace and outer space.

On the national level, some legal rules had been adopted. Australia had set 100km as the boundary between airspace and outer space and the USA had specific regulation, issuing permits via the Federal Aviation Authority. Belgium had excluded suborbital flights from the space law scope; the United Kingdom had established a task force under its Civil Aviation Authority and for Germany all craft within airspace were aircraft.

As to State practice, replies to a questionnaire circulated by the Committee for further clarification were received from Australia, France, India and Japan. France and Japan were involved in suborbital projects. Australia, France and Japan had legislation on the matter. Australia saw no immediate need for specific legislation. France considered air law should apply first, later a *sui generis* framework could be set up. India was in the process of drafting its national space legislation, which did not seem to include suborbital flights. Japan was enacting a National Space Activity Act, and would not be including suborbital flights in future legislation as it saw no need for their regulation at this stage.

State practice showed, so far, that most national relevant laws – without specifically regulating suborbital flights – considered them within the air law regime. National legislation rarely addressed these flights. In 2008, the European Space Agency (ESA) had stated that human suborbital flights should be considered as high altitude aeronautics and the European Aviation Safety Agency (EASA) placed civil suborbital operations under the competences and certification of the Agency.

The air and space law liability rules were not directly applicable to suborbital flight. Rules would probably evolve from national initiatives and detailed solutions were required due to the investment scope and high risk of aerospace activities. Proposals would have to deal with the creation of a (*sui generis*) contractual liability regime (fault-based limited liability) for suborbital flights, which could profit from the early time experience in the aviation field.

Professor Hobe said that a new spaceflight industry might develop as an increase in the demand for suborbital services was expected. Transboundary suborbital flights would pose challenges to national sovereignty and the applicability of certain freedoms of the air as established by the 1944 *Chicago Convention on International Civil Aviation* and other complementary agreements. Technological solutions were needed as well to minimise risk failure. Air traffic control would have to deal, on both the national and international level, with the creation, coordination and monitoring of spaceport standards and logistic infrastructure guaranteeing air safety mechanisms.

Since the Committee's 2014 report, there had not been much development on legally binding rules for suborbital operators. However, the technological progress and increasing successful test flights would probably turn suborbital flights into a working market and space tourism would be the most highly marketed aspect of suborbital activities. An appropriate, detailed legal approach would be necessary. The open legal issues should

be further addressed with a view to drafting guidelines for a model law on suborbital activities. These guidelines might develop specific aspects and include others relating to suborbital transportation, such as air safety, air and space traffic management, infrastructural legal problems of spaceports and air and suborbital traffic coordination.

The Chair thanked Professor Hobe for his presentation and invited comments from the floor.

Professor Mahulena Hofmann (Luxembourg) congratulated Professor Hobe on his presentation and said that she preferred referring to suborbital flights as "non-orbital flights" as their characteristic element was the possibility of reaching outer space. As to liability, non-orbital flights may, if operated frequently, pose a threat to space objects in the low orbits – as was the case with space debris – so, in case of damage, the 1972 *Convention on International Liability for Damage Caused by Space Objects* should apply. Regarding the impact of these activities on the space environment, it was important to observe the principle of avoidance of harmful interference with the space activities of other States.

Professor Irmgard Marboe (Austria) wondered whether suborbital vehicles should be registered. They did not fulfil the criteria of Art IV of the 1974 *Convention on Registration of Objects Launched into Outer Space* but did this not, by itself, exclude the application of space law? She suggested renaming suborbital flights as "non-orbital flights" as they could reach an altitude of 1000 km and this was certainly not "below" Earth orbit. She added that not having the delimitation issue solved should not become a barrier to the development of a national and international legal framework for suborbital flights.

Professor Marco Pedrazzi (Italy) referred to the wording "only partly take place in outer space". This description, which added to the lack of agreement on delimitation, had turned into a problematic situation. He was in favour of drafting guidelines and considered that they should be discussed by both space and aviation lawyers.

The Chair gave the floor to Professor Hobe for his reactions.

Professor Hobe said that for decades there had been lengthy discussions on delimitation and different theories brought up, so the process had turned into a vicious circle. He wished to concentrate on future State practice. A starting point would be national space legislation and there were examples like Australia (100km). International organisations would also provide useful guidance. As state practice showed, this was more than an aviation problem and triggered highly complicated discussions. A real need to delimitate did exist, and there would also be issues of transportation involved. As to the chance of collision, private international law might also become applicable. Professor Hobe noted the importance of registering space/suborbital objects for reasons of identification and ensuing liability issues in case of an accident.

Professor Marboe saw the model law as a very good idea, opening the door for States to consider having national legislation on the topic. In the case of non-orbital flights, drafting national laws would appear a sensible move for States, especially as the activity would be a national one. The case would be different if the suborbital transportation activity involved different geographical points and going across various airspaces.

Professor Williams considered that linking the legal aspects of suborbital flight to delimitation issues would mean going round in circles and hinder advances on the matter. At this stage, attention should be paid to the doctrine and it would be useful to analyse positions and the development of the industry, setting aside, for the moment, the need for delimitation, which was not so urgent. Moreover, there was no political will in this sense. As to definitions, she favoured a description at these early stages as definitions tend to set limits whereas descriptions are non-exhaustive. Guidelines seemed the best option and hopefully State practice would increase.

Professor Hobe said that it would be useful to focus on customary international law. For thirty years the international community had been unable to draft agreements. Security was certainly an issue but there was no statement on this from the international community. A model law would provide recommendations for legislators but should that be the procedure? Should they encourage States to come up with their own solutions? On this point he had mixed feelings.

Dr Ulf Haeussler (Germany), on delimitation, said that security concerns might still play an important role, but what exactly would that role be taking into account the emerging technological progress arising from, for example, venture capital projects in the context of "New Space"? For instance, craft deployed to just above 100 km in order to launch CubeSats into low Earth orbit would either be aircraft or spacecraft depending on delimitation, and the available options were significantly different if small craft were intended to carry out launches for military and/or intelligence purposes.

Dr George Anthony Larson (US) asked whether Art XI of the Outer Space Treaty (ie, the 1967 *Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies* or OST) required disclosing the location of the mining activity prior to the commencement of the mining operation.

Professor Hobe said that it was possible to monitor space flights and highlighted the advantage of point to point transportation and the importance of the financial sides. Space was underdeveloped as far as space commercialisation was concerned.

The Chair suggested moving on to the conclusions and the proposal for guidelines for a model law. He asked whether the recommendation on page 17 of the report appealed to attendees.

Dr Haeussler asked whether the Committee had considered having an international convention.

Professor Williams, in response to this, referred to the different ILA conventions produced over time. The PCA had been inspired in the 1998 proposal for a convention on dispute settlement related to space activities. In 2012, at the Sofia Conference, Guidelines on a Model Law on national space legislation had been adopted. Also, at the 1994 Buenos Aires Conference, an international instrument on the protection of space debris had been adopted and the Committee had chosen to use the term "instrument" in order to leave questions on its binding or nonbinding nature to be decided at a later stage. In fact, at this moment, the trend was to use the term "guidelines" and this is how they were being circulated within COPUOS in the form of Conference Room Papers (CRPs).

The Chair asked whether there were any objections to drafting guidelines for a model law on suborbital flights.

Professor Pedrazzi noted that there was not much State practice and reiterated that a serious approach to the issue of delimitation required a debate by both air and space lawyers.

Professor Hobe stressed that a recommendation for guidelines should encourage States to enact national legislation. International air law was very clear, not so space law, especially in the area of contractual liability. States should be given guidance and an idea of the applicable theories.

Professor Marboe asked whether it was necessary for the guidelines to touch upon the question of delimitation.

Professor Hobe replied that the idea was mainly to provide some guidance.

The Chair enquired whether the Committee was in a position to draft guidelines for a model law and if consensus had been reached on the future work of the Committee on this subject.

Dr Haeussler thought it useful, when drafting guidelines, to identify the subject matter or issues which States could not address on their own and compile them.

Professor Williams recalled that at the moment there was no resolution for submission to the Conference because an extension of the Committee's mandate had been requested and agreed.

Professor Pedrazzi, suggested organising a meeting or conference bringing together both air and space lawyers. The feedback would be very useful.

The Chair announced that the Committee would go ahead with the drafting of guidelines for a model law on suborbital flights.

Professor Williams clarified that, in the present report, her comments on security were still at an exploratory stage. The Committee, anyway, would continue discussing this issue as a new development and in accordance with its terms of reference.

The Chair suggested moving on to the topic of space mining. There would be three introductory presentations by Professors Hobe, Williams and Hofmann, and then the floor would be open for discussion.

Professor Hobe said that the US Commercial Space Launch Competitiveness Act reopened a long debate on the legality of resource mining on celestial bodies. This was because it envisaged the facilitation of commercial exploration and commercial recovery of space resources by US citizens and conveyed rights on US citizens to possess, own, transport, use, and sell the asteroid resource of space resource obtained "in accordance with applicable law, including the international obligations of the United States".

Commercial space mining activities seemed to be on the agenda and there was heavy pressure from the US industry to have national space law on the matter. Could, however, the United States (or any other state) regulate these questions on its own by means of national legislation?

It was clear that appropriation by claims of sovereignty in outer space was prohibited. Article II of the OST prohibited national appropriation of outer space and celestial bodies by means of use or occupation or by any other means. However, the interpretation of the wording of Article I(2) of the OST, according to which the exploration and use of outer space and celestial bodies was to be free, made it clear that the appropriation of territory in outer space and on celestial bodies was prohibited, whereas the commercial use and, thus, mining on celestial bodies, be it of renewable on non-renewable resources, was not explicitly prohibited. According to the adjudication of the Permanent Court of International Justice in the 1927 *Lotus* case, what was not prohibited was allowed. Thus, according to the OST, mining space was allowed.

However, the situation might have changed after the adoption of the OST. According to Article 11 of the Moon Agreement (ie, the *Agreement Governing the Activities of States on the Moon and Other Celestial Bodies* or MOON), the moon and its resources were the common heritage of mankind. The precise meaning of the wording "common heritage" – also used in the *United Nations Convention on the Law of the Sea* for the deep seabed – was not entirely clear. The MOON foresaw that an explicit legal regime for lunar mining was to be set up internationally and the basic concepts of this regime were laid down in its Article 11(7). However, Article 11(3) stated that natural resources in place could not become "property of any State, international intergovernmental or non- governmental organization, national organization or non-governmental entity or of any natural person". It was disputed whether this provision was to be interpreted as a moratorium. It could, nevertheless, be clearly seen that the MOON was much more restrictive as far as lunar mining was concerned.

Thus, mining of space resources was not expressly prohibited by the OST whereas the MOON most likely set some restriction.

The MOON had been ratified by 16 States only (not the US) whereas the OST had 104 ratifications to date. Due to the low number of ratifications, it could not be stated that the economic regulation in the MOON had emerged into customary international law. The US, therefore, was not bound by the MOON and was consequently covered by the legal regime of the OST only, which clearly set no severe restrictions on the mining of celestial bodies.

With this in mind, IISL adopted by consensus, in December 2015, a position paper on space resource mining concluding that the US national law on space mining could be seen as one possible interpretation of the OST. Nevertheless, whether such interpretation would be shared by other States was still an open question. Whether national mining activities in space could be regulated unilaterally by single States through national legislation needed, therefore, to be taken into consideration.

The current legal situation was not satisfactory as many legal questions remained open. Whether the United States interpretation of Art II of the OST was followed by other States would be central to the future understanding and development of the non-appropriation principle.

Another fundamental question was the effect of this unilateral legislative measure by the US on a future legal order for the exploitation of resources of celestial bodies and of outer space. To answer this question, it must again be considered that the OST did not openly

allow any kind of lunar exploitation. As stated in the IISL position paper, the limitations in Art II of the OST were not very explicit when it came to resource exploitation. According to fundamental rules of treaty interpretation as mentioned above, these limitations were arguably not precise enough in order to effectively limit the freedom of commercial use as guaranteed by Article I(2) of the OST. However, this provision and, more precisely, Art 11 of the MOON, clearly expressed that outer space must be considered an international common space, a *res communis omnium*, meaning that, in principle, national legislation and unilateral exploitation was to be avoided. It was rather for the international legislation process to set up an order for the exploitation of outer space and celestial bodies which struck a fair balance of guaranteed freedoms and limitations, necessary to keep the benefits of space travel and space exploitation for the benefit of all mankind. This was the specificity of the international legal commons, as in the legal regime for the deep seabed and Antarctica. For this reason, no State was entitled to unilaterally enact a specific order for the usage of these international commons. Any unilateral act contrary to the *res communis* orientation of outer space could even be considered an abuse of rights. The US recognised this implicitly when it maintained that its domestic legislation aimed at being in accordance with "the international legal obligations of the US". Such obligations demanded the drafting of an international order for the exploitation of outer space and celestial bodies as an international, and not unilateral, effort.

Professor Hobe concluded that the US initiative was not contrary to international law, but at the same time did not prejudice any kind of future legal order for the use of this international common.

Professor Williams referred to her comments on the US Commercial Space Launch Competitiveness Act made in the framework of the IISL Board of Directors during the drafting of the Statement mentioned in her earlier intervention.

On the international field, the legal nature of natural resources of outer space, the moon and other celestial bodies was still undefined. In 1968 Bin Cheng's authoritative opinion was that:

to the extent to which outer space and celestial bodies constitute '*res extra commercium*', by analogy with the rules underlying the freedom of the high seas, the appropriation of the natural resources thereof merely forms part of the freedom of exploration and use, and is not prohibited.

Yet, the analogy with the freedom of the high seas as applied to resources from outer space, the moon and other celestial bodies, was now far more complex than in 1968, when Cheng's contention might have been better understood and accepted. In fact, the appropriation of natural resources from the high seas was referring to a limited area on planet Earth whereas in the case of outer space and celestial bodies the area was incommensurable. In today's world, particularly when the MOON confirmed by its title that it intended to cover "other celestial bodies" as well – whether discovered or otherwise – the international community was doubtful on the possible application of the first come, first served criterion to incommensurables.

The question was remindful of the time when the principle "first come, first served", concerning geostationary orbital positions in the 1980s, was dominating the international scenarios and the ITU had taken care of the issue.

The new US legislation referred strictly to asteroid resources and, as observed by the IISL, it clearly stated that those activities should be carried out in accordance with applicable law and international obligations of the US. This clarification written into the new law was of major importance.

It might be useful to have in mind that the US internal regulations were, usually, stricter than rules of international law. Professor Williams referred to Art 46 of the 1969 *Vienna Convention on the Law of Treaties* (provisions of internal law regarding competence to conclude treaties), emphasizing Art 46(2), which provided that a violation of internal law was manifest if it would be "objectively evident to any State conducting itself in the matter in accordance with normal practice and in good faith".

By no means was the mention of natural resources made in Art 11(1) of the MOON, or considering them "common heritage of mankind", a rule of customary international law, nor was it on its way to becoming one. Rather, it was a stumbling block for the MOON to gain support from the international community. On this point, the precedent set by Part XI of UNCLOS, concerning the "Area", was a good illustration. Today, only sixteen States were bound by the MOON.

Professor Williams concluded that, in light of the current situation regarding the legal nature of natural resources from outer space, the US legislation was consistent with international law and should be seen as an interpretation of Art II of the OST. Other interpretations might follow and would be welcome. In the US legislation, the ban on claims of sovereignty over outer space, the moon and other celestial bodies, remained untouched. Interesting, for its implications, was the Statement of IISL Board of Directors in 2009 when considering that a specific legal regime for the exploitation of natural resources from outer space should be elaborated on the basis of present international space law, for purposes of clarity and legal certainty in the near future.

Professor Williams quoted a personal view whereby the time was ready – although perhaps not the political moment – to give Art II of the OST and the controversial sides of the MOON a more positive spin. In this quest a down-to-earth discussion surrounding some special kind of "ownership" appeared opportune – perhaps using different or new terminology to avoid confusion and misinterpretations. This would help addressing the problem in its prime colours. In this challenge, international cooperation would have a major role to play.

The Chair thanked Professors Hobe and Williams and highlighted that this was an extremely interesting topic.

Professor Hofmann was then given the floor to talk on her experience on the matter. She pointed out that the scarcity of specific resources on the Earth and the need to supply space flights in outer space sped up the development of methods for the extraction of resources from celestial bodies. Several States had plans under way such as the US, China, Japan and, recently, Luxembourg.

The international legal framework for the extraction of space resources was based on the OST and the MOON, both concluded under the auspices of the UN. The OST allowed the use of celestial bodies and their parts (Art I) but prohibited appropriation by claim of sovereignty, by means of use or occupation, or by any other means. The MOON

contained further details on the non-appropriation regime related to celestial bodies, prohibiting any appropriation of natural resources "in place" (Art 11), and envisaging an international regime to govern their exploitation "as such exploitation [was] about to become feasible" (Art 11). At the same time, it allowed the collection and removal of samples of mineral and other substances on celestial bodies (Art 6) and made clear that these substances could be used for the support of scientific missions (Art 6). Most probably, it also allowed for appropriation of natural resources of celestial bodies which were not "in place" (Art 11).

The MOON has been adhered to by 16 States so far. The OST, on the other hand, was a very broadly internationally recognised legal source, binding 104 States and its substantial provisions were considered customary international law. The main issue was, therefore, how its non-appropriation principle could and should be interpreted in relation to the extraction and use of space resources. This question had several elements, but could be summed up as follows: was the extraction of resources from celestial bodies at the same time an appropriation of celestial bodies? There were no convincing arguments for a positive answer, so it must be answered in the negative. The present space resources programmes did not reveal any intention to occupy or appropriate any part of celestial bodies by the States Parties internationally responsible for these resource-related activities. Moreover, the vast number of asteroids and other objects of interest made it highly unlikely that the activity on one mining site would hamper the exploitation of the same territory of a celestial body by an entity from another State; even for such a case, the OST already provided a remedy in the form of international consultations (Art IX).

In addition to international treaty rules, a question in connection with the planned space resources extraction and use was whether the national, consistent practice of the entities under the jurisdiction of several States active in space mining was able to contribute to the development of a rule of international customary law to govern such activities. If this went in line with the respective *opinio juris*, it would theoretically be possible; however, several States such as the Russian Federation and some Latin American countries objected to unilateral solutions in the 2016 sessions of the Scientific and Technical Subcommittee and Legal Subcommittee of COPUOS and in other fora.

Therefore, the decisive legal source remains the OST, which required States Parties to "authorize and supervise" national activities in outer space, whether they were carried out by governmental agencies or by non-governmental entities (Art VI). In accordance with this provision, several States drafted – or were drafting – appropriate national legislation on space resources. The 2015 US legislation anticipated a specific authorisation regime for the future, and entitled US citizens to possess, own, transport, use and sell space resources. In Japan and the United Arab Emirates, legislation on the use of space resources was under preparation.

Luxembourg was also active in this new field. In May/June 2016, the Luxembourg government signed a Memoranda of Understanding (MoUs) to develop activities related to space resources utilisation with Deep Space Industries and Planetary Resources. These MoUs went back to the government meeting in June 2015 which supported space mining activities, accompanied by deliberations relating to their most appropriate legal framework. To analyse the relevant legal provisions, the government set up an international study team, coordinated by the University of Luxembourg, to conduct a study of the

applicable legal norms and possible solutions. As Luxembourg was a State Party to the OST, the study team recommended that Luxembourg adopt legislation implementing Art VI of the OST and be open to international negotiations in relevant fora establishing a cooperation framework in accordance with the preamble to the OST. In May 2016, the Luxembourg government decided to begin drafting two pieces of legislation – a general space law and a law dealing specifically with space resources. Work on these two projects was progressing and the legislation was expected to be effective in 2017.

Like in the ILA, the issue of rights to space resources was in the focus of several international bodies at present. COPUOS would be dealing with this in 2017, the non-governmental Hague Space Resources Group discussed this issue regularly and the IISL Board of Directors published a balanced statement on its website. This subject would also be discussed at an IISL session of the 2016 International Astronautical Congress in Guadalajara, Mexico. All these initiatives would lead to a clearer picture of the international positions on its regulatory framework.

It could therefore be concluded that, in the absence of arguments to the contrary, the extraction and use of space resources did not contradict the non-appropriation principle of the OST as the utilisation of space resources did not represent "appropriation of celestial bodies" *stricto sensu*. It certainly did not violate the non-appropriation principle of the MOON in the case of sample collection, use of minerals to support missions, and most probably in cases of utilisation of natural resources "out of place". It did infringe the MOON in cases of appropriation of space resources "in place" and in cases of rejection by the appropriate State Party of any credible steps leading to the establishment of an international regime governing the exploitation of these resources. However, in line with the fundamental principle *pacta sunt servanda*, these potential violations concerned exclusively the 16 States Parties to the MOON. For non-Parties, the MOON was not in a position to create any moratorium on the extraction of space resources, as for those non-Parties the point of reference on the legality of space mining lay solely in the OST.

To conclude, Professor Hofmann noted that new space activities not envisaged by the OST – such as on-orbit services or active space debris removal – were emerging practically annually. These areas would require thorough international discussion and a dynamic interpretation of the international legal provisions adopted in the beginning of the space era.

The Chair thanked Professor Hofmann for a very good presentation.

Professor Marboe noted that private initiatives were encouraging the development of space law. New Zealand, for instance, had recently joined COPUOS and Luxembourg was drafting national legislation. She pointed out that many presentations at Stanford University that, at the time, had seemed pioneering referred to activities which were now almost a reality. It was also important to put into practice the objective of the benefit for all countries, for instance, by the sharing of information. The benefit of mankind clause should be strengthened as well. The MOON, with only 16 State Parties thereto, was problematic. Why, when the instrument itself stated that it was for the benefit of all countries, had not more developing countries ratified it?

Professor Hobe observed that States no longer wished to accept multilateral treaties but preferred to begin by the drafting of national legislation. The original idea of the MOON

was establishing an international regime if these activities became feasible. There was, he added, no statement on the protection of the environment in that agreement.

Dr María del Luján Flores (Uruguay) agreed with Professor Hobe that a global/international interest issue could not be regulated through national legislation. Article I of the OST and the preamble thereto made this clear. The principle of non-appropriation in Art II should also be given due attention. It was necessary to establish an international regime for the exploitation of natural resources from space. Space resource exploitation, given the progress in science and technology, has turned from a remote possibility into a more likely one. Therefore, the creation of an international regime that implied the participation of all States, as foreseen in the MOON, not only assured the best management of natural resources and protection of the environment, but also prevented the adoption of unilateral decisions. It was also a matter of equity, particularly intergenerational equity.

Professor Hofmann commented that the US legislation required the observance of international law and most certainly the environment would be taken into account.

Professor Pedrazzi said that it was regrettable that the international community was divided on the issue of space mining. The US law and the Luxembourg project on one side and, on the other, the States adhering to the MOON and opposing the US position made international consensus for an international regime a challenging objective. As to the proposal for Luxembourg to develop an international regime, what was the idea?

Professor Hofmann clarified that Luxembourg would never oppose discussing an international regime possibility.

Mr Dipak Bhattacharyya (India) turned attention to the question of jurisdiction in respect of dispute settlement arising from losses of space ventures. In some cases, the claim settlement was vitiated due to a jurisdiction issue. Ms Kalpana Chowla, an Indian astronaut, had lost her life and neither the US nor India had undertaken the claim settlement for loss of life as the contention was on the place where the accident had occurred.

Dr Souichirou Kozuka commented that, unlike in the case of suborbital flights, an international aspect necessarily came up with moon resources in the sense that the resource exploitation could be consented by an entity from another State, and whether that State recognised a private right to the exploited resource would be open to question. The 1883 *Paris Convention for the Protection of Industrial Property* might help as precedent.

Professor Hofmann mentioned that the resources would not be brought to Earth.

Professor Marboe referred to the case of States not recognising the property of space resources by other States. In the copper cases, in Germany, the States had considered there was a blatant breach of international law. This could be taken as a presumption that property over space resources was not recognised.

The Chair asked for further comments on space mining.

Professor Williams noted that no more topics could be added to the Committee's terms of reference but this did not rule out discussions by the Committee and the analysis of new developments occurring during its mandate.

The Chair remarked that it had been an extremely interesting session and gave the floor to Professor Williams for details on future work of the Committee.

Professor Williams clarified that the terms of reference did not include space mining or space security issues. However, the Committee would continue exploring these topics as they represented a challenge of major dimensions today. This course of action was possible in light of the terms of reference of the Committee (*in fine*). The other topics, namely dispute settlement, satellite data in court, new developments of space technologies and space debris, including the effectiveness of the Compendium maintained by the OOSA Secretariat, would continue under permanent study.

Professor Marboe added a comment on *clauses compromissoires*, suggesting the inclusion of this possibility in space contracts for future disputes in order to promote the Optional Rules for Arbitration of Disputes relating to Outer Space Activities. The Committee could perhaps address the problem of active space debris removal (ADR) and possibly engage in drafting rules on the matter.

The Chair invited the Committee officers to give their concluding remarks.

Professor Hobe commented that, if there were more commercial activities, there would be more disputes in the future. As to space mining, it was important to follow the latest developments, keeping a close look on state practice and the development of national space legislation on the matter.

Professor Williams thanked the participants for their contributions. She mentioned the issue of privacy and the recent trend in UK courts, highlighting that they were more inclined to protect the right of privacy in response to interpretations of freedom of information in extreme terms as had been the Sunday Times decision by the European Court of Human Rights in 1979. She then thanked the Chair for presiding over the meeting.

The Chair thanked the Committee officers, the attendees, and the Session Reporter and declared the meeting closed.

Session reporter: Viviane Contin-Williams (UK)

PROTECTION OF PRIVACY IN PRIVATE INTERNATIONAL LAW

WORKING SESSION

Monday, 8 August 2016, 2.00pm

Chair: Professor Catherine Kessedjian (France)

The Chair announced that it was a double pleasure for her to be presiding over the working session. First, this was a topic with which everyone, as citizens, was concerned. Second, it was an opportunity to give credit to Professor Berkhard Hess, with whom the Chair had worked for many years (including on the Committee on International Civil Litigation and the Interests of the Public).

The Chair mentioned that she dreamed of a time when the titles of ILA committees gave up specifying public or private international law. For the present Committee, the topic could simply be "protection of privacy", allowing the Committee to shape the topic however it wished. There were certainly public international law aspects of the protection of privacy.

The Chair observed that, on the basis of available material, the focus of the Committee was the privacy of *individuals*. It was fair to say that privacy also concerned companies. So, before handing the floor to the Chair of the Committee, the Chair posed the question to the Committee – was the Committee also interested in the privacy of legal persons? This was an issue of increasing importance. As evidence of this, the Chair referred to a report in the *Wall Street Journal* that she had read on the plane to Johannesburg about the difficulties facing the Italian energy company, Enel SpA, in trying to keep its data within the European Union in its dealings with Amazon.

Professor Berkhard Hess (Germany) took the floor to explain the ongoing work of the Committee. He introduced the two Co-Rapporteurs, and thanked them for their work so far.

Professor Hess proceeded to explain how the Committee had evolved and what the main issues were. He referred to a 2004 article by James Whitman entitled "The Two Western Cultures of Privacy: Dignity versus Liberty", which discussed the difference in the concept of privacy between continental Europe (where it was a broad concept with constitutional underpinning, particularly as borne out in the jurisprudence of the European Court of Human Rights) and the United States (where the concept is defined in terms of liberty of individuals from incursions by the state). The mandate of the Committee was broader. The focus was on the relations between individuals, and it was clear that the Committee needed to enlarge its approach. In this regard, Professor Hess made reference to breaches of privacy in cyberspace, noting that data exchange and protection were particularly important online.

In response to the question put by the Chair in her introduction, Professor Hess noted that the idea was not to be restricted to private international law, but rather to take the whole picture into account in the programme of work. The Committee wanted to address a range of scenarios, including the use of social media, the situation of consumers as the weaker party, and the position of minors.

At its first meeting in Luxembourg in September 2014, the Committee delineated and enlarged the approach to its work. It would approach its work from a comparative law perspective, enlarging the concept of privacy to encompass data protection and related issues. The meeting was held in the sidelines of a conference hosted by the Max Planck Institute entitled "The Protection of Privacy in the Aftermath of the Recent Judgments of the CJEU", which covered the recent decisions of the Court of Justice of the European Union (CJEU) in the cases of *Google Spain*, *Digital Rights Ireland* and *eDate Advertising*. The conference also covered recent developments in the US and the UK in the area of defamation.

The second meeting of the Committee was held in February 2015, at which answers to a first questionnaire were circulated. The meeting featured a comparison of the different concepts of privacy in national systems.

The third and most recent meeting of the Committee was held in February 2016. It focussed on procedural law issues as well as the eventual output of the Committee in the form of guidelines.

Professor Hess noted that initial ideas were taking shape about possible rules relating to jurisdiction as well as available remedies. A second questionnaire on this issue was circulated to Committee members to get an idea of national solutions, and a preliminary text was subsequently drawn up. Now in Johannesburg, the Committee expected to tackle the issue of applicable law, based on a text drawn up by Professor Jan von Hein. It also planned to survey recent decisions and legislative action. With respect to legislative action, Professor Hess mentioned the General Data Protection Regulation (Regulation (EU) 2016/679), which had been adopted in April 2016. With respect to recent decisions, Professor Hess mentioned the recent decisions of the US Court of Appeals for the Second Circuit in *Microsoft Corp v United States*, of the CJEU in *Verein für Konsumenteninformation v Amazon EU Sàrl*, and of the European Court of Human Rights in *Arlewin v Sweden*.

Dr Cristina Mariottini (US) gave a presentation on some of the basic concepts and definitions that informed the work of the Committee.

An interim report had been drafted within the Committee on substantive aspects of privacy in national systems. The idea was to look at substantive law to understand how it affected procedural law and private international law (eg, matters of material and personal scope, standing etc). Responses to a questionnaire circulated to this end revealed that the concept of privacy in national systems had its origins in a variety of sources, from constitutional rules to legislation in areas of private, criminal and administrative law. At the same time, the role of courts (including regional courts) was significant in defining the scope of privacy and in balancing competing rights and interests, such as the freedom of expression and access to information.

The responses to the questionnaire also reflected the differences in the concept of privacy as described by James Whitman in the article to which Professor Hess had earlier referred. In broad terms, responses from continental Europe and Brazil showed that protection of privacy was concerned with the right to dignity, whereas the response from the United States showed a concern with liberty from government intrusion. Dr Mariottini

made reference to the 1954 decision of the Federal Court of Justice of Germany (*Bundesgerichtshof*), which extrapolated from Arts 1 and 2 of the Basic Law of Germany a right of personality. Subsequent decisions of the court had drawn a link between the protection of privacy and personality rights with the expression of an individual's dignity. Dr Mariottini also made reference to the 1867 decision of the Paris Court of Appeal in the Dumas case, in which the court stated that where an individual had consented to an image being taken but the image was too revealing, the individual had the right to withdraw consent subject to the individual indemnifying the image owner for consequent loss. In this case, the right to privacy trumped the right to property. The case demonstrated starkly the differences between the French approach to privacy and the approach in the United States. In the United States, a person could not renege on consent given. The right of publicity there meant that a person's image was a market commodity.

The Committee would be looking into mass media violations of privacy, the most interesting aspects of which were occurring in the online environment. The Committee would also be looking into new social media, and how violations of privacy in that context was redefining liability and standing. One example was the liability of internet content providers for user generated content (which was often uploaded anonymously). Another example was the liability of search engines and the right to erasure as evidenced by the 2014 decision of the CJEU in *Google Spain*. A further example was the 2011 decision of the Court of Milan which found Google liable for defamation because of the operation of its autocomplete algorithms.

Finally, Dr Marionetti made reference to the 2015 decision of the English Court of Appeal in *Google v Vidal-Hall*, which she characterised as a landmark case along the long and winding road towards conceptualising breaches of privacy as a common law tort rather than as a matter of equity. Hitherto, English courts had used equitably remedies for breach of confidence to provide relief for claims for breach of privacy. She cited the statement by the court that "there is nothing in the nature of the claim [for misuse of private information] itself to suggest that the more natural classification of it as a tort is wrong". However, she acknowledged that the decision was ultimately about characterising breach of privacy for the purposes of *procedural* rules relating to the service of process outside the United Kingdom in tort claims (ie, for jurisdictional purposes), not about the substance of the claim as a matter of English law.

The Chair opened the floor for discussion.

Professor David Stewart (US) emphasised that one challenge in dealing with the Committee's mandate was precisely the different notions of privacy among the various legal systems. There was no single concept, nor harmonious approach to jurisdiction and remedies.

The Chair queried whether this was an opportunity for the ILA to craft a definition of privacy that would be useful in multiple jurisdictions. She asked attendees whether this would be a futile undertaking.

Professor Hess responded that the Committee had not given up, but it was a real challenge. Basic concepts were different among different legal systems, as highlighted by Dr Mariottini in her presentation.

The Chair then queried what the end goal of the Committee was.

Professor Hess responded that the Committee would like to propose a resolution to the ILA that provided guidelines on how to deal with recurring conflicts that were being experienced everyday. The guidelines would address jurisdiction and applicable law. The Committee was approaching the task with caution and was taking its time as befit the subject matter.

Professor Stewart added that it was not the goal of the Committee to formulate a unified concept of privacy, but rather, from the starting point that there were differences between legal systems, to come up with mechanisms for protection. He expressed the hope that, in the course of its work, the Committee would continue to reach out beyond the US and continental Europe so as to understand how the concept was approached elsewhere, eg, in the Middle East and in Asia.

The Chair agreed that the Committee was too "occidental" in outlook and that there was a need for it to work on outreach.

Professor Pedro de Miguel Asensio noted that there was a need to reach consensus on the meaning of the concept of "personality rights" in the international context. A lack of consensus had seen the concept of personality rights expressly excluded from the scope of the EU's Rome II Regulation (Regulation (EC) 864/2007), and defamation being excluded from the scope of the proposed treaty that was being developed under the auspices of the Hague Conference on Private International Law (HCCH) as part of the "Judgments Project".

The Chair observed that this intervention touched on something that had always felt strange her, namely that all international organisations with a harmonisation mandate stopped work when they were confronted with an issue that was too difficult to tackle. She gave the examples of sales contracts and the transfer of property. It seemed that privacy was one such difficult issue that no one wanted to tackle. She queried which organisation – UNIDROIT, UNCITRAL or the HCCH – would be best place to tackle the issue of privacy. In her view, it would be the HCCH.

Professor Mariottini agreed.

The Chair then suggested that the Committee develop persuasive arguments to convince the HCCH to tackle the issue.

Professor Hess responded that the whole starting point for the Committee was that no organisation had addressed the issue. The goal of the Committee was to develop common denominators and to formulate guidelines. Otherwise, its work would have no impact.

Professor Héctor Valverde Santana noted that privacy was a fundamental right in Brazil. He agreed that it was a difficult concept to define. In response to a query from the Chair, he added that in many cases, including one involving Google, the courts in Brazil were being asked to attempt a definition.

Professor Jan von Hein gave a presentation on jurisdictional issues.

As noted by Professor Hess, a second questionnaire had been circulated to Committee members that dealt with private international law issues relating to privacy (eg,

jurisdiction, applicable law). It focussed on whether there were specific rules in national systems for jurisdiction in personality rights/privacy claims. In sum, most jurisdictions had developed solutions that focussed on adapting or modifying general rules.

In the EU, the Brussels I bis Regulation (Regulation (EU) 1215/2012) contained unified rules on jurisdiction over claims for breaches of personality rights and privacy. However, the Regulation did not bring about a complete unification of these rules as it did not apply to defendants domiciled in third States. Here, existing national rules applied (in the case of Germany, the 19th century code of civil procedure continued to apply). In effect, it was national rules that applied to a large amount of litigation, notably claims against multinational companies headquartered in the United States (eg, Amazon and Google). The exception to this was Italy, which, in a 1995 reform, extended the rules in the then 1968 Brussels Convention to third State defendants. Still, there was some controversy in Italy whether the reference in Italian law to the 1968 Convention should be given an ambulatory meaning so as to apply to the Brussels I Regulation (and now the Brussels I bis Regulation).

In most States, there were no jurisdictional rules specific to privacy. Rather, breach of privacy was treated as a tort and the jurisdictional rules relating to tort claims would be applied. In the EU, there were no specific jurisdictional rules in the Brussels I bis Regulation, but there were in the General Data Protection Regulation (see Art 79(2), which reflected the general jurisdiction and "centre of main interest" approach).

One example of how national systems were adapting and modifying jurisdictional rules was the case law of the CJEU. The CJEU had formulated rules to deal with violations of personality rights by conventional media (the socalled "mosaic principle"). However, in *eDate Advertising*, this principle had been reduced in favour of a "centre of main interest" approach. While legislators had not introduced anything in particular, *eDate Advertising* marked a paradigm shift, which had been confirmed in subsequent case law of CJEU (notably in the *Wintersteiger*, *Pinckney* and *Hejduk* cases). The modification of jurisdictional rules in *eDate Advertising* only applied to personality rights, not IP or other internetspecific rights.

Another example of adaptation and modification was in the UK with respect to libel tourism. The UK had become a popular forum for bringing defamation claims against media outlets, even where the claim bore little connection with the UK. (As a side note, Professor von Hein noted that this might seen as a bizarre strategy for litigants given the continued application in the UK of the double actionability rule in defamation claims.) In response, the UK parliament had enacted the *Defamation Act 2013*, s 9 of which provided that English courts did not have jurisdiction over defamation claims unless England was "clearly the most appropriate place" in which to bring the claim. This was effectively a codification of the rule of *forum non conveniens*.

In a vast majority of national systems surveyed, some variant of the rule based on *forum delictii commissii* (understood broadly to cover the *forum actus* and the *forum damni*) applied. In the UK, service out of the jurisdiction was possible where the wrongful act occurred in the jurisdiction. In the US, jurisdiction existed where the effects of the wrongful act were felt in the jurisdiction.

In several jurisdictions, the courts had handed down decisions addressing a multiplicity of forums where internet publications were concerned. Reference had already been made to *eDate Advertising*. Professor von Hein also referred to the decisions of the Federal Court of Justice of Germany in "New York Times" (2 March 2010, VI ZR 23/09) and "Seven Days in Moscow" (29 March 2011, VI ZR 111/10) (post on German website by US resident in Russian). In these decisions, the focus of the court was not on habitual residence but on whether there was a collision of conflicting interests of the parties in the forum. Here, the court stressed the need for foreseeability.

Professor von Hein offered some tentative conclusions with regard to jurisdiction:

1. The foreseeability of the forum was important. In the wake of the *eDate Advertising* decision, the EU legislature inserted Recital 16 into the Brussels I bis Regulation, which stated that "[t]he existence of a close connection should ensure legal certainty and avoid the possibility of the defendant being sued in a court of a Member State which he could not reasonably have foreseen".
2. One should be wary of applying different rules for different media. In the modern world, the same content was being distributed by different channels. It should not make a difference the channel by which one consumed that content.
3. The mosaic principle should be abolished. It was generally better to narrow down potential forums and allow the plaintiff to sue for the whole damage in a single forum. Another advantage of narrowing down potential forums was that it would facilitate the mutual finetuning of rules of jurisdiction and applicable law. Here, there were several practical reasons for favouring the application of the *lex fori* in claims for breach of privacy, bearing in mind its strong underpinnings in national constitutions.
4. It was questionable whether there was a need for jurisdictional rules to favour the plaintiffs. After all, the plaintiff was not always the weaker party, as evidenced by the recent high profile case involving complaints by Turkish President Recep Tayyip Erdoğan against the German comedian Jan Böhmermann.

Professor Hess warned against the use of labels such as "general jurisdiction" and "specific jurisdiction".

The Chair noted that few factors of privacy protection went to establishing general jurisdiction as currently defined. If the concept of general jurisdiction was developed, it could be possible to obtain entire relief in a single forum for worldwide violations. The only incentive was for the plaintiff to go to the defendant's forum.

Professor Hess responded that this was a most interesting point. While the mosaic rule might work in IP claims, it was not needed and should be abolished in privacy claims. Then again, the distinction between general and specific jurisdiction did not play a big role.

The Chair quizzed Professor Hess on the last point. If the distinction did not matter, why maintain it? The ILA must be future oriented. If it considered that the distinction had no bearing in practice, we should forget about it. General jurisdiction played a limited role in claims for violations of personality rights. In the CJEU cases, jurisdiction coincided with the place of acting; to be precise, as specific jurisdiction. The Brussels I bis Regulation

only came into play where the wrongful act was carried out in a State different to the State of the defendant's domicile. If one were to define wrongful acts as being committed in the publisher's principle place of business, this would usually coincide with general jurisdiction. However, publishers might have their domicile or seat in one State and circulate their newspapers, broadcast, or upload/host content in other State. In this scenario, there would be practical value to have general jurisdiction as the default rule. This would also have consequences for the applicable law.

The Chair posited that, where the internet was used, more difficult issues arose. In particular, it was more difficult to "locate" general jurisdiction.

Professor von Hein responded that it might be easier to define place of a company in online issues.

The Chair agreed, if the website met international standards set by UNCITRAL. The Chair then raised for discussion the connection between the language of the website and jurisdiction.

Professor von Hein referred back to the "Seven Days in Moscow" case, which involved a post in Russian dealing with Russian issues, clearly directed at Russia, but hosted by a German website. There was no close connection to Germany, so the German court declined jurisdiction.

Professor de Miguel Asensio agreed that language may be a relevant factor in jurisdictional decisions. While the preamble to the Rome I Regulation (Regulation (EC) 593/2008) noted that language was an irrelevant consideration for jurisdiction purposes, the EU General Data Protection Regulation acknowledged that it was an important consideration for choice of law purposes.

Professor de Miguel Asensio continued to give a presentation of the General Data Protection Regulation. The Regulation had been discussed for many years before finally being adopted in April 2016. It would only apply from May 2018. While based on the same principles underlying the 1995 Data Protection Directive, some significant changed were introduced by the new Regulation, including new provisions on jurisdiction and applicable law as well as an emphasis on methods of enforcement.

Privacy was a fundamental right in the EU. This fact had significant implications for private international law. For one, it was part of the EU's public policy and rules on privacy constituted its mandatory provisions.

While the new Regulation provided higher standards of protection for "data subjects", these protections were only enjoyed by natural persons. Nevertheless, the Regulation was important for business activities.

Data protection traditionally involved two mechanisms of enforcement. The first mechanism was public enforcement by actions taken by national supervisory authorities, whether on application by a data subject or on its own motion. The second mechanism was private enforcement by the data subject instituting civil proceedings. The *Google Spain* case was an example of public enforcement, involving actions taken by the Spanish supervisory authorities on application by an aggrieved data subject. That data subject could have taken their complaint to the civil courts, where they could have obtained

compensation, a remedy not available under public enforcement. Yet private enforcement was more costly and burdensome. Public enforcement was easier, and could be initiated by a simple email. The *Google Spain* highlighted the distinction between public and private enforcement.

Another significant change was that the new regime was established under a Regulation. The old regime was established under a Directive, and therefore relied on 28 different national regulatory systems. The new regime introduced a single regulatory system. This was significant from a choice of law perspective, as there was no need to determine which law applied in a given case as there was a single, harmonised, law (ie, the Regulation).

The new Regulation also marked a change in approach to territorial scope. In this regard, Art 3 of the Regulation was to be compared to Art 4 of the 1995 Directive. The role of Art 3 of the Regulation was to determine the extent to which "controllers" and "processors" were required to respect EU law, and the competence of EU authorities to enforce that law. Article 3(1) provided that the Regulation applied to controllers and processors established in the EU. The notion of "establishment" was broad, involving "the effective and real exercise of activity through stable arrangements" (see Recital 22). There was therefore no need for an entity to have a branch in the EU to be considered as having an establishment there. In *Google Spain*, the issue was whether a US company (Google, Inc) was a controller for the purposes of EU legislation. The establishment was not Google, Inc, but Google Spain SL, which was a subsidiary that simply sold advertising. However, in view of the relationship between parent and subsidiary, the processing of data was done in the context of the activities of Google's establishment in the EU. Article 3(2) introduced an alternative rule for applying the Regulation to controllers and processors that were not established in the EU. The rule was based on whether activities were directed at EU citizens.

While the new Regulation established a single regulatory regime, it also gave rise to a new problem from a private international law perspective. By pursuing a onestop shop approach for regulatory action, which favoured companies who wished to deal with a single regulatory authority, the Regulation posed a problem for data subjects. For instance, if Facebook was based in Ireland, the data subject would be required to bring a complaint to the Irish supervisory authority. Now, not all supervisory authorities were equally resourced, and not all shared the same leadership in applying data protection law from the perspective of the data subject.

The new Regulation contained provisions dealing with jurisdictional issues, notably Art 79. These were relevant for data subjects seeking compensation. Compensation was not available when seeking a remedy using the public enforcement mechanism. Article 79 could be used to obtain an injunction. Article 79 was also a specific rule on jurisdiction for the purposes of the Brussels I Regulation, meaning that it prevailed over the jurisdictional rules in that Regulation. Some concerns had been raised about the interaction between the establishment of the data processor – one of the connecting factors to establish jurisdiction under Art 79 – and their domicile. Here, the Regulation distinguished itself from *eDate Advertising* by making no reference to "centre of main interest". Moreover, the Regulation did not provide for proceedings to be brought in another Member State where damage was suffered, nor contemplate what effect a choice of court agreement would have where that agreement covered both contractual and noncontractual claims.

The Chair noted that it was not at all surprising that the General Data Protection Regulation, which was prepared by the DirectorateGeneral for Internal Market, did not take into account private international law considerations, a matter which was dealt with by another DirectorateGeneral. The Chair drew a comparison with the development of the Service Regulation (Regulation (EC) 1393/2007), where private international law experts were not invited to attend discussions. It was left to private international law academics to write a letter to the European Commission to explain that private international law issues were already dealt with in the Rome and Brussels regimes. This led to the draft being amended to include references to these other EU regulations. It appeared that, for the development of the General Data Protection Regulation, there had been a lack of communication between the different parts of the European Commission.

Professor Hess responded that the jurisdictional rules in Art 79(2) of the General Data Protection Regulation were novel so far as they started with the concept of "establishment". This provided for a potentially huge enlargement of jurisdiction in internet cases. Together with the rules of extraterritorial application, the Regulation marked a large expansion of EU data protection law. The Committee would be considering whether this approach, unilaterally adopted by the EU, was the right solution for an international instrument.

The Chair exclaimed that it certainly should not be. If the Committee were ultimately to recommend the adoption of such rules in its guidelines, one would expect to see strong justification for that recommendation in the accompanying report.

Professor Hess reassured the Chair that he was not pre-empting the Committee's consideration of the issue, and was only surveying relevant developments. For now, he suggested that the concept of "establishment" might be worth exploring further.

The Chair invited attendees to react to these EU developments.

Professor Stewart took up the invitation by noting that he was struck by how insensitive Art 3 was to the concerns of third countries. The extraterritorial operation of the Regulation was rather astonishing. On the one hand, he could understand why Art 3 was phrased the way it was; on the other hand, he had a sense that the drafters might not have been aware of how the provision might be taken by third countries. It was an invitation to conflict.

Dr Ruth Atherton asked the panel to comment on the impact of the General Data Protection Regulation on efforts to increase data sharing, which was a focal point in global health.

Professor de Miguel Asensio responded that data that was usually shared in the health context did not fall within the definition of "personal data" because it was deidentified. Health data was sensitive data, which was subject to special measures of protection. Here, there were no significant changes introduced by the Regulation. Professor de Miguel Asensio then referred to the 2015 decision of the CJEU (in the *Schrems* case), which invalidated the EU's Safe Harbour framework. A new agreement between the EU and US in the wake of that decision provided that, if a US company was not regarded as having an adequate level of privacy protection, the transfer of personal data to that company was not allowed without authorisation or the giving of certain guarantees. No change to the Regulation was necessary.

The Chair noted that there was still some time before the Regulation commenced application, so there was time to rehearse issues that might arise. She agreed that health was an important issue.

Professor Hess made reference to another case brought by Mr Schrems. That case concerned a class action against Facebook representing thousands of consumers. The issue was whether, because the claim was pursued as a class action, it was unable to be brought in the forum of the lead consumer. The case was currently before the Austrian Supreme Court, and the issue was expected to be referred to the CJEU. A further question posed by Professor Hess was the impact of the jurisdictional rules in Art 79 of the General Data Protection Regulation. The Committee would address this issue.

The Chair invited Professor von Hein to present on applicable law rules.

Professor von Hein noted that the focus was on the *lex fori* and *lex loci delicti*. Historically, there was a close relationship between jurisdiction and choice of law. In many legal systems, both jurisdiction and choice of law rules for personality cases were based on some variant of *lex loci delicti*. In the UK, the double actionability rule, which was still in force for defamation cases, acted as a ceiling. In Germany and Italy, the principle of ubiquity applied to choice of law. In Europe, concepts of close connection and a multiplicity of forums influenced choice of law rules. The overall goal was an international harmony of decisions.

The *lex fori* had several advantages. It reduced the time and cost of litigation, it produced a judgment of higher quality, and promoted foreseeability of result for defendants (eg, media outlets). Moreover, it reduced the need to resort to public policy, and public policy was part of the law of the forum. At the same time, the *lex fori* suffered the disadvantage of promoting forum shopping, although this had been addressed in the EU through harmonised rules on jurisdiction.

Professor von Hein referred back to the decision of the Federal Court of Justice of Germany in "New York Times". In that case, the question was whether the place of damage was Germany because the defamatory article could be accessed online in Germany. The court developed the innovative test of a collision of interests. The court reasoned that this occurred in Germany as the plaintiff was domiciled in Germany and the article concerned the affairs of his company based in Germany. From this, Professor von Hein noted that, while the English approach favoured defendants, the German approach favours plaintiffs. But at the end of the day, despite diametrically opposed underlying approaches, the law of the forum was always applied. Professor von Hein also referred to the 1997 decision of the French Court of Cassation in *Gordon & Breach*.

Professor von Hein expressed the view that there were substantial arguments to justify the application of the *lex fori*. Contrary to other areas of law, personality rights were significantly influenced by constitutional values. He noted that a paper was being developed internally for the Committee, which would develop this idea further.

The Chair asked whether the report would, in its discussion about jurisdiction, say anything about the doctrine of *forum non conveniens* or similar theories that allowed courts to decline jurisdiction or dismiss proceedings, as this might have an impact on applicable law.

Professor Hess responded that the Committee had not finally discussed this issue.

The Chair encouraged the Committee to at least make a note of this in the report, even if it was not covered in the resolution.

Professor von Hein observed that there were other areas where judicial discretion was creeping in to determinations of jurisdiction. Identifying the "centre of main interest" already invited the exercise of some discretion.

The Chair noted that building discretion into jurisdictional rules was not the same as *forum non conveniens*. In some jurisdictions, applying the doctrine required consideration of the law applicable to the underlying claim.

On another point, the Chair expressed her favour for applying the *lex fori*, which she noted was contrary to the French tradition. However, if this rule were to make its way into international guidelines, it might mean that the fight at the jurisdictional level would be even more difficult as there would need to be a really "proper" forum, an idea expressed by Albert Ehrenzweig. Determining the forum in which the claimant wished to enforce their rights determined the proper forum. By jurisdictional rule alone, it would be possible to balance the interests of the defendant in foreseeability and the interest of the plaintiff in the accessing a remedy. The issue was whether it was possible to craft a jurisdictional rule that did not rely on applicable law rules to act as a counterbalance.

Professor Hess responded that this was a realistic goal and a direction in which the Committee could head. He added that Professor von Hein's arguments were convincing, and that statistics would be influential.

Dr Atherton queried whether there were areas of law where this approach could be more challenging. In areas such as intellectual property and inventorship, there were substantial differences in the law between forums, and a *lex fori* approach could have a significant impact on these areas of law.

Professor Hess agreed that there were differences, and that these differences needed to be bridged.

Professor von Hein added that territorialism played a much greater role in intellectual property. Personality rights were different.

In response to earlier comments by the Chair, Professor von Hein noted that he did not have a single rule in mind for applicable law. The courts could deviate from it, for instance, the law of the habitual residence of both parties could apply where both parties shared the same habitual residence, regardless of where proceedings were brought. However, failing any such special circumstances, the *lex fori* would apply.

Professor Stewart asked Professor von Hein about the role of public policy. In many cases, issues of privacy might well be treated as the public policy of the forum.

Professor von Hein responded that, if the *lex fori* were applied, there would be no need to refer to public policy of the forum.

Professor Stewart added that he could think of US cases that discussed conflict of public policy.

Professor von Hein responded that the Committee would need to consider how much courts take into account foreign mandatory rules when determining jurisdiction. He referred to the case of a Greek teacher working in Germany whose salary was cut by Greece as an austerity measure. The question was whether the German Federal Labour Court should take into account Greek law. This case was the first time that the labour court had referred a matter to the CJEU.

The Chair noted that there were many different areas of law – corporate social responsibility was an example – where hard or soft mandatory rules were being developed. These would need to be taken into account.

Dr Mariottini gave a final presentation on ongoing work at the HCCH on developing a new treaty on the recognition and enforcement of judgments as part of the "Judgments Project".

The Chair noted that, given the scope of that project, the Committee's work would not be picked up by the HCCH. She thanked the panel and attendees for their participation.

SECOND REPORT (2016)

Background

1. The International Law Association (ILA) Committee on Baselines under the International Law of the Sea was formed with the approval of the ILA Executive Council in November 2008. The Committee's final report was considered at the Sofia Conference (2012) and in Resolution No. 1/2012 the 75th Conference of the ILA noted the conclusions of the Committee and requested the Secretary-General of the ILA to forward the Report to relevant Parties. The Committee's original four-year mandate ended in 2012.

2. The Committee was formed on the basis of a proposal with a two-part mandate: first, to "identify the existing law on the normal baseline" and, second, to "assess if there is a need for further clarification or development of that law."[1] The need to identify, and possibly to clarify or develop, the existing law on the normal baseline arose in response to the phenomenon of sea level rise likely to accompany climate change, and in particular

[1] *Proposal for the establishment of a new committee on baselines*, para. 7.

the effect this may have on low-lying, small island developing States.[2] The need was also considered to arise with respect to the artificial extension of existing coasts[3] and the issue of baselines along ice-covered coasts. In addition to concerns raised by these phenomena, the importance of identifying the existing law on the normal baseline was highlighted by two international maritime delimitation cases – *Territorial and Maritime Dispute between Nicaragua and Honduras in the Caribbean Sea* (ICJ Judgment 2007)[4] and *Guyana/Suriname* (Annex VII Arbitral Tribunal award 2007)[5] – in which the location of the normal baseline was in question.

3. In pursuit of these objectives, the Committee drafted an internal discussion document for consideration at the August 2010 ILA biennial meeting in The Hague. The draft final report was circulated to Committee members on 18 January 2012 and was discussed during an inter-sessional Committee meeting in Hamburg, Germany on 16 and 17 March 2012, and the final report of the Committee was considered at the 2012 Sofia Conference and adopted by Resolution No. 1/2012.

4. Two matters were identified during the conclusion of the final report. The first was a recognition that substantial territorial loss arising from sea-level rise is an issue that extends beyond baselines and the law of the sea to encompass additional areas of international law. Resolution No. 1/2012 acknowledged that issue by noting that it "requires consideration by a committee established for the specific purpose of addressing this broad range of concerns".[6] In response, a proposal for the establishment of a new ILA Committee on International Law and Sea-Level Rise was submitted to ILA Headquarters with Professor Davor Vidas (Norwegian Branch) as proposed Chair, and Professors David Freestone (UK Branch) and Jane McAdam (Australian Branch) as the proposed Co-rapporteurs. The Executive Council of the ILA endorsed that proposal and that Committee has now commenced its work plan.

5. The second matter that was identified in the 2012 Committee's Report was the desirability of a further exploration of the international law of the sea addressing 'straight baselines' under an extended mandate of the Committee on Baselines under the International Law of the Sea. This arose due to 'straight baselines' not being considered in any detail in the 2012 Committee Report. A related matter was 'archipelagic baselines' under Part IV of the 1982 United Nations Convention on the Law of the Sea (LOSC)[7] and related state practice with respect to those baselines. In addition, a view existed amongst Committee members that the work of the Committee on baselines would not be complete if its deliberations were ultimately limited to issues principally associated with Article 5 of the LOSC.

[6] Resolution No. 1/2012 [8].

[7] *United Nations Convention on the Law of the Sea*, opened for signature 10 December 1982, 1833 UNTS 397 (entered into force 16 November 1994) ('LOSC').

6. It was therefore proposed that the ILA Committee on Baselines under the International Law of the Sea have its mandate expanded for a further 4 years during which time it would consider the following matters:

1. The interpretation and relevant state practice of Article 7 of the 1982 United Nations Convention on the Law of the Sea regarding the method adopted by States of drawing straight baselines.
2. The interpretation and relevant state practice of Article 8 (2) of the 1982 United Nations Convention on the Law of the Sea regarding the effect arising from the establishment of straight baselines within waters previously not considered internal waters and the consequences thereof for innocent passage.
3. The interpretation and relevant state practice of Article 10 of the 1982 United Nations Convention on the Law of the Sea relating to the method adopted by States of drawing straight baselines within a bay.
4. The interpretation and relevant state practice of Article 13 of the 1982 United Nations Convention on the Law of the Sea as it relates to the method adopted by States in relying upon low-tide elevations in the drawing of straight baselines, and the consistency of that practice with Article 7 (4) of the Convention.
5. The interpretation and relevant state practice of Article 14 of the 1982 United Nations Convention on the Law of the Sea as it relates to the matters noted above with respect to how States rely upon a combination of methods in determining baselines, including the normal baseline as provided for in Article 5 of the Convention and as considered in the Committee's 2012 Sofia Conference Report.
6. The interpretation and relevant state practice of Article 47 of the 1982 United Nations Convention on the Law of the Sea regarding the method adopted by States in the drawing of archipelagic baselines.

7. The then Director of Studies, Professor Chinkin, asked the Executive Council to agree to an extended mandate until 2016 and that extension was duly granted.[8] Captain J. Ashley Roach, JAGC, U.S Navy (Retired) (USA) was appointed as Chair and Professor Donald R. Rothwell (Australia) was appointed as Rapporteur.

8. The Work Plan of the Committee is divided into three phases. The first phase, which culminated in a First Report, focussed on the question of straight and archipelagic baselines as provided for in Articles 7 (Task 1) and 47 (Task 6) of the LOSC. A First Interim Report was prepared for circulation and discussion at the ILA American Branch conference in New York on 26 October 2013. The Rapporteur then prepared a draft of the First Report for circulation in December 2013 inviting comments from Committee members prior to finalisation in February 2014.[9] During the Committee meeting at the Washington

[8] International Law Association, Executive Council Meeting Minutes, 10 November 2012.

[9] In preparing the First Report the Rapporteur was supported with research assistance provided by students from the ANU College of Law, Australian National University. The support and assistance of those students is acknowledged. Zoe Winston-Gregson acted as a research assistant in the later stages of that project and also made a contribution along with a team of ANU College of Law students who contributed to the research and writing of parts of the First Report who included Alice Bolt, Alice Bradshaw, Jacqueline Edwards, Anita Gupta, Sam Osborne, Nishadee Pereva,

Conference, the First Report was finalised and the Work Plan for the period 2014-2016 was agreed upon.

9. The second phase, which culminates in this Second Report,[10] includes addressing the questions raised in para. 6, items 2, 3, 4 and 5, which were not considered in the First Report.[11] This Second Report follows the format of the First Report and uniformly considers each relevant article through its historical background, text, and analysis of the text by way of state practice, decisions of courts and tribunals, and commentary.

10. At the March 2016 Inter-sessional meeting of the Committee it was decided to seek an extension of the Committee's mandate for a further two years. A workplan was put before the Director of Studies, Professor Brus, for the period 2016-2018 justifying the two year extension on the basis of:

- the need to undertake a more complete review of state practice;
- the need to take into account the potential for dispute settlement of baseline disputes;
- the need to take into account the potential impact of the decision of the Philippines v China Annex VII arbitration on the South China Sea;
- the need to assess the distinction between islands, rocks and low-tide elevations; and
- the need to complete an assessment of some outstanding aspects of the Committee's mandate as outlined in 2012

Professor Brus supported this proposal. Accordingly, this Second Report does not reflect the decision of the Philippines v China Annex VII arbitration on the South China Sea.

The Committee also agreed to continue to explore the following issues:

1. The interpretation of Article 7(2) with respect to deltas and unstable coastlines;
2. The meaning of 'main islands' in Article 47(1);
3. The legal consequences arising when the status of an archipelagic State and that State's capacity to proclaim archipelagic baselines is disputed; and
4. The significance and relevant state practice with respect to Article 50 and the drawing of closing lines for the delimitation of internal waters within an archipelagic State.

The Committee remains open to extending its mandate to consider:

- the interpretation and relevant state practice with respect to Article 9 dealing with mouths of rivers.

The Committee also acknowledges that in addition to straight baselines, the LOSC and relevant state practice in the law of the sea include closing lines, and straight lines and

Andrew Read, Russell Schmidt (Summer Research Scholar), Kai Scott, Sasha Silberstein, Marc Vandenbrooke, Anna Whitton, and Clara Wilson.

[10] A draft of this report was circulated to the Committee on 30 May 2016 with minor comments received by 6 June 2016 taken into account; more substantive comments have been held over until the Final Report of the Committee scheduled for 2018.

[11] In preparing the Second Report the Rapporteur acknowledges the research assistance of Jacqueline Edwards.

other lines (including those predicated on Articles 9 and 10 of the LOSC, as well as on historic claims) on the basis of which outer limits of maritime zones are delineated. Finally, in this Report the terms 'miles' and 'nautical miles' have been used interchangeably.

II. Article 8(2)

A. Relevant Historical Background

11. The International Law Commission (ILC) in its Draft Articles recognised that in instances where the drawing of straight baselines enclosed as internal waters areas which had previously been considered part of the territorial sea or high seas, a right of innocent passage would remain where "the waters have normally been used for international traffic."[12] When this issue was considered at UNCLOS I in Geneva, a separate article was agreed upon for insertion in the Convention on the Territorial Sea and the Contiguous Zone which directly considered internal waters. It provided as follows:

> Article 5
>
> 1. Waters on the landward side of the baseline of the territorial sea form part of the internal waters of the State.
>
> 2. Where the establishment of a straight baseline in accordance with Article 4 has the effect of enclosing as internal waters areas which previously had been considered as part of the territorial sea or of the high seas, a right of innocent passage, as provided in Articles 14 to 23, shall exist in those waters.

12. Paragraph 2, which is the forerunner to Article 8(2) LOSC, was proposed at UNCLOS I by the UK.[13] The UK position on this matter would have been influenced by the outcome in the 1951 *Fisheries* case[14] and subsequent developments in state practice and through the work of the ILC regarding straight baselines.

B. LOSC Text

13. At UNCLOS III there was ongoing support for the retention of Article 5 of the Convention on the Territorial Sea and the Contiguous Zone, subject to adjustment to reflect modifications to the law of the sea regime which were occurring. Accordingly, there was consensus for the retention of a modified version of Article 5(2) which became Article 8(2) in the final text. It provides as follows:

> *Article 8*
>
> *Internal Waters*
>
> 2. Where the establishment of a straight baseline in accordance with the method set forth in article 7 has the effect of enclosing as internal waters areas which had

not been previously considered as such, a right of innocent passage as provided in this Convention shall exist in those waters.

C. Analysis of Article 8(2)

1. Text

14. There is minimal difference in the text between Article 5(2) of the Convention on the Territorial Sea and the Contiguous Zone and Article 8(2) of the LOSC. There remains a connection between the provision and the relevant Article providing for the drawing of straight baselines (Article 7). It follows that Article 8(2) is only activated once Article 7 straight baselines have been established. Article 8(2) does not, like its predecessor, make precise reference to other maritime zones other than internal waters. The effect is therefore that the waters enclosed within baselines either were or were not previously considered to be internal waters. As observed in the *Virginia Commentaries*, "the comprehensive formula employed by the new Convention was clearly intended to cover the exclusive economic zone (or exclusive fishing zones) in addition to the territorial sea and high seas, and possibly also a contiguous zone."[15] The effect of enclosing certain waters by way of Article 47 archipelagic baselines does not fall within the remit of Article 8(2).

2. State Practice

15. An analysis of domestic instruments implemented by State parties to the LOSC clearly indicates that it is generally accepted that the drawing of straight baselines will transform the legal status of the enclosed waters into internal waters.[16] It is equally possible to conclude that the codified and customary right of innocent passage is generally recognised. A frequently referenced example of state practice is the Minches, a passage between the Outer and Inner Hebrides, where the UK acknowledges that ships of foreign states enjoy the right of innocent passage.[17] In contrast, acceptance of the extension of the right of innocent passage to newly-defined internal waters is comparatively rare.

16. The state practice of Costa Rica is a possible exception. Pursuant to decree 18581-RE, Costa Rica recognises that the right of innocent passage applies in its internal waters "in accordance with the principles and norms of international law."[18] Notably the decree implies that the decision to extend innocent passage into the State's internal waters was predicated upon the fact that "several Important (sic) ports on the Pacific

[18] *Decree 18581-RE concerning straight baselines in the Pacific Ocean* (Costa Rica) 14 October 1988, art 3.

coast" are located on the Costa Rican coastline.[19] On this basis, it may not be possible to attribute the Costa Rican decree to an appreciation of Article 8(2), but rather to the practical exigencies of Pacific trade. This conclusion is supported by the ambiguous language of the decree, which provides that "the right of innocent passage to ships of all nations is permitted [in internal waters], in accordance with the principles and norms of international law", a statement that fails to distinguish between internal waters delimited by applying the system of normal baselines and those generated by straight baselines.[20] Some irregularities have also been identified in the practice of Belize, Denmark, Cyprus, Ireland, Honduras and Slovenia.[21]

17. Several States observe a right of innocent passage in internal waters enclosed by straight baselines by administrative rather than legislative means.[22] For example, "Australia and South Africa recognise the right of innocent passage in the waters enclosed by straight baselines."[23]

3. Case Law

18. There does not appear to be any instance of a court of tribunal having applied Article 8(2) to date with respect to recognising the right of innocent passage following the drawing of an Article 7 straight baseline. The International Court of Justice did, however, in the *Land, Maritime and Island Frontier* dispute between El Salvador and Honduras, recognise that the right of innocent passage applied in all of the Gulf of Fonseca (an historic bay).[24] The internal waters enclosed by the bay closing lines and "all waters of the Gulf [were found to be subject to the right of innocent passage by virtue of] the exigencies and resulting history of a three-State but relatively small bay, with its problems of navigational access."[25] This decision provides an example of an analogous circumstance where the drawing of a baseline which thereby confirmed the status of the enclosed waters as internal did not impair a pre-existing right of innocent passage.

4. Commentary by Publicists

19. Publicists have noted the exceptional nature of the right of innocent passage conferred by Article 8(2). Adi states that Article 8(2) "preserve[s the right of innocent passage] in the internal waters [in a manner that is] identical to the case in the territorial

[25] Ibid.

waters in terms of alien navigation."[26] Kopela is of the view that, given the lack of a clear distinction between the juridical nature of "other" internal waters and those enclosed by straight baselines, "it is difficult to establish whether states treat navigation in their internal waters as a right of innocent passage belonging to third states or part of their discretion to allow navigation and entry into their internal waters and ports."[27] The conclusion of Kopela with respect to Article 8(2) is that the provision is indicative of an emerging principle of customary international law, a conclusion that is supported by the unchallenged adoption of Article 8(2) at UNCLOS III.[28]

20. Smith invokes Article 8(2) in support of the principle that baselines should not exceed 24 nautical miles:

> This implication [that baselines are limited to 24 nautical miles or less] is reinforced by article 8(2) which guarantees the right of innocent passage in areas converted to internal waters by straight baselines … Preservation of innocent passage carries over pre-existing rights in waters that were territorial in nature before the application of straight baselines. Given this theme of linkage to territorial waters, it follows that, as a rule, no straight baseline segment should exceed 24 miles.[29]

D. Conclusion

21. In the absence of extensive state practice relating to Article 8(2) it is difficult to make firm conclusions, other than to observe that there is little evidence to suggest that the recognition of the right of innocent passage within waters enclosed by Article 7 straight baselines that previously were not considered internal waters is contentious. Notwithstanding the characterisation by publicists such as Smith that Article 8(2) seeks to "preserve" a right of innocent passage within waters newly enclosed by Article 7 straight baselines, Article 8(2) does not require that the right of innocent passage have been previously accepted. Rather, Article 8(2) addresses waters that were previously not considered to be internal waters. Therefore, whether the coastal State had or had not previously acknowledged the right of innocent passage within those waters is irrelevant to the state of the right following the establishment of Article 7 straight baselines.

III. Article 10

A. Relevant Historical Background

22. The ILC considered the status of bays with respect to baselines and made provision for those circumstances in Article 7 of the Draft Articles. That provision sought to define a bay, including its relevant dimensions, and allowed for the drawing of a line across the mouth of the bay not exceeding 15 miles. Larger bays could have a closing line, including a combination of closing lines, drawn within the bay. These provisions did not apply

Smith, 'Limits in the Seas: Straight Baselines Claim: China' (9 July 1996) No. 117 *Office of Ocean Affairs, Bureau of Oceans and International Environmental and Scientific Affairs, U.S. Department of State* 1, 5; as to the status of whether straight baselines are limited in their length to 24 miles, see the discussion in the *First Report* (2014) [36-37].

in the case of 'historic bays', a matter on which the International Law Association had commented in 1926 and 1928.[30]

23. The ILC's recommendations formed the basis for what became Article 7 of the Convention on the Territorial Sea and the Contiguous Zone. Article 7 contained six sub-paragraphs and retained the principal provisions of the ILC draft, though the entrance points of the bay were extended to 24 miles. Article 7, and its provisions for the drawing of closing lines within or across a bay, did not apply in the case of historic bays or where Article 4 straight baselines were drawn.

B. LOSC Text

24. Article 10 of the LOSC repeats the text of Article 7 with some very minor variations. All of the key components of the regime for baselines within a bay are retained.

Article 10

Bays

1. This article relates only to bays the coasts of which belong to a single State.

2. For the purposes of this Convention, a bay is a well-marked indentation whose penetration is in such proportion to the width of its mouth as to contain land-locked waters and constitute more than a mere curvature of the coast. An indentation shall not, however, be regarded as a bay unless its area is as large as, or larger than, that of a semi-circle whose diameter is a line drawn across the mouth of that indentation.

3. For the purposes of measurement, the area of an indentation is that lying between the low-water mark around the shore of the indentation and a line joining the low-water mark of its natural entrance points. Where, because of the presence of islands, an indentation has more than one mouth, the semi-circle shall be drawn on a line as long as the sum total of the lengths of the lines across the different mouths. Islands within an indentation shall be included as if they were part of the water area of the indentation.

4. If the distance between the low-water marks of the natural entrance points of a bay does not exceed 24 nautical miles, a closing line may be drawn between these two low-water marks, and the waters enclosed thereby shall be considered as internal waters.

5. Where the distance between the low-water marks of the natural entrance points of a bay exceeds 24 nautical miles, a straight baseline of 24 nautical miles shall be drawn within the bay in such a manner as to enclose the maximum area of water that is possible with a line of that length.

6. The foregoing provisions do not apply to so-called "historic bays", or in any case where the system of straight baselines provided for in article 7 is applied.

---

C. Analysis of Article 10

1. Text

25. Article 10 provides a mechanism for the drawing of straight baselines within a juridical bay. Two types of bays are excluded from Article 10: a) bays shared by two or more States;[31] and b) historic bays.[32] Neither of these two exceptions are therefore assessed. Article 10(2) defines a juridical bay providing some general guidance as to size and indentation from the coast. A semi-circle test is applied on the basis of a semi-circle whose diameter is a line drawn across the mouth of the bay. The line is determined from the low-water mark of the natural entrance points of the bay. With respect to determining the entrance points of the bay, the *Virginia Commentaries* observed that: "Such points, however, are not always easy to determine because some bays have a number of such points and others possess smoothly curved entrances on which no single point is distinguishable."[33]

26. Different outcomes arise if the distance between the natural entrance points is less than or greater than 24 nm. If less than 24 nm then a closing line is drawn across those entrance points and the waters on the landward side of the line are considered internal waters. If greater than 24 nm then a straight baseline of 24 nm shall be drawn within the limits of the bay.

2. State Practice

27. Contemporary evidence of State practice suggests that adherence to the provisions of Article 10 remains varied in practice. While it is possible to identify examples of juridical bays that satisfy the definition in Article 10,[34] there are a number of instances of state practice where States have sought to draw straight baselines across the entrances to gulfs and bays which exceed the provisions of Article 10. Examples include Libya's claims with respect to the Gulf of Sidra, which has been rejected by a number of states as having any basis of claim as an historic bay, or a juridical bay subject to a closing line,

---

[31] Westerman asserts this provision was "necessary in order to prevent large bodies of water such as the Mediterranean or Baltic seas from technically becoming juridical bays under Article 7": Gayl Shaw Westerman, *The Juridical Bay* (Oxford University Press, Oxford, 1987) 79.

Goldie, "Historic Bays in international law: an impressionistic overview" (1984) 11 *Syracuse Journal of International Law and Commerce* 211-273; "Historic Bays: Memorandum by the Secretariat of the United Nations" (United Nations Conference on the Law of the Sea, 24 February – 27 April 1958) UN Doc. A/CONF.13/1.

[33] Nandan and Rosenne (eds), *United Nations Convention on the Law of the Sea 1982: A Commentary* Vol II (1993) 117.

[34] See, eg, Brian Melchior and Kevin Baumert, 'Limits in the Seas: Mauritius: Archipelagic and other Maritime Claims and Boundaries' (8 July 2014) No. 140 *Office of Ocean and Polar Affairs, Bureau of Oceans and International Environmental and Scientific Affairs, U.S. Department of State* 1, 6 – with the exception of Mathurn Bay, the six bay closing lines put forward by Mauritius in the 2005 Regulations to the *Maritime Zones Act 2005* satisfy the "semi-circle test" and do not rely upon closing lines in excess of 24nm. Grenada's 28 bays equally satisfy both requirements: Brian Melchior and Kevin Baumert, 'Limits in the Seas: Grenada: Archipelagic and Other Maritime Claims and Boundaries' (28 March 2014) No. 135 *Office of Ocean and Polar Affairs, Bureau of Oceans and International Environmental and Scientific Affairs, US Department of State* 1, 3.

including by Australia, France, Germany, Italy, and the United States.[35] In 1966 Argentina drew straight baselines across the mouths of the San Jorge and San Matias gulfs which were also subject to protest by the United States on the basis that neither met the test as a juridical bay under the provisions of the Convention on the Territorial Sea and the Contiguous Zone.[36] Protests have also been lodged by the United States with respect to the length of the closing lines drawn across bays by Mauritania,[37] Sudan[38] and Costa Rica.[39] The US has also objected to the use of straight baselines to delimit waters off the mainland coast of Portugal and the Azores on the grounds that the baselines relied upon "do not enclose juridical bays or lie in localities which meet the legal requirement that the coastline is deeply indented and cut into."[40]

28. Churchill and Lowe have identified New Zealand, Papua New Guinea, Samoa and Vanuatu as States whose domestic legislation conforms to the Article 10 definition of bays and the specifics of the semi-circle test.[41] It is observed that references to bays in the domestic legislation of other LOSC State parties "either fail … to define a bay and/or fail … to prescribe the maximum limit of the closing line."[42] In spite of this inconsistency, Churchill and Lowe maintain that it is not possible to "conclude from this … that the practice of these States is necessarily contrary to the Conventions."[43] Churchill and Lowe argue that such a conclusion could only be based upon clear evidence of how these domestic provisions are applied in practice.[44] Writing in 1999, Churchill and Lowe noted that due to the limited evidence of relevant State practice it was impossible to reach a conclusion as to the degree of fidelity between State practice and Article 10.[45]

29. A more recent assessment of state practice by Prescott and Schofield (2005) reached the conclusion that "Article 10(2) presents most governments with few difficulties because they alone are responsible for interpreting this Article. They consider potential

bays, apply the precise semi-circle test in the second sentence and if it is passed the bay is closed."[46] The practice of Australia and Mauritius is assessed by Prescott and Schofield as being consistent with the Article 10(2) test.[47] In the case of the UK, the Territorial Sea (Baselines) Order 2014 proclaims certain baselines adjacent to the UK, Channel Islands and Isle of Man in which the provisions of Article 10 are specifically endorsed.[48]

30. In some instances where Article 10 has been applied to bays that do not meet the definition of an Article 10 juridical bay, the normal baseline (as defined by the low-water line) has been identified as an appropriate substitute.[49]

3. Case Law

31. The International Court of Justice in the *Land, Island and Maritime Frontier* case determined that the provisions of Article 10 "might be found to express general customary law."[50] The case provided some relevant statements on the legal status and effect of the closing line used to delimit the Gulf of Fonseca. These are extracted below. The closing lines of the Gulf of Fonseca are drawn from Punta Amapala (on the coast of El Salvador) to Punta Cosigüina (in Nicaragua).[51] As the Gulf of Fonseca extends from the coast of one State to another, the Gulf does not satisfy the test for a juridical bay.[52] The Court concurred with the generally accepted conclusion that the Gulf of Fonseca is an historic bay.[53] While the provisions of Article 10 do not apply to historic bays, the case's discussion of the effect of closing lines on the delimitation of surrounding maritime zones is equally applicable to juridical bays.

32. The Court concluded that bay closing lines were effectively the Gulf's 'ocean limit' and accordingly acted as the "baseline for whatever régime lies beyond it".[54] While the Court accepted El Salvador's submission that bay closing lines were acceptable as a line "depicting the ocean limit of the Gulf of Fonseca," it found that this limit must logically share the character of a baseline under international law.[55] Following on from this conclusion, the territorial seas of Honduras and El Salvador must be calculated from the Gulf of Fonseca's closing lines, and must not include waters enclosed by the bay closing lines.[56] Thus "maritime belts within the Gulf may properly be regarded as the internal waters of the coastal State, not being subject to joint sovereignty, and even though subject, as indeed are all the waters of the Gulf, to rights of innocent passage that owe their origin

to the exigencies and resulting history of a three-State but relatively small bay, with its problems of navigational access."[57] The Court concluded that to calculate the territorial sea from a point other than the Gulf's closing line "would be incompatible with the legal status of a bay."[58] The Court resolved the issue of overlapping coastal State jurisdiction by concluding that "the legal situation on the landward side of the closing line is one of joint sovereignty, [thus] all three of the joint sovereigns [Nicaragua being the third] must have entitlement outside the closing line to territorial sea, continental shelf and exclusive economic zone."[59] The Court conceded that the Parties may choose to divide the zone of shared jurisdiction into three distinct areas.[60] The key principle that may be extracted from the judgment is that bay closing lines are of the same legal "character" as baselines.

33. Honduras' acceptance of the Court's findings is evidenced by the following Executive Decree: "On the Pacific Ocean, the straight baseline is the proportional sector appertaining to Honduras on the baseline common to the three coastal States of the Gulf of Fonseca, which in turn is part of the line drawn across of the said Gulf, between Punta Amapala in El Salvador and Punta Cosigüina in Nicaragua, in accordance with the terms of the Judgment delivered by the International Court of Justice on 11 September 1992."[61]

34. The most prominent domestic courts that have considered and assessed the status of bays are those in the United States in cases involving Louisiana, Mississippi, Alaska, Florida, Texas, Maine, and Rhode Island.[62]

4. Commentary by Publicists

35. Prescott and Schofield assess the application of Article 10 to single State bays. They observe, based on their analysis at the time (2005), that there are 25 'coastal indentations', other than estuaries, that coincide with the coastal termini of international boundaries,[63] and conclude that "[i]t does seem discriminatory that states with sovereignty over a bay can take advantage of Article 10 whereas two states with sovereignty over a bay of exactly the same proportions are prevented from agreeing to close it."[64]

36. Westerman highlights the relationship between the delimitation of bays and expansionist policies, arguing that "many states have declared sovereignty over bays of increasing size as one strategy for maximising national control over waters previously considered high seas."[65] Westerman's understanding of the relationship between bay delimitation and inter-State conflict may be approached as a possible explanation for

continued academic and national interest in the interpretation of Article 10 and relevant state practice.[66]

37. A significant body of literature addresses the Article 10 conditions that define a juridical bay, especially in the context of litigation that has arisen before the Supreme Court of the United States involving federal and state authorities. The discussion which follows considers issues that publicists have considered in a more general context.[67]

a. "Natural entrance points" of an indentation

38. Churchill and Lowe have identified Article 10's ambiguous reference to a bay's 'natural entrance points' as a likely source of difficulty in the 'practical application' of the provision.[68] Referring to the English Court of Appeal decision in *Post Office v Estuary Radio Ltd*,[69] the authors submit that "neither set of points [put forward by the parties] seems very obviously to be the 'natural entrance points' of the [Thames] estuary."[70] While the Court of Appeal accepted the Post Office's submission that Naze and Foreness were natural entrance points and thus sufficient to meet the juridical test of a bay,[71] Churchill and Lowe's contention implies that the identification of a bay's natural entrance points is a matter of degree.[72]

39. Prescott and Schofield are of the view that in the case of a "classical bay shape with a narrow mouth between two headlands, the natural entrance points will be obvious".[73] In these instances, the points will possess a name such as cape, point, head or bluff leading to the selection of a 'mathematical point' along the coast. As such, in their view: "It seems that the precise natural entrance points should be selected after the study of large-scale charts, maps and air photographs and then a visit to the feature."[74] In those instances where the natural entrance points are not as readily apparent, Prescott and Schofield are of the view that this would not ordinarily result in controversy, observing that "[s]ince the selection of natural entrance points is the sole responsibility of the country concerned, this is not a situation that is likely to cause difficulties or uncertainties."[75]

b. The semi-circle test

40. Writing in the context of Article 10's antecedent provision in the Convention on the Territorial Sea and the Contiguous Zone, O'Connell argued that the semi-circle test is an arbitrary means of defining a juridical bay.[76] O'Connell intimated that the provision fails to give effect to geographical variations that do not detract from an indentation's essential characteristic as a "bay":

---

[66] Ibid.
[67] A detailed analysis of issues associated with bays appears in O'Connell, *The International Law of the Sea* Vol 1 (Clarendon, Oxford, 1982) 389-416.

[69] [1968] 2 QB 740
[70] Ibid.
[71] *Post Office v Estuary Radio Ltd* [1968] 2 QB 740, 760.
[72] Churchill and Lowe, *The Law of the Sea* 3rd (1999) 42.
[73] Prescott and Schofield, *The Maritime Political Boundaries of the World* 2nd (2005) 129.
[74] Ibid.
[75] Ibid.
[76] O'Connell, *The International Law of the Sea* Vol 1 (1982) 393.

> [i]t is possible to have a shallow bay attenuated on either side or one side of the headlands whose area is as large as that of the semi-circle; or a deep V-shaped bay whose depth is greater than that of the diameter, but whose area is less than that of the semi-circle. Why the one should be a bay and the other not defies scientific enquiry, and hence the area comparison, useful as it may be in many situations, and plausible as it appears to be on superficial examination, cannot be regarded as a device of customary international law.[77]

41. O'Connell notes that the ambiguous "relationship between the two sentences of Article 7(2)" [the forerunner to Article 10(2)], the latter of which contains the semi-circle test, fails to clarify whether the relevant tests are to be applied.[78] Drawing upon the conclusion in the *Louisiana Case* that Article "7(2) plainly treats the semicircle test as a minimum requirement,"[79] O'Connell concludes that the test should be approached as "a secondary and additional condition which may, or may not, be fulfilled by measuring a bay against the requirements of the first sentence."[80] O'Connell further criticises the requirement that a bay is "to contain land-locked waters," arguing that a literal reading of this provision would "restrict … the category of bays … to very few actual bays in the world" whereas a common-sense interpretation "adds nothing to the result achieved by applying the semi-circle test."[81]

42. Prescott and Schofield refer to the "simple principle of the semicircle test" found in the second sentence of Article 10(2),[82] and give emphasis to the linkage between Article 10(2) and Article 10(3) as giving effect to the principle outlined in Article 10(2). In their view, "[t]he three sentences in Paragraph 3 present no difficulties for most countries when the central authority has no aversion to creating internal waters and extending its territorial seas,"[83] but concede that when the semicircle test has been subject to scrutiny in the context of litigation before the United States Supreme Court "each of the three sentences can provide many pages of evidence and long hours of debate."[84]

D. Conclusion

43. While the status of a juridical bay in the modern law of the sea within which a straight (closing) line may be drawn has a long history as reflected in both the Convention on the Territorial Sea and the Contiguous Zone and the LOSC, state practice in applying Article 10 is varied and has proven to be contentious. Though the International Court of Justice in the *Land, Island and Maritime Frontier* case considered the provisions of Article 10 to reflect "general customary law", state practice suggests that some States take an expansive view as to what is a juridical bay for the purposes of Article 10, paragraphs 2 and 3. A particular difficulty that arises with Article 10 is the multiple criteria a coastal State must apply in order to determine that the indentation along the coast is a juridical bay. Given the ambiguity that exists with those criteria it is unsurprising that there exist

variations in state practice and that the drawing of straight (closing) lines within certain bays has been the subject of protest.

IV. Article 13

A. Relevant Historical Background

44. The status of drying rocks and shoals was considered by the ILC and was reflected in Article 11 in the Draft Articles. At UNCLOS I the ILC draft text of Article 11 was not endorsed and in its place Article 11 of the Convention on the Territorial Sea and the Contiguous Zone addressed low-tide elevations.

B. LOSC Text

45. Article 13 of the LOSC repeats verbatim Article 11 of the Convention on the Territorial Sea and the Contiguous Zone. While there was some early debate at UNCLOS III with respect to the text of the article, consensus was reached for retention of the Geneva text as follows:

Article 13

Low-tide elevations

> 1. A low-tide elevation is a naturally formed area of land which is surrounded by and above water at low-tide but submerged at high tide. Where a low-tide elevation is situated wholly or partly at a distance not exceeding the breadth of the territorial sea from the mainland or an island, the low-water line on that elevation may be used as the baseline for measuring the breadth of the territorial sea.
>
> 2. Where a low-tide elevation is wholly situated at a distance exceeding the breadth of the territorial sea from the mainland or an island, it has no territorial sea of its own.

C. Analysis of Article 13

1. Text

46. There are three dimensions to Article 13. The first is the definition of a low-tide elevation. A low-tide elevation has the following elements:

- it is naturally formed;
- it is an area of land;
- it is surrounded by water;
- it is above water at low-tide; and
- is submerged at high tide.

No reference is made to the composition of the feature other than that it is 'naturally formed'. The generic term 'low-tide elevation' may therefore encompass a rock, a shoal or some other similar feature.[85] No connection is drawn between Article 13 and the Article 121 'Regime of Islands', though a feature which geologically is properly characterised

[85] These various features are assessed in *Territorial and Maritime Dispute* (Nicaragua v. Colombia) (Judgment) [2012] ICJ Rep 624.

as a rock may for the purposes of the law of the sea be properly characterised as either a 'low-tide elevation' if it is submerged at high tide, or an Article 121(3) rock if it is above water at all times. The determining juridical characteristic is therefore whether the rock is or is not submerged at high tide. Importantly, no reference is made to the size or composition of the feature other than it being "an area of land".

47. The second is the significance of a low-tide elevation for the purposes of the baseline. In this respect the location of the low-tide elevation is determinative as to its capacity for being used as the basepoint for measuring the breadth of the territorial sea. To that end, the low-tide elevation must wholly or partly fall within the breadth of the territorial sea as measured from the mainland or an island. If that requirement is met then the low water line on the elevation may be used as the basepoint. An exception to this rule applies in the case of those low-tide elevations beyond the breadth of the territorial sea which have had a lighthouse or similar installation built upon them so that they are now permanently above sea level. In those instances straight baselines may be drawn to and from the low-tide elevation consistently with Articles 7(4) and 47. The other Article 7(4) exception is where the drawing of such baselines has received general international recognition.[86]

48. The third dimension relates to the maritime zone generated by a low-tide elevation. A low-tide elevation is not considered to be part of the coast and does not generate a distinctive territorial sea, but the low-water line may be used as the basepoint for measuring the breadth of the territorial sea if it falls within the territorial sea generated from the mainland or an island. Whether the low-tide elevation is utilised as the basepoint may depend on whether it is the most outer lying low-tide elevation within the territorial sea of the mainland or an island. If the low-tide elevation is relied upon as the basepoint for the territorial sea, it can also be the basepoint from which other maritime zones are proclaimed. Article 13(2) makes clear that if the low-tide elevation is situated at a distance which exceeds the breadth of the territorial sea from the mainland or an island, then it has no territorial sea of its own.

2. State Practice

49. It is possible to identify a number of coastal States whose relevant legislation and practice deviates from the LOSC principles regarding baselines associated with low-tide elevations, though it is difficult clearly to differentiate whether the state practice relates to Article 13 low-water line baselines or Article 7(4) straight baselines, partly arising from inaccurate charting. China has relied upon "eight low-tide elevations … that cannot be used to determine the territorial sea because no part of any of these low-tide elevations are within 12 miles of the mainland or an island."[87] Furthermore, none of these elevations possess lighthouses or similar structures that would justify the drawing of straight baselines, nor have these baselines received general international recognition.[88] Saudi Arabian legislation relevant to basepoints is similarly inconsistent with Article 13, as it "appears

[86] Note also that Article 47 (4) addresses the drawing of archipelagic baselines to low-tide elevations.
[87] Robert W. Smith, 'Limits in the Seas: Straight Baselines Claim: China' (9 July 1996) No. 117 *Office of Ocean Affairs, Bureau of Oceans and International Environmental and Scientific Affairs, U.S. Department of State* 1, 6.
[88] Ibid; it is acknowledged that the circumstances as they existed in 1996 may have now altered.

to allow low-tide elevations wherever situated to generate a territorial sea."[89] States such as New Zealand and Trinidad and Tobago have created ambiguity with respect to how they characterise low-tide elevations for the purposes of measuring the breadth of the territorial sea by having enacted legislation equating low-tide elevations with an island.[90]

50. States including Japan and Mexico have implemented legislation that closely observes the provisions of Article 13.[91] Churchill and Lowe have noted that "some States appear to accept the use of low-tide elevations as basepoints, regardless of whether lighthouses or similar installations have been built on them."[92]

3. Case law

51. The International Court of Justice considered the issue of low-tide elevations in its 2001 judgment on the *Case Concerning Maritime Delimitation and Territorial Questions between Qatar and Bahrain (Qatar v Bahrain)*,[93] where the ICJ determined that Article 13 reflected customary international law.[94] The dispute between Qatar and Bahrain rested on the issue of whether Fasht al Dibal (a low-tide elevation) could "be appropriated in accordance with the criteria which pertain to the acquisition of territory."[95] Qatar maintained that a territorial claim cannot be made in relation to a low-tide elevation; Bahrain claimed the converse.[96] The Court confirmed that "a low-tide elevation situated in the overlapping area of the territorial sea of two States, whether with opposite or with adjacent coasts [may be used by both States] for the measuring of the breadth of their territorial sea."[97] As both States would benefit from reliance upon the low-tide elevations for delimitation purposes, "the competing rights derived by both coastal States … would by necessity seem to neutralize (sic) each other."[98] Bahrain claimed that it held a superior title to the low-tide elevations "in the sea between Bahrain's main islands and the coast

of the Qatar peninsula" and was thus able to exercise sovereign rights over these areas.[99] In support of this contention Bahrain claimed that the legal status of low-tide elevations is analogous to that of islands under the law of the sea.[100] The Court noted that "[i]nternational treaty law is silent on the question whether low-tide elevations can be considered … "territory" " and that "the few existing rules [in the law of the sea] do not justify a general assumption low-tide elevations are territory in the same sense as islands".[101] The Court rejected Bahrain's submission that a low-tide elevation is susceptible of a claim to territorial sovereignty, supporting this finding with a reference to the rule in Article 13(2) that low-tide elevations situated beyond the limits of a State's territorial sea do not themselves generate a territorial sea.[102] On this basis the Court concluded that neither Bahrain nor Qatar were able to rely upon the low water line of the low-tide elevations "in the zone of overlapping claims" for the purposes of drawing the equidistance line between the two States.[103]

52. The ICJ also recently assessed Article 13 in its 2012 judgment in *Territorial and Maritime Dispute* (Nicaragua v. Colombia)[104] and confirmed that low-tide elevations within 12 nautical miles of an Article 121(3) rock could be used for the purpose of delimiting the territorial sea.[105] In that regard, it can be recalled that Article 13(1) makes no distinction regarding the territorial sea generated from an island.

4. Commentary by Publicists

53. Prescott and Schofield have commented on the location of the low-tide elevation within the confines of the territorial sea. They have observed that "[a] strict interpretation of the phrase means that to be used as a baseline, a low-tide elevation must lie within, or at least partially within, the territorial sea generated from the normal baseline of the mainland or an island."[106] Accordingly, in their view "[l]ow-tide elevations that lie outside the territorial sea generated from the mainland or an island cannot be used to generate a further area of territorial sea"[107] and as such a low-tide elevation that meets this qualification cannot be used for the drawing of a baseline to extend the territorial sea so as to encompass other low-tide elevations which are beyond the normal baseline.

54. Churchill and Lowe provide further support for the principle that "it is not possible to "leapfrog" from one low-tide elevation to another."[108] The authors confirm that a State may not extend its territorial sea where "a low-tide elevation is situated at a distance less than the breadth of the territorial sea from another low-tide elevation, which in turn is situated less than the breadth of the territorial sea from the mainland."[109] While the authors condemn the practice of "leapfrogging", they recognise that "where a low-tide

[109] Ibid, 48.

elevation is twelve miles from the mainland, the outer limit of the territorial sea will be twenty-four miles from the mainland."[110]

55. Sir Gerald Fitzmaurice reached a similar conclusion on this issue:

> It is one thing to permit the use of a low-tide elevation to create *in its immediate vicinity* a moderate bulge in what is already territorial sea. But the effect is of quite another kind, and on an altogether different scale, if such elevations (even if within the territorial sea) can be used as departure points for what may be far-flung baselines ranging perhaps thirty, forty, or sixty miles.[111]

D. Conclusion

56. A distinctive feature of Article 13 is that it permits a coastal State to rely upon a maritime feature other than the mainland or an island as the basepoint from which the territorial sea is measured. There is also a direct linkage between Article 13 and Articles 7(4) and 47 (4), which has permitted some coastal States to engage in ambiguous conduct as to which of these provisions they have utilized when they rely upon certain low-tide elevations to measure the breadth of their territorial sea or to draw straight baselines. While Article 13 identifies the essential characteristics of a low-tide elevation there remains the potential for coastal State discretion in characterising a feature as a low-tide elevation. One important element in this process is the level of State discretion in determining the relevant vertical datum. This matter was considered in the 2012 Final Report of the Committee when reviewing Article 5. The issue of whether a low-tide elevation can properly be considered as 'territory' also remains unsettled,[112] though the International Court of Justice has made clear that low-tide elevations cannot be appropriated.[113]

V. Article 14

A. Relevant Historical Background

57. This article had no predecessor in either the work of the ILC or the deliberations at UNCLOS I. At UNCLOS III a proposal was made in 1973 by China for a provision recognising the capacity of a coastal State to "reasonably define the breadth and limits of its territorial sea" with respect to a variety of relevant factors. This eventually formed the basis for deliberation around the capacity of a coastal State to rely upon a series of methods for the determination of baselines.

B. LOSC Text

58. Originally this provision was subsumed within what became Article 7 of the LOSC, but UNCLOS III elected to create an independent article that follows all of the relevant articles dealing with baselines. It provides as follows:

---

[110] Ibid.

[111] Fitzmaurice, 'Some Results of the Geneva Conference on the Law of the Sea: Part 1 – The Territorial Sea and Contiguous Zone and Related Topics' (1959) 87 (emphasis original).

Article 14

Combination of methods for determining baselines

The coastal State may determine baselines in turn by any of the methods provided for in the foregoing articles to suit different conditions.

C. Analysis of Article 14

1. Text

59. While Article 14 is short, it provides to a coastal State reassurance as to how it can go about determining its baselines. To that end the following points can be made. First, the coastal State 'may' determine baselines in this manner. This removes doubt as to whether a coastal State must rely upon a combination of baseline techniques and confirms that depending on particular circumstances a coastal State may determine its baselines solely in reliance upon the Article 5 normal baseline method, or on the Article 7 straight baseline method. Second, the baselines can be determined by any of the methods provided for in the 'foregoing articles'. Here the use of the words 'in turn' is of significance. The *Virginia Commentaries* observed in this respect that:

> The expression "in turn" is rendered *en fonction des différentes situations* and in similar terms in other languages. The English expression must therefore be assumed to mean something along the lines of "according to the circumstances" or "to suit different conditions".[114]

This view is reinforced by the chapeau and its title "Combination of Methods for determining baselines". It is also confirmed by the text of the article where it refers to the coastal State adopting these approaches to "suit different conditions" thereby explicitly acknowledging that States will encounter multiple coastal and maritime variables as they assess how to determine their baselines.

2. State Practice

60. General acceptance of the principle that States may exercise discretion when selecting a "baseline methodology" is possibly best evidenced by the variety of delimitation methods employed by coastal States. Few States have adopted legislation to specify that a range of methods may be used to delimit its maritime zones. Mauritius and Mexico are two such exceptions. Article 4(2) of the Mauritian *Maritime Zone Act 2005 (No 2)* specifies that the State may rely upon "straight archipelagic baselines …, normal baselines …, the seaward low-water line of reefs …, straight baselines [or] a combination of [these] methods" to delimit its maritime zones.[115] Similarly, "[t]he limits of the territorial sea [of Mexico] shall be measured from baselines, either normal or straight, or a combination of the two."[116]

[116] *Federal Act relating to the Sea* (Mexico) 8 January 1986, art 26.

3. Case Law

61. There is no known instance of where an international court of tribunal has had occasion to consider the application of Article 14.

4. Commentary by Publicists

62. Churchill and Lowe note that while it is not possible to prescribe a single method for the calculation of baselines, it is necessary that the rules are applied consistently:

> it is desirable that the rules should be formulated in as precise and objective a way as possible, so that two cartographers, asked to draw the baselines along a particular stretch of coast, would ideally both arrive at the same result. It is also desirable that the waters enclosed by baselines should be of such a nature that the regime of internal waters is as or more appropriate to them than the regime of the territorial sea or EEZ … If the rules are not sufficiently precise, it may be possible for a State to draw its baselines in a generous manner, thus pushing the outer limit of its territorial sea and other zones farther seawards and bringing greater areas of sea within internal waters, thus reducing the areas of sea available for use by other States.[117]

While these statements are not specifically directed to Article 14, they nevertheless imply that coastal State discretion should not be left unchecked.

D. Conclusion

63. In view of the different methods that Part II, Section 2 of the LOSC permits coastal States to rely upon when determining their baselines, Article 14 provides certainty that a combination of methods may be utilised according to different geographical and maritime circumstances. This is appropriate and reaffirms the significance associated with the declaration of baselines for the identification of internal waters and maritime zones including the territorial sea. However, while Article 14 reaffirms coastal State discretion, the baselines methodology selected by a coastal State must be appropriate and adapted to the particular stretch of coastline under consideration.

V. Straight Baselines and Diplomatic Protests

64. The opposability of the limits of the territorial sea established by straight baselines and that of straight baselines themselves largely depend upon an absence of protest from other States. Thus, a survey of protests are very important for the purposes of assessing state practice concerning straight baselines. In this respect, the First Report indicated as follows:

> 30. For the purposes of this Report it is not possible to provide an exhaustive analysis of all relevant state practice. Nor it is possible to discuss the legal grounds on which States may have predicated their recourse to straight (or closing) baselines, as typically that is not made publicly known. Rather mention will be made of some particular examples of state practice in areas that have been the subject to debate.

The report goes on to indicate:

> 41. Not entirely surprisingly, the number of States which have protested relevant state practice in this regard, in proportion to the number of potentially interested States, is very small.

---

[117] Churchill and Lowe, *The Law of the Sea* 3rd (1999) 32-33.

In this regard, the First Report placed reliance upon Churchill who had written in 2005: "at least eight different States and the EU have protested to one or more baseline claims….".[118]

65. Since the First Report the straight baseline (SBL) claims of 80 States were identified. A detailed search for protests thereof uncovered additional objections as set out Table 1. It lists a total of 82 protests or other forms of objection. It shows that the straight baseline claims of 39 States (almost 50% of the total SBL claims) -- all but Iran being parties to the LOSC -- have been objected to by 21 States and the EU/EC (only two of which – Iran and the US – are not party to the LOSC).

66. The Committee may wish to consider what conclusions and recommendations should be drawn from this new data in preparing its Final Report.

Table 1
List of Publicly Available Protests of or Objections to Straight Baselines (SBL)[119]

1. Protest of **Albania**'s 1976 SBL
   - U.S. note 21 July 1989, 1989-1990 Digest 461, LIS No. 116, Roach & Smith 3rd ed. 92
2. Protest of **Argentina**'s 1966 SBL
   - U.S. aide memoire 2 March 1967, Roach & Smith 3rd ed. 129 & n. 148
3. Protest of **Cameroon** 1962 SBL
   - U.S. note Feb 1963, Roach & Smith 3rd ed. 94-95
4. Protest of **Canada**'s SBL
   - U.S. note of 1 November 1967 re Labrador & Newfoundland, Roach & Smith 3rd ed. 96-97
   - U.S. note of 25 April 1969 re Nova Scotia, Vancouver Island and Queen Charlotte Island, Roach & Smith 3rd ed. 96-97
   - Canada's 1985 Arctic SBL
   - U.S. statements 10 January and 26 February 1986, II Cumulative Digest 1785, Roach & Smith 3rd ed. 111-112
   - UK on behalf of the EC note No. 90/86, 9 July 1986, Roach & Smith 3rd ed. 112
5. Protests of **China**'s 1996 and 1998 straight baseline claims
   - Philippines and Viet Nam notes verbale 17 May and 6 June 1996 objecting to PRC statement of 15 May 1996, LOSB No. 32, at 88 & 91 (1996)

BASELINES UNDER THE INTERNATIONAL LAW OF THE SEA

WORKING SESSION

Monday, 8 August 2016, 2.00pm

Chair: Frederick Abbott (US)

The Chair introduced himself and explained his function before introducing Captain J Ashley Roach, the Chair of the Committee.

Captain J Ashley Roach (US) explained that the Committee was now dealing with State practice in detail because there was not much evidence available about State practice in 2013, at the time of the Washington Conference. That has since changed, and the Committee found it necessary to revisit the topic. Captain Roach continued with a discussion on the different kinds of lines, noting that the 2016 report focused on 'straight baselines' in Art 7 of the United Nations Convention on the Law of the Sea (UNCLOS) and 'archipelagic baselines' in terms of Art 47 of UNCLOS. Captain Roach drew attendees' attention to the observations of the International Court of Justice (ICJ) that the provisions of UNCLOS are to be interpreted restrictively.

Moving on to empirical data, Captain Roach noted that there were 153 coastal and island States, 79 of which had drawn one or more straight baselines. Many of the straight baselines segments did not comply with one or more of the requirements in Article 7 of UNCLOS. The Committee conducted a preliminary study on straight baseline segments in 2013, the report of which (dated 28 December 2015) was available online. Captain Roach said that reason the Committee looked at straight baselines in this way was because, in the 1951 *Fisheries Case*, the ICJ made no mention of length, and geographers had subsequently found that the longest approved segment was 40 nautical miles (nm). Therefore, in trying to work out what State practice was in regards to straight baselines, the Committee needed to identify which segments were longer than 40nm. The Committee discovered that 31 of the 79 States which had used straight baselines had drawn no segments longer than 40nm. In most cases, this was because they are small coastal States. There were, however, 40 States that had drawn one or more segments longer than 40nm. A total of 262 (plus 7 by Taiwan) straight baselines segments greater than 40nm were discovered; the longest being 300.8nm across the Gulf of Sidra. Captain Roach referred attendees to the study, which contained each one of the States' claims and identified the segments by location.

The Committee also looked at the situation in regards to protests. As commented in the 2014 report, there was not much evidence of what States were saying about what other States were doing. Therefore, the Committee went hunting, and found, based on publically available information, that there were 82 protests or other forms of objection. The straight baseline claims of 39 States had been objected to by 21 States and the European Union/European Community. As wording varied in the process of protests, the worry for those involved in the study was that there was no precise system of protests, and that States just objected on one or more grounds.

Another issue was the requirement in Art 16(2) of UNCLOS that charts be deposited by coastal States with the UN Secretary-General showing the straight baselines. Article 16(2) did not apply to normal baselines. Captain Roach drew attendees' attention to a

graphic that depicted that States that had not yet complied with Art 16(2). He also made reference to Art 6, which dealt with reefs.

Captain Roach indicated that provisions of UNCLOS dealing with mouths and rivers (Art 9) would be considered by the Committee in its final report. However, the Committee did look at provisions dealing with bays (Art 10) and ports (Art 11) in its 2016 report. Article 14 of UNCLOS represented a new development by allowing States to use a combination of methods for determining baselines, depending on where they were, which was very useful. The only State that did not allow this was China, whose territorial sea law only allowed for straight baselines. Captain Roach expressed the opinion that this might partially account for why China had so many straight baselines.

Captain Roach then turned to archipelagos. The provision dealing with archipelagos (Art 47) was new to UNCLOS. It only applied to independent mid-ocean archipelagos. There were some very specific rules in Art 47 about what could be done. The rules relating to archipelagos were much more specific in content than those that applied to straight baselines. There was more complete data available in terms of archipelagos, and the Committee came up with the following findings. First, the water to land ratio of 9:1 to 1:1 was met by the vast majority of the 22 archipelagic States surveyed. There were a few exceptions; for example, Fiji and three of the four Seychelles islands needed to be redrawn. In terms of the segment lengths, Art 47 provided that no segment could be longer than 125nm. While Papua New Guinea had drawn one segment that was too long, it had revised its legislation; however, the legislation had not yet been presented to the PNG legislature, and therefore Captain Roach could not make any definitive comments about it.

Captain Roach recalled that, in terms of segment lengths, up to 3% of the number of segments could exceed 100nm, provided that they were less than 125nm. 21 of the 22 archipelagic States complied with this rule. Captain Roach referred attendees to the data set out in the table contained in the December 2015 report, of which an updated version would soon be available. Once again, there was a need for adequate charting; not all archipelagic States complied with the requirement yet but the percentage of States that had complied was higher than that of the States that complied with the charting requirements of straight baselines.

Captain Roach drew some final conclusions from the study done on State practice. First, the precision in the requirements for archipelagic baselines set out in the first two paragraphs of Art 47 of UNCLOS seemed to be responsible for the widespread adherence to those requirements among archipelagic States. This was in total contrast to the lack of adherence under Art 7. States had claimed more sea areas than they would be entitled to under Art 7, especially if one were to apply the ICJ's approach of restrictive interpretation. The table in the 2015 report identified each segment by State and by location. There was consensus that many straight baselines did not comply with Art 7, and that the question was how one could change that, which was the big challenge for the Committee.

The Chair opened the floor for questions and comments, specifically relating to Captain Roach's presentation.

Professor Erik Franckx asked how the Committee would account for the fact that not all States publish protest notes.

Captain Roach responded that, as noted in the current report of the Committee as well as in earlier reports, the study dealt only with publically available protests and acknowledged that not all States made their protests publically available. What was revealing in the study, however, was that there was much more out there than just what the EU and the US had done. A list of the protests was available in the 2016 report, representing the data available to the Committee to date.

Professor Clive Schofield (Australia) referred to Captain Roach's analysis of Art 47 and found that one of the systems or subsystems needed reviewing. There seemed to be two systems. He queried whether each individual subsystem had to comply or whether the systems could be combined. He also queried whether the Committee needed to look at each individual group of archipelagic baselines, or whether it could adopt an overview.

Captain Roach responded that one way to analyse archipelagic baselines is that Art 47 refers to one or more archipelagic baselines. It does not refer to one archipelagic group, therefore they needed to be analysed separately and should not be viewed aggregately.

Mr Danilo Suarez pointed to the recent award in the South China Sea arbitration between the Philippines and China. China had indicated that it would not comply with the award. From a military point of view, the Philippines could not enforce the decision; only America could do so, but they only seemed to be interested in enforcing their freedom of navigation. He asked for Captain Roach's insights on the matter.

Captain Roach emphasised that he could not speak for the current or for the next US administration. He took exception to the statement that America was only interested in protecting their freedom of navigation, which was merely one component. Rather, it was a broader question of the rule of law at sea. From a defence point of view, US interests were affected if there was non-compliance with the rule of law, but the US is not the only State affected by navigational restrictions, all users were. The second part of the question on how to help China take an off ramp was more problematic. China had dug a fairly large hole for itself, and senior political leadership in China were not cognisant of the economic effects of their decision. One can only watch and wait as to how this issue would be revolved. Professor Donald Rothwell would have more to say on this later in the session.

Mr Suarez continued the discussion on the South China Sea arbitration by emphasising that there was a serious concern in that, at a recent summit, ASEAN Member States did not show much sympathy towards the Philippines. In his opinion, the US was the only country that could play a vital role in the coming years to enforce the award.

Captain Roach responded that he had had the privilege of addressing ASEAN ambassadors earlier in the year, and they fully understood what was necessary. What was necessary was constant attention to the issue by all those affected. The US could not act alone. In fact, if they were to act alone, it would not be helpful as it would be seen as confrontation between the US and China. It was necessary to figure out ways to get the senior political leaders in China to see that it was in their military and economic interest to comply with the law of the sea and to uphold rather than tear down the arbitral award. There had been worldwide propaganda by China to undermine the rule of law. The more everyone talked about the issue, it would at some point trickle up to the leaders in China

who make decisions. Captain Roach indicated that people in the know believed that it would take a couple of generations to bring about meaningful change. In the meantime, one could not sit on our hands, as China would take advantage of that.

The Chair informed the audience that there would be a chance to circle back to the issue at a later stage in the session. He introduced Professor Donald Rothwell, Rapporteur, who would be discussing baselines in the South China Sea arbitration.

Professor Donald Rothwell (Australia) started by making two opening remarks. First, the session was structured by way of presentations, which sought to reflect this very dynamic area of law. Secondly, the session was not a panel about the South China Sea, which Professor Rothwell asked attendees to keep that in mind. He would speak on a limited aspect of the South China Sea award that touches on the work of the Committee, which it would have to address in its final report in 2018.

Professor Rothwell briefly summarised the key issues of the award: the status of China's claim based on the 9-dash line, the status of islands, rocks, elevations and reefs, and the environmental impact of China's artificial islandbuilding activities. He then focused on baselines. The Award addressed a number of questions that went to the status of maritime features in drawing territorial baselines. They addressed it differently than, for example, the ICJ had done in the *Territorial and Maritime Dispute* case between Nicaragua and Colombia**,** which was another important decision dealing with this area. The award focused on important questions in respect to the characterisation of critical features that were relevant for baseline determinations, and whether some of the features in the South China Sea could generate archipelagic baselines consistent with Art 47 of UNCLOS.

Professor Rothwell pointed out that some of the other issues considered by the Tribunal included the status of Art 13, which deals with low-tide elevations. The Tribunal held that certain aspects of Art 13 needed to be read with Art 121(1), which dealt with islands. In paragraph 305 of the award, the Tribunal held that a low-tide elevation had to be "evaluated on the basis of its natural condition". Professor Rothwell pointed out that this was relevant in terms of artificial islands. The Tribunal further held in paragraph 305 that "as a matter of law, human modification cannot change the seabed into a low-tide elevation or a low-tide elevation into an island" and that "[a] low-tide elevation will remain a low-tide elevation under the Convention, regardless of the scale of the island or installation built atop it". Therefore, a feature, whether a reef or a high- or low-tide elevation, would retain its previous natural condition before the modification. To that end, the Tribunal said in paragraph 306 that it had reached the conclusions on the best available evidence of the previous status of nowmodified reefs, which in itself raised some interesting procedural issues. In terms of characterisation, the Tribunal was mindful of the *Territorial and Maritime Dispute* case and, to a degree, restated many of the conclusions regarding the characterisation of low-tide elevations that the ICJ reached. However, it went further by clarifying aspects of the characterisation of the status of low-tide elevations. In paragraph 309 of the award, the Tribunal made clear that "low-tide elevations do not form part of the land territory of a State in the legal sense. Rather they form part of the submerged landmass of the State and fall within the legal regimes for the territorial sea or continental shelf" and "low-tide elevations cannot be appropriated, although a coastal State has sovereignty over low-tide elevations which are situated within its territorial sea, since it has sovereignty over the territorial sea itself".

Professor Rothwell was pleased that the Tribunal addressed an issue which corresponded with an earlier phase of the Committee's work, namely high-water datum. This was critical in determining whether some of these low-tide elevations could be such based on the tidal characteristics. In paragraph 311 of the award, the Tribunal stated that it:

> sees nothing in the Convention, and no rule of customary international law, that would mandate that the status of low-tide elevations and high-tide features/islands be determined against any particular high-water datum. Accordingly, the Tribunal considers that States are free under the Convention to claim a high-tide feature or island on the basis of any high-water datum that reasonably corresponds to the ordinary meaning of the term "high tide" in Articles 13 and 121.

The Committee's work between 2008 and 2012 addressed the characteristics of Art 5 and the statement by the Tribunal further clarified and advanced the Committee's understanding of some of these aspects. Importantly, the statement suggested that a coastal State had a certain margin of appreciation as to the high-water datum on which it could rely.

Professor Rothwell then turned to the status of Subi Reef, and whether it fell within the territorial sea of Thitu Island and could accordingly be an Art 13 lowtide elevation. One of the significant issues that the Tribunal had to address was the status of Sandy Cay, and it had been presented with conflicting evidence of the existence of Sandy Cay. At different points in time, it did or did not exist. In paragraph 373, the Tribunal came to the conclusion that the absence of a sand cay at a particular point in time was not conclusive evidence of the absence of a high-tide feature, and accordingly took the view that Subi Reef could fall in the potential territorial sea of Thitu Island.

The tribunal did not look at straight baselines in Art 7 in much detail, but it did consider the connection between Art 7 straight baselines and Art 47 archipelagic baselines. The tribunal directly addressed the question of whether or not there would be the potential of drawing archipelagic baselines around a group of islands, known commonly as the Spratly Islands, in the central part of the South China Sea. The tribunal made an obvious point that the Philippines was an archipelagic State from which certain entitlements flowed. China was not an archipelagic State and accordingly it could not draw archipelagic baselines. In paragraph 574 of the award, there was a firm reaffirmation of the critical criteria discussed by Captain Roach in regards to Art 47. Paragraph 576 of the award was particularly interesting for the work of the Committee, as it directly addressed the issue, raised by Captain Roach, as to whether it was possible to argue that State practice in this area had moved on from the provisions of UNCLOS. As the Rapporteur of the Committee, Professor Rothwell found this part of the award especially helpful as it gave firm confirmation that, even though there had been some variations in State practice in this area, the Tribunal was not convinced that, in 2016, a new customary international law rule had formed that would permit a departure from UNCLOS.

By way of conclusion, Professor Rothwell made the point that the Tribunal's award would be significant for the ongoing work of the Committee. He emphasized that these remarks were just his initial reactions, which he had not yet discussed with the members of the Committee. In summary, there had been some developments in the way the Tribunal interpreted Art 13, which was helpful; the award presented some clear statements in terms of the application of Art 47 and presented statements on customary international law.

The Chair opened the floor for questions.

Professor Cymie Payne (US) asked the panel to comment on paragraph 9 of the Joint Declaration signed by Russia and China that confirmed that it was "of utmost importance that the provisions of this universal treaty [ie, UNCLOS] are applied consistently, in such a manner that does not impair rights and legitimate interests of States Parties and does not compromise the integrity of the legal regime established by the Convention".

Professor Rothwell responded that, as this was not a general session of the law of the sea, and as this intervention did not address the matters discussed in his presentation, he would not comment on it at present.

Professor Christopher Ward (Australia) noted, in response to both Professor Payne's intervention and Professor Rothwell's presentation, that the exhaustive nature of the arbitral tribunal and the depth of its analysis in this technical area of law represented a strong affirmation of the rule of international law of which China would be well advised to take note.

Dr Vasco Becker-Weinberg (Portugal) noted that it was interesting that similar work had been done on State practice from a Chinese perspective, looking at every possible norm on archipelagic baselines to justify their position. It was the mirror image of what the Committee had done. The Tribunal's award had been helpful in setting straight that bad examples did not constitute international customary law.

Professor Rothwell responded that, while he had focused only on a small number of paragraphs of the award, there were some interesting implications, from that aspect of the judgment, for a number of States that sought to draw baselines around independent or offshore archipelagos. It was interesting to consider whether the award took into account the practice of States who had, in the view of the Committee, drawn excessive baselines. He queried whether they now had to go back and reassess their baselines to ensure consistency with Art 47 or whether they could take comfort in that it was existing State practice. While the tribunal said that this was the position of Arts 7 and 47 in 2016, in a few years' time, other States might also take expansive views on this point. The test would be whether States made adjustments or retained their excessive baselines and even whether other States lodged protests against excessive baselines in light of the South China Sea Award.

Dr Becker-Weinberg added that Portugal drew archipelagic baselines in 1985 and the US protested, whereas China took Portugal's baseline as valuable State practice.

Professor Schofield noted that there was a seemingly overt statement by the Tribunal that there could be no archipelagic baselines in the Spratly Islands as it would capture too much water to fulfil the ratio test. Yet it recognized that the Philippines was an archipelagic State. Therefore, it seemed as if the Tribunal was not entirely sure that one could not construct a limited series of archipelagic baselines in the Spratly group to form part of a larger archipelago such as the Philippines, were one to imagine that the sovereignty disputes were resolved. This came back to Professor Schofield's earlier intervention as to whether one could view the whole of the State's archipelagic claims or each individual system.

Professor Rothwell responded that the award was silent on territorial issues but hypothetically Professor Schofield was right that, if the Philippines were to have territorial sovereignty over some of those features, as an archipelagic State, it would be able to explore some of those options. Some caution needed to be exercised as to whether or not an archipelagic State could draw more than one complete set of archipelagic baselines which could have quite varying land to water ratios, but in total have appropriate land to water ratios. One of the important aspects of the award that one needed to bear in mind was how the arbitrators constantly referred back to the intents and objectives of UNCLOS. One also needed to remember the prohibition on abuse of rights in Art 300 of UNCLOS.

Professor Schofield added that it was his understanding that, in some of the Philippines' 2009 laws revising their archipelagic baselines, some of the potential archipelagic systems they considered included portions of the claimed features in the Spratly Islands. In the end, it opted not to include those versions of the archipelagic systems, and restricted it to the main islands.

Captain Roach responded that one of the points that the Committee would discuss in its final report was main islands. There were not a lot of main islands in the Spratly Islands.

Mr Suarez again raised the question of how the US could enforce the South China Sea award.

Professor Donald Rothwell responded that, as this was not a general session on the South China Sea Award, he would decline to comment.

Dr Becker-Weinberg asked whether the Committee would consider cases where drawing baselines would achieve the land water ratio objectively but lack unity.

Captain Roach replied that this formed part of main islands and would be discussed in the final report.

Professor Manuel Almeida Ribeiro (Portugal) asked a question about Art 121(3) of UNCLOS dealing with the regime of islands.

Professor Rothwell declined to answer, noting that Art 121 was not within the scope of the current work.

Professor Franckx asked what the relationship was between State practice and the statements of the arbitral award.

Professor Rothwell responded that this was an important question that would have to be addressed in the Committee's final report. The Committee's 2014 report and Captain Roach's discussion of State practice that had been presented indicated that archipelagic States by and large complied with the provisions of UNCLOS when drawing archipelagic baselines. The interesting aspect was where States, relying on Art 7 as a version of Art 47, tried to draw straight baselines around coastal, offshore or mid-ocean archipelagos that were some distance from the metropolitan State. This was the scenario considered by the Tribunal, which dealt with very small and particular features which were distinct from often larger offshore islands that other mainland States had claimed.

David Letts (Australia) queried whether there was a willingness, capacity or place for States that were not party to UNCLOS (such as the US) to similarly deposit charts on the terms of Art 16 to create some form of consolidated information.

Captain Roach responded that the US information was publically available, so it did not find it necessary to go further than that. Art 16 did not apply to normal baselines, and the US did not use straight baselines as a matter of policy. Accordingly, it really was a non-issue for the US.

David Lett interjected that it was, however, an issue for other States.

Captain Roach acknowledged this, adding that, from what he had heard, there were domestic political reasons for not depositing charts. The UN, through the Division for Ocean Affairs and the Law of the Sea (DOALOS), had been active in reminding States of their obligations of due publicity and deposit under Art 16; it could not, however, force States to do so.

Professor David Freestone (United Kingdom) added that, if a nonparty deposited charts with DOALAS, DOALAS would adopt a handsoff approach and possibly ignore the deposit.

The Chair said that there would be time to circle back to the issue at a later stage before introducing Professor Freestone, who was the Co-Rapporteur of the new ILA Committee on International Law and Sea Level Rise.

Professor Freestone commenced his presentation on the new Committee, which had its first meeting in Washington in 2013. The Committee's mandate, to run from 2014 to 2018, was (1) to study the possible impacts of sea level rise and implications under international law of the partial and complete inundation of State territory, or depopulation thereof, and (2) to develop proposals for the progressive development of international law in relation to the possible loss of all or of parts of State territory and maritime zones dues to sea level rise. The Committee would also look at the human impact in terms of forced migration.

Professor Freestone then moved on to a discussion on the Fifth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC), which considered the main causes of a rise in sea level. In 2007, the IPCC put a modest analysis forward that the seal level would rise up to 75cm by 2100, but a lot of other scientific work projected much higher levels. The post2007 critique said that the Panel was way off, and the International Geographical Union held that the sea level was projected to rise by 5m by 2300. The changes in sea level were also not uniform. The IPCC, in its Fifth Assessment Report, commented that the projections were larger than those in its 2007 Fourth Report because of improved modelling of land-ice contributions. The IPCC now predicted a 1m rise by 2100; this was a conservative estimate with a strong regional pattern. In Greenland, the scientists had been dismayed to find that the ice shelf was melting faster than predicted.

One of the potential impacts of a rising sea level on maritime zones was to move the baseline further up the shore, taking the maritime zones with it. International law recognised the ambulatory nature of baselines. Coastal land might be lost, which led to jurisdictional uncertainty and a loss of resources. In terms of normal baselines under

Art 5 of UNCLOS, the Committee on Sea Level Rise and International Law had taken over the work of the current Committee. Existing law of normal baselines should also be applied to ambulatory baselines. Professor Freestone continued with a discussion on the proposals made by different people to address the issue of sea level rise.

In terms of the issues that the Committee on Sea Level Rise and International Law had to look at for its first report, Professor Freeman noted the Committee did not want to second guess the Baseline Committee as the latter considered *lex lata* while the former's mandate was much more *de lege ferenda* in developing new rules. The new Committee was looking at the advantages of ambulatory or fixed baselines; fixing limits raised the problem that, once fixed, one would have problems with UNCLOS provisions if the baseline moved inland. The Committee would also look at how maritime boundary treaties would be affected by a fundamental change in circumstances, and whether sea level rise was a fundamental change in circumstances.

As a postscript, Professor Freestone noted some recent developments in the area. In July 2015, a number of Polynesian Islands said that they would not move their baselines despite the UNCLOS provisions. In March, the Marshall Islands introduced legislation entitled the *Maritime Zones Declaration Act 2006*, in which it reworded all of its baselines and outer limits, which it said would not be moved once established.

The Chair opened the floor to questions.

Ms Pham Trang asked, with respect to States losing their maritime zones due to sea levels rising, whether they could claim historic title in order to retain their sovereignty and jurisdiction.

Professor Freestone responded that the Committee had not addressed that issue yet, and could therefore not comment. It would be considered in the next report.

Professor Schofield added that the primary, immediate purpose of the Marshall Islands declaration and emerging practice in the Pacific was to establish baselines to delineate limits and limit maritime boundaries with the view to maritime jurisdiction due to surveillance enforcement of fishing. It was, however, also set against the context of sea levels rising and Pacific Oceanscape that overtly said that priority action one was to establish jurisdictional limits but also to change the international law of the sea to secure existing limits.

Professor Freestone noted that the smaller islands of the Pacific were at the cutting edge of this. In Australia, all the baselines had been digitized but there was consensus there that they would not change them.

Clive Schofield added that the Marshall Islands declaration was some 450 pages long and was, in effect, a textualisation of a digital file.

The Chair closed the session as there were no further questions.

FIRST REPORT OF THE COMMITTEE

by Prof. Frederick Abbott and Prof. Brigit Toebes (Part I-IV & VIII),
Ms Ellen 't Hoen LLM (Part IV), Dr Xavier Seuba (Parts V & VII) and
Dr Ruth Atherton, Dr Helène De Pooter and Prof. Gian Luca Burci (Part VI)

I. Introduction

The Global Health Law Committee (GHLC) was established in October 2014. Since that date, the GHLC has actively pursued its mandate toward the progressive development of international law relating to health, including to identify and confirm norms that are relevant to the promotion and protection of public health, and to develop proposals for improving the existing legal and policy framework The GHLC held its first meeting in February 2015 in connection with a substantive program on Global Health Security Challenges that it co-organized in Geneva, and its second meeting in March 2016 in London in connection with the UN Secretary General's High Level Panel on Access to Medicines hearings and dialogue.

In October 2015, the GHLC settled upon four tracks for its short to medium-term work program. These are:

1. Legal issues surrounding access to research materials, including: (a) biological materials, including virus sharing; (b) clinical research surrounding potential outbreaks, e.g., Ebola.
2. Legal issues surrounding access to medicines deemed "essential" by WHO.
3. Legal issues surrounding tensions between trade/investment agreements and global public health, including (but not limited to) IP issues addressed in the tobacco cases,

Canada patent case and data protection cases; the relationship between ICH guidelines and the TBT Agreement, and; the general relationship between international law and innovation.

4. State obligations in the field of health and links with human rights law, including in the fields of non-communicable diseases (including tobacco) and also (progressively) sustainable development (e.g., obligations to assure clean air and water, and to address climate change).

As can be seen from this report, the GHLC has made strong progress in the areas of its work program.

Contrary to, for example, international trade law, international environmental law and international humanitarian law, global health law is not a well-developed field. There is an urgent need for counterbalancing such interests as international trade, industry and commerce against the protection of the health of individuals and populations worldwide. International standard-setting instruments are, increasingly, successfully employed by international organisations, state authorities and civil society organisations to achieve equity in health. For instance the Framework Convention on Tobacco Control (FCTC) has played a key role in advancing tobacco control at the domestic level.[1] In terms of its sources, global health law brings together international standard-setting instruments adopted in the context of the WHO and under human rights law, while health-related legal rules, norms and other (non-binding) standards can also be found in several other branches of international law, including under international humanitarian and environmental laws, and in medical ethics and patients' rights.

The human 'right to the highest attainable standard of health' (the 'right to health') features as a key standard in global health law, as it places the emphasis on the protection of individual health worldwide, and because it emphasises the need to strive for equity in health. The right to health is acknowledged in, *inter alia*, Article 12 of the UN International Covenant on Economic, Social and Cultural Rights (the ICESCR).[2] In 2000, the Committee on Economic, Social and Cultural Rights (CESCR) adopted General Comment 14, an explanatory document to the right to health in Article 12 of the ICESCR.[3] Importantly, General Comment 14 recognises that the right to health is not a right to be healthy, but rather a broad human right extending not only to access to healthcare services but also to the underlying determinants of health, including an access to safe and potable water and adequate sanitation, healthy occupational and environmental conditions, and access to health-related education and information.[4] A

[1] Adopted by the World Health Assembly on 21 May 2003, and entered into force on 27 February 2005.

[2] Other right to health provisions can be found, *inter alia,* in Article 12 of the Convention on the Elimination of all forms of Discrimination against Women (CEDAW, 1979) and Article 24 of the Convention of the Rights of the Child (CRC, 1989) and Article 25 Convention on the Rights of Persons with Disabilities (CRPD, 2006).

[3] Committee on Economic, Social and Cultural Rights, *The Right to the Highest Attainable Standard of Health*, UN General Comment No 14 (2000), UN Doc E/C12/200/4 (11 August 2000). While this document is not legally binding and can thus be characterised as a 'soft law' instrument, it is considered authoritative by many scholars and practitioners from the field

[4] General Comment 14 *supra* note 3.

further important component of General Comment 14 concerns the identification of a set of guiding principles that apply with respect to all health-related services: States are to guarantee the availability, accessibility, acceptability and quality of health facilities (the so-called 'AAAQ').[5] [6] Further, General Comment 14 defines a set of legal state obligations to 'respect, protect and fulfil' human rights.[7] Lastly, General Comment 14 defines a set of legal core obligations, minimum essential levels of health services which States have to guarantee 'at the very least'.[8] These principles and guidelines inspire many of the topics addressed by this Committee, including the topics addressed in this report.

II. Global Health Security Challenges: towards strengthening global governance

On February 19, 2015, a group of experts in law, public health, security and medicines, met in Geneva under the auspices of the GHLC and the Global Health Program of the Graduate Institute|Geneva. The group assembled to discuss the global response to the Ebola outbreak of 2014-2015 in West Africa, and the work that needs to be done in order to improve response to pandemic disease threats. Members of the group were associated with multilateral organizations, academic institutions and nongovernmental organizations (including funders), including those that participated in the response. The meeting was organized as an open-ended sharing of ideas. The participants were acting in their individual capacities, and not as representatives of organizations. This summary is a synthesis of the discussion, and intentionally does not identify individual participants and their contributions.

Several important themes emerged from the day-long meeting.

First, there was a general consensus that the single most effective mechanism to improve prevention of and response to pandemic disease is the strengthening of national health systems, and despite recognition of this by the international community, inadequate systematic attention is being directed to this area. Robust public health systems are needed for the diagnosis and detection of disease outbreaks (i.e. surveillance), and for the implementation of measures in response. The building up of national capacity is called for by the International Health Regulation (IHR), but most countries have not implemented the IHR requirements.

Donor governments appear to have priorities other than building up national health infrastructure. The agencies in donor governments responsible for allocating funds are often economic development agencies that do not see a short-term benefit from investments in public health.

The rules governing international procurement organizations may allow flexibility for using a percentage of funding to build up local capacity, but such funding is not sufficient to materially address the gaps. Moreover, the problem of health system capacity is also a matter of training the necessary personnel, and this may be as difficult as finding the funding for such an endeavor.

---

[5] Ibid.

[6] Ibid. Accessibility has four overlapping dimensions: non-discrimination, physical accessibility, economic accessibility (affordability) and information accessibility.

[7] Ibid.

[8] Ibid. These essential service also include the right to essential medicines.

Insufficient attention is paid to encouraging private sector support and investment in building up national health systems in developing countries. Breakdowns in health systems may have significant adverse consequences for enterprise interests, and investments in preventing such breakdowns should be encouraged as prudent business planning.

The question was raised whether a human-rights based response to pandemics and other global health security threats may be useful.

As a consequence of weak national health systems in fragile countries, when urgent circumstances have subsided the transition from donor/international organization pandemic response to the national and local government control can introduce elements of instability. In some cases, dangerous public order situations have arisen.

Some expressed the view that the Ebola crisis may provide impetus for directing resources towards building up national health system capacity, but that this momentum will dissipate as it typically does following an immediate crisis.

Second, there are a number of important issues to address in relation to vaccines, treatments and diagnostics necessary to prevent and control pandemic disease. The potential for outbreak appears to be increasing as pathogens are more frequently jumping the animal to human barrier.

It is important to accelerate the potential development of new vaccines and treatments, and this includes streamlining clinical testing and regulatory evaluation processes. But, in all cases, a baseline of health security must be followed as experience indicates that prospective treatments may be more dangerous than even urgent circumstances would warrant. Vaccines and treatments to address pandemics are often developed with substantial government funding, and there is some question whether high prices for the resulting products are justified. While acknowledging that producers may have opportunity costs for manufacturing facilities, it nevertheless should be possible to arrange purchases on a cost plus basis. Determining cost can be difficult, and establishing advance purchase commitment pricing similarly can be difficult, but these are not insurmountable obstacles. Recognizing that there are multiple mechanisms for funding and development, it is important that vaccines and treatments be priced in a way that permits their distribution to those requiring them.

Point-of-care diagnostics are a very important element of pandemic response, and more attention should be paid to development and distribution of such diagnostics.

Cooperation among national and regional drug regulators has been good, and there does not appear to be substantial need for a new organization or legal mechanism to make that cooperation work. WHO, in particular, is suffering from a lack of adequate financial support for its drug regulatory unit, and faces a shortfall of personnel. This is a serious immediate concern.

Lack of transparency by developers of vaccines and treatments poses problems for R&D efforts, as well as regulators. Some private-sector companies have begun providing more information. National security interests may be playing a role in the lack of transparency, and it is difficult to address this aspect.

There was substantial attention paid to the potential role of convalescent blood plasma (i.e. from patients who had recovered from disease) which appeared to be very promising

in the treatment of Ebola. Convalescent blood has an important advantage in not requiring regulatory approval (or clinical testing) because virtually all blood donors have recovered from some diseases, and use of blood and plasma from such donors is routine. With respect to outbreak of almost any pathogen, convalescent blood may be a logical rapid choice for treatment pending other developments.

The timeline between identification of a new pathogen outbreak and development of a vaccine or treatment needs to be accelerated. While substantial advances have been made in modeling and use of pre-existing platforms, there will still remain a period during which effective treatments are not available.

Drugs, vaccines and diagnostics to address pandemic disease share characteristics with those for "neglected diseases", but with the distinction of being needed to prevent outbreaks in higher income countries. Therefore, funding is made available by high income countries and their enterprises to address pandemics. However, because of the absence of the typical demand pull for treatments, this is an area in which alternative models of R&D may be usefully explored. If such alternative models can be developed and implemented, they may show the way toward new models for more conventional infectious and noncommunicable diseases.

Third, there was an evident lack of coordinated response to the Ebola outbreak. Subsequently, the role of WHO as lead for health emergency response has been confirmed. But, it is worrisome that governments are not inclined to provide significant financial support to WHO consistent with the urgency evidenced by the Ebola Resolution. There is a strong current of thought that major prospective funding governments are not anxious to relinquish authority to WHO in addressing crises.

It was unusual for a nongovernmental organization (MSF) to request military support in terms of personnel and logistics to confront the outbreak in West Africa. However, there was not enough human capacity available to confront the situation, including because a number of the first responders had died from the disease. Money was not the problem. It was human resources.

WHO is not organized to directly act as an emergency responder. It does not have the personnel or resources for that function. Moreover, it is doubtful that member states will be inclined to pay personnel to await a pandemic outbreak.

Communication with the public is an important part of pandemic response. WHO has been paying considerable attention to this area. There is a difficult line between providing adequate warning and triggering potentially excessive reaction. Communications must be very rapid, clear, and accurate, particularly because the public looks to WHO as an authoritative source, and alternative sources may provide unreliable information. The wide adoption of social media communication has heightened the difficulty of messaging during a pandemic outbreak.

The response of the UN Security Council was also unusual, though not necessarily unwelcome because it elevated the profile of pandemic response. That said, the Security Council did not coordinate with WHO, and the establishment of UNMEER effectively bypassed a number of existing UN and other agencies already established to address international emergencies, including of a humanitarian nature. In this regard, the response to the Ebola outbreak appeared to be disorganized and lacking in coordination.

There was largely a consensus against the need for establishing a new international organization to address potential pandemic outbreak. Already there are a proliferation of organizations, and adding another bureaucracy may not improve matters. There are UN agencies mandated to address humanitarian crises, in addition to WHO, and a number of nongovernmental organizations with substantial capacity in this area. What is apparently needed, however, is an improved mechanism for coordination of response. Also, while it is not unusual for military capacity to be used to provide logistical support in response to international emergencies, there should be an understanding about how military forces are used, and how their role differs in relation to civil police forces and customs/border authorities.

A core problem at WHO is the lack of "untied" donor funding. Government donors do not appear to be particularly interested in funding pandemic response. NGOs are acting as first and primary responders, and are also providing large-scale funding to WHO. NGO funders, as government funders, are playing a role in determining the direction of WHO programs. The area of pandemic response cannot be realistically addressed without taking into account the role of non-state actors.

III. GHLC Participation in the UNLP High Level Panel Process

In November 2015, the UN Secretary General appointed a High Level Panel on Access to Medicines (HLP) with a mandate "to review and assess proposals and recommend solutions for remedying the policy incoherence between the justifiable rights of inventors, international human rights law, trade rules and public health in the context of health technologies." The HLP was called upon to deliver a report to the Secretary General by June 2016. In December 2015, the HLP issued a call for contributions to the global public, with such contributions to address the subject matter of its mandate and, in particular, that "promote research, development, innovation and increase access to medicines, vaccines, diagnostics and related health technologies to improve the health and wellbeing of all, as envisaged by Sustainable Development Goal 3, and the 2030 Agenda for Sustainable Development more broadly." The call for contributions contemplated an accelerated time-line, with contributions due for submission in February, a date that was thereafter extended into March. Recognizing a unique opportunity to make a contribution to the development of international law, the GHLC decided that its members might prepare contributions in response to the HLP's call. Two contributions were submitted to the HLP. As a consequence of the relatively short time-line for preparing and submitting the contributions, the GHLC indicated on those contributions that they did not necessarily reflect the views of all of the Committee members, and the contributions included identification of their specific authors.[9] Both contributions were selected for presentation at the hearing of the HLP in London on March 9, 2016, which preceded the GHLC meeting held in London on March 11.

[9] Stating: "The perspectives in the submission made to the UNHLP may not necessarily reflect the totality of views of each member of the GHLC. It is intended to further public dialogue and the development of needed options. Peter Beyer, as current staff at WHO, has recused himself from this submission."

At the hearings before the HLP and its Expert Advisory Group (EAG)[10] in London, GHLC Rapporteurs Ellen 't Hoen and Xavier Seuba presented the contributions and responded to questions. Each of the contributions was well received by the hearing panel.

The following two sections of this report (IV and V) originated in the context of development of contributions to the HLP. Both address subject matter that had earlier been identified by the GHLC as part of its work program.

IV. Legal Issues Surrounding Access to Essential Medicines[11,12]

This section offers a summary of a GHLC contribution to the HLP, incorporating several proposals regarding access to essential medicines, as amended after the presentation and discussions of the proposals at the hearing of the UN High Level Panel held on 9-10 March in London. The amendments reflect the support of several stakeholders to expand the mandate of the Medicines Patent Pool to include all essential medicines. Substantial additional work is required to develop the proposals in detail. The GHLC proposes to do this after the publication of the report by the UNHLP.

The WHO Essential Medicines Concept and the challenges of ensuring access to new Essential Medicines as a component of the right to health in a post TRIPS era

The right to essential medicines is a key component of the right to health as guaranteed under international human rights law. The most important treaty is the International Covenant on Economic, Social and Cultural Rights (ICESCR, 1966) enshrining the right to health in Article 12. This provision is further interpreted in the non-binding yet authoritative General Comment 14 (2000), which defines the State's legal obligation to provide essential medicines. Other important right to health provisions are contained in the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), the Convention on the Rights of the Child (CRC and General Comment 15), and the Convention on Persons with Disabilities (CPD). The WHO Constitution states in its preambular declaration of basic principles "The enjoyment of the highest attainable standard of health is one of the fundamental rights of every human being without distinction of race, religion, political belief, economic or social condition."

According to the WHO, essential medicines are: '[T] hose that satisfy the priority health care needs of the population…. selected with due regard to public health relevance, evidence on efficacy and safety, and comparative cost-effectiveness… [and] intended to be available within the context of functioning health systems at all times in adequate amounts, in the appropriate dosage forms, with assured quality and adequate information, and at a price the individual and the community can afford'.[13] (The term Essential Medicines here refers to medicines included in the WHO Model List of Essential Medicines and national Essential Medicines List.)

---

[10] Prof. Abbott, a member of the EAG, also disclosed his role as co-chair of the GHLC.

[11] Report based on the submission to the UN High Level Panel on Access to Medicines (UNHLP) prepared by Ellen 't Hoen LLM, Prof dr Brigit Toebes, Katrina Perehudoff MSc, LLM, and Prof Frederick M Abbott available here: http://www.unsgaccessmeds.org/inbox/2016/2/22/contributionglobal-health-law-committee-of-the-international-law-association.

[12] Dr. Ruth Atherton has recused herself from this portion of the submission.

The WHO published the first Essential Medicines List (EML) in 1977 and has updated the list every two years. The WHO EML guides countries in the selection and provision of essential medicines. Countries are encouraged to develop their own EML and to implement policies to ensure access to these medicines. Today, more than 150 countries have an EML.[14]

Access to essential medicines is a key component of the fulfilment of the human right to health. A study of 186 national constitutions shows that 135 (73%) include provisions on health or the right to health. Some constitutions specifically mention access to medicines.[15] The SDGs include achieving Universal Health Coverage (UHC) and emphasise access to essential medicines and vaccines for all.[16]

Essential medicines should be available, accessible, acceptable and of assured quality.[17] Essential medicines policies have traditionally been rooted in policies to encourage the availability of generic medicines. Countries have sought to keep the prices of essential medicines low by excluding them from patentability. The Andean Community, in 1991, adopted a decision providing that "inventions related to pharmaceutical products included in the List of Essential Drugs of the WHO" shall not be patentable.[18]. India excluded medicines from patentability until 2005.[19] This encouraged the development of a generic pharmaceutical industry that has served as the 'pharmacy of the developing world'.[20] When the Uruguay Round of trade negotiations was launched in 1986, 49 of the 98 parties to the Paris Convention excluded pharmaceutical products from patent protection.[21] Countries varied in the periods of protection granted and/or set out conditions that restricted patent holders' rights.[22]

Adoption of the WTO Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) in 1994 diminished the legal space through which the availability of generic medicines might be assured. TRIPS set out minimum standards for the protection

of intellectual property rights. Members of the WTO may no longer exclude entire fields of technology, such as medicines, from patentability,[23] and a minimum 20-year patent term is obligatory.[24]

The 19th EML edition (2015) contains several important medicines including for the treatment of cancer, tuberculosis (TB) and hepatitis C (HCV) that are widely patented and highly priced.[25]. The high prices of the new essential medicines illustrate the challenges to access in the post-TRIPS era.[26] When WHO labels a medicine as essential governments must act to ensure availability.

Yet, mandatory patenting of new essential medicines has entrenched price-setting power within the commercial industry, reducing the effective authority of governments. Monopoly pricing routinely precludes wide access. There is an embedded conflict between government obligations under human rights law and obligations under IP law.

Political coherence of States' obligations under international intellectual property treaties and obligations to ensure the human right to health.

The introduction of TRIPS coincided with the emergence of the HIV/AIDS pandemic, which fuelled a global campaign for access to medicines.[27]

The global mobilization around HIV focussed on a number of flexibilities contained in TRIPS to bring down the price of medicines. These flexibilities include compulsory licensing (CL), parallel importation, delay and/or non-enforcement of medicines patenting and regulatory data protection by least developed countries, defining patentability criteria to reward meaningful innovation and prevent 'ever-greening' of patents, and implementing exceptions to patent exclusivity.

In 2001 the WTO adopted the Doha Declaration on TRIPS and Public Health expressly acknowledging these flexibilities and making clear that IP protection must not interfere with the protection of public health[28] *[16]*. Paragraph 4 reads: "*We agree that the TRIPS Agreement does not and should not prevent Members from taking measures to protect public health. Accordingly, while reiterating our commitment to the TRIPS Agreement, we affirm that the Agreement can and should be interpreted and implemented in a manner supportive of WTO Members' right to protect public health and, in particular, to promote access to medicines for all*."

[28] Declaration on the TRIPS Agreement and Public Health. World Trade Organization. WT/MIN(01)/DEC/2. 20 November 2001.

Consistent with the Doha Declaration, developing countries that had ARV patents have widely used TRIPS flexibilities to procure generic ARVs, mostly from India where these products were not patented. In 2010 the Medicines Patent Pool was created to ensure that generic versions of new ARVs continue to be available. Today, first line ARV regimens are available from generic suppliers for US$ 95 – 158,[29] a steep decrease from US$ 10.000 – 15.000 a decade and a half ago. It is estimated that 80% of the people receiving HIV treatment access generic prequalified ARVs. This progress is the result of unprecedented global mobilisation and the absence of medicines product patents in India until 2005.

The use of flexibilities for non-HIV products seems to be more difficult and politically more sensitive. For example when India issued a CL for a cancer medicine it provoked an out-of-cycle review by the US Trade Representative.[30] The MPP has recently expanded its mandate to include HCV and TB, but challenges remain for countries outside the scope of the MPP agreements. For other new essential medicines such regularized access strategies are lacking.

TRIPS-plus requirements (i.e. standards of IP protection higher than those mandated by TRIPS) in regional and bilateral trade agreements roll back much of the positive momentum represented by the Doha Declaration.[31] Investor to State Dispute Settlement (ISDS) mechanisms, often contained in such agreements, are being used by the pharmaceutical industry to contest decisions by national patent offices and courts.[32]

The trend in international norm setting for patents reflects the IP agenda of corporations that seek expansion of their monopoly positions in the market through patents and other market exclusivity mechanism. For example: test data protection rules that prevent the marketing authorisation of generic and biosimilar medicines by a medicines regulatory agency for a certain period of time or marketing exclusivity granted under orphan drug laws.

The progress in access to ARVs has been the result of a unique and unprecedented global mobilisation. Other diseases have not sparked responses at the same scale, which raises the question of how to ensure access to new treatments for hepatitis, tuberculosis (TB), cancer, diabetes and other non-communicable diseases in the face of expanded patent and

[31] Sell, Susan K. "TRIPS-plus free trade agreements and access to medicines." *Liverpool law review* 28.1 (2007): 41-75. Preferential trade agreements (PTAs) such as the signed but not yet ratified TPP typically contain reference to the Doha Declaration and its paragraph 4 formula regarding non-interference with measures to protect public health, but do not specifically address how conflicts between newly-negotiated and tighter restrictions on use of pharmaceutical and health technologies, and the Doha principles, will be resolved. There are no clearly defined mechanisms for that, and conflicts are inevitable. Future work of the GHLC may include examination of how references to the Doha Declaration in PTAs can most effectively function in addressing TRIPS-plus requirements.

exclusivity rights. Affordable essential medicines are crucial to the success of UHC, an important target under the SDGs.

The human right to access to essential medicines – who is responsible for the fulfilment of this right?

Obligations of States parties

States are the primary duty holders under the international human rights treaties. Based on Article 12 ICESCR, they are under a legal obligation to take measures necessary for the prevention, treatment and control of diseases and for creating conditions assuring access to medical services.[33] General Comment 14 explains that States should ensure that medical services, including essential medicines, are available, accessible, acceptable and of good quality ('AAAQ').[34] It identifies access to essential medicines as a legal core obligation of the right to health[35]. According to General Comment 14, the legal core obligation to provide essential medicines is 'non-derogable', which means that non-compliance would result in a *prima facie* violation of the ICESCR.[36] They are also under a legal obligation to ensure that the pharmaceutical industry does not limit people's access to essential medicines (State's 'obligation to protect').[37]

Obligations of the international community of States

States and the international community of States at large are under an obligation to facilitate access to essential medicines in other countries and to provide the necessary aid when required.[38] They are to assist developing countries in realizing their core obligation to provide access to essential medicines to their population.[39] States should prevent third parties, including the pharmaceutical industry, from violating the right to health in other countries.[40] They should ensure that their actions as members of international organizations take due account of the right to health.[41]

Responsibilities of the pharmaceutical industry

The preamble to the Universal Declaration of Human Rights calls on 'every individual and every organ of society' to promote and respect human rights. Similarly General Comment 14 recognizes that the private business sector has responsibilities under the right to health.[42] In line with this it is widely recognized that the pharmaceutical industry carries responsibilities under the right to health.[43] Based on the 'Ruggie Principles' (2008), endorsed by the Human Rights Council in 2011, pharmaceutical companies have

the corporate responsibility to respect human rights. This means that they should avoid infringing on the human rights of others and should address the adverse human rights impacts of the activities in which they – or their business relationships – are involved.[44]

Enforcing responsibilities to the human right to health

The tension between IP and human rights is perpetuated by the differences in how these two frameworks are enforced. IP rights enjoy binding enforcement mechanisms at the international level through the WTO Dispute Settlement Mechanism and through ISDS. While both IP and human rights standards are legally enforceable and binding on State parties, the authority of human rights norms is not often recognised within the IP framework. Although WTO dispute settlement no longer insists on a self-contained regime approach, human rights have yet to play a material role. On the other hand, States are held accountable to human rights norms in several authoritative, albeit often non-binding, fora (i.e. CESCR).

Access to medicines as part of the human right to health has been increasingly enforced before domestic courts, with one of the most prominent cases filed by the Treatment Access Campaign seeking access to ARVs in South Africa.[45] Domestic enforcement is highly contingent on a functional national judiciary and patients' own access to justice – both of which may be lacking in countries where access urgently needs to be scaled up. In successful cases where patients cannot afford their medicines, the courts often shift the financial burden from the patient to the State, which must pay for expensive, sometimes patented, medicines, rather than address the root causes of high prices. For example in Brazil, where unplanned government spending on court-mandated medicines grew by 11 times over 2 years, reaching US$47,8 million in 2009.[46] In these circumstances, achieving UHC and health system sustainability becomes a major concern. These shortcomings show that a more equitable solution is needed to address the core issue of how health systems can provide high-priced, essential medicines rather than ease only the symptom of patient affordability through the courts.

A global public policy response that rebalances obligations under human rights law with obligations under IP law is needed to address patent challenges to access to new essential medicines.

Proposals to realign obligations under human rights treaties and IP treaties.

Access to essential medicines is a key component of the right to health. Essential medicines should be available "at a price the individual and the community can afford."[47] The patent status of an essential medicine can be an impediment to achieving an affordable price and to a government's obligation to fulfil its population's right to essential med-

icines. This is the case when the patent holder refuses cooperation through equitable pricing or licensing of the relevant patents.

The GHLC made the following proposals aimed at reconciling access to essential medicines under the right to health and patent rights for consideration by the High-Level Panel. The proposals should be seen in the context of proposals for reform of the global pharmaceutical R&D framework to ensure financing for R&D while maintaining prices within reach of the people and communities that need access to the innovations.

Establish an Essential Medicines Patent Pool (EMPP) supported by the UN
The EMPP could be modelled after the MPP and hosted by the MPP and pursue public health focused licence terms and conditions.[48] [49] The unmet need for treatments for both communicable and non-communicable diseases justifies the application of the patent pool model beyond only a few infectious diseases.

Companies should license their patents related to essential medicines to the EMPP, which would align with their responsibility to promote and protect human rights.

Both voluntary licensing and CL (Proposal 2) through an EMPP should be coupled with a tiered royalty system to remunerate the patent holder and contribute to R&D expenditure at levels proportionate to GDP. The WHO and UNDP have provided guidelines for the remuneration of non-voluntary use of medical technologies that could be used or further adapted for that purpose.[50]

A patent owner's refusal to license an essential medicine to the EMPP would satisfy the CL grantee's requirement under article 31 of TRIPS to have made efforts to obtain authorization from the right holder on reasonable commercial terms and conditions, recognizing that there is no prior negotiation requirement in cases of national emergency, extreme urgency or public non-commercial use.

The right of states to exempt essential medicines from patenting should be authoritatively recognized by the WTO (Proposal 3), including taking into account obstacles that could arise in the implementation of the EMPP. This would assure that the priority needs of individuals, in accordance with basic human rights principles, are given first priority among interests.

National governments should establish effectively automatic non-voluntary licensing of patents related to medicines on the WHO EML or their national EML
The UN and its specialised agencies in collaboration with the WTO should develop guidance for countries including model legislation to implement the effectively automatic provision of CL for essential medicines. This effectively automatic non-voluntary system should be implemented immediately and should be integrated with the EMPP when the latter is established.

Compulsory licensing of patents related to essential medicines is possible under TRIPS. The Doha Declaration specifies: "Each Member has the right to grant compulsory licences

[48] For details see: www.medicinespatentpool.org . Accessed February 2016.

[50] http://www.who.int/hiv/amds/WHOTCM2005.1_OMS.pdf . Accessed February 2016.

and the freedom to determine the grounds upon which such licences are granted." While Article 31 (a) of the TRIPS Agreement requires that CLs should be considered on their individual merits, a legal mechanism meeting that requirement may employ identification as an essential medicine as the means through which the individual merits of a licence are determined.[51] [52] Export of the predominant part of essential medicines produced under such a CL should be understood to fall within the August 30 2003 'waiver'/pending amendment inserting article TRIPS 31*bis*, satisfying the requirement for authorization of export of medicines produced under a CL.

Authorize exemption of essential medicines from patenting

The WTO Ministerial Conference should provide an authoritative interpretation of articles 27 and 30 of TRIPS to allow Members to exclude essential medicines from patentability. The UN General Assembly should adopt a resolution urging the WTO to take this action.

The priority needs of individuals for access to essential medicines should take precedence over commercial interests, and should be facilitated. The recommended authoritative interpretation would demonstrate unqualified recognition by the international community of the priority of human rights over commercial interests.

Conclusion

Impact on policy coherence and advancing human rights

All three proposals will increase policy coherence by strengthening the human rights aspects of access to medicines and by providing effective remedies to patent barriers to generic low-priced essential medicines.

Impact on public health

The impact on public health is expected to be significant. High prices are a serious impediment for providing new essential medicines as is evidenced by the global rationing of new antivirals for the treatment of HCV, challenges of access to new ARVs in countries excluded from voluntary licence agreements and the lack of cancer treatment. While affordability is only one aspect of ensuring access to medicines, lack of affordability is often the single most important barrier.

V. The Framework Convention on Pharmaceutical Innovation[53,54]

The GHLC submitted to the HLP a proposal for the adoption of a Framework Convention on Pharmaceutical Innovation, followed by optional protocols touching upon intellectual property management, funding for innovation, regulatory aspects of pharmaceutical approval processes, and international cooperation in science and technology.

The changing landscape for pharmaceutical innovation

Innovation policies, processes and structures must be adjusted to respond to technological and social changes taking place in a rapidly evolving global society. The linear innovation model has been replaced by a more complex framework, where many actors intervene at several different stages of the innovation chain. Scientific and technological advances, pressing social needs, increased competition, and the ever-evolving role of the state, have prompted the emergence of innovation models pulling together competences and talents of very diverse stakeholders. Innovation has become highly cumulative, and frequently requires collaboration in open, inclusive, and enabling environments. As such, innovation reaches unprecedented levels of sophistication. However, the needs of large segments of the population remain unmet and the overall sustainability of the pharmaceutical innovation system is at stake.

Pharmaceutical innovation refers to the introduction of new products and processes that create value for health. While innovation is difficult to measure, this definition is a useful starting point. Presently, networks of innovators, often of a global nature, have recourse to a wide range of legal and managerial tools that integrate the innovation toolbox. Such a toolbox exists and is administered in the context of specific policy, economic, legal, regulatory, and cultural settings, both of national and international scope. Indeed, both "proximal" (or downstream) and "distal" (or upstream) determinants of health, including health innovation, may be conditioned by international treaties.[55]

Tools and stakeholders relevant to innovation give a sense of the magnitude of the challenge. Numerous tools have been deployed to promote pharmaceutical innovation, mention commonly being made to public funding, intellectual property, regulatory processes, availability of venture capital, ownership of innovation 'platforms' and 'infrastructure', science and engineering education, technology transfer, competition, prizes, 'open' strategies, and liability rules.[56] On the other hand, the range of actors in the production of innovative goods mirrors that of stakeholders involved in the policy aspects of innovation. International organizations, states, companies, and researchers pursue complementary goals, including the provision of public goods, the maximization of social welfare, the enhancement of firms' competitiveness, and the advancement of science. The promotion of policy options that strengthen interaction and complementarity between those tools and stakeholders is crucial both at the national and international levels.

Framework Convention

Innovation in the area of health is produced and governed by a combination of national and international policies and regulations in a wide array of areas, and spans across several legal regimes, notably international health law, human rights law, and international economic law.

The model of a framework convention followed by protocols is often pursued in contexts of technical complexity and uncertainty. The framework convention is in fact an umbrella

[55] D. W. Bettcher, *et al.,* "Global trade and health: key linkages and future challenges", *Bull World Health Organ*. 2000; 78(4): 521–534.

[56] S. M. Benjamin, A. K. Rai, 'Fixing Innovation Policy: A Structural Perspective', *The George Washington Law Review,* vol. 77, 2008, p. 2.

treaty that enshrines core values and fundamental principles, facilitating initial consensus on a number of central points while leaving technically complex aspects for additional protocols.

A core element of the Framework Convention on Pharmaceutical Innovation would be the portrayal of pharmaceutical innovation as a common interest of mankind. It would also identify core principles, relevant stakeholders, and the areas of relevance to pharmaceutical innovation where further normative action is required. Specific and complex topics relating to intellectual property management, regulatory aspects of pharmaceutical approval processes, funding, and international cooperation in science and technology, would be approached independently in additional protocols.

Previous proposals to set up a treaty on pharmaceutical innovation have been of varying scope and have targeted a wide array of topics, including clinical trials, medical ethics, transparency, open innovation, funding for research, and international cooperation on science and technology.[57] Global common values and objectives cut across these proposals and the proposed Framework Convention on Pharmaceutical Innovation.

The proposed treaty would be a public health and human rights-based global instrument. First, it would recognize that innovation in the area of pharmaceuticals is a common interest of mankind. Second, the right of everyone to the enjoyment of the highest attainable standard of physical and mental health[58] provides a useful legal basis and analytical framework to address practices, regulations, and policies with an impact on health, including pharmaceutical innovation. Pursuant to this right, its interrelated and essential elements' and the legal obligations resulting from it, states have the obligation to cooperate –including by means of normative action– and to act locally to enhance meaningful and accessible health innovation to prevent, treat and control epidemic and endemic diseases.

Protocol on intellectual property management

Intellectual property is a tool to stimulate innovation provided that it is finely combined with social norms, government intervention, and competition.[59] Fulfillment of the instrumental purpose of the intellectual property system depends on its actual design and management of intellectual property assets. Some key elements should be included in the Protocol on intellectual property management.

[57] See, for all, WHO, *Global Strategy and Plan of Action on Public Health, Innovation and Intellectual Property*, 2011, 28 (2.3) (c); WHO, R*esearch and Development to Meet Health Needs in Developing Countries: Strengthening Global Financing and Coordination, Report of the Consultative Expert Working Group on Research and Development: Financing and Coordination*, 2012.

[58] Enshrined in Article 12 of the International Covenant on Economic, Social and Cultural Rights, Dec. 16, 1966, 993 U.N.T.S. 3; and elaborated further in Committee on Economic, Social and Cultural Rights*, General Comment nº 14, The Right to the highest attainable standard of health*, 11/08/2000, E/C.12/2000/4.

[59] WIPO, *World Intellectual Property Report – Breakthrough Innovation and Economic Growth*, Geneva: WIPO, 2015, p. 14.

First, patent statutes have commonly adopted broad language with respect to patentability. This room to maneuver needs to be preserved, since it is ultimately related to innovation output, which is both product and country-contextual. In this regard, the Framework convention would explicitly acknowledge such freedom.

Next, a reminder of the flexibility existing with respect to patent post-grant measures of relevance to innovation would be also meaningful. In the Framework Convention these references may be broad and merely quote the Doha Declaration on the TRIPS Agreement and Public Health, whereas more detail could be provided in the proposed protocol on intellectual property management. In this same context, patent approval processes may also be enriched by giving special status to patents relating to priority health needs.

Third, collaborative innovation models, based on cooperation to foster the development of knowledge, rely heavily on intellectual property management and balancing of stakeholder incentives. In this sense, new approaches to intellectual property sharing and management are currently instrumental to promote efficiency and cooperation. Successful international models include the Medicines Patent Pool, which could be supplemented by key principles to adjust intellectual property management to contemporary values and needs, in particular transparency with respect to patent status and licensing conditions.

Protocol on pharmaceutical innovation financing

The proposals for financing innovation, in particular the identification of a sustainable source of funding, put forward in 2012 by the Consultative Expert Working Group on Research and Development could be the starting point for the 'financing protocol' of the Framework Convention on Pharmaceutical Innovation. They included discussion on a 'governmental agreement to contribute to the global cost of R&D, considering each nation's level of development, size of economy and capacity to pay' and delinkage between the costs of innovation and the price of pharmaceuticals, a key concept bridging access and innovation. Whether the funds collected would be devoted to prizes, grants or directly publicly-funded research should be addressed in the protocol.[60]

Protocol on administrative and technical measures

Medicines' regulatory agencies and entities responsible for financing drugs play a relevant role in innovation policies. Their specificities and topics of regulation (technical standards, medicines purchasing) deserve independent attention. On the one hand, there are policy, governance, and normative aspects relating to international quality, safety, and efficacy of medicines that need to be addressed. This is particularly the case of the inclusiveness of international standard-setting processes and the way certain standards impact the development of new drugs. On the other hand, a range of instruments and measures normally implemented at the national level could gain additional recognition in an international treaty. These instruments and measures include procurement agreements, advanced market commitments, conditions of access to government funded research, priority review vouchers, and free access to test data information.

[60] Evidence shows, however, that direct subsidization may be the most effective response to inadequate innovation incentives and costly adaptation. K. Maskus, *Research and Development Subsidies: A Need for WTO Disciplines?,* E15Initiative. Geneva: ICTSD&WEF, 2015.

Protocol on science and technology cooperation

International scientific cooperation is key to fulfill the potential of pharmaceutical research. Proposals on the adoption of an international treaty to facilitate and promote the development of science and technology have been on the table for the last two decades,[61] while bilateral agreements and scientific programs also promote scientific and technological international cooperation, and may be a source of inspiration and funding. The protocol on science and technology cooperation could address i) rules on research subsidies in areas of public health interest; ii) an agreement to place 'into access pools the patented results of publicly funded research that develops knowledge capable of supporting applied science and R&D, especially in areas of common global concern';[62] iii) measures enabling cooperation between research centers; iii) compromises to facilitate international mobility of scientists; iv) design of agendas of common interests and priority setting in accordance with public health priorities; v) measures to stimulate technology transfer between developed and developing countries; vi) criteria and to support and access to publicly funded research and tax advantages; and vii) facilitating access to scientific resources.

Which international structure and adoption process

An instrument of this caliber needs broad international support, including states with research-based economies, emerging economies, as well as countries with pressing health needs. It also requires involvement of numerous international organizations, companies supplying different segments of the pharmaceutical market, scientists, and non-governmental health organizations.

Prior complex international normative processes were materialized through a range of conferences over a considerable number of years. In the case of pharmaceutical innovation, discussion has advanced since the nineties. The proposal put forward aims at providing the structure and mechanisms, and some update, to proposals previously made. Already existing initiatives, developed by multiple stakeholders in international organizations, civil society, the private sector, and academia, would fall under the scope of the proposed new regime. The task would be twofold: coordinating and going further when necessary, while constructing broad-ranging stakeholder incentives to participate.

The Framework Convention, negotiated in the context of international conferences, could establish a light coordination mechanism in charge of monitoring the action of concerned stakeholders. The coordination mechanism could be based on the recommendations put forward by the Consultative Expert Working Group on Research and Development and stakeholders described therein, and could also benefit from the experience of already existing small and functional international authorities or regulatory groups.

VI. Legal Issues Surrounding Access to Global Health Research Materials

Overview

Recent Ebola outbreaks and pandemic risks[63] underscored significant gaps in global preparedness for outbreak prevention and response[64]. These events highlighted the lack of available treatments, vaccines and diagnostics to assist communities and individuals exposed to pathogens. Unfortunately, product research and development timelines and economics[65] infrequently align with the accelerated needs of affected individuals and communities in the context of a public health outbreak or emergency. Product development efforts are optimally effective when enabled long prior to the needed interventions. These efforts begin with access to research materials.

From a legal perspective, this public health need is confronted with the absence of one or more dedicated international instruments addressing access to a breadth of human pathogens and biological research materials in general terms (the Pandemic Influenza Preparedness (PIP) Framework being an exception to this gap); and the lack of uniform legal environment to promote medical research for global health accompanied by swift product development, particularly in the context of a public health emergency of international concern (PHEIC) or other health emergency. This is in contrast with other areas where states have established multilateral normative schemes to manage resources of common interest, as for example the FAO International Treaty on Plant Genetic Resources for Food and Agriculture. The lack of dedicated instruments means that the legal status of human pathogens and clinical samples and the rights and obligations of states with regard to their management, exploitation and sharing, fall under a number of existing international legal instruments and regimes largely established and implemented for the pursuit of interests and objectives other than public health. This situation, in turn, raises the risk of fragmentation and possible conflicts among different rules, and of unpredictability as to whether and how human pathogens will actually be made available for public health purposes.

This section examines the legal and contextual issues surrounding access to global health research materials in the context of product development aimed at global health and identifies potential benefits to amending existing instruments or developing new instruments or tools.[66]

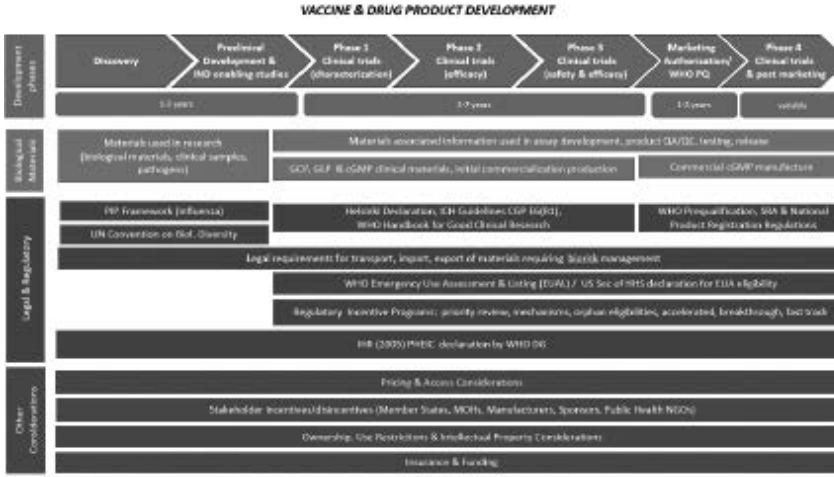
[66] This paper is not intended to provide a compilation of all laws, regulations and considerations related to access to global health research materials, but is intended to highlight areas for consideration in the context of benefiting global health stakeholders and communities.

These include:

- The need for prompt and safe sharing of biological materials, data and information, including human pathogens and clinical samples to facilitate research and development of therapeutics, vaccines, diagnostics aimed at public and global health measures;
- The legal, regulatory and contextual considerations that overlay global product development and the need to balance bio-risk management; and
- Consideration of incentives to drive products development aimed at beneficial global health outcomes.

Product Development Overview & Uses of Global Health Research Materials

Acknowledging the important public health benefit of affordable and accessible therapeutics, vaccines and diagnostics, the sharing of biological materials for global health research is examined here in the context of the product development process. As illustrated in Figure 1, product development begins in the discovery phase encompassing research to elucidate disease biology, targets and molecules that have the potential to ameliorate, prevent or detect a disease of interest.[67]



Product development targeting infectious and pandemic disease requires access to biological materials which are the causative agent of the disease. In the case of vaccine development, for example, access to the pathogen is essential to provide antigens, nucleic acids and sequence information essential to identifying potential vaccine candidates, assays and diagnostics. Concomitantly, as discussed further below, the need for biosafety and biosecurity remain central to the management, sharing and use of these materials.

Following the discovery phase, and before progressing into humans, molecules with the highest potential are extensively studied in animal and *in vitro* models during

[67] Special thanks to Murray M. Lumpkin, MD, MSc. for input and critical review of paper.

pre-clinical research. Pre-clinical research seeks to minimize the risks of introducing product candidates into humans. In the US, for example, these studies form the basis for an Investigational New Drug (IND) application, a prerequisite to the clinical development phase.

If successful in the preclinical phase, product candidates may enter clinical development phases. During clinical phases, product candidates are characterized and examined for safety and efficacy in human subjects (beginning with health volunteers and progressing into an applicable patient populations). Biological samples from human subjects (such as blood, sputum or other tissue samples) collected attendant to clinical trials can provide insights to understanding the etiology, pathology and epidemiology of the disease. These materials, as well as portions of the pathogen and information derived from each, may also be used in assay development, product quality assurance/quality control, and product release in support of manufacturing.

Upon achieving clinical evidence of safety and efficacy through phase 3 trials and if the product can be produced in a quality manner in compliance with cGMP standards, marketing authorization for the product may be sought from the applicable regulatory agency (usually in the country of manufacture or a stringent regulatory agency that will be a reference agency for follow-on authorizations), followed by WHO Prequalification if applicable, and national registrations in the countries where the product will be used. Finally, if required, phase 4 trials and post marketing studies will follow product registration. The timeline for the product development and its cost have been detailed by others, but is generally understood as taking close to a decade with average costs in the hundreds of millions of dollars (USD) or more[68].

Legal and Regulatory Frameworks Applying to Biological Materials for Global Health Research

As described above, access to pathogens is a critical initial step in the development of therapeutics, vaccines and diagnostics. Similarly, human biological samples provide critical insights in product development. As pathogens and human biological materials for global health research have both overlapping and different legal considerations, we example them separately.

Pathogens

Public health is largely confronted with the absence of one or more dedicated international legal instruments requiring states and other actors to cooperate and share human pathogens for the benefit of public health (the PIP Framework being an exception to this gap)[69]. In the case of pathogens, such as viral agents, several legal constructs provide context.

The UN Convention on Biological Diversity (CBD)[70] is based on the principle of sovereignty over genetic resources and the right of each Party to regulate access to them

[68] See e.g., DiMasi et al., J. Health Econ. (2003) 22: 151–185; Drug Inf. J. 2004; 38: 211–223; Adams, C. et al, J. Health Econ. (2010) 19: 130–141; Avorn, J. .N Engl J Med (2015) 372:1877-1879

[69] See e.g., Abbott, F. "An International Legal Framework for the Sharing of Pathogens: Issues and Challenges" (2010)

[70] Adopted in 1992, 196 parties as of early June 2016.

through mutually agreed terms. The primary purpose of the CBD was to fight biopiracy and ensure both effective management and preservation of a shrinking pool of genetic and biological resources as well as access to benefits for countries sharing them. The CBD is based on a bilateral approach to sharing of resources between states. The Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization (NP)[71] implements in detail the benefit access and sharing provisions of the CBD. Its Article 4 para. 4 foresees a carve-out from its applicability in the following terms: "*Where a specialized international access and benefit-sharing instrument applies that is consistent with, and does not run counter to the objectives of the Convention and this Protocol, this Protocol does not apply for the Party or Parties to the specialized instrument in respect of the specific genetic resource covered by and for the purpose of the specialized instrument*."[72] Accordingly, the CBD and NP leave open the question of whether certain pathogens, particularly those which could lead to the declaration of a PHEIC (or potentially those requiring higher levels of biosecurity), should fall outside the scope of the CBD and whether an alternate legal framework could serve as such a specialized instrument.

The PIP Framework[73] addresses the need for pandemic influenza pathogens[74]. This non binding instrument regulates the sharing of influenza viruses both within and outside the existing network of WHO laboratories and collaborating centres. It also establishes channels to ensure the sharing of benefits deriving from the use of viruses and/or the services of the network for both preparedness and response in case of pandemic flu outbreaks. The framework embodies an innovative approach, including private companies, laboratories and academic institutions in its scope besides states. It contemplates the conclusion of legally binding Material Transfer Agreements (MTAs) between parties providing and accessing the virus as the tool to guarantee the fulfilment of the objectives of the Framework. The UN General Assembly has recently recalled the importance of the cooperation at the global level in fully implementing the PIP Framework (A/RES/70/193).

Future possibilities and areas of research:

- *Clarify whether the PIP Framework constitutes or may provide the basis for a 'specialized instrument' under NP Article 4.*
- *Revision of the PIP Framework: expansion of its scope (pathogens other than pandemic influenza viruses) and development of further incentives to encourage industries to conclude MTAs.*
- *Alternatively, negotiation of a new international treaty along the lines of the FAO Treaty establishing a multilateral mechanism to share human pathogens.*
- *Inclusion in the IHR of a clear obligation to share pathogens.*

---

[71] Adopted in 2010, in force as of October 2014, with 77 Parties as of early June 2016.

[72] Under the CBD, "Genetic resources" means genetic material of actual or potential value. "Genetic material" means any material of plant, animal, microbial or other origin containing functional units of heredity.

[73] Adopted by the World Health Assembly (WHA) in 2011 under Article 23 of the WHO Constitution.

[74] Due to their high mutation rate, new strains evade immunity obtained from prior vaccinations and necessitate biannual refinement of the antigenic composition of the vaccine to address current circulations of the virus, http://www.who.int/wer/2012/wer8747.pdf

Clinical Materials

Unlike pathogens, the biological materials from human subjects (including clinical samples) are subject to laws, regulations and guidelines[75] aimed at the protection of individual subjects' rights, safety and well-being. While international principles, standards and guidelines including the Declaration of Helsinki [76] and International Conference on Harmonization (ICH) Guidelines for Good Clinical Practice (GCP)[77] are broadly accepted, human subjects research is regulated nationally[78]. The simultaneous application of these international and national regulations, as well as the application of different national standards and processes can significantly increase the complexity of multi-site, multi-jurisdictional trials and similarly impact the management and subsequent use and sharing of biological materials collected attendant to such trials.

Use restrictions on human biological materials are also directly impacted by the context of their collection, the specific patient informed consent and the potential biohazards the sample may create. These cells and tissues are typically collected in different contexts, including: during treatment/diagnosis, as donations for another recipient, in research (including human subjects research, clinical trials and educational purposes) or the manufacture of biological products[79]. These contexts together with the applicable patient informed consents serve as legal and ethical covenants between patients and researchers and define the parameters of allowable use that will follow the human samples[80]. For example, informed consent may detail the destruction, storage and the allowable or

[75] See International Compilation of Human Research Standards, 2016 Edition, complied by: Office for Human Research Protections, U.S. Department of Health and Human Services

[76] In US, the Declaration of Helsinki is embodied in the Common Rule (45 CFR part 46, and FDA counterparts 21 CFR 50 and 21 CFR 56) which details the protection of human research participants. These regulations requires IRB review and informed consent for research obtaining private information from living individuals. Human biological materials are governed by Department of Health and Human Services, Office for Human Research Protections (OHRP) http://www.hhs.gov/ohrp/. In the EU, clinical trials are governed by Regulation No. 536/2014 of the European Parliament and of the Council on Clinical Trials on Medicinal Products for Human Use. Human biological materials are further governed by Directive 2004/23/EC on Setting Standards of Quality and Safety for the Donation, Procurement, Testing, Processing, Preservation, Storage, and Distribution of Human Tissues and Cells, which also calls for mandatory consent.

[77] Global principles of clinical trial conduct include International Conference on Harmonization (ICH) Guidelines for Good Clinical Practice (GCP), which assure that the principles of the Helsinki Declaration in protection of subjects' rights safety and well-being. GCP is typically a prerequisite to marketing authorization. ICH Guidelines for Good Clinical Practice E6(R1) describe the responsibilities of all participants including investigators, sponsors (including their CROs), monitors and Institutional Review Boards (IRB)/Independent Ethics Committees (IEC) and include the requirement for informed consent of trial subjects. Additional international guidelines include WHO's Handbook for Good Clinical Research Practice (GCP): Guidance for Implementation (2005) and CIOMS International Ethical Guidelines for Biomedical Research Involving Human Subjects (2002)

[78] *Fundamentals of U.S. Regulatory Affairs, 8th Ed (2015).*

[79] *C. Petrini J Blood Medicine 2012:3 87-96; Fundamentals of U.S. Regulatory Affairs, 8th Ed (2015), at 337.*

[80] In the absence of express agreements to the contrary, US Courts have generally held that ownership rights over clinically excised or donated tissues is relinquished by the patient or research subject. *See* Allen et al Clinical Chemistry 56:11 1675-82, at 1678 (2010). Further, while secondary research with such tissue may be subject to IRB approval, patient consent may on a case-by-case basis, be

impermissible secondary uses of the samples[81]. Within the bounds of the uses permissible under the patient informed consent, human samples must also be managed in accordance with the applicable biohazards guidelines[82].

Accordingly, to enable sharing for broad scientific and R&D purposes, clinical researches optimally anticipate the potential future uses and seek patient consent accordingly. However, given that individuals within single or multiple-site trials may consent to different scopes of use, the subsequent research, sharing and analysis of these samples and information can be significantly constrained.

In the recent Ebola virus outbreaks, the lack of existing therapies, vaccines and diagnostics highlighted the misalignment between product development timelines and the needs of patients and public health systems in the context of a public health emergency. Given no products approved for Ebola Virus Disease (EVD) existed at the time of the outbreak, the global health community and regulators were required to rely upon clinical trial procedures or emergency use authorizations in order to provide specific new treatments to patients.

Emergency Use Authorizations

Recognizing the need for applicable regulatory and public health bodies to act swiftly for the benefit of patients, emergency use authorizations serve to mimic marketing authorizations, but apply specific temporal and use limitations. While emergency use does not supplant the need for full clinical trials, nor imply approval by a Stringent Regulatory Authority or WHO pre-qualification, these procedures import clinical trial elements, including risk-benefit analysis, data collection and evaluation, informed consent and national sovereignty over drug/vaccine/diagnostic approvals. For example, in the US, FDA's Emergency Use Authorization (EUA) procedure[83] is allowable following the Department of Health and Human Services (HHS) Secretary's issuance of a determination of public health emergency or significant potential for public health emergency. During the Ebola emergency, WHO adopted a similar principles of emergency use, known as Emergency Use Assessment and Listing (EUAL)[84] which are allowable in the context of a PHEIC when no licensed medicine, vaccine or diagnostic is available and certain minimum requirements are met, including Good Manufacturing Practices (GMP)[85] manufacture and intent to seek WHO PQ in the future. Data is assessed for reasonable likelihood that quality, safety and effectiveness outweigh foreseeable risks and uncertainty in light of the PHEIC. The EUAL process may also include from an expert Advisory Committee (AACEUM).

[84] http://www.who.int/medicines/publications/druginformation/issues/WHO_DI_29-3_NormsStandards.pdf?ua=1; http://www.who.int/medicines/news/EUAL-vaccines_7July2015_MS.pdf

[85] http://www.who.int/medicines/areas/quality_safety/quality_assurance/production/en/; http://ec.europa.eu/health/documents/eudralex/vol-4/index_en.htm

These hybrid tools may be essential in public health emergencies when time is of the essence for vulnerable patients and affected public health systems. Emergency use recognizes the need for applicable regulatory and public health bodies to promptly act in public health and other emergency situations, with a presumption that failure to act may be deemed unethical. It also encompasses the perspective that the community, when faced with a public health emergency, is willing to tolerate a greater risk of the unknown (less available of data) given the counterbalance of the known significant risk inherent in the public health emergency. In such settings, in light of the potential increased clinical risks, informed consent becomes even more critical, but what constitutes that consent and how it is obtained in the context of a public health emergency demands an approach, like the emergency authorization itself, that recognizes the realities of the public health emergency and the risks, not only to the individual patient, but to the community at large that an individual patient may represent.

Given the complexity, cost and perceived liabilities of international clinical trials, little incentive exists for private sector biotechnology and pharmaceutical entities to serve as sponsor[86] of clinical trials in the context of a PHEIC. From a product development perspective, a gap also exists between the emergency use and conventional approval processes, since the emergency use authorization ceases upon termination of the emergency declaration. This gap serves as a disincentive for product developers in the context of health emergencies, particularly as patients may already face high mortality and morbidity due to the underlying pathogen. To fill such a gap, in recent Ebola PHEIC, WHO recently took on an expanded role in a clinical trial aimed at ameliorating Ebola Virus Disease when no other sponsor was willing to conduct the trial in Guinea[87].

This role for WHO was also arguably consistent with the IHR. Under the IHR, adopted by the WHA in 2005, states must develop capacities for surveillance, assessment and response. While the IHR do not address sharing of pathogens or clinical trials and associated biological materials, it calls for WHO's unique role as the guardian of public health[88]. IHR entrust the WHO to detect, assess and respond to public health emergencies of international concern and other public health risks. Indeed, states have often looked to WHO to play a coordinating and normative role in this regard, or even to assume an operational role for the approval and distribution of vaccines and medicines.

Future possibilities and areas of research:

- *Consider the potential benefit of WHO further defining an optional role in clinical trials (such as serving as a clinical trial sponsor) in the limited circumstances when a product manufacturer is unable or unwilling to do so.*
- *Consider whether the role of WHO in serving as a clinical trial sponsor might be relevant in other circumstances taking into account potential advantages for public welfare.*

---

[86] A "Sponsor" of a clinical trial is the company, person, institution or organization that takes responsibility for the initiation, management and/or finance or resources for the clinical trial. *Fundamentals of U.S. Regulatory Affairs, 8th Ed (2015);* https://www.clinicaltrialsregister.eu/doc/EU_Clinical_Trials_Register_Glossary.pdf

Transport & Transfer of Materials: Biosafety, Biosecurity and Biorisk management

While it is generally recognized that the conditions of transport, storage and use of pathogenic biological agents must meet the appropriate biosafety[89] and biosecurity[90] requirements in light of the specific biorisk[91] presented, national and subnational/local standards vary widely and can create operational barriers that impede research or result in the spoilage of research materials. Developing as well as developed countries are not exempted from criticism or operational challenges regarding their biosecurity and biosafety standards.[92]

Over the past decade, increased attention to scientific, operational and legal guidelines have been applied to biorisk management. While not meant to be an exhaustive review, the following provide example of frameworks and standards that warrant consideration as related to the transport of materials.

In 2003-2004, the laboratory-acquired SARS-CoV infections in Singapore triggered a demand for international biosafety guidance. In response, the WHA in 2005 adopted resolution WHA58.29 on Enhancement of laboratory biosafety[93]. The WHO further developed guidance on biorisk management[94] as well as a *Strategic Framework for Action (2012-2016)*[95] aiming towards the development of sustainable global, regional and national plans relating to laboratory biorisk management. Similarly, in Europe, the *Laboratory Biorisk Management Standard (CWA 15793:2011)*[96] is registered with the European Committee for Standardization (CEN). In Canada, the Canadian Biosafety Standards, recently updated, sets out managment requirements for the safe handling and storing of human and animal pathogens and toxins.[97] In the US, the Federal Select Agent

---

[89] Biosafety (which concerns the "containment principles, technologies and practices that are implemented to prevent the unintentional exposure to biological agents or toxins or their accidental release) more directly addresses the protection of researchers and actors along the product development pathway (http://apps.who.int/iris/bitstream/10665/70878/1/WHO_HSE_2012.3_eng.pdf).

[90] Biosecurity (which describes the "protection, control and accountability for biological agents and toxins … to prevent their loss, theft, misuse, diversion of or unauthorized access or intentional unauthorized release") extends the zone of protection to the national and international public (*id.*)

[91] http://www.cdc.gov/biosafety/publications/bmbl5/BMBL5_sect_IV.pdf

[92] In 2015, the Hudson Institute published its analysis of the US national state of defense against biological attack and infectious disease, finding the nation "dangerously vulnerable" to a biological event. In a 2008 publication by the House of Commons, the Veterinary Laboratory Agency underlined that some current biological containment facilities in the UK "require significant capital investment to bring them to acceptable bio-containment standards." See House of Commons, Innovation, Universities, Science and Skills Committee, *Biosecurity in UK research laboratories*, Sixth Report of Session 2007-08, vol. II.

[96] CWA 15793:2011. Guidelines for the Implementation of the CWA 15793:2008 (CWA 16393:2012) have been adopted to assist States in understanding the CWA 15793.

[97] http://canadianbiosafetystandards.collaboration.gc.ca/

Program[98] oversees the storage, use and transfer of human and animal biological agents and toxins which have the potential to pose a severe threat to public health, including viral agents such as Ebola virus.[99]

The *UN Model Regulations on the Transport of Dangerous Goods (18th ed)*[100] issued by the Committee of Experts on the Transport of Dangerous Goods (UNCETDG) – a committee of the UN Economic and Social Council – set forth international modal regulations on air, rail, sea, road and post. Parts 2, 4, 5 and chapter 6.3 relates to infectious substances[101]. Many states have adopted the *UN Model Regulations* in their entirety or with varriation, to stand as their national dangerous goods legislation.

In addition, independent quality systems such as ISO 17025:2005 and ISO 9001:2000 as well as trade organizations[102] provide further guidance and assurance that valid audit trails and verifiable storage systems exist for all dangerous pathogens received at, transported and held within organizations[103].

Future possibilities and areas of research:

- *Compilation of legal and regulatory requirements, or development of a uniform set of biorisk standards in order to increase consistency in the application of biosafety and biosecurity measures across different services and laboratories.*

Bioterrorism & Synthetic Biology

While vaccine development has traditionally relied on molecular biology techniques as means to capture and elucidate viral antigens from pathogens for use in vaccines, an additional layer of complexity is given by advances in biotechnology, in particular genetic sequencing and molecular biology. In view of the increasing ability of many scientific institutions to sequence and synthetically reconstruct nucleic acids, proteins and biomolecules, reliance on sharing physical samples for such research may one day be fully obviated. Progress in biotechnology may soon make synthetic construction of complex pathogens and biomolecules based on publically available genetic sequences and information, a concrete reality.

[99] http://www.selectagents.gov/SelectAgentsandToxinsList.html

[100] ST/SG/AC.10/1/Rev.18 (Vol. I) & (Vol. II), 2013. These *UN Model Regulations* are subject to biennial amendments. In December 2014, UNCETDG agreed on further changes for the 19th revised edition (ST/SG/AC.10/1/Rev.19 (Vol. 1) & (Vol. II), 2015), which will come into force in 2017.

[101] These recommendations are addressed to governments and to the international organizations concerned with safety in the transport of dangerous goods. For the purpose of the *UN Model Regulations*, "infectious substances"(*i.e.* "substances known or reasonably expected to contain pathogens. Pathogens are defined as microorganisms (including bacteria, viruses, rickettsiae, parasites, fungi) and other agents such as prions, which can cause disease in humans or animals") are assigned UN numbers and proper shipping names according to their hazard classification and their composition. The packaging, labelling and documentation requirements vary from a category to another. The shipper, the carrier and the receiver have specific responsibilities in ensuring successful transportation. The WHO has provided for an overview of the roles of these actors in its *Guidance on regulations for the Transport of Infectious Substances 2015-2016 (*WHO/HSE/GCR/2015.2), applicable as from 1st January 2015.

[102] See e.g., http://www.iata.org/whatwedo/cargo/dgr/Pages/download.aspx

[103] House of Commons, Innovation, Universities, Science and Skills Committee, *Biosecurity in UK research laboratories*, Sixth Report of Session 2007-08, vol. II.

The first synthetic virus creation (polio) was reported in 2002[104]. Subsequent laws, such as the variola amendment[105] enacted in the US in 2004 banned the synthesis, use, transfer or possession of the smallpox (variola) virus with penalties of 25 years to life in prison. Similarly, the WHO Independent Advisory Group mentioned below recommended that the recreation of variola virus should be prohibited[106]. While legal prohibitions to such research may impede a biorisk concerns from compliant actors, a legal instrument may not achieve avoidance of intentional bioterrorism acts. In 2015, a WHO Independent Advisory Group on Public Health Implications of Synthetic Biology Technology Related to Smallpox prepared a report[107] to the WHO DG detailing the health implications of a synthetic smallpox development. The Scientific Working Group concluded that "it would be possible to recreate variola virus" from relatively simple chemicals and laboratory equipment. Accordingly, the report emphasized the "importance of the core capacities required by the International Health Regulations (2005)" calling for increased capacity for detection, disease control, biosecurity and risk communication. The report highlighted the need for "increased biosafety and biosecurity in laboratories stock inventories, strengthened regulatory frameworks and their implementation, coordination between sectors including health, judiciary, law enforcement and customs." In the context of biorisk management, bioterrorism must be integral in the considerations as applied to biological materials. Therefore, in addition to the legal frameworks, diligence and coordination of the global community must seek to ensure biorisk management of this and similar pathogenic agents is achieved.

Future possibilities and areas of research:

- *Increase awareness of biorisk through trainings and clear guidelines.*
- *Consider the potential benefit and learnings from smallpox virus, including limited number of authorized repositories capable of ensuring appropriate biorisk management.*[108]
- *Consider the importance of integrating genetic sequencing and molecular biology of highly pathogenic agents into regulatory and policy development on biosecurity and on limiting access to dangerous pathogens solely for public health purposes.*

Other Considerations

Ownership, Use Restrictions & Intellectual Property

Ownership and use restrictions, including intellectual property, need express consideration when contemplating the sharing of biological materials for global health research. An initial step to this analysis requires answering the questions of 'what use limitations must

[104] http://www.sciencemag.org/news/2002/07/poliovirus-baked-scratch

[105] 18 U.S. Code § 175c

[108] http://apps.who.int/iris/bitstream/10665/198357/1/WHO_HSE_PED_2015.1_eng.pdf ; see also House of Commons, Innovation, Universities, Science and Skills Committee, *Biosecurity in UK research laboratories*, Sixth Report of Session 2007-08, vol. II: calling for "a secure system for assuring protection to those put under pressure from outside to source material from a containment facility" and "Training staff in biosafety [as] an essential element for the safe operation of any high containment facility"

be accounted for when contemplating sharing for the intended purpose?' In the absence of express agreements to the contrary, US Courts have generally held that ownership rights over clinically excised or donated tissues are relinquished by the patient or research subject[109]. However, as described herein, patient consents may detail use limitations.

Intellectual property also plays a role along phases of R&D. While the development of pharmaceutical patents may occur along the product development phases, many occur in the earlier end of the product development timeline (such as during the discovery of new molecules and methods). Accordingly, the contemplated research uses must be analyzed in light of the desired activities and in light of the jurisdictional limitations of the applicable patents, if any. For the purpose of this discussion, however, an IP analysis is merely one component that needs consideration.

At a different normative level, existing contractual practices impact the conditions upon which biological materials are shared. The widespread practice among laboratories, research centres, universities and private companies is under cover of a material transfer agreement (MTA) or similar agreement. Such agreements are customary in the transfer of biological samples and detail the responsibilities of the parties in providing, receiving and safely managing the materials. In many cases these MTAs may contain clauses that specify the permissible use of the biological material or detail the intellectual property rights related to the materials or their use. By way of example, the ownership claims and restrictions imposed by the MTA[110] of Erasmus Medical Center to share the MERS-CoV virus was well publicized and noted by the WHO DG.[111]

Incentives/disincentives for stakeholders

The development of therapeutics, vaccines and diagnostic for global health applications requires a spectrum of stakeholders including academic and clinical researchers, clinical researcher organizations, product manufacturers, regulatory agencies, members states, distributers, NGOs, funders, intergovernmental organizations and agencies, including WHO. Each of these stakeholders play a unique role along the product development and delivery pathway. Creating an environment that encourages sharing of research materials and product development aimed at global health must also take into account the existing stakeholder incentives and disincentives beyond the legal considerations. While not the focus of this discussion, these include, among others, the cost of and timelines of product development, product liability and indemnification concerns of product developers,[112] pricing considerations balancing with broad product accessibility. Accordingly the importance of operational and incentive alignment with legal frameworks must not be overlooked.

VII. Regulation, Trade and Public Health[113]

International standard-setting in pharmaceuticals

International harmonization

A range of activities are conducted at the international level to guarantee the safety, quality, and efficacy of medicines. These activities include, among others, the harmonization of pharmaceutical nomenclatures, the standardization of pharmaceutical compositions, the adoption of harmonized guidelines relating to activities in the preclinical, clinical, production and distribution phases of the medicines' chain, and the harmonization of documentation submitted for approval of pharmaceutical products.

International harmonization of information concerning medicines' tests and trials fulfills an important public health objective. In effect, harmonization avoids the repetition of tests already carried out, or tests very similar to other already carried out. Such a repetition gives rise to avoidable risks for human health and generates unnecessary expenses. Despite these widely shared objectives, international harmonization can hardly be total. Diverging standards are justifiable and sometimes necessary from the public health point of view in a number of areas and for a number of reasons, including genetic differences, climate conditions, or different scientific approaches to quality, safety, and efficacy. However, the risk and unintended consequence may be the use of technical standards to erect entry barriers to foreign competitors.

Harmonization of technical standards relating to pharmaceutical products has historically taken place in multilateral, regional and bilateral forums of public nature, and also in the context of public-private partnerships and initiatives. In addition to the normative dimension, harmonization has an institutional side. Cooperation between health agencies in matters relating to drug registration and control is more and more frequent, and different initiatives have been developed in parallel, frequently involving regulatory agencies where similar market conditions and public health situations prevail.

In this context, it is timely to reflect upon the so-called international standards of reference, and the current prominence, in that regard, of the standards adopted by the International Council for Harmonization of Technical Requirements for Pharmaceuticals for Human Use (ICH). The ICH is not only a very original initiative and the most productive source of international pharmaceutical standards, but it also underwent very relevant changes in 2015. After briefly describing the ICH, its guidelines and recent reform, the relationship between a number of pharmaceutical standards and norms on ethics, human rights, and trade will be addressed. For that purpose, the World Trade Organization (WTO) Agreement on Technical Barriers to Trade (TBT) will play a crucial role.

International standard-setting organizations

Even though institutional sources of international pharmaceutical regulation are not too numerous, there exists still a rich diversity. In addition to the World Health Organization (WHO) and its two major experts' committees dealing with pharmaceutical standardization (the WHO Committee on Biological Standardization and the WHO Committee on Specifications for Pharmaceutical Preparations), the International Organization for Standardization (ISO), the Organization for Economic Co-operation and Development

[113] Dr. Ruth Atherton has recused herself from this portion of the submission.

(OECD), and the already mentioned ICH, to name the most relevant ones, adopt international standards of relevance in the pharmaceutical sector .[114] There are also professional organizations such as the World Medical Association (WMA) and the *Council for International Organizations of Medical Sciences* (*CIOMS*) that develop important pharmaceuticals standards, in particular standards relating to good clinical practices.

Mapping active stakeholders in the area of international standardization reveals the diverse nature of standard-setting organizations. Some of them are multilateral organizations of either unrestricted membership, such as the WHO, or close and limited membership, this being for instance the case of the OECD. Others, by contrast, are private non-profit organizations, of heterogeneous membership, namely ISO, WMA and ICH.

International Council for Harmonization

The ICH is the most interesting and influential standard-setting organization in the area of pharmaceuticals. In 25 years of action it has adopted about 90 guidelines[115] that have been regularly updated and generally implemented both in ICH Member states and in many other countries that do not participate in the ICH process. In fact, the influence of ICH standards expands well beyond its actual members for a number of reasons. Indeed, non-ICH regulatory authorities may decide adopting ICH guidelines, they may be considered the international standards of reference pursuant to WTO law, or they may be endorsed by other international standard setting organizations, this being notably the case of the WHO.

Among the features of the ICH, the high level of implementation of the guidelines it adopts, as well as the dynamism and productivity in terms of the number of the guidelines produced, stand out. Regulatory members participating in the ICH are engaged in implementing the ICH standards, which do not go through any further internal discussion once adopted. Another feature of the ICH is the sophistication of its standards. There is consensus that the ICH standards are in themselves both of great quality and demanding. This does not exclude, however, concerns regarding the coexistence of some ICH guidelines and international trade norms, human rights norms, and ethical standards.

Changes at the International Council for Harmonization

The ICH is an interesting organization in terms of nature and membership. Up until October 2015, only innovative industry associations of the United States, Japan and the European Union, together with regulatory authorities of the same countries and region, were full members of the ICH. The WHO, Canada and the European Free Trade Association (EFTA) were just observers. The "ICH process" was essentially a closed one, with the International Federation of Pharmaceutical Manufacturers and Associations (IFPMA) acting as Secretariat. For contemporaneous accounts of independence and conflicts of interest that situation was hardly sustainable, not to mention the absence

[114] Moreover, some initiatives of national nature have great influence on activities conducted abroad. This is the case of some pharmacopeias, notably the U.S. Pharmacopeial Convention, the European Pharamocopoeia and the British Pharmacopoeia.

[115] About 30 on safety, plus numerous annexes; 12 on quality; 20 on efficacy; and 8 multidisciplinary documents. *See* the ICH production at http://www.ich.org/products/guidelines.html (accessed May 2016)

of regulatory authorities of the rest of the countries of the world, and the absence of representatives of generic industry associations.

The ICH has gone through very relevant changes in recent times. These changes have impacted on its nature as organization, its membership, the name of the managing bodies, and the norm-setting process, among other aspects.

First, the ICH is not anymore a "process" administered by IFPMA but a non-profit association. Second, regulatory members and industry members are not anymore on equal footing, since the latter have lost the power to propose and adopt standards -however, they can still appoint experts to all regulatory projects, which gives considerable leverage. Third, new regulatory members have been included on equal footing as the three foundational regulatory members. This is the case of the regulatory agencies of Canada and Switzerland, and it will probably be also the case of the other regulatory authorities of EFTA member states, and also the EFTA itself. Moreover, the door is open to a limited number of other regulatory authorities that must, however, fulfill demanding conditions.[116]

The impact of these changes may be crucial for the global acceptance of the ICH guidelines. Some aspects however may be contentious. First, previous guidelines remain untouched, and with them, the discrepancies with respect to the actual need of some standards and their relationship with trade, human rights, and ethical norms, and with policies aimed at promoting the local production of pharmaceuticals in developing countries. Second, the new 'Council' will be scrutinized for its inclusiveness of countries, companies, and consumers that had no representation in the previous 'Conference'. In this respect, the demanding conditions to become (non-founding) regulatory and industry members, as well as observers, are key. In this respect, it is worth mentioning that since 2014 some regulatory authorities in emerging economies -Argentina, Brazil, India and Colombia- have discussed the creation of a parallel standard-setting process. Third, the relationship between the ICH and the WHO presents some important questions. Perhaps the most fundamental among these, if WHO has the constitutional mandate to adopt the same type of guidelines that the ICH adopts,[117] should WHO merely observe and endorse the ICH guidelines or, rather, should it become the alternative and truly global standard-setting process?

Relationship with other areas of international law

The impact that international pharmaceutical standards have on ethics, human rights, and trade norms is of central importance. Whereas the stated purpose of harmonization is to reduce the costs of developing medicines, ensure the quality, safety, and efficacy of medicines, and avoid the repetition of preclinical and clinical assays, the content of the harmonized standards may be in tense relationship with ethics, human rights, trade and competition norms.

---

[116] They must have made substantive contributions to previous ICH guidelines and must accept and implement key ICH guidelines. The latter include six guidelines on stability, the critical guidelines on good manufacturing practice and the delicate guidelines on good clinical practice. More analysis is needed in this respect, but taking into consideration the participation on the three last assemblies of the ICH, candidates include Republic of Korea, Brazil, China and Singapore.

[117] *See* Article 2(u) of the WHO Constitution

With respect to ethics and human rights, the guidelines on good clinical practice adopted by the ICH are the case in point. This is an area where a rich normative *acquis* existed when the ICH started its work. In the last fifty years professional and scientific organizations have adopted rules that apply to many steps of the drug development process, and in particular to clinical assays. The guidelines of the WMA and CIOMS are particularly well-known, but are not, by any means, the sole ones. Moreover, a reduced but very important in substance number of international treaty and customary norms apply to clinical assays, some of them dating back to Nuremberg trials. However, in a number of aspects, the ICH guidelines seem to depart from these norms. For instance, ICH E6 does not address, or seems to addresses differently, important ethical requirements stipulated in the Declaration of Helsinki relating to the use of placebos[118] and also regarding the continuation of therapies once the trial is concluded.[119]

With respect to effects on international trade, the use of technical standards to restrict international trade is a matter of concern. Think for instance about a standard relating to purity. If such a standard does not impact on safety and efficacy, it should be of no interest whether the requirement of purity is set at 99% or 98.8%. However, adopting one or the other percentage may impede the entrance of products into the national market and be considered, therefore, a protectionist measure. Indeed, if the ICH adopts such a standard, if it becomes the international standard of reference, and members transform it into national regulations, activities taking place in countries that did not adopt the ICH guideline will be affected. For instance, the trade of companies based in non-ICH countries with ICH members will be disrupted.

The relevance of the WTO Agreement on Technical Barriers to Trade

The TBT is aimed at ensuring that national regulations do not become unnecessary barriers to trade. In order to do so, it establishes that national regulations –by definition, mandatory- cannot be more trade–restrictive than the levels established in international standards of reference. The latter are not identified, nor are international standard-setting organizations. On the contrary, the TBT Agreement sets forth some basic criteria. Fundamentally, it establishes that national regulations must satisfy the "necessity test", that is, they cannot be more trade-restrictive than necessary to fulfill a legitimate objective. Pursuant to Article 2.5 of the TBT, whenever a technical regulation is adopted to achieve one the legitimate objectives explicitly mentioned, including the protection of human health, and the national regulation is in accordance with relevant international standards, it shall be rebuttably presumed not to create an unnecessary obstacle to international trade.

In this regard, with respect to the "international standard of reference", the increasing importance of the ICH, the declared objective of expanding guidelines to non-ICH states (and the fact that some non-ICH states actually adopt them), the consensus that generally characterizes the adoption of the standards, and the fact that the WHO is also endorsing

[118] While Article 32 of Declaration of Helsinki provides for the limited use of placebo in clinical trials, the ICH GCP and ICH Choice of Control Group guidelines adopt a more open stance and accept the use of placebo may change in different jurisdictions

[119] While the Declaration of Helsinki establishes that specific recommendations should be made for the continuation of treatments beyond the trial, these requirements are absent from ICH guidelines.

ICH guidelines, may result in the perception that ICH are, in effect, the international standards of reference.

This is very important because national regulations will have in principle to be based on the ICH guidelines. Certainly, the TBT is concerned about trade restriction. For instance, it would be applicable if good manufacturing practices adopted internally were more demanding than those existing in international standards of reference. For this reason, states where sophisticated pharmaceutical companies are based may be tempted to increase the level of exigency of international standards using their leverage in the ICH. In this way, they will be able to endorse national regulations that satisfy international standards and that only some companies can satisfy. Situations may be, however, more complex. What happens, however, if the standards adopted are not more demanding but just different? This may occur in areas where, even if some international standards exist, countries hold different views. Likewise, what happens if those standards are just more competitive? In those cases, and contrary to the argument of some companies in recent battles relating to biosimilar products regulations, ICH standards would just not apply.

VIII. Conclusion and Future Work

This report includes the initiation of GHLC study of global health security challenges, and the results of its first meeting on this subject; an analysis and recommendations with respect to access to essential medicines that reflects a contribution made to the UN HLP, as amended based on stakeholder suggestions; an elaborated proposal for a Framework Convention on Pharmaceutical Innovation and related protocols, also reflecting a contribution made to the UN HLP; a detailed analysis and recommendations with respect to access to research materials, and; a study and suggestion for further exploration regarding key regulatory issues affecting the production and distribution of medicines, including trade-related aspects. GHLC members recognize the urgency of addressing issues involving the links between health and human rights law, issues concerning noncommunicable diseases, and obligations to protect the environment and address the health impact of climate change. The GHLC expects to further address all of these issues as it continues with its work program. We have made a good start.

GLOBAL HEALTH LAW

WORKING SESSION

Tuesday, 9 August 2016, 9.00am

Chair: Professor Dapo Akande (UK)

The Chair introduced the three panellists – Professor Frederick Abbott, Co-Chair of the Committee, Dr Ruth Atherton, member of the Committee, and Dr Xavier Seuba, Co-Rapporteur of the Committee.

The Chair informed attendees that the first report of the Committee was available online from the ILA website.

Professor Frederick Abbott (US) introduced himself and welcomed attendees.

Professor Abbott started his presentation by referring to the mandate of the Committee. He mentioned that the main objective of the Committee was to bring forward international health law as a field of international law.

He then laid out some points on the breadth and complexity of the field. First of all, the protection and promotion of health encompassed a wide range of subject matter, including:

- the establishment and functioning of national healthcare systems
- mechanisms for the production and distribution of health goods and services, including cross-border movement
- innovation and access to health-related technologies
- preparation for, and responses to, health emergencies
- the impact of environmental degradation and climate change
- disparate treatment of groups.

Few areas were as heavily regulated as healthcare, as exemplified by the following:

- implementation of national healthcare schemes, including access to goods and services, insurance and reimbursement
- approval of new health technologies, including medicines
- regulation of production and distribution, including approval of manufacturing facilities, supply chain, prescribing and pricing
- regulation of professional services, including cross-border provision
- innovation and transfer of technology, including patents and regulatory market exclusivity, and related competitive market aspects
- the systems of regulation are interrelated.

With regards to the nexus between trade and public health, the following points were made:

- The establishment of the WTO and the adoption of the TRIPS Agreement represented a “sea change” in the international regulation of public health. Before then, half of the countries in the world exempted pharmaceuticals from patenting, whereas afterwards, it basically is a given that patent protection would be provided.

- Authority to make rules directly affecting important health interests were moved from the international organisation regulating health (WHO) to the international organisation primarily devoted to promoting mercantile interests (WTO).
- Trade negotiations since the formation of the WTO, including preferential trade agreements, had an increased focus on restricting public health flexibilities (as exemplified by the recent TransPacific Partnership Agreement (TPP). Rules on the extension of market exclusivity to biologic drugs was the most contentious element of the TPP negotiations
- Other key aspects included investor-State dispute settlement and intervention in public health formularies/reimbursement determinations.

Professor Abbott informed attendees that the Committee had initially decided to focus on four subject matter tracks, namely:

- legal issues surrounding access to research materials, including biological materials and results of clinical research
- legal issues surrounding access to essential medicines
- legal issues surrounding tensions between trade/investment agreements and global public health
- State obligations in the field of health and links with human rights law, including non-communicable diseases and sustainable development.

The first major activity of the Committee was to co-organise a multi-stakeholder meeting on global health security in Geneva in February 2015 in the midst of the West African Ebola crisis. The Committee managed to bring to the table all the relevant actors, including Médecins Sans Frontières (MSF), WHO, people involved in the development of new vaccines, and an array of organisations working to put together a response to the crisis. The idea was to come up with potential changes to the legal framework that might be beneficial in light of the crisis and with a view to future events.

Professor Abbott proceeded to address a few highlights of the meeting. There was a strong consensus on the fact that the top priority for improving responsiveness was to invest in building up national healthcare systems (surveillance, response, training of personnel). There was a critical need to accelerate research and development as well as approval pathways for new vaccines and treatments. There was a critical need to improve the management of crisis intervention services. In this regard, Professor Abbott pointed to the fact that MSF had to ask the US military to intervene and provide on-the-ground support and intervention. He noted that it was not a question of money (MSF is a well-funded organisation); rather, the problem was that there were insufficient trained people and there was no organisation that could build hospitals, train staff and protect them. It was difficult to coordinate the interactions between, and transition from, military authorities to civil authorities. WHO was not specifically a on-the-ground response organisation, and had very limited staff for that.

Other highlights included the need to integrate work of international organisations and NGOs, without establishing new international organisations. Moreover, it was acknowledged that the recent Zika outbreak represented the latest challenge to the emergency response system, and would certainly not be the last.

The second major activity of the Committee was participation in the process of the High Level Panel on Access to Medicines (HLP), which had been appointed by the UN Secretary General in November 2015. The HLP called for submissions, and members of Committee prepared two submissions:

- access to essential medicines authored by Ellen 't Hoen, Professor Brigit Toebes and Professor Abbott (as well as by Katrina Perehudoff, who is not a Committee member)
- Framework Convention on Pharmaceutical Innovation and Related Protocols authored by Xavier Seuba

Professor Abbott noted that the number of submissions received exceeded expectations. Both submissions authored by members of the Committee were selected for presentation at HLP hearings in London. Professor Abbott then proceeded to summarise the first submission on access to essential medicines, as set out in the Committee's first report.

Professor Abbott noted that the process of the HLP had been fascinating, and pointed to the fact that not only developing countries struggled with the issues. For example, the Netherlands made a very detailed presentation about the challenges the country faced with regards to access to essential medicines, its pharmaceutical budget, and its aging population. He noted that there were many submissions related to the need to prioritise the right to health as a human right.

Professor Abbott ended his presentation by informing attendees that Committee members had expressed interest in formulating a draft resolution for adoption by the ILA based on the anticipated HLP report. However, as of 8 August 2016, the report had not been issued.

The Chair opened the floor for questions on Professor Abbott's presentation.

Mr Steven van Hoogstraten (Netherlands) asked if a draft of the HLP report was available.

Professor Abbott responded that there was no draft available, but that both submissions made by Committee members were available on the ILA website.

Mr Dipak Bhattacharyya (India) noted that 70% of the Indian population did not have access to any essential medicines due to high prices. Furthermore, there was no reference to alternative medicines. He mentioned that there should be more discussion on alternative medicines in the global health scenario. He asked the panellist whether there were any concerted efforts to address these issues. He noted that high prices set by patent holders was preventing the general public from accessing medicines. Any report or presentation of the Committee should take these issues into account. Mr Bhattacharyya also expressed concern at the lack of representation from China on the Committee.

Professor Abbott noted that most of the work of the Committee so far had been directed at improving accessibility to medicines. He pointed to the fact that the Committee's primary submission precisely addressed this issue. He also pointed to the fact that the Indian government allocated a very low proportion of its budget to assure accessibility of medicines (less than almost every other country in comparable circumstances). Therefore, one could not talk about what was going on in India without talking about governmental budgeting priorities. While the domestic pharmaceutical industry in India had been very

successful, there had not been much effort in channelling those medicines to the wider Indian population as compared to exporting them. India was a very complex picture and there was a lot of work to be done.

Professor Abbott added that a lot of attention was being paid to the topic of alternative medicines. For example, in China, 25% of the medicines budget went to providing these types of medicines (traditional Chinese medicines). The Committee had not been very much involved in this topic, but was aware of its importance.

Mr Xavier Seuba (Spain) noted that, in the 2000s, the WHO organised an event on the topic of alternative medicines and promoted the adoption of national policies on traditional medicines. Admittedly, there had been little research on this, particularly from a legal perspective. The topic had not yet received the attention of the legal community.

Mr Bhattacharyya referred to the fact that India had an infant mortality rate of 25% as evidence that these issues were very pressuring for the country.

Dr Ruth Atherton (US) thanked Mr Bhattacharyya for raising important questions. She then proceeded to give a presentation on the legal issues surrounding access to research materials, including biological materials, and the results of clinical research.

To begin with, Dr Atherton offered a definition of global health research materials as pathogens (viruses, bacteria, microorganisms that cause disease) and clinical materials (human biological samples such as blood or tissues). She then explained why access was needed. The primary goal of global health research was to bring medicines, vaccines and diagnostics to people in need. Access to these research materials was a critical step in the process of developing new therapeutics.

She gave the example of the early work of Edward Jenner in England in inoculating a child against smallpox by collecting samples of fluid from cowpox lesions, which set the stage for all vaccinations worldwide. That work involved access to pathogens (cowpox and smallpox) and access to clinical material (the milk-maid who had contracted cowpox and the child who was inoculated). Dr Atherton showed how the importance of access began at the fundamental level of access to the pathogens and clinical materials to develop new therapies and vaccines.

Today, higher standards existed, a global desire for information and material sharing to allow access was widely increased, and a complex array of considerations – including pricing and stakeholder incentives – arose for global product development.

Dr Atherton referred to the way in which the Ebola crisis highlighted continuing gaps in access to medicines and vaccines, particularly for those who were more vulnerable. Unfortunately, product development timelines were not aligned with the needs of patients and communities undergoing a crisis. Product development needed to be optimised for the needs of the patient. The uncertain legal situation involving the pathogens and clinical materials needed for new therapeutics, vaccines and diagnostics led to an unpredictability as to whether and how these materials would be shared.

Dr Atherton then discussed the question of how these research materials were to be used. To illustrate she referred to "development phases" for medicines and vaccines, which began with the discovery in order to identify the target molecules that have the potential

to lead to future products. This was followed by extensive study of the molecules with the highest potential in animals and in-vitro models during the pre-clinical phase. If this was successful, candidates could progress into clinical development, where they were analysed for safety and efficacy. These studies were done in humans, beginning with health volunteers typically and progressing into appropriate patient populations. Trials became increasingly costly as they progressed. The goal was to prove to regulatory agencies that a marketing approval was justified, that the product was safe and effective, and that the risk-benefit analysis tipped towards the patient. Along the way, patient samples were collected and helped in identifying the causes, manifestations and incidences of these diseases. Both types of materials could be used in aspects of product development. While timelines varied and costs were debated, it was generally understood that this process could take a decade and cost hundreds of millions of dollars.

Dr Atherton next addressed the relationship between the stakeholders and the regulatory and legal framework for both pathogens and clinical materials. With regard to pathogens, there were two important frameworks – one that was very broad, and one that was specific to a single pathogen. The *Convention on Biological Diversity* (CBD) was based on the principle of sovereignty over genetic material and provided for access to that material on terms mutually agreed by States Parties. Genetic material was defined to mean "any material of plant, animal, microbial or other origin containing a functional units of heredity" (Art 2). A principal objective was to fight biopiracy. There was also the *Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization*, which further implemented details of the CBD. On the other end of the spectrum was the Pandemic Influenza Preparedness Framework. This was a specific non-binding framework that provided for the sharing of viruses and contemplated the role of private companies, academics and laboratories in addition to States.

With regard to clinical materials, there were international principles including the *Declaration of Helsinki* and the International Council for Harmonization of Technical Requirements for Registration of Pharmaceuticals for Human Use. Both of these processes were broadly accepted, but human subject research was regulated nationally. By way of illustration, the International Compilation of Human Research Standards enumerated over 1,000 laws, regulations and guidelines that govern the topic in 120 countries. Differences in these regulations created highly complex legal and operational problems for multijurisdictional trials concerning the subsequent sharing and use of materials. Materials need to be transported from the site of collection to the site of research. Here, one must examine the role of bio-risk, bio-safety and bio-security. In this context, bio-terrorism and bio-security could not be overlooked. The first synthetic polio virus was reported to be made in 2002, and subsequent laws enacted in the US banned the synthesis, use, transfer or possession of smallpox virus with penalties up to life imprisonment. Similarly, a WHO advisory group recommended that recreation of the polio virus should be prohibited. Legal prohibitions might not achieve avoidance of intentional bio-terrorism attacks. This must be part of the access considerations of the Committee.

Finally, Dr Atherton referred to other considerations that needed to be taken into account, including the broad spectrum of stakeholders that were needed to develop important therapeutics. Academics, clinical researchers, States, NGOs, funders, intergovernmental organisations each played a role in product development. Creating an environment that

encouraged sharing and distribution must take into account existing incentives and disincentives beyond legal considerations. Dr Atherton concluded by noting that, while the focus of her presentation did not allow for a full analysis of various factors – including cost and timelines, liabilities inhibiting the development of medicines, and prices that must be balanced to allow product accessibility – these factors must not be overlooked.

The Chair opened the floor for questions on Dr Atherton's presentation.

Mr Bhattacharyya noted that patients were being used as guinea pigs for the trials of international pharmaceutical companies. This harmful syndrome on the underdeveloped masses happened a lot, especially in India. In the previous two years in India, trials had been put forward without notifying patients of harmful side effects. The world was focused too much on the Zika virus while India battled with dengue fever. Every day, 105 individuals died from dengue fever. There should be a watch dog to monitor occurrences of epidemics in other areas of the world. Mr Bhattacharyya agreed with Dr Atherton about access.

Dr Atherton thanked Mr Bhattacharyya for his intervention. She acknowledged that she did not give enough attention in her presentation to the issue of informed consent, and acknowledged the expertise of Mr Bhattacharyya on this issue. Informed consent was one of the most critical principles of medicine and became particularly important in the context of a vulnerable populations. The compilation of laws referred to in her presentation was largely driven by the complexities and importance of informed consent. The laws around clinical trials had evolved to ensure protection of the patient. So it was disheartening to hear that this was potentially not occurring in the way that all of us would like to see done.

Dr Atherton noted that the focus of her work was to look upstream at the creation of medicines. She acknowledged that, once the regulatory approval was received, the hard work began.

With regards to dengue fever, Dr Atherton noted that it was something of which she was well aware in her role at the Bill & Melinda Gates Foundation. There were organisations trying to eliminate dengue fever. Obviously, neglected tropical diseases were a critical part of access, and medicines needed to be provided to treat patients in need.

Dr Seuba reacted to the issue of informed consent. Informed consent was a customary rule of international law, finding expression in the Nuremburg trials and in international treaties. The Committee would find sources of international health law in various places (including the WHO and WTO). Some of these sources were probably too old, while pharmaceutical standards had evolved into a very important source. There were now more sophisticated rules to apply in the context of clinical trials.

Dr Atherton noted the intersection between technology and informed consent, particularly in that it was becoming more common for consent to be videotaped or recorded in some electronic manner. There were only a few jurisdictions that had jurisprudence on the matter. The interaction was an important and developing area to monitor.

Dr Seuba presented on two parts of the report that he had authored. The first concerned the submission to the HLP on the adoption of a Framework Convention on Pharmaceutical

Innovation. The second concerned international standardsetting in the area of pharmaceuticals. He noted that the HLP submission allowed the Committee to reflect on the broader relationship between public international law and innovation, more particularly pharmaceutical innovation.

The HLP submission advocating the adoption of a Framework Convention on Pharmaceutical Innovation conveyed the following:

- It highlighted the various legal regimes influencing innovation – it responded to the multifaceted nature of pharmaceutical innovation and identified a mechanism to facilitate international coordination and also to foster legal development or international normative action.
- It argued that the relationship between innovation and public international law went beyond intellectual property. Norms found in several international legal regimes impacted on pharmaceutical innovation, including international human rights law, international health law, and international economic law.

Dr Seuba noted that it was not easy to draw up the proposal in a single document as it identified topics that related to very different areas. The objectives of the proposal outlined the following:

- the Convention would facilitate the adoption of clear principles and basic understandings, enable and promote the development of complex legal tools, and prompt the cooperation of diverse stakeholders
- like in other areas of public international law where framework conventions had been developed, the proposal would facilitate the codification of fundamental principles and reach consensus on central points in the fraemwork convention, and address complex topics and more technical areas in specific and independent instruments (protocols)

Dr Seuba noted that there were a number of pillars in the proposed Framework Convention, namely:

- human rights basis for international normative action in the area of health innovation
- recognition of health innovation as a common interest of the mankind
- definition of pharmaceutical innovation as the introduction of new products and processes that create value for health
- identification of relevant stakeholders, a coordination mechanism, and areas of further normative action in additional protocols

Dr Seuba explained to attendees the different kinds of protocols, as outlined in the report.

Dr Seuba mentioned that there was an intense relation between public international law and pharmaceutical innovation, which was reflected in this report. Both the normative technique and mechanism to develop the proposal were typical of public international law. Moreover, at least eight international organisations or programs were relevant for the purposes of the adoption of the new regime.

Dr Seuba explained the special relevance of WTO law to the proposal. In this regard, he noted that TRIPS was relevant to IP management, the General Agreement on Trade in Services (GATS) was relevant to facilitating the international mobility of scientists, the Agreement on Subsidies and Countervailing Measures (ASCM) was relevant to the acceptability of subsidies in health-related areas, and agreement on Technical Barriers to Trade (TBT) was relevant to conditions for drug development.

Dr Seuba noted that the international structure and adoption process could not happen without the support of stakeholders. The success of an initiative of this caliber required broad international support, including:

- States with research-based economies, emerging economies, as well as countries with pressing health needs
- international organisations
- companies supplying different segments of the pharmaceutical market
- scientists
- non-governmental health organisations

The Framework Convention would be negotiated by means of international conferences. Previous partial attempts would be the source and point of departure. A light coordination mechanism would be in charge of monitoring the action of concerned stakeholders.

The Chair opened the floor for questions on Dr Seuba's presentation. He kickstarted discussions by querying the interaction between the Framework Convention and existing areas of law. Dr Seuba's presentation noted that proposal would in part clarify certain matters in the WTO agreements, but the Chair queried whether legally this would actually work. One of the aims of the proposal was presumably to take some of this discussion outside existing mechanisms and to put it into the new mechanism. However, unless all WTO members were to become party to the proposed Framework Convention, there would be a potential conflict between these existing treaties and the Framework Convention and protocols. Then the question would be the extent to which the WTO dispute settlement system and other systems would be able to take these protocols into account in interpreting the WTO agreements.

Dr Seuba responded that he had given some thought to this issue. He thought that the protocols would be the right place to reach compromise by participating member states to precisely address these type of issues in the context of relevant institutions and organisations. He thought that it was perfectly possible to achieve this objective. The other response was that having on board the relevant organisations was the best way to distribute these functions. The idea was to coordinate existing mechanisms and organisations that so far addressed health related issues.

Mr van Hoogstraten queried the problem that the proposed Framework Convention would actually be solving. Why create a whole new structure with 190 countries if there was an existing structure and the only problem was with coordination.

Dr Seuba agreed that coordination was a problem but that it was not the only problem. Existing organisations had a clear mandate to carry out specific tasks. Having a common

document identifying clear principles and clear objectives would facilitate responding to the health needs and innovationrelated concerns.

Professor Locknie Hsu (Singapore) intervened with two questions for the panel. The first concerned managing corruption with respect to pharmaceutical innovation; the second concerned the use of sovereign wealth funds for funding.

Professor Abbott responded that, while the proposed Framework Convention did not address corruption, the Committee did have a strong interest in competition law and competition law principles. The Committee had been looking closely at procurement clauses and practices, and noted that one key element globally in reducing costs and improving supply chains was to increase transparency in procurement processes. This was something that would be incorporated more directly into the Committee's inquiry, and was work that the UN Development Programme was doing on the ground right now.

With respect to the second question, Professor Abbott was not sure whether the Committee had specifically reflected on a potential role of sovereign wealth funds. These funds could be looked at in terms of contributions to reforms and innovation processes and whether that could fit into some type of delinkage proposal or factored in to push-pull mechanisms in the development of new medicines. Professor Abbott posited that in Singapore, a lot of biotech innovation was being funded by sovereign wealth funds.

Dr Seuba mentioned that sovereign patent funds were a new and contentious tool that was being used by States such as China, Singapore and France. The Committee had not yet researched this area from a legal point of view because it was still a new initiative.

Professor Abbott asked Professor Hsu to unpack her question on sovereign wealth funds, and whether she had something specific in mind.

Professor Hsu responded by noting that the Norwegian sovereign wealth model worked well for Norway. This model might assist the Committee in getting new stakeholders to fund expensive research.

Professor Abbott thanked Professor Hsu for this suggestion.

Dr Atherton cited an example of funds in Japan that specifically targeted global health innovation. Where innovators were partnering with industries in States, it allowed them to access a variety of sovereign funds or co-funding for global health. There were a few models out there that were starting to take hold, so it is something to monitor with interest.

Professor Abbott observed that much of the public private partnership (PPP) funding was coming from development funds, such as the Dutch development fund and the British development fund. Those are contributions made without an expectation of return on investment. In the Middle East, a number of wealthy governments are investing in health, the funds for which were coming from sovereign wealth funds

Dr Atherton thought that some of these funds were looking at specific returns and criteria for returns so they were operated more as a venture capital style investment as opposed to PPP, which tended to be more grant like.

Mr Bhattacharyya (India) suggested having a country specific protocol rather than a general protocol. India had the biggest corruption in the healthcare over the past three years. In the last two years, its rural health funds from WHO, UN and other rich countries had been defalcated. Things were going beyond imagination. Where was this money going? There should be a system in place that monitored how the money was being spent. The Committee should push for more transparency as the underprivileged were suffering from the mismanagement of funds.

Dr Seuba thanked Mr Bhattacharyya for his intervention, and suggested that it might be useful to have a bilateral treaty, for example, between India and the US. South to south initiatives took place, but the ideal situation would be a global convention.

Professor Abbott responded to Mr Bhattacharyya by adding that the Committee could highlight this as a general problem in the hope that pointing it out would help those in the country to put pressure on government to address the issue. From the outside, it was very difficult to know what one would suggest that would help address and identify the problem. The World Bank did a large scale study on the issue in India. What the Committee could do to help from the outside was a very good question, and one on which further reflection was needed.

Dr Seuba continued with his presentation on the second part of the report that he authored –international standardsetting in the area of pharmaceuticals. In parallel to the debate relating to innovation and access, there was another scientifically complex debate touching upon the quality, safety and efficacy (QSE) of medicines. Whereas the former frequently focused on IP, the latter essentially related to technical standards. Marketing authorisation of medicines depended on the satisfaction of standards of national and international origin. QSE of medicines was certified through laboratory tests and clinical trials on animals and persons as well as the fulfillment of manufacturing, distribution and management standards.

Dr Seuba noted that, in the area of international harmonisation, we find the harmonisation of pharmaceutical nomenclatures, the standardisation of pharmaceutical compositions, the adoption of harmonised guidelines relating to activities in the preclinical, clinical, production and distribution phases of the medicines chain, and the harmonisation of documentation submitted for pharmaceutical registration. The purpose of international harmonisation in this field was to:

- avoid the repetition of tests already carried out, or the conduct of tests very similar to others already carried out
- accelerate the entry of products into the market
- avoid the creation of entry barriers to foreign competitors.

Dr Seuba then referred to the public institutional dimension of international harmonisation, referring to the international standard-setting organisations referred to in Part VII of the report, including the development of the International Council for Harmonization of Technical Requirements for Registration of Pharmaceuticals for Human Use (ICH).

Dr Seuba explained the relevance of the WTO Agreement on Technical Barriers to Trade, as set out in Part VII of the report.

Dr Seuba also mentioned some controversy associated with ICH, namely:

- the risk that the ICH process results in excessively demanding standards
- the risk that the ICH blocks debate on presently contentius scientific issues
- conflict or missmatch with human rights and ethical standards (as drawn out in Part VII of the report).

Dr Seuba added that the ICH must be praised for the adoption of high quality standards, but added that its membership and external participation should be broadened. Other countries should become full members, associations of patients and consumers should join as observers, as should generic manufacturers' associations.

Dr Seuba finished his presentation by questioning the role of the WHO, in view of Art 2(u) of its Constitution, which provides that WHO's functions included the development, establishment and promotion of international standards with respect to food, biological, pharmaceutical and similar products.

Professor Abbott thanked the chair for facilitating the session. He then referred to the beginning of his presentation, where we identified four basic thematic areas which included access to research materials, access to essential medicines, tenstions with trade/investment agreements, and links with human rights law. The Committee had made good progress in each of these areas. Of course, with this Committee and with the ILA in general there was a resource limitation. Global public health was a huge area with hundreds of subtopics, of which many were highly specialised. The Committee only had 14 members, and there were limitations on how much they could do. For the moment, our mission was to move each of this areas forward progressively, while addressing the systemic impact of climate change on the environment and the potential for degradation of public health.

The Chair thanked attendees for their participation.

Draft Report on Aggression and the Use of Force (May 2016)

The current draft is the latest version containing the updates and revisions by the Chair and Rapporteur following the last meeting of the Committee, and is being presented to the Committee members for further discussion at the Johannesburg conference. The Committee has held four meetings thus far, at the University of Essex, at the Sofia ILA conference, at the University of Cambridge, and at the Washington ILA Conference. Most members of the Committee have contributed to the report, whether at the meetings or in writing, and twelve members prepared background research papers which contributed to the drafting process. The fifth Committee meeting will take place at the Johannesburg

conference, and the outcome of discussion should move forward the final drafting of the report for adoption at the next ILA conference.

Part A: Context

A.1. Introduction

The Committee's mandate concerns the international law on the use of force (*ius ad bellum*); it does not deal with international humanitarian law or international human rights law, though these fields of law may be engaged in any particular case.

On one view the rules of international law on the use of force are relatively easy to state, though they can be difficult to apply in practice. The rules are to be found in the United Nations Charter, in other treaties, and in customary international law.[1] The Charter contains, among the Principles of the United Nations, a prohibition of the threat or use of force (Article 2, paragraph 4) and this indisputably is part of customary international law. The Charter refers to two not unrelated circumstances in which the prohibition does not apply. First, forcible measures may be taken or authorized by the Security Council, acting under Chapter VII of the Charter. Second, force may be used in the exercise of the right of individual or collective self-defence, recognized in Article 51 of the Charter, if an armed attack occurs. A further exception that has been suggested, but which remains controversial, is the use of force to avert an overwhelming humanitarian catastrophe (sometimes referred to as 'humanitarian intervention'). This is not mentioned in the Charter, and would have to be found, if at all, in customary international law. Force used at the request or with the consent, duly given, of the government of the territorial State is not a true exception: it is discussed below. The use of force in retaliation (punishment, revenge or reprisals) is illegal.

Together with the obligation to resolve disputes peacefully,[2] the prohibition of the use of force in Article 2(4) is a cornerstone of the United Nations Charter.[3] In the pre-Charter era of the League of Nations, the Covenant of the League adopted a formulation that failed to meet its objective, in part by focusing on the prohibition and regulation of 'resort to war'

---

[1] The political organs of the United Nations, in particular the General Assembly, have contributed to the law through consensus resolutions: Declaration on Principles of International Law concerning Friendly Relations and Co-operation among States in accordance with the Charter of the United Nations (Friendly Relations Declaration) (GA res. 2625 (XXV)); Definition of Aggression (GA res. 3314 (XXIX)); Declaration on the Non-use of Force 1988 (GA res. 42/22). So too has the International Court of Justice in a series of judgments and advisory opinions: *Corfu Channel (United Kingdom* v. *Albania)*; *Military and Paramilitary Activities in and against Nicaragua (Nicaragua* v. *United States of America)*; *Legality of the Threat or Use of Nuclear Weapons* advisory opinion; *Oil Platforms (Islamic Republic of Iran* v. *United States of America)*; *Legal Consequences of the Construction of a Wall in the Occupied Palestinian Territory*; *Armed Activities on the Territory of the Congo (Democratic Republic of Congo* v. *Uganda)*: see C. Gray, "The International Court of Justice and the Use of Force", in C J Tams, J Sloan (eds.), *The Development of International Law by the International Court of Justice* (2013), pp. 237-261. See also Eritrea-Ethiopia Claims Commission, *Jus ad bellum* awards: 45 I.L.M. 430 (2006): see Murphy, Kidane & Snider, *Litigating War: Mass Civil Injury and the Eritrea-Ethiopia Claims Commission* (OUP, 2013).

[2] UN Charter Articles 2(3) and 33.

[3] *Armed Activities on the Territory of the Congo (Democratic Republic of the Congo* v. *Uganda)*, *judgment, I.C.J. Reports 2005*, p. 168, at p. 223, para.148.

and thus giving rise to arguments that it allowed uses of force not declared as war.[4] The UN Charter rectified this, broadening the prohibition by prohibiting the threat or use of 'force', as opposed to the narrower 'war'.

Accordingly, the meaning of 'force' requires clarification. More specifically, there are two key matters which must be addressed: i) what is the nature of the prohibited force; and ii) whether the aim for which the force is used is a determining factor in its prohibition. We consider these questions below, as well as the meaning of the concept of 'armed attack' for the purpose of the right of self-defence and the possibly autonomous concept of 'aggression'.[5]

A.2. Clarification of the different *jus ad bellum* terms and concepts

'Use of force'

The substantive nature of force was the subject of much debate during the drafting of the UN Charter, but while there were proposals to include economic pressure as a form of force, these were not accepted.[6] Coercive measures *per se* are not equated with the type of force envisaged in Article 2(4), although they may violate other prohibitions, such as the principle of non-intervention.[7] Article 2(4) is generally accepted as referring to the use of 'armed' or 'physical' force.[8] This interpretation was confirmed in the list of

[4] I. Brownlie, *International Law and the Use of Force by States* (OUP: Oxford, 1963), pp. 59-60.

[5] The literature is vast. See, for example, C H M Waldock, "The Regulation of the Use of Force by Individual States in International Law" (1952) 81 *Recueil des Cours* 455; D W Bowett, *Self-Defence in International Law* (1957); I Brownlie, *International Law and the Use of Force by States* (1963); T M Franck, *Recourse to Force. State Action Against Threats and Armed Attacks* (2002); C Gray, *International Law and the Use of Force* (3rd ed., 2008); Y Dinstein, *War, Aggression and Self-Defence* (5th ed., 2012); O. Corten, *Le droit contre la guerre* (2nd ed., 2014) – for an earlier edition in English, see O. Corten, *The Law Against War. The Prohibition on the Use of Force in Contemporary International Law* (2010); *The Oxford Handbook of the Use of Force in International Law* (ed., M. Weller, 2015). The *Institut de Droit International* (through its Tenth Commission – Present Problems of the Use of Force in International Law) has worked on a number of use of force issues and adopted four resolutions: Self-defence (27 October 2007, Santiago); Humanitarian action (27 October 2007, Santiago); Military assistance on request (8 September 2011, Rhodes); Authorization of the use of force by the United Nations (9 September 2011, Rhodes): see also the 'Complementary Report' on 'Humanitarian intervention/humanitarian actions' by the Secretary General of the Institut, Joe Verhoeven, for the Tokyo session in 2013.

examples appearing in the Friendly Relations Declaration.[9] The latter also clarifies that the prohibition of force extends to *indirect* force such as arming rebel groups.[10]

The reference in Article 2(4) to force "against the territorial integrity or political independence of any state" has been at the heart of arguments supporting use of force in circumstances that could be claimed as having other objectives (e.g. humanitarian intervention).[11] This interpretation, however, has two notable flaws. First, an examination of the *travaux* of the Charter demonstrates that the inclusion of the reference to territorial integrity or political independence was not intended to narrow the prohibition. Rather, it was an addition intended to emphasise and recognise the equal sovereignty of weaker or post-colonial states.[12] Second, Article 2(4) goes on to state "or in any other manner inconsistent with the Purposes of the United Nations". It is clear that "the intention of the authors of the original text was to state in the broadest terms an absolute all-inclusive prohibition; the phrase 'or in any other manner' was designed to ensure that there should be no loopholes."[13]

A final question is whether there is any threshold of seriousness below which a use of force does not fall within the Article 2(4) prohibition. There is some indication from State practice and case-law that there is indeed a *de minimis* threshold.[14] For example, law enforcement activities such as the enforcement of a State's fisheries jurisdiction, kept within a limit of reasonableness and necessity,[15] may not qualify as a use of force. Of course, a law enforcement situation may evolve into one of prohibited use of force.[16]

The relatively wide net cast by Article 2(4) is part of the UN Charter's overall objective to reduce the use of force by states to the point where it can only take place with UN authorisation or in self-defence against an armed attack. Nonetheless, even a wide interpretation of force under Article 2(4) has its limits. Economic pressure, as noted earlier, is excluded from the notion of force in this context. The limitation to armed or physical

force, however, faces certain challenges in light of recent and potential future developments, such as inter-state cyber operations.

'Armed attack'

"Armed attack" signifies a threshold for an act that provides the trigger for the exercise of the right of self-defence, thus requiring an understanding of which acts qualify as armed attacks. Conflation of the term with 'use of force' can have dangerous implications. The comparatively wide approach often advanced with regard to the prohibition of force is understandable in light of the Charter's aims to minimise the recourse to force. However, if 'force' and 'armed attack' were to be seen as one and the same, the more acts that are banned as a result of being considered 'force', the more acts would have to be accepted as 'armed attacks' which trigger the right to self-defence – thereby widening the circumstances in which states can justify forcible action and leading to the opposite of the Charter's intentions. On the other hand, it may be regarded as dangerous to see a gap between "use of force" and "armed attack", since doing so arguably invites coercion below the threshold of "armed attack", knowing that the other side cannot respond.[17]

"Armed attack" therefore requires a definition of its own. There is some controversy with regard to a number of elements. The first is whether there is a threshold which can be measured in terms of scale and effects and whether this excludes so-called 'minor border incidents'. In the *Nicaragua* judgment the ICJ asserted that it was necessary "to distinguish the most grave forms of the use of force (those constituting an armed attack) from other less grave forms."[18] In paragraph 195, the Court explained that the difference between 'armed attacks' and less grave forms of the use of force was primarily one of 'scale and effects' and gave an example of acts which did not constitute armed attacks, but which could nonetheless qualify as less grave forms of the use of force, that is, 'assistance to rebels in the form of the provision of weapons or logistical or other support.'[19] These statements have given rise to controversy and the Court's exclusion of 'mere frontier incidents' has come in for particular criticism.[20] State practice indicates that small-scale border attacks involving the use of lethal force are not excluded from the concept of 'armed attack' and may give rise to the right of self-defence[21] Overall, it would

[17] For a US view, see Taft, "Self-Defense and the Oil Platforms Decision", 29 *Yale J. Int'l L.* 295 (2004); see also Matheson, *International Civil Tribunals and Armed Conflict* 252-55 (2012).

[18] ICJ, *Nicaragua, loc. cit.,* supra n. 2, at para. 191. See J.A. Green, *The International Court of Justice and Self-Defence in International Law* (Oxford: Hart Publishing, 2009), at 31-36.

[19] ICJ, *Nicaragua, loc. cit.,* supra n. 2, at para. 195: "Such assistance may be regarded as a threat or use of force, or amount to intervention in the internal or external affairs of other States." In the *Oil Platforms* judgment, the Court repeats the distinction between "the most grave forms of the use of force" and "other less grave forms", and reaffirms that only the former qualify as 'armed attacks' ICJ, *Oil Platforms, loc. cit*., supra n. 2, at paras. 51, 64.

[20] As one distinguished author put it, "[*T]here are frontier incidents and frontier incidents. Some are trivial, some may be extremely grave*." G.G. Fitzmaurice, 'The Definition of Aggression', (1952) 1 *I.C.L.Q.*, pp. 137-144, at 139.

[21] See, for example, statements by Pakistan, Thailand, Cambodia, and Israel, in relation to border incidents. In particular, the 2006 conflict between Israel and Hezbollah in Lebanon and Israel included disagreement over the initial categorisation of the opening incident in July 2006, which might be considered as a 'border incident'. The majority of States speaking on this matter appeared to support the invocation of Article 51 self-defence by Israel (including eleven of the Security Council

appear that the determining criteria would more appropriately be centered upon questions of scale and effects of the attack rather than proximity to a border fence.

A further controversial issue is whether hostile intent must be displayed. Evidence can be drawn from the Definition of Aggression, the case-law of the ICJ and State practice to support the argument that *mens rea* is a relevant factor for determining whether an 'armed attack' has occurred. [22] Yet the better view might be that while hostile intent is not an essential element of an armed attack, the existence of mistake or accident is highly relevant in deciding whether the use of force in self-defence is necessary.

Another question is whether a number of incidents which alone might not be armed attacks might be seen as together being an armed attack: the so-called accumulation of events theory. There is some, not entirely consistent, evidence in support of the theory, but it has not been widely accepted. The accumulation of attacks is however relevant from the point of view of proportionality: if a state uses force in self-defence against an attack which is the latest in a series, the assessment of the proportionality of its response may be in relation to the series of attacks, not simply the last one.

Finally, can attacks against state interests or nationals abroad be considered armed attacks against the state? The question of the protection of nationals is dealt with in section B.2.c below. As regards emanations of a State such as embassies and warships, practice indicates that no territorial nexus is needed, and attacks on them, and also in some circumstances on merchant vessels, may constitute armed attacks for the purpose of self-defence.[23]

'**Aggression'**

Consideration of the concepts of 'force' and 'armed attack' shows that the two are not the same assuming that there is a gravity threshold for acts to qualify as armed attacks. Thus while every 'armed attack' will constitute a 'use of force' the reverse is not the case. The question arises of where the concept of 'aggression' fits in.

During the Charter negotiations, the term 'aggression' was found to be too controversial for use in demarcating the scope of the right of self-defence; instead that right was made contingent on what was regarded as the more neutral concept of 'armed attack'[24] 'Aggression' was however used in the Charter in a different context, notably as one of the three circumstances listed in Article 39 (together with 'threats to the peace' and 'breaches of the peace') in which the Security Council might use its enforcement powers. The Definition of Aggression adopted by the General Assembly in 1974 is expressly not intended to define the concept of armed attack. But the relationship between aggression and armed attack is not clear.

Is there a separate and autonomous legal meaning of 'aggression' in the post-1945 era? In the instances in which it appears in the Charter, it might be regarded as a mere

---

members), although many of them simultaneously expressed concerns over the proportionality and nature of Israel's response. For discussion of these cases see Ruys book pp.156-157, 452-453. See also discussion of the differing views in Gray pp.177-183.

[22] Ruys p 29

[23] Ruys, pp 32-34 For merchant vessels, see ICJ, *Oil Platforms, loc. cit*., supra n. 2, at §§ 64, 72.

[24] Ruys p 15

'institutional provision, indicating the circumstances in which the UN Security Council may exercise its Chapter VII powers, rather than a provision creating rules of primary international law. It is noted, for instance, that the related concepts of 'threat to the peace' or 'breach of the peace' are not regarded as triggers of State responsibility[25] International case-law is not of help, a finding of aggression being notably absent from the judgment in *DRC* v *Uganda.*

While the 1974 GA Definition of Aggression has in Article 1 an almost exact copy of Article 2(4) of the Charter, indicating a similarity in the drafters' minds between aggression and prohibited use of force, for most of the post-Charter period the concept of aggression has not been addressed in the *ius ad bellum* perspective, attention being focused on 'force' and 'armed attack'. One author has opined that 'even if there is evidence that supports the continued existence of 'aggression' as an autonomous legal concept giving rise to State responsibility, it has arguably remained a dormant concept for most of the Charter era.'[26]

The question arises whether the position has changed since the adoption in 2010 of amendments to the Statute of the International Criminal Court which define the crime of aggression for the purpose of that Court (the Kampala definition). This brings us to the relationship between the *ius ad bellum* and the crime of aggression. It is important to consider whether the distinctions between the Kampala definition and the *ius ad bellum* will have any implications for the latter.[27]

Under the Kampala definition, the crime of aggression is constituted by 'the planning, preparation, initiation or execution', by a person in authority, of an act of aggression by a State, but only it that act of aggression 'by its character, gravity and scale, constitutes a manifest violation of the Charter of the United Nations'. It is this additional qualification or 'threshold' which provides the essential distinction between the crime of aggression on the one hand and State aggression under the *ius ad bellum* on the other... As well as criticisms of this threshold on the ground that it is obscure and difficult to interpret,[28] there have been more fundamental objections. On the one hand it is argued that the threshold results in a definition of the crime which does not reflect accurately the customary law crime of aggression which was confined to participation in a war of aggression; instead of the threshold, a requirement of a special intent (to conduct, for example, an aggressive attack) would have assisted to align the crime more nearly to the customary law crime. On the other hand, it is argued that there should have been neither threshold nor special

---

[26] Ruys

[27] See M. O'Connell and M. Niyazmatov 'What is aggression? Comparing the jus ad bellum and the ICC statute' *JICJ* (2012) 189; S Murphy, "The Crime of Aggression at the ICC", in *Oxford Handbook on the Use of Force* (M. Weller ed., 2015); C. Kress 'Time for Decision: Some Thoughts on the Immediate Future of the Crime of Aggression: A Reply to Andreas Paulus', 20 *EJIL* (2009) 1129 (written before the adoption of the Kampala amendments, but focusing on aspects of the draft amendments which were subsequently adopted without change).

[28] M. Milanovic: 'What exactly, for instance, makes an act of aggression 'by its character, gravity and scale … a manifest violation of the Charter of the United Nations?' The vagueness of these terms is, well, manifest.' *JICJ* (2012) 165 at 170.

intent: participation in *any* breach of Article 2(4) may constitute, it is said, a crime in customary international law.[29]

As the Kampala definition stands, however, the *crime* of aggression to be prosecuted under international criminal law is thus given a narrower definition than the *act* of aggression under the *ius ad bellum*. In broad terms, the description of the act of aggression is similar to the formulation in Article 2(4) of the Charter, although departing from it in insignificant respects, as did the 1974 Definition. An 'understanding' which was adopted at the same time as the Kampala definition states that 'aggression' is 'the most serious and dangerous form of the illegal use of force; and that a determination whether an act of aggression has been committed requires consideration of all the circumstances of each particular case, including the gravity of the acts concerned and their consequences, in accordance with the Charter of the United Nations.'[30]

Concerns have been expressed that the Kampala definition of the crime of aggression, negotiated under political pressure, may harm the *ius ad bellum* definition of aggression. It has been suggested that the definition of the crime should have followed exactly the *ius ad bellum*, and that the Kampala definition will undermine the compliance pull of the *ius ad bellum*. Under this view, 'public international law experts are right to be concerned about the rise of two competing definitions of aggression in public international law. They especially need to be concerned about the newer ICC definition eclipsing the *ius ad bellum* definition.'[31]

Others suggest that the *ius ad bellum* will not be weakened and that, on the contrary, the amendment to the ICC Statute may in practice have a stronger deterrent effect on individuals who direct the affairs of governments. The very existence of the ICC jurisdiction is likely to have an impact on the Security Council and on governments and that impact will be even greater if prosecutions are brought. The ICC will be an additional judicial actor in the system. Further, there is an argument that the Kampala definition has now helped to confirm aggression as a legal concept giving rise to state responsibility under international law. First, the definition of the crime predicates a finding that the state concerned has committed an act of aggression and, second, the definition in some sense gives normative weight to the 1974 GA Definition.[32]

An 'understanding' adopted at the Kampala conference sought to address any concern that the new definition of aggression might prejudice existing law:

> It is understood that the amendments that address the definition of the act of aggression and the crime of aggression do so for the purpose of this Statute only. The amendments shall, in accordance with article 10 of the Rome Statute, not be interpreted as limiting or prejudicing in any way existing or developing rules of international law for purposes other than this Statute.[33]

Whether or not the Kampala definition of the crime departs from the customary law definition, the threshold of 'manifest violation' is relevant only to the crime over which

the ICC will have jurisdiction. It does not affect the definition of 'acts of aggression' and it should not lead to a diminished appreciation of the *ius ad bellum* constraints on States.

Part B: Lawful uses of force

The UN Charter contains provision for two exceptions to the prohibition on the use of force in Article 2(4): Security Council authorization; and self-defence.

B.1 Security Council authorization

While Chapter VI of the Charter deals with the pacific settlement of disputes, Chapter VII concerns action with respect to threats to the peace, breaches of the peace, and acts of aggression, and Chapter VIII provides that the Council may utilize regional organizations for enforcement action under its authority (Article 53).[34] Force used with the authorization of the Security Council under the Charter does not fall within the prohibition of the use of force. Resolutions authorizing States, or in some cases international organizations, to take 'all necessary means' or 'all necessary measures' will usually be prefaced by an express determination of the existence of a threat to international peace and security (Article 39). There is usually a reference to Chapter VII, or to Article 42, but this is not essential. What is essential is a wording in a Council decision that authorizes the use of force. The resolution by its mandate describes the task that is to be performed by the authorized operation and will frequently require reports to the Council on the conduct of the mission.

Resolutions authorizing the use of force are adopted under Chapter VII of the Charter, and almost always contain an express reference to Chapter VII (or provisions thereof).[35] In order to act under Chapter VII, the Council must determine the existence of a threat to the peace, breach of the peace, or act of aggression, and such a determination is normally included in the authorizing resolution. The most crucial element is the language of the resolution, which indicates both whether force has been in fact been authorized, and if so by whom and for what purpose.

Resolutions authorizing one or more States or international organizations to use force often refer to the taking of 'all necessary means' or 'all necessary measures', which is generally understood to include the use of force.[36] Such resolutions ought to be clearly drafted, though sometimes the need for agreement within the Council can lead to unfortunate ambiguities.[37] To interpret a resolution regard may be had to all the circumstances, and recourse may be had inter alia to statements made by Council members at the time of adoption.[38] There is no such thing as an 'implied authorization' to use force: force has either been authorized or it has not.

---

[34] Article 53 contains the important proviso that "no enforcement action shall be taken under regional arrangements or by regional agencies without the authorization of the Security Council."

[35] It is often thought that a reference to Chapter VII implies the use of force. That is not the case, as the Council may make recommendations under Chapter VII as well as decide on measures to be taken, and the measures it may decide upon include those not involving the use of armed force (Article 41).

[36] E.g., xxxxxx.

[37] See the controversy over the interpretation of SCR 1441 (2002) and the military operation against Iraq in March 2003.

[38] On the interpretation of Security Council resolutions, see *Kosovo* opinion, para. 94.

The degree of Council oversight of such authorized operations raises important policy questions. Among the questions that arise are the breadth of the authorization (mandate); the nature of any requirement to report to the Council; and whether a particular authorization is time-limited.[39] The reluctance of some states to authorize the use of force in Syria in 2013 may have stemmed from what they saw as overbroad interpretations of earlier authorizations.

It has been suggested that Security Council endorsement should be seen as politically desirable, even in cases of self-defence (and need not affect the right of self-defence).[40]

B.2 Self-Defence

Resort to self-defence is the second exception to the prohibition on the use of force in Article 2(4) of the UN Charter.[41] Since the principle, though not its conditions and qualifications, is uncontroversial, it is common for states against which accusations of aggression are levelled to assert that their use of force was a lawful act of self-defence.[42]

The formulation of the right to self-defence in the UN Charter reflected the tension between recognising the right of states to defend themselves, while not creating too wide an opening in the ban on force whereby claims of self-defence might become the pretext for unlawful force. Accordingly, Article 51 of the Charter was formulated thus:

"Nothing in the present Charter shall impair the inherent right of individual or collective self-defence if an armed attack occurs against a Member of the United Nations, until the Security Council has taken measures necessary to maintain international peace and security. Measures taken by Members in the exercise of this right of self-defence shall be immediately reported to the Security Council and shall not in any way affect the authority and responsibility of the Security Council under the present Charter to take at any time such action as it deems necessary in order to maintain or restore international peace and security."

Article 51 includes a number of restrictions and regulations, and while an armed attack is a necessary trigger for the exercise of lawful self-defence, it is not in itself sufficient – once the right is triggered it is then further regulated by various legal constraints. The role of the Security Council in maintaining global peace and security remains prominent even during the exercise of self-defence. The state must immediately report its exercise of self-defence to the Security Council, thereby encouraging the Council to act if it has not done so already, and placing the matter in the public arena. While failure to report could support an evidentiary claim that the action was not one of self-defence, such a failure is not itself a substantive breach that invalidates the exercise of the right to self-defence.[43]

[40] L. van den Herik, N. Schrijver (eds.), *Counter-Terrorism Strategies in a Fragmented International Legal Order. Meeting the Challenges* (2013), p. 715; see Security Council resolution 2249 (2015) of 20 November 2015.

[41] The reference in Article 51 to an "inherent" right could also support viewing it not merely as an exception, but also as an independent and pre-existent rule.

[42] E.g. Ethiopia-Eritrea; Iran-Iraq; DRC –Uganda; Israel-Iraq reactor;

[43] J. Green, 'The Article 51 Reporting Requirement for Self-defense Actions' *Virginia Journal of International Law*, 55, 2015; Gray p. 122; Ruys, pp. 70-72.

Article 51 provides that the right to self-defence may only be exercised until "the Security Council has taken measures necessary to maintain international peace and security". Again, this is in line with the Security Council's role as envisaged by the Charter. The Article does not elaborate on what these measures might be,[44] but by specifying that these are measures "necessary to maintain international peace and security", an element of effectiveness is assumed. Accordingly, should the Security Council, for example, adopt a resolution condemning the attack but which does not contain measures capable of obviating the need for self-defence, the right to self-defence would be presumed to continue. Security Council resolutions may call for – or even demand –a ceasefire, and the Council has the power to require States, including the defending State, to cease all use of force.[45] If the initial attacking state complies with the Council's demands, then failure by the victim state to cease its own use of force may risk changing its conduct from lawful self-defence into an illegal use of force.[46]

B.2.a Necessity and Proportionality

Action taken in self-defence must adhere to the requirements of necessity and proportionality. These are fundamental principles, and the International Court of Justice has noted that: "[t]he submission of the exercise of the right of self-defence to the conditions of necessity and proportionality is a rule of customary international law."[47] The application of both necessity and proportionality presupposes that the measures are being taken for a legitimate end. If a state commits a prohibited use of force, it cannot then argue that the measures were lawful on the basis of necessity and proportionality; the analysis on the basis of these principles only enters the frame if the measures can in principle be presented as self-defence. There are two primary approaches to defining the legitimate aims of action taken in self-defence: halting and repelling an existing attack; and preventing the continuation of further attacks (as well as ending any existing attack).[48]

The notion that self-defence can only be used to end the current attack resonates with the ideals behind the UN Charter, by minimising the possibilities for lawful recourse to force.[49] There is, however, also significant support and practical reason to accept that

[44] These would include the possibility of Chapter VII enforcement measures of collective security. H. Kelsen, 'Collective Security and Collective Self-Defense under the Charter of the United Nations' 42 AJIL 783 (1948) p.793.

[48] For a detailed analysis with further possible approaches, see D. Kreztmer "The Inherent Right to Self-Defence and Proportionality in Jus Ad Bellum" 24 *European Journal of International Law* 235, 2013.

[49] Ibid

self-defence measures may also take into account the need to make sure that the attacker doesn't simply briefly or deceptively momentarily refrain from operations while planning to continue attacks. It would appear therefore that while self-defence does not automatically justify 'all-out' war to destroy the enemy, the forcible measures can include the need to defend the state from the continuation of imminent attacks, and not only repel the attack of the moment.[50] The risk of abuse will be reduced by two considerations: if the initial armed attack is over, there is more opportunity for the Security Council to be in a position to take measures that would prevent the need for further self-defence. Moreover, the underlying principle in such circumstances is that any measures taken in self-defence must adhere to the principle of necessity.

In the context of self-defence, the principle of necessity requires that the self-defence measures be required in order to achieve the legitimate ends sought. Its origins are often traced to the 1837 *Caroline* incident and the ensuing exchange between Britain and the United States.[51] In this exchange, the following was noted:

"It will be for it to show, also, that the local authorities of Canada,- even supposing the necessity of the moment authorized them to enter the territories of the United States at all,-did nothing unreasonable or excessive; *since the act justified by the necessity of self-defence, must be limited by that necessity, and kept clearly within it.*"[52]

And

"Undoubtedly it is just, that while it is admitted that exceptions growing out of the great law of self-defence do exist, those exceptions should be confined to cases in which the "*necessity of that self-defence is instant, overwhelming, and leaving no choice of means, and no moment for deliberation*."" [53]

In practice, 'no choice of means' is interpreted as requiring that forcible measures be the only available effective measures for self-defence. It does not mean that extensive non-forcible measures must always be attempted, as there may be circumstances such as an ongoing barrage of missiles in which such options cannot reasonably be explored in time and are manifestly futile in the specific context. However, should there be an option of non-forcible measures which would alleviate the need for force while achieving the defence of the state, then forcible measures would not be necessary.[54]

---

[50] This is separate from the question of anticipatory action when there has not previously been an armed attack. See below discussion on anticipatory self-defence.

[51] This revolved around an incident in which involved the British took forcible measures against Canadian rebels in US territory. R. Jennings "The Caroline and McLeod Cases" 32 AJIL 82 (1938).

[52] *Letter from Mr. Webster to Lord Ashburton*, Department of State, Washington, 27th July, 1842, text available on http://www.yale.edu/lawweb/avalon/diplomacy/britain/br-1842d.htm. Italics added.

[53] *Letter from Mr. Webster to Lord Ashburton*, Department of State, Washington, 6th August, 1842, text available on http://www.yale.edu/lawweb/avalon/diplomacy/britain/br-1842d.htm.

[54] "The reason for stressing that action taken in self-defence must be *necessary* is that the State attacked (or threatened with imminent attack, if one admits preventive self-defence) must not, in the particular circumstances, have had any means of halting the attack other than recourse to armed force. In other words, had it been able to achieve the same result by measures not involving the use of armed force, it would have no justification for adopting conduct which contravened the general prohibition against the use of armed force. The point is self-evident and is generally recognized; hence it requires no further discussion." *Addendum – Eighth report on State responsibility by*

The principle of proportionality is additional and separate to necessity. In essence, *necessity* requires the question 'are the self-defence measures necessary in order for the state to defend itself'. Although it is not often used in this manner,[55] *proportionality* should present a different question of whether 'the effects of the measures taken are excessive in relation to that defensive necessity'. Proportionality is a formula requiring the balancing of two elements against each other.[56] It might be said that the measures taken in self-defence must be proportionate to the armed attack which preceded them. Notwithstanding, the preferred position is that the measures be balanced in light of the aims of the self-defence. As examined above, the legitimate aims in this context are to halt any ongoing attack and prevent the continuation of further attacks.[57]

Many of the debates over adherence to the proportionality principle in specific cases have in fact been questions of necessity rather than proportionality.[58] In other words, they have spoken of (dis)proportionality when taking the view that the forcible measures were not necessary in order to defend the state.[59] This is, in fact, a question of the principle of necessity rather than proportionality. In order to asses proportionality, there is a need to weigh the relative interests against each other, thereby assessing whether the harmful effects of the force taken in self-defence is outweighed by achieving legitimate aims.[60] Accordingly, the proportionality criterion requires that the necessity of acting in self-defence be balanced against the harm caused by so doing.

B.2.b Anticipatory Self-Defence[61]

Whether or not a state may rely on self-defence in order to take forcible measures prior to an armed attack is one of the clearest instances in which the line between self-defence and unlawful use of force is most often debated.[62] The English-language version of the Charter provides that the right to self-defence is available "if an armed attack occurs". A temporal aspect is reflected in the use of the word "occurs", which appears to rule out

A/CN.4/318/Add.5-7, Extract from the Yearbook of the International Law Commission:-1980vol. II(1) para. 120; see also analysis of practice in J. Green *The International Court of Justice and Self-Defence in International Law* (Oxford: Hart, 2009) pp.76-80; ICJ, *Oil Platforms, loc. cit*., supra n. 2, at para 76.

[55] Analysis in Kreztmer, *supra,* n.49.

[56] The variables in the formula will vary and proportionality requires different elements to be measured depending on the legal context, with differences between international human rights law, the ius in bello, and the ius ad bellum.

[57] Ago report, para. 121; Berman, Greenwood, Shaw, Wood, all in E. Wilmshurst, *Principles of International Law on the Use of Force by States in Self*-Defence – working paper, The Royal Institute of International Affairs, October 2005, pp.52-57.

[58] Analysis in Kreztmer, *supra,* n.49.

[59] E.g. Israel-Lebanon.

[60] Kreztmer, *supra,* n.49.

[61] The associated terminology is itself a subject of debate. The most often used terms are 'anticipatory', 'pre-emptive', and 'preventive'. There are differing interpretations and differentiations between these terms, none of which can claim to be objectively correct. For the purposes of this report, 'anticipatory' is used as a general term for all self-defence measures taken prior to an armed attack; 'pre-emptive' is used in connection with measures claimed to be defend against future attacks even if said attacks are not imminent or specific.

[62] E.g. Osirak attack

the possibility of taking action in self-defence in advance of an armed attack occurring.[63] The ensuing debate over the legality of anticipatory self-defence has – since the adoption of the Charter – been one of the most hotly contested issues surrounding the right to self-defence under international law.[64]

Positions in the past were likely to advocate one of two possibilities: first, that Article 51 of the Charter has firmly shut the door on any possibility of anticipatory action, and that recourse to self-defence will only become available if an armed attack has occurred.[65] Second, there was the view that allowed for self-defence in the face of imminent attacks.[66] A relatively wide interpretation of the latter position was adopted by the Bush administration following September 2001, with particular reference to 'rogue states', terrorists, and weapons of mass destruction. [67] However, apart from limited state support and a number of commentators, this expanded interpretation received scarce support. There is still a debate between supporters of the original two positions stated above, but recently support seems to be increasing for the view that the right to self-defence does exist in relation to manifestly imminent attacks, narrowly construed.[68] This position has received further validation in the reports of the UN Secretary General, although there does not appear to be a clear majority for either side of the debate.[69]

---

[63] While it is the English version of the Charter that is at the heart of the debates and most often at the centre of discussion, the French version (and Spanish) appears to present a less restrictive temporal phrase ("dans le cas où un Membre des Nations Unies est l'objet d'une agression armée").

[64] Contrast, for example, the views of D. Bowett *Self-Defence in International Law* (Manchester, Manchester University Press, 1958), pp.191-192, and I. Brownlie, *International Law and the Use of Force by States* (OUP: Oxford, 1963) pp.275-278; see below discussion. Supra, Bowett & Brownlie; for some of the earliest discussion see H. Grotius *On the Law of War and Peace De Jure Belli ac Pacis*, Translated by A. C. Campbell, London, 1814, Book II, Chapter 1, V.

[69] "A More Secure World: Our Shared Responsibility" *Report of the Secretary General's High-level Panel on Threats, Challenges and Change* UN 2004, para.188; See also "Imminent threats are fully covered by Article 51, which safeguards the inherent right of sovereign States to defend themselves against armed attack. Lawyers have long recognized that this covers an imminent attack

Accordingly, although the matter remains unsettled, there may be reason to accept that when faced with the clear and present danger of a specific imminent attack, states may engage in measures to defend themselves in order to prevent the attack. Any such measures would have to conform to all the earlier stated requirements of necessity and proportionality which will further constrain the anticipatory use of force, and must give primacy to effective measures by the Security Council. If a state engages in forcible measures self-described as anticipatory self-defence but in fact not as the result of a need to prevent an imminent attack, it will not be able to avail itself of justification by self-defence and its use of force must be examined in light of the prohibitions on use of force and aggression.

B.2.c Self-Defence against Non-State Actors

An additional controversial area in the realm of self-defence is the question of resort to self-defence against non-state actors located in other states. The use of force in such circumstances is not a new phenomenon and has occurred in numerous situations over the past two centuries.[70] The legal debate in the context of self-defence has, however, become a prominent issue following the attacks against the US in September 2001. One approach to self-defence assumes that its primary relevance is in the context of armed attacks by states (or groups acting on behalf of a state).[71] Nonetheless, Article 51 does not specify that the armed attack which gives rise to self-defence must have been carried out by a state, and therefore leaves room for a textual reading that includes attacks by non-state actors. Moreover, there is considerable state practice stretching back to the *Caroline* and more clearly since 2001, which lends support to the claim of self-defence in such circumstances.[72] Ultimately, this rests upon the notion that self-defence is a right that exists in order that states are able to protect themselves when attacked from outside their borders. The source of attack does not change the fact that the state must be able stop it from causing harm. There is no unanimous agreement on this issue at the present stage, although there is growing recognition – including through state practice – that there are certain circumstances in which a state may have a right of self-defence against non-state

---

as well as one that has already happened." *In Larger Freedom: Towards Development, Security and Human Rights for All, Report of the Secretary-General, delivered to the General Assembly*, UN Doc.A/59/2005 (Mar. 21, 2005), para124; but see reactions of a significant number of states who were opposed to a temporal widening of the right to self-defence, including Pakistan, Mexico, Turkey, as discussed in Ruys, pp.339-341.

[70] The Caroline case 1837, US troops sent into Mexico 1916, US strikes in Pakistan, Somalia and Yemen, Israel v Hezbollah, DRC Uganda, Turkey Kurdish rebels in Iraq, Ethiopia Somalia.

Bothe, "Terrorism and the Legality of Pre-emptive Force" 14 *E.J.I.L.* 227 (2003), p.233; S. Alexandrov *Self-Defense Against the Use of Force in International Law* (The Hague: Kluwer Law International, 1996) pp.182-3; G. Simpson, in E. Wilmshurst *Principles of International Law on the Use of Force by States in Self-Defence* The Royal Institute of International Affairs, Chatham House, October 2005, pp.27-28.

[72] For example, US operations against Al-Qaida in Afghanistan and the support this received from other states, Iran and Turkey (separately) against Kurdish groups in Iraq, Israel against Hezbollah in Lebanon and Islamic Jihad in Syria, Ethiopia in Somalia, and others. See analysis in N. Lubell, *Extraterritorial Use of Force Against Non-State Actors* (OUP, 2010), ch.1-3.

actors operating extraterritorially.[73] The military operations on Syrian territory against the so-called Islamic State have, in particular, demonstrated the readiness of a number of states to invoke Article 51 in the context of operations against a non-state actor.[74]

Nonetheless, the modalities of how self-defence might be carried out in this context does raise considerable challenges. A key question in this regard is that allowing for self-defence against non-state actors located in a third state can appear to allow states forcibly to violate the territorial integrity of that state, when the latter is not necessarily guilty of any unlawful act. The state in which the non-state actor is located (the host state) is likely in these circumstances to consider itself a victim of unlawful force. Consequently, the debates over self-defence against the non-state actor itself is inextricably wedded to the question of whether this violates the prohibition of use force against the host state. Care must be taken not to conflate a number of issues in this regard: i) whether, conceptually, a state may invoke the right to self-defence following an attack by an extraterritorial non-state actor; ii) what steps must be taken before any such right can be exercised; iii) whether force against the non-state actor can be distinguished from force against the state; iv) whether the host state might be in violation of international law due to the activities by the non-state actor; v) if so, whether this justifies force against the host state itself.

While the first two issues can be dealt with separately,[75] the last three are often intertwined. The simple fact that a non-state actor was operating from its territory does not automatically open the host state to lawful forcible measures against it by the victim state. Indeed, claiming such a position would risk neglecting the implications created by allowing for force directly against a state that might not be responsible for the initial armed attack.[76] If the armed attack by the non-state actor can be attributed to the host

Greenwood, V. Lowe, A. Roberts, P. Sands, M. Shaw, all in *Chatham House Principles of International Law*; S. Murphy "Self-Defense and the Israeli Wall Advisory Opinion: An Ipse Dixit from the ICJ?" 99 *A.J.I.L.* 62 (2005) pp.64,67-70; *ibid* for examples of state practice.

[74] See letters to the Security Council by Canada, Turkey, the UK, the US, Australia, France, and Denmark: Letter dated 31 March 2015 from the Chargé d'affaires a.i. of the Permanent Mission of Canada to the United Nations addressed to the President of the Security Council, S/2015/22; Letter dated 24 July 2015 from the Chargé d'affaires a.i. of the Permanent Mission of Turkey to the United Nations addressed to the President of the Security Council, S/2015/563; Letter dated 7 September 2015 from the Permanent Representative of the United Kingdom of Great Britain and Northern Ireland to the United Nations addressed to the President of the Security Council, S/2015/688; Letter dated 23 September 2014 from the Permanent Representative of the United States of America to the United Nations addressed to the Secretary-General, S/2014/695; Letter dated 9 September 2015 from the Permanent Representative of Australia to the United Nations addressed to the President of the Security Council, S/2015/693; Identical letters dated 8 September 2015 from the Permanent Representative of France to the United Nations addressed to the Secretary-General and the President of the Security Council, S/2015/745; Letter dated 11 January 2016 from the Permanent Representative of Denmark to the United Nations addressed to the President of the Security Council, S/2016/34;These letters reflect a mixture of claims relying on collective self-defence and individual self-defence. Either way, even claims of collective self-defence in aid of Iraq must still rest on the recognition that Iraq had the right to engage in cross-border self-defence against IS.

[75] *Supra*, n.48-61, n.71-74 and accompanying text.

[76] This is a particular danger for smaller/weaker states. D. Ahmad "Defending Weak States Against the 'Unwilling or Unable' Doctrine of Self-Defense" Journal of International Law and International Relations 2013

state, then the right to self-defence will be equally against the state. However, without attribution of the armed attack, the host state may have been in violation of other rules of international law – particularly Security Council resolution 1373[77] – but it is mistaken to say that such a violation automatically allows for forcible measures against the host state. Not all violations in the *ius ad bellum* lead to self-defence. Accordingly, if the armed attack is only attributable to the non-state actor, the victim state may have a right to self-defence against the armed group, but not against the state.

Differentiation must be made, therefore, between force against the non-state actor as opposed to force against the host state.[78] For example, an air attack against an isolated camp of the non-state actor might have little effect on the host state itself.[79] In practical terms, this amounts to a differentiation between forcible measures taken *against* the host state, as opposed to forcible measures taken *within* the host state. However, this distinction does not absolve the need to ensure that Article 2(4) is not violated. The preferred approach to Article 2(4) of the Charter aims to prevent any such semantic exception to the prohibition on the use of force. Indeed, such a distinction is not dissimilar to certain arguments aiming to justify humanitarian intervention as not violating Article 2(4). No matter how temporary and limited the incursions are, they will still fall within the scope of Article 2(4).[80] Accordingly, using force within the territory of another state – even if the forcible measures are limited to strikes against a non-state actor – must be considered as within the notion of force as it exists in Article 2(4) of the Charter. Distinguishing between forcible measures *within* but not *against* the state does not, therefore, provide a solution for the *ius ad bellum* concerns.[81] As a consequence, use of force in such circumstances will not be lawful unless justified by self-defence or Security Council authorisation.

Self-defence against non-state actors must adhere to all the requirements and restrictions placed on the exercise of self-defence generally. It can only be triggered by an armed attack, and the debate over the required gravity threshold for determining an event as an armed attack may, arguably, require a particularly high threshold in the context of triggering a right to self-defence against non-state actors.[82] Moreover, its exercise is conditioned by the requirements of necessity and proportionality.[83] In the current context, necessity requires that, if possible, the host state be given the opportunity to halt and prevent the

[77] S.C. Res. 1373 (2001), adopted by the Security Council at its 4385th meeting, on 28 Sept. 2001.

[78] For example, note Canada's position that "Canada's military actions against ISIL in Syria are aimed at further degrading ISIL's ability to carry out attacks. These military actions are not aimed at Syria or the Syrian people, nor do they entail support for the Syrian regime", as well as Australia, both at *supra*, n.76.

[79] Columbia v FARC in Ecuador; Israel v Islamic Jihad in Syria.

[80] A. Randelzhofer "Article 2(4)" in B. Simma, (ed.) *The Charter of the United Nations, A Commentary* (Oxford: OUP, 1994), pp.117-8.

[81] There will however remain a difference with regard to the *ius in bello*, since the classification of a conflict as international or non-international will largely rest on the question of the parties to the conflict. If there is no fighting between the two states but only between the victim state and the armed group, then this may be classified as a non-international armed conflict. See discussion and debates in Wilmshurst classification chapters

[82] See discussion in C. Kress, 'Some Reflections on the International Legal Framework Governing Transnational Armed Conflicts', 15 *Journal of Conflict & Security Law* 2, 2010, p.249; Lubell pp.50-51.

[83] See above section B.2.a on necessity and proportionality.

attacks by the non-state actor through its own law enforcement or other lawful means. Reference is sometimes made in this context to requiring that the host state be unable or unwilling to take adequate action against the non-state actor.[84] Rather than being relied upon as a new justification for resort to force, the unwilling or unable test should be viewed as a component of the necessity criteria. It is an additional test that must be satisfied when taking action against a non-state actor on the territory of another state, and does not obviate the need to adhere to all other obligations attached to the exercise of self-defence. Even after seeking resolution through the host state proves futile, forcible measures by the victim state must be proportionate and be limited to those strictly necessary in the context of self-defence against the non-state actor. Accordingly, even if accepting the right of self-defence against non-state actors, if the forcible measures taken by the victim state unnecessarily include use of force directly against the host state, this may be an instance in which self-defence comes in conflict with Article 2(4).[85] The situation has an added layer of complexity when the non-state actor is operating from more than one state. In such circumstances, a legitimate claim to engage in self-defence on the territory of one state does not provide automatic licence to use force on the territory of other states; the *ius ad bellum* rules as stated above must be applied anew each time.

The debate over self-defence in these circumstances is not settled, and definitive practice is yet to emerge. It must be noted in this context, that the Security Council has the power to take action directed against threats to the peace by armed groups, and has taken measures of this nature in the past.[86] By acting decisively in future situations of such type, the Council could reduce the risk of States taking matters into their own hands.

B.3. Rescue of Nationals Abroad

The rescue of nationals abroad has long presented a challenge to the application of the rules on use of force. It is the subject of contrasting opinions, numerous cases with inconsistent state practice, and ambiguous case-law.[87] The first question to be asked is whether the sending of armed forces to rescue nationals on the territory of another state is an act

[84] See letters by Australia, Canada, Turkey, US, *supra*, n.75; Deeks

[85] See, for example, debates over Israel's actions against Hezbollah in Lebanon in 2006. There is strong argument that Israel had the initial right of self-defence against the Hezbollah, but many critics argue that the nature of Israel's response went beyond the necessary; see also separate opinion of Judge Simma in DRC v Uganda, paras.13-14.

[86] The Security Council has directly addressed armed groups in a number of resolutions, for example when demanding that "the KLA and other armed Kosovo Albanian groups end immediately all offensive actions and comply with the requirements for demilitarization", UNSC Res. 1244 (1999); The Council has authorized action in a number of situations involving violence by armed groups, for example in Somalia, UNSC Res. 1725 (2006), and in the Democratic Republic of the Congo, UNSC Res. 1484 (2003).

[87] See recent examination of debates and analysis provided by Kress; see for example also N. Ronzitti, 'Rescuing Nationals Abroad Through Military Coercion and Intervention on Grounds of Humanity'; W. Friedmann, 'United States policy and the crisis of international law', 59 *American Journal of International Law* (1965); L. C. Green, 'Rescue at Entebbe – Legal Aspects', 6 Israel Yearbook on Human Rights (1976), p. 312; *L. within the scope of use of force covered by Article 2(4) of the UN Charter. If so, then there is a need to enquire whether there are legal grounds for allowing such operations, or whether they might be a violation of Article 2(4) of the UN Charter.

Arguments for excluding such operations from the scope of Article 2(4) rest mainly upon the notion that the force is not intended to jeopardise the "territorial integrity or political independence" of the other state. This, however, appears to contradict the widely accepted approach to Article 2(4) which, as explained earlier, should include any forcible measures on the territory and without the consent of the other state.[88] Notwithstanding, while adhering to this approach to Article 2(4), there may be room to describe certain rescue operations as not consisting of a use of force, for example in the case of operations to evacuate nationals from within general unrest or conflict (as opposed to situations in which they are being attacked or held by a specific party)[89]. Acceptance of such an approach would be enhanced in cases in which the sending state does not engage in any hostilities and in particular if there was at least an attempt to seek permission and if the territorial state does not actively object to the evacuation operations.[90]

If the operations involve direct use of force, then it must be viewed as within the scope of Article 2(4).[91] If so, for such operations to be lawful, there must exist independent grounds that justify them. A number of possibilities have been raised over the years, including the notion of a separate right to conduct rescue operations, reliance on the principle of necessity, and self-defence. While there has been some support for the first two of these,[92] the prevailing view is that, in the post-Charter era, only self-defence can provide for legal recourse to unilateral force that would otherwise violate Article 2(4).[93] Accordingly, to trigger the right to self-defence, it would be necessary to establish the occurrence of an armed attack. As discussed, armed attacks can include actions outside the victim state's territory,[94] although there is disagreement whether attacks against the nationals of a state are included.[95] The view that they are is stronger if it is clear that the nationals have been attacked directly as a result of their nationality and are seen by their attackers as individual manifestations of their state.[96]

Reliance on the self-defence justification will also require abiding by the restrictions placed on the exercise of self-defence. The question of a threshold for armed attack will be pertinent in this case.[97] Crucially, any operations will be subject to the self-defence principles of necessity and proportionality. These must be adhered to strictly in order

[88] See earlier section on scope of 2(4) and similar discussion in sections on self-defence against non-state actors, and on humanitarian intervention.

to prevent the possibility of abusing claims of rescuing nationals as a cover for forcible operations with ulterior motives.[98]

B.4. Consent

The existence of consent may provide an additional lawful basis for a state's armed forces to enter and/or be stationed on the territory of another state. Yet, it should not be thought of as an exception to the prohibition of the use of force. The exceptions of Security Council authorisation and self-defence (as discussed above) remain a violation of state sovereignty, but are excused violations. On the other hand a state's use of force on the territory of another state upon its consent involves no violation of state sovereignty *ab initio*. If consent to the deployment of military personnel is validly given, there is no use of force against the host State.

However, while we may talk of the absence of a violation of *state* sovereignty, it is rather *governmental* authority which is at stake. Indeed, states are permitted in principle to use force in another state, providing it is at the invitation or with the consent of the *government* of the state concerned.[99] One might suggest that this provides a legal basis for the use of force as the government is the legitimate representative of the people of the state concerned. However, it operates as a legal basis for forcible measures as much in the context of autocratic regimes as it does in those which operate under a democratically elected government. Conversely, non-governmental forces are not able to invite or consent to the use of force, whether directly or indirectly, upon the territory of a state. Indeed, the ICJ has held that there is no 'right for States to intervene, directly or indirectly, with or without armed force, in support of an internal opposition in another State'.[100] Notwithstanding, this relatively simple statement of the law is deceptive in that the identity of those providing consent, the parameters of consent, the determination of its existence, and the implications of its withdrawal raise considerable questions in relation to the prohibition of force.

The fact that a government of a state is able to provide consent to the use of force upon its territory opens up questions with regard to identifying the government. The entity consenting to the use of force may be the *de jure* governmental authority even if it no longer controls some or all of the state's territory. In other words, it represents the constitutional government and/or democratically elected power. An entity may also obtain governmental power through exercising effective control over the territory and population of a particular state.[101] External recognition by other states may affect the

---

[98] See debates over US Grenada, Panama; Russia-Georgia. The latter also raises the question of how to define 'nationals'. It has been suggested that there must be a genuine link between the state and the nationals, and it cannot include 'manufactured nationality'. Kress paper; Russia-Georgia report; J.A. Green, "Passportisation, Peacekeepers and Proportionality: The Russian Claim of the Protection of Nationals Abroad in Self-Defence" in J.A. Green and C.P.M. Waters (eds.), *Conflict in the Caucasus: Implications for International Legal Order* (Basingstoke, Palgrave Macmillan, 2010), 54-79.

[99] *Nicaragua* [1986] ICJ Rep 14, 126, at 246

[100] *Nicaragua* [1986] ICJ Rep 14, 126, at 206; *Armed Activities on the Territory of the Congo (Democratic Republic of the Congo v Uganda) (Judgment)* [2005] ICJ Rep 168, 227 [164] ('*Armed Activities*').

[101] As a matter of international law, effective control is arguably the determinative factor for governmental authority. As stated in the *Tinoco* case, it is 'independence and control' that entitles

international legitimacy of a governmental regime.[102] Thus, if an opposition force were to demonstrate large scale effective control over territory within a state and/or receive widespread recognition as the government of the state concerned then it might arguably be lawful *per se* for it to consent to the use of force within its borders.

Requests or approval coming from members of a *previous* government no longer in office, or from the military/intelligence services rather than highest echelons of current government, will not suffice.[103] For consent to be recognised as emanating from the state, it must be freely given by the appropriately authorised highest levels of the lawful government.[104] Furthermore, consent must be given prior to the entry of the armed forces into the state,[105] and situations of apparent contradiction between public denial of consent occurring alongside secret approval by the same government, are a matter for evidentiary proceedings for determination of the said consent.

Generally speaking, consent can allow for the sending of armed forces into a state following the request by its government for assistance in quelling an insurrection.[106] It has been argued, however, that if such internal unrest is to reach the level of a civil war then assistance to either side is prohibited, unless one side is being given assistance in which case it might be possible for states to counter-intervene on the side of the other.[107] However, the apparent acceptance as lawful by the international community of Russia's support for the Assad regime in Syrian civil war might suggest otherwise. In addition, if the requesting government is attempting to quash a legitimate struggle for self-determination then consent will not legitimise the use of force by the sending state.[108] Although there may have been some ambiguity about providing support to groups fighting to achieve an internationally recognised right to external self-determination, or in cases of popular

[108] Declaration on Friendly Relations; Shaw 1148.

mass uprisings against abusive regimes, it is generally prohibited to forcibly intervene on behalf of a rebel movement.[109]

In the absence of the requisite consent from the government, the sending of armed forces will violate the prohibition on the use of force. There may also be circumstances in which consent is given but a violation nevertheless ensues. This can occur if the sending state uses force in a manner going beyond the scope requested and agreed to by the territorial state.[110] If consent has been given and is subsequently withdrawn, failure by the sending state to proceed with removal of armed forces will be in violation of international law. Should the remaining troops engage in hostilities or forcibly resist the territorial state, then this may be an unlawful use of force.[111] If, however, they remain within the military bases previously established by consent – especially during a period of negotiations over procedure for withdrawal – then their mere presence would not necessarily be an unlawful use of force, even though it may be a violation of state sovereignty and allow for non-forcible counter-measures.[112]

Part C: Particular issues

C.1. Humanitarian intervention

The term 'humanitarian intervention' refers to the forceful intervention for humanitarian purposes by a third State or States to save the people of a State from their own Government's action or inaction.

The UK Government was a leading proponent of an exceptional and strictly limited justification for the use of force by states to avert an overwhelming humanitarian catastrophe – not, it should be noted, a general right of humanitarian intervention.[113] The claim was first made in relation to the establishment of the safe havens in Northern Iraq in the spring of 1991.[114] It was 'the underlying justification of the No-Fly Zones' in northern and southern Iraq. And it was restated in the following terms in 1998 in connection with the events unfolding in Kosovo:

> There is no general doctrine of humanitarian intervention in international law. Cases have nevertheless arisen (as in northern Iraq in 1991) when, in the light of all the circumstances, a limited use of force was justifiable in support of purposes laid down by the Security Council but without the Council's express authorisation when that was the only means to avert an immediate and overwhelming humanitarian catastrophe. Such cases would in the nature of things be exceptional and would depend on an objective assessment of the factual

---

[109] Shaw 1152; See examination of practice in Gray 59-64; see also related discussion in section on humanitarian intervention. There has, however, been some debate as to whether this prohibition is restricted to direct forcible intervention and the provision of arms and training, or whether it also extends to non-lethal equipment and supplies.

[110] Res 3314; see analysis in Antonopoulos.

[111] There was some debate as to whether the movements of Russian troops beyond their bases in Sevastepol in Ukraine was a violation of Article 3(e) of the Definition of Aggression (1974) given that no shots were fired.

[112] Antonopoulos

[113] S Murphy, *Humanitarian Intervention: the United Nations in an evolving world order* (1996); C Greenwood, "Humanitarian Intervention: The Case of Kosovo" (1999) 10 Finnish Y.B.I.L. 141; S Chesterman, *Just War or Just Peace: Humanitarian Intervention and International Law* (2001).

[114] (1992) 63 B.Y.I.L. at 827-828.

> circumstances at the time and on the terms of relevant decisions of the Security Council bearing on the situation in question.[115]

The Secretary-General's High-level Panel's report *Our common future* of 2004, and the Secretary-General's report *In larger freedom* of 2005, did not mention such a right. The ensuing General Assembly debate in April 2005 offered no support; those who addressed the question of humanitarian intervention saw it as a matter to be decided upon by the Security Council, not one where unilateral action was permitted. There was no hint of a unilateral right in the 2005 World Summit Outcome. In the final analysis, it may be that the claims made in 1991 and 1999 rested on some exceptional justification of necessity, such as is found in domestic legal systems, rather than on a positive rule of law.[116] Notwithstanding, the claims were repeated in 2013.

Among a number of initiatives stimulated by the need for internationally agreed action to avert extreme humanitarian emergencies, the most influential was the International Commission on Intervention and State Sovereignty, whose 2001 report was entitled *The Responsibility to Protect*.[117] The Secretary-General's High-level Panel endorsed (at paragraph 203):

> the emerging norm that there is a collective international responsibility to protect, exercisable by the Security Council authorizing military intervention as a last resort, in the event of genocide and other large-scale killing, ethnic cleansing or serious violations of international humanitarian law which sovereign Governments have proved powerless or unwilling to prevent.

The Panel went on to propose that the Security Council adopt guidelines as to when it should act. This was proposed expressly to ensure the legitimacy of the Security Council's actions, not their legality. The Secretary-General's report *In larger freedom* was in similar terms. In the event, however, the Security Council did not adopt such guidelines. Nor did the General Assembly support their adoption.

In paragraphs 138 and 139 of the 2005 World Summit Outcome, the Heads of State and Government noted that '[e]ach individual State has the responsibility to protect its populations from genocide, war crimes, ethnic cleansing and crimes against humanity.' They went on to say that 'the international community, through the United Nations' also has the responsibility to use appropriate peaceful means, in accordance with Chapters VI and VIII of the Charter, to help protect populations. The key sentence then follows:

> In this context, we are prepared to take collective action, in a timely and decisive manner, through the Security Council, in accordance with the Charter, including Chapter VII, on a case-by-case basis and in cooperation with relevant regional organizations as appropriate, should peaceful means be inadequate and national authorities are manifestly failing to protect their populations from genocide, war crimes, ethnic cleansing and crimes against humanity.

---

[115] Baroness Symons, *Hansard HL Debs.*, WA 139-40, 16 November 1998: B.Y.I.L., 69 (1998), 593.

[116] Note however that there is convincing support for the view that the use of force cannot be justified on the basis of necessity. See authorities quoted by Ruys p.13.The United States appears not to have embraced such a right. See M Matheson, *Council Unbound: The Growth of UN Decision Making on Conflict and Postconflict Issues after the Cold War* (2006) at 139.

[117] *Report of the International Commission on State Sovereignty and Intervention: The Responsibility to Protect* (2001). This was preceded by a report by the Danish Institute for International Affairs, *Humanitarian Intervention: Legal and Political Aspects* (1999).

This sentence merits careful analysis. As a political commitment, the passage on 'responsibility to protect' in the 2005 World Summit Outcome is potentially significant. What is significant, legally as well as politically, is that in the 2005 World Summit Outcome the General Assembly, that is to say, the membership of the United Nations as a whole, confirmed that enforcement action to protect populations from genocide, war crimes, ethnic cleansing and crimes against humanity is within the remit of the Security Council.[118] By 2005 the power to authorize intervention for humanitarian purposes was well established in the practice of the Security Council, and any remaining doubts should have been removed by the 2005 World Summit Outcome. In fact, the Assembly went further. It clearly said that it expected the Security Council to take action in appropriate cases, and the Security Council itself has acknowledged this.[119]

C.2. Cyber-operations

Much has been written in recent times about cyber operations in relation to the prohibition of the use of force.[120] The regulation of such operations within an existing armed conflict and the protection of individuals from its effects are matters for other branches of international law.[121] There is, however, also concern over the possibility that cyber operations might fall within the scope of use of force under the *ius ad bellum*, and over the implications of such a determination. At the outset, it should be clear that types of cyber operations vary considerably and the vast majority of them will fall outside the realm of 'force'. For example, a large proportion of cyber operations entail hacking into networks in order to retrieve classified information.[122] Other types of operations include those designed to disrupt networks, as seen for example in the operations directed against

[118] It may be recalled that as recently as 1993, Rosalyn Higgins wrote that "[n]otwithstanding the risk that unilateral intervention for humanitarian purposes is open to abuse, it is far from clear that such action can properly be authorized by the United Nations.": R. Higgins, *Problems and Process: International Law and How We Use It* (1994), 254.

[119] Security Council resolution 1674 (2006) reaffirmed paragraphs 138 and 139 of the 2005 World Summit Outcome Document, as was recalled in Security Council resolution 1706 (2006) on Darfur.

[120] See, for example: M. Waxman, "Cyber-Attacks and the Use of Force: Back to the Future of Article 2(4)" 36 *Yale Journal of International Law* 421 (2011); M. Schmitt "Computer Network Attack and the Use of Force in International Law: Thoughts on a Normative Framework" 37 Columbia Journal of Transnational Law 885 (1999); M.E. O'Connell "Cyber Security Without Cyber War" 17 *Journal of Conflict and Security Law* 187, 2012; International Group of Experts, *Tallinn Manual on the International Law Applicable to Cyber Warfare*, "Ch.II: The Use of Force" (M. Schmitt gen. ed., Cambridge University Press 2013); H. Harrison Dinniss *Cyber Warfare and the Laws of War* (Cambridge University Press, 2012); H. Lin, "Offensive Cyber Operations and the Use of Force" 4 *J. Nat'l Security L. & Pol'y* 63, 2010;

[121] In particular international humanitarian law and international human rights law.

[122] For example the hacking into government or military networks, such as the 'Titan Rain' incident in 2003 when US Defense facilities, NASA labs, Lockheed Martin, and other systems were hacked into and lost many terabytes of information (Chinese sources were alleged to have been behind this operation),R. Clarke and R. Knake *Cyber War: The Next Threat to National Security and What To do About It* (HarperCollins 2010), pp.58, 125-6. There have been a number of other such incidents originating from various sources, including those known as 'Solar Sunrise' and 'Moonlight Maze', as well as Operation 'Buckshot Yankee'. For the latter, see "Cyber-Intruder Sparks Massive Federal Response — and Debate Over Dealing with Threats" E. Nakashima, *Washington Post* December 9, 2011; for a detailed list of these and others, see H. Harrison Dinniss *Cyber Warfare and the Laws of War* (Cambridge University Press, 2012), Appendix 1.

Estonia and Georgia which included incidents described as denial of service attacks, leading to severe disruption of media, government and banking systems.[123] Infiltration of networks can also be designed to cause harm, and the Stuxnet worm is alleged to have led to physical damage to centrifuges at the Iranian nuclear facilities.[124] Incidents of this nature (most of them unreported) constitute the majority of known types of cyber operations to date and, other than rare exceptions,[125] the major efforts to regulate and control the risks from cyber operations should therefore be in branches of law other than those relating to force and armed conflict.[126]

Nonetheless, if cyber operations directly cause significant damage, the question arises whether they can be said to constitute an armed attack giving rise to a right of self-defence on the part of the victim state. First, cyber operations can take place as part and parcel of a wider kinetic attack, as was said to have happened in the Israeli attack on an alleged nuclear development site in Syria.[127] In such cases they are one component of a wider operation clearly involving use of physical force, and can be assessed within the examination of the wider incident. Second, there is the potential for cyber operations alone to directly cause serious harm.[128] Scenarios include using cyber operations to open the flood-gates of a dam; causing a missile defence system to attack inwards; and the ultimate doomsday scenario of causing the meltdown of a nuclear reactor. Unlike the more common hacking into networks to sabotage or steal information, these operations are designed directly to cause significant harm which may result in massive casualties. In such circumstances, an emerging view is that cyber operations may constitute an armed attack if their scale and effects mirror those of a traditional kinetic attack.[129] Any such conclusion must be reached with great caution: a wide interpretation of Articles 2(4) and 51 of the Charter in this context may affect the interpretation and debate surrounding other areas of the law of use of force as detailed in this report. Nor does the 'scale and effects' criterion give much guidance in view of the questions over the correct thresholds for the separate notions of 'force' and 'armed attack', as discussed above. As noted, the vast majority of known cyber operations do not reach the thresholds for either use of force or armed attack. Moreover, if a conclusion were to be reached that a cyber operation could properly be termed an armed attack, it should be recalled that self-defence does not

---

[124] D. Sanger "Obama Order Sped Up Wave of Cyberattacks Against Iran" *New York Times,* June 1, 2012.

[125] The case of Stuxnet, for example, might be considered by some as falling within the scope of force or even armed attack. See

[126] See analysis in M.E. O'Connell "Cyber Security Without Cyber War".

[127] Clarke and Knake, *supra*, n.124, pp.1-8.

[128] Even individuals with a personal agenda have demonstrated the potential for using computer networks to gain control of complex systems and unleash serious damage. For example, see the case of an Australian individual who caused the dumping of sewage into rivers, leading to serious harm to the local environment, R. O'Harrow Jr "Search Engine Exposes Industrial-Sized Dangers" *The Sydney Morning Herald* June 4, 2012. In another case, a disgruntled employee disabled the system for detecting oil pipeline leaks off the Californian Coast, D. Kravets "Feds: Hacker Disabled Offshore Oil Platforms' Leak-Detection System" *Wired* 18 March 2009; See also R. Allison "Hacker attack left port in chaos" *The Guardian*, 7 October 2003.

[129] Tallinn manual, pp.54-61.

require using the same means as the attack which provided the trigger for its exercise: determining that a cyber operation was an armed attack would therefore unleash the possibility of kinetic force in self-defence.

A particular challenge is raised in this regard by potential cyber operations which cause a major stock exchange to crash or disable the functions of critical infrastructure. There are contrasting opinions on whether this might be considered a use of force, or even an armed attack.[130] On the one hand – and as noted above – economic pressure is not considered to be within the scope of the prohibition on use of force, and financial harm is not usually considered as passing the threshold of armed attack. It could therefore be argued that such operations should be excluded from the scope of armed attacks. It will however remain the case that other rules of international law will likely have been violated, including the principle of non-intervention and economic and trade agreements. On the other hand, disabling vital infrastructure goes beyond actions such as economic embargoes, as it involves direct invasive measures into the system of another state in order to cause internal harm; moreover the harm caused could have severe consequences for the state and despite no direct physical effects the harm might be similar as if a missile had struck the infrastructure. The law and past interpretations in other contexts may appear to point against such operations constituting armed attacks, but the absence of state practice in relation to major cyber operations against critical financial infrastructure makes it difficult to draw definitive conclusions. It may be that future events could dictate the evolvement of the law in unforeseen directions.

Lastly, one of the greatest concerns over cyber operations is that, unlike kinetic attacks for which the origin is usually apparent, the victim state may face great difficulties in identifying the attacker. The accepted rules on state responsibility will apply, but their application will require uncovering the necessary facts in order to attribute the acts to a particular state.

C.3 The Environment and Use of Force

The notable increase in environmental awareness in the years since the formulation of the United Nations Charter necessitates an examination of the relevance of the environment to the use of force and aggression. Parallels exist between environmental harm and the issue of economic pressure raised earlier. Insofar as both might involve harm to another state in the absence of direct physical effect, it could be argued that environmental harm should fall outside the scope of the Article 2(4) prohibition on the use of force. There may, however, be a difference between the two, since it is conceivable that environmental harm can be used as a tool for *direct* causation of significant damage on a scale equivalent to that which is commonly accepted as a use of force; deliberate poisoning or contamination of rivers or other sources of drinking water or the atmosphere are possible examples in this regard. Accordingly, there may be a basis to argue that using the environment to cause direct effects similar to those of physical force could be within the scope of Article 2(4) and of the prohibition of the use of force.

Other situations which can be envisaged include circumstances in which a state takes action that leads to environmental and human harm across the border, but in which the harm is an indirect consequence rather than the primary purpose. In such circumstances a claim

[130] Tallinn manual, pp.56-57.

of aggression will be hard to sustain, although there will be room for the examination of numerous other rules of international law and potential grounds for state responsibility for the harm caused.[131]

In addition to human harm caused through environmental damage, there is a separate question over harm to the environment itself. There is no doubt that protection of the environment has become a matter of concern for international law both within and outside the context of inter-state conflict.[132] Indeed, in such cases the environmental harm may well have violated a range of international law prohibitions and the responsible state may be liable through various forums. This is, however, unlikely to enter the scope of the prohibitions on the use of force.

Conclusions

It has occasionally been suggested that the rules of international law on the use of force are dead.[133] This may be an exaggeration, but it reflects – or reflected – a real concern. From Iraq to Crimea, there has been concern over the resort to force in dubious legal circumstances. At the same time, there was growing concern at the failure to respond adequately to modern security threats (not least, transnational terrorism and the proliferation of weapons of mass destruction) and to humanitarian catastrophes (such as in Rwanda, Darfur and Syria). Such concerns have led some to push the boundaries of the law, arguing for a unilateral right to use force preventively or for humanitarian purposes, and for implied or retrospective authorization by the Security Council for the use of force.

An important question is whether there are significant shortcomings in the traditional body of rules on the use of force by States. Is the law as it is the law as it ought to be? Are existing rules adequate to meet current threats, especially from terrorist groups and weapons of mass destruction?

The General Assembly of the United Nations, at the level of Heads of State and Government, responded to this question in its 2005 World Summit Outcome document. The Heads of State and Government reaffirmed:

> that the relevant provisions of the Charter are sufficient to address the full range of threats to international peace and security. We further reaffirm the authority of the Security Council to mandate coercive action to maintain and restore international peace and security. We stress the importance of acting in accordance with the purposes and principles of the Charter.[134]

It seems that, in the view of the Heads of State and Government, the rules on the use of force in the Charter (and in customary international law), when properly interpreted

[133] For example, M J Glennon, "Why the Security Council Failed" (May/June 2003) Foreign Affairs 16; M J Glennon, "How International Rules Die" (2005) 93 Geo. L.J. ,939.

[134] General Assembly res. 60/1, para. 79. This followed similar statements by the Secretary-General's High-level Panel in its report *A more secure world: our shared responsibility* (A/59/565), paras. 185-203; and by the Secretary-General in his report *In larger freedom: towards development, security and human rights for all* (A/59/2005), paras. 122-126.

and applied, are adequate to meet new challenges. What is needed are not new rules, but political will on the part of States, including members of the Security Council and potential troop-contributors. The 2005 World Summit Outcome thus offered one response to a debate that took off after 9/11 questioning the effectiveness, the relevance, and even the existence of rules of international law on the use of force.

A further danger for the rules on the use of force has been discussed above, namely that the traditional interpretations of 'armed attack' are being widened to encompass kinds of inter-State harm that do not come within the Purposes and Principles of the Charter. If harm which causes damage to a state's economic interests, its environment, or its infrastructure are all to be characterised as 'armed attacks', however the damage was delivered, the scope of justifiable use of force in self-defence could be unacceptably enlarged.

The UN Charter goal of collective peace and security is dependent upon strict adherence to the international law on use of force. It is essential that the scope of the prohibition on the use of force be interpreted in a manner suited to achieving its aim, otherwise the maintenance of international peace and security will be impossible.

USE OF FORCE COMMITTEE

WORKING SESSION

Tuesday, 9 August 2016, 9.00am

Chair: Professor Duncan French (UK)

The Chair introduced himself and welcomed attendees to the second day of the conference. He provided a brief outline of the structure that the session would follow and then gave the floor to the Rapporteur to present the draft report and lead a general discussion on the report.

Professor Noam Lubell (UK) started by explaining what had been done with the report and what still needed to be done.

He reminded attendees that the use of force in international law was a highly controversial area of international law and was not an easy task for the Committee. The reason for this controversy lay in the fact that there was adverse repercussions if the decision to use force subsequently proved to be erroneous.

Professor Lubell acknowledged the wide range of views in relation to the use of force, but noted that the Committee's task was not to merely acknowledge these divergent views but to also try to strike a balance between juxtaposing opposing views and offering informed viewpoints on critical aspects of the use of force. He expressed appreciation to the members of the Committee for a productive meeting that was held on 8 August 2016, and highlighted that the draft report was going to see further changes as a result of that meeting.

Before going through the main points of the report, Professor Lubell informed attendees that it was a preliminary report and that both the structure and substance would change considerably as a result of the discussions during the present session and the Committee's meeting planned for February 2017. Essentially, the plan was to start off by setting out the centrality of the prohibition of use of force. The opening statement and key issues in the introduction and the conclusion would entail a discussion on the importance of the prohibition on the use of force.

Among other things, the report sought to bring clarity to the various concepts used as well as the ambit of interpretation. For example, there were sometimes certain elements of confusion among the different terms that were used in the *ius ad bellum*. When one spoke of use of force, armed attack and aggression, one would find that people, seasoned commentators and even international bodies to a certain extent used these terms interchangeably in a manner that was not helpful to the debate. As such, the intention of the report was to bring some clarity with regard to the terms that were used.

The report first pointed out that the key aspects to the concept of "use of force" were in line with Art 2(4) of the UN Charter. This was generally accepted as referring to the use of armed or physical force rather than, for instance, economic pressure. In addition, the reference in Art 2(4) to territorial integrity and political independence of any State should not be taken to be a limiting phrase; rather, it was meant to be an absolute and all-inclusive prohibition. Looking at the history of why this phrase was inserted, it was clear that it was meant to ensure that the prohibition on the use of force would not become too narrow.

There was some support for the view that there was a *de minimis* threshold on the use of force and there might be some things that fall below use of force. The use of force was thus set out as the wider of all the various notions in the *ius ad bellum* in the report.

In the case of "armed attack", if interpreted too widely, it would open doors to self-defence in circumstances beyond those intended. For that reason, the report would define "armed attack" narrowly. There was some concern that, if the concept of armed attack was interpreted to be much narrower than the concept of use of force, a State could be subjected to use of force and not have the right to self-defence. Controversy over the notion of a gap between the two concepts was acknowledged and reflected in the report. It was pointed out that armed attack, as mentioned by the ICJ, was meant to be a graver form of use of force.

In the case of "aggression", there was a remarkable level of inconsistency in both definition and scope. The initial attempt was to see whether one could say, in a fairly straightforward manner, that aggression mirrored either use of force or armed attack. That would have been neater than saying that it was a third category in the *ius ad bellum.* Negotiations on the UN Charter revealed a hesitance to use aggression for armed attack, and it was found that armed attack would be technically a better term of art that could be used. Ultimately, aggression ended up being used as a procedural trigger in Art 39 rather than as part of the definition in Art 2(4) or Art 51.

Aggression, as a legal term of art, played a role in the context of international criminal law, notably within the International Criminal Court (ICC). There was an international criminal law definition of aggression. However, that was not the same aggression as the one that was often referred to in the *ius ad bellum* and State practice outside the international criminal law context. Outside that context, there appeared to be inconsistency in the manner in which the concept was used. Sometimes it was used in the context of use of force and other times it was used in the context of an armed attack. The Committee would differentiate between the ICC definition and the general *ius ad bellum* definition, paying particular attention to the scope and ambit of the terms "use of force" and "armed attack".

Professor Mary Ellen O'Connell (US) drew Professor Lubell's attention to the need for the report to reflect definitions of terms such as "armed conflict" and "use of force" as contained in the Committee's previous reports.

Professor O'Connell also reminded attendees that in the meeting held on 8 August 2016, it had been agreed that the proscription of aggression was a *jus cogens* norm. Hence, the report should reflect the implications of this classification.

Finally, for completeness, she proposed the inclusion of general principles, which included an assessment on proportionality, *jus cogens*, the UN Charter, as well as customary international law positions on the use of force.

The Chair, after acknowledging Professor O'Connell's submissions, returned to the discussion on the *de minimis* requirement for the use of force, noting the example of the Russian jet that went into Turkish territory. The issue was whether there was a use of force or whether it was the State exercising police powers. He questioned whether that would be an example of the question of whether the use of force required a boundary violation to be applicable.

The Chair highlighted that when people talked about the *de minimis* threshold, they were referring to situations that might be closer to law enforcement than the conflict-type situations. There was thus a debate on whether there was a threshold or not. If there was no threshold, that would be one of the reasons to maintain the gap between use of force and armed attack, because one would not want to call any of these incidents an armed attack.

Professor Alfred Soons (Netherlands) proposed that the report's definition of the use of force should be expanded to further clarify the notion of the use of force. He queried the examples of the *de minimis* threshold provided in the report, and whether they were related to the *de minimis* threshold or to the international use of force. In his opinion, it seemed that it was more a question of the nature of the use of force. He suggested exploring the distinction between the international use of force and national law enforcement. For him, the *de minimis* rule was more important for the international use of force issue and the examples of law enforcement could serve a purpose of indicating the difference between international use of force in the Charter regime and the law enforcement regime, which had its own practice.

Professor Lubell indicated that the differentiation between police law enforcement and international use of force was not as straightforward. He suggested that it could perhaps be clearly reflected in the report.

Professor Chang-Wee Lee (Korea) suggested that the Committee pay more attention to the use of nuclear technology and nuclear weapons in the use of force.

The Chair noted Professor Lee's concern and suggested that this be addressed when the session dealt with cyber operations.

Professor Lubell proceeded to the section of the report dealing with Security Council authorisation. The bottom line was that "force used with the authorization of the Security Council under the Charter [did] not fall within the prohibition of the use of force." The determining criteria was not in the reference to Chapter VII of the UN Charter but rather the wording in the Security Council resolutions, which needed to be very clear in allowing for the use of force. The Committee took the position that there was no such thing as implied authorisation to use force. Use of force is either authorised or not.

Professor Lubell stated that selfdefence was central to the use of force and aggression, because when any State was of using force unlawfully, in almost all cases, it would claim that their conduct was justified on the grounds of self-defence. Understanding these rules and how self-defence worked was critical if one wanted to have any clarity on the prohibition on the use of force. He noted that the report briefly looked at Art 51 of the UN Charter and pointed out some key issues, including the issue of reporting to the Security Council. The report noted that the failure to report to the Security Council in itself did not invalidate the exercise of selfdefence; however, it could harm the State's case when evidentiary support was required.

Professor Lubell then outlined the concepts of necessity and proportionality as discussed in the report. Necessity was the requirement that the self-defence measure be necessary. Proportionality was a separate and additional requirement in the exercise of self-defence. In essence, proportionality was a balance between two elements, as seen in any area of the law when measuring one factor against another. Thus, the report noted that the

proportionality criterion required that the necessity of acting in self-defence be balanced against the harm caused by doing so.

He referred to anticipatory self-defence, which is recognised as a highly contested issue surrounding the right to self-defence. Professor Lubell emphasised that the Report rejected the wider pre-emptive approach to anticipatory self-defence, which was endorsed for a while by the US, in particular by the administration of President George W Bush post-9/11. However, the increase in the support for the notion of anticipatory self-defence in the context of manifestly imminent attacks, construed as narrowly as possible in recent years, was recognised by the Committee.

The Chair invited further questions and contributions.

Professor O'Connell suggested a change to the structure of the report. She proposed that proportionality and necessity be moved to a general section so that they also apply to Security Council authorisations of the use of force.

Professor Lubell reiterated that the report was in its preliminary phases and that the structure would be revisited.

He proceeded to outline the report's position on responding to self-defence against non-State actors. By way of example, he noted the tension that existed in this respect.

On the one hand, one found a situation where a State was subjected to an armed attack from outside its borders and needed to defend itself. Even if that armed attack could not be attributed to the host State, but only coming from an armed group, the State would argue that it was subjected to an armed attack and would argue for the right to defend itself in the absence of other remedies.

On the other hand, if the armed attack could be attributed to the host State, allowing for self-defence, this would seemingly be a breach to the territorial integrity and harm of the State.

Professor Lubell, in line with the report, then briefly discussed the circumstances under which an armed attack could be attributed to the host State.

Dr Hannah Woolaver (South Africa) noted that the section on the use of force against non-State actors could be further clarified. She noted Professor Lubell's recognition of the tension between the possible existence of the right to self-defence and the protection under Art 2(4) of the UN Charter. By recognising this tension, the inevitable conclusion should be that the right to use force in self-defence was still an unlawful use of force contrary to Art 2(4). In her opinion, the report could simultaneously support the right to self-defence against non-State actors and at the same time recognise that the use of force against a host State (hosting an armed group) was unlawful under the Charter.

Dr Woolaver suggested that an engagement with the ICJ jurisprudence on defining attribution to a State as an element of the definition of armed attack would be helpful. She also suggested that the Committee address the Security Council's latest practice of calling on States to use force against terrorist actors but at the same time not expressly authorising such actions (eg, UNSC Resolution 2249).

Professor Lubell recognised Dr Woolaver's comments and noted the different views on the tension within the Committee. He stressed that the Committee recognised this tension but at the same time noted the view that there were those cases that left a State with no other option but to use force against an armed group that operated from another State's territory.

In relation to structural and substantive changes to the report, Professor Lubell stated that the report was still work in progress.

Dr Christian Tams (Germany) suggested a closer scrutiny of the relationship between Art 2(4) and Art 51 of the UN Charter in the case of an attack by non-State actors. He concurred with Dr Woolaver that recent Security Council practice (eg, encouraging military action against the socalled Islamic State without authorising it) must be given due attention in the report. According to Dr Tams, any use of force under Art 51 that was not proportional was unlawful as proportionality was a key element of validity.

Professor O'Connell affirmed the position stated by Dr Woolaver, finding that her structural argument was accurate. If a State attempted to justify use of force, prevailing upon Art 51 as as an exception to the general prohibition, and it did not meet the requirements of necessity and proportionality, it became an unlawful use of force and therefore a violation of Art 2(4). What the report was reflecting was really a question of attribution and whether attribution was required to the territorial State before use of force could be exercised against a non-State actor. She suggested that that could be clarified in the report.

Professor Lubell indicated that the issue in the ICJ case of *Armed Activities on the Territory of the Congo (Democratic Republic of Congo v Uganda)* was whether it had been claimed that the attacks were attributable. The Court refrained from taking a position on whether there was a right of self-defence against an armed group when it was not attributable. It claimed that it was not settled and decided not to rule on the issue. Professor Lubell stressed the importance of reflecting the debate in the report in light of the different opinions of Committee members.

The Chair added that the use of force against non-State actors was a highly contentious issue and there were numerous perspectives to be explored.

Professor Lubell proceeded to outline the report's position on the rescue of nationals abroad and stated that the report would not endorse the argument that this action falls outside the scope of Art 2(4). He added, however, that the report considered the argument that in some circumstances the rescue of nationals abroad was an evacuation operation that involved no force and the host State – although it might not have explicitly consented –did not object. Although questionable, one could argue that this would not fall within the ambit of Art 2(4). However, if there was any force involved then this would fall within the scope of Art 2(4) and the only way to justify such actions in the absence of the consent of the State would be to establish that there had been an armed attack. One would have to ask the question whether attacks on nationals abroad could be considered an armed attack against the State. This would possibly be the case if the attack was clearly a result of their nationality and they were attacked in the context of being seen as individuals of their State.

Professor Lubell then briefly outlined the question of consent and suggested that this section be moved elsewhere in the report. He noted the many complexities of identifying the government that gave consent and that this was a complex question in international law that could not be dealt with fully in the report. He highlighted that the report clearly indicated that consent needs to be given freely and from the appropriate, authorised highest levels of government. Although in theory it would seem that States could give consent to allow for other States to assist, there were arguments that one should not intervene in a civil war at all (even on the side of the State) unless another State had intervened on behalf of a rebel group. The Committee recognised this view.

In addition, it was recognised that if the requesting government was attempting to quash a legitimate struggle to self-determination, the consent would not legitimise the use of force. It was decided in the Committee meeting on 8 August that there were some areas that would need to be added and strengthened in the report. A particular area was the situation in which a State gave consent to another State to use force on its territory but that force was force that would have been unlawful for the State to do itself; whilst it might not be a violation of sovereignty in terms of use of force, consent did not make something unlawful lawful. There could also be situations where there was consent to the use of force initially but subsequently withdrawn or the force went beyond the consent given. In these situations, there could be an unlawful use of force.

Professor Christopher Waters (Canada), referring the earlier discussion on the rescue of nationals abroad, asked if it was indeed the case that arguments were stronger when nationals were seen as individual manifestations of their State. He stated that if this was the case, the report must cite State practice in this regard.

Professor Waters further recommended that the report strengthen its position on sham operations associated with the rescue of nationals abroad.

Professor Lubell noted Professor Waters' recommendations.

Dr Woolaver asked whether the Committee had considered including considerations of whether consent needed to be public or whether consent given privately was sufficient. She found that this was an issue that was increasingly being confronted such as the use of force in Pakistan. She wondered if public protest by a State against use of force to which it had privately consented had implications for its legality.

Professor Lubell maintained that Dr Woolaver's question was very interesting and one that the Committee had not discussed in relation to its inclusion in the report. He stated that consent could potentially be valid whether it was given publicly or in private. The key issue was likely to be whether the consent could be evidenced.

The Chair asked whether international organisations had a right to rescue employees in emergency situations.

Professor Lubell expressed the opinion that if the rescue of nationals abroad fell within Art 2(4) and could only be justified by recourse to self-defence, then to allow for that, one would have to argue that international organisations had a right to self-defence as a freestanding right of the organisation as opposed to the Member States.

In relation to the report's section on humanitarian intervention, Professor Lubell stated that its formulation was still under discussion. He noted that, as it stood, there was perhaps too much emphasis on the UK's position. This was because the UK was one of the few States that had made bold statements in relation to the right to humanitarian intervention.

Dr Vasilka Sancin (Slovenia) on the section on humanitarian intervention and recommended that there be a separate sub-chapter on it. She also asked whether the word "through" in the sentence cited in the report from the 2005 World Summit Outcome ("[i]n this context, we are prepared to take collective action, in a timely and decisive manner, through the Security Council, in accordance with the Charter…") was used intentionally to give options for interpretation in a manner that the situation would have to be addressed or submitted through the Security Council. She queried what would then happen in a case where a decision in the Security Council was blocked.

Professor Lubell mentioned that, with regards to responsibility to protect (R2P), it was not envisaged that it required a separate section because R2P was much wider than humanitarian intervention. The elements that related to use of force were essentially the same as those on the debate on humanitarian intervention. He also agreed that, when dealing with these matters, it was important to be aware of the negotiations behind the scenes on how to word the arguments.

Professor Lubell then proceeded to deal with cyber operations. The Committee agreed that cyber operations be included in the report. The reality, noted in the report, was that the vast majority of cyber operations did not fall within the realm of the use of force. The principal question asked was whether cyber operations could constitute an armed attack and the position taken was that in most cases they would not, although in some cases cyber operations occurred alongside kinetic operations. As such, there was usually no question of a standalone cyber operation being an armed attack. It was recognised that cyber operations could constitute an armed attack if their scale and effect mirrored those of a traditional kinetic attack. In such cases, it was important to recognise that if a cyber-attack was considered an armed attack then there could be room for kinetic self-defence.

He noted in this regard that a cyber-attack on a stock exchange was in principle not an armed attack. However, should a major attack of this kind take place with dire consequences, States might respond to it in ways not seen thus far.

In relation to the environment and the use of force, Professor Lubell noted the debate concerning the inclusion of this section in the report in the context of use of force. The report noted that environmental harm could be used as a tool for direct causation of significant damage (eg, if one State deliberately poisoned the river flowing into another State).

Professor Lubell finally moved to the conclusions of the report, which remained to be finalised. The key was to reiterate that the law on the use of force, particularly the prohibition on the use of force, remained fundamental to world order. Whilst exceptions existed, care in how they were addressed and interpreted should be taken. The report would also take the position that the Security Council should adequately address such matters.

The Chair invited further questions and comments on the draft report.

Dr Hitoshi Nasu (Australia) stated that the draft report appeared to be a collection of past and current debates on various aspects of the use of force in international law, drawing rather uncritically on the ICJ's jurisprudence that was developed in light of a particular set of circumstances that existed at the time. He recommended that the Committee consider revisiting some of the traditional criteria developed in the ICJ's jurisprudence, particularly the attribution test and the gravity test in light of contemporary political circumstances and technological advancement with an eye to establishing whether these remained practical and valid.

Professor O'Connell stated that the strength of the report was its sticking to the current law and not taking progressive perspectives and possible normative developments.

Professor O'Connell questioned the concept of a cyber attack and wanted to know what constituted a cyberattack in the context of cyber operations versus kinetic attacks. She proposed that that perhaps this should not be included in the report.

Professor Waters concurred with Professor O'Connell and suggested the removal of the reference to an attack on the stock exchange. He argued that it was too hypothetical and confusing.

Professor Lee suggested that the Committee clarify its position on the use of nuclear weapons as well as the R2P.

Mr Bruce Mauleverer (UK) observed that the conclusion of the report spoke of the goal of the collective peace and security being "dependent upon strict adherence to the international law on the use of force". It also referred to "resort to force in dubious legal circumstances". He recommended that the report be expanded to discuss the language of UN Security Council Resolutions 678 (all necessary means), 687, and 1441 (serious consequences). He further raised concern that the Committee was not engaging in political territory and should at least make some comment on the distinction between all necessary means and all necessary measures. He added that Resolution 1441 should not be confined to a footnote (footnote 37).

Professor Lubell stated in response to suggestions for the removal of Stock Exchange attacks as an armed attack that its inclusion was important because, in the context of cyber operations, this was the likely question to be asked in the next few years.

He reiterated that the report sought to strike a balance on issues of the use of force and added that, apart from narrating the law, the Committee had to suggest practical solutions. He maintained, however, that the report should be careful not to open holes on the rules on the use of force.

The Chair, in closing, thanked the Rapporteur, members of the Committee, attendees and the reporters.

Final Report

INTERNATIONAL HUMAN RIGHTS LAW AND THE INTERNATIONAL COURT OF JUSTICE (ICJ): THE DOMESTIC IMPLEMENTATION OF JUDGMENTS/DECISIONS OF COURTS AND OTHER INTERNATIONAL BODIES THAT INVOLVE INTERNATIONAL HUMAN RIGHTS LAW

Part Two

THE DOMESTIC IMPLEMENTATION OF JUDGMENTS/DECISIONS OF COURTS AND OTHER INTERNATIONAL BODIES THAT INVOLVE INTERNATIONAL HUMAN RIGHTS LAW

finalized by Stefan Kadelbach

A. INTRODUCTION

1. For the mandate and genesis of this report, the Committee refers to Part One of this Final Report of the International Law Association as it was adopted during its Washington DC conference in March 2014,[1] dealing with the first part of the Committee's mandate, the relationship of the International Court of Justice and human rights.[2] For the purposes of Part Two, the ILA International Human Rights Law Committee (IHRL) sought to examine the legal framework of compliance with international judgments and decisions involving human rights around the world in order to study how the courts of a representative set of countries dealt with obligations resulting from decisions of judicial or quasi-judicial international human rights bodies, the impact of human rights jurisprudence, and the possible trends and parallels in their methods of implementation. As a consequence, the Committee sought to identify Guidelines regarding the nature of the obligations assumed by a state party to an international human rights treaty or *vis-à-vis* a judgment from a human rights body or an international body that involves human rights. The Guidelines are annexed to the Resolution adopted on 11 August 2016.

The Committee considered the following matters:

1. To define the obligations of a state upon becoming party to a treaty as regards compliance with judgments or decisions of judicial or quasi-judicial bodies in human rights cases;
2. To evaluate the practice of states, highlighting good practices;
3. To develop a concept and scope of 'good faith' compliance and 'good practices' with human rights treaties.

B. THE WORK OF THE COMMITTEE

2. The Chair sent Part 2 of the Final Report, which was prepared by Professor Stefan Kadelbach, Co-Rapporteur, to the Committee members on March 31, 2016, and requested comments. At the invitation of Judge Paulo Pinto de Albuquerque of the European Court, the Committee met on 12-13 May 2016 at the European Court of Human Rights in Strasbourg and finalized its draft Final Report, draft Guidelines and draft Resolution.

[1] See paras. 1 – 18 of the first part of the Report, as finalized by Christina Cerna.
[2] See paras. 19 – 87 of the first part of the Report, as finalized by Eva Rieter.

The following members participated in the session: Anne Bayefsky, Christina Cerna, Jonas Christoffersen, Yuji Iwasawa, Stefan Kadelbach, Niels Petersen, Paulo Pinto de Albuquerque, Thilo Rensmann, Eva Rieter, and Koji Teraya. Comments received from Mark Weston Janis, Jernej Letnar Cernic, Jeremy McBride, Nigel Rodley, Sandesh Sivakumaran, Hans van Aggelen, Dragica Wedam-Lukic and Gentian Zyberi were also taken into consideration in the preparation of the report.[3] The Committee discussed and finalized its draft Final Report, Part Two, at the 77th Conference in Johannesburg from 8 to 11 August 2016. The Committee members Christina Cerna, Ioana Cismas, Marcilio Franca Filho, Yuji Iwasawa, Stefan Kadelbach, Alexander Meziaev, Niels Petersen, Thilo Rensmann, Koji Teraya, Gus Waschefort and Gentian Zyberi participated in the meetings. The first part of the working session was devoted to discussing the report, the annexed guidelines and the resolution, and the second part to exploring possible future mandates of the ILA Human Rights Law Committee. In the public session of the Committee, the present report, the guidelines and the resolution were discussed and adopted. Finally, in the Conference's plenary session of 11 August 2016, the resolution and the guidelines annexed thereto were unanimously adopted.

C. THE OBLIGATIONS OF STATE PARTIES TO COMPLY WITH JUDGMENTS OR DECISIONS OF JUDICIAL OR QUASI-JUDICIAL INTERNATIONAL BODIES DEALING WITH HUMAN RIGHTS

1) The legal bases of the obligation to comply with human rights decisions

3. A state, in the exercise of its sovereignty, voluntarily consents to becoming a party to a human rights treaty. The legal bases of the states' obligation to comply with decisions of human rights bodies are the treaties which confer upon human rights bodies the jurisdiction to declare violations. Although most UN human rights treaty bodies were limited to state reporting on compliance with the treaty when they were created, today the core UN human rights treaties provide for a complaints mechanism and an individual petition procedure. For the purposes of this report, the term 'judicial bodies' refers to human rights courts: the European Court of Human Rights (ECtHR), the Inter-American Court of Human Rights (IACtHR) and the African Court of Human and Peoples' Rights (AfCtHPR). The term 'quasi-judicial bodies' comprises the ten UN human rights treaty committees and the regional commissions of the Inter-American and African systems.

4. For the ten UN human rights treaty bodies, two general and eight subject-specific treaties form the bases of jurisdiction.[4] Individual complaint procedures exist under eight

[3] This part of the report is based, i.a., on contributions on protection systems and selected countries by individual Committee members which are indicated in the respective sections, as well as on comparative background papers provided by Christina Cerna, Matthias Herdegen and Elena Sciso.

[4] These bodies are the UN Human Rights Committee (HRC) under the International Covenant on Civil and Political Rights of 19 Dec 1966 (ICCPR), 999 UNTS 171, in force 23 March 1973; the committees monitoring the International Covenant on Economic, Social and Cultural Rights of 19 Dec 1966 (ICESCR), 993 UNTS 3, in force 9 March 1973; the Convention on the Elimination of all Forms of Racial Discrimination of 7 March 1966 (CERD), 660 UNTS 195, in force 15 June 1969; the Convention on the Elimination of Discrimination against Women of 18 Dec 1979 (CEDAW), 1249 UNTS 13, in force 9 Aug 1985; the two committees under the Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment of 10 Dec 1984 (CAT), 1465 UNTS 85, in force 31 Oct 1990 and the Optional Protocol thereto of 18 Dec 2002, 2375 UNTS 237, in force 22 June 2006, respectively, i.e. the Committee against Torture (CAT) and the Subcommittee

of these treaties, but require a special acceptance by the state parties.[5] In the regional systems, different models exist. With respect to Europe, although acceptance of the compulsory jurisdiction of the ECtHR was optional for many decades, today a state, upon becoming a member of the Council of Europe, must accept the compulsory jurisdiction of the Court and the right of individual petition.[6] The Inter-American Commission on Human Rights (IACHR) is unique in that it exercises jurisdiction under two human rights instruments: the American Convention of Human Rights (ACHR)[7] and the American Declaration on the Rights and Duties of Man (ADRDM).[8] The acceptance of filing individual applications before the Inter-American Commission under the ADRDM is automatic and does not require acceptance by the state upon becoming a member of the OAS. Acceptance of the IACtHR's jurisdiction, however, requires a state to become party to the ACHR and, in addition, to expressly accept the Court's jurisdiction under Article 62 ACHR.[9] In contrast to the European system, individuals do not have direct access to the IACtHR, but need to file their application with the IACHR which can take it to the Court if the respondent state does not comply with its recommendations. As regards the competence over inter-state complaints, only in two protection systems ratification of the underlying treaty includes the recognition of acceptance of the contentious jurisdiction for such proceedings,[10] whereas for the others specific acceptance is required.[11] In the African system, both complaint procedures before the African Commission are compulsory, but jurisdiction of the AfCtHPR depends on the ratification of an additional protocol to the African Charter, and its jurisdiction for individual petitions requires a declaration by the defendant state party.[12] Once a state is a party, the African bodies are competent to entertain complaints with respect to all human rights instruments to which the respondent

[11] This is the case with Article 41 ICCPR; Article 8 (2) OP CEDAW; Article 20 CAT; Article 33 CED; Article 13 OP CRC; Article 47 ACHR.

[12] Articles 47 and 55 African Charter of Human and Peoples' Rights of 27 June 1981 (AfChHPR), 1520 UNTS 217; OAU Doc CAB/LEG/67/3 rev. 5, in force 21 Oct 1986; Articles 5 and 34 (6)

state is a party. The Statute of the newly created Arab Court of Human Rights permits cases brought to be heard by the Court if the claimant's State and the respondent State are both parties to the statute; individuals do not have access to the Court.[13] The Terms of Reference of the ASEAN Intergovernmental Commission on Human Rights do not provide for a complaint mechanism.[14]

5. As to a state's treaty obligations, the Vienna Convention on the Law of Treaties (VCLT) is an undisputed general point of reference.[15] Even though the VCLT entered into force only after the adoption of most of the human rights treaties and has not been ratified by all of their parties its essential contents are considered to form customary international law.[16] Accordingly, international treaties in force are 'binding upon the parties to it and must be performed by them in good faith' (*pacta sunt servanda*) (Article 26 VCLT) and 'shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose' (Article 31 § 1 VCLT). By following an evolutive approach to the interpretation of the treaty provisions on their jurisdiction,[17] the competent human rights bodies have spelled out the obligation to comply with human rights conventions in an increasingly specific way.

6. According to Article 1 ACHR, states have 'to respect and ensure' the rights and freedoms of the ACHR to all persons subject to their jurisdiction.[18] Article 2 ACHR explicitly demands that states 'undertake to adopt [...] such legislative or other measures as may be necessary to give effect to those rights or freedoms' guaranteed under the Convention. In its jurisprudence on impunity, the Court interpreted these obligations to mean that the state has the duty to organize the governmental apparatus and all the structures through which public power is exercised to permit the exercise of rights and freedoms and that it 'must prevent, investigate and punish any violation of the rights recognized by the Convention and, moreover, if possible attempt to restore the right violated and provide compensation as warranted for damages resulting from the violation.'[19] Ensuing duties are 'obligations of means, not of result', 'due diligence' obligations as the Court calls

them in the context of protecting a victim from violations by private parties.[20] As far as procedural restitution is at stake, these duties are addressed to the judiciaries of the respondent states.

7. The European Convention creates obligations for states parties towards all individuals within their jurisdiction, envisaging the practical implementation of the protected rights and freedoms on the domestic legal order of states parties. Recent case law has extended the ECtHR's jurisdiction extraterritorially, to countries outside the Council of Europe, in cases where the European state party to the Convention exercises authority and control over the purported victim or over the territory when the state party is an occupying power.[21] The ECtHR[22] could not avail itself of an express legal basis for positive obligations, but developed similar case-law under the jurisdiction clause of Article 1 ECHR, especially in the context of Articles 2 (right to life) and 3 (prohibition of torture and degrading treatment), at times taken together with the provision on the binding nature of judgments (Article 46) if measures to remedy a violation did not prove adequate.[23] Procedural obligations derive from Article 13 ECHR (right to an effective domestic remedy), which is violated if the state party obstructs efforts to remedy or investigate human rights complaints, be it before, during or after procedures before the ECtHR.[24] The Committee of Ministers of the Council of Europe (CoM) published a guide in respect of domestic remedies giving various examples of domestic case law of good practices in terms of implementation.[25]

8. With respect to the UN system, the stance taken by the HRC may be taken as paradigmatic. The jurisdictional clause of Article 2 ICCPR is decisive, according to which the state parties undertake 'to respect and to ensure to all individuals within [their] territory and subject to [their] jurisdiction' the rights recognised in the Covenant.[26] HRC General Comment 31 spells this out in further detail in holding all branches of government likewise accountable for both negative and positive obligations.[27] In conjunction with specific guarantees this means that states do not only have to refrain, for instance, from death threats (Article 9 ICCPR), but also 'to take appropriate measures to ensure' the

[27] HRC, General Comment No. 31, The Nature of the General Obligation Imposed on States Parties to the Covenant, CCPR/C/Rev.1/Add. 13, 26 May 2004.

right to security against private persons.[28] As in the Inter-American system, failure to prosecute perpetrators constitutes in itself a human rights violation.[29] It is a part of *bona fide* compliance with the Covenant that procedural safeguards ranging from domestic remedies to access to complaint procedures before the HRC, if accepted by the state party, are guaranteed effectively.[30]

9. To conclude, all treaty bodies dealt with here have confirmed the obligations of the states under the respective treaties, developed a notion from which negative and positive obligations are derived and established a nexus to procedural safeguards and consequences in that respect. We will now examine the measures to be taken by domestic courts.

2) Jurisprudence on the state party's obligation to comply with adverse human rights judgments and decisions

a) Human rights courts

10 Since there is neither a World Court of Human Rights nor an ICJ human rights chamber,[31] and since the AfCtHPR has not yet elaborated jurisprudence in this respect,[32] this section on court practice will focus on the ECtHR and the IACtHR.[33] Under the respective Conventions, states 'undertake to abide by the final judgment of the Court in any case to which they are parties' (Article 46 § 1 ECHR) or 'undertake to comply with the judgment of the Court in any case to which they are parties' (Article 68 ACHR). As in international law generally, such duties in the context of human rights protection mechanisms imply, as a rule, an 'obligation of result' of the respondent states, namely to put an end to the violation, to restore the situation that had existed before (*restitutio ad integrum*), to compensate for damages and to prevent repetitions of the conduct found to be in violation of the treaty.[34] In cases of international human rights crimes, there is an

[32] See generally F. Viljoen, *International Human Rights Law in Africa*, Oxford (OUP) 2nd ed 2012, pp. 410-468. To date, there have been two judgments by the AfCtHPR on the merits, App. 009/2011, *Tanganyika Law Society et al v Tanzania*, 14 June 2013, and App. 013/2011, *Beneficiaries of Late Norbert Zongo et al v Burkina Faso*, 28 March 2014.

[33] ICJ decisions with an impact on human rights, as they are dealt with in the first part of this report, will be integrated where pertinent in the country studies (below section D), but not systematically, given the small number of cases.

[34] Cf. Articles 30, 31 and 35 of the Articles of the International Law Commission on Responsibility of States for Internationally Wrongful Acts, 56 UN GAOR Supp. No. 10, p. 43, Doc A/56/10 (2001), expressly referred to by the ECtHR, *VgT Verein gegen Tierfabriken v Switzerland (No. 2)*, Rep.

additional obligation to put in place a system that allows the investigation, prosecution and if warranted, the punishment of offenders.[35] Even though closer analysis of ECtHR and IACtHR practice reveals common features and shows tendencies of rapprochement, it has to be noted that both differ with respect to the substantial scope of their respective treaty bases, their powers in the follow-up mechanisms and the cultures of judicial dialogues with their domestic counterparts.[36]

11. In the European system, the execution of ECtHR judgments is subject to the supervision of the Committee of Ministers (CoM) (Article 46 ECHR).[37] The ECtHR, according to the original wording of the ECHR, has had no role in the execution phase. For approximately the first forty years since the ECtHR took up its function in 1959, the Court was content to let the CoM determine the appropriate redress for a finding of a violation of the ECHR. Its role ended with the judgment, and the mere finding of a violation was considered sufficient, also in terms of 'just satisfaction' (Article 41 ECHR). With the enlargement of the Council of Europe and the changing nature of the cases presented to the court, the ECtHR has developed a pattern to assist the CoM and the respondent state in identifying the remedies for the declared violation. The Committee of Ministers itself has sought such guidance from the Court since 2004.[38] Protocol No. 14 to the ECHR[39] has recently introduced the possibility for the CoM to seek interpretative assistance from the ECtHR in clarifying obligations arising from a judgment (now Article 46 § 3 ECHR). Moreover, the CoM has the option of instituting proceedings before the ECtHR to determine whether a state has complied with a judgment (Article 46 § 4 ECHR). In both cases, a majority of two-thirds of the CoM is required. This development corresponds to the increasingly more assertive role of the ECtHR with respect to the concepts of restitution and compliance with its judgments. So far, however, the Court has not yet acknowledged a complaint for non-execution of a judgment based on Article 46 ECHR alone.[40]

12. In the ECHR system, the choice of the appropriate means to implement a judgment still falls, as a matter of principle, to the respondent state.[41] However, the Court has

---

2009-IV, § 87. The underlying principle is the duty to make adequate reparation for every violation of an obligation under international law, cf. PCIJ, *Factory at Chorzów (Jurisdiction)*, 26 July 1927, Ser. A No. 9, p. 21 and *Factory at Chorzów (Merits)*, 13 Sept 1928, Ser. [40] Cf. ECtHR, *Olsson v Sweden (No. 2)*, 27 Nov 1992, Ser. A 250; in *Emre v Switzerland (No. 2)*, 11 Oct 2011, § 75, the Court for the first time combined the finding of a violation of a substantive right with one of Article 46 ECHR.

[41] ECtHR, *Marckx v Belgium*, 13 June 1979, Ser. A 31, § 58.

assumed an increasingly stricter stance in monitoring compliance with its decisions.[42] In this same vein, the ECtHR has limited the choice of means if the measures to be taken follow in sufficient clarity from the obligations of the Convention as specified by the Court.[43] Along this line, the ECtHR has turned to a practice of giving directions to the respondent states. Accordingly, execution may not only entail 'individual' measures as a consequence of the obligation to put an end to an ongoing unlawful situation and to provide restitution, but also 'general' measures aimed at eliminating the root causes and at preventing future violations.[44] As regards 'individual' measures, in some cases the ECtHR considers the appropriate remedy to be so self-evident that recourse to a lengthy discussion between the CoM and the respondent State would undermine the Court's 'principle of effectiveness.'[45] In *Assanidze v. Georgia*, the ECtHR reached the conclusion that the violation found (arbitrary detention) left no choice of remedy: the State had to release the applicant as soon as possible.[46] In a similar vein, possibilities of re-examination of administrative procedures must be considered.[47] Even though a conventional duty to this end is controversial,[48] the ECtHR, in order to restore the applicant to his prior position, has repeatedly appealed to respondent states to seek the possibility of re-opening judicial proceedings, where appropriate.[49] The CoM has endorsed this approach and encouraged states to ensure that adequate possibilities of the re-examination exist in those cases where the Court has declared a violation.[50] Remedies may also extend to 'general measures' like legislative acts.[51] This practice may be seen as a compensation for the lack of direct effect of ECtHR judgments[52] and fits in with a tendency of the Court to consider not only the state as a whole under the duty to comply with judgments, but all of its institutions, including the legislature.[53] The ensuing obligations may also entail a duty of domestic courts to ensure 'with diligence', having regard to legal certainty, the conventional standards.[54] Taken together with the process of monitoring compliance by the CoM, the indication and supervision of general measures amount to a concept of

'control of conventionality' for which these two institutions share responsibility.[55] An important role has also been assumed by the Parliamentary Assembly, which may draw the attention to judgments which have not been implemented, and, to a lesser extent, by the Commissioner for Human Rights.[56]

13. Since 2004, the ECtHR has established a new pattern of supervision to cope with its extensive backlog,[57] the 'pilot judgment' procedure designed to deal with repetitive cases deriving from 'systemic' problems.[58] The Court selects a representative case, suspends the processing of other cases dealing with the same issue, and specifies the 'general measure' that the state is supposed to take.[59] The basis of this obligation is the finding of a violation and its legal consequence that the state has to put an end to the situation that is in conflict with the Convention.[60] Appropriate means usually are either legislative measures[61] or the putting in place of essential infrastructure,[62] such as the construction or improvement of prisons.[63] Often, the Court contents itself in enumerating possible measures to be taken; it does so either in the *dispositif* or in the reasons of its judgments.[64]

14. With regard to the Inter-American compliance system, the lack of a provision in the ACHR providing for the execution of judgments by a political body has resulted in this supervision being conducted by the Court alone. The IACtHR asserts that monitoring state compliance with its judgments is an inherent attribute of its jurisdiction and regularly holds hearings and issues resolutions on compliance to this end.[65] Under its doctrine of 'control of conventionality', a state, under Article 2 ACHR, is required to give domestic effect to the provisions of the Convention and to determine whether its domestic laws

---

[55] Flauss (n. 37), pp. 37-38. The term 'control of conventionality' originated with the Inter-American system (*infra*).

[56] Forst (n. 52), pp. 22-24, 40-42, with references; see Parliamentary Assembly, Committee on the Honouring of Obligations and Commitments of the Member States of the Council of Europe (Monitoring Committee), The Monitoring Procedure of the Parliamentary Assembly, AS/Mon/Inf(2013)06rec3, 27 June 2013.

[57] The backlog has been reduced in the meantime; in 2012, there were still 151,600 cases pending before the Court; as of 31 March 2016, approximately 67,200 applications were referred to one of its formations.

[58] Beginning from ECtHR, *Broniowski v Poland*, Rep. 2004-V, § 83; see P. Leach et al., *Responding to Systemic Human Rights Violations*, Antwerp (Intersentia) 2010; as to 'quasi pilot judgments' (identification of systemic failure, but no suspension of cases and no indication of general measures) id., p. 24; for further analysis L.-A. Sicilianos, *The Involvement of the ECtHR in the Implementation of its Judgments*, 32 Neth Q Hum Rts 2014, 235-262.

[59] See, for instance, ECtHR, *Atanasiu et al. v Romania*, 21 Dec 2010, § 230.

[60] The pilot judgment procedure has been incorporated into the Rules of Procedure, which now provide that the ECtHR is to identify the remedial measures the State is required to take at the national level, Article 61 RoP ECtHR, as amended by the Court 21 Feb 2011, www.echr.coe.int/Documents/Rules_Court_ENG.pdf.

[61] Like in ECtHR, *Greens and M.T. v UK*, Rep. 2010-VI (rights of prisoners to vote).

[62] Cf. ECtHR, *Driza v Albania*, Rep. 2007-V, § 123.

[63] As in ECtHR, *Ananyev et al.* v *Russia*, 10 Jan 2012.

[64] According to Article 61 § 4 RoP, the Court may set a time limit.

[65] Cf. as to its role in the execution process Article 65 ACHR, according to which the IACtHR "shall specify" cases to the General Assembly of the OAS "the cases in which a state has not complied with its judgments, making any pertinent recommendations".

comply with the provisions of the Convention as interpreted by the Court.[66] Compliance under Article 2 ACHR is interpreted by the IACtHR to mean that 'the state must adopt all measures so that the provisions of the Convention are effectively fulfilled in its domestic legal system.'[67] Despite the fact that Article 68 ACHR requires only that states comply with judgments in cases to which they are parties, under the control of conventionality doctrine the IACtHR has interpreted this to mean that all states parties are required to conform their national laws and jurisprudence to all the Court's judgments, including the reasoning. If a domestic law conflicts with the state's international obligations, the state is in violation of Article 2 ACHR and the Court may order the state to amend or repeal the law so as to comply with the treaty and provide for its execution. Absent implementing legislation, the IACtHR considers the ACHR self-executing and automatically incorporated into the domestic law of the states parties to the treaty; it determines that domestic laws that violate a right under the ACHR are without legal effect, such as amnesty laws that prevent the state from investigating, prosecuting and punishing human rights crimes.[68]

15. Individual and general measures ordered by the IACtHR result from an interpretation of the remedies clause (Article 63 ACHR) which, as opposed to the restriction on financial compensation found in Article 41 ECHR, explicitly spells out that 'consequences of the measure or situation that constituted the breach of [...] a right or freedom be remedied'.[69] The categories of such remedies ordered by the Court include restitution, rehabilitation, satisfaction, guarantees of non-repetition, the obligation to investigate prosecute and punish, compensation for material and moral damages and costs and expenses of bringing the case before the Inter-American system.[70] Restitution may mean the release of an individual illegally detained, the return of illegally seized property, protection for displaced victims to return to their homes, reinstatement of employment, the expunging of judicial, administrative, criminal or police records when a conviction has been reversed and the return of ancestral lands to indigenous groups.[71] In this vein, the IACtHR, in 1997, for the first time ordered the release of a civilian who had been convicted by a military court and then abused while in captivity.[72] In other cases the IACtHR annulled proceedings and ordered a retrial. For example, in the *Lori Berenson* case, the Court held that provisions of emergency laws adopted to deal with terrorism violated Article 2 ACHR, because they permitted the military to try civilians and demonstrated that the state had not taken the necessary domestic legal measures to give effect to the rights set forth in the ACHR.[73]

[72] IACtHR, *Loayza-Tamayo v Peru*, 17 Sept 1997, Ser. C 33, § 87.

[73] IACtHR, *Berenson-Mejía v Peru*, 25 Nov 2004, Ser. C 119.

The state, after a change of regime and a number of ensuing judgments, annulled previous military court judgments and ordered retrials in civilian courts. In comparison, the IACtHR, for various reasons, responds to a considerable degree to systemic human rights violations, whereas the ECtHR in the vast majority of cases follows an individual justice pattern, so that general measures play a more important role for the former than it does for the latter.[74]

16. As for reparations, substantial moral damage, according to the ECtHR, result in higher compensation payments,[75] whereas they may entail in IACtHR jurisprudence a wide range of non-pecuniary remedies.[76] Such measures may be public acts or ceremonies in which the state acknowledges responsibility for the violations. Thus, the Court has demanded a public apology, publication and dissemination of the relevant parts of its judgment in the local newspapers, the creation of a memorial named after the victims, locating and identifying the victim's mortal remains and returning them to their families, and scholarships, literacy or vocational programs and housing for the living relatives of the victims, whom the Court also identifies as 'victims' due to their suffering as a result of the violation of the ACHR.[77] Similar in effect to the pilot procedure under the ECHR, if a pattern of human rights violations reveals a systemic problem likely to be repeated in the future and fundamental changes are not made, the IACtHR orders reparations that not only benefit the individual victims in the case but also bring about structural changes. Such remedies comprise capacity building by training public officials, legislative reform, reversal or execution of domestic court rulings and other non-legal measures such as improving prison conditions.

b) Quasi-judicial bodies

17. The UN treaty bodies have repeatedly used their powers to formulate in general observations how the respective conventions should be effectively implemented, as general comments by CEDAW, CRC, CAT, and CERD show.[78] In particular, the HRC, based on Article 40 § 4 ICCPR, which allows it to publish 'general comments as it may consider appropriate', specified compliance obligations by member states with regard to the treaty and its decisions. When it comes to complaint procedures, however, only five out of the ten treaty bodies could develop practice on a significant number of complaints so far: HRC, CERD, CEDAW, CAT and CRPD.[79] Among these institutions, HRC and CAT

[79] The mechanism under CMW has not entered into force. CRC, CRPD, and CED have only recently started to operate and processed only a very small number of cases; SPT has a special jurisdiction for on-site inspections.

are probably the most pertinent in terms of numbers of cases and potential impact on domestic courts.[80] This section therefore concentrates on the implementation of findings of these bodies.

18. The Optional Protocol (OP) to the ICCPR, in Article 1, establishes the right to individual communications before the HRC for violations of civil and political rights as they are spelled out in the Covenant. The HRC is a 'quasi-judicial' body (see above, para. 3), which is, like the other UN treaty-based bodies, also competent to review the reports states have to submit regularly. The HRC uses the term 'decisions' for all types of final outcome of the procedure concerning an individual communication. If such a decision results in the finding on the merits, the treaty denotes it as 'views', which are to be forwarded to the state party in question and to the applicant (Article 5 § 4 OP). As of 1 September 2015, the HRC has adopted views in 1088 cases (with violations found in 922 cases); in addition, 645 cases were declared inadmissible, 368 discontinued or withdrawn, and 492 not yet concluded.[81]

19. Even though the HRC is not a human rights court, its views show some 'important characteristics of a judicial decision' such as their 'determinative character'.[82] Apart from the declaration of the alleged violations, the HRC has recommended remedies for a violation like the amendment of legislation, the release of unlawfully detained persons, or the payment of compensation.[83] Furthermore, in its follow-up procedure, it requests information from the state party about the measures taken to give effect to its views. To prevent irreparable harm, the HRC may decide on provisional measures.[84] The Committee on occasion has implied that its views are legally binding,[85] and appeared to be backed by the ICJ when it referred to HRC practice as 'jurisprudence',[86] even though the source of this legal obligation has never been explicitly defined or defended in any of the Committee's decisions on cases.[87] In General Comment Number 33 the HRC notes that 'the Optional Protocol [...] imposes obligations on states parties […] arising out of that procedure, in addition to their obligations under the Covenant' and stresses a duty of the states to cooperate with the Committee in good faith.[88] Instead of attributing explicitly binding force to its decisions, however, it has noted that its views 'represent an authoritative determination by the organ established under the Covenant itself charged with the interpretation of that instrument'.[89]

---

[80] CERD, CEDAW and CRPD address systemic problems of discrimination to be remedied predominantly by legislation and administrative practice. Violations are rarely found in complaint procedures, i.e. 15 by CERD, 15 by CEDAW and 5 by CRPD, numbers found http://www.ohchr.org/EN/HRBodies/Pages/HumanRightsBodies.aspx, 31 Oct 2015.

[88] General Comment No. 33 (n. 30), §§ 3, 15 and 19.

[89] Id. § 13.

20. The HRC has not dealt with the domestic status of the Covenant. It follows a traditional international law pattern by leaving it to the member states as to how they ultimately live up to the standards set by the ICCPR. However, it has taken Article 2 ICCPR as a starting point to specify the obligations incumbent upon states to respect and to ensure the rights guaranteed by the treaty.[90] Accordingly, state parties are required to 'take the necessary steps to give effect to the Covenant rights in the domestic order'.[91] As to the judiciary, the ICCPR demands that every victim of a violation of a right in the Covenant must have access to an effective remedy, and this should include having his or her rights 'determined by competent judicial, administrative or legislative authorities [...] and to develop the possibilities of judicial remedy' (Article 2 § 3).[92] Thus, state parties are obliged to ensure that individuals and groups can invoke their rights under the ICCPR effectively.

21. However, it remains debatable how effective the mechanism of the Optional Protocol is for monitoring compliance with its own decisions. The HRC has assigned a committee member the task of 'follow-up' and occasionally of meeting with recalcitrant state representatives. But this procedure is opaque to the author of the communication who is not kept informed of the state's responses during these follow-up meetings, or even informed that such meetings have occurred. The lack of transparency in the follow-up procedure, and the lack of a sustained effort to keep the pressure on states who have failed to implement decisions – for example, by repeated, continuing meetings or open dialogue with state representatives dedicated specifically to follow-up of individual cases – diminishes the efficacy of, and respect for, the Committee's decisions.

22. Cooperation of the state party during procedures and in the follow-up is often unsatisfactory. In many cases, the HRC does not receive any response from the state party to communications or it witnesses rejection of its views after the ending of proceedings, which casts a deep shadow over the monitoring system of the HRC. When no response is at hand, the HRC considers the process as 'ongoing with a view to implementation'. However, it does not provide for any recourse if the state party does not participate or comply with the HRC's views. If a state party refuses to implement views under the Optional Protocol, the Committee publishes notice of the failure to implement the views. If the state violates interim or provisional measures, it directly violates the 'obligation to respect in good faith the procedure of individual communication established under the Optional Protocol.'[93]

23. The absence of any serious monitoring mechanism negatively affects the level of state compliance with the Committee's views. Part of the problem might be that the text of the Optional Protocol even lacks an express legal basis, so that the 'follow-up' mechanism was based on the doctrine of 'implied powers'. More importantly, the at times inconsistent and little transparent follow-up practice does not sufficiently persuade state parties to comply. Experience shows that states do not necessarily reject the rationale of the Committee's views, but they quite often assert that they do not have sufficient

[90] General Comment No. 31 (n. 27); for the self-executing character of the ICCPR see Y. Iwasawa, *Domestic Application of International Law*, 378 Recueil des Cours 2015, 9-261, at 36-41.
[91] Id. § 13.
[92] Id. §§ 15-19.
[93] Id. § 19.

domestic mechanisms of implementation. Thus, more persuasiveness in, and awareness of, decisions would contribute to the development of more consistent follow-up.

24. The CAT, which was set up in 1989, is responsible for the review of state reports, state complaints (which have not been raised so far), an inquiry procedure with respect to systematic violations, and, on an optional basis, individual complaints under Article 22 CAT. So far (15 Aug 2015), 272 out of 697 such complaints were decided on the merits, and 107 violations were found.[94] Findings on the merits are 'decisions' (Article 118 § 4 Rules of Procedure).[95] The CAT in those cases does not only state if a violation was found, but also refers to Article 118 § 5 RoP, according to which it may invite the respondent state to inform it about measures of relief, when it sets out specific measures to be taken such as interim relief, investigation, prosecution, and punishment of the responsible and compensation of the victims.[96] Like the HRC, the CAT has instituted a follow-up dialogue with the state parties.

25. However, the record of compliance with its decisions is disappointing. In complaint procedures, states too often fail to respond to communications. Only in 47 out of the 101 cases where violations were found, a satisfactory resolution has been achieved.[97] The review of state reports (Article 19 CAT) and the response by member states to the recommendations made by the CAT in the course of the reporting procedure have raised concerns as to the effectiveness of CAT and its protection mechanism. One of the issues raised most often is the lack of incorporation of the Convention into domestic law, be it that no statute of transformation is enacted, that the definition of torture has not been incorporated into domestic law, or that penal law and procedural law have not been duly amended.[98]

26. The IACHR (para. 4) was modelled on the now defunct European Commission, but unlike its European counterpart, was originally created by political resolution and not by treaty, in 1959. The Commission was 'recreated' with a 'legal basis' when the ACHR entered into force in 1978. All member states of the OAS recognise its competence to receive complaints under the ADRDM. In admissible cases, the IACHR may negotiate 'friendly settlements' between the parties; in serious and urgent cases, it may grant precautionary measures; it may issue decisions on the merits; and it may take a case to the IACtHR if the state fails to comply with the recommendations in its merits report. Although the ADRDM is not a legally binding instrument, the IACtHR has declared it 'a source of international obligations' for the member states of the OAS.[99]

27. The African Commission on Human and Peoples' Rights (AfCHPR), like its regional counterparts, is a quasi-judicial body established under Article 30 of the African Charter

(see para. 4) to interpret the African Charter and promote and protect individual human rights as well as the collective rights of peoples. Consonant with the communitarian nature of traditional African culture Article 29 of the African Charter also provides for duties incumbent upon peoples. The AfCHPR reports to the Assembly of Heads of State and Government of the African Union. States and individuals of 53 member states (except South Sudan) of the African Union may direct communications of alleged violations of the African Charter to the AfCHPR. With the creation of the African Court on Human and Peoples' Rights,[100] the Commission also submits cases to the Court. While the Commission's decisions are not legally binding on the AU member states, judgments handed down by the Court are binding upon parties to the case at hand. In addition to the African Charter, the Court has subject matter jurisdiction to interpret and apply any "relevant Human Rights instrument ratified by the States concerned". This broad subject-matter jurisdiction allows for the direct application of, amongst others, AU human rights treaties in addition to the African Charter, including the African Charter on the Rights and Welfare of the Child and the African Protocol on the Rights of Women in Africa.[101]

3) The obligation to comply with jurisprudence in matters of human rights when the State was not a party to the litigation

28. As far as human rights treaties address the effect of decisions of the competent bodies, the wording confines their binding force to the parties to the case decided (Articles 46 ECHR, 68 ACHR). The pilot judgment procedure in the European system is no exception to this rule. Even though it extends consequences of a judgment to like cases stemming from complaints with the same root cause, the legal effects are limited to the same respondent state. In other words, there is no formally binding effect of decisions by human rights courts on states not party to the procedures (*erga omnes*). This can similarly be said of final decisions by quasi-judicial bodies in complaint procedures.

29. The consequence is that there is no rule of international law that prevents states from failing to adhere to human rights decisions in cases in which they were not a party. One rationale for this is that otherwise new complaints in similar cases would be *res judicata* and hence inadmissible. Furthermore, human rights jurisprudence is not homogeneous, often fragmented and, due to the evolutive approach taken by some human rights bodies, subject to change. Finally, the exclusion of an *erga omnes* effect opens opportunities, provided that courts act in a cooperative spirit. A case in which a domestic supreme court decides not to follow the jurisprudence of an international human rights body with good reasons may initiate a judicial dialogue that ends up clarifying old, or even creating new, interpretations of the human rights treaty.[102]

---

[100] The Court was created under the Protocol to the Charter of 1998 (n. 12).

[101] African Charter on the Rights and Welfare of the Child of 11 July 1990, OAU Doc CAB/LEG/24.9/49 (1990), in force 29 Nov 1999; Protocol to the African Charter on Human and Peoples' Rights on the Rights of Women in Africa of 11 July 2003, in force 25 Nov 2005, reprinted in M.S. Nsibirwa, *A Brief Analysis of the Draft Protocol to the African Charter on Human and Peoples' Rights on the Rights of Women*, 1 Afr Hum Rts L J 2001, 40-64, at 53.

[102] An example is the judgment of the Supreme Court of the United Kingdom, *R v Horncastle*, [2009] UKSC 14, § 11, which changed the ECtHR's evaluation of hearsay evidence in criminal proceedings; see ECtHR, *Al-Khawaja and Tahery v UK*, Rep. 2011-VI, §§ 146-147.

30. However, even though the primary function of judgments of human rights courts and decisions of quasi-judicial bodies is to grant legal protection to the applicants in a specific case, they have a leading role to play in providing orientation for similar future cases in other states.[103] Thus, according to the ECtHR, its judgments do not only serve as a remedy in individual cases, but also to establish a general standard of protection for all parties to the ECHR,[104] which it considers a 'constitutional instrument of European public order'.[105] The Court bases this claim to a general normativity of its jurisprudence on its mission under Article 19 ECHR, 'to ensure the observance of the engagements undertaken' by the states parties to the ECHR. Accordingly, member state courts have to take judgments, recommendations and observations by the competent bodies into account to the broadest extent possible.

31. The CoM *Guide to Good Practice* of 2013 notes that a party to the ECHR is 'obliged under Article 1 to secure the Convention rights to everyone within its jurisdiction, and under Article 46 to implement final judgments of the Court in cases to which it is party. Insofar as the Court is encouraged to be consistent in its interpretation of the Convention, it is advisable for all branches of the State, including national courts and tribunals, to have regard to the Court's settled interpretation of the Convention in cases against all High Contracting Parties. This can help prevent violations of the Convention. The effectiveness of a domestic remedy can also be significantly enhanced if it is able to respond to the Court's evolving interpretation of the Convention, in accordance with the living instrument doctrine, without waiting for this to be specifically reflected in the finding of a violation against the relevant High Contracting Party.'[106] It is also stated that a proper interpretation of the Convention by a national court or tribunal might not be possible without having regard to the jurisprudence of the ECtHR. In the same vein, the new Protocol (No. 16) to the ECHR provides for the highest courts of the ratifying parties the option to request an advisory opinion by the ECtHR on a pending case.[107] The general comments and observations by the competent UN treaty bodies may play a comparative role in judicial or quasi-judicial dialogue. If the national system permits, it is the role of counsel to draw the attention of domestic courts to the jurisprudence developed in the scope of a treaty to which the respective state is a party.

32. Thus, even though there is neither *stare decisis* nor formal *erga omnes* effect of decisions, domestic authorities must accord full consideration to the interpretation adopted by the respective competent international courts for the system to achieve coherence.[108] With respect to the European system, full consideration signifies that domestic courts and

other state authorities take full cognizance of the interpretation by the ECtHR.[109] Also regarding the other protection systems, courts should give effect to the decisions taken by the competent international bodies and follow their interpretation, unless they provide convincing arguments for a different understanding.

D. CONTENTS OF 'GOOD FAITH' COMPLIANCE AND 'GOOD' OR 'BEST PRACTICE'

1) 'Good Faith'

33. The source of the obligation of the state parties to implement judgments is the respective human rights treaty itself. With respect to third states, their duty to duly consider decisions by human right bodies derives from the underlying treaty obligations and the duty to apply and interpret them in good faith (Articles 26 and 31 VCLT, see para. 5 above). The ECtHR derives from good faith,[110] the IACtHR from the object and purpose of human rights treaties[111] the obligation of the state parties to execute its decisions. HRC General Comment number 33 refers to good faith when stressing the duties of states to cooperate in complaint proceedings and to implement their decisions.[112] The CAT Rapporteur on follow-up noted that, even though the decisions of CAT may not be strictly mandatory, states parties had an obligation to comply with them in good faith.[113]

34. When the European Court and a UN human rights treaty body, like CAT, issue contradictory jurisprudence, the state generally appears to follow the European Court since it is a judicial body that issues legally binding judgments. Australian courts held that under its domestic Foreign State Immunity statute, they could not hear a civil suit against foreign state officials in the case of torture committed abroad,[114] thus ignoring decisions and general comments of the CAT that Article 14 should have extraterritorial application, and suggesting a claim of state immunity would be incompatible with the obligations assumed by state parties under the Convention.[115] This practice follows similar cases in the UK, Canada and New Zealand.[116] While the ECtHR, which in *Jones v. United Kingdom*

upheld the immunity of states and state officials from civil suits for torture in foreign courts,[117] appears to affirm the position taken by these domestic courts, it is a matter of concern when the interpretation by CAT, the responsible body under the Convention against Torture, is not even considered.[118]

35. As the ILA Human Rights Committee concluded earlier, decisions by human rights bodies constitute subsequent treaty practice in the sense of Article 31 § 3 (b) VCLT and have to be taken into account in the process of interpretation.[119] Thus, even as far as decisions may not be formally binding in themselves, the jurisprudence developed by these bodies constitutes *res interpretata* within the treaty system accepted by the state. For domestic courts, giving serious consideration to them is a matter of preventing a determination of the international responsibility of their states and thus of good faith implementation. With respect to the decision of quasi-judicial bodies, the minimum good faith obligation is to guard the object and purpose of the respective treaties, which means that the essential contents of the guarantees be respected, to protect the most vulnerable and to prevent irreparable harm to persons, which may mean that provisional measures are required until the matter is settled or decided.

2) 'Good Practices'

36. The fact that the judgments and decisions of human rights bodies generally refer to obligations of result, that the duty to prevent human rights violations implies that due diligence standards be observed, the lack of a strictly binding *erga omnes* effect of decisions, the disputed legally binding character of quasi-judicial human rights bodies and the rather vague good faith basis of obligations, all indicate that it is not always possible to spell out clear-cut obligations, which the decisions of the competent bodies would entail, particularly with respect to states not parties to the case. On the other hand, the more imminent threats to human rights affecting standards protecting the very existence of the human being and the more imminent the danger of irreparable harm, the less flexibility can there be in living up to treaty obligations as are specified by the interpretation of the competent bodies.

37. When standards were adopted in the past by expert groups or international organizations with a view to elaborating such an approach to a routine of compliance, they have

[119] ILA, International Human Rights Law and Practice: Final Report on the Impact of Findings of the United Nations Human Rights Treaty Bodies, in: Report of the Seventy-First Conference in Berlin, London (ILA) 2004, p. 621, § 21; as to subsequent practice see the work initiated in 2008 of the ILC working group Treaties over Time – Subsequent agreement and subsequent practice in relation to interpretation of treaties, http://legal.un.org/ilc/guide/1_11.shtml.

been referred to as principles,[120] recommendations,[121] guidelines,[122] or guides to good practice.[123] The denomination does not necessarily imply a certain method of identification of such standards. However, the term 'principles' seems to suggest a certain level of normative abstraction, whereas 'good practice' identifies a certain conduct.[124] To identify an ideal type of such conduct, valid for all protection systems and all countries subscribing to them, necessarily results in an exercise of concentrating on universal minimum requirements for which the term 'good practice' recommends itself rather than to speak of 'best practice'. The method of identifying such practice may either be to seek model-type behaviour or, conversely, to point at shortcomings and possible means of improvement.

38. The approach taken here is to draw inspiration from various sources and to try to identify a basic set of 'good practices' relevant for domestic courts. Even though the concept of 'good practice' can be still vague, it can be rooted in international discourse. While it may be possible to connote the minimum obligations of states, there certainly exist practices which are preferable. Even if states are not strictly obliged to follow them, good practices reveal preferable options for realizing the object and purpose of human rights treaties and to fill *lacunae* in domestic law. Such practices may be identified both by deduction and inductively, i.e. on the one hand, by the interpretation of human rights treaties and relevant decisions with a focus on the best interest of the individual, and on the other hand, by study of various countries which may provide clues to preferable options. Whether they prove practicable may depend on factors like the overall constitutional set up of the state in question and of institutional as well as financial resources. In other words, the existence of various conceptions of good practices does not deny the usefulness of the concept as such.

39. With respect to the judiciary, in its *Guide to Good Practice* (2013) the Council of Europe's Committee of Ministers stressed the importance of dialogue between the ECtHR and national courts: 'This operates not only through meetings between judges, but especially through the exchange of ideas and principles as expressed in judgments. If national courts and tribunals can have regard to the Convention principles and the Court's jurisprudence, they can discuss these in their judgments, and the Court in turn can then both influence and be influenced by this analysis. This enriches and extends the effect of the Court's role of authoritatively interpreting the Convention.'[125]

E. COUNTRY BASED CASE STUDIES

40. The Committee is conscious of the fact that wide gaps may exist between laws and judgments on the one hand and the factual situation with respect to human rights on the other hand. There may be countries in which the judiciary holds human rights in high esteem whereas, at the same time, politics and public authorities systematically neglect or even violate them. On the other hand, courts in states with an overall acceptable civil rights record may set aside human rights treaties, convinced that their legal orders should serve as a paradigm for others. Good practice, however, starts with good law, and neglect of international treaty obligations is more likely to serve as a bad example than as model type conduct. Thus, in order to identify good practices, the Committee has undertaken to examine questions of compliance in a selection of specific contexts, of particular states, and in relation to particular human rights instruments and decision-making bodies, in particular domestic courts. The present study seeks to examine, *inter alia,* how states and most particularly, domestic courts, interpret their obligations under international decisions dealing with human rights.

41. In so doing, this Report starts from the assumption, as studies suggest, that ratification of human rights treaties leads to better rights protection.[126] Taking other studies into account which take a sceptical view at this observation[127] and bearing in mind that several constitutional and supreme courts consider their domestic constitutional framework as decisive in the last resort, this is a less obvious point of departure than one might assume. The assumption is nevertheless supported by the fact that international treaty law creates obligations which add to domestic protection schemes since, upon their ratification, it is no longer up to the state alone whether rights are publicly recognised as binding obligations and if violations are declared.[128] The local remedies rule, the principle of subsidiarity and the margin of appreciation that human rights bodies underscore that the primary obligation to respect and ensure human rights is with the states parties themselves. In assuring the best protection of the human rights of the individual, both constitutions and treaties have their roles to play, which advocates for leaving space to a productive judicial dialogue without raising claims of predominance of one over the other.

42. The following sections highlight various factors which are of importance with respect to the status human rights have in domestic legal orders in general and, as a consequence, for domestic courts in particular. Such factors are: the relationship among

national constitutions, international human rights treaties and domestic laws; the direct or indirect effect of human rights treaties in national law; the status of decisions of human rights courts and quasi-judicial bodies; how states and legal orders respond to the finding that a violation of human rights has taken place; and the extent to which domestic courts follow the practice of human rights bodies even if such practice concerns findings with respect to third states. If a state has not recognized the jurisdiction of such bodies to hear complaints, it is of interest how they respond to judgments of the ICJ with an impact on human rights, as they have been dealt with in Part One of the present report.

43. The present report examines the implementation and compliance with judgments in a selection of cases before the UN human rights treaty bodies, the ECtHR and the IACtHR in 20 countries.[129]

1) Argentina

44. Following a monist approach, the Argentine constitution, since a reform in 1994, distinguishes between two categories of treaties.[130] While treaties generally are subordinate to the constitution, but prevail over statute law, a set of key human rights instruments was incorporated into the constitution and shares its rank. Among them are, according to Article 75 § 22, ADRDM, UDHR, ACHR, ICCPR and its Optional Protocol, as well as the other major UN treaties except CMW and CED.

45. The Argentine Supreme Court accordingly interprets the obligation of the judiciary to harmonize the provisions of these treaties with those of the constitution.[131] The courts apply the treaties as they are interpreted by the competent courts, in particular under the ACHR, also in cases to which Argentina had not been a party. An example is the *Barrios Altos* case, in which the IACtHR held Peruvian amnesty laws to be incompatible with Peru's obligations under the Convention.[132] Based on this judgment, the Supreme Court declared Argentine amnesty laws to be 'constitutionally intolerable', despite the fact that the amnesty laws had been declared constitutional in an earlier 1987 Supreme Court decision.[133] Decisions of quasi-judicial bodies, by contrast, are not considered as binding, but provide interpretive guidance for judicial practice.[134]

---

[129] It is to be noted that regional courts, in particular the Court of Justice of the European Union (ECJ), have developed their own fundamental human rights jurisprudence drawing from human rights treaties which has an impact on domestic law. However, they are not included in this report since these regional organisations are not yet parties to human rights conventions. An exception is the EU's accession to CRPD, OJEU 2010 L 23/35. The project of the EU to ratify ECHR is suspended, due to ECJ Opinion 2/13, 18 Dec 2014, EU:C:2014:2475.

2) Australia

46. Australia has ratified most of the UN human rights instruments. It has also accepted the right of individual complaints under OP ICCPR and Article 22 CAT. However, these treaties only take direct effect on the domestic plane if transformed by 'enabling' legislation passed according to the external affairs power of Section 51 (xxix) of the constitution.[135] While such laws were enacted with respect to CEDAW and some of the obligations following from CERD, no such statute directly implements ICCPR, ICESCR, CAT, CRC and CRPD. As an implementation mechanism, the 2011 Human Rights (Parliamentary Scrutiny) Act was passed which requires bills to include a statement of compatibility with human rights standards and sets up a specialized Parliamentary committee with the task of review. The Human Rights Commission, which has existed since 2009 and was created under a different name before, is empowered to investigate and to conciliate complaints on various discrimination grounds and with respect to specific treaties among which ICCPR and CRC, but not the other UN human rights treaties are enumerated.

47. Human rights thus are in force, as far as they are adopted by legislation, on the rank of statute law.[136]Absent an act of transformation, human rights treaties serve as reference for the interpretation of Australian law before courts.[137] As the example referred to above has demonstrated, however, interpretations given to the conventions by treaty bodies are at times not considered as authoritative (see para. 34).[138]

3) Bangladesh

48. Bangladesh is a party to the basic UN human rights conventions, with the exception of CED, but has accepted jurisdiction for individual complaints only for CEDAW and CRPD. It belongs to the countries which have not yet submitted the initial report for review procedures according to the ICCPR to which it acceded in 2000. Like other commonwealth countries, Bangladesh adheres to a dualist approach. Therefore, its human rights obligations become effective on the municipal plane only if they are formally enacted as domestic law.

49. In this vein, the Supreme Court of Bangladesh referred in a case of 2008 to the ICCPR, but noted that 'our courts will not enforce the covenants and convention even if ratified by the State unless these are incorporated in municipal laws.'[139] In a 2013 decision, the same Court noted that while the state remained bound to honour a treaty it is party to, it was a different question whether the judiciary would follow and act in accordance with treaty stipulations in the absence of statutory command to that effect. Rather, it would take in aid ratio or observation made by the tribunals that were created

[136] In Federal Court of Australia, *Toben v Jones*, 27 June 2003, [2003] FCAFC 137, the Court was confronted with the argument that a statute went further than CERD required and was hence unconstitutional; only in rejecting this claim, it reviewed the statute law against CERD.

by the UN in the same way it consulted decisions of the superior courts of other states like the UK, India, or Pakistan and treat them as persuasive authorities where appropriate.[140]

4) Brazil

50. In 2004, Brazil reformed its legal system through a constitutional amendment by which a specific procedure for the incorporation of human rights treaties has been created (Article 5 § 3 of the Constitution).[141] The treaties that undergo this novel procedure, as did CRPD, now have constitutional status. However, there is still debate on the legal force of human rights treaties that were incorporated before the reform, which include ACHR and most core universal human rights instruments. According to a Supreme Court judgment which, i.a. under the influence of IACtHR case-law, departs from earlier jurisprudence, these treaties do not have legal, but 'supra-legal' status.[142] Even though this does not amount to constitutional rank, it appears that now statute law could be subject to review of compatibility with human rights law. However, in a case on an amnesty law, the Supreme Court refrained from making use of such an option,[143] so that conventionality control demanded by IACtHR was not applied.[144] Thus, there is not yet a clear doctrine as to the effect of supra-legality.

51. Therefore, even though the mobilizing effects of decisions and judgments under the Inter-American system are acknowledged,[145] with regard to the overall application of human rights by the executive, legislative and judiciary, a clear theory of how far human rights take precedence over any other political or national interest has yet to be created and followed. The issue has gained relevance in recent controversies between Brazil and the Inter-American system, especially with the latter questioning political decisions by the Brazilian government – as happened in the Belo Monte Dam case.[146]

5) Canada

52. Canada is not a party to the ACHR, but to most UN treaties including the complaint procedures under ICCPR and CAT. As a dualist system, Canadian law requires

[146] IA Comm'n HR, *Indigenous Communities of the Xingu River Basin, Pará*, PM 382/10, 1 April 2011 (precautionary measures).

that human rights treaties be incorporated into domestic law.[147] There is a presumption that courts should strive to interpret domestic law in conformity with Canadian international legal obligations insofar as domestic law permits. In practice, both customary and conventional international legal obligations of Canada are used to assist in interpreting and applying domestic law.[148] This is particularly true in the case of the interpretation of Canada's constitutional human rights embodied in the Canadian Charter of Rights and Freedoms.

53. Thus, international human rights law may be used to interpret the content of the rights and freedoms guaranteed by the Charter, the interpretation of limits on those rights, and the balancing of competing rights. A majority opinion of the Supreme Court in 2011 states: 'Charter rights *must* be interpreted in light of Canadian values and Canada's international and human rights commitments.'[149] In some cases, courts have invoked interpretations of treaty obligations by international monitoring bodies.[150] Nevertheless, this willingness to seek interpretive guidance from international human rights law will not overcome a direct conflict between domestic and international law.[151] An example is the communication of *Waldman v. Canada* in which the HRC found a violation of Article 26 ICCPR because of discriminatory funding of religious schools by laws in Ontario.[152] Canada has refused to implement the decision, and claimed that divided jurisdiction as a federal state has made it impossible to do so by provincial recalcitrance. Even though the ICCPR does not permit claims that federalism can be invoked to reduce state obligations and the non-existence of federal remedies has been disputed, the Supreme Court of Canada has not reversed earlier decisions in this context to bring Canadian law into conformity with the HRC decision.[153] Canada's non-compliance, therefore, shows up on a regular basis in the 'unsatisfactory' column of the HRC's annual report.

6) China

54. The case of the People's Republic of China (PRC) is of particular interest since the country is, also by its representatives, depicted as an alternative model with a genuine, non-Western approach to human rights law.[154] Despite different understandings of the official Chinese position in the Western world, the PRC formally accepts the notion of universality of human rights.[155] It has ratified six out of the nine UN human rights treaties, ICCPR, CMW and CED being those not binding on the PRC. However, official statements stress that the emphasis in Chinese legal thought traditionally is on obligations towards others rather than on individual rights, and declare two caveats: that the principle

of sovereignty prevailed over international human rights, so that they are not recognized as a sufficient reason for intervening into what is considered a domestic affair;[156] and that the right to subsistence and development were given greater weight under the present conditions.[157]

55. Since the Chinese constitution is silent on treaties, their domestic status is unclear and varies according to subject-matter. Human rights treaties have not been transformed into internal law so they do not form part of the sources of law to be applied by courts. Even though the 1982 constitution and later amendments subscribe to fundamental rights, they are not as inclusive as human rights treaties,[158] are subject to the limitation of collective interests (Article 51) and, as a rule, cannot be invoked before courts. Some of the areas covered by statute law take up matters which also fall into the purview of human rights. The General Principles of Civil Law (Article 142) and the Civil Procedure Code (Article 238) demand priority of international treaties in case of conflict with civil laws, which might be read as to open domestic law for human rights. However, with respect to human rights-related administrative law complaints, a general perception of judicial corruption and of a lack of independence is considered to be a constant source of distrust. Even in matters such as criminal law and criminal procedure where special laws protecting rights exist, courts reportedly take human rights treaty law or general comments by treaty bodies rarely into account.[159] On the other hand, there are indications that a reform of judicial review under the influence of international standards is the major reason for the decrease in the use of capital punishment in recent years.[160] It also seems that the exclusion of minors and pregnant women from the death penalty introduced by the criminal law reform of 1997 can be traced back to Concluding Observations by the CRC, deploring the lack of conformity of Chinese law with the Convention.[161]

7) Colombia

56. In Colombia, a country with a long history of violent internal conflict, human rights treaties have a special status, and their relationship with international humanitarian law (IHL) has been a salient issue.[162] It is in that context that Article 214 of the Constitution of 1991 is to be understood according to which human rights must not be suspended and IHL is to be respected under all circumstances. Article 93 provides that international

[162] C. von der Groeben, *The Conflict in Colombia and the Relationship between Humanitarian Law and Human Rights Law in Practice*, 16 J Confl & Sec L 2011, 141-164.

treaties, 'ratified by the Colombian Congress, that recognized human rights', prevail internally. To these treaties belong ACHR, all nine UN core treaties as well as the Geneva Conventions and their Additional Protocols, irrespective of the date of ratification. The rights set forth in the Colombian Constitution are to be interpreted in conformity with the international human rights treaties to which Colombia is a party.

57. This compound of treaties and constitutional rights is known as the 'bloc of constitutionality', following the French example with respect to the preamble of the 1946 Constitution. The Constitutional Court decides on constitutional complaints filed against municipal law, which can be reviewed against the standard of the *bloque de constitucionalidad* (cf. Article 241 of the Constitution).[163] In interpreting human rights treaties, the Constitutional Court defers to the jurisprudence of the IACtHR as the relevant 'hermeneutic criterion', also if such practice did not directly relate to Colombia.[164] Also the recommendations of the competent treaty bodies are to be taken into account.[165] In case of doubt, the interpretation of the laws most favourable to human rights is to be preferred.[166]

8) Denmark

58. Denmark is a party to the ECHR and to the UN treaties except CMW and CED, and it has accepted most individual complaint procedures such as those under ICCPR and CAT. Since Denmark has a dualistic legal system, treaties have to be transformed before being applicable before courts.[167] As the only one of these conventions, the ECHR was integrated into Danish law in 1992. Like in other Scandinavian countries, the main responsibility to comply with human rights treaties lies with the legislature, and institutions like the Parliamentary Ombudsman and independent human rights boards play an important role. This prerogative of Parliament also shows in the process of legislation when a review procedure has to be followed to ensure that a bill presented is not in conflict with Denmark's treaty obligations. During this process, judgments of human rights institutions like the ECtHR are considered, irrespective of whether or not Denmark was a party to the dispute in question.

59. Courts generally follow the ECHR and its interpretation by the ECtHR, but only in so far as it is required by Strasbourg practice and no other means are at disposal.[168] Treaties which are not incorporated do not serve as a standard to set aside statute law, but provide orientation as far as the laws leave room for interpretation.[169]

9) France

60. The Constitution of France, formally a monist state, provides that '[t]reaties or agreements duly ratified shall [...] prevail over Acts of Parliament' (Article 55).[170] This 'control of conventionality' falls into the responsibility of the *Cour de cassation* (CdC), the supreme court of the judiciary, and the *Conseil d'Etat* (CdE), the supreme administrative court.[171] The result of such control may be that national law is set aside or judgments of municipal courts are quashed. With respect to closed procedures, legislation was introduced in order to make the re-examination of criminal cases possible if the accused was convicted in violation of the ECHR, and jurisprudence of the CdE holds administrative authorities obliged to re-consider an administrative act which orders sanctions, even though there is no obligation to recall the act.[172]

61. Courts do not often refer to human rights treaties if the case can be decided on the basis of domestic law. The CdC ascribes to judgments of the ECtHR an *erga omnes* effect, which means that states would have to comply with them even if they were not a party to the dispute. A famous example is the interpretation of the right to a fair trial under French law by referring to ECtHR jurisprudence decided in Turkish cases.[173] The CdE is more reticent in that respect, but still applies the ECHR as it is interpreted by the ECtHR.[174] Most references to ECtHR case-law, however, are implicit when it is used for interpretive guidance. Since the 1990s, it is observed that the application of French law has been modified in many instances by adjusting it to ECHR practice. Decisions by non-judicial bodies like the HRC and the European Committee of Social Rights are not considered legally binding, but are used as reference material for interpretation.[175] The *Conseil Constitutionnel* on a recent occasion refused to follow a finding concerning France directly, which was special in that the HRC had arrived at a result which diverged from ECtHR in defining the scope of freedom of religion.[176]

10) Germany

62. Under the German Basic Law (Article 59 § 2), certain categories of international treaties, to which human rights conventions belong, must be formally adopted by an act of Parliament. This rule determines the domestic status of the treaty which applies as federal statute law. However, the Federal Constitutional Court (FCC) derives a general presumption from the constitution that the Basic Law is open towards international law so that the Constitution as well as all legislation enacted must be interpreted in the light of Germany's international obligations as far as methodologically feasible.[177] Amongst

[177] Bundesverfassungsgericht, BVerfGE 74, 358 at 370, 26 March 1987.

these obligations, the ECHR has a prominent place. In the shape of fundamental rights interpreted in conformity with its guarantees, human rights of the ECHR can be invoked in constitutional complaints procedures. To respond to ECtHR judgments is mostly up to Parliament; as far as the judiciary and the executive branch are concerned, statute law provides for the possibility to re-open procedures.[178] Because of the predominance of ECHR the UN treaties play a less prominent role, but have likewise to be taken into account as a means of interpretation.[179]

63. According to the FCC, German Courts must abide by ECtHR jurisprudence, even though not 'schematically', which means that in exceptional cases in which a complex balancing of colliding interests is at stake the Constitution may demand otherwise.[180] The Court mentions conflicts between the tabloid press and privacy and family law cases as examples. As a rule, however, judgments in which Germany was a party must be implemented and ECtHR practice is to be duly considered to avoid a violation of the fair trial guarantee. In a case on the ordering of preventive detention subsequent to criminal sentence, the FCC modified its own interpretation of the Constitution in order to harmonize domestic law with a ruling of the ECtHR.[181] Judgments in cases of third states are considered in the process of interpretation of the international treaties ratified by Germany. Even though the Court explicitly rejects any *erga omnes* effect,[182] the claim that ECtHR jurisprudence has not been properly considered may open a fair trial complaint.[183] The Federal Administrative Court expressly refers to the ECtHR as the 'authentic interpreter' of the Convention.[184] To harmonize interpretation with international law is a constitutional obligation and includes the jurisprudence of the ICJ, as the FCC has repeatedly held in cases in which notification of the right to consular assistance under Article 36 VCCR had not been granted.[185] Finally, practice of UN treaty bodies is occasionally, but not systematically cited in the reasoning of FCC judgments.[186] How far other courts live up to these standards is a different question.[187]

11) India

64. India adheres to most UN human rights treaties, with the exceptions of CAT, CED and CMW, but has not recognized any individual complaint procedures. The Indian Constitution of 1949 lists a range of human rights which show similarities to articles of

[186] Cf. Bundesverfassungsgericht (Chmb), 2 BvR 148/11, 15 Dec 2011, § 33 (HRC).

[187] A disputed example is case-law by administrative courts on the prohibition of headscarves in classrooms, which takes a Swiss case as an argument for its compatibility with the German Constitution, cf. ECtHR, *Dahlab v Switzerland*, Rep. 2001-V, quoted without closer examination by Administrative High Court of Baden-Wuerttemberg, NJW 2001, 2899, at 2905.

the UDHR.[188] Social and economic rights are not included as self-executing rights, but binding as principles. Additionally, it holds the state responsible to 'foster respect for international law and treaty obligations' (Article 51) and confers on Parliament the power to make law for implementing treaties (Article 253). In order to fulfill its conventional duties, the Protection of Human Rights Act of 1993 was enacted. India thus chose an approach also taken by other common law countries not to implement treaties directly, but by specific legislation.

65. Additionally, the Supreme Court plays a proactive role in entrenching human rights law in the domestic system by interpreting progressively fundamental rights of the Constitution in the light of treaty rights.[189] In particular public interest litigation has taken the Court to refer to ICCR, CEDAW and ILO treaties to endorse the notion of societal change as a force underlying any interpretation.[190] In another case, it read the constitutional right to shelter in context with ICESCR to arrive at a right to adequate housing for the poor;[191] even the ECHR is quoted on various occasions.[192] Interestingly, such entrenchment even trumps reservations to treaties declared by India.[193]

12) Italy

66. According to the Italian Constitutional Court, the relationship between the internal legal order, on the one hand, and the ECHR and the effects of ECtHR judgments on the other are defined by Article 117 § 1 of the Italian Constitution, as amended in 2001. It provides that the legislative powers should be pursued 'in accordance with the [...] international obligations of the state'.[194] Treaties share the rank of the statute of transformation, but whether human rights treaty provisions are self-executing is still a controversial issue. However, the Court derives from Article 117 § 1 a concept of consistent interpretation. If such interpretation is not possible because of the wording of the provisions or because of structural gaps, the responsible courts will have to submit to the Constitutional Court the issue of the unconstitutionality of the domestic provision when contrasted with the conventional rule.[195] The underlying goal of the Constitutional Court is to ensure a balance between the need to guarantee respect for the international obligations of the state and of other constitutionally protected values and interests.

67. The Constitutional Court recognized the interpretative value of the provisions of the ECHR as clarified by the ECtHR with regard to constitutional principles and rules on the

protection of fundamental rights. On the other hand, only if the guarantee at hand has become 'consolidated law' (*diritto consolidato*) by ECtHR jurisprudence, can it form the basis for a Convention-conform interpretation.[196] Even though the concept is not entirely clear, it apparently means that only Grand Chamber and pilot judgments and eventually chamber judgments constitute 'consolidated law', even though chamber judgments are only relevant if Italy was a party to the case.[197] Moreover, judicial interpretive and monitoring activity finds an insurmountable barrier in systemic deficiencies of the internal legal order, which undermines the full respect of the obligations arising out of the Convention. Nevertheless, the Constitutional Court has played an active role in integrating the ECHR as it is interpreted in ECtHR case-law into the Italian Constitutional order. Thus, it declared the unconstitutionality of Article 630 of the Code of Criminal Procedure in so far as the domestic provision did not provide for the reopening of a case when necessary, pursuant to Article 46 § 1 ECHR, to give effect to a judgment of the ECtHR.[198] The Italian Supreme Court also considers provisional measures by the ECtHR as binding; it was necessary for the judiciary to respect Article 3 ECHR rigorously and to avoid expulsion to a state where inhuman treatment was expected.[199]

13) Japan

68. In the Japanese Constitution of 1946, human rights form a central pillar of the political order.[200] For determining the domestic status of Japan's human rights obligations, which comprise all UN treaties with the exception of CMW, but no individual complaint procedure, Article 98 § 2 of the Constitution provides that '[t]he treaties concluded by Japan and established laws of nations shall be faithfully observed'. The provision is read to incorporate international treaties upon ratification without further legislation. The prevailing doctrine places them on a rank between the Constitution and statute law. A Cabinet Legislation Bureau examines the compatibility of parliamentary bills in advance.

69. Japanese Courts have not been active in applying international human rights treaties since the human rights provisions of the Constitution are considered sufficient to satisfy international standards. In this vein, the Japanese Supreme Court does not treat human rights conventions as self-executing. However, the Court ruled that a provision in the civil code discriminating against children born out of wedlock was unconstitutional and void, following criticism brought forward in international fora.[201] The Court referred

Iwasawa, *International Law, Human Rights and Japanese Law: The Impact of International Law on Japanese Law*, Oxford (Clarendon Press) 1998.

[201] Supreme Court of Japan, Case on Statutory Share in Inheritance of Children Born out of Wedlock, 4 Sept 2013, Saikō Saibansho Minji Hanreishū [Minshū] 1320, Engl. trans. http://www.courts.go.jp/english/judgments/text/2013.09.04-2012.-Ku-.No.984.and.985-19544,html.

to ICCPR and CRC and the opinions and recommendations of their monitoring bodies as decisive elements of its reasoning. Some court decisions even refer to international treaties and decisions under treaties to which Japan is not a party like the ECHR.[202] As to the possibilities to invoke human rights before courts, instead of attributing immediate effect to human rights treaties, decisions rather tend to recognize an indirect impact in that they seek an interpretation which coordinates international and municipal law. Thus, in the *Nibutami Dam Case*, the ICCPR is used to fill provisions of the Constitution with contents regarding land use in conflict with minority rights.[203] In a range of cases, lower courts extended such an indirect effect also to civil law and thus influenced legal relations between private individuals.[204]

14) Mexico

70. Mexico has ratified the ACHR and all major UN conventions and accepted individual complaint procedures of six of these systems.[205] In 2011, the Constitution of 1917 was amended, and it incorporated in Title 1, Chapter 1 human rights provisions enshrined in treaties to which Mexico is a party. The reform also set out a constitutional duty of the state to prevent, investigate and punish human rights violations. The current domestic status of human rights law was defined by jurisprudence in the following years.[206]

71. In 2009, the IACtHR in the *Radilla Pacheco* case had declared Mexico in violation of its obligations under the ACHR for entrusting the investigation of a forced disappearance at the hands of the military in 1974, to the military justice system. Since 'forced disappearance' is a human rights crime and not a disciplinary offense, the IACtHR stated that it should be investigated by ordinary civilian jurisdiction.[207] In following year the IACtHR ruled again on human rights crimes involving civilians still in the hands of the military justice system and expressed its irritation at the failure of Mexico to comply with its judgment in *Radilla Pacheco*.[208] Consequently, under the amended Constitution of 2011, the Mexican Supreme Court issued an opinion announcing that Mexico would henceforth comply with judgments of the IACtHR, which it asserted constituted *res judicata* and could not be questioned.[209] Courts were under an obligation to exercise an *ex*

officio control of conventionality. In a later decision resolving a conflict of jurisprudence at the circuit court level, the Court reconsidered the status of human rights provisions in international treaties and decided that they had constitutional status, but were not superior to the Mexican Constitution.[210] Human rights and the rights set forth in the Constitution were interpreted as having co-equal status and should be considered as an 'amalgam of rights'. Consequently, these new rights are to be harmonized in accordance with the principle of the best interests of the human being. A special requirement was formulated with respect to interpretation: In ascertaining which solution served the '*pro persona* principle' best, jurisprudence and reasoning of IACtHR judgments were binding on domestic judges, irrespective of whether or not Mexico was a party to the dispute. For promoting and enforcing human rights by this jurisprudence the Mexican Supreme Court became one of the winners of the UN Human Rights Prize in 2013.

15) Netherlands

72. The moderately monist Dutch Constitution grants supremacy to treaty provisions and decisions or resolutions by international institutions that are binding on all persons (Article 94 of the Constitution of 1953, as amended 1983).[211] Statutory regulations in force within the Kingdom shall not be applicable if such application is in conflict with such provisions of treaties or resolutions. According to Article 93, '[p]rovisions of treaties and of resolutions by international institutions which may be binding on all persons by virtue of their contents shall become binding after they have been published.' As a consequence, all courts can review acts of parliament against self-executing treaty provisions,[212] to which all ECHR guarantees belong. This is remarkable because the courts cannot review the constitutionality of acts of parliament (Article 120).[213] The domestic courts interpret ECHR provisions not just in light of ECtHR judgments against the Netherlands, but also in light of judgments against other States (*res interpretata*), and they hold Dutch State organs responsible accordingly. At times courts try to interpret them in as limited a manner as possible, but generally speaking they faithfully apply the case law. Moreover the legislative and executive branches have often been proactive in adapting practices and legislation following international case law relevant to the Dutch situation,[214] also if this case law did not involve the Netherlands.

73. An example of a case where the Supreme Court clearly relied on human rights law is its *Nuhanović/Mustafić* judgment**.**[215] In the specific circumstances of these cases it found the Dutch state responsible for the conduct of Dutchbat in Srebrenica. It invoked the *Al-Skeini* case of the ECtHR[216] to dismiss the argument that the state did not have jurisdiction as referred to in Articles 1 ECHR and 1 § 2 ICCPR.[217] It also found there was no basis in customary international law, the ECHR, the ICCPR and Dutch law for the exercise

of the type of far-reaching restraint in the judicial review of what happened, as advocated by the government. The Supreme Court also invoked the Draft ILC Articles on the Responsibility of International Organisations and the Commentaries thereto.[218] Among others, it recognised the possibility of dual attribution of responsibility, explaining this by reference to the independent and non-exclusive responsibility discussed by the ILC.

16) Russia

74. Russia is a party to seven of the nine principal UN treaties and accepted complaint procedures under ICCPR, CERD, CEDAW and CAT, but the most important obligations result from the ECHR. The Convention forms part of the national legal system. Having been ratified by the Russian Federation (RF) internally in the form of a federal law, the ECHR takes 'priority of application' over 'federal constitutional', statute law and other legal acts (cf. Articles 32 and 15 § 4 Constitution of 1992).[219] Even though, under Article 17 § 1, 'human and civil rights and freedoms shall be recognized and guaranteed according to the universally recognized principles and norms of international law and this Constitution', the Constitution is interpreted as prevailing over the norms of international treaties to which the RF is a party. Self-executing norms of the ECHR should apply directly within the domestic legal system.

75. The question of the relationship between the decisions of the highest judicial bodies on the one hand, and judgments of the ECtHR on the other, is a recurring issue. The role of 'apple of discord' in this context was played by the case of *Konstantin Markin*.[220] In this case, the Constitutional Court of the Federation (CCRF) decided in 2009 that the norms contested by the applicant concerning parental leave did not affect the human rights listed in the Constitution. In 2010, the ECtHR found a violation of Article 14 in conjunction with Article 8 of the ECHR.[221] The key to the relationship between decisions of the ECtHR and the CCRF can be found in the parallel application of the Constitution and 'international principles and norms' (Article 15 § 4 in conjunction with Article 17 of the Constitution). Accordingly, fundamental rights can be violated as a result of a violation of the international treaty or the Constitution, or both.[222] By the Federal Law 'On Ratification of the ECHR' Russia has acknowledged the competence of the ECtHR to interpret the treaty. Originally, this was thought to refer only to Strasbourg jurisprudence concerning Russia. Nevertheless, the Supreme Court and the CCRF have concluded that not only cases to which Russia was a party but all Strasbourg case-law should be taken into consideration.[223] A new posture began to take shape when several Russian Duma

[222] CCRF, Case No. 4-P on applications of *A.A. Doroshok, A.E. Kot, and E.Y. Fedotova*, 26 Feb 2010, § 3.3

[223] Even though subject to some caveats, see CCRF, Resolution No. 2-P/2007 on request of the *Cabinet of Ministers of the Republic Tatarstan, applications of PLC 'Nizhnekamskneftekhim', PLC 'Khabarovskenergo' and several citizens*, 5 Feb 2007.

members challenged the constitutionality of the Ratification Law, because they believed Russia was obliged unconditionally to implement ECtHR decisions if they contradict the Russian Constitution. In a ruling of July 2015, the CCRF expanded former rulings on the supremacy of the Constitutional Court over foreign courts and international treaties, affirming the primacy of the Russian Constitution. In the case of conflict, the Court held that 'in such a situation, by virtue of the Basic Law, Russia will be forced to abstain from the literal implementation of the decision of the Strasbourg Court' and invoked court practice in various countries like Germany, Italy, and the UK to support its position. The CCRF suggested that the federal legislature introduce a legal procedure which would enable it to interpret ECtHR judgments on request of the President or the government of the Federation.[224] In her reaction to this ruling, the president of the Parliamentary Assembly of the Council of Europe noted that the RF is already one of the countries with the highest number of non-implemented ECtHR judgments; it has not yet fully implemented nearly 1500 judgments. The mechanism envisaged by the CCRF should not lead to a selective implementation, as this would undermine the authority and efficiency of the human rights protection system as a whole.[225]

17) Slovenia

76. Pursuant to Article 8 of the Constitution of Slovenia, laws and regulations must comply with generally accepted principles of international law and with treaties to which Slovenia is a party.[226] The same article states that ratified and published treaties shall be applied directly. This means in effect that Slovenia recognises the primacy of international law over internal law, but international law ranks below the Constitution. Through ratification and publication, treaties become an integral part of the domestic legal system, and only if their provisions cannot be directly applied in determining the rights and obligations of individuals, it is necessary to adopt appropriate rules for their implementation. If their provisions are self-executing, they are to be used directly regardless of whether their content is reproduced in internal regulations or not.

77. The fundamental rights spelled out in the Constitution broadly correspond to the guarantees of the ECHR. Thus, the Slovenian Constitutional Court frequently refers to ECtHR jurisprudence in interpreting them, also if such judgments were not addressed to Slovenia as a party to a complaint, and follows ECtHR case law quite closely. Article 15 § 5 of the Constitution determines that no human right or fundamental freedom may be restricted on the ground that the Constitution does not recognise that right. If divergences between the two systems occur, they often come up in private law cases in which

[224] CCRF, Resolution No. 21-P/2015 on request of *State Duma deputies*, 14 July 2015, translation by M. Smirnova found at http://transnational-constitution.blogspot.de/2015/08/russian-constitutional-court-decision.html. The Russian President signed a corresponding law on 15 December 2015, summary found at http://en.kremlin.ru/acts/news/50935, 15 Dec 2015. A connection between this ruling and the judgment by the ECtHR, *Yukos Shareholders v Russia*, 31 July 2014, in which applicants were awarded 1.87 billion € compensation under Article 41 ECHR has been noted.

[225] Council of Europe, Parliamentary Assembly, PACE President concerned by decision on 'selective implementation' of Strasbourg rulings in Russia, press release of 16 July 2015.

[226] For this section see D. Wedam Lukić, *The Impact of the Jurisprudence of the European Court of Human Rights on the Decision-making of the Constitutional Court of Slovenia*, in Kadelbach, Rensmann and Rieter (n. 18).

competing protected interests are weighed against each other differently. The casuistic and at times unpredictable character of ECtHR practice is considered to be another reason. Slovenian criminal procedure law, unlike other procedural codes of the country, declares an ECtHR judgment as a possible basis for reopening a case.

18) South Africa

78. The Republic of South Africa (RSA) has a written constitution with an extensive Bill of Rights in Chapter Two. In addition to providing for the domestication of international law and a general preference for an interpretation in harmony with municipal law, the Constitution of 1996 also provides, in Section 39 (1) (b), 'when interpreting the Bill of Rights, a court, tribunal or forum must consider international law'. In one of the Constitutional Court's earliest decisions, in which the death penalty was deemed unconstitutional, it was held that 'public international law would include non-binding as well as binding law'.[227] In this vein, 'decisions of tribunals dealing with comparable instruments, such as the United Nations Committee on Human Rights, the Inter-American Commission on Human Rights, the Inter-American Court of Human Rights […] and the European Court of Human Rights […] may provide guidance as to the correct interpretation of particular provisions of Chapter Three'.[228] The Constitutional Court uses the ECHR and ECtHR case-law accordingly.[229] Generally, the Court's approach towards human rights law is regarded as exemplary, even though observers note that its reference to human rights bodies is more erratic than systematic.[230] An interesting element of the Constitution is Section 39 (1) (c) which provides that courts 'may consider foreign law' and thus empowers them to take into account how constitutional courts in other states deal with human rights and their application in internal law.

79. Section 39 (1) (b) of the Constitution has initiated an international human rights mainstreaming within South African law, and human rights litigation feature prominently in South African legal practice. In the spirit of the Constitution, other post-1994 legislation also promotes the harmonization of South African law and international human rights law. For instance, Section 6 (1) (a-e) of the Refugee Act 130 of 1998 provides that the act must be interpreted and applied with due regard to a number of specifically listed international human rights law instruments, and the last provision provides for any other relevant convention or international agreement to which South Africa is a party.[231]

19) United Kingdom

80. Treaties, including those on human rights, have no direct legal effect in the United Kingdom, but the courts apply a presumption when interpreting legislation that Parliament does not intend to breach treaty obligations.[232] To determine the scope of the obligation concerned, they will have regard to rulings of relevant international courts and bodies. Pursuant to the Human Rights Act 1998, which indirectly incorporates the ECHR, common law as well as existing and future legislation must, as far as possible, be read and given effect in a way which is compatible with rights and freedoms under the ECHR and the courts must take into account ECtHR case law. Nonetheless, legislation, which despite such interpretative efforts is found to be incompatible with those rights and freedoms must still be given effect and only a declaration of incompatibility can be made. It is then a matter for Parliament to decide whether to amend the legislation concerned, but a declaration of incompatibility, of course, will be an incentive to apply to the ECtHR to obtain a judgment that the UK has breached its obligations under the ECHR.

81. In recent years, criticism has been voiced in the judiciary as well as on the political plane that the ECtHR had unduly constrained member states' margin of appreciation.[233] The new Supreme Court distanced itself from the deference hitherto practiced by the House of Lords and held that, under certain, albeit rare circumstances, it were 'open to the domestic court to decline to follow the Strasbourg decision'.[234] In particular, cases concerning the deporting of suspects of terrorism[235] and on voting rights of prisoners[236] triggered British initiatives which resulted in the so-called Brighton Declaration with proposals to amend the Convention and appeals to the Court with a view to strengthening domestic courts in their relationship to the ECtHR.[237]

20) United States of America

82. The US is not a party to the ACHR, but individuals may file petitions before the IACtHR pursuant to the ADRDM. This is the only international human rights body to which complaints against the US may be brought. From the UN treaties, the US has ratified ICCPR, CAT, CERD, and the first CRC Optional Protocols, albeit with many caveats. According to court practice, international treaties, if executed by Congress or treated as self-executing by courts, are superior to the law of the states, but in relation to federal law, a last in time rule applies. Consequently, a treaty provision that becomes effective as law of the US supersedes as domestic law any inconsistent pre-existing provision of a

law or treaty of the US. Subsequent federal law, where possible, will be construed so as not to conflict with international law or an international treaty to which the US is a party. If a federal law, subsequent in time, cannot be reconciled with international law or an international treaty to which the US is party, it supersedes the earlier provisions.

83. According to a reservation to CAT and declarations made to the CCPR and CERD, the US considers the substantial provisions of these human rights treaties as 'not self-executing', which means that they are not directly applicable and can only be enforced domestically through implementing legislation.[238] Thus, references to these treaties in jurisprudence are only indirect.[239] The fact that no such incorporation has taken place is one of the reasons why the Alien Tort Statute of 1789, which provides that US federal courts have jurisdiction over an alien's violations of a few especially definite rules of customary international law, has gained some attention in human rights litigation.[240] In the *Medellín* case, concerning the obligatory force of ICJ orders and judgments with respect to treaty obligations arising from the Vienna Convention on Consular Relations, the US Supreme Court affirmed that the US had an obligation under international law not to sentence and execute a foreign national in criminal proceedings without granting the opportunity to seek consular protection.[241] However, the decisions by the ICJ against the US, the Court noted, derived from Article 94 § 1 of the UN Charter, were not self-executing so that they did not take domestic effect unless Congress implemented them. Since no such legislation was enacted, the ruling made state compliance with international court judgments a voluntary exercise.[242] With regard to a possible indirect impact decisions and opinions of international bodies may have on interpretation, the Supreme Court has expressed that they deserved 'respectful consideration'.[243]

F. CONCLUSIONS

84. Cursory as it is, the foregoing overview has affirmed the assumption that the human rights record of a state as a whole does not always coincide with openness of its courts with respect to human rights treaties. This goes in both directions. However, whether the human rights record of a state is satisfactory or not, recent trends by some courts to openly justify non-compliance generally or in certain cases (Germany, Italy, Russia, UK) is a principal concern. This comes at a time in which many protection systems are

being challenged as regards their workability.[244] Such domestic non-compliance by courts takes different shapes.[245] They range from the non-execution of judgments in individual cases for lack of resources (as some of the ECtHR pilot procedure categories indicate) to intentional non-implementation (Russia, US), from systemic non-compliance (China), 'reservations' by courts (Germany, Italy, UK), to political resistance to certain aspects (UK). In that climate, it is essential to recall that domestic courts share responsibility with international bodies for the protection of human rights.[246] To live up to this demand, criteria can be drawn from the preceding sections which relate to the courts' obligations, methods and capacities as well as to the institutional environment in which they operate. These criteria are (1) the characteristics of the system of human rights protection to which their states adhere, (2) the mode of engagement with international law in general, (3) the interpretation of the role of domestic courts in relationship to political institutions, (4) their willingness to adhere to international practice, (5) the framework of jurisdiction, (6) the existence of mechanisms to avoid conflict with human rights treaties, and (7) the availability of training, information and exchange.

85. Firstly, it is obvious that it makes an important difference to which protection system a country belongs. In the regional court systems, their courts and the binding effect of their judgments had a strong influence on the status of the respective conventions in domestic law. In the Americas the jurisprudence of IACtHR has revolutionised the status of human rights in domestic law, most notably by the requirement of 'control of conventionality'. The ECHR has attained a special status in many European legal orders, and has changed internal law in many respects (France, Germany). On the other hand, due to the less strictly conceived binding effect of its decisions, more limited practice in terms of numbers of cases, and the heterogeneity of its members, the UN treaty bodies have by far not achieved a comparable impact. Whether acceptance of individual complaint procedures makes a difference, may depend on the internal constitutional structure. But it is well arguable that recognition of such proceedings provides an incentive to bring human rights violations before a court.

86. Secondly, an important feature certainly is the mode of 'engagement' of a domestic legal order with international law in general.[247] At first sight, it looks like monist systems are more favourable to human rights treaties than dualist constitutions, as the examples from the Netherlands and from Latin America illustrate. However, courts in some systems like the US have developed modes to avoid integration of international law. On

Shelton (ed.), *International Law and Domestic Legal Systems: Incorporation, Transformation, and Persuasion*, Oxford (OUP) 2011.

the other hand, courts in dualist legal orders may compensate for the seemingly strict separation between the national and the international level with methods of consistent interpretation which aim to bring domestic law in harmony with human rights (Australia, Canada, Germany, India). Thus, to capture the stance taken by courts, the monism/dualism dichotomy is certainly too simplistic. It is therefore advisable to look at the attitude a legal system takes vis-à-vis human rights treaties in particular. Many constitutions attribute to human rights a special status which is not necessarily the status international law or treaties have in general (Latin American countries), others dispose of bills of rights which coincide in contents with human rights treaties (India, South Africa).[248] Decisive is whether or not individual guarantees are deemed self-executing, what rank they have in relation to other sources of law, and whether there are effective legal remedies to invoke them in court proceedings. By contrast, there are many states which do not incorporate or transform human rights treaties at all.

87. A third feature is the attitude taken by courts generally with respect to international law. Certainly, this attitude depends on the position of the judiciary in the overall balance of powers within a state, and in federations it may be further influenced by the relationship between the federal and state levels. However, courts often have considerable powers to influence their role and status, and in a comparative perspective, they make different use of it. The ILA Study Group on Domestic Interpretation distinguishes between avoidance and alignment. Avoidance postures accordingly include concepts of open contestation like constitutional caveats (Germany), ranking constructions in the domestic hierarchy of norms as they are observed in many countries, and doctrines of non-justiciability like, in particular, concepts of self-execution (Japan, US). Techniques of alignment are consistent interpretation (Canada, Germany, Italy).[249] Antagonistic strategies may be present in the jurisprudence of the same court, and at times techniques of alignment are used to camouflage avoidance and *vice versa*. It has been analysed in legal writings how the attitude of courts to international law is mostly dominated by domestic matters like the institutional context, pursuit of a local political agenda, and culturally idiosyncratic modes of reception.[250] From a human rights perspective, however, one easily identifies strategies of alignment with good court practice.

88. A closely related issue is, fourthly, the use of international material by domestic courts. As state organs, they share the obligation to implement judgments in proceedings to which they are a party; given the exhaustion of remedies rule, however, clarity about the content of these obligations is often available only after the supreme judicial body has taken a decision. Therefore, to avoid future violations, it is crucial how decisions are taken into account which relate to other cases. Practice varies between courts which follow closely the interpretation given by the competent bodies (Netherlands, Slovenia), courts which take such judgments as means of orientation (as they do in most states), and courts which ignore, or deny any effect from, international decisions (Bangladesh, US).

[248] 'Consubstantial norms', in the terminology of the ILA Study Group, see id. para. 29.

[249] Id. paras. 19-24, 38; cf. also P.-H. Verdier and M. Versteeg, *International Law in National Legal Systems: An Empirical Investigation*, 109 AJIL 2015, 514-533, at 522-527.

[250] See S. E. Merry, *Transnational Human Rights and Local Activism: Mapping the Middle*, 108 American Anthropologist 2006, 38-51; H.P. Aust, A. Rodiles and P. Staubach, *Unity or Uniformity? Domestic Courts and Treaty Interpretation*, 27 Leiden J Int'l L 2014, 75-112.

UN bodies generally have a comparatively modest impact on domestic court practice.[251] As a rule, courts are expected to adhere to treaty obligations incurred by their states and seek orientation in the practice of authoritative interpreters, and they often do so, even in cases in which their states did not participate (Mexico). Should domestic courts consider findings of international bodies unconvincing, it constitutes good practice to engage, where possible, *bona fide* in a judicial dialogue, also with other domestic courts dealing with related questions.[252] The Constitution of South Africa explicitly obliges courts to consider international jurisprudence and the case-law developed, and accordingly can be considered an ideal for good practice.

89. Fifth, to enable courts to fulfil their obligations, they must have jurisdiction to hear human rights cases,[253] be it explicitly in constitutional complaints (*amparo*) or incidentally in other types of procedures. Such procedures can be based on legislation or jurisprudence alike, and they do not necessarily have to be in the hands of the judiciary alone, as parliamentary and independent institutions illustrate (Denmark).[254] As to courts, effective remedies presuppose a certain infrastructure, independence of the judiciary from politics and economic interests, and sufficient resources.[255] To avoid irreparable harm and to ensure effective protection, the option to obtain provisional relief as well as procedural ways to implement judgments and decisions by means of enforcement or reopening of proceedings must exist. Conversely, if violations result from ongoing court proceedings, mechanisms must be devised to close a file and to provide for certainty. Ideally, procedural law or court practice formulates standards against which domestic law can be reviewed. The development of a bloc of constitutionality composed of constitutional and human rights (Colombia, France, Mexico) is a notable example in that respect.

90. Sixth, means exist which are suitable to avoid conflicts before courts between international human rights law and national law. Such a path is the *ex ante* examination before ratification of international treaties by constitutional courts (France). Studies suggest that non-compliance is often infrastructure-related, which means that the state must have the capacity to react to an adverse judgment and to promote change or repeal legislation (France, Germany, Japan, UK).[256] Such a review of bills presented before enacting legislation is advisable (Australia). Also parliamentary committees can be entrusted with the task of surveillance as to how municipal law conforms to treaty obligations and the practice of treaty bodies and give advice as to measures to be taken (Denmark).

91. Finally, failure to consider international practice may be due to a lack of information and, possibly, also to accessibility in terms of language. Whereas awareness of ECtHR and IACtHR judgments is nowadays quite high within the respective systems,

[251] Cf. also C. McCrudden, *Why Do National Court Judges Refer to Human Rights Treaties? A Comparative International Law Analysis of CEDAW*, 109 AJIL 2015, 534-550, at 535.

the practice of UN human rights bodies is less well known. This may be different in countries where the UN treaties are the principal source of human rights obligations, as it is the case in Japan. Generally speaking, however, it would contribute to good practice by governments to develop a pattern of dissemination of relevant decisions for responsible institutions like courts, judicial councils, bar associations and to provide translation, if necessary. Likewise, meetings of members of judiciaries of different countries on a regular basis have proved useful. Thus, courts may be provided with additional information as to whether a change of jurisprudence ought to be considered.

INTERNATIONAL HUMAN RIGHTS LAW COMMITTEE

WORKING SESSION

Tuesday, 9 August 2016, 9.00am

Chair: Professor Willem van Genugten (Netherlands)

The Chair welcomed attendees and introduced the members of the panel, namely Professor Christina Cerna (US), Professor Koji Teraya (Japan), Professor Stefan Kadelbach (Germany) and Dr Thilo Rensmann (Germany).

The Chair commenced the session with an overview and breakdown of the draft report produced by the Committee and thanked them for their hard work and effort. The Chair explained that the draft report focused on international human rights law, the International Court of Justice, and the domestic implementation of judgments/decisions of courts and other international bodies that involved international human rights law.

The report also examined the legal framework of compliance with international judgments and decisions involving human rights around the world in order to understand how the courts of a representative set of countries dealt with obligations resulting from decisions of judicial or quasi-judicial international human rights bodies, the impact of human rights jurisprudence, and the possible trends and parallels in the methods of implementation.

In his discussion, the Chair made reference to part one of the final report, which was adopted in March 2014, dealing with the impact of international human rights on the International Court of Justice. The current draft report was the second stage of the Committee's research and the working document was drafted by Professor Stefan Kadelbach. Pursuant thereto, the Committee sought to identify guidelines regarding the nature of the obligations assumed by a State Party to an international treaty that involved human rights. The draft guidelines were included as an annex to the draft report.

The Chair explained that, in sum, the Committee focused on three key issues:

1. defining the obligations of a State upon becoming party to a treaty as regards compliance with judgments or decisions of judicial or quasi-judicial bodies in cases involving human rights;
2. evaluating the practice of States, highlighting good practices; and
3. developing the concept and scope of "good faith", compliance and "good practices" with regard to treaties involving human rights.

The Chair explained that Section D of the report focused on country based case studies. The case studies focussed on key issues in national courts including the implementation of and compliance with judgments and the status of human rights in the various countries. The committee looked at twenty countries: Argentina, Australia, Bangladesh, Brazil, Canada, China, Colombia, Denmark, France, Germany, India, Italy, Japan, Mexico, Netherlands, Russian Federation, Slovenia, South Africa, United Kingdom and the United States of America.

The Chair thereafter made a few general observations based on the various country based case studies.

The first observation was that domestic courts with a good record of observing human rights were not always in countries with good human rights records. Good practice itself started with good laws within the states concerned. The protection system to which a country belonged also made a significant difference. In the regional court systems, their courts and the binding effect of their judgments had a strong influence on the status of the respective conventions in domestic law.

The second observation was that an important feature was the mode of "engagement" of a domestic legal order with international law in general. It was too simplistic to say that monist systems were more favourable to human rights treaties than dualist systems. It was advisable to look at the attitude that a legal system took vis-à-vis human rights treaties in particular. It was important to consider whether or not individual guarantees were deemed self-executing, what rank they had in relation to other sources of law, and whether there were effective legal remedies to invoke them in court proceedings.

The third observation was that the role and status of the courts responsible for administering human rights must be taken into account. Important aspects to bear in mind included the independence of the national courts and the attitude of the courts towards the observance of human rights. He further highlighted the difference between the principle of avoidance and that of alignment. Both principles could be employed by the same court. In addition, the attitude taken by courts generally with respect to international law was of utmost importance. This was largely influenced by a variety of factors including the institutional context, pursuit of a local political agenda, and culturally idiosyncratic modes of reception.

The fourth observation was that, in relation to the use of international material by domestic courts, whilst certain states had taken active steps in incorporating international law into their judgments, some States had not done so. He gave South Africa as an example of good practice in this respect. As a rule, courts were expected to adhere to treaty obligations and should domestic courts consider the findings of international bodies unconvincing, it was good practice for the courts to engage where possible in a judicial dialogue with other domestic courts dealing with related questions.

The fifth observation was that to enable courts to fulfil their obligations, they must have jurisdiction to hear human rights cases. In order for courts to operate optimally, there needed to be sufficient resources, the requisite infrastructure, and the judiciary must be independent from political and economic interests. In addition, parliamentary bodies could play an effective role in furthering international law. Greater emphasis could and perhaps should be placed on how to further engage national parliaments in this.

The sixth observation was that the failure to consider international practice might be due to a lack of information and the inability to access the judgments of international courts due to language barriers. It would therefore be good practice of governments to disseminate the relevant decisions to courts, judicial councils and bar associations, with the relevant translations where necessary.

The Chair then highlighted that, from these observations, the Committee was able to produce guidelines and recommendations for good practice.

Professor Cerna made a few general remarks regarding the draft resolution produced by the Committee, and indicated that this would be discussed at a later stage in much greater detail.

The Chair then discussed the conclusion reached by the Committee in its work. He indicated that, through its research, the Committee had established that the human rights record of a State did not always coincide with the openness of its courts with respect to human rights treaties. What was of primary concern was that courts in certain cases (Germany, Italy, Russian Federation, UK) had openly justified noncompliance with human rights treaties. Such non-compliance took different forms ranging from the non-execution of judgments in individual cases due to lack of resources, intentional non-implementation (Russian Federation, US), systemic non-compliance (China), "reservations" by courts (Germany, Italy, UK) and political resistance to certain aspects (UK).

The Chair then proceeded to invite attendees to pose questions to the panelists.

Dr Gentian Zyberi (Albania) indicated that the independence of the judiciary was particularly important in relation to enforcement. Other key issues such as corruption and the manner in which the courts were viewed by society were also important. In relation to the use of international materials, the major issue was that there was not enough engagement with international sources, and whatever engagement that might occur ordinarily did so at the highest national courts. The engagement of domestic courts in international law was particularly difficult in politically charged cases. This was due to the fact that it was difficult for the courts to make rulings that were acceptable to both the domestic and the international audience.

Professor Kadelbach indicated that he agreed with these comments. Although the courts should also benefit from good practice, a great deal of importance must also be placed on the standing of the courts within society and the public perception of the courts.

Professor Cerna then circulated the draft resolution to attendees.

The Chair indicated that the draft resolution included the draft guidelines proposed by the Committee. He explained that the preparation of the guidelines evidenced the completion of the second part of the Committee's work (the first part was finalised in 2014 and presented at the working session in Washington).

One attendee commented that a major issue was reprisal taken against individuals who brought complaints to international bodies. He encouraged the Committee to consider mechanisms of encouraging cooperation.

Professor Kadelbach indicated that guideline 6 contained within the draft resolution in fact made provision for such cooperation.

Professor David Bilchitz (South Africa) indicated that point four of the draft resolution seems to suggest that international human rights law was not a priority and was not of prime importance. He enquired whether this was something that should be considered.

Professor Kadelbach indicated that, although not expressly included in the report and draft resolution, this was definitely considered by the Committee, although there was no general hierarchy in respect of international law.

Dr Ioana Cismas (US) reiterated that guideline two addressed the concern about the primacy of international human rights law adequately.

Professor Cerna added that part of the objective of the report was to illustrate the importance of international human rights law. There had been great progress in this regard in Latin America, for example. However, international human rights law still needed to be given greater importance in a number of other countries.

Mrs Oonagh Fitzgerald (Canada) inquired whether the report distinguished between the rights contained in the *International Covenant on Civil and Political Rights* (ICCPR) and the *International Covenant on Economic, Social and Cultural Rights* (ICESCR). It would also be interesting for the Committee to consider the more positive obligations envisaged in the ICESCR. This was especially so given the adoption by the UN General Assembly of the Sustainable Development Goals (SDGs) and the adoption of the Paris Agreement on Climate Change. There were also emerging principles in ensuring that the various SDGs were implemented.

The Chair then indicated that the next items on the agenda included the discussion of ideas for inclusion in the new mandate to be decided in November, the issue of membership, the role of the rapporteur, and the formation of a new committee.

A number of issues were raised as potential topics of interest.

Professor Cerna mentioned that the Committee had considered and discussed a number of possible topics. For example, one topic was the question of long arm jurisdiction in human rights. This topic presented interesting questions: How far back in time could we go when considering and dealing with the violation of human rights? Was it appropriate to go as far back as slavery and if so what would be appropriate reparations? Who are the "victims"? Another topic involved the inter-relationship between UN bodies and regional bodies – what were the divergences/convergences?

Professor Cerna then introduced the topic that had received the greatest support from the Committee at its intersessional meeting held in Strasbourg, France and during its working meeting in Johannesburg and that the Committee wished to present as its next topic should the Committee be reconstituted under its current structure. This was "International Human Rights Law and States of Emergency." This was deemed to be a timely subject given that both Turkey and France had both recently declared states of emergency. The ILA has studied this subject in the past, in the 1990s, but changed circumstances provide new issues and ways of dealing with these questions that merit studying this important issue again. It was suggested and agreed that the term "states of emergency" should be expanded and interpreted also to include natural disasters (e.g. caused by climate change and other phenomena), epidemics (e.g. the Zika virus).

Dr Zyberi noted that human rights in states of emergencies in an age of global threats should be something to consider. It was suggested that this should not be limited to terrorism but should possibly also include situations such as famine. It was important to establish what determines a state of emergency. Whatever topic was chosen, it was important to combine the theory and practice of human rights. It might be helpful to have a list if topics on a long-term agenda which could be used by the Committee in the future.

The Chair indicated that the Committee should also consider looking at the use of non-judicial means to address human rights concerns. This method could be equally effective.

One attendee explained that there was a problem with public order and criminality in urban areas. Some said that human rights law should be used, whilst others said that international humanitarian law should be applied. This should also be considered. Citizen security was also an interesting topic and its importance was growing.

Dr Hilly Moodrick-Even Khen (Israel) suggested that now might be the time to consider evaluating the hierarchy in human rights norms. She queried whether there were new *jus cogens* norms, such as gender equality. She also suggested that the Committee consider looking into the relationship between international human rights law and international humanitarian law. She queried whether these was a hierarchy. She also queried whether international law norms should be used in the interpretation of international human rights law.

Professor Cerna pointed out that the hierarchy issue had been considered in the report, including the hierarchy between constitutions and international covenants.

Mrs Fitzgerald (Canada) suggested that, in relation to states of emergencies, man-made emergencies should also be considered, such as climate change. Part of the research could also look at ways to prevent the harm occurring but also the positive enforcement of rights.

Professor Aaron Fellmeth (US) highlighted that the Committee might want to consider incorporating someone with expertise in international humanitarian law when considering states of emergencies as the latter might often include involvement by rebels and other organised groups.

Professor Christof Heyns (South Africa) added that the Committee could also consider whether states of emergencies could be broadened to include responses to emergencies. It might also be interesting to look at the relationship between the United Nations and regional organisations as well as the concept of universality.

The Chair concluded the session by thanking attendees for their participation.

COMMITTEE ON THE RULE OF LAW AND
INTERNATIONAL INVESTMENT LAW

WORKING SESSION

Tuesday, 9 August 2016, 9.00am

Chair: Photini Pazartzis (Greece)

The Chair noted that the Committee was a year old and was still in its infancy. Thus, the Committee welcomed all input and feedback from attendees. She introduced the panel, comprised of the Chair of the Committee and Co-Rapporteurs, then gave the floor to the Chair of the Committee.

Professor August Reinisch (Austria) informed attendees that the Committee was first established by the ILA Executive Committee in its meeting in May 2015. However, the Committee had not commenced much of its work, and was thus keen to receive feedback from members and non-members of the Committee.

Professor Reinisch then proceeded to give a brief background on the Committee. At the 2008 conference in Rio de Janeiro, the Committee on the International Law on Foreign Investment concluded its work. Its aim had been to codify investment law. That Committee recorded its findings in the *Oxford Handbook on International Investment Law*, which was published by Oxford University Press.

The question as to whether investment law could become the subject of a new Committee post 2008 was posed at the end of the conference. It was decided at the Rio de Janeiro conference to set up a Study Group on the Role of Soft Law Instruments in International Law. The specific task of this Study Group was to provide an overview of emerging jurisprudence in the field; in particular to determine if a soft law instrument could assist governments and tribunals in agreements and negotiations. However, when the work of this Study Group commenced, its members realised that it was too early to attempt to codify the law. Reasons for this included, among other things, that tribunals disagreed on a number of elements in investment law such as the reach of most-favourednation clauses, the effect of umbrella clauses or the scope of protection under fair and equitable treatment. Another contentious issue was that many core fields of investment law were not yet ripe for consensus.

The Study Group then turned its focus to the value of soft law instruments, looking at how they had worked in other fields of international law and whether there were any areas that were ripe for codification. Like its predecessor, the outcome of the Study Group was a published book, this time with Edward Elgar. It was then proposed at the end of the Study Group that the current Committee be formed.

Professor Reinisch stated that the time was now ripe to focus on investment law and the rule of law. He underlined that the basic mandate of this Committee was to study the implications of the rule of law on investment law with focus on procedural and substantive matters.

- Examples of the substantive issues were whether investment standards could lead to a spillover into constitutional law or if there would be a negative effect on domestic

law and also whether investment law influenced the rule of law in domestic systems. Other substantive issues included the debate on investor obligations and whether investor agreements were the proper instruments to regulate this as well as the effect of investment law on the host State and the financing of investment arbitration.
- Examples of procedural aspects included an analysis of procedural fairness, transparency, and moving towards a quasi-court and appeal system for investment law. Another issue to assess was whether the rule of law could be used as a tool to criticise investment law or whether investment law could be used to push through the rule of law.

Professor Reinisch emphasised that, in the event of an overlap with the work of other Committees on substantive issues, the two Committees must work together. He then recommended that, after this open session, Committee members stay behind and have their first official meeting.

Ordinarily, a report and sometimes draft recommendations followed the work of a Committee. Although this Committee would like to follow this procedure, it might be difficult to come up with draft recommendations. However, similar to its predecessor, the Committee would want to follow up with a publication consisting of contributions on the identified topics.

Professor Andrea Bjorklund (American) enumerated the six over-arching topics/categories that the Committee would be addressing and gave some context on each:

1. The notion of rule of law in domestic and international law.
2. The implications of a greater emphasis on the rule of law for host States – this topic would focus on how the development of rule of law principles in international investment law could have a spillover effect on the law of the host state.
3. The rule of law component of investment standards (eg, how protection standards had developed and how they contributed to the rule of law).
4. Threats to the rule of law posed by investment guarantee – this would involve an assessment of how much a focus on international investment law could harm the rule of law.
5. Rule of law demands in investment arbitrations – this would assess how the arbitral process should work in order to encourage the rule of law as well as decision making within the rule of law.
6. Contributions of investment law arbitrations to the rule of law generally – this would involve a look at the contributions that investment law had made towards other areas of international law such as transparency, as well as how and where clarification and legal certainty developed in international law.

Professor Bjorklund reminded attendees that the above categories were subject to amendment and invited contributions on what to discuss under these categories. She then proposed to open the discussion on the first category by stating that there was currently a lot of discourse on the topic and warned that the Committee should be specific and careful about what was meant by the rule of law.

The Chair opened the floor to interventions on the first category (ie, the notion of rule of law in domestic and international law).

Professor Mary Footer (UK) questioned to what extent, if at all, the rule of law was based on the socalled Washington Consensus. Had the US viewed fair and equitable treatment as a rule of law standard in bilateral investment treaties (BITs)? Following on from this, did the rule of law resonate at all with other views such as those from China (and the so-called Beijing Consensus), Japan and South East Asia? She also pointed out that there was no single understanding of what the term meant.

Professor Catherine Kessedjian (France) advised the Committee to be aware of the language and legal cultural differences around the world, for example the differences between the rule of law and the French é*tat de droit*. The Committee must also have a strong introductory chapter outlining what they were going to do. She noted that the previous report had no definition of soft law. She also advised the Committee to be mindful of concepts that seemed to be universal.

Dr Marcin Menkes (Poland) suggested that the Committee frame the topic as the legitimacy of investment law and that they should identify a formal and substantive approach to the topic. It could do a comparative exercise between the different branches of law, for instance the extent to which substantive principles of rule of law between international investment law and human rights law were similar.

Professor Susan Karamanian encouraged the Committee to consider the political theorists working in this area in trying to determine the definition of the rule of law. She acknowledged that it would be a huge challenge to ascertain the meaning of the rule of law; nevertheless, the Committee should be sensitive to comments raised in this working session especially regarding those of a western view.

Ms Luz Helena Hanauer stated that the Committee would have more direction if it defined who the recipient (beneficiary) of this definition would be. Was it intended for judges or for policy makers? She also queried the purpose of establishing such a definition or a concept.

Professor Stephan Schill (Germany) agreed that the Committee ought to work on defining the notion and concept of the rule of law. Because of its diversity, an ILA Committee would be in a good position to conduct this exercise and compare different domestic legal orders to try to develop a universal – or at least broadly accepted – concept that could be used in international investment law. The Committee needed to work comparatively with other international and constitutional regimes and to spend time on the concept of rule of law. The Committee should refer to legal literature. In this regard, for example, there had recently been writings in the field of law and economics trying to explain the rule of law. This material could be useful to the Committee in ascertaining the meaning of the rule of law.

The Chair asked the panel to respond to the first round of interventions.

Professor Andreas Ziegler (Switzerland) responded by warning that it was not realistic to expect that, at the end of this exercise, the Committee would produce a pure theory acceptable to everyone. He had recently written a chapter on good faith in international investment law and encountered the same challenges there as with this first topic. He had started by comparing how the term "rule of law" was used in different legal systems. The comparison could be taken to a global level; however, some countries would be underrepresented, which would make it difficult to find sources.

He warned that the rule of law could become a very political question. Some had argued that, despite the ongoing debate, there was consensus on the core meaning of the rule of law in different fields.

The Committee was aware of the challenge and was counting on members and non-members to engage with it. They were aware that the name of the Committee was an ambitious one (the rule of law and international investment law), but it should try nonetheless.

Professor Reinisch acknowledged that there was a difficulty to overcome when it came to the different notions of the rule of law. He was skeptical about the ability to seriously engage on a broad comparative issue. There seemed to be some consensus in the UN where, in the Secretary General reports, there appeared to be a working definition of the rule of law. It could be beneficial to use these working definitions as an additional yardstick. The reports might be criticized, but at the same time could be somewhere to find consensus. The rule of law was not merely procedural in nature but was a broad notion that had to do with governance and supremacy of the law. It would thus be prudent for the Committee to take a topdown approach and to build on what was already out there.

Professor Footer said that a lot would depend on the eventual membership of the Committee. She then suggested that the Committee come up with a number of assumptions about the rule of law and set out to challenge them. This could be done through a mapping exercise. Instead of comparing the definition of the rule of law in different jurisdictions, the Committee could challenge the various assumptions. She also suggested that the Committee query whether the rule of law was an economic governancebased concept and whether it meant something different in the UN context, especially with the UN being concerned primarily with international peace and security.

Dr Marc Bungenberg (Germany) asked whether it would be possible that, by next month, the Committee have a clearer picture on this first topic before embarking on the others, and whether this would have an impact on the Committee's workload.

Dr Menkes said that it would be advisable to compare the perspectives of different countries because they had different legal traditions. Instead of covering ninety-eight jurisdictional perspectives, the Committee could cover ten branches of law, making it easier to cover a broad scope.

Professor Kessedjian expressed her concern over Professor Reinisch's response to the issues raised by attendees. The name of the Committee must be taken very seriously. The ILA had not formed yet another Committee on investment. She did not think it necessary to have yet another book on investment law. She emphasised that this Committee was about the rule of law, which was the centre of its mandate. Thus, the Committee must conduct the tedious exercise of determining what the rule of law was today in the twenty-first century for international and investment law purposes. The Committee would not be saved from the very tedious exercise of comparative law. The rule of law was the specificity of this Committee and this should be made clear in the Committee's report.

Professor Reinisch responded to Professor Kessedjian's concerns by stating that he did not recall responding to interventions from the floor with the attitude that this was just another investment law committee and that the rule of law was unimportant. Quite the contrary, the rule of law was central to the Committee's work. In response to Professor

Mary Footer's question regarding the UN, Professor Reinisch quoted from a 2004 report of the UN Secretary General entitled *The Rule of Law and Transitional Justice in Conflict and Post-Conflict Societies*, which defined the rule of law as being "a principle of governance in which all persons, institutions and entities, public and private, including the State itself, are accountable to laws that are publicly promulgated, equally enforced and independently adjudicated, and which are consistent with international human rights norms and standards". Although the report was about peace and security, the definition could be useful for the purposes of the Committee's work.

Professor Reinisch agreed that the Committee was about the rule of law, which is why the rule of law was the first topic that the Committee would address. He conceded that it was indeed a challenging topic. Once the Committee had consensus on what it understood the rule of law to be, it could determine whether it was reflected in investment law.

Professor Bjorklund stated that, in order to take advantage of the brain power in the room, she did not want to adopt Dr Bungenberg's suggestion *in toto* because she would like to discuss the other topics while everyone was still present.

In response to Professor Menkes' suggestion to make a comparison of the rule of law on an international rather than domestic level, she said that she did not think that it was either a domestic or international law study but both. The international law comparison might be easier because it was smaller, but the Committee must try and engage in both.

Professor Ziegler added that the topic was very interesting and could continue being discussed for some time; however the other topics also needed attention.

The Chair gave the floor to Professor Bjorklund to start the discussion on the second category (ie, the implications of a greater emphasis on the rule of law for host States).

Professor Bjorklund stated that, as previously mentioned, the Committee's initial ideas surrounding the second topic were if and how investment law should affect the law of the host State and what the challenges were in getting feedback from international law to domestic law.

Professor Kessedjian said that there was one aspect of Andrea Bjorklund's initial remark regarding whether a State would have an obligation or rather incentive to follow the decision of an arbitral tribunal that she found particularly interesting. She enquired what the legitimacy of a tribunal was and the personnel who composed it, and whether this would be a question that the Committee would address in its work.

Professor Bjorklund asked Professor Kessedjian whether she did not think a State had an obligation to honour an award.

Professor Kessedjian disagreed with Professor Bjorklund, stating that it was one thing to enforce an award and another to apply the award in regulatory rules.

Professor Bjorklund argued that, logically speaking, if the reason behind an award was not legitimate, neither was the award itself, and the State had no obligation to follow it.

Professor Kessedjian argued, in response, that being given an award did not mean that a State would change its policies to be in line with that award.

Professor Bjorklund agreed that a State did not have to change its policy based on a decision of the tribunal, but it must at least consider it. The tribunal could not force a State to comply; however, if a State did not, the entire exercise became pointless.

Professor Kessedjian responded that she would not be that drastic.

Professor Karamanian posited that a State which refused to comply with an award did so at its own peril because it might face more cases in the future. She suggested that the Committee look at other areas such as human rights. She also questioned how national systems were responding to awards. She pointed out that topics two and four would both assess national systems. Looking at other systems of law would be useful in giving the Committee insight.

Professor Schill suggested that the Committee look at the interaction of obligations of international law and foreign investment and the extent to which those obligations were transformed and complied with at the domestic level. There might be clashes on an international and national law level when it came to the definition of the rule of law. This clash could be seen in the *Tadić* case and in domestic cases.

Professor Engela Schlemmer (South Africa) agreed with Professor Schill that the definition of the rule of law would differ between countries and constitutions, and gave the example of South Africa, which no longer used the arbitration route because many of the arbitrated issues involved policy considerations that were not matters meant for arbitration.

Professor Bjorklund agreed with Professor Schlemmer, and said that being an American (and "semi-Canadian"), one faced difficult questions when dealing with strong federal States because it was difficult for the national government to force the constituent states to comply with international law obligations.

Mr Juan Pablo stated that, in Mexico, international investment awards were actually taken into account when designing regulations in the Mexican federal government.

The Committee should look at what States understood by the rule of law domestically and what the Committee understood by rule of law in terms of investment law. He then suggested that the Committee analyse the recent developments in Latin America where certain States were imposing a constitutional appeal against international arbitrations. They did so on the premise that, while these constitutional appeals might breach their international law obligations, they would retain the rule of law domestically.

Professor Ziegler reminded attendees that the purpose of the meeting was not only to get ideas about what the Committee should do, but also on what they should leave out.

Ms Hanauer asked the panel about the main impacts that had occurred in the past and if they had any bearing on the spillover effect. She then reiterated that the Committee needs to adequately define for whom they were trying to define the concept of the rule of law and for what reasons.

Dr Menkes voiced his concern at whether causation can be distinguished from correlation while analysing the influence of international investment law on regulatory/legislative change. He observed that if we were struggling as economists to prove causation

between international investment law and economic growth, then how would we be able to differentiate between arbitral and domestic rulings.

Professor Junji Nakagawa (Japan) stated that, in the context of the second topic, the rule of law was being assessed from an international law perspective. The conflict between the different levels of the rule of law was an issue and the Committee must consider these different levels.

Professor Bjorklund noted with interest that EU domestic law was under threat from international investment law as well as the concern that EU law could not be influenced or altered in any way by international law, making it a completely separate regime. This had also been seen for a number of years in the US.

The Chair asked Professor Bjorklund to move on to the third category (ie, the rule of law component of investment standards).

Professor Bjorklund said that the Committee had envisioned a "roll call" of the main investment law standards such as fair and equitable treatment, expropriation, the transfer provisions, and the in accordance with host state law provisions. Each warranted discussion about their contributions to the rule of law.

Professor Schill agreed that the third topic did look straight forward, but submitted that most of the investment law standards in light of the rule of law were not that simple to apply. For example, the concept of legitimate expectations changed policy considerations because it limited the legislator. Evaluation of these standards would depend on what the rule of law was, and applying this to various international standards would be easier once this had been ascertained.

Professor Ziegler agreed that the answers to all of these topics would depend on what the rule of law was. Trying to come up with a definition of the rule of law was a challenge faced by all Committee members.

Dr Menkes asked whether the Committee could include the substantive rights of States such as the right to self-preservation and the measures taken during states of emergency.

The Chair asked Professor Bjorklund to introduce the fourth category (ie, threats to the rule of law posed by investment guarantees).

Professor Bjorklund said that this category was covered substantially during the course of the discussion on the second category, but invited further comments from the floor all the same. The Committee could look at the failure of investment law agreements and decisions to accommodate non-economic interests as well as the lack of obligations placed on investors.

Professor Footer suggested that the Committee also take into account security interests, that is, human security which differed from human rights. This concerned securing the well-being of individuals (ie, local communities and land). Human security could be much broader than human rights. For example, it could possibly include national security interests.

Dr Menkes suggested that, given the legitimacy crisis, it would be worthwhile to include labour law concerns as opposed to investor rights. He also suggested that the Committee

investigate how regulatory power was considered tantamount to the rule of law. This could be included in a separate point on the freedom of regulation and the rule of law; one could enhance or undermine the other.

The Chair asked Professor Bjorklund to introduce the fifth category (ie, rule of law demands in investment arbitrations).

Professor Bjorklund said that the Committee had a provisional list of areas to consider, namely institutional guarantees of a fair trial or due process in general. She acknowledged that the Committee would have to consider what due process meant in light of the rule of law. The Committee would also have to consider the independence and impartiality of arbitrators, the equality of the parties, procedural fairness, transparency, the right to be heard, consistency and sufficiency of decision making, control mechanisms, and the desirability of an appellate stage.

Mr Fenghua Li commented that some scholars argued that international investment arbitration was a form of global governance. If this argument was true, it might have the potential to affect the rule of law in the regime of international investment law, which begged the question as to whether investment arbitration was a form of governance.

The Chair gave the floor to Professor Bjorklund to address the sixth and final category (ie, contributions of investment law arbitrations to the rule of law generally)

Professor Bjorklund introduced the final category as one that could be quite controversial. Under this topic, the Committee would assess the effect of transparency on investment law, as well as the general interaction between investment law and areas of public international law. One of the underlying factors was that investment law was so active and States usually paid the awards issued against them. Therefore, the Committee would also be looking at the deficiencies within the contributions of investment law to the rule of law. She also stated that this topic would be a conclusory section building on the other parts of the study.

Professor Karamanian remarked that there had been a conversation about treaty interpretations the previous day and suggested that the Committee look at the *Vienna Convention on the Law of Treaties*, particularly Art 31, in relation to investment law.

The Chair agreed with Professor Karamanian and remarked that this last topic was as important as the first.

Mr Richard Allen (UK) said that the final topic seemed to be another way of asking whether there was now a customary international law of international investment.

Professor Ziegler agreed with Mr Allen's comment, and noted that the first topic was theoretical and value laden and the conclusion was challenging. Not all the conclusions would be agreed upon by everyone in the Committee, although a dual approach could be useful and had even become an ILA tradition. The most interesting outcome would be to highlight what the differences were.

The Chair handed the floor to Professor Reinisch to provide some concluding remarks.

Professor Reinisch thanked attendees for their participation and for giving the Committee members a lot of food for thought on what would be a very challenging exercise.

The Chair thanked attendees for their participation. She noted that the Committee had a heavy workload ahead of it. This session had proven that the rule of law was a central topic of the Committee. In her personal opinion, the Committee could start with a working definition but only at the end would it have a picture of what the rule of law and its implications for investment law.

FINAL REPORT (2012-2016)

I – Introduction: The ILA Committee on International Protection of Consumers: Mandate and its activities; II – Mappings of global, regional and national efforts on the international protection of consumers – 1. Global Level, 2 Regional Level, 3.National Level. III – Committee's work in the last two years: Engagement in international Organizations dealing with consumer protection: – 1.Revision of UN Guidelines on Consumer Protection; 2.The UN Intergovernmental Group of Experts (IGE) on Consumer Protection Law and Policy ; 3.Collaboration with Consumers International at the Revision of the UN Guidelines and UNCTAD Manual on Consumer Protection; 4.Protection of International Tourists at the Hague Conference on Private International Law; 5.Meetings among Committee's members; 6. Preparation of a final report: Guidelines Draft on Best Practices on international protection of consumers – Applicable law; Conclusion: Johannesburg Recommendations and Guidelines on the Best Practices on International Protection of Consumers

I – Introduction: The ILA Committee on International Protection of Consumers: Mandate and its activities

The Mandate of the ILA Committee on International Protection of Consumers was established in 2008, since then the Committee has acted to fulfil this mandate. The internal Amsterdam Statement in 2010 and the Sofia Statement (ILA's Resolution 4/2012) are examples of the most important accomplishments of the Committee.

Following the discussions at the Biennial Conference in Rio de Janeiro,[1] the Committee on International Protection of Consumers was officially approved as an ILA Committee

[1] See the Rio de Janeiro findings the first Discussion Paper at www.ila-hq.or/en/committees/index.cfm/cid/1030

in November 2008, as a response to a proposal by the Brazilian Branch. The Committee's mandate is to: "*undertake studies on the international protection of consumers, with particular regard to e-commerce, tourism and consumer accidents. To this end, the Committee will compare various national legislations on consumer protection and the standards they offer for the protection of non-national and non-resident consumers on their territories, and will consider the possible extraterritorial reach of consumer legislation. The Committee's primary aim is to look at how national legislation on the conflict of laws and jurisdiction, as well as international treaties, model laws and regional legislation on consumer issues) deal with the issue of consumer protection in a transboundary context. It will compare national and regional solutions to the issue by bringing together specialists to provide insight into national and regional experiences on consumer protection in a transboundary context, to assist in currently existing efforts in international law-making*." [2]

The current Committee's mandate includes a study of the role of public and private international law to protect consumers, the review of Guidelines, Model laws and Treaties, as well as national legislations concerning protection and consumer redress, especially in the context of conflict of laws and jurisdiction. Since its creation the Committee has addressed three issues: (1) the impact of the financial crisis on consumers and its international dimension; (2) the issue of consumer redress in cross-border transactions and the role of international law to protect consumers; (3) International Organizations dealing with consumer protection. It took 4 years for the Committee to address the first two issues, which have been completed with the Sofia Declaration on the development of international principles on consumer protection. The third one is especially addressed in this report.

II – Mappings of global, regional and national efforts: the present status

1. Global level

1.1 UN Efforts and the Revision of the UN Guidelines for Consumer Protection

In the absence of a universal instrument that contains specifically rules vis-à-vis international consumer protection, the Guidelines on Consumer Protection (UNGCP, adopted in 1985, revised in 1999 and 2015) is the most important reference. The UNGCP provide policy advice for member states and leave them enough flexibility when transposing principles into national laws. More than one hundred countries now have laws based on the Guidelines. When celebrating its 30th anniversary,[3] the revision of Guidelines was approved by the UN General Assembly on 22 December 2015. The revision brought important suggestions to address the new issues of consumer society, such as consumption at a distance by electronic means and mobile, the privacy, the protection of hyper-vulnerable consumer,[4] the financial and credit services, the tourism and mass transport,

[2] See Discussion Report available at www.ila-hq.or/en/committees/index.cfm/cid/1030 .

[3] See the original version, A/RES/39/248, 16 April 1985 and its importance in Brazil, in the work of SHAFIQ, Marcelo Gomes. A construção do direito do consumidor. São Paulo: Atlas, 2009.

[4] The expression are used is "vulnerable and disadvantage consumers" (III, .5), the expression hyper-vulnerable is used by Antonio Herman Benjamin, initially in lectures and, later, in the decision: "the ethical-political category, and also legal, of vulnerable subjects includes a subgroup of subjects hyper-vulnerable, [...] When you protect the hyper-vulnerable, strictly speaking ends benefited is truly the society itself, as expected respect for the collective social inclusion pact imperative,

the densification of the power of administrative protection agencies of consumers, and international consumption. It is believed some points of the revisions could serve as inspiration for national legislators,[5] especially regarding the international protection of consumers. The very recent revision of UNGCP in 2015[6] aimed to achieve an effective protection for consumers at the national, regional and international levels, while maintaining the balance between a high level of consumer protection and the competitiveness of businesses.[7] Now, the Preamble of UNGCP sets out expressively the Millennium Development Goals and the areas covered by UNGCP are much broader by adding new themes such as state-provided services, privacy, e-commerce,[8] financial services,[9] energy,[10] public utilities,[11] travel and tourism[12] and so forth. Moreover, in implementing one of the objectives of the Guidelines which is to further international cooperation in the field of consumer protection, the revision of the Guidelines in 2015 encourage national enforcement agencies to coordinate and cooperate in cross-border cases, to utilize existing international networks, to enter into bilateral and multilateral arrangement and to improve international judicial and interagency cooperation. Finally, the Guidelines also guarantee

---

which is expensive, not for his patrimonial facet, but precisely by embracing the intangible and humanist dimension of the principles of human dignity and solidarity. Ensure judicial inclusion (that is, recognize the legitimacy to Act) of these people hyper-vulnerable, including of the intermediaries who is up to represent them, not to leave any rough justice for lack of rights spokesman offended." (STJ, REsp 931,513/RS, p/Judgment Minister Herman Benjamin, first section, tried in 11/25/2009, Laurence 9/27/2010). See MARQUES, Claudia Lima. [12] UNCTAD, (2015), Draft Resolution on Consumer Protection for Consideration by the General Assembly, Paragraph 78, available at http://unctad.org/Sections/ditc_ccpb/docs/UNGCP_DraftResolution2015_en.pdf.

the establishment of international institutional machinery (an Intergovernmental Group of Experts on Consumer Protection Law and Policy) to provide capacity building and technical assistance to developing countries and economies in transition in formulating and enforcing consumer protection laws and policies, among other mandates.[13] In sum, compared with the previous version in 1999, the new UN Guidelines revised in 2015 has improved in building capacity through forming an expert group with participation of consumer authorities, in building international cooperation with more interactions at the governmental level and in building an environment favorable for digital economy and many services.

The United Nations Guidelines on Consumer protection constitute a policy framework urging national governments to promote consumer protection initially in eight areas: *basic needs*, *safety*, *information*, *choice*, *representation*, *redress*, *consumer education* and *healthy environment*. The Guidelines are particularly designed for governments of developing countries and newly independent countries in structuring and strengthening consumer protection policies and legislation (ref.). The Guidelines were adopted "*recognizing that consumers often face imbalances in economic terms, education levels, and bargaining power, and bearing in mind that consumers should have the right of access to non-hazardous products, as well as the importance of promoting just, equitable, and sustainable economic and social development*." The document is the most important international legal reference establishing minimum standards in the field of consumer protection including the need to "*facilitate the production and distribution patterns responsive to the needs and desires of consumers*", "*assist countries in curbing abusive business practices by enterprises at the national and international levels which adversely affect consumers*", "*facilitate the development of independent consumer groups"*, "*further international co-operation*" and "to *encourage the development of market conditions which provide consumers with greater choice at lower prices*".[14] Nevertheless, it is important to note that during the past 30 years of UNGCP, there was no official group of experts nor a specific Committee regarding consumer protection matters in the ambit of the United Nations. Therefore, the creation of the Intergovernmental Group of Experts on Consumer Protection Law and Policy should be welcomed as one of the most important results of the Revision of the UNGCP in 2015.

The Intergovernmental Group of Experts on Consumer Protection Law and Policy shall operate within the framework of an existing commission of the Trade and Development Board of the United Nations Conference on Trade and Development. The intergovernmental group will have the mandate such as to provide forums and modalities for multilateral consultations, discussions and exchanges of views between Member States; undertake studies and research periodically on consumer protection; conduct voluntary peer reviews of national consumer protection policies of Member States, as implemented by consumer protection authorities; collect and disseminate information; provide capacity-building and technical assistance to developing countries and economies in transition in formulating and enforcing consumer protection laws and policies; consider relevant

[13] UNCTAD, (2015), Draft Resolution on Consumer Protection for Consideration by the General Assembly, Paragraph 96, available at http://unctad.org/Sections/ditc_ccpb/docs/UNGCP_DraftResolution2015_en.pdf.

[14] See http://unctad.org/en/Pages/DITC/CompetitionLaw/UN-Guidelines-on-Consumer-Protection.aspx .

studies, documentation and reports from relevant organizations of the United Nations system and other international organizations and networks; make appropriate reports and recommendations on the consumer protection policies of Member States, including the application and implementation of these guidelines; and conduct a periodic review of the guidelines, when mandated by the United Nations Conference to Review All Aspects of the Set of Multilaterally Agreed Equitable Principles and Rules for the Control of Restrictive Business Practices.[15] The UNGCP aim that each "*Member States should develop, strengthen or maintain a strong consumer protection policy, taking into account the guidelines set out below and relevant international agreements. In so doing, each Member State must set its own priorities for the protection of consumers in accordance with the economic, social and environmental circumstances of the country and the needs of its population, and bearing in mind the costs and benefits of proposed measures."*[16]

Some United Nations' agencies are also engaged in consumer protection at international level. The Agriculture and Consumer Protection Department of the Food and Agriculture Organizations (FAO) has established "Food Chain Crisis Management" (FCC) and "Emergency Prevention System for Food Safety" (EMPRES Food Safety) that assist FAO members in early warning, emergency prevention and rapid response.[17]

Codex Alimentarius Commission (CAC), jointly created by FAO and the World Health Organization (WHO) as the world's most relevant food standard body covering 99% of the earth's population, has established more than two hundred food standards and more than one hundred guidelines and codes for food production and processing. The Food Code, or Codex Alimentarius,[18] is now global reference for both food industries and consumers. Top priority has been given to the protection and interest of consumers. It serves as an important basis for national food legislation and has far-reaching implications for resolving trade disputes among the WTO members.

The World Health Organization has launched numerous programs and initiatives related to consumer protection.[19] For instance, in 2003, the WHO Framework Convention on Tobacco Control, as the first international treaty negotiated under the supports of the WHO, was adopted and eight implementation guidelines covering nine articles of the Convention have been approved.[20] Since 2004, the International Food Safety Authorities Network (INFOSAN) has facilitated information and data sharing regarding food safety issues.

The International Organization for Standardization (ISO) through Committee on Consumer Policy (COPOLCO) develops standards together with active participation of consumer organizations, a network called Priorities from a Consumer's Point of View.[21]

According to the project overview dated in January 2016, COPOLCO has advanced in total twenty-nine key areas for consumers.[22] In recent years, much progress has been achieved in the areas of customer satisfaction (the right to be informed and the right to redress of consumer), product safety (recall procedure, food safety, consumer safety guidance, child-resistant packaging and cross-border trade),[23] more vulnerable consumer (children, older people and persons with disabilities, etc.)[24], services (energy and finances),[25] and so forth.

The World Intellectual Property Organization (WIPO) adopted the WIPO Development Agenda in 2007, which contains 45 recommendations and aims to care for especially the rights of intellectual property users in developing countries, through a demand-driven approach.[26]

The International Telecommunication Union (ITU) adopted in 2014 GSR14 Best Practice Guidelines on Consumer Protection in a Digital World, which highlights the need to redefine legitimate consumer rights and to establish effective mechanisms for cooperation with relevant bodies at the national, regional and international level, service providers and consumer authorities.[27] The Guidelines encourages effective systems to safeguard consumer privacy and data, consumer right to information, multiple channels for redress as well as the particularly vulnerable consumers.

The UN World Tourism Organization created a working group on the protection of tourists/consumer and travel organizers in 2010.[28] The mentioned working group proposed in 2013 a Draft Convention on the Protection of Tourist and Tourism Service Providers,[29] which has a special focus on the force majeure and the emergencies such as disasters and bankruptcies of travel agencies. The UNWTO proposal purports to standardize national laws and to protect mainly *ex post* tourism services providers. In the absences of indicated responsible authorities, the effectiveness of tourists/consumers protection remains to be improved.

1.2 Other international organizations

Other international organizations have also raised awareness of consumer rights and promoted consumer empowerment. In the area of financial services, after the world financial crisis, the Organization for Economic Cooperation and Development (OECD) assisted G20 countries and other economies in adopting G20 High-level Principles on Financial Consumer Protection in 2011.[30] The Financial Stability Board (FSB) delivered Consumer Finance Protection with particular focus on credit in 2011.[31] The World Bank issued Good Practices for Financial Consumer Protection in 2012.[32] In the area of electronic commerce, OECD approved in 1999 the OECD Guidelines for Consumer Protection in the Context of Electronic Commerce,[33] which were revised and re-issued in 2016. On 24 March 2016, the OECD Council revised this instrument and the Recommendation of the Council on Consumer Protection in E-commerce ("the revised Recommendation") "now addresses new and emerging trends and challenges faced by consumers in today's dynamic e-commerce marketplace".[34] The 2016 Recommendation reflexes the challenges arising in mobile and online payments, the purchase of intangible digital content products, and participative e-commerce.[35]

The United Nations Commission on International Trade Law (UNCITRAL)'s Working Group III has drafted preliminary procedural rules for online dispute resolution (ODR) cross-border electronic commerce transactions (including business-to-consumer transactions)[36] and an outcome document regarding the elements and principles.[37] In 2013, International Financial Consumer Protection Organization (FinCoNet) was created with a purpose of institutionalizing cooperation among financial supervisory authorities.[38] The FinCoNet issued a Report on Responsible Lending – a Review of Supervisory Tools for Consumer Lending Practices, which summarized the responses to financial crisis from twenty jurisdictions worldwide and reported that a great majority of jurisdictions were in the process of developing or implementing measures of responsible lending.[39]

In the area of tourism services, as early as 1970, the International Institute for the Unification of Private Law (UNIDROIT) adopted an International Convention on Travel Contracts (CCV), aiming at safeguarding the rights and interests of the traveler.[40] However, little progress has been achieved in terms of ratifications by member states

of the UNIDROIT. The Hague Conference on Private International Law (HCCH) decided to include a proposal submitted by the Brazilian government "Draft Convention on Cooperation and Access to Justice Concerning International Tourists" into its working agenda.[41] More details will be addressed in following section 1.3.

The International Consumer Protection and Enforcement Network (ICPEN) has gathered together fifty-five countries as member organizations and three countries as partner organizations since 1992, to cooperate in information sharing and enforcements for cross-border commercial activities affecting consumers. Instead of handling individual consumer complaints, ICPEN promotes collective actions to be taken by consumer agencies of its participants in order to facilitate cross-border remedies and effective international consumer protection. A few initiatives of this kind are international internet sweeps, filing complaints in up to eight languages related to cross-border transactions such as online shopping, ecommerce services, travelling, phone services, financial services, etc. through alternative dispute resolution (ADR) with supervision of national consumer authorities[42] and the education campaigns such as the fraud prevention project.

The International Consumer Product Safety Caucus (ICPSC) is international organization with a view to sharing information and enhancing cooperation among consumer product safety regulatory and market surveillance authorities. ICPSC develops knowledge base project and individual topics such as international cooperation, products recalls, recall effectiveness and product safety initiatives.[43]

The International Consumer Product Health and Safety Organizations (ICPHSO), as another international forum, is composed by governmental agencies, consumers, business, legal firms, trade associations and all stakeholders, to study non-food consumer product safety issues.[44]

Consumers International (CI) is the worldwide federation of consumer groups (non-governmental organizations – NGO) with members over 240 member organizations in 120 countries and represents the global voice defending the consumer rights in other important international organizations. CI is specifically recognized as speaking for consumers in the UN and in the OECD where it occupies a seat on the Committee on Consumer Policy alongside business and labour unions. Apart from participation in international negotiations, such as the revisions of the UN Guidelines and the OECD e-commerce guidelines, the contributions and achievements of CI include empowerment of consumers and participation in the development of national consumer protection legislation and policy, acting through and advising its member associations.[45]

1.3. Progress achieved by the Hague Conference on Private international Law
On the 26th of March 2015, the Council of the Hague Conference on Private International Law has decided to include the subject of international protection of tourists as consumers on the working agenda and has asked the Permanent Bureau to conduct a desirability and feasibility study taking into account *inter alia* the compatibility of the work conducted in other fora. For the first time, in more than 100 years, the international protection of tourists has become a subject of Hague Conference Agenda. Even though the subject herein has benefited from the preliminary studies of ASADIP (American Association of Private International Law, Asunción, Paraguay), the Sofia Statement on the Development of International Principles on Consumer Protection of ILA (Res. 4/2012 of the International Law Association, London) and the Draft Convention prepared by Brazilian Government[46], it is necessary to have a new international instrument on the subject protection of tourist. Meanwhile, it is timely that the new instrument will be analyzed, because the UN World Tourism Organization (Madrid) is working on a Resolution on the form of a Convention to protect tourists and providers only in case of force major (catastrophes, mass accidents and bankruptcy). The two instruments will be fully compatible, because the UNWTO 5th Draft merely presents uniform substantive rules and some standards practices to be used in case of emergencies, nationally and internationally. It is important to note that the preamble of this 5th Draft states "*the insufficiency and lack of consistency of existing rules at the global level governing the rights and obligations of tourists and of tourism service providers, particularly in a context of increasing diversification of destinations and generating countries.*" And it recognizes "*the need to establish uniform provisions relating to the protection of tourists and tourism service providers in order to enhance transparency and increase legal certainty for tourists and tourism service providers*."

The same can be true for rules on private international law and international judicial and administrative cooperation. In the revised UN Guidelines on Consumer Protection, the protection of tourists as consumers has been included as a new subject: " 78. *Tourism. Member States should ensure that their consumer protection policies are adequate to address the marketing and the provision of goods and services related to tourism, including, but not limited to, travel, traveler accommodation and timeshares. Member States should, in particular, address the cross-border challenges raised by such activity, including enforcement cooperation and information sharing with other Member States, and should also cooperate with the relevant stakeholders in the tourism-travel sector."* We hope to have new international legal instruments in this area. From the perspective of international protection of consumer/tourist, the HCCH proposal advances a great step compared with the UNWTO proposal because the draft convention aims to protect *ex ante* tourists as consumers in any market niche with direct consumption relations through international cooperation among administrative authorities and judicial cooperation including small claims courts.[47]

2. Regional level

2.1 European Union

Consumer protection policy involves in regional integration processes. Different regional blocs set up different priorities. The European Union (EU) has become a global reference in breaking down trade barriers without prejudice to the high level of protection for the consumers. The European Consumer Agenda adopted by the European Commission purports to maximize consumer participation and trust in the single market. The European treaties and the Charter of Fundamental Rights of the European Union[48] establish the general principles of promoting balanced and sustainable development while ensuring free movement of persons, services, goods and capital. A number of directives at EU level[49] effectively facilitated legislative harmonization among EU member states. In the area of enforcement, EU regulation No. 2006/2004 lays down a structure for enforcement cooperation among national authorities of the EU member-states. Where consumers' collective interests in the internal market are at stake, a court or an administrative entity can grant injunctions, in accordance with the Injunctions Directive 2009/22/EC. Regarding the disputes, the EU consumers may benefit from the European Consumer Centers (ECC-Net)[50] as well as alternative dispute resolution[51] and online dispute resolution.[52]

A new **Package Travel Directive** (2015/2302/EU) was adopted on 25 November 2015, bringing up-to-date developments in the travelling market. The new Directive entered into force on 31 December, 20 days after its publication. The Member States have to adopt laws to transpose it by 1 January 2018 and it will become binding from 1 July 2018. The new Directive broadens the concept of 'package', namely, applicable to 3 different sorts of travel combinations: "*pre-arranged packages* – ready-made holidays from a tour operator made up of at least 2 elements: transport, accommodation or other services, e.g. car rental; *customised packages* – selection of components by the traveler and bought from a single business online or offline; *linked travel arrangements* – if the consumer, after having booked one travel service on one website, is invited to book another service through a targeted link or similar, the new rules offer some protection– provided that the second booking is made within 24 hours."[53] It is also to mention that the new Directive (EU) 2015/2302 on package travel and linked travel arrangements has an "Interpretative Guidelines on Regulation (EC) No 261/2004 of the European Parliament and of the Council establishing common rules on compensation and assistance to passengers in the event of denied boarding and of cancellation or long delay of flights and on Council Regulation (EC) No 2027/97 on air carrier liability in the event of accidents as amended

by Regulation (EC) No 889/2002 of the European Parliament and of the Council", published on June 10th 2016".

The **Common European Sales Law** (COM(2011) 635 final) presented by the European Commission aiming "to make cross-border trade simpler for consumers" has not achieved success. In 2014, BEUC, the European Consumer Organization, which represents 41 national consumer associations across Europe and Ecommerce Europe, and more than 4,000 companies that sell products and services online to consumers throughout Europe, called for a joint letter to reject the proposed instrument and to vote against the report on the Common European Sales Law. They argued that *"the Common European Sales Law proposal will only generate confusion, increase legal complexity and uncertainty and transaction costs. It would undermine existing rules on private international law and as well as consumer protection standards in a number of countries and thus damage the confidence of both consumers and companies when engaging in ecommerce transactions."* On 16 December 2014 the EU Commission presented its Work Programme for 2015 to the European Parliament with the existing proposal for a Common European Sales Law (CESL) being listed as item 60 in the Annex of withdrawn proposals. The reason given for the withdrawal is "Modified proposal in order to fully unleash the potential of e-commerce in the Digital Single Market".[54]

On 9 December 2015 the European Commission published two proposals concerning digital content under the European Commission's Impact Assessment. The framework for this action is "**A Digital Single Market Strategy for Europe**", which should give "better access for consumers and businesses to online good and services" and simplify rules for consumers making online digital purchases.[55]

According to the proposal for a **Directive on contracts for the supply of digital content**, *"Only 18% of consumers who used the Internet for private purposes in 2014 purchased online from another EU country while 55% did so domestically. Consumers are not confident when buying online across borders and believe that they are better protected when buying online in their own country, under their familiar domestic law. One of the major reasons is their uncertainty about their key contractual rights. Differing national regimes also constitute an obstacle to efficient enforcement of consumer rights. As a result, consumers miss opportunities and face a narrower range of goods at less competitive prices. Moreover, since consumers are not confident to shop online cross-border, they are unable to take advantage of existing price divergences between Member States and thus miss important potential opportunities. It is necessary to act fast in relation to the online sales of goods."*[56] BEUC welcomed the European Commission's proposal, "*which is a step forward in ensuring that consumers are protected when purchasing or accessing digital products*". In the relation to the Commission's proposal BEUC supports:" *1. The inclusion of in-kind payments into the scope of the directive. 2. The adoption of specific remedies in case the digital content is not in conformity with the contract, in particular the right to recover the data submitted to the service provider such as videos, photos, consumer reviews and other user-generated content. 3. The reversal of the burden of proof on the trader, which is the party best placed to assess the causes of the problem with the digital*

[54] See http://www.epln.law.ed.ac.uk/2015/01/07/proposal-for-a-common-european-sales-law-withdrawn/ .
[55] See COM(2015) 635 final.
[56] See http://ec.europa.eu/justice/contract/files/digital_contracts/dsm_online_en.pdf .

content."[57] The Directive aims to achieve a full harmonization.[58] The proposed Directive "lays down certain requirements concerning distance sales contracts concluded between the seller and the consumer, in particular rules on conformity of goods, remedies in case of non-conformity and the modalities for the exercise of these remedies." (Article 1).

The second proposal is **a Directive on certain aspects concerning contracts for the online and other distance sales of goods**, COM (2015) 635 final, aiming a full harmonization (Article 3). This Directive has a very large range of new rules, as a set of certain sales, for example, rules on conformity, remedies and modalities of these remedies (Article 1), conformity criteria (Article 4 and 5), incorrect installation (Article 6), legal defects (Article 7), transparency (Article 15) and remedies (Article 9). Other provisions include a consumer's choice about the replacement of goods at seller's own expenses (Article 10 and 11), rules on price reduction (Article 12) and the right to terminate the contract (Article 13). Article 18 imposes the mandatory nature of consumer contract law's rules, but there is an important exception provided by Article 4, 3. According the Article 4, 3: "*Any agreement excluding, derogating from or varying the effects of Articles 5 and 6 to the detriment of the consumer is valid only if, at the time of the conclusion of the contract, the consumer knew of the specific condition of the goods and the consumer has expressly accepted this specific condition when concluding the contract*."

These two EU proposals were "built on a number of amendments made by the European Parliament in the first reading concerning the proposal for a Regulation on a Common European Sales Law, in particular the restriction of the scope to online and other distance sales of goods and the extension of the scope to certain digital content which is provided against another counter-performance than money."[59]

It is worth mentioning that until September 2016 an evaluation of the EU consumer protection rules will be made. In the context of the "Fitness Check" of EU consumer and marketing law directives, the Commission seeks views on whether these rules are still up to date and fit for purpose. The following six directives are subject to this Fitness Check: Unfair Contract Terms Directive 93/13/ECC; Consumer Sales and Guarantees Directive 1999/44/EC; Unfair Commercial Practices Directive 2005/29/EC; Price Indication Directive 98/6/EC; Misleading and Comparative Advertising Directive 2006/114/EC; Injunctions Directive 2009/22/EC. In addition, this consultation covers also the Consumer Rights Directive 2011/83/EU, which is subject to a separate evaluation.[60] A good example is the "Blue Guide" on the implementation of EU product rules 2016, with a proposal to change the cross-border accreditation and to enhance cooperation between accreditation bodies. [61]

2.2 Americas and OEA: International Consumer Protection from a regional perspective

Consumer protection has gained in recent years new impulses in the Americas, according to the trends in multinational forums dedicated to the subject, more specifically referred to the defense and guarantee of rights.

---

[57] See http://www.beuc.eu/consumer-rights-and-enforcement/common-european-sales-law.

[58] See 2015/0288 (COD).

[59] COM (2015) 635 final. Information sent by Professor Thierry Bourgoignie.

[60] Information send by Prof. Dr. Christoph Benicke. See consultation in: https://ec.europa.eu/eusurvey/runner/ConsumerLawFitnessCheck.

[61] Notice 5.4.2016 C(2016) 1958 final. Information sent by Professor Thierry Bougoignie.

Within the American scope, the initiatives were originated by the Inter-American Juridical Committee of the OAS, an area in which the issue has been on its agenda since year 2000, and has been strengthened last year after the proceedings held in an academic and political meeting in Rio de Janeiro, in August. As a corollary of that meeting, innovative ideas were presented in order to draft legislative proposals as a Guide for national rules on international consumer matters in countries where require them. The upcoming idea was to draft a text, which contained a wide range of systems and positions on duty among the countries of the Americas. In that context, a broad spectrum of representatives of American sub-regions and legal systems was formed, due to the help of the Academy, the involved countries would be able to move ahead with any proposal or referential model that can be overturned in the national regulations.

To date, a selected group of representatives of the three Americas, accompanied by the Juridical Committee and expert's advices in the field, on behalf of the ASADIP (American Association of Private International Law), is working on a comprehensive and plural project. The project is estimated to be discussed and presented at the next meeting of the Inter-American Committee in October in Rio.

Similarly, some sub-regional integration schemes (MERCOSUR/Pacific Alliance) have also expressed their desirability of relevant systems of international protection of consumers within their territorial spaces. Coincidentally in line with these trends, Argentina, a member of MERCOSUR, where consumer protection has gained constitutional status, has also taken steps to introduce national regulation of private international law for the protection of consumers in order to defend their rights as a vulnerable population. Indeed, in Title IV of the new Civil and Commercial Code, which regulates matters of private international law, two specific international rules for consumer protection have been incorporated for the first time.[62]

2.3 Mercosur

The Southern Common Market (Mercosur) has made some progresses in consolidating a Mercosur system of consumer defense,[63] which is structured based on a common information system, a regional action of capacity building, a norm applicable for international consumer contracts.[64] The Mercosur legislations sets an aim of harmonizing basic concepts (such as consumer and provider) regarding consumer protection adopted by members. It is the technical committee 7 with the participation of national consumer protection agencies in the discussion of policies and actions, in order to improve and develop the protection and defense of consumers within the Mercosur.[65]

The Inter-institutional Agreement between Bodies of Consumer Protection of Mercosur member states on Behalf of Visitor Consumer – this agreement was approved on June 3, 2004, in Buenos Aires, Argentina.[66] Pursuant to Article 3, consumer

tourists in the region will be advised and informed of their rights. Fast and efficient administrative mechanisms will be in force to settle disputes stemming from the consumer's stay in a foreign country, taking into account of the rules of the host country. At the meeting on August 16 and 17, 2012, the member states of Mercosur decided to start the phase of implementation of the agreement. The pilot project received the support from the Superintendence of Consumer Protection (PROCON's) of Rio de Janeiro and Sao Paulo. On January 10, 2013, the PROCONs together with Brazilian Consumer National Bureau (SENACON) officially lunched the Form[67] for Complaints of Visitor Consumer in conjunction with Uruguay and Venezuela. Once lodged a claim, authorities of both countries shall remain in contact for information exchange and cooperation in pursuit of a mutually satisfactory agreement. In the subsequent meetings of the CT 7, from 2013 onwards, other tourism destinations were adhered to the pilot project, namely, the Autonomous City of Buenos Aires, San Carlos de Bariloche, Curitiba, Porto Alegre, Natal and Fortaleza.[68] In 2014, Brazil received many foreign tourists in the occasion of the World Cup, creating therefore a pilot project based on the Agreement, which was used by consumer protection authorities in all 12 host cities, under Senacon-MJ coordination, which helped certainly to reduce the number of problems related with foreign tourists during the 2014 World Cup.[69]

The Draft Agreement on Applicable Law Relating to International Consumer Contracts and the Draft Agreement on Recall of Products and Services – Mercosur has been discussing this subject since 2010, when the Brazilian delegation presented a draft resolution to Mercosur Common Group on law applicable to international consumer contracts during the regular meeting of the CT 7 in Rio de Janeiro. Being analyzed, revised and extended in the following meetings of the CT 7, the draft had four different versions.[70] Approved as Decision Project No. 15/2012, the latest version contains the Mercosur Agreement on the Applicable Law to International Consumer Contracts.[71] With respect to the applicable law, Article 4, that governs the contracts concluded by the consumer, the latter being in the state of domicile, employs alternative connection elements, such as the consumer's domicile, place of conclusion or execution of the contract and headquarters of the supplier of goods or services, allowing the parties to choose the applicable law, if it is the most favorable for the consumer. In the absence of a valid election or lacking the exercise of this right, the rule provides for the application of the law of the consumer's domicile. Since 2015 the project has been paralyzed due to divergences

presented by the Venezuela delegation. In 2015, the CT 7 began a debate on a Draft to an Agreement on Recall of Products and Services.[72]

2.4 NAFTA

Compared with the EU and the Mercosur, the North American Free Trade Agreement (NAFTA) holds a more mercantilist position, since there is no common consumer policy nor primary objective to harmonize consumer protection laws.[73] NAFTA gives each member state the freedom to impose restrictions due to public policy purposes.

2.5 ASEAN

In ASEAN[74], in terms of enactment of consumer law, now of general consumer laws in nine out of ten ASEAN states (not yet Cambodia), but e.g. those of Brunei and Singapore aren't as comprehensive as the seven others.[75] Moreover, a cross-border consumer redress mechanism to handle consumer complaints has been created within the ASEAN, though the ASEAN Committee on Consumer Protection (ACCP).[76] In accordance with the ASEAN Strategic Action Plan for Consumer Protection 2016-2025 (ASAPCP), measures will be adopted aiming to achieve a Common ASEAN Consumer Protection Framework, a higher level of consumer empowerment, a higher consumer confidence and cross-border commercial transactions, more consumer-related matters in ASEAN policies and more consumer protection measures in products and services sectors.[77]

2.6 APEC

In Asia-Pacific Economic Cooperation (APEC), the blueprint in 1998 declared to develop and implement consumer protection.[78] The Electronic Commerce Steering Group (ECSG) is in charge of the cross-border privacy rules (CBPR) system from which consumer may benefit.[79] It should be noted that APEC only operates in non-binding commitments and consensus among its member states and therefore the ongoing projects are only of advisory nature.

2.7 Africa

In Africa, the Southern African Development Community (SADC) adopted a draft declaration on regional cooperation in competition and consumer policies[80] and the Communications Regulators' Association of Southern Africa (CRASA) formulated Information and Communications Technology Consumer Rights and Protection Regulatory Guidelines[81] for its member states.

2.8 Mega-regional trade agreements

In the mega-regional trade agreements negotiations, one can find two different approaches. In the recently concluded Trans-Pacific Partnership Agreement (TPP), the achievement on consumer protection is modest since TPP members "agree to adopt and maintain consumer protection laws related to fraudulent and deceptive commercial activities online and to ensure that privacy and other consumer protections can be enforced in TPP markets."[82] It is to note that the TPP has a Chapter (Ch.14) on e-commerce.[83] Article 14.10 includes a general recognition by the States of the benefits of consumers being able to access and use online services and applications of their choice, and to connect the devices of their choice to the Internet ("Open Internet" principle).[84] This Chapter addresses several other issues that interest -directly or indirectly- consumer protection, like methods of electronic authentication and the validity of e-signatures; maintenance of laws on online privacy and the regulation of "unsolicited commercial electronic messages" (spam) and one especial rule on online consumer protection, as follow: *"Article 14.7: Online Consumer Protection – 1. The Parties recognise the importance of adopting and maintaining transparent and effective measures to protect consumers from fraudulent and deceptive commercial activities as referred to in Article 16.6.2 (Consumer Protection) when they engage in electronic commerce. 2. Each Party shall adopt or maintain consumer protection laws to proscribe fraudulent and deceptive commercial activities that cause harm or potential harm to consumers engaged in online commercial activities. 3. The Parties recognise the importance of cooperation between their respective national consumer protection agencies or other relevant bodies on activities related to cross-border electronic commerce in order to enhance consumer welfare. To this end, the Parties affirm that the cooperation sought under Article 16.6.5 and Article 16.6.6 (Consumer Protection) includes cooperation with respect to online commercial activities.*" In Chapter 16 about Competition the TPP has a second rule on the importance of consumer protection to this Free Trade Area: *"Article 16.6: Consumer Protection- 1. The Parties recognise the importance of consumer protection policy and enforcement to creating efficient and competitive markets and enhancing consumer welfare in the free trade area. 2. For the purposes of this Article, fraudulent and deceptive commercial*

[84] See https://www.globalpolicywatch.com/2015/11/the-tpps-electronic-commerce-chapter/ .

activities refers to those fraudulent and deceptive commercial practices that cause actual harm to consumers, or that pose an imminent threat of such harm if not prevented, for example: (a) a practice of making misrepresentations of material fact, including implied factual misrepresentations, that cause significant detriment to the economic interests of misled consumers; (b) a practice of failing to deliver products or provide services to consumers after the consumers are charged; or (c) a practice of charging or debiting consumers' financial, telephone or other accounts without authorisation. 3. Each Party shall adopt or maintain consumer protection laws or other laws or regulations that proscribe fraudulent and deceptive commercial activities. 4. The Parties recognise that fraudulent and deceptive commercial activities increasingly transcend national borders and that cooperation and coordination between the Parties is desirable to effectively address these activities. 5. Accordingly, the Parties shall promote, as appropriate, cooperation and coordination on matters of mutual interest related to fraudulent and deceptive commercial activities, including in the enforcement of their consumer protection laws. 6. The Parties shall endeavour to cooperate and coordinate on the matters set out in this Article through the relevant national public bodies or officials responsible for consumer protection policy, laws or enforcement, as determined by each Party and compatible with their respective laws, regulations and important interests and within their reasonably available resources."[85] These new rules have attracted the attention of the Committee and should be analyzed further in the future.

While in the ongoing Transatlantic Trade and Investment Partnership (TTIP) negotiations, the approach seems more ambitious because the TTIP's goal is to harmonize consumer protection standards, according to the announcement of political leaders. The Similarity can be found in the ***Comprehensive Economic and Trade Agreement (CETA)*** concluded between Europe and Canada.[86] As the negotiations continue, more time will be needed to verify if the potential closer economic partnership may imply deregulation of consumer protection in the EU or instead intensify harmonization between the EU and the US.

3. National level

3.1 China

In 2013, China amended its 20-year-old Consumer Law. Along with the administrative enforcement, the courts also play an extremely important role in the defense of consumer rights. It should be noted in this regard that, by June 2015, there was a total of 199,000 lawsuits in the country, 179 000 of which completed the trial, verifying a remarkable increase in the winning rate on the part of the consumer[87]. The Supreme Court issued respectively on the 23rd of December 2013 and the 16th of June 2015, a "judicial interpretation on the provisions relating to some problems in law enforcement in the prosecution of cases involving food or medicine" and 10 paradigmatic cases on the protection of consumer rights[88]. On July 1, 2015, the Commission for the Protection of Consumers of Shanghai brought a collective action under the new Consumer Law.

[88] http://www.court.gov.cn/zixun-xiangqing-14729.html. They are the cases: 1) Yin Chang Yi against the subsidiary of Wuhan Hanfu Supermarket Co., Ltd. in Hanyang, on a contract of sale; 2) Liu Xin

On November 23, 2015, the State Council of China promulgated the Guideline on the Role of Leadership in New forms of Consumption in the Acceleration of Development, according to which the punitive damages system will be improved and intensified, in order to impose high amounts in damages to increase the costs on violations by business operators.

Considering that product safety and market surveillance as a key priority worldwide, China has adopted several important legislation on food and product safety in the past several years and joined in Trilateral Cooperation EU/USA/China Summits.[89]

It is also to note that since April 2011 China has a special choice-of-law rule for consumer contracts. Article 42 of the "*Law of Application of Law for Foreign-related Civil Relations of People's Republic of China"* provides that "c*onsumer contract shall be governed by the law of the country of the consumers' habitual residence. The law of the country where the products/commodities and services be supplied should govern the contract, provided that it was chosen by the consumer or there is no related business activities of supplier/ professional in the country of the consumer's habitual residence."* Article 42 indicates three rules, namely: (a) In general, the Habitual residences' law of consumer governs the consumer contracts; (b) The law of the country where the commodities and services be supplied by the supplier should be applied, if it was chosen by consumer; (c) The law of the country where the commodities and services be supplied by the supplier should be applied, under the circumstance that the supplier didn't deal related operation in the country of the consumer's habitual residence.[90]

It is to note that the consumer can choose the law of performance (*lex loci executiones*) or the law of the habitual residence of the consumer will apply. There are other translations that put the emphasis on the alternative connecting factors: "consumer contracts shall be governed by the law of the place in which the consumer is habitually resident; if consumer chooses to apply the law where goods and services are provided, or if the business party does not engage in any soliciting activities in the place in which the consumer is habitually resident, the law of the place where goods and services are provided shall apply."[91]

---

against Shanxi Lixin Pharmacy, on a contract of sale; 3) Wang Xin against Xiaomi Technology Co., Ltd., on a contract of sale online; 4) Li Xiaodong against Jiuxian Platform Electronic Commerce Limited Company, on a contract of sale online; 5) Yang Bo against affiliate Bayan Nur He Zhongyuan Delivery Limited in Urad Front Banner, on a contract of sale online during the Chinese New Year; 6) Fan Jianwu against Guangdong cultural relics sales headquarters, on a contract of sale; 7) Yu Aoyong against the seller of Hua Liping products in a liability action; 8) Wang Yi against Luyou Products for Babies, Limited, on a contract for the provision of services; 9) Wu Jun against the Company for Trade and Investment of Suning Commerce of Zhejiang, Limited, on a contract of sale; and 10) Wang Yi against Tianjin Zhongjin Plenty Fame Automobile Service Co., Ltd., surrounding a purchase and sale agreement. It must be noted that to date the Supreme Court failed to publish any guiding case on the application of the new Consumer Law since its enactment.

3.2 Japan

Japan is currently making the first comprehensive reform of the contract law provisions of its Civil Code of 1898, which is also influencing a revision of the Consumer Contracts Act of 2000. Representative actions for damages claims have been incorporated in the new act.

In the area of electronic commerce, the Ministry of Economy, Trade and Industry of Japan issued an Interpretative Guidelines on Electronic Commerce and Information Property Trading, with a view to explain how the relevant laws and regulations including the Civil Code are applied and interpreted with respect to various types of legal problems in the field of electronic commerce. In Part IV of such Guidelines, issues concerning cross-border transactions have been raised and adjudicative jurisdiction and applicable law have also been elucidated.

The Act on Special Provisions of Civil Court Procedures for Collective Recovery of Property Damage of Consumers was submitted to the Congress on April 19, 2013 and promulgated as the Act No. 96 of 2013 on Dec. 11. This Act is supposed to come into force from October 1, 2016. It is mainly for consumer group litigation led by consumer organizations for monetary compensation based on consumer contracts.[92]

Japan's Private International Law rules are codified in the Act on the General Rules of Application of Laws. The Revision of this Act in 2006 brings an especial rule on international consumer contracts. The Article 11 is adapted to the European Union Model but puts all focus on the consumer's manifestation about the mandatory rules.[93]

---

[92] Information sent by Wenjia Sun.

[93] *Information sent by Yuko Nishitani.* The original text is: "Special Rules for Consumer Contracts – Article 11 (1) Even if the law governing the formation and effect of a contract (except for a labor contract) that is concluded between a consumer (the term "consumer" as used in this article means an individual who becomes a contractual party neither in nor for the purpose of business) and a business operator (the term "business operator" as used in this article means a juridical person or other association or foundation, or an individual who becomes a contractual party in or for the purpose of business), which is referred to in the following provisions of this article as a "consumer contract", is, according to a choice or change of governing law pursuant to Article 7 or Article 9 respectively, a law other than the law of the place where the consumer habitually resides, the specific mandatory rules in the law of the consumer's habitual residence shall also apply to matters subject to such mandatory rules with regard to the formation and effect of the consumer contract, provided that the consumer expresses his/her will to the business operator to the effect that such mandatory rules should apply. (2) If the parties have not chosen a law to govern the formation and effect of their consumer contract pursuant to Article 7, the formation and effect of such consumer contract shall be, notwithstanding Article 8, subject to the law of the consumer's habitual residence. (3) Even if a law other than the law of the consumer's habitual residence has been chosen to govern the formation of a consumer contract pursuant to Article 7, the specific mandatory rules in the law of his/her habitual residence shall exclusively apply to matters subject to such mandatory rules with regard to the formalities of the consumer contract, notwithstanding paragraphs 1, 2 and 4 of the preceding article, provided that the consumer expresses his/her will to the business operator to the effect that such mandatory rules should apply. (4) If the law of the consumer's habitual residence has been chosen to govern the formation of a consumer contract pursuant to Article 7, and if the consumer expresses his/her will to the business operator to the effect that the law of his/her habitual residence should exclusively apply to the formalities of the consumer contract, the formalities of the consumer contract shall be governed by the law of the consumer's habitual residence, notwithstanding paragraphs 2 and 4 of the preceding article. (5) If the parties have not chosen a law to govern the formation of their consumer

3.3 India

The Indian Parliament is debating the Consumer Protection Bill 2015 to reform of the Consumer Protections Act of 1986, with a focus on inclusion of e-commerce transactions, mediation process, product liability, advertisement, safe food and new consumer protection agencies for regulation and redress.

3.4 Australia

The Australian Consumer Law has been set for review in 2016 and some possible areas embrace the penalty regime in delivering deterrence, the application of the ACL to the sharing economy, the adoption of trusted international product safety standards and so forth. It applies already to software.

Quality in Consumer Goods and Credit – Australia did not adopt the approach to quality until 2010 when it adopted the terminology 'acceptable quality' in the *Australian Consumer Law*.[94] The Australian provision in Commonwealth law is no longer a term of the contract but a statutory guarantee to consumers. The ACL consumer guarantees include 'express warranties' including assertions. The developments in the notion of merchantable quality of goods and the substitution of acceptable or satisfactory involve a collapsing of the private requirements of one buyer into a standard for all reasonable consumer buyers. It assumes an interchangeability of buyer and an interchangeability of what is desired or required of the goods. It assumes that what is suitable for one buyer will be suitable for other buyers. Today, we should note that there is no applicable merchantable or acceptable quality standard for credit or other financial services in Australia. There is an implied contractual term that such services should be fit for a communicated purpose or a communicated desired result. [95] This standard is different from the traditional goods standard. The services must be fit for the purpose or 'of such a nature and quality that they might reasonably be expected to achieve that result'. [96] This is a shift from a standard unique to the acquirer which edges towards a more general standard. [97]

---

contract pursuant to Article 7, the formalities of the consumer contract shall be governed by the law of the consumer's habitual residence, notwithstanding paragraphs 1, 2 and 4 of the preceding article. (6) The preceding paragraphs 1 through 5 are not applicable in any of the following cases: (i) the business operator's establishment which relates to the consumer contract is located in a jurisdiction other than the jurisdiction of the consumer's habitual residence, and the consumer goes to the jurisdiction of the business operator's establishment and concludes a consumer contract in that jurisdiction; except where the consumer has been solicited by the business operator to conclude the consumer contract in that jurisdiction. (ii) the business operator's establishment which relates to the consumer contract is located in a jurisdiction other than the jurisdiction of the consumer's habitual residence, and the consumer goes to the jurisdiction of the business operator's establishment and receives or is to receive complete performance by the business operator in that jurisdiction; except where the consumer has been solicited by the business operator to receive complete performance to be performed by the business operator in that jurisdiction. (iii) at the time the consumer contract is concluded, the business operator is unaware of the location of the consumer's habitual residence and has reasonable ground for such unawareness. (iv) at the time the consumer contract is concluded, the business operator has misidentified the counterparty as not being a consumer and has reasonable ground for such misidentification." 3.5 UK

The new Consumer Rights Act of 2015 – After accusations of being extremely and unnecessary complex,[98] the UK Consumer Law has been reshaped very recently, by the Consumer Rights Act 2015. The legal benchmark inaugurates a new contour of consumer law, by setting out a framework that consolidates in one place key consumer rights covering contracts for goods, services, digital content and the law relating to unfair terms in consumer contracts. Additionally, the Act creates easier paths for consumers and small and medium sized enterprises ("SMEs") to challenge anti-competitive behaviour through the Competition Appeal Tribunal ("CAT"). Another important element is the consolidation of enforcers' powers as listed in Schedule 5 to investigate potential breaches of consumer law; the same session establishes that certain enforcers (Trading Standards) can operate across local authority boundaries. In the pursuit of keeping up with technology and new forms of consumer relations, products and services, the Act also gives the civil courts and public enforcers greater flexibility to take the most appropriate action for consumers when dealing with breaches or potential breaches of consumer law.[99]

3.6 France

Changes on the Consumer Code: The French Consumer Code (*Code de la Consommation*) was established by Law No. 93.949, of July 26th, 1993, and has so far been a real consolidation of consumer protection regulations (including consumer protection, procedure and administrative rules as well as economic criminal law and over-indebtedness rules). It contains a legislative section (articles L, updated by *Ordonnance* No. 2016-301 of March 14th, 2016, which shall come into force in July 2016) and a regulatory section (in force by Decree No. 97.293 of March 27th, 1997, articles R) and references to Law No. 95.125, of February 8th, 1995, about the organization of civil, criminal and administrative procedure jurisdictions. At this time, the French chose to maintain intact their Civil Code of 1804 – now updated- and their *Code de Commerce*. They consolidated all rules of consumer protection on a crosscutting Consumer Code, hitherto little systematic, but stabilized all the internal laws and special Directives of consumer protection. On March 2016 an Administrative Law modernized the 1993 Consumer Code (Ordonnance n°2016-301, de 14.03.2016). In July 2016, the reform of the legislative section of *Code la Consommation*, will be started, aiming to introduce a definition of consumer (derived from the Directive 2011/83/EU on consumer rights),[100] a definition of professional or supplier of goods and services and "non-professional" (which can be treated as consumer)[101] as well as substantial changes of the subjects order.

[101] See the original Text: « Article liminaire (Créé par Ordonnance n°2016-301 du 14 mars 2016) Pour l'application du présent code, on entend par : – consommateur : toute personne physique qui agit à des fins qui n'entrent pas dans le cadre de son activité commerciale, industrielle, artisanale, libérale ou agricole ; – non-professionnel : toute personne morale qui agit à des fins qui n'entrent pas dans le cadre de son activité commerciale, industrielle, artisanale, libérale ou agricole ;- professionnel : toute personne physique ou morale, publique ou privée, qui agit à des fins entrant dans le cadre de

Changes on the Civil Code: On October 1, 2016 will come into force the France´s Order No. 2016-131 of February 10, 2016 reforming the contract law, the general rules and the proof of obligations. This is a very important reform for the French Private Law, because the letter of its Obligation Law has remained practically intact since the approval of the Napoleonic Code in 1804. This order seeks mainly to codify the case law created during the past century and to make the French Law more competitive within the European law market. This norm does not focus on Consumer Law, but rather only indirectly modifies the French Consumer Code of 1993. However, the reform incorporates, although briefly, the rules about unfair contractual terms and standard form contracts, which are applicable to consumers and professionals. The order also establishes for the first time in the Civil Code the duty of pre-contractual information and it sets up new regulations about the exclusion of liability for defective products and electronic commerce. [102]

3.7 Brazil

The new Brazilian Civil Procedure Code came into force in March 2016 (Law 13.105, 16.03.2015) and brought a new Chapter on international cooperation (Articles 26 to 41). Article 22 of the new Civil Procedure Code assures jurisdiction for the Brazilian Courts "raising from consumer relations, when the consumer has domicile or residence in Brazil" (nr. III, Art. 22). Article 23 establishes the exclusive jurisdiction mentioning only immobile goods situated in Brazil. Article 101, I of the Brazilian Consumer Code (Lei 8.090/1990) remains in force and guarantees the privilege of *forum actoris* to consumers.

The Reform of the Consumer Code is being debated at the Brazilian Parliament and Bill 3415, 2015 with half sanction by the Senate brings changes to update the Consumer Code in national and international distance sales and e-commerce. The Bill 3415, 2015 updates article 101, by adding a sole paragraph introducing the possibility for the parties to choose the most favorable law to the consumer (most favorable law test). There is also a new Article 9B in the Introductory Law (LINDB) with a conflict rule on other consumer contracts, using the traditional *lex loci celebrations*, but allowing the choice of the Brazilian Law, if most favorable to consumer.

3.8 Argentina

The new Argentinian Civil and Commercial Code came into force in 2015. This body of rules replaces the Civil Code of 1871 and the Commercial Code of 1862. The new code unifies not only the civil and commercial law, but it also incorporates some rules about consumer contracts. These are not regulated as another special type of contract, but rather as a fragmentation of the general contract theory. Thus, the code sets up first the contracts in general, then the consumer contracts and finally the different types of contracts. Solely principles and general rules about consumer law have been incorporated into the code. The Civil and Commercial Code settles, amongst others, a definition of consumer contract and consumer relationship, general norms about the interpretation of consumer contracts, abusive practices, duty of information, publicity and electronic commerce. These incorporations meant a partial reform of the special legislation about consumers: the Law No. 24.240 on Consumer and User Protection, which came into force in 1993

son activité commerciale, industrielle, artisanale, libérale ou agricole, y compris lorsqu'elle agit au nom ou pour le compte d'un autre professionnel. »

[102] Information sent by Manuel Gonzalo Casas, University of Heidelberg, Germany.

and was substantially modified in 2008 by the law No. 26.361. For example, by defining the consumer relationship the new code excludes from the Argentina´s Consumer Law the so-called "exposed consumer".

Moreover, the new code incorporates, separately from the consumer contracts, the regulation of standard form contracts. These were neither included in the Civil Code nor in the Consumer Law. It establishes, for example, the principle of interpretation *contra proferentem*, that is, against the party that drafted the standard terms. By this, the new law closes the discussion whether the consumer law should be applied to relations between small and medium-sized enterprises and big companies.

Finally, the law No. 27.250, which modifies the article 4 of the Consumer Law and the article 1100 of the Civil and Commercial Law about duty of information on consumer contracts, took effect on June 22, 2016. The innovation of this norm is that it establishes that suppliers can replace the communication on physical means by using another medium of communication just if the consumer accepts it expressly.[103]

It is to note that the new Argentinean Civil and Commercial Code regulates also on Article 2655 "the law applicable to international consumer contracts"[104] and on Article 2654[105] "the jurisdiction on international consumer contracts". [106]

3.9 Panamá, Dominican Republic and Paraguay

On 8 May 2014, Panamá approved a new Code on Private International Law (Código de Derecho Internacional Privado, Ley nº 7),[107] with four Articles about cross border

[103] Information sent by Manuel Gonzalo Casas, university of Heidelberg, Germany.

[104] The original text is: "ARTÍCULO 2655.- Derecho aplicable. Los contratos de consumo se rigen por el derecho del Estado del domicilio del consumidor en los siguientes casos: a. si la conclusión del contrato fue precedida de una oferta o de una publicidad o actividad realizada en el Estado del domicilio del consumidor y éste ha cumplido en él los actos necesarios para la conclusión del contrato; b. si el proveedor ha recibido el pedido en el Estado del domicilio del consumidor; c. si el consumidor fue inducido por su proveedor a desplazarse a un Estado extranjero a los fines de efectuar en él su pedido; d. si los contratos de viaje, por un precio global, comprenden prestaciones combinadas de transporte y alojamiento. En su defecto, los contratos de consumo se rigen por el derecho del país del lugar de cumplimiento. En caso de no poder determinarse el lugar de cumplimiento, el contrato se rige por el derecho del lugar de celebración."

[105] The original text is: "Contratos de consumo – ARTÍCULO 2654.- Jurisdicción. Las demandas que versen sobre relaciones de consumo pueden interponerse, a elección del consumidor, ante los jueces del lugar de celebración del contrato, del cumplimiento de la prestación del servicio, de la entrega de bienes, del cumplimiento de la obligación e garantía, del domicilio del demandado o del lugar donde el consumidor realiza actos necesarios para la celebración del contrato. También son competentes los jueces del Estado donde el demandado tiene sucursal, agencia o cualquier forma de representación comercial, cuando éstas hayan intervenido en la celebración del contrato o cuando el demandado las haya mencionado a los efectos del cumplimiento de una garantía contractual. La acción entablada contra el consumidor por la otra parte contratante sólo puede interponerse ante los jueces del Estado del domicilio del consumidor. En esta materia no se admite el acuerdo de elección de foro."

[106] Information sent by Prof. Dr. Ricardo Lorenzetti, Supreme Judge from Argentina.

[107] Ley publicada en: *Gaceta Oficial del Panamá,* nº 27.530, el 8/5/2014. El Código refiere, en su art. 184, que entrará en vigencia en los 6 meses siguientes a su publicación, es decir, el 8/11/2014.

consumer contracts, in a compreensive way to adopt strong protection policy on the subject.[108]

For the first time in the Americas, the consumer protection is mentioned as public policy principle in Private international Law. Article 8[109] of the new Panama Code impose as the maximum principle the protection of the consumer interest ("*el interés superior del consumidor*").

Art. 89 defines international contracts made with a weaker party ("*se entiende por contratos desiguales o de adhesión los contratos en los que la parte más débil no tiene facultad para negociar las cláusulas esenciales de dichos contratos. Se entenderá como cláusulas esenciales o de adhesión las cláusulas que fijan el precio, las condiciones de ejecución del contrato y las cláusulas de solución de conflictos. La imposición de una de esas cláusulas se entenderá como el medio de comprobación de un contrato desigua*l"). Art. 90 expressly includes consumer contracts as such. And Article 95 regulates the jurisdiction and the law applicable to international consumer contratcts ("*los contratos del consumidor se rigen por la ley del lugar donde concluyó la transacción. A elección del consumidor, este podrá recurrir a la jurisdicción de su domicilio,[110] a la del lugar de conclusión del contrato o a la que le sea más favorable, en función del principio del interés superior del consumidor. Se entiende por la ley más favorable la ley de la reparación y protección más apropiada al interés del consumidor*."). It is a very interesting and innovative model, inspired by the Brazilian Proposal at the CIDIP VII.[111]

---

[108] The Chair thanks the ASADIP for the Information followed and specially Prof. Dr. Luciane Klein Vieira.

[109] See the original text: "Art. 8º. Los principios fundamentales de la comunidad internacional son parte de las reglas de aplicación del juez, como el interés superior del niño y el interés superior del consumidor, que priman sobre cualquier otro aspecto; la igualdad, equidad, buena fe y lealtad negocial, la seguridad jurídica sobre los actos, la básica territorialidad de la ley, la personalidad de las normas sobre el Estado, la capacidad y derecho de familia, la proporcionalidad, los derechos adquiridos sin fraude al derecho naturalmente competente, la protección a la parte más débil, las obligaciones internacionales *erga omnes* y los derechos derivados del *ius cogens* y la responsabilidad ambiental y aquellos principios universales de justicia aplicables."

[110] Aquí, es interesante observar que si el consumidor propone la demanda ante los tribunales de su domicilio, punto de conexión que debería ser empleado por todos los ordenamientos jurídicos mercosureños, a fin de facilitar el acceso a la jurisdicción a la parte débil, el juez buscará en las normas de conflicto del foro cuál es el derecho a ser aplicable, que puede ser un derecho nacional o extranjero.

[111] See the **Article 4. Contractual protection in distance contracting** 1. (**Limited and valid choice of law applicable to passive consumers)** International contracts and transactions concluded by the consumer in the State of his or her domicile, especially in the case of distance contracting, shall be governed by the law chosen by the parties; the parties may choose the law of the consumer's domicile or the law of the place of conclusion, the place of performance, or the law of the main office of the provider of goods or services; such law shall be applicable to the extent it is more favorable to the consumer. 2. **(Determination of the law most favorable to the passive consumer)** To that end, the most favorable option for the consumer shall be regarded as the following, in the order indicated: a. The law of the consumer's domicile; b. The law of the common residence of the consumer and one of the branches of the provider of goods or services; c. The law of the place of conclusion or the law of the place of performance, if it coincides with the law of the domicile, the principal place of business or main office of the provider of goods or services, which acted in the contract in a capacity other than that of mere distributor. 3. (**Place of conclusion in distance contracting**) In

On 15th October 2014, the so called "Ley de Derecho Internacional Privado de la República Dominicana" was approved the Law 544, which came into force on 20th December 2014.[112] The new Law on Private International Law of the Dominican Republic brinsg two articles related to international protection of consumers. Article 16, number 4, ensures the jurisdiction when the consumer has domicile at the Dominican Republic and the "stream of commerce" of the provider of goods and services was directed to this country. Article 16, number 1, brings a subsidiary connection to the place of performance, excluding the choice of a forum in international consumer contracts (Articles 18 and 19 together).

Article 16, inspired by the European Model, regulates the law applicable to international consumer contracts as follows: "los contratos celebrados por consumidores se rigen por la ley del país donde habitualmente se realiza la actividad, en defecto de elección por las partes se aplicará la ley de la residencia habitual del consumidor. Párrafo. En los contratos celebrados por consumidores establecidos en este artículo, la elección por las partes de la ley aplicable no podrá aminorar los estándares de protección del consumidor previstos en la ley de su residencia habitual, en aquellos casos en que el cocontratante tenga un establecimiento comercial en dicho país o de cualquier forma haya dirigido su actividad comercial hacia dicho país."

On 21th January 2015 in Paraguay came into force a new Law on the applicable law on international contracts (*Ley 5393 sobre el derecho applicable a los contratos internacionales*), which is only for commercial contracts, excluding consumer contracts.[113]

3.10 USA

Two consumer law initiatives in the US should be mentioned: the Consumer Financial Protection Bureau's proposed rule prohibiting class action waivers in financial services contracts, and the draft Restatement of Consumer Contracts.[114] In Johannesburg the Committee is willing to make a brief discussion of both initiatives.

Case Law has defined High-speed internet service as a utility -The 2-to-1 decision by a three-judge panel of the United States Court of Appeals for the District of Columbia Circuit prevents cable and phone companies from blocking websites or creating fast and

the case of international distance contracting, the place of conclusion shall be considered to be that of the domicile notified by the consumer at the moment of contracting, except in the case of fraud. 4. (**Domicile notified at the moment of conclusion of the contract**) In the case of international distance consumer contracting, the consumer's domicile shall be regarded as the address or domicile communicated by the consumer to the professional or provider of goods or services at the moment of conclusion of the contract between the parties, except in the case of fraud. 5. (**Subsidiary rule for passive consumers)** If there is no valid choice of law by the parties, international contracts and transactions concluded when the consumer is in the State of his or her domicile shall be governed by the law in force therein. 6. (**Online choice of the law**) In the case of distance online and interactive choice by the consumer, the options of State laws to be selected must be clearly and prominently communicated in the prior information given to the consumer."

[112] Ley publicada en: *Gaceta Oficial de la República Dominicana,* el 18/12/2014. Entró en vigencia el 20/12/2014, conforme art. 1º del Código Civil.

[113] We thank ASADIP for this information. For Paraguay, see MORENO RODRIGUEZ, José Antonio. El derecho no estatal en la nueva ley paraguaya de contratos internacionales, p. 55.,

[114] Information sent by Prof. James Nefh.

slow lanes for delivering content on the internet. With a ruling in June 2016 high-speed internet service should be equally accessible to all Americans, a federal appeals court has come down forcefully in favor of competition and consumer protection. The decision affirmed the government's view that broadband is as essential as the phone and power and should be available to all Americans, rather than a luxury that does not need close government supervision. The decision came in a case about rules applying to a doctrine known as net neutrality, which prohibit broadband companies from blocking or slowing the delivery of internet content to consumers.[115]

III – Committee's work in the last two years: International Organizations dealing with international consumer protection

Desiring to contribute for debates on the creation of acceptable and equitable framework principles to international consumer protection worldwide, the Committee has worked very hard in the last two years. The Committee recommended to international organizations, especially the UNCTAD, the Hague Conference on Private International Law, to national consumer protection authorities, to non-governmental organizations such as the CI (Consumers International), to the IACL (International Association of Consumer Law), to the ASADIP (Asociación Americana de Derecho Internacional Privado), to the IFFTA (The International Forum of Travel and Tourism Advicates), to the academia and to consumer groups the "Sofia Statement on the Development of International Principles on Consumer Protection" (ILA Resolution nr. 4/2012). This report is about the success achieved by the Chair and all Committee Members on this endeavor.

1. Revision of UN Guidelines on Consumer Protection

The Committee on International Protection of Consumers of the ILA has been accepted by the United Nations Conference on Trade and Development (UNCTAD) to act in the role of an observer in the current efforts in updating the UN Guidelines on Consumer Protection (1985 and 1999). A few suggestions submitted by the Committee on International Protection of Consumers have been well reflected in the UN Guidelines. The Committee of International Protection of Consumers of International Law Association has recognized the emergence of the international dimension in consumer protection and the role of international (private and public) law in helping to develop more equitable standards of consumer protection worldwide. Aiming to develop fair, equitable and non-discriminatory standards and models for all consumers in the world, the Committee has proposed five guiding principles which had been adopted by the ILA as Resolution No. 4/2012 the Sofia Declaration. The suggestions submitted to the UNCTAD were made based on this 'Sofia Statement on the Development of International Principles on Consumer Protection' (approved as an International Law Association's Resolution – Res. No. 4/2012).

The Chair of the Committee, Professor Claudia Lima Marques (Federal University of Rio Grande do Sul, Brazil) sent substantive and editorial suggestions to the UNCTAD by writing on February 16, 2015. The Rapporteur of the Committee, Professor Dan Wei attended the Informal Expert Meeting of the UNCTAD on Revision of UN Guidelines for Consumer Protection and participated in the technical discussions as the representative

[115] Information sent by Prof. James Nefh. see https://www.cadc.uscourts.gov/internet/opinions.nsf/3F95E49183E6F8AF85257FD200505A3A/%24file/15-1063-1619173.pdf.

of the Committee on March 27 in Geneva. Professor Lima Marques and Professor Wei submitted afterwards the second position with 3 final suggestions to the plenary of the UNCTAD, which has been very well received. ILA was invited by the UNCTAD to continue making contributions for this project in the near future.

All committee members are very honored by the positive impact of the suggestions for the most important universal legal instrument in the area of consumer protection. The Committee members also express gratitude to the indispensable support of the ILA Headquarters, the Executive Council and Professor Marcel Brus.

The UN Guidelines for Consumer Protection sets a goal to promote international cooperation among Member States and encourages sharing experiences and best practices in consumer protection. The ILA Committee on International Protection of Consumer' focus is to help the efforts of the Intergovernmental Group of Experts (IGE) on Consumer Protection Law and Policy/UNCTAD.

2. The UN Intergovernmental Group of Experts (IGE) on Consumer Protection Law and Policy

The Intergovernmental Group of Experts (IGE) on Consumer Protection Law and Policy is a standing body established under the United Nations Guidelines for Consumer Protection (UNGCP) "*to monitor the application and implementation of the guidelines, provide a forum for consultations, produce research and studies, provide technical assistance, undertake voluntary peer reviews, and periodically update the guidelines*."[116]

On 17 to 18 October 2016, in Geneva, Switzerland, in the First Session of the IGE on consumer protection will be studied the future of this intergovernmental Expert Group IGE and the following topics: "1. Launch of the revised United Nations Guidelines for Consumer Protection; 2. Engaging stakeholders for the achievement of the Sustainable Development Goals: leaving no consumer behind; 3. Challenges and perspectives for the emerging collaborative economy; 4. Capacity building in consumer protection: trends and challenges. " In this First Session, the IGE on Consumer Protection is expected to decide on its method of work and work program for the period 2016-2020. In particular, in guideline 97(c) of the United Nations Guidelines for Consumer Protection, the General Assembly decided that UNCTAD should conduct voluntary peer reviews of national consumer protection policies of Member States, as implemented by consumer protection authorities. An interactive discussion will also be devoted to this pioneer peer learning activity."

In order to facilitate the deliberations and the informal exchange of experiences and best practices on the topics to be discussed, member States and observers are requested to submit contributions in writing to the UNCTAD secretariat by Friday, 16 September 2016, to allow participants to prepare themselves for the consultations.

The International Law Association through our Committee was invited to send written contributions to be discussed at the Johannesburg Conference and to participate in the meeting as observer. This invitation is a great honor and recognition. At the Johannesburg Conference, the Committee will ask the authorization to act again as observer in this first

[116] See http://unctad.org/en/Pages/MeetingDetails.aspx?meetingid=1060 .

meeting. If the ILA Headquarters and the Executive Council allows our participation, with the support and guidance of Prof. Marcel Brus, the Chair and General Rapporteur will be present to initiate a cooperative joint work with this new important UN Forum on the protection of consumers. The goal of the Chair and all Members of the Committee is to support the UN efforts in this "Intergovernmental Group of Experts on Consumer Protection Law and Policy" to enhance cross border protection of consumers worldwide.

3. Protection of international Tourists at the Hague Conference on Private International Law

In the annual Council of the Hague Conference on Private International Law in 2015, the Committee on International Protection of Consumers of the ILA was accepted by the Permanent Bureau to participate as an observer. The Chair Professor Claudia Lima Marques and the Rapporteur Professor Dan Wei attended the meeting on March 24-26, 2015 in the Hague, Netherlands. The Committee strongly supported the initiative to include tourism project into the working agenda of the Hague Conference on Private International Law and to carry out a feasibility study by the Permanent Bureau and the creation of an experts' group.

4. Meetings among Committee's members

In these years, the Committee Members decided to make small meetings, taking the opportunity of participation in key congresses and events and to hold only one main teleconference before the Johannesburg Conference. The Chair and the Rapporteur have had several meetings with the Members to prepare for the book and this report, as follows.

4.1 Collaboration with Consumers International at the Revision of the UN Guidelines and of the UNCTAD Manual on Consumer Protection

Consumers International (CI) is the only independent global non-governmental organization on consumer protection, giving worldwide "voice for consumers". With over 240 member organizations in 120 countries, it is the most important and much-acknowledged international NGO for the international consumer movement, helping, protecting and empowering consumers worldwide.[117] During the process of the Revision of the UN Guidelines and together with the IACL (International Association of Consumer Protection) the Committee has worked together with the CI to enhance the mentions of cross-border consumer protection in the UN Guidelines. The Committee feels honored to be able to collaborate on this important endeavor and wants to acknowledge the important contributions made by the CI Representatives, Antonino Serra, Amanda Long and Robin Simpson during the Revision of the UNGCP.

At the end of this effort, the Chair and several members of the Committee, like Prof. Dr. Thierry Bourgoignie, Prof. Dr. Yu Ying and Prof. Dr. Iain Ramsay were invited to send comments on the updating of the UNCTAD's Consumer Protection Manual by Mr. Robin Simpson who worked independently with the UNCTAD secretariat after the revised Guidelines were adopted in December 2015. During the process of Revision of the UNGCP and at the CI's World Congress in Brasília, the mentioned Committee Members held small informal meetings with the Chair and General-Raporteur and also Skype conferences.

[117] See www.consumersinternational.org <http://www.consumersinternational.org>

4.2 International Association of Consumer Law

The Committee has work closely with the IACL. During the Biannual Conference of the International Association of Consumer Law (IACL), the most important experts of consumer protection have discussed the international dimension of consumer law (Amsterdam, 29 June to 1 July 2015, see the Program). The Chair and the other five Committee Members Hector Valverde Santana (Brazil), Iain Ramsay and Toni Williams (UK), Thierry Bourgoignie (Canada), James Nefh (USA) and Gail Pearson (Australia, also President of IACL) made two informal meetings to prepare for a future book of the Committee and to contribute for this Report. The IACL congregates the leading scholars in consumer protection and in this Amsterdam Congress, the main international issues discussed were: self-regulation in tourism and air travel, e-commerce, cross-border unfair commercial practices, international product safety, data protection, private enforcement of consumer law and international collective actions and arbitration.

4.3 Brasilcon, DLJV and Academia

The Committee Members have also made small meetings during several Congresses, in Brazil and in Germany, namely, during the 2016 Congress of Brasilcon (Claudia Lima Marques, Dan Wei, Hector Valverde Santana, Thierry Bourgoignie, Christoph Benicke, Gail Pearson, Iain Ramsay and Toni Williams), the 2015 Deutsch Lusitanische Juristenvereinigung-DLJV, in Porto Alegre, Brazil (Rui Dias, Dan Wei, Christoph Benicke, Claudia Lima Marques, Hector Valverde) and in academic Congresses, at the Federal University of Rio Grande do Sul, in Porto Alegre, Brazil (Yuko Nishitani, Hector Valverde Santana, Juan Cerdera), at ASADIP Congresses in 2015 Porto Alegre and in 2016 Panamá City (Claudia Lima Marques, Cristoph Benicke, James Nefh), ASADIP PUC-Rio (Claudia Lima Marques, David Stewart, Dante Negro-OEA and José Moreno Rodríguez-ASADIP). Some of these meetings were organized by other International Associations that wish to continue working together with our Committee.

4.4 Work with ASADIP

As mentioned before, the Committee Members worked together with the American Association on Private International Law (ASADIP) during the 2014 and 2015 Annual Congresses of ASADIP and also the preparatory meetings for the Hague Council. Within the range of ASADIP's activities and considering the constant development of tourism services and the increasing number of visitors and tourists in the world, 108 experts from more than 14 countries have manifested officially their support for the creation of a legal instrument with an objective to protect tourists and visitors internationally. The so-called "Declaration of *Rio de Janeiro*" well reflects the accomplishment of studies, which is now under the scope of the Hague Conference on Private International Law. The draft convention on the cooperation and protection of consumers as tourists recognizes all vulnerabilities of tourists as foreigners, e.g.: the less time they spend in destinations, the circumstances of being away from their home country and culture, possible difficulty in foreign languages, the need for information, the need to find proper venue to complain and the need to get access to justice, use of alternative dispute resolution and small claim courts, the need to benefit from an easy administrative and legal aid without discrimination. It is interesting to note that in 2014 ASADIP organized a meeting with participations by experts, diplomats and practitioners to help the Member States to include the subject of tourist protection in the working agenda of the Hague Conference

on Private International Law. In 2015, ASADIP's annual meeting was held in Panama City and ASADIP continued to focus on the international protection of consumers. The ASADIP has invited the Committee to present relevant results at the coming meeting and to consider the need to create a study group on the protection of tourists as consumers.

4.5 Future work with the International Forum of Travel and Tourism Advocates (IFTTA)

Preparing our collaboration with the Hague Conference on Private International Law the Chair make contact with the International Forum of Travel and Tourism Advocates (IFTTA). The IFTTA is a world organization of lawyers, academicians, legal advisors, government officials and tourism experts solely dedicated to the legal aspects of tourism and travel. IFTTA was conceived in 1983 and has always tried to spread the expertise of its members by organizing annual conferences and workshops worldwide and distributing a periodical IFTTA Law Review. As travel is mostly international, it seems appropriate to widen the legal horizon beyond the purely domestic. IFTTA's main focus is to exchange experiences, learn from each other and promote international travel and tourism through the creation of an appropriate legal framework. IFTTA has held 26 World Conferences and many regional ones. At present, membership comprises lawyers from 42 countries across the globe. Sections and chapters have also been formed in Europe, North America, Argentina, Israel, Brazil and the Asia-Pacific region. The Committee appreciates the key focus of IFTTA and is willing to contribute for further developments of any international instrument.

The IFTTA invited the Committee to present its work at the Buenos Aires Conference in 2015. In the lively debates at IFTTA conferences, the consensus reached was that issues in travel and tourism law are more or less the same all over the world, yet legal approaches differ in the light of cultural and historical backgrounds. Based on this first exchange of ideas, IFTTA sent a letter to enhance the cooperation to the Hague Conference on Private International Law supporting the position to protect tourists as consumers worldwide. Being respectively the observer at the UN World Tourism Organization, in Madrid and the observer on the Revision of the UN Guidelines on Consumer Protection at UNCTAD, IFTTA and ILA plan to exchange information and share knowledge to contribute jointly for new international instruments on Co-operation in Respect of Protection of Tourists and Consumers in the world.

5. Preparation of a final report: Guidelines Draft on best practices on international protection of consumers: Applicable law

After the Committee's work at the negotiations on the Revision the UN Guidelines for consumer protection, all the involved members were convinced that there is need to be aware of the different Models that already exist, since more and more countries have established conflict rules for this issue (see Panamá, Dominican Republic, Argentina, Brazil, CARICON, China etc.). The work of the Committee aims to put in evidence these Models and to support this new trend of consumer protection, by means of presenting a draft resolution with some Guidelines on jurisdiction for international consumer transactions, recommendations on the best practices. The Draft resolution has been endorsed by all Committee's members.

The Committee will also publish a book entitled "The Future of International Protection of Consumers". The structure will be organized as follows: Part. 1 Models of consumer protection through Private International Law; Part. 2 Sofia Declaration and Revision of UN Guidelines; and Part. 3 National developments of consumer protection law and policy.

The Committee will continue to pay close attention to the coming results at the UNCITRAL and continue to work on the protection of international tourist protection, following with great interest the results at the Hague Conference on Private International Law. Both of issues haven't been addressed in the Draft Resolution.

DRAFT RESOLUTION

COMMITTEE ON THE INTERNATIONAL PROTECTION OF CONSUMERS

The 77th Conference of the International Law Association held in Johannesburg, South Africa, 7 to 12 August 2016:

HAVING CONSIDERED the Report on the Role of international Law on contemporary consumer protection, the contents of the book prepared by the Committee and the survey of the consumer protection laws and regulations in the global financial crisis;

THANKS the Chair, the Rapporteur and the members of the Committee for the valuable work done;

RECOGNIZING the emergence of the international dimension in consumer protection through the globalization and the role of international law in helping to develop more equitable standards of consumer protection and the need to take consumer into account in international trade regulation;

ACKNOWLEDGING that individuals are usually the weaker parties on consumer contracts in general, and specifically in cross-border contracts in respect to the applicable law and jurisdiction in the national, regional and global markets;

CONCERNED about the growing consumers' loss of confidence in the global market and inexistence of universal models to protect consumers in cross-border contracts;

AWARE that the *ILA Resolution No. 4/2012 – Sofia Statement on the Development of International Principles on Consumer Protection* was utilized by the UNCTAD during the Revision of the UN Guidelines for Consumer Protection in 2015, representing a chance to enhance consumer protection, in its international and national dimensions;

DESIRING to contribute with the debate on the creation of acceptable and equitable framework principles to international consumer protection worldwide;

ADOPTS the Recommendations and Guidelines annexed to this Resolution;

COMMENDS the Recommendations to international organizations, countries and consumer groups that are working in national, regional or international initiatives to face the global financial crises and to assure international co-operation in consumer issues, and to their advisors, with a view to focusing the attention of all concerned on the need to develop fair and equitable standards and models for all consumers in the world, without discrimination;

INVITES the Committee to continue and complete its work on the new developments on the international protection of consumers and to focus on the protection of tourists.

JOHANNESBURG RECOMMENDATIONS AND GUIDELINES ON THE BEST PRACTICES ON INTERNATIONAL PROTECTION OF CONSUMERS

RECOMMENDATIONS

1. CONSIDERING that consumers as natural persons acting outside of their profession or trade are not experts and do not have the same knowledge and information of the businessmen, so their unequal bargaining power makes the application of the common rules on commercial transaction transactions (which often includes *lex mercatoria)* unfair to them. Therefore, **we recommend acknowledgement of the protection of consumers as weaker parties as a principle in national and international transactions,** and we stress the differences between consumer contracts and other business contracts and the need for special rules to protect consumers not only nationally but also in international contracts and in case of dispute resolution.

2. NOTING that several international law initiatives have been undertaken by different international bodies, such as the United Nations Commission on International Trade Law (UNCITRAL), the Organization of American States (through CIDIP VII-Part II), the European Union, Mercosul and CARICOM, which are also working to harmonize laws relating to cross-border consumer transactions through conventions, model laws, and legislative guides. Also that the 2015 Revision of the UN Guidelines for Consumer Protection has acknowledged the international dimension of the consumer protection, urging the States to consider the cross-border consumer transactions and the protection of tourists. The UNCITRAL's efforts to regulate jurisdiction for online consumer contracts and the efforts of the Hague Conference of Private International Law about the possibility and necessity to regulate the international tourism should be welcome. Therefore, **we recommend the adoption of special rules on applicable law and jurisdiction for cross-border consumer protection.**

3. AWARE that the foreign tourists demand special protection related to their consumer rights, especially if they are in the visited destination, far from their habitual residence, culture environment and language; ACKNOWLEDGING the efforts made at the UN World Tourism Organization to enhance the protection of tourists in case of emergency situations and the efforts of the Hague Conference of International Law on the field, **we also recommend the continuations of the actual international efforts to assure more international co-operation and pro-active initiatives on consumer protection worldwide, especially in the field of international tourism.**

4. CONSIDERING that in the last years there has been an important moment to update national and regional laws, regulating international consumer contracts (specially at the EU, Mercosur, OEA, Japan, China, Korea, Brazil, Argentina, Panamá, Dominican Republic) and after studying the models of consumer protection through Private International Law in the world, **we recommend the States to use one or more of these best practices on international protection of consumers, therefore we selected and organized the following Guidelines to helping the development of fair and equitable legal standards for all consumers in the world, without discriminations;**

DRAFT

GUIDELINES ON THE BEST PRACTICES ON LAW APPLICABLE TO INTERNATIONAL PROTECTION OF CONSUMERS

Considering the 2012 ILA's Sofia Statement on the Development of International Principles on Consumer Protection acknowledging *that "It is desirable to develop standards and to apply rules of private international law that entitle consumers to take advantage of the most favourable consumer protection",* the best practices on especial rules on applicable law to international consumer contracts, selected by the Committee on International Protection of Consumers, are the follow:

1. Models of Framed Autonomy in Consumer Contracts

The Committee identifies three different models of what can be called "framed autonomy in international consumer contracts" or "limited Party Autonomy in Private International Law", models that permit the choice of law in international consumer contracts, but limiting this choice by three different protective approaches:

a. *Substantive-comparative approach:* by using mandatory rules (European Model)
b. *Substantive-comparative approach with the creation of an especial connecting factor to consumer protection*: by allowing the choice only of "the most favorable law" to the consumer (Brazilian Model)
c. *Procedural and alternative approach*: by allowing the choice of law if made only by the consumer and limiting the laws to choose with traditional connecting factors.

A. Limiting the Choose Law by comparing with Mandatory Rules:

European Union Model – As Recital 25 explain **c**onsumers should be protected by rules of the country of their habitual residence that by the EC Regulation 593/2008 cannot be derogated from by agreement, "provided that the consumer contract has been concluded as a result of the professional pursuing his commercial or professional activities in that particular country". The same protection should be guaranteed if "the professional, while not pursuing his commercial or professional activities in the country where the consumer has his habitual residence, directs his activities by any means to that country or to several countries, including that country, and the contract is concluded as a result of such activities". Article 5 of the 1980 Rom Convention had already this model, now consolidate at Article 6 of the European Regulation n. 593/2008 on the law applicable to contractual obligations, called Rome I.

The European Model is followed by the Laws of Québec, Canada, and with some adaptations- by the Dominican Republic and the new Civil and Commercial Code of Argentina. The Japanese Law has some European and some *sui generis* elements, because requires the manifestation of the consumer.

Committee's Suggested Model Rule:

"Article 1. Consumer Contracts

1. An international consumer contract shall be governed by the law of the country where the consumer has his habitual residence, provided that the professional:

a) pursues his commercial or professional activities in the country where the consumer has his habitual residence, or
b) by any means, directs such activities to that country or to several countries including that country, and in both cases, the contract falls within the scope of such activities.[118]

2 If the requirements in points (a) or (b) of paragraph 1 are not fulfilled, the law applicable to a contract between a consumer and a professional shall be governed by the law choose by the parties, however, such a choice may not have the result of depriving the consumer of the protection afforded to him by the mandatory rules of his habitual residence.[119]

3. In absence of choice, by the law of the country where the goods or services were supplied.[120]"

B. Party Autonomy only to choose the most favorable law to consumers:

Brazilian Model – The Brazilian Government has used this model at the CIDIP VII proposal (Inter-American Convention on the Law Applicable to International Consumer Contracts and Transactions),[121] suggested by Prof. Dr. Claudia Lima Marques, from the Federal University of Rio Grande do Sul, in Porto Alegre, at her OAS Summer Course in 2000,[122] and also at the MERCOSUR CT 7 Proposal. The Brazilian Bill 3514, 2015 to update the Consumer Code also use this model (Art. 101 sole paragraph) opting for a new connecting factor to consumer contracts, ´the more favorable law to consumer´.

The Brazilian Model is followed in part by the new Panama Private International Law. The Panama Law allowed the choice only by the consumer, but does accept the most favorable to the consumer connecting factor, defined in a substantive presumption ("Se entiende por la ley más favorable la ley de la reparación y protección más apropiada al interés del consumidor"), although the mix of jurisdiction and applicable law in a sole rule may bring some difficulties.

---

[118] Adaptation of the European Model.

[119] Adaptation of the European Model.

[120] Adaptation of the Argentinean Law.

[121] See OEA/Ser.G, CP/CAJP-2652/08 add. 4, 10 November 2008 and Explanation to the Simplified Version of the final Brazilian Proposal "Buenos Aires Proposal", Joint proposal of the Governments of Brazil, Argentina, and Paraguay, in OEA/Ser.G, CP/CAJP-2837/10, 21 April 2010.

[122] The original academic proposal had distinguished between active and passive consumers, as followed: "*Article 2. Protection contractuelle générale* – 1.Les contrats et les transactions avec les consommateurs, spécialement ceux conclus à distance par moyens électroniques, par opération de télécommunication ou par téléphone, lorsque le consommateur se trouve dans son pays de domicile, sont régis par la loi de ce pays ou par la loi plus favorable au consommateur, choisie par les parties, tant qu'elle est la loi du lieu de la conclusion du contrat, ou celle du lieu de l'exécution du contrat, ou celle de la prestation caractéristique, ou celle du domicile ou du siège du fournisseur des produits ou des services. 2.La loi choisie par les parties, parmi celles du lieu de la conclusion du contrat, du lieu de l'exécution de celui-ci et du lieu du domicile du consommateur, est appliquée aux contrats conclus par le consommateur lorsqu'il se trouve en dehors du pays de son domicile . See MARQUES Cláudia Lima, A proteção do consumidor: aspectos de direito privado regional e geral, in *XXVII Curso de Derecho Internacional-OEA/CIJ*, Ed. Secretaría General- Subsecretaria de Asuntos Jurídicos, Washington, 2001, p. 657-780.

Committee's Suggested Model Rule:

"Article 1. Consumer Contracts

1. An international consumer contract shall be governed by the law of the habitual residence or domicile of the consumer or by the law choose by the parties, provide that this law is more favorable to the consumer.
2. The parties may choose between the law of the habitual resident or domicile of the consumer; the place of the conclusion of the contract, the place of performance or the law of the main office of the professional or provider of goods or services.
3. The more favorable law to the consumer is presumably the law that assures the remedies or the redress more protective for the consumer interest in this dispute.[123]
4. In all contracts and especially in the case of distance online or interactive choice by the consumer, the options of laws to be selected must be clearly informed to the consumers, but the choice does not prevent their right to claim the application of ´the most favorable law for the consumer` in case of future litigation.[124]"

C. Limited **connecting factors and choice of law only by the consumer:**

Chinese Model: The special choice-of-law rules for consumer contracts are provided in Article 42 which states that "consumer contracts shall be governed by the law of the place in which the consumer is habitually resident; if consumer chooses to apply the law where goods and services are provided, or if the business party does not engage in any soliciting activities in the place in which the consumer is habitually resident, the law of the place where goods and services are provided shall apply."[125]

The Chinese Model can be compare to the Japanese model, insofar the Japanese Law also use the will of the consumer to apply the mandatory rules ("Art. 11. 1…a law other than the law of the place where the consumer habitually resides, the specific mandatory rules in the law of the consumer's habitual residence shall also apply to matters subject to such mandatory rules with regard to the formation and effect of the consumer contract, provided that the consumer expresses his/her will to the business operator to the effect that such mandatory rules should apply").

Committee's Suggested Model Rule:

"Article 1. Consumer Contracts

1. International consumer contract shall be governed by the law of the habitual residence of the consumer.
2. The law of performance, considered the law where the goods or services be supplied, shall be govern the international consumer contract if the consumer expressly choose this law or if there is no related business activities of supplier/professional in the country of the consumer's habitual residence.

---

[123] Adaptation of the Panama Law: "Se entiende por la ley más favorable la ley de la reparación y protección más apropiada al interés del consumidor."

2. Final Suggestion of the Committee of a mixed Model Rule:

Article 1. Consumer Contracts

1. An international consumer contract shall be governed by the law of the country where the consumer has his habitual residence, provided that the professional:
   a. pursues his commercial or professional activities in the country where the consumer has his habitual residence, or
   b. by any means, directs such activities to that country or to several countries including that country, and in both cases, the contract falls within the scope of such activities.[126]
2. If the requirements in points (a) or (b) of paragraph 1 are not fulfilled, the law applicable to a contract between a consumer and a professional shall be governed by the law choose by the parties[127] and in absence of choice, by the law of the country where the goods or services were supplied.[128]
3. The parties may choose the law applicable, provide that this law is more favorable to the consumer.[129]
4. The parties may choose between the law of the habitual residence of the consumer, the place of conclusion or the place of performance of the contract,[130] and in this case, the more favorable to the consumer is the law that assures the protective remedies or redress more adequate to the interest of the consumer in the dispute.[131]

[126] Adaptation of the European Model.
[127] Adaptation of the European Model.
[128] Adaptation of the Chinese Model, followed also by Argentina.
[129] Adaptation of the Brazilian Model.
[130] Adaptation of Chinese Law and Brazilian Model.
[131] Adaptation of the Panama Law.

COMMITTEE ON THE INTERNATIONAL PROTECTION OF CONSUMERS

WORKING SESSION

Tuesday, 9 August 2016, 2.00pm

Chair: Professor Rainer Hofmann (Germany)

The Chair welcomed attendees and observed that the Committee must be the most lusophonic of the ILA, with members from Portugal and Macao SAR.

Professor Cláudia Lima Marques (Brazil) expressed her great honour in serving as the Chair of the Committee, and congratulated its members for their work on the book entitled *The Future of International Protection of Consumer* (published by the Federal University of Rio Grande do Sul).

Professor Dan Wei (HQ) presented the work of the Committee since the last biennial conference in 2014. The Committee had decided to launch a second book (as noted by Professor Lima Marques). The book brought together contributions from most of the members of the Committee, with additional contributions from Indian colleagues and Brazilian experts in the field of consumer protection. The book was divided into three parts: the first part focussed on the revision of the *UN Guidelines for Consumer Protection* (UNGCP); the second part focussed on national developments in consumer protection law and policy; the third part contained some of the products of the Committee's work, including the Sofia Statement (adopted at the 2012 biennial conference) and existing models of consumer protection through private international law with suggestions.

Over the past two years, members of the Committee had been actively keeping in touch. As a result, the current draft report reflected contributions from all members. The work over this period had been very intensive, and the Committee had worked closely with international organisations (including United Nations Conference on Trade and Development (UNCTAD) and the Hague Conference on Private International Law (HCCH)) and nongovernmental organisations (including Consumers International (CI), the International Association of Consumer Law (IACL) and the American Association of Private International Law (ASADIP)).

With regards to the UNGCP, Professor Wei recalled that the current version had been twice revised (in 1999 and 2005). The Committee was invited to participate in a further revision of the UNGCP as observer. The Committee submitted some suggestions, most of which had been reflected in the 2015 revision.

The revised UNGCP set the goal of further international cooperation among Member States in the field of consumer protection. The Committee was particularly pleased that the UN General Assembly decided to establish an intergovernmental group of experts on consumer protection law and policy. This was a positive step, because one of the main objectives of the group was to assist with the implementation of the UNGCP, and to provide a forum for consultation, technical assistance, voluntary peer review, and the periodic updating of the UNGCP. The first meeting of the group would take place in Geneva in October 2016. In order to facilitate discussion and deliberation, as well as the informal exchange of best practice, Member States and observers had been required to submit written contributions prior to the meeting. The ILA had been invited to submit a

contribution. The Committee hoped to be able to participate in the meetings, and counted on the support of the Executive Council in this regard.

With regards to the HCCH, Professor Wei was pleased to report that an important initiative related to consumer protection in the area of tourist protection had been well received by the governing council. Work towards a draft convention had been included on the work programme of the organisation at the proposal of Brazil. Professor Wei attended the annual meeting of the Council on General Affairs and Policy in 2015 as an observer for the ILA, where she manifested support for the proposal, and emphasised the importance of acknowledging the tourist as the weaker party and the need for special protections.

With regards to nongovernmental organisations, Professor Wei described recent interactions between the Committee and CI, IACL, and ASADIP (as detailed in the Committee's report). Moving forward, the Committee would continue these interactions, as well as develop a closer association with the International Forum of Travel and Tourism Advocated (IFTTA), which was a perfect partner for the Committee.

Ana Cândida Muniz delivered a presentation entitled "The UN Guidelines for Consumer Protection: review and next steps".

When consumer rights began to be internationally considered, following an address of the US President John Kennedy to Congress in 1961, no one would have predicted that the theme would become one of international concern.

The advent of the UNGCP, first adopted in 1985, was a clear recognition of the importance of the basic rights that President Kennedy had outlined; the right to safety, the right to be informed, the right to choose, and the right to be heard. The UNGCP were a direct effect historical events that followed President Kennedy's address, including the first UNCTAD in 1964, the collapse of the Soviet Union, the independence of many countries and the fall of dictatorships in others, and an increase in UN membership.

These independent countries and new UN members required a special strategy for their development. Hence, the attention to the theme of consumption and therefore consumer protection became inevitable.

Today, about 20 years on, the UN General Assembly had recently approved the second review of the UNGCP. But what did this review mean? What was expected from UN members, and what could consumer expect from the adoption of the revised UNGCP?

The Advent of the UNGCP adopted in 1985

In 1970, the UN Economic and Social Council requested the Secretary General to survey institutions and legislation in the various UN members. Upon consideration of the report of the survey, ECOSOC agreed that general "guidance" was necessary setting specific objectives, considering the needs of developing countries in particular.

It was only in the early 1980s that ECOSOC formally requested the Secretary General to continue consultations and a first draft of the guidelines was presented. In April 1985, the General Assembly adopted the UNGCP by consensus (Resolution 39/248). The UNGCP provided an international framework for the development and evaluation of consumer policy.

There was no doubt that the Guidelines became an international reference regarding minimum consumer protection standards. Legislation in many UN was largely based on and inspired by the UNGCP.

The UNGCP constituted a policy framework and urged governments to promote consumer protection, at first, in eight areas, namely basic needs, information, safety, choice, representation, redress, consumer education, and healthy environment. The UNGCP were designed in particular for governments of developing and newly independent countries to use in structuring and strengthening consumer protection policies and legislation. They were adopted "recognizing that consumers often face[d] imbalances in economic terms, education levels, and bargaining power, and bearing in mind that consumers should have the right of access to non-hazardous products, as well as the importance of promoting just, equitable, and sustainable economic and social development". Accordingly, the UNGCP was used as an example of official recognition of consumer protection as a tool for social justice and economic development.

Early reports on the implementation of the UNGCP recognised their importance and relevance for social development, especially in developing countries. Even in developed countries, where there were already considerably strong consumer laws, the UNGCP constituted a reference, even to achieve objectives and goals. As for the objectives of the UNGCP, States at the time considered that, among the interests and needs of consumers – "particularly those in developing countries" – those deserving attention related to imbalance in economic terms and education, access to non-hazardous products, and just, equitable and sustainable economic and social development. Therefore, the original UNGCP had the aim not only of identifying the main consumer rights, but also of assisting States to achieve adequate and proper protection in this very specific area.

The UNGCP settled a new standard for the responsibility of government to develop proper policies on consumer protections, and in doing so, to set priorities according to the State's economic status and needs. It was recommended that governments provide or maintain adequate infrastructure to develop, implement and monitor consumer protection policies, paying special attention to certain sectors of the population such as those in rural areas.

Thus, it became crucial for States to create proper organisations or agencies to implement, follow and enforce the basic consumer protection standards established in the UNGCP in the following areas:

- physical safety;
- promotion and protection of consumers' economic interests;
- standards for the safety and quality of consumer goods and services;
- distribution facilities for essential consumer goods and services;
- measures enabling consumers to obtain redress;
- education and information programmes;
- measures relating to specific areas (food, water, pharmaceuticals including pesticides and chemicals); and
- international cooperation.

The review of UN Guidelines in 1999

The 1999 review of the UNGCP was mainly focused on environmental matters. At the 1972 Conference on Human Environment, the International Organization of Consumers Unions set the basis for environmental discussions in the ambit of consumer matters. It was recognised that environmental matters were basically "ordinary people's matters", and that the wellbeing and survival of all individuals was the main concern. Considering that the environment was being damaged, mainly due to all sorts of consumption (eg, energy, water, food, electronics), the need to call people's attention to this matter became inevitable. In order not only to consider the theme of environmental matters in its new revision, but also to successfully call attention to the need for sustainable consumption, the revised UNGCP called for new consumer protection and awareness policies, as well as international cooperation.

The 1999 revisions to the UNGCP did not suppress or change any of the objectives set in the 1985 version, but highlighted some of these objectives and established new objectives according to the need to consider environmental limitations and global warming. New objectives included education on environmental, social and economic impacts of consumer choice, consumer redress, and the promotion of sustainable consumption patterns.

The UN considered that unsustainable patterns of production and consumption within industrialised countries were the major cause of the continued deterioration of the global environment. It was therefore crucial for such countries to take the lead in achieving sustainable consumption patterns. As for developing countries, their needs and economic status were to be taken into consideration together with the goals of eradicating poverty, development and healthcare. The revised UNGCP also acknowledged the role of enterprises in guaranteeing consumer protection, stating that they should obey the relevant laws and regulations of the countries in which they do business, complying with international appropriate standards.

The participation of universities and public and private enterprises was also officially considered in the process of developing consumer protection policies. In this regard, the participation of the civil society was important, as highlighted by CI, which participated not only in creating the UNGCP in the first place, but also in expanding them, including in the area of sustainable consumption.

The first meeting of the Ad Hoc Expert Group on Consumer Protection

For 30 years, there was no official group mandated to consider consumer protection matters under the auspices of the UN. For over 18 years, the Intergovernmental Group of Experts (IGE) on Competition Law and Policy within UNCTAD organised ad hoc meetings on consumer protection. While both themes were related, given the existence of an official international document on consumer protection, the lack of an official dedicated forum for discussing consumer matters under the auspices of the UN was for some time the object of much criticism. The Sixth United Nations Conference to Review All Aspects of the Set of Multilaterally Agreed Equitable Principles and Rules for the Control of Restrictive Business Practices, which convened in Geneva in November 2010, invited UNCTAD to convene two ad hoc expert group meetings on on the interface between competition policy and consumer welfare, separate from the Competition Law and Policy IGE:

- The first ad hoc expert group meeting took place in July 2012 and had as its first aim to prepare an implementation report on the UNGCP. Given the time that had elapsed since their original elaboration and first review, it was necessary for the group to consider the need for a new review. Initial investigations were coordinated by UNCTAD with the participation of several States, which contributed information on whether the UNGCP were still valid and useful. The result of this process was that the UNGCP remained not only valid and useful, but that other themes should be studied with a view to possible inclusion in a second revision, including: ecommerce, financial services, data protection, tourism, energy and cross-border trade.
- The second ad hoc expert group meeting took place in July 2013. States used the opportunity to discuss not only the need for a revision of the UNGCP, but also the need for establishing an official and dedicated IGE on consumer protection. In order to promote further investigation and studies, four working groups were created: one on ecommerce (chaired by France), one on financial services (chaired by Malaysia), one on other issues (chaired by Brazil and Germany), and one on the implementation of the UNGCP (chaired by Gabon). Other issues highlighted by the Brazilian and German experts were tourism, privacy, and data protection. This process counted on the participation of the ILA and CI, which contributed to drawing attention to issues such as public services, energy, e-commerce, financial services, updates related to water, pharmaceutical products, and food, and the need for a new IGE.

Review process of UN Guidelines 2012-2015

The first ad hoc expert group meeting recommended that UNCTAD "undertake discussions regarding the possibility of updating the [UNGCP], under the auspices of the Intergovernmental Group of Experts on Competition Law and Policy". It also recommended that UNCTAD "undertake to collaborate on the content of potential revisions".

An implementation report was prepared by the UNCTAD secretariat and considered by the second ad hoc export group meeting. The report identified a number of areas for the improvement of the UNGCP to ensure that they addressed new and contemporary issues that were at the forefront of consumer protection policy.

In 2015, an informal expert meeting was held in Geneva, attended by more than 60 participants from over 40 Member States, intergovernmental and non-governmental organisations. Although it was an informal meeting, it was perhaps one of the most important moments in the discussions relating to the UNGCP review. At this point, most States had confirmed their support on the new version of the UNGCP and strongly affirmed the need for establishing an IGE on consumer protection. UNCTAD representatives explained the budgetary implications of establishing an IGE, noting that the earliest budgetary opportunity would be 2017-2018. However, States, especially developing States, considered that the social and political impact of officially establishing the IGE was too important, even without the proper budget.

A draft resolution on consumer protection and the revised UNGCP was submitted to and adopted by the Seventh United Nations Conference to Review All Aspects of the United Nations Set of Multilaterally Agreed Equitable Principles and Rules for the Control of Restrictive Business Practices. Thanks to the close work and support of States, particularly by their respective consumer protection agencies, the aim of creating an IGE on

consumer protection was achieved: the UN General Assembly decided to establish such a group at its 81st plenary meeting on 22 December 2015. The revised UNGCP was also adopted. The new revision covered the additional topics of e-commerce, financial services, public utilities, tourism, and data protection and privacy.

The IGE on consumer protection law and policy would operate within the framework of an existing commission of UNCTAD's Trade and Development Board. It would be mandated to:

- provide forums and modalities for multilateral consultations, discussions and exchanges of views between Member States;
- undertake studies and research periodically on consumer protection;
- conduct voluntary peer reviews of national consumer protection policies of Member States, as implemented by consumer protection authorities;
- collect and disseminate information;
- provide capacity-building and technical assistance to developing countries and economies in transition in formulating and enforcing consumer protection laws and policies;
- consider relevant studies, documentation and reports from relevant organisations of the UN system and other international organisations and networks;
- make appropriate reports and recommendations on the consumer protection policies of Member States, including the application and implementation of the UNGCP;
- conduct a periodic review of the UNGCP, when mandated by the United Nations Conference to Review All Aspects of the Set of Multilaterally Agreed Equitable Principles and Rules for the Control of Restrictive Business Practices.

The need for internalisation of the UNGCP by the UN Member States

In the year that marked the 30th anniversary of the original adoption of the UNGCP, Member States had made a special effort to establish an IGE on consumer protection within the UN. In previous versions of the UNGCP, States where urged to take appropriate measures to implement the UNGCP. Whether regionally or nationally, governments were demanded to take the necessary measures to respect the standards established in the UNGCP as well as to take actions in order to achieve such standards.

The question remained as to how the "new" UNGCP topics would be implemented? How would States develop consumer protection policies to align with the UNGCP? Would the IGE on consumer protection take part in such implementation? Brazil was one of the States to take the lead in this area since it already had developed a specific policy for consumer protection matters; however, the both political and economic crisis in Brazil seemed to have hampered these developments.

It was undeniable that the UNGCP constituted an international reference for standards of consumer protection and policies. But they certainly went beyond that, being an international recognition of consumers' vulnerabilities and a necessary tool for development and even human rights.

The two updates to the UNGCP might be considered a little too "shy" for some critics and experts, but they certainly reflected the times and new technologies. The theme of sustainable consumption was as important in 1999 as it was in 2015. As the UN

Secretary-General observed at the signing of the Paris Agreement in April 2016, "[t]he era of consumption without consequences is over". The connection between consumer protection, development and environment was therefore inevitable. It was time to take action on these topics. Following the latest revision of the UNGCP, it was urgent for governments to create, deliver and develop policies regarding consumer protection in accordance with the international standards established by the UNGCP.

The constant evolution of the means of communication and related technologies was providing new products and services, and shrinking barriers and distances. The inclusion of topics such as data protection and privacy, e-commerce, financial services, and tourism was an example of this process. At the same time, it is necessary to recognise that constant change in our societies demanded future reviews of the UNGCP. Governments, civil society and other stakeholders must therefore consider such change; after all, the rights recognised in the UNGCP recalled that consumer protection had an impact on development, access to information, access to justice and, ultimately, people's lives. It was here that civil society, academics and actors such as ILA could make a contribution in order to guarantee consumer protection and the implementation of the UNGCP.

Dr Luciane Klein Vieira delivered a presentation entitled "Latin American paradigm on international protection of consumers", in which she outlined major developments in the region in the area of private international law as it related to consumer protection. Specifically:

- In Argentina, a new civil and commercial code had entered into force on 1 August 2015, which contained special rules for applicable law in consumer matters.
- In Brazil, while there were no special rules for applicable law in consumer matters, projects were afoot to fill gap (including reforms to the Consumer Protection Code to limit party autonomy and to favour the most favourable law). Moreover, Art 22(2) of the new Code of Civil Procedure conferred jurisdiction on the Brazilian courts in consumer matter when the consumer is domiciled or resident in Brazil, although it was not clear whether Congress intended for this to be an exclusive jurisdiction.
- In Paraguay, significant reforms were implemented by Law No 5393 on the Law Applicable to International Contracts, which was promulgated in January 2015. However, consumer contracts were expressly excluded from the scope of the new regime.
- In Panama, a new Code of Private International Law was introduced in 2014, which contained special rules for jurisdiction and applicable law in consumer matters.
- In the Dominican Republic, Law 544 on Private International Law was introduced in 2014, which also contained special rules for jurisdiction and applicable law in consumer matters (Arts 16 and 63, respectively).

Dr Klein Vieira also outlined two major regional projects instigated by Brazil:

- In 2010, under the auspices of the Organisation of American States, Brazil submitted a proposal for a draft "InterAmerican Convention on Applicable Law to Some International Consumer Contracts and Transactions" to the Seventh InterAmerican Specialised Conference on Private International Law (CIDIPVII). The proposal – referred to as the "Buenos Aires Proposal" – was supported by Argentina and Paraguay. If adopted, the Convention would constitute a significant breakthrough in the region.

- In 2010, under the auspices of Mercosur, Brazil presented a draft resolution on the law applicable to international consumer contracts. The resolution was revised and formulated as Draft Decision 15 of 2012. That proposal used the CIDIPVII proposal as a basis. Article 4 established a number of connecting factors for determining the law applicable to contracts concluded by passive consumers, with the consumer having the right to choose the applicable law where it was the most favourable law to the consumer. Regrettably, this project had stalled since the entry of Venezuela to Mercosur.

Dr Klein Vieira noted that there was an absence of conventional sources for rules on consumer protection. This aggravated conditions for consumers. It was a source of mistrust and reduced legal certainty. The efforts by Argentina, Brazil, Paraguay, Panama and the Dominican Republic to reform their domestic laws were laudable. However, it was necessary to go beyond this; it was essential that a convention be adopted at a regional level, following the Brazil OAS and Mercosur proposals, to ensure adequate protection.

The Chair noted that, from a European Union perspective, it was good to hear about regional developments elsewhere. From the EU experience, it was definitely worthwhile pursuing legally binding solutions.

Ms Maria Goretti Sanches Lima delivered a presentation on the efforts of the World Tourism Organisation (UNWTO) and the HCCH to protect tourists. Ms Lima introduced herself as the Executive Vice President of IFTTA, and provided attendees with an overview of the organisation and mandate of IFTTA, and its arrangements with UNWTO, through which it had become involved in UNWTO's work developing a draft convention on the protection of tourists and the rights and obligations of tourism service providers.

The UNWTO commenced work on the draft convention following an accident in Finland. The central idea was to make provision for the protection of tourists in extraordinary circumstances. As the term "extraordinary circumstances" had an established legal meaning in the EU, the focus was on "emergency situations". A working group had been established to develop the convention, and all member States and other organisations such as IFTTA were participating in the process. The draft convention also covered other issues such as accommodation and package holidays.

There were many rules and terms in the draft convention that were being elaborated. One of the main issues was the title of the convention. This was because it dealt with two types of participants: tourists and tourism service providers. Tourism service providers had hitherto not been a focus of the UNWTO. In the latest meeting of the working group, the UNWTO had started reflecting more deeply on this issue, and decided to remove reference to "protecting" service providers, replacing it with reference to their "rights and obligations", which brought with it certain legal consequences. Another sensitive issue was that the draft convention did not develop provisions regarding service providers; rather, the provisions of the draft convention focussed on tourists. A lot of further work remained to be done.

At the HCCH, a new legislative project was dealing with the protection of, and access to justice for, tourists. Based on information available, the idea is impressive yet easy to implement. However, the eventual convention needed to have broad acceptance among

States. Yet the advantage of the HCCH project was that it was not implementing new rules; rather it was marking a way for adapting something that already existed.

Ms Lima expressed that view that both conventions were entirely suitable and each project should be able to proceed. They were different in substance and in other respects, and therefore could coexist and be implemented together.

Professor Hector Valverde Santana (Brazil) delivered a presentation entitled "globalisation and product liability". He thanked Professor Lima Marques for inviting him to present. He started by noting that technological developments had significantly changed systems of production and consumption. There was an increasing risk of product defects being distributed in markets. Defects in products and services were related to a lack of security, such as life, physical integrity and consumer property. The need to protect these interests was the main reason for the organised consumer protection movement. However, increasing industrialisation and mass consumer production, together with an increased exposure to danger, were the main factor that leading to a debate on the need to regulate provider liability for defective products and services. Reform in developed and developing countries sought to strike a balance between consumer protection and the promotion of economic activity. Consensus was reached in some aspects of regulation, such as in the allocation of repair of damages, strict liability, and full compensation.

Professor Valverde noted that, along with the globalisation of manufacture and consumption, came the dispersion of traditional production centres in developing countries and the consequent migration of multinational companies to those countries. This was highly motivated by production costs in the form of cheaper labour and the lack of protective legislation. Added to this was tax incentives, proximity to market, and easy access to raw materials.

Professor Valverde observed that cross-border product liability disputes were intensified by globalisation. These disputes were regulated and resolved by national law. As a result of globalisation, unsafe products and services were being consumed far from the production site, with varying standards and quality control. International debate on defective products and services was therefore necessary. Objective standards for consumer protection in all countries was necessary through appropriate conventions. It was a fundamental right to not be exposed to unsafe products and services. At the same time, individuals States were taking action, including by facilitating access to justice in their courts, and recognising consumer vulnerability through the application of the most favourable law.

Professor Valverde recommended that States promote activities aimed at developing proper regulation of provider liability for defective products and services. What was needed that action to prevent damage in the first place by improving safety certification systems, reporting mechanisms (including of consumer accidents) and administrative bodies specialised in safety and product recall. It was also important to strengthen rules on class actions.

Professor Valverde concluded by suggesting that new challenges for civil liability in this area must be addressed by existing legal regulations, as well as through protective measures. It was also important to recognise the use of the civil fine as an enforcement

measure that resulted in an appropriate sanction. These suggestions were merely illustrative and not exhaustive.

Professor Wei noted that the Committee would focus on the protection of tourists in the coming two years. Given the importance of the area, the Committee could consider undertaking further study into product liability.

Professor Lima Marques introduced the draft recommendations and guidelines proposed by the Committee. She explained that there were three different models for consumer protection before the Committee:

1. The EU model, which began in the 1980s with the adoption of the Rome Convention (now the Rome Regulations) – these instruments provided protection of the country of the consumer's habitual residence, which was assured by the application of mandatory rules.
2. The substantivecomparative approach with the creation of a special connecting factor to consumer protection, which allowed only for the choice of the most favorable law to the consumer (Brazilian model)
3. The procedural and alternative approach, which allowed for party autonomy but only if the choice of law was made by the consumer, and traditional connecting factors existed with the chosen law (Chinese model)

The recommendations and guidelines proposed by the Committee did not put forward a rule based on any of these models, but rather put forward a fourth model that was a mix of all three. The Committee's model was similar to the EU model insofar as it maintained habitual residence as the main connecting factor, provided that the supplier or professional directed their activities to that place. If this was not the case, the Committee's model provided for a limited ability for the parties to choose the applicable law, provided that it did not deny the law of the habitual residence where that was the law more favourable to the consumer. In the absence of such a choice, the law of the place where the goods or services were agreed to be supplied was to be applied. The Committee's model contained a definition of "law more favourable". During consideration of the draft by the Steering Committee, Lord Mance had suggested using the words "more protective of" rather than "more adequate to" the consumer's interests.

Mr Dipak Bhattacharyya (India) explained difficulties experienced by Indian courts in assuming jurisdiction in consumer matters over multinational enterprises. Jurisdiction would only be established by service of summons abroad. Foreign companies did not take cognizance of summons unless served on an Indian office. The main emphasis should therefore be on the enforcement of judgments of the chosen court. If these judgments were not enforced in a timely manner, the philosophy of consumer protection would fail.

Professor Lim Marques agreed that jurisdiction was a very important subject, and the results of her research in this area was published in the book. She noted work by ASADIP on developing principles of jurisdiction, but these excluded consumer matters. She also noted that the enforcement of foreign judgments was being considered at the HCCH (as part of the "Judgments Project"). Argentina was trying to have judgments in consumer matters within scope, but this was being opposed by the United State and other countries.

These two projects were just the beginning. The Committee was following them. For now, it was focussing on one area of private international law, ie applicable law.

The Chair noted that the recognition and enforcement of foreign judgments was a sensitive subject in many countries. In the EU, even with its common philosophy of consumer protection, there was much debate leading to the recasting of the Brussels I Regulation.

The Chair then queried whether the Committee was happy for only a single model for applicable law to be presented in the draft recommendations and guidelines.

Professor Wei explained that the original intention of the Committee was to present the existing models together with the Committee's own model. It believed that there was no universal consensus on the issue of applicable law, and therefore its role was to provide existing models in a practical manner for national legislatures to consider. After discussions with the Steering Committee, it was decided to present a single model that combined existing models. Professor Wei expressed a preference for presenting all model (ie, existing models and the Committee's own model).

The Chair responded that, in his experience, it was not the best solution to present multiple models. It was unusual for an ILA resolution to do that.

Professor Lima Marques agreed that there were strong arguments for presenting a single rule, and proposed a vote.

Professor Wei added that she was happy if only one model were presented. But her preference was for all models to be presented as different alternatives. This would allow the resolution to get more traction, particularly among developing countries.

The Chair called a vote. Five attendees expressed their support for presenting a single model (ie, the Committee's own model); no one expressed their opposition. The Chair also noted that the draft guidelines would be revised to include the change suggested by Lord Mance mentioned earlier by Professor Lima Marques.

The Chair thanked attendees for their participation and closed the session.

FIRST REPORT OF THE COMMITTEE 2016

I. Introduction

The ILA Committee on the **Role of International Law in Sustainable Natural Resource Management for Development** (hereinafter 'the Committee') was established by the ILA Executive Council in November 2012 in response to a proposal by the Netherlands Branch in September 2012. This Committee builds upon a distinguished history of ILA inquiry into international law related to sustainable development. In 1978, the ILA established the Committee on Legal Aspects of a New International Economic Order, whose work culminated in the substantive Seoul Declaration on the Progressive Development of Principles of Public International Law Relating to a New International Economic Order (1986) and a series of book publications in the 1980s and early 1990s. At the 1992 Cairo Conference of the ILA, the Committee on Legal Aspects of Sustainable Development

was established, and its work resulted in the 2002 New Delhi Declaration on Principles of International Law in the Field of Sustainable Development (New Delhi Declaration). The New Delhi Declaration was also published as an UN document and served as an input at the World Summit on Sustainable Development (WSSD) in Johannesburg, 2002. A follow-up Committee on International Law on Sustainable Development was equally productive, with a number of book publications and the adoption of the 2012 Sofia Guiding Statements on the Judicial Elaboration of the 2002 New Delhi Declaration of Principles of International Law relating to Sustainable Development (Sofia Guiding Statements). In Sofia, pressing questions on sustainable natural resource management for development were emphasized, and it was agreed that a new Committee would examine these issues.

This new Committee analyses the principle of sustainable use of natural resources, as a crucial element of the evolving international law of sustainable development, in view of its firm status in treaty law and its frequent application in decisions of international courts and tribunals. It considers how international law can support a sustainable use and stewardship of natural resources, while also contributing to an adequate living standard and the realization of human rights for all. For sustainable development, effective governance of resources is crucial, including water, forests, biodiversity, landscapes, minerals, and energy (particularly from renewable sources), as is the relationship between armed conflict and natural resource management. In this regard, there is recognition of the need to analyse and build better global understanding of the role and legal status of principles and rules of international law for the sustainable use of natural resources, as well as their implementation in the practice of States and international organizations, and their reflection in the decisions international courts and tribunals.

The field of international law on sustainable development is rapidly evolving.[1] Global concern and attention towards sustainable resources management concerns has risen significantly. Global policy agendas are moving to reflect the interest, with the outcomes of the 2012 UN Conference on Sustainable Development (Rio+20) resulting in the world's agreement, at New York in September 2015, on Agenda 2030 and the global Sustainable Development Goals (SDGs), which cover for high profile resources such as water, energy, landscapes and biodiversity towards 2030. Treaty negotiations continue to touch upon sustainable management of different natural resources. Of highest note in the recent period is the adoption at Paris in December 2015 of the new *Paris Agreement*

under the United Nations Framework Convention on Climate Change[2] (Paris Agreement) at the 21st Conference of the Parties (COP). Tribunals are increasingly being seized of natural resources concerns, with notable recent decisions such as the *Japan – Whaling case*, *Nicaragua – San Juan River case*, and the *Peru – Maritime Boundary case* in the International Court of Justice (ICJ), the *Coastal State Opinion* and the *Seabed Chamber Opinion* in the International Tribunal on the Law of the Sea (ITLOS), the *South China Sea Arbitration* in the Permanent Court of Arbitration and Justice, and *China – Rare Earth* and *US – Tuna/Dolphin III* in the World Trade Organisation's dispute settlement mechanism.

The focus of the Committee's work is responsive to the evolving needs of the global sustainable development agenda, supported by a consideration of how key principles on sustainable development have been reflected in the growing body of global, regional and bilateral treaties which touch upon the sustainable management of key natural resources, and also the increasing instances of countries seeking international dispute resolution through different tribunals, courts and arbitral procedures. In particular, the Mandate of this Committee has three principal axes that form the Work Programme:

(i) The study and analysis of the contents, legal status and application of the principles and rules of international law related to the sustainable management of natural resources at the national and international levels, as well as an assessment of the practice of States, and international organizations in this field;
(ii) An examination of the relationship between the evolving international law in the field of sustainable development (see the New Delhi Declaration and the Sofia Guiding Statements) and the principle of the sustainable use of natural resources, including analysis of:
    a. the status of the obligation of countries to use natural resources in a manner that is sustainable, including issues such as the obligation to undertake impact assessments of plans and projects that might affect sustainable development, transboundary resources management, the sharing of resources in the world interest and taking into account the interests and needs of future generations;
    b. innovative economic instruments to support sustainable use of natural resources and their status and implementation in international and national law, including measures within Regional Trade Agreements and multilateral economic treaties;
    c. the relationship between natural resource management and the enjoyment of human and peoples' rights;
    d. decisions of international courts and tribunals on matters related to natural resource management.
(iii) The study of national and international approaches to the regulation of natural resources in developing countries and the impact of such approaches on the sustainable use of natural resources and on the evolution of international law in this field.

[2] *Paris Agreement under the United Nations Framework Convention on Climate Change*, 12 December 2015 (in force 4 November 2016), UN Doc FCCC/CP/2015/10/Add.1, Decision 1/CP.21, Annex. ("Paris Agreement")

Regarding the first tranche of work on *International Law and its Practice for Sustainable Resources Management*, in the recent period a working group was formed to engage Committee Members in discussions during an international law experts seminar event in Leiden, The Netherlands, on 12-14 November, 2015, which was kindly hosted by Prof Nico Schrijver, the Faculty of Law at Leiden University and the Netherlands Branch of the ILA. Scoping notes were prepared by the Committee's working group on freshwater resources, and on marine resources. Several brief papers were also prepared by legal specialists, guided by Committee Members, on the contributions of international law and governance to the achievement of key global SDGs related to natural resources, including energy, biological resources, freshwater and fisheries and ocean resources.

Following this brief introduction, Section II of the present Report provides a summary of the Committee's scoping work to date, compiled in line with the newly agreed global SDGs that shape the international sustainable development policy agenda from 2016-2030. This scoping supports analysis of the contents, legal status and application of the rules of international law related to the sustainable management of certain natural resources in these sectoral areas, assessing the practice of States and international organizations (including treaty bodies). Then, in Section III, the Report comments on a new development, the adoption and entry into force of the Paris Agreement, highlighting how this innovative instrument addresses the New Delhi Declaration principle on the sustainable use of natural resources in accordance with the Committee's mandate, and showing how it also reflects other New Delhi Declaration principles. The final Section IV further outlines the future research agenda of the Committee.

II. The Rules and Practices of International Law in their Contributions to the Global Sustainable Development Goals Related to Natural Resources

Building on growing global consensus elaborated through the 1992 United Nations Conference on the Environment and Development (UNCED or Rio Summit), the 1997 UN General Assembly (UNGA) Special Session on Sustainable Development, and the 2002 World Summit on Sustainable Development (WSSD), among other meetings, the Rio+20 outcome document *The Future We Want*[3] called upon countries to agree to a series of time-bound global objectives and targets building on the 2000 Millennium Development Goals (MDGs), and called on all countries and stakeholders, including through international treaty bodies and organizations, to assist in developing the post-2015 development agenda. In September 2015, the post 2015 agenda was formally adopted in the UNGA Resolution *Transforming our World: The 2030 Agenda for Sustainable Development* (Agenda 2030).[4] Therein, UN member States agreed on 17 SDGs and 169 related time-bound targets and specific means of implementation. These SDGs and their targets guide the UN, member States, other international organizations and stakeholders across all regions of the world towards more sustainable development worldwide.

As expert law and governance reviews prepared by Committee Members in collaboration with the Centre for International Sustainable Development Law (CISDL) and the United

Box 1: SDG 6 Water and Sanitation – Ensure Availability and Sustainable Management of Water and Sanitation for all

6.1 By 2030, achieve universal and equitable access to safe and affordable drinking water for all.

6.2 By 2030, achieve access to adequate and equitable sanitation and hygiene for all and end open defecation, paying special attention to the needs of women and girls and those in vulnerable situations,

6.3 By 2030, improve water quality by reducing pollution, eliminating dumping and minimizing release of hazardous chemicals and materials, halving the proportion of untreated wastewater and substantially increasing recycling and safe reuse globally,

6.4 By 2030, substantially increase water-use efficiency across all sectors and ensure sustainable withdrawals and supply of freshwater to address water scarcity and substantially reduce the number of people suffering from water scarcity,

6.5 By 2030, implement integrated water resources management at all levels, including through transboundary cooperation as appropriate.

6.6 By 2020, protect and restore water-related ecosystems, including mountains, forests, wetlands, rivers, aquifers and lakes.

6.a By 2030, expand international cooperation and capacity-building support to developing countries in water- and sanitation-related activities and programs, including water harvesting, desalination, water efficiency, wastewater treatment, recycling and reuse technologies.

6.b Support and strengthen the participation of local communities in improving water and sanitation management.

Nations Environment Programme (UNEP) have demonstrated, these SDGs and their targets can be linked to the object and purpose of many important international treaties in the field of sustainable development.[5] In Part II of the Committee's initial Report, the outcomes of several analytical scoping reviews are provided, in which the authors examine the contributions of international law and governance to the achievement of specific SDGs related to natural resources, in particular with regards to sustainable energy, freshwater, biological resources, and marine resources.

1. Rules and Practices of International Law for the Sustainable Management of Fresh Water Resources towards SDG 6 on Ensuring Water and Sanitation for All

Based on the Scoping Note by Dr Otto Spijkers, The Netherlands, Dr Yongmin Bian, China & Prof Maki Nishiumi, Japan; with contributions from a further Legal Brief by Freedom-Kai Phillips, Canada, Dr Cameron A. Miles, Australia, Dr Ashfaq Khalfan, Kenya, and Dr Maria Leichner Reynal, Uruguay, for expert review.

1.1 Sustainable Management of Fresh Water Resources

SDG 6 on Water and Sanitation commits to "ensure availability and sustainable management of water and sanitation for all", emphasizing global agreement on the need to ensure access to water and sanitation, and to care for the water resources necessary for sustainable development upon which all countries depend.

International human rights law provides for access to water and access to sanitation. International water law regulates the use of freshwater resources, such as rivers, lakes, wetlands, aquifers, and glaciers. Like other natural resources, freshwater resources can be depleted, destroyed and polluted. International rivers provide different benefits to different riparian states. For example, for many agricultural states, rivers are essential for food security. Irrigation and fisheries are important for some riparian states, especially midstream and downstream states. The most urgent problems relating to the sustainable

utilisation of freshwater resources include water pollution, depletion of non-rechargeable underground water and fossil water, and the diversion of freshwater resources in a way that negatively affects underlying ecosystems.

This section focuses on the substantive targets of SDG 6 that are recognized in the *International Covenant on Economic, Social and Cultural Rights*[6] (ICESCR), the UN *Convention on the Law of the Non-navigational Uses of International Watercourses*[7] (New York Convention), the United Nations Economic Commission for Europe (UNECE) *Convention on the Protection and Use of Transboundary Watercourses and International Lakes*[8] (Helsinki Convention), and the *Convention on Wetlands of International Importance especially as Waterfowl Habitat*[9] (Ramsar Convention), and discusses international law, policy and governance mechanisms which could help to achieve SDG 6 in a coordinated way. The section ends with legal obstacles that the international community and States may face in their efforts on water and sanitation that are deserving of further research.

1.2 Contribution of International Law, Policy and Governance to SDG 6 on Water and Sanitation

The Committee on Economic, Social and Cultural Rights (CESCR), the independent body of experts elected by States to interpret the ICESCR, determined that the right to water, target 6.1, is derived from the right to an adequate standard of living found in Article 11(1) of the ICESCR.[10] The right to water is also protected under other international treaties, including the UN *Convention on the Rights of the Child*[11] (CRC) and the UN *Convention on the Elimination of All Forms of Discrimination against Women*.[12] In the UNGA and the Human Rights Council (HRC), States have affirmed by consensus that "the human right to safe drinking water and sanitation is derived from the right to an adequate standard of living, and inextricably related to the right to the highest attainable standard of physical and mental health, as well as the right to life and human dignity."[13] As the CESCR also notes, the right to water entitles everyone to sufficient, safe,

[11] *Convention on the Rights of the Child*, 20 November 1989 (in force 2 September 1990), 1577 UNTS 3, Arts. 24(2), 27. ("CRC")

[12] *Convention on the Elimination of All Forms of Discrimination against Women*, 18 December 1979 (in force 3 September 1981), 1249 UNTS 13, Art. 14(2). ("CEDAW")

[13] For example, *Human rights and access to safe drinking water and sanitation*, UN Doc. A/HRC/RES/15/9 (2010), Para. 3; *The human right to safe drinking water and sanitation*, UN Doc. A/RES/68/157 (2013), Para. 2; *The human rights to safe drinking water and sanitation*, UN Doc. A/RES/70/169 (2015). Note: the UNGA and HRC referred to them as a single right until UNGA Res 70/169, which recognized two rights – a right to safe drinking water and a right to sanitation.

acceptable, physically accessible and affordable water for personal and domestic uses,[14] as endorsed by the UNGA and the Human Rights Council (HRC).[15] CESCR General Comment No. 15 on the right to water, adopted in November 2002, sets criteria for the full enjoyment of the right to water addressing: availability, quality, and accessibility, including non-discriminatory physical and economic access to water and information on water issues.[16] General Comment No. 15 also states that, "the right of individuals and groups to participate in decision-making processes that may affect their exercise of the right to water must be an integral part of any policy, programme or strategy concerning water,"[17] of relevance to target 6.6. Additionally, it states that: "individuals and groups should be given full and equal access to information concerning water, water services and the environment, held by public authorities or third parties."[18] Similar obligations apply to the right to sanitation.[19]

The right to safe drinking water and sanitation, target 6.2, is also a derivative right to an adequate standard of living, and a pre-requisite to the realization of the rights to adequate housing and health. These in turn are pre-requisites to the right of every child to a standard of living adequate for the child's physical, mental, spiritual, moral and social development, including access to sanitation, as guaranteed by the CRC. As the CESCR indicated, States must ensure that everyone, without discrimination, has physical and affordable access to sanitation, "in all spheres of life, which is safe, hygienic, secure, socially and culturally acceptable, provides privacy and ensures dignity,"[20] as endorsed by the UNGA and the HRC.[21] The UN Independent Expert on the issue of human rights obligations related to access to safe drinking water and sanitation endorsed and expanded upon the criteria articulated by UNCESCR in 2009.[22] These international human rights standards require States to take active steps to ensure that everyone can enjoy the right to water and sanitation, achieving targets 6.1 and 6.2, as soon as possible. State parties must adopt the necessary measures directed towards the full realization of the right to water and sanitation, including by taking positive measures to assist individuals and communities to enjoy the right.[23] States are under an obligation to move as expeditiously and effectively as possible towards securing the right to water.

[23] General Comment No. 15, *supra* n10, Para. 25.

Target 6.3 focuses on water quality through pollution reduction and has its roots in Chapter 21.3 of *Agenda 21*,[24] Articles 25 and 40 of the *Johannesburg Declaration on Sustainable Development*,[25] the 2012 UNEP Manila Declaration,[26] and *The Future We Want*. The principal instruments relating to the release and transportation of hazardous chemicals – the Basel, Rotterdam and Stockholm Conventions – are relevant to target 6.3's focus on minimizing release of "hazardous chemicals" in connection with the right to clean water.[27] In implementing these Conventions, State Parties to the Conventions have enhanced synergies, cooperation and coordination in their decision-making through the adoption of a synergies" framework grounded in an Ad Hoc Joint Working Group. This framework was adopted through decisions of each respective Convention,[28] and has structured decision-making around organizational, thematic, managerial and administrative issues. Further integration has occurred through a simultaneous extraordinary meeting of the COP in 2010, which provided a set of joint activities including a synchronized budget and auditing,[29] the move in 2011 to begin harmonization of the Secretariats,[30] the 2013 omnibus decision coordinating all COP meetings,[31] and the 2015 decisions enhancing measures for cooperation and coordination which further expands institutional integration on strategic, technical and financial matters.[32]

Many international treaties are directly relevant to targets 6.4, 6.5, 6.6 and 6.a at global, regional and bi-lateral levels, a selection of which are in Box 2 below. Three international treaties with intersecting scopes related to environmental protection of waters are highlighted here. First, the Ramsar Convention aims to conserve and sustainably use natural resources through emphasis on the wise use of wetlands.[33] Second, New York Convention aims to harmonize terms and principles relating to watercourse agreements,

facilitate cooperation and consultation relating to the protection and management of international watercourses, and support constructive reconciliation of disputes.[34] As such, its adoption furthers the harmonization of international legal standards with respect to integrated trans-national management of international waterways and watersheds. Third, the Helsinki Convention aims to protect transboundary watercourses and international lakes through cooperation to strengthen measures to prevent pollution of the marine environment, and to address, minimize, and mitigate any adverse effects from the failure to do so.[35]

Given the transboundary operative scope of the Helsinki Convention,[36] and the New York Convention,[37] cooperative arrangements under these treaties can facilitate the implementation of target 6.5, which calls for integrated water resources management at all levels, including through transboundary cooperation. For instance, regional cooperation efforts under the Helsinki and New York Conventions to prevent adverse health and socio-economic impacts from environmental damage to transboundary rivers might be recognized as good practices for target 6.5, or might further capacity building, international cooperation and other support under target 6.a. With respect to wetlands, Parties to the Ramsar Convention recognize that wetlands – whether naturally occurring or manmade, permanent or temporary,[38] including adjacent islands and marine water deeper than six meters at low tide[39] – constitute vital ecosystems that provide broad socio-cultural, environmental and economic benefits. Implementing the Ramsar Convention's inclusive definition of wetlands as one contiguous whole can advance States' achievement of targets 6.3, 6.4, 6.5 and 6.6.[40]

Key principles on the cooperative and equitable use and management of international watercourses are found in the New York and Helsinki Conventions, including sustainable use, environmental protection, and a duty to cooperate on equitable governance of the watercourse.[41] Additionally, the Helsinki Convention provides for the precautionary principle, the polluter-pays principle, and the principle that water resources should be managed for both present and future generations.[42] Parties to the Ramsar Convention aim to facilitate cooperation on the wise use of wetlands and water resources based on an ecosystem approach,[43] with wise use defined as "the maintenance of their ecological character, achieved through the implementation of ecosystem approaches, within the

[43] Ramsar Convention, *supra* n9, Art. 3(1); Ramsar Manual, *supra* n40, 46–7.

context of sustainable development."[44] The active institutional framework arising from the cooperative and precautionary mechanisms provided therein empowers Parties to achieve core aspects of SDG 6 including pollution reduction under target 6.3, support to sustainability across the water-use chain under target 6.4, policy harmonization and collaboration under target 6.5, establishment of protective measures under target 6.6, and mobilization of international support for capacity building and water-usage programs under target 6a.

The three Conventions facilitate the development and strengthening of local, regional, and national measures to protect transboundary waters, providing a normative framework to guide regional and sub-regional agreements on key watercourses, and actively engage achievement of SDG 6. Parties to the Helsinki Convention aim to develop measures to implement a variety of mechanisms to prevent/control pollutants, notably precautionary measures and application of environmental impact assessments (EIAs) to minimize pollution.[45] As such, the Helsinki Convention includes provisions to address the quality, quantity and integrated management of water basins, in support of target 6.3.[46] Under the New York Convention, Parties are encouraged to harmonize watercourse agreements to the terms of the Convention.[47] Parties to the Ramsar Convention are required to implement National Wetland Policies based on common guidelines.[48] Measures under the three Conventions that allow for the harmonization of water-related policies, in particular concerning water quality, the use of the precautionary approach, and the use of EIAs, constitute important channels for the adoption of the mutually supportive programs, policies and procedures necessary to effectively achieve SDG 6.

Environmental protection is a key feature across the Conventions. In the New York Convention, riparian States are required to protect the ecosystem of relevant watercourses, prevent the introduction of pollution and alien species, and to mitigate any significant adverse impacts where there is reasonably belief that these may occur.[49] The principal aim of the Helsinki Convention is the prevention, control and reduction of transboundary impacts from pollution. This is achieved through use of EIAs, joint measures, cooperative monitoring and public participation in policy making directly in line with target 6.5 on transboundary water management, and peripherally target 6.3 on pollution prevention through information of water-quality.[50]

Under the Ramsar Convention, Parties designate suitable wetlands for inclusion on the List of Wetlands of International Importance, which requires establishing a domestic monitoring framework and sharing ecological information with the Ramsar Secretariat on changes to their ecological character, with notations indicated on the Montreux Record among other procedural mechanisms.[51] Policy-making decisions relating to water-use efficiency, integrated water management and protection of water-related ecosystems can be significantly enhanced through the monitoring framework established under Ramsar, which provides valuable insight to changes in ecological character of water sources informing policy in support of targets 6.4-6.6. Each Convention's notification efforts support integrated water management under target 6.5, and implicitly foster greater dialogue and cooperation in support of SDG 6 more broadly speaking.

Given the importance of the management of shared water resources to future sustainable development and the potential for conflict over shared waterways, the importance of dispute resolution mechanisms cannot be underestimated. Dispute settlement provisions provide clear procedures for consideration of contentious measures relating to the implementation of SDG 6. Procedures are provided in the New York and Helsinki Conventions. Disputes that arise relating to an international watercourse under the New York Convention are to be resolved through use of negotiation, mediation, conciliation by a third party or joint watercourse institution, or submission of the dispute to the ICJ.[52] The Helsinki Convention provides for similar measures, including consideration by the ICJ, or arbitration based on procedures attached in its Annex IV.[53] While the Ramsar Convention does not provide for explicit dispute settlement procedures, the Secretariat of the Convention has – in certain contexts – been identified as a modality for consultation and implementation of measures relating to the waters in question by the ICJ.[54] Additionally, European Parties may access dispute resolution measures established under the Helsinki Convention.

A number of regional water agreements also contain key principles of cooperative and equitable use and management of international watercourses and a selection are listed in Box 3. In Africa, the 2000 *Revised Protocol on Shared Watercourses in the Southern African Development Community* provides for the conservation and enhancement of the environment to promote sustainable development[55] including the protection and preservation of ecosystems,[56] and the *Water Charters* of the Senegal and Niger rivers and the Lake Chad Water Basin also contain provisions on sustainable development[57] and

ecosystem protection.[58] Water agreements in Latin America also contain these principles. For example, the 1975 *Statute of the River Uruguay* includes two chapters on environmental protection and pollution prevention and control,[59] and the 2010 *Guaraní Aquifer Agreement* contains provisions for the conservation and protection of the Guaraní Aquifer System so as to ensure "multiple, reasonable, sustainable, and equitable use of its water resources."[60]

In Asia, the 1995 *Mekong River Agreement*[61] provides for reasonable and equitable utilization, protection of the environment and prevention of environmental harm;[62] and both the 2001 *China-Kazakhstan Cooperation Agreement*,[63] and 2008 *China-Russia Agreement*[64] include provisions on cooperation and equitable and reasonable utilization, and the prevention of environmental harm.[65] Lastly, the principles of equitable use, environmental protection, and sustainability are also found in European water agreements including the Danube Convention, which provides for the prevention, control and reduction of transboundary impact, the sustainable and equitable use of water resources, and the conservation of ecological resources,[66] and the Rhine Convention, which has as primary objective the sustainable development of the Rhine ecosystem in particular through the prevention and control of pollution, the protection of biological diversity, and the consideration of ecological requirements when implementing technical measures related to water development projects.[67] The European Union (EU) *Water Framework Directive* is also worth mentioning as it provides for environmental protection including the review of the environmental impact of human activity, the prevention and control of pollution, and public participation.[68]

1.3 Legal Obstacles Facing the Implementation of SDG 6 on Water

As observed by Dr Otto Spijkers, The Netherlands, Dr Yongmin Bian, China and Prof Maki Nishiumi, Japan in their ILA Committee Scoping Note, the most important international or national legal obstacles and innovations for the implementation of these treaties

and customary principles for sustainable management of freshwater resources are as follows. First, there is a lack of multilateral agreements adopted for international rivers. Few riparian states have ratified the New York Convention, especially in Asia, meaning that there is no global compulsory dispute settlement mechanism to set and apply universally applicable standards. Second, many gaps remain in the existing agreements regulating use of specific watercourses. Many transboundary watercourses are not yet regulated by a specific treaty. Their use is not managed by a common institution, such as a commission, meaning that there is a noticeable lack of effective dispute settlement mechanisms. Third, the vagueness of international customary standards continues to be a challenge. Customary international rules are rarely applied in domestic courts and provide very limited guidance to States, especially relating to information sharing and the duty to notify. It is not clear whether upstream States have an obligation under international law to share with downstream States the hydrological information of international rivers in their territory. Fourth, there is a lack of international cooperation in relation to EIAs. Practices for EIAs are adopted by the riparian states according to their own domestic laws, if any. Usually, downstream States do not have an opportunity to participate in the EIA process done by upstream States.[69] State practice shows great variety and inconsistencies. For example, it is not clear how to judge whether negative impacts are 'significant' or 'substantial'. Fifth, there is a need to strengthen the ecosystem approach, and a need to strengthen the legal recognition of the rights of the riparian populations, the human right to clean water in particular.

There are several other legal, policy and governance challenges to the implementation of SDG 6, as noted by Freedom-Kai Phillips *et al* in their contribution to the Committee's deliberations. These include human-induced pressures on water quality and quantity, impacts from climate change on water availability, increased demand for water-based energy both within and beyond the watershed, and degrading biodiversity and ecosystem integrity. Increased institutional capacities and cooperation are needed to foster comprehensive and compatible solutions. Water is a cross-cutting resource often traversing or impacting multiple jurisdictions, national or regional and various local rights holders, requiring a cohesive administrative approach both nationally and internationally.[70] The rights to water and sanitation were relatively recently recognized, and some countries have adopted them as legally binding in national law.[71] The right to sanitation is recognised in fewer countries than the right to water.[72] Most countries adopt elements of these

[69] See, e.g., N Sánchez Castillo & Y Bian, "China's Obligation to Conduct Transboundary Environmental Impact Assessment (TEIA) in Utilizing Its Shared Water Resources" (2014) 55 Natural Resources Journal 105.

[70] *Nature for Water: Protecting Water-Related Ecosystems for Sustainable Development* (UNECE, 2005).

[71] The right to water is recognised in national law by countries including Algeria, Angola, Belarus, Bolivia, Central African Republic, Democratic Republic of the Congo, Costa Rica, Ecuador, France, Guinea, Kenya, Honduras, Indonesia, Madagascar, Maldives, Mauritania, Mozambique, Namibia, Nicaragua, Paraguay, Russia, South Africa, Tajikistan, Uganda, Ukraine, Uruguay and Venezuela. Note that this list is not comprehensive and does not include sub-national legislation recognising the right to water (e.g. California, Quebec, Wallonia, Flanders, Brussels and Mexico's Federal District). Some national judiciaries recognise the rights to water and sanitation on the basis of the direct incorporation of the ICESCR in national law (e.g. Argentina) or as rights implicitly contained in the right to life (e.g. India).

[72] These include Algeria, Bolivia, Kenya, Maldives, South Africa and Uruguay.

rights in national laws and policies on water and sanitation.[73] There are a range of other policy obstacles of particular relevance to targets 6.1 and 6.2, including: (i) exclusion of particular groups in planning decision-making, (ii) lack of culturally sensitive and pro-poor policies for the allocation of water resources between the different sectors of water use, and also within the different sectors (agriculture, education, health, water resources), (iii) insufficient allocation of resources for water and sanitation, and (iv) urbanisation that is dramatically increasing the populations of urban informal settlements that are frequently not politically accepted. Levels of drought are being exacerbated by alterations in weather patterns due to climate change and by desertification due to poor farming practices. Decentralisation policies in many countries are transferring responsibilities for water and sanitation from the national to the regional, local or municipal level. While residents may gain access to decision-making processes, the necessary capacity and finances are not always transferred to the new authorities, making it difficult to manage services adequately, and to extend them to the unserved and under-served.

Lack of information, particularly at the local level, exacerbates the administrative governance challenges related to SDG 6. All three Conventions provide mechanisms for information sharing and collaboration or supported its implementation. Both the Helsinki and New York Conventions provide for cooperative measures including sharing of ecological data, development of mutually applicable measures, and creation of joint mechanisms. The Ramsar Convention requires timely exchange of data relating to the ecological character of a wetland, with an Advisory Mission able to be deployed to supplement and support domestic response capacity. Ensuring effective and consistent domestic and regional monitoring in the face of limited capacity and changes in personnel and political climates, continues to prove challenging for the elimination of water pollution in line with target 6.3, among other targets. Inadequate financing and ineffective institutional collaboration are key challenges to ecosystem protection and restoration. The lack of adequate resources in individual jurisdictions is a prime inhibitor of successful implementation of SDG 6, exacerbated by the lack of access to knowledge and operational experience. By leveraging the collaborative forums provided by the Conventions, the costs of policy development can be reduced making domestic implementation more cost-effective.

The Ramsar Convention plays a key role in targets 6.5 and 6.6, among other conventions. While all three Conventions cover water and groundwater, only the Ramsar Convention has exclusive jurisdiction over wetlands, and complementary jurisdiction over transboundary water and groundwater resources. As the Ramsar Convention has the broadest membership and the longest institutional history in relation to the other two Conventions, it has great potential to capitalize on its collaborative nature as a means to preserve and restore aquatic ecosystems in partnership with the others.

1.4 Future International Law Research on Sustainable Management of Water Resources

Conservation and sustainable use of global water resources and implementation of adequate sanitation provides a wide range of benefits to ecosystem health and the welfare of current and future generations. Individually and collectively, the New York Convention,

[73] The most authoritative assessment of laws is found in: *The human right to safe drinking water and sanitation in law and policy - a sourcebook* (WASH United, Freshwater Action Network, WaterLex, 2012).

the Helsinki Convention and the Ramsar Convention play an integral role in achieving SDG 6, also SDG 15, and to a certain extent, SDG 14 and targets 3.9, 11.5, 12.4, and 17.9. As each Convention possesses an overlapping mandate to conserve and sustainably use water resources based on an ecosystem approach, the collaborative, substantive and procedural aspects each Convention provides are valuable tools, particularly for developing nations, that can and must be leveraged in a mutually supportive manner to enhance the complementarity of the respective instruments.

SDG 6 provides a unique opportunity for the recognition, development and integration of mutually supportive legal and institutional measures in line with the aforementioned Conventions, particularly the *Convention on Biological Diversity*[74] (CBD) under SDG 15. Complementary strategic planning under the Strategic Plan 2011-2020 and Aichi Biodiversity Targets is a prospective avenue for enhanced synergies, clarity and coordination. Increased communication and collaboration at the executive level of applicable Secretariats would also benefit the implementation of SDG 6. The Basel, Helsinki, Rotterdam, and Stockholm Conventions have each adopted valuable approaches to meeting the challenges of effectively managing international water resources and reversing their degradation.

The effective realization of SDG 6 also requires greater policy coherence across all governance mechanisms at all levels, and across applicable industry sectors. The development of national, regional, local and sector-based water and sanitation strategies allows for domestic policy harmonization and enhancement of interfaces with related strategic planning modalities such as National Biodiversity Strategies and Action Plans (NBSAPs). Further emphasis must be placed on increased complementarity across the relevant international treaties, and at the national level, through implementation and enforcement of environmental legal norms as applied by the domestic judiciary. Greater collaboration among the international legal research community, including law schools, international organizations, and the judiciary, is required to meet the need for increased legal and policy cohesion in the domestic application of international sustainable development law and those related to SDG 6 in particular.

In particular, as noted by Dr Otto Spijkers, The Netherlands, Dr Yongmin Bian, China and Prof Maki Nishiumi, Japan in their ILA Committee Scoping Note, there are several important future trends or research priorities in this field which can be recommended based on recent developments. In 2014, the Helsinki Convention became global and the New York Convention entered into force, and in 2015 the SDGs were adopted. These three developments can complement each other in several ways.[75] For instance, States are encouraged to embrace a "sustainable" interpretation of water law's fundamental principles. The SDGs, with their emphasis on ecosystems, could encourage the further development of the ecosystems approach in international water law. Public participation in the sustainable management of water is also encouraged. Future international law research priorities cover several further key concerns. For instance, civil liability and compensation of various actors, such as States, corporations, and individuals, for damage

[74] *Convention on Biological Diversity*, 5 June 1992 (in force 29 December 1993), 1760 UNTS 79. ("CBD")

[75] See also O Spijkers, "The Sustainable Development Goals as Catalyst for the Sustainable Management of Water Resources" (2015) 24 *Journal of Water Law* 115.

caused to transboundary waters. Further, the link between biodiversity and international water law through the development of the ecosystem approach bears investigation. In addition, the links between human rights and international water law, especially in the case of involuntary resettlement, are important to explore.

2. Contributions of International Law to SDG 7 on Sustainable Energy for All

Based on a Legal Brief with Dr Markus Gehring, Germany, Mr Stuart Bruce, UK and Sean Stephenson, Canada, with further review by Dr Ilaria Espa, Italy & Dr Paolo Davide Farah, Italy.

2.1 Sustainable Management of Renewable Energy Resources

As former UN Secretary-General Ban Ki-moon noted: "Energy is the golden thread that connects economic growth, increased social equity, and an environment that allows the world to thrive".[76] Energy was crucial to progressive realisation of the MDGs, despite not being included in their text. The SDGs redresses this omission, formally acknowledging the important role of energy in society, and for the attainment of all SDGs as an integrated, indivisible set of global priorities.[77] SDG 7 aspires to "ensure access to affordable, reliable, sustainable, and modern energy for all", especially for the 1.3 billion people without electricity and 2.7 billion people who use wood and biomass to cook and heat their homes. This section highlights selected features of the existing international legal order that are relevant to the implementation of SDG 7. It surveys relevant international, regional and bilateral treaties and non-binding instruments, identifies certain legal, policy and governance challenges that States may encounter when implementing SDG 7, and then considers innovations to assist with overcoming those obstacles, before drawing tentative conclusions regarding law, governance and policy opportunities for ensuring access to affordable, reliable, sustainable, and modern energy for all.

2.2 Contributions of International Law and Governance to SDG 7 on Sustainable Energy for All

International law and policy can play a role in facilitating and accelerating changes in global energy production and consumption and steer State and non-State actors towards increased use of low-carbon energy sources. However, at present, international law relating to sustainable energy is underdeveloped and may have a limited role in achieving SDG 7. Despite extensive political agreement on the need to further increase access to modern, affordable, sustainable energy services, binding international law instruments tend to indirectly, rather than directly, relate to sustainable energy and SDG 7. Implementation of SDG 7 can draw upon the normative guidance found in a wide range of international as well as bilateral and regional policy instruments.

To date, international treaties have largely avoided creating binding sustainable energy generation and consumption obligations. Rather, the relevant instruments have sought to facilitate decentralised sustainable energy policy choices and investment through innovative mechanisms and support measures. International treaties have been designed to balance incentives and disincentives and to motivate and influence behavioural change

[76] UN, *Sustainable Energy for All: A Framework for Action. Secretary-General's High-Level Group on Sustainable Energy for All* (2012), 4.
[77] Agenda 2030, *supra* n4, Para. 18.

Box 4: SDG 7 on Sustainable Energy – Ensure Access to Affordable, Reliable, Sustainable, and Modern Energy for All

7.1 By 2030, ensure universal access to affordable, reliable, and modern energy services;
7.2 By 2030, increase substantially the share of renewable energy in the global energy mix; and
7.3 By 2030, double the global rate of improvement in energy efficiency.
7.a By 2030, enhance international cooperation to facilitate access to clean energy research and technology, including renewable energy, energy efficiency and advanced and cleaner fossil-fuel technology, and promote investment in energy infrastructure and clean energy technology; and
7.b By 2030, expand infrastructure and upgrade technology for supplying modern and sustainable energy services for all in developing countries, in particular least developed countries, small island developing States, and land-locked developing countries, in accordance with their respective programmes of support.

among States and their domestic actors. Global treaties of particular relevance to sustainable energy access and development include the *Statute of the International Renewable Energy Agency* (IRENA), the *United Nations Framework Convention on Climate Change*[78] (UNFCCC), its *Kyoto Protocol*[79] and Paris Agreement, the *United Nations Convention on the Law of the Sea*[80] (UNCLOS), and increasingly, the World Trade Organization (WTO) agreements, and human rights treaties. Regional treaties also play a role, and are described in the subsequent section.[81]

Directly relevant to SDG 7 is the IRENA Statute, which articulates the only generally accepted definition of renewable energy in international law as all forms of energy produced from renewable sources in a sustainable manner, including bioenergy, geothermal energy, hydropower, ocean energy, solar energy, and wind energy.[82] The IRENA Statute also provides strong, detailed support for its implementation, especially for target 7.2, and supports targets 7.2, 7.a and 7.b through the mandate and objectives of the international organisation that it created, which include knowledge transfer, capacity building and promotion of international cooperation. Most relevantly, in performing its activities, IRENA is tasked to become a centre of excellence which can facilitate efficient development and transfer of knowledge and technology.[83]

---

[78] *United Nations Framework Convention on Climate Change*, 9 May 1992 (in force 21 March 1994), 31 ILM 849. ("UNFCCC")
[79] *Protocol to the United Nations Framework Convention on Climate Change*, 11 December 1997 (in force 16 February 2005), 2303 UNTS 162. ("Kyoto Protocol")
[80] *United Nations Convention on the Law of the Sea*, 10 December 1982 (in force 16 November 1994), 1833 UNTS 3. ("UNCLOS")
[81] For deeper analysis see S Bruce, "International Law and Renewable Energy: Facilitating Sustainable Energy for All?" (2013) 14(1) Melbourne Journal of International Law 3; and S Bruce "Climate Change Mitigation through Energy Efficiency Laws: from International Obligations to Domestic Regulation' (2013) 31(3) Journal of Energy & Natural Resources 327.
[82] *Statute of the International Renewable Energy Agency*, IRENA/FC/Statute, 26 January 2009 (in force 8 July 2010), Art. 3. The Statute defines renewable energy by its source, but it does not define the "sustainable manner" in which renewable energy must be produced.
[83] *Ibid*, Art. 4.

Within the climate change regime, while renewable energy is not expressly mentioned in the UNFCCC as a relevant measure, and energy efficiency is noted only in the preamble in the context of a potential measure to counteract growing energy consumption,[84] the Kyoto Protocol provides its Parties with discretion to implement and elaborate policies and measures across sectors, with explicit reference to renewable energy sources and energy efficiency, in accordance with their national circumstances.[85] The relevance of the UNFCCC and Kyoto Protocol to advancing SDG 7 is twofold. First, they establish global objectives, an international framework and rules related to emissions reductions and market mechanisms that can incentivise investments in renewable energy and energy efficiency projects. Second, they establish obligations for States to cooperate, share and transfer low-carbon energy technologies and knowledge, as well as financial assistance.[86]

While the climate regime imposes no obligation on Parties to generate or provide access to sustainable energy, in practice it has catalysed significant investment into sustainable energy projects and contributed to knowledge transfer, particularly through Clean Development Mechanism projects. In this manner, the climate regime's evolution through decisions of the COPs and other bodies, focusing on mitigation, adaptation, finance, technology transfer and capacity building, and most recently the Paris Agreement, will directly and indirectly affect the implementation of SDG 7. Although low-carbon technologies are not an explicit, textual focus of the pre- or post-2020 climate regime, increased generation and use of sustainable energies and "making finance flows consistent with a pathway towards low greenhouse gas emissions and climate-resilient development" will be vital to attaining the climate regime's new long-term objective of "holding the increase in the global average temperature to well below 2°C degrees above pre-industrial levels"[87] and in contributing to the regime's overall effectiveness. Additionally, the preamble of the decision text accompanying the Paris Agreement explicitly acknowledges "the need to promote universal access to sustainable energy in developing countries, in particular in Africa, through the enhanced deployment of renewable energy",[88] lending unanimous support to SDG 7 and targets 7.1 and 7.2.

International trade instruments, particularly the covered agreements of the WTO, are of increasing relevance to SDG 7.[89] In principle, the WTO's foundational pillars and disciplines, in particular the principles of most favoured nation and national treatment,[90] treat the energy sector and energy goods and services like all others. In 2001, through the Doha Ministerial Declaration, WTO members noted that trade disciplines and environmental protection can be "mutually supportive" and agreed to negotiate the reduction and/or

[90] The principles of most favorable nation found in Art. 1(1) of GATT and Art. 2 of GATS, as well as national treatment found in Art. 3(4) of GATT incorporate factors such as "like circumstances", and if the measure places a foreign investment at a "disproportionate disadvantage"

the elimination of tariff and non-tariff barriers on environmental goods and services.[91] In 2007, Asia-Pacific Economic Cooperation (APEC) leaders committed to "wide-ranging and ambitious actions" to contribute to greenhouse gas (GHG) reductions[92] and, in 2012, concretized certain of its ambitions by endorsing an agreement on environmental goods, consisting of 54 products for which tariffs would be reduced by 5% by the end of 2015.[93] This has been mostly successfully implemented. Since 2014, the EU and 16 other States have been negotiating to remove tariff and non-tariff barriers to trade in environmental goods and services that contribute to environmental protection and climate change mitigation (in addition to providing economic benefits).[94] Renewable energy and energy efficiency products are among the environmental categories under consideration.

The global regimes relating to oceans and human rights are of note as well. The global regime relating to oceans, UNCLOS, has particular significance to renewable energy production and targets 7.2, 7.a and 7.b, establishing coastal State jurisdiction for the construction and operation of offshore wind turbines or marine renewable energy generation within that costal State's exclusive economic zone (EEZ) or on its continental shelf.[95] The clean energy aspects of SDG 7 in particular benefit from the clarity of territorial sovereignty and functional dispute settlement provided under UNCLOS. Obligations to cooperate globally and regionally and to provide technical assistance to developing States may further assist attainment of SDG 7.

The connection between human rights and energy is underdeveloped in the SDGs, since international human rights law does not yet recognise a human right to energy. This predicament is particularly relevant for the advancement of target 7.1. Agenda 2030 generally notes that the SDGs are grounded in both the *Universal Declaration on Human Rights* and international human rights treaties, and are informed by the *Declaration on the Right to Development*, but it does not indicate how human rights interact with issues related to energy.[96] Additionally, CEDAW expressly requires Parties, in the context of rural development, to ensure that women have the right to adequate housing including electricity.[97] Despite the absence of binding international obligations, the connection between human rights and climate change is increasingly explored,[98] which necessarily implicates issues regarding access to and use of energy.

Regional treaties that touch on energy have grown in prominence recently, many of which contain innovative mechanisms that could be used to advance SDG 7. The *Energy Charter Treaty*[99] (ECT) and its *Protocol on Energy Efficiency and Related Environmental Aspects*[100] (Energy Efficiency Protocol), European Union law, international investment agreements, and increasingly, regional trade agreements and regional human rights treaties (and case law) are of particular relevance. The 1994 ECT contains a broad range of obligations in support of SDG 7, including free trade in energy materials and products, freedom of energy transit through pipelines and grids, investment protections and dispute resolution measures. The promotion of renewable energy and cleaner fuels is also noted as a priority.[101] The primary objectives of the Energy Efficiency Protocol are to promote energy efficiency policies consistent with sustainable development, foster cooperation on energy efficiency, and encourage economic energy use that encourages environmental benefits. Parties are required to establish energy efficiency policies, legal and regulatory frameworks to promote the efficient functioning of market mechanisms, including market-oriented price formation and a fuller reflection of environmental costs and benefits, the reduction of barriers to energy efficiency, mechanisms for financing energy efficiency initiatives, education and awareness, dissemination and transfer of technologies, and transparency of legal and regulatory frameworks. [102] Practically, the Energy Efficiency Protocol has been effective at facilitating cooperation and knowledge exchange, through Working Group dialogues with States in transition that are developing energy legislation, analytical studies and voluntary country reviews. In this regard, lessons can be learned to advance targets 7.a and 7.b. The EU's innovative directives on renewable energy and energy efficacy create legal frameworks to promote sustainable energy measures domestically, institute rules to remove barriers in energy markets and establish time-bound targets to be achieved by member States through national plans contributing to the attainment of SDG 7.[103] By 2020, energy efficiency must improve by 20% and 20% of final energy consumption must be generated from renewable energy sources. The EU proposes to increase both the share of its renewable energy and improvement in energy efficiency by 27% by 2030.[104]

International trade and investment agreements facilitate SDG 7 through encouraging investments generally – not specifically in relation to SDG 7 targets, or even within the energy sector – to promote and protect all cross-border investments, including investments

made in the renewable energy and energy efficiency sectors. States agree to a range of positive and negative obligations in international investment agreements, some of which are similar to those in WTO law, which act as incentives for in-bound investments, promote stable business environments and may encourage investors with knowledge and capacity in sustainable energy to bring their experience into new jurisdictions. Additionally, certain RTAs (for example the EU-Caribbean Forum) encourage innovations to advance an economic response to climate change and sustainable development through the promotion of cleaner, more sustainable energy technologies.[105] The trade agreement signed between Chile and Colombia establishes several cooperation schemes for the production of sustainable energy, technology transfer and energy efficiency.[106] Similar cooperation schemes are included in the CAFTA-DR[107] and in the *Cotonou Agreement*.[108] The above-mentioned regional trade agreements provide States with an opportunity to progress on SDG 7 in the context of greater economic and trade openness, supported by capacity building, technical assistance, scientific and educational exchanges, dialogue and other measures.

As for the gradual advancement of target 7.1, regional approaches may support an implied human right to energy grounded in regional treaties, including the *African Charter on Human and Peoples' Rights* and the *Additional Protocol to the American Convention on Human Rights in the Area of Economic, Social and Cultural Rights* under the principle of "best attainable physical and mental health". [109] Regional jurisprudence and inquiries have recognized the practical connection between energy matters and certain human rights, particularly in connection with the rights to housing and to a clean environment.[110] Legal action has also been brought against States through regional American human rights bodies in the context of global warming, climate change and melting ice caps.[111]

Additionally, human rights obligations were considered in the recent landmark decision of *Urgenda Foundation v The Netherlands*, which held that The Netherlands was required to take further action to reduce its GHG emissions,[112] noting that regardless of the scale of emissions a State must exercise due care towards third parties.[113] As public interest litigation grows, jurisprudence may increasingly serve to interpret laws in the context of rights linked to climate change and energy and to influence the operationalisation of target 7.1.

2.3 Legal Obstacles Facing the Implementation of SDG 7 on Sustainable Energy for All

A spectrum of challenges at the international, regional and national levels may impact domestic implementation of SDG 7. First, many of the terms used in SDG 7 are undefined both in its text and in international law generally. Terms like "modern energy" and "modern energy services" in SDG 7 and target 7.1 respectively are commonly used by international organizations including the International Energy Agency (IEA), the World Bank and the Sustainable Energy for All (SE4ALL) initiative, but there is no universally agreed definition. The SE4ALL initiative launched by Secretary-General Ban Ki-moon, detailing channels for public-private collaboration on sustainable energy access,[114] gives meaning to "modern energy" by demarcating the type of energies that are excluded from its scope, including wood, coal, charcoal and animal waste. The IEA defines modern energy services as "household access to electricity and clean cooking facilities"[115] such as fuels and stoves that do not cause indoor air pollution. The World Energy Outlook confirms that there is no single definition of "energy access", but common elements across definitions exist. Both the IEA and the World Bank use a threshold of "500kwh per year per urban household – and just half this rate for rural households" to define access to modern energy.[116] This is not to mention the inherent uncertainty in "energy efficiency improvement" in target 7.3. Definitional uncertainty within non-binding international instruments has minimal impact on the legal obligations of States, particularly when compliance is not being assessed, but this poses difficulties when attempting global scientific accounting towards achieving this goal.

Second, domestic measures to support renewable energy sources have been subject to inquiry with recent trade disputes claiming injurious conduct concerning the application of renewable energy support policies and measures, including the lawfulness of mandatory targets, domestic content requirements and whether feed-in-tariffs amount to unlawful subsidies in breach of the *Agreement on Subsidies and Countervailing Measures*.[117]

[117] See e.g. *Canada – Certain Measures Affecting the Renewable Energy Generation Sector* (Japan and EU complainants), regarding domestic content requirements in a feed-in tariff programme. Other cases have been filed but have not progressed: see e.g. *China – Measures concerning Wind Power Equipment* (US complainant); *European Union and a Member State* [Spain] – *Certain Measures*

Similar issues have been challenged in recent investor-state arbitrations against Canada,[118] Spain,[119] Italy[120] and the Czech Republic,[121] where investors have alleged that repeal of clean energy programs, mal-administration of clean energy programs and/or imposition of performance requirements have resulted in indirect expropriation, unfairness or the devaluing of their investments and breaching fair and equitable treatment which includes legitimate expectations. Importantly, these investment disputes do not challenge the competence of States to create laws and regulations regarding renewable energies, but rather the differential treatment of programs and policies, which allegedly breach obligations related to international investment agreements. Careful planning and implementation of sustainable energy programs in a non-discriminatory, fair manner, in accordance with the rule of law and legitimate expectations of investors in a given context, can advance SDG 7 while ensuring compliance with international economic law obligations.

Third, implementation of SDG 7 necessitates a practical operationalization of the principle of common but differentiated responsibilities as reflected, among other sources, in Article 3 of the UNFCCC. This tension has affected climate negotiations, and the ailing WTO Doha round. As SDG 7 requires action from both developed and developing countries, it is commonly understood that achievement of the various targets and indicators will necessitate some degree of so-called "burden sharing"; that is, a "fair" allocation of responsibilities among all States taking into consideration their individual historic responsibilities. The SDGs reaffirm the principle of common but differentiated responsibilities.[122] Given the rapid cost and efficiency improvements in clean technologies, the burden in adopting, or facilitating adoption of, greater levels of clean energy

[122] Agenda 2030, *supra* n4, Para. 12.

may bring considerable economic, environmental and energy security advantages. In this regard, the progress on this principle made through the Paris Agreement may be looked to as an example.

Lastly, despite significant progress relating to energy, many developing States in particular have either no or suboptimal sustainable energy polices, laws and regulations, for want of financial resources, domestic institutional cooperation, capacity and/or technical capability. Opportunities exist to improve these issues, as well as the effectiveness of new and existing laws and regulations, by addressing cognate issues in an integrated fashion, including the links between transport and energy efficiency or fiscal incentives and renewable energy project finance, and by ensuring that energy legislation complements climate change legislation. Such measures could reduce continuing demands on finite government resources and provide greater certainty and predictability to private enterprise, thereby encouraging international and regional trade and investment and support a holistic regulatory approach that maximises SDG 7 implementation efforts. The drafting of model laws and regulations could assist in maximizing sustainable energy development opportunities and increasing uptake of sustainable energy,[123] and provide clarity to undefined terms in support of targets 7.1-7.3.

2.4 Future International Law Research on Sustainable Management of Renewable Energy Resources

Overall, the current state of international law related to sustainable energy and energy access is underdeveloped, but it has considerable potential to advance SDG 7. International law, and particularly international policy, can be used to facilitate and accelerate change in global energy production and consumption and steer State and non-State actors towards increased use of low-carbon energy sources. It would do so by facilitating and optimising domestic, regional and international commitments among States and non-State actors and providing a forum for dialogue and normative development. In recent years, some 164 States have adopted renewable energy targets or support policies, including feed-in-tariffs and renewable portfolio standards.[124] Sustainable energy measures are often used in the context of Nationally Appropriate Mitigation Actions (NAMAs) – emissions reduction actions within domestic climate strategies – or vertically integrated NAMAs, so-called V-NAMAs, whereby sub-national actors with relevant competences are involved in planning and implementation of those strategies. Greater cognisance and incorporation of sustainable energy measures into national plans of action and development plans can support progressive implementation of SDG 7.

The objectives of SDG 7 may be advanced through a range of measures and approaches including, on the one hand, continued and increasing interpretation of energy-related issues in the context of existing international law frameworks and, on the other hand, the development of new measures, such as: global product performance and sectoral standards; international energy generation, access, use and education benchmarks; globally agreed principles for sustainable energy technology sharing, transfer and licensing; international mechanisms to mobilize private and public sustainable energy finance; and

---

[123] *Ibid*, Para. 45.

[124] JL Sawin et al, "Renewables 2015: Global Status Report: Key findings" (Renewable Energy Policy Network for the 21st Century, 2015) at 7.

comprehensive and meaningful global, regional and national monitoring, reporting and verification procedures that measure and track progressive implementation of SDG 7.

Over time, international regulation of sustainable energy may emerge. For the moment, the absence of specific and integrated legal frameworks that support sustainable energy development may provide an impediment to concerted action. As the economic self-interest of States increasingly aligns with the objectives and desired outcomes of SDG 7 and the other SDGs, the incentives to improve both international and domestic sustainable energy laws and regulations will strengthen. Just as international law related to SDG 7 is piecemeal, so too are the means of implementation found in SDG 17. Additional research, collaboration and capacity building regarding international law, policy and governance related to sustainable energy would further contribute to this burgeoning field and contribute to the advancement of SDG 7.

3. Rules and Practices of International Law for the Sustainable Management of High Seas Marine Resources towards SDG 14 on Sustainable Management of Fisheries and Ocean Resources

Based on a Scoping Note by Cymie R. Payne, USA; with contributions from a further Legal Brief by Prof Konstantia Koutouki, Canada, and Mr Freedom-Kai Phillips, Canada, for expert review.

3.1 Value, Threats, Status of Marine Natural Resources on the High Seas and Generally

SDG 14 aims to "conserve and sustainably use the oceans, seas and marine resources for sustainable development." This part of the Committee's examination focuses on just the natural resources of the ocean's high seas area, that is, areas beyond national jurisdiction (ABNJ), which constitute more than half of the world ocean and the world's largest ecosystem. International law governing natural resources in areas within national jurisdiction—ocean waters landward of 200 nm (or 12 nm for states that have not claimed an EEZ) and the seafloor landward of continental shelf boundaries, where they have been claimed—is extensive, and only partially overlaps this topic.[125] High seas marine resources include fisheries, one of the most ancient subjects of international law, and marine genetic resources, one of the most novel. These and other vital ocean natural resources and ecosystem services exist within areas of national control and areas beyond national jurisdiction, with important transboundary effects and commons considerations.

[125] The work of the ILA "International Law and Sea Level Rise" Committee on fixed versus ambulatory baselines is relevant to this topic. That Committee noted, at its April 2015 meetings, the linkages with this Committee's work, particularly with regard to coastal adaptation to climate change. That Committee is also considering human rights and forced migration in relation to sea level rise, subjects that have bearing on sustainability, governance and rights of human populations in relation to marine resources. In this regard, that Committee considered that the "law on self-determination had a great potential in the context of endangered statehood and access to natural resources". That Committee also discussed whether "income generated from the Exclusive Economic Zone of a submerged State could eventually be put in a Trust Fund for the benefit of the affected population". Alternatively, that portion of the ocean might become high seas. *See*, DD Caron, "Climate Change, Sea Level Rise and the Coming Uncertainty" in S-Y Hong and JM Van Dyke, eds, *Oceanic Boundaries: A Proposal to Avoid Conflict in Maritime Boundary Disputes, Settlement Processes, and the Law of the Sea* (Martinus Nijhof, 2009), 1-17.

The extent and status of ocean ecosystem services was evaluated by the First Global Integrated Marine Assessment (World Ocean Assessment).[126] Half of the oxygen humans breathe is produced by the ocean; it is an essential element in climate dynamics, including the ocean's absorption of heat and about 26 percent of the anthropogenic carbon dioxide in the atmosphere; it cycles inorganic plant nutrients and is part of the hydrological cycle. Its biodiversity, greater than terrestrial biodiversity, includes living marine resources with and without commercial value. Primary production in areas of upwelling has no market value, but it is the basis of the oceanic food web. Marine resources with commercial value include seafood, hydrocarbons and seabed minerals. Marine food resources are the primary source of essential protein and micronutrients for about 3 billion people. Marine genetic resources, such as the thermophiles that live in the deep ocean, are potentially highly valuable for industrial, pharmaceutical, cosmetic and other applications. Ships use the ocean to transport food, energy, consumer goods and people—especially tourists. Ocean-based energy sources include wind and tide. Submarine cables on the ocean floor carry 90 percent of information and financial transactions. Cultural and religious ecosystem services associated with high seas living resources have social value, particularly for island and other ocean-going peoples; they are given economic value by tourism.

Harm to the living marine environment of the high seas is largely caused by economic uses of marine natural resources, by impacts of ships, and by pollution. Threats include over-harvesting directed at particular species, land- and ocean-based pollution. Current research reports a high risk that we are experiencing defaunation of the oceans.[127] As a result of a weak legal regime and poor enforcement, up to one third of the fish catch is taken illegally,[128] and non-target species are killed. In some cases, legal concepts intended to contribute to sustainable management have not had the desired result: for example, the concept of "maximum sustainable yield", used in international agreements, is criticized for being "based on the inherent trade-off between increasing harvests and decreasing the ability of a smaller resulting population to compensate for the removals."[129] Acidification from excessive global atmospheric carbon dioxide levels, a much broader problem, is also a threat. Future impacts might be caused by bio-prospecting, deep seabed mining and marine geoengineering. The social pillar of sustainable development concerns equitable access to living marine resources, benefit sharing for deep seabed minerals and marine genetic resources.[130] The notoriously poor labour conditions at sea are not discussed further in this section.[131] The marine natural resources of the high seas are relatively unknown. Governance measures are therefore undertaken under conditions of uncertainty and ignorance. Measures to support the collection and sharing of scientific information are a necessary element of the international law regime for high seas living resources. International law is called to address the crucial balance between the economic,

environmental and social pillars of sustainable development for the natural resources of the high seas. Ensuring that resource extraction—living and non-living—is conducted in a manner that does not cause harm and that leaves enough for the future is necessary. So too is management of all kinds of ocean pollution, including noise pollution.

More broadly, as noted by Prof Konstantia Koutouki et al, SDG 14 aims to conserve and sustainably use all oceans, seas and marine resources for sustainable development. Including the high seas, three-quarters of the planet's surface consists of oceans, seas and marine areas. They are a vital provider of food for humans and wildlife, and crucial to regional, national and local economies, as well as an important regulator of our climate and an important source of cultural and spiritual inspiration for many peoples and communities. SDG 14 is key for the environmental dimension of sustainable development, however, the international legal instruments, governance arrangements and policy collaborations on sustainable development in relation to conservation and sustainable use of resources are still evolving, and with regard to key aspects of SDG 14, important gaps can be found.

3.2 The International Legal Terrain on the High Seas and SDG 14 for Sustainable Management of Ocean Resources

UNCLOS is the framework convention that structures the law of the sea, codifying customary international law and developing international law. It establishes maritime zones, principles, and rights and duties of coastal, port, flag and land-locked states. It also created the ITLOS, a forum for dispute settlement and authoritative interpretation of UNCLOS. Detailed means to achieve sustainability are left to implementing agreements and other legal measures. Obligations that promote more sustainable management of the high seas marine environment, established by UNCLOS and the opinions of ITLOS and the ICJ, include: conservation;[132] precaution, applied according to the State's capabilities;[133] due diligence;[134] EIAs;[135] and best environmental practices.[136]

The customary principle of freedom of the seas embedded in UNCLOS states that "the high seas are open to all States" for navigation, overflight, laying of cables, construction of artificial installations, fishing, and scientific research, subject to other provisions of UNCLOS and of international law.[137] Freedom of the seas is in tension with other rights and duties to the extent that it is used to unilaterally assert a right of free access to take and use the marine environment. The principle has evolved from its earlier form, as recognized by the ICJ in its statement that "resulting from the intensification of fishing …

the former *laissez-faire* treatment of the living resources of the sea in the high seas has been replaced by a recognition of a duty to have due regard to the rights of other States and the needs of conservation for the benefit of all."[138] The *res communis* nature of the high seas is partly guaranteed by Article 89, which states that "no State may validly purport to subject any part of the high seas to its sovereignty," and Article 136, stating that "The Area [the seabed, ocean floor, and subsoil in ABNJ] and its resources [minerals at or beneath the seabed] are the common heritage of mankind".[139] The opinions of ITLOS articulated certain rights of humankind to its ocean heritage including and extending beyond the Area, and described some rights and obligations as *erga omnes*, belonging to all.[140]

Progressive development of the law of the sea to incorporate sustainability has occurred in part through implementing agreements, notably the 1995 *Agreement for the Implementation of the Provisions of the United Nations Convention on the Law of the Sea of 10 December 1982 relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks*[141] (FSA). The FSA balances environmental protection of fish populations, economic interests in harvesting seafood, and social equity in preserving fish for coastal fisheries and future generations by extending the management of fisheries to the high seas for species that spend a significant part of their lives moving between the high seas and coastal state jurisdictions, implementing Article 118 of UNCLOS. The Food and Agriculture Organization (FAO) *Agreement to Promote Compliance with International Conservation and Management Measures by Fishing Vessels on the High Seas*[142] obliges each Party to ensure that vessels flying its flag observe fishery conservation and management measures on the high seas, and to oversee the high seas fishing activities of its vessels. It also contributes to enforcement, and thus to the progressive development of the law, by encouraging flag states to allow port states to investigate foreign fishing vessels suspected of activities that undermine the effectiveness of international conservation and management measures. The 2009 FAO *Agreement on Port State Measures*[143] provides flag state obligations and minimum rules for port states that include: inspections to identify illegal, illegal, unreported and unregulated (IUU) fishing activities, authority to deny port facilities for activities like transhipment, recognition of the port state's right to deny entry to vessels, the obligation to deny entry to IUU fishing vessels other than for enforcement or emergency, and capacity building to assist developing states.

Numerous multilateral, regional[144] and bilateral treaties govern fishing,[145] whaling,[146] the protection of biodiversity, and conservation of specific regions,[147] as do resolutions of the UNGA.[148] Four of the thirteen Regional Seas programs address ABNJ in addition to coastal areas through conventions and action plans. Regional seas organizations are involved in establishing marine protected areas (MPAs), managing fisheries, and other activities that contribute to sustainability. Regional fisheries management organizations (RFMOs) have been established for particular target species[149] and for regions,[150] with authority to manage or in some cases only to advise on managing fisheries, through controls on fishing gear, fishing effort, trade and other measures. UNGA Resolutions 44/225, 45/197, and 46/215 established a moratorium on driftnets longer than 2.5 kilometres on the high seas, thus reducing mortality of non-target animals (including dolphins, whales, seals, birds, fish species, and turtles). A 2013 report stated the moratorium has been generally successful.[151]

Sustainability is a goal of many of these instruments, though the emphasis is often on its "sustained yield" aspect. For example, both Australia and Japan "emphasized conservation and sustainable *exploitation* as the object and purpose of the Convention" (emphasis added) most relevant to their dispute over interpretation of the International Convention for the Regulation of Whaling's provision on scientific exemptions from whaling moratoriums.[152] Through the FAO, states adopt influential, voluntary guidelines, including the important 1995 FAO *Code of Conduct for Responsible Fisheries* and four implementing International Plan of Action (IPOA) guidelines on conserving seabirds and sharks; IUU fishing; and management of fishing capacity.[153] The Code of Conduct's objectives reflect

[144] The FAO lists six global and trans-ocean regional fishery bodies; 34 for four oceans; and 11 for continental bodies.

sustainable development concerns: food security, especially for local communities; trade in fish and fishery products; and habitat protection. The IPOA-IUU guideline was noted with approval by ITLOS.[154] The adoption in 2014 of *Voluntary Guidelines for Flag State Performance* supports the legal principles of flag state responsibility for preventing IUU fishing, "to ensure the long-term conservation and sustainable use of living marine resources and marine ecosystems."[155]

Two treaties that address species preservation and biodiversity globally have limited application to the high seas. First, trade in endangered species, including trading in listed species taken on the high seas ("introduction from the sea"), is regulated by the *Convention on International Trade in Endangered Species of Wild Fauna and Flora*[156] (CITES). Second, each Party to the CBD commits to obligations regarding "processes and activities" carried out under its jurisdiction or control with effects on biodiversity anywhere, including the high seas.[157] The CBD establishes objectives that reflect the three pillars of sustainability in Article 1 and defines the concept of biodiversity to reflect the complex interactions between organisms and the ecological complexes of which they are part in Article 2. Parties have an affirmative duty to cooperate for conservation and sustainable use of biodiversity in ABNJ, under Article 5. This obligation is further defined in Article 14(1)(c) to include sharing information on activities that are likely to significantly adversely affect biodiversity in ABNJ, and in Article 14(1)(d) to notify and act to minimize imminent or grave damage. Of particular importance to the implementation of sustainability, the CBD COP adopted Decision IX/20 in 2008 to establish criteria for ecologically and biologically significant areas (EBSAs) in need of protection in open-ocean waters and deep-sea habitats and to identify locations to include in a network of MPAs, a process which continues to be implemented.

Institutional arrangements for oversight of the Area are provided by the International Seabed Authority (ISA), authorized by UNCLOS[158] and the 1994 *Agreement Relating to the Implementation of Part XI of the Law of the Sea Convention*[159] (Agreement on the Area). The ISA has the capacity to promulgate regulations to ensure the protection of the marine environment from harmful effects of mineral prospecting, exploration and exploitation under UNCLOS Article 145; to conduct resource assessments and environmental assessments; to approve plans of work for exploration or exploitation proposed by mining interests; to fund scientific research; and to educate.

Ships[160] (MARPOL) and its annexes regulate dumping of wastes generated on-board ship. The 1972 *Convention on the Prevention of Marine Pollution by Dumping of Wastes and Other Matter*[161] (London Convention) prohibits many categories of land-created waste in the ocean and the 1996 *Protocol to the London Convention*[162] prohibits all ocean dumping other than substances that are specifically permitted. Geoengineering techniques affecting the oceans are addressed to a very limited extent by the London Dumping Convention and its Protocol and the CBD.[163] Experiments that dumped iron dust into the ocean in ABNJ—intended to demonstrate a possible carbon sequestration technique and to increase fish populations—showed the weakness of the legal controls.[164] The parties to the London Convention and Protocol placed a moratorium on all ocean fertilization other than "legitimate scientific research" by Resolution LC/LP.1 (2008) and Resolution LC/LP.2 (2010). The resolution creates an assessment framework directing the countries conducting the research to notify and consult with potentially affected countries. Decisions about allowing the research rest with the researching countries. The CBD resolution is even milder: CBD parties are requested to ensure that ocean fertilization does not take place until more science and governance are in place.[165]

As Prof Payne's contribution argues, State Practice is also important. States demonstrate increasing commitment to ocean sustainability by participation in the treaties, non-binding agreements, UNGA resolutions, and other measures referred to above. However, both flag states and coastal states often show a lack of will and/or a lack of capacity to enforce international obligations on the high seas. In particular, flag states have not been willing or able to compel compliance by those subject to their jurisdiction, including ships they register, with their international obligations, as required by UNCLOS, Article 91. On the other hand, there is extensive state practice in the fisheries sector supporting evolving legal principles that include flag state responsibility. Many coastal states have legislation requiring that agreements for access to the coastal state's EEZ fisheries must include a provision establishing the foreign flag state or association's responsibility to ensure that its vessels comply with the agreement and the coastal state's fishing laws.[166]

The ISA is developing deep seabed mining regulations and applying its regulations for mineral prospecting and exploration in the Area. Many states have adopted national legislation, as required, to implement their obligations under UNCLOS. The United States is not a party to UNCLOS and is therefore not able to participate. Despite advice that this meant the legal regime of the Area does not apply to US companies, the US company Lockheed Martin used its subsidiary to obtain British sponsorship,[167] suggesting that legal advisors saw legal risk for non-Parties to flout the treaty rules established for the Area.

Taking a focus which extends beyond the high seas, the contributions of Prof Konstantia Koutouki et al highlight the relevance of treaties and practice in a different yet complementary light. They note that while a wide range of international law relates to SDG 14, central instruments include the 1982 UNCLOS, the FSA, the New York Convention, the Helsinki Convention and the Ramsar Convention.

UNCLOS is uniquely positioned for implementation in SDG 14. In paragraph 158 of *The Future We Want*, it is recognized as providing the legal framework for the conservation and sustainable use of oceans and their resources and, as such, is of principal importance to an analysis of how international law and governance can help to implement SDG 14. Indeed, target 14.c aims to enhance "the conservation and sustainable use of oceans and their resources by implementing international law as reflected in the [UNCLOS], which provides the legal framework for the conservation and sustainable use of oceans and their resources…" Under UNCLOS, States have agreed to a general obligation on States to protect and preserve marine life.[168] For instance, States must individually or jointly establish measures to prevent, reduce and control marine pollution, specifically: toxic or harmful land-based dumping, pollution from vessels, and pollution resulting from natural resources exploration on the seabed or subsoil and other marine installations.[169] As target 14.1 seeks to prevent and significantly reduce marine pollution of all kinds, particularly from land-based activities by 2025, these UNCLOS provisions are directly relevant. Scientific collaboration under UNCLOS, for instance, could be used to trace and prevent or stop illegal marine pollution, and to monitor the effectiveness of collaborative efforts. Further, under UNCLOS, measures taken by States must not create unjustifiable interference to lawful activities of States, may not directly or indirectly transfer the damage from one location to another, and shall address the use of technology and the accidental introduction of species into the marine environment.[170]

Target 14.2 aims to sustainably manage and protect marine and coastal ecosystems to avoid significant adverse impacts by 2020. Supporting this goal, UNCLOS establishes measures relating to global and regional cooperation.[171] States, in cases of imminent or actual damage, must provide notification to other affected States, and cooperate with other international organizations to develop joint contingency plans.[172] Monitoring and

[172] *Ibid,* Art. 198-199.

evaluation measures are facilitated, including publication of reports, with particular emphasis on activities which are planned and permitted.[173] Planned activities which have a reasonable potential to cause harm are to have the potential effects assessed, with the results integrated into reporting.[174] In addition, target 14.4 aims, by 2020, to effectively regulate harvesting, and end overfishing, IUU fishing, and destructive fishing practices. In target 14.4, countries also seek to implement science-based management plans, to restore fish stocks in the shortest time feasible at least to levels that can produce maximum sustainable yield as determined by their biological characteristics.

Supporting this aspect of SDG 14, and implementing provisions of UNCLOS, the FSA seeks to ensure the long-term conservation and sustainable use of straddling fish stocks and highly migratory fish stocks.[175] In particular, the general principles of the FSA are measures which optimize utilization of fish stocks, adoption of an ecosystem approach, and application of the precautionary approach.[176] States are further required to apply the precautionary approach to conservation and management of straddling fish stocks, and exercise caution in cases of uncertain, unreliable or limited information.[177] In implementing the precautionary approach, States shall improve decision-making, apply common guidelines relating to stock condition, develop data collection and research programs, provide for enhanced monitoring for concerned species, and implement precautionary management measures including modest catch limits.[178] Organizations such as the Marine Stewardship Council (MSC) provide valuable consumer capacity-building with regard to the sustainable use of fish stocks. MSC sets standards with regards to supply chains to ensure that the goal of sustainability in terms of fish and seafood harvesting. Of course public participation is an important aspect of governance and via organizations such as MSC the public is given the opportunity to vote with their purchasing power. MSC and others like it however, need to work on their own transparency so that the public feels confident that the standards set do in fact make a difference.

Prof Koutouki et al also note that other treaty regimes, backed by key principles, governance arrangements, and scientific and policy collaborations, remain relevant to the delivery of SDG 14. In particular, by 2020, target 14.2 aims to sustainably manage and protect marine and coastal ecosystems to avoid significant adverse impacts, including by strengthening their resilience, and take action for their restoration; target 14.5 aims to conserve at least 10 per cent of coastal and marine areas, consistent with national and international law and based on best available scientific information. Supporting these aspects of SDG 14, the Ramsar Convention establishes international cooperative measures to facilitate the conservation and wise use of wetlands,[179] adopting an ecosystem approach to wetlands that includes lakes, rivers, underground aquifers, peatlands, mangroves and other coastal areas such as coral reefs.[180] It requires Parties to establish domestic monitoring of listed wetlands to monitor changes in ecological character with changes noted on

[173] *Ibid,* Art. 204-205.

[180] *Ibid*, Art. 2(1).

the Montreux Record, among other mechanisms,[181] providing a useful tool for implementation and monitoring of target 14.2. Further, the Helsinki Convention, which establishes cooperative measures to address, mitigate and prevent transboundary pollution of watercourses, can assist to address the quality, quantity and integrated management of water basins, supporting targets 14.2 and 14.5, by encouraging measures relating to, among other issues: (1) pollution prevention; (2) source licensing; (3) waste-water discharges; (4) water quality; (5) pre-discharge treatment; (6) EIA; (7) sustainable water management; and, (8) contingency planning to minimize effects of accidental pollution.[182] In addition, the New York Convention, which aims to harmonize measures grounded in watercourse agreements facilitating cooperation and consultation relating to protective and governance measures relating to international watercourses, and amicable settlement of disputes,[183] recognizes principles such as (1) a duty of reasonable and equitable use of the watercourse; (2) an obligation to provide good faith cooperation; (3) application of an ecosystem approach; and, (4) facilitation of information sharing.[184] Under the New York Convention, in their efforts to establish environmental protection measures, including notification requirements and individual or joint mechanisms to prevent pollution or the introduction of alien species,[185] the Parties are delivering on targets 14.1 and 14.2.

With regard to other aspects of SDG 14, such as the aim to minimize ocean acidification as per target 14.3, and to support small-scale artisanal fishers as per target 14.b, Prof Koutouki et al have observed less international collaboration. They argue that these remain areas for further international development and cooperation, particularly where institutional governance or capacity building, through horizontal and vertical collaboration, can remove obstacles to achieving these aspects of SDG 14. To this end, States are helped by organizations like the International Council for the Exploration of the Sea (ICES), whose motto is "science for sustainable seas." ICES as an intergovernmental organization has as a mandate to "increase the scientific knowledge of the marine environment and its living resources and to use this knowledge to provide unbiased, non-political advice to competent authorities."[186] ICES could further aid States with the science of sustainability by integrating Indigenous and local community knowledge into their reports and assessments, they note, pointing to this work in the Arctic.

3.3 Legal Obstacles Facing the Implementation of SDG 14 on Marine Resources

Prof Cymie Payne notes several important gaps and obstacles, with specific consideration of the high seas. Although UNCLOS Part XII was intended to provide a framework for the protection and preservation of the marine environment, divergence between the law of the sea and international marine environmental law principles has been observed.[187] The future promises to integrate these approaches as gaps in the legal regime for ocean ABNJ are filled. First, there is an institutional gap. There is no institution comparable to the ISA mandated to act on behalf of humanity with regard to the rest of the ocean

environment in ABNJ and activities other than seabed mining. It has been suggested that existing institutions, such as the RFMOs and the IMO, can fill that role. But the sectoral organizations do not coordinate with each other, and fundamental differences in "culture, processes and epistemic communities" between them make the prospect doubtful.[188] Moreover, the existing institutions act through flag states, which often have failed to fulfil their obligations or refused to accept new commitments. The RFMOs typically base management decisions on consensus and allow objectors to opt out of conservation measures. Some states simply remain outside the treaty and refuse to cooperate, although virtually all states have conservation and cooperation obligations as parties to UNCLOS. Moreover, it is not yet known what—if any—state, international organization, or other entity has standing to litigate a dispute, compensation claim, or enforcement matter in cases of environmental harm, even in the case of the far better-developed regime for the Area.[189] Second, there is also a gap in coverage, geographic and functional. Problems that are ocean-wide, like IUU fishing, are difficult to address effectively. Cumulative impacts from multiple environmental insults are even more difficult to prevent or counter. The regional fishery agreements do not cover all species, they generally do not address non-target species and they often do not have a mandate for ecosystem protection.[190] As a result, ecosystems like the Sargasso Sea fall through the gap, and their vital global functions are left largely unprotected from pollution of all sorts, the passage of ships, and the impacts of fishing.[191] Treaties that might provide protection, like the World Heritage Convention, are silent as to ABNJ; it is argued that silence might be permissive and the Sargasso Sea would be a prime candidate for listing.[192]

Third, as she notes, accountability is a puzzle—concepts of responsibility and liability are in place but difficult to apply. Yet without enforcement, obligations provide only guidance but no real leverage to compel preventive activities. Without a robust mechanism, there is nothing to ensure that a responsible party undertakes response and remediation if it causes significant environmental damage to humanity's common heritage. For example, a state that sponsors a company to mine the deep seabed in the Area has an obligation to ensure that the company complies with the terms of its contract with the ISA and the obligations set out in UNCLOS and related instruments, as well as several direct obligations.[193] However, these are obligations for the sponsoring state to make best possible efforts—to exercise due diligence. The sponsoring state is liable only if it does not try, but it might not be liable if it tries and fails. The result: a liability gap that no one is responsible for. This is not unique to deep seabed mining; due diligence is the standard.[194]

[193] Advisory Opinion on Responsibilities and Obligations with respect to the Area, *supra* n133, Para. 242.

[194] SRFC Advisory Opinion*, supra* n154, Para. 125.

Fourth, even if a state does fail in its due diligence obligations, standing is a challenge, as is the availability of a forum for dispute settlement and accountability. The ISA has standing and ITLOS's Seabed Disputes Chamber is a forum, but only for activities in the Area.[195] The Seabed Disputes Chamber has suggested that others may be entitled to standing—other Parties to UNCLOS, for example[196]—but the scope and nature of the right to enforce remains undefined and limiting it to UNCLOS parties seems to fall short of the "common heritage of humankind" standard. This leaves an accountability gap within the regime for mining in the Area, and an even vaster gap for other activities on the high seas. Fifth, many activities, such as those occurring on the deep seabed that do not involve exploration, prospecting or collection of minerals, are unregulated at present. Exploration and extraction of marine genetic resources are in this category. Scientific research is also virtually unregulated; concerns include under regulation that allows environmental damage, identification of criteria to allow research without risking harm, and knowledge transfer appropriate to this global commons. The complement to the lack of prohibitive regulation is the lack of facilitating governance: for example, approaches that require international cooperation and enforcement, such as establishing MPAs to ensure healthy fish stocks and biodiversity, are unauthorized because there is no entity with the capacity to permit them. Finally, there is no governance mechanism to ensure that the living and non-living ocean continues to function as a healthy whole. The interactions between the physical and biological ocean create the conditions we consider normal. The international law regimes for the high seas marine environment address only pieces of the system.

Several efforts to fill these lacunae are underway. Firstly, The ISA is overseeing the development of deep seabed mining regulations for the Area that will address a host of issues, including EIAs, with goals including protection for the living marine environment from mining damage, "a fair financial return to mankind for its resources," and "orderly, safe and rational management of the resources."[197] Secondly, the preparatory committee process for the negotiation of an *Implementing Agreement for Conservation and Sustainable Use of Marine Biological Diversity beyond Areas of National Jurisdiction* (BBNJ) began in March 2016, pursuant to UNGA Resolution 69/292 (2015). The package of issues for negotiation is limited to: marine genetic resources, including benefit-sharing, area-based management tools including MPAs, EIAs, and capacity-building and marine technology transfer. It is intended to complement existing agreements, institutions, and arrangements. Thirdly, Governance models being developed for the Arctic centre on the work of the Arctic Council and IMO. Lastly, the non-legally binding 2014 *Hamilton Declaration on Collaboration for the Sargasso Sea* calls for the use of existing international law and existing regional and international organizations to safeguard the unique Sargasso Sea ecosystem. The Declaration sets a precedent for protecting an area of special value that is defined by ocean currents rather than fixed points. The use of existing instruments is a

[195] UNCLOS, *supra* n80, Arts. 162(2)(u) (non-compliance), 185(2) (suspension), 187 (jurisdiction of Seabed Disputes Chamber), 189 (limitation on jurisdiction with regard to decisions of the Authority), 191 (advisory opinions).

[196] Advisory Opinion on Responsibilities and Obligations with respect to the Area, *supra* n133, Paras. 179-180.

[197] ISA, *Developing a Regulatory Framework for Mineral Exploitation in the Area: Report to Members of the Authority and All Stakeholders* (2016).

different approach from declarations of legally binding high seas MPAs elsewhere. It is hoped that the BBNJ negotiation will provide strong legal rules to create high seas MPAs.

In this fragmented, complex legal regime, authoritative interpretation of duties and rights provides clarity and consistency in the application of the law. ITLOS's Seabed Disputes Chamber has jurisdiction to provide advisory opinions regarding the Area on the interpretation of UNCLOS, Part XI, the 1994 Agreement on the Area, and the relevant annexes and regulations for the organization and management of activities in the Area on questions referred to it by the ISA, and contentious jurisdiction to settle disputes,[198] as it did in its first advisory opinion Advisory Opinion on Responsibilities and Obligations with respect to the Area. The first advisory opinion of the full Tribunal answered several questions about coastal state and flag state obligations with regard to IUU fishing in the Request for an Advisory Opinion submitted by the Sub-Regional Fisheries Commission (SRFC) on 2015. This advisory opinion also confirmed ITLOS's advisory jurisdiction where an international agreement related to the purposes of UNCLOS provides for submitting an advisory opinion request to ITLOS.[199] Including an appropriate provision should be considered in the negotiation of any future agreements relating to the high seas.

3.4 Future International Law Research on Sustainable Management of Marine Resources

In addition to the conclusions of Prof Payne above, which focus on the high seas, several other observations can be made concerning obstacles and priorities for future international law research. First, as noted by Prof Koutouki et al, main legal and governance obstacles highlighted in global debates on SDG 14 include fishing fleet overcapacity, perverse subsidies, poor governance arrangements, challenges in coordination of scientific data on stock assessments and other matters, and lack of compliance with rules on by-catch and discards.[200] Increased cooperation is particularly necessary to address data-collection and sharing and collaboration on enforcement of catch quotas. Perverse subsidies which artificially maintain the fishing sector in main jurisdictions fundamentally undermine conservation measures in neighboring States. Lack of integrated governance at the regional and national levels leads large segments of impacted local communities to remain marginalized. Data shortages regarding fish stocks and broader ecosystem metrics remain prevalent, significantly impacting development of mitigation measures. Incidental capture of threatened or non-targeted species, often through inappropriate methods or technologies, continues to impact fish stocks. While a majority of coastal countries do undertake coastal zone management planning and have developed competent authorities to address coastal issues, watershed pressures including hydropower development, degradation of potable water sources, and large-scale irrigation for agriculture, coupled with poorly managed land uses, continue to exacerbate problems of sustainable use of marine resources. Capacity concerns, increases in marine habitat degradation and lack of implementation of sustainable marine planning principles continue to plague conservation efforts. Lack of stakeholder engagement or integration into

[198] UNCLOS, *supra* n80, Arts. 159(10), 187, 191.

[199] *Ibid*, Annex VI, *Statute of the International Tribunal for the Law of the Sea*, Art. 21 and *Rules*, Art. 138; SRFC Advisory Opinion, *supra* n154, Para. 60.

[200] MRAG, *Towards sustainable fisheries management: international examples of innovation* (London: MRAG, 2010).

decision-making procedures – particularly at the local level – continues to significantly restrict collaboration, knowledge transfer and the effectiveness of compliance or monitoring efforts. In essence, as Prof Koutouki et al argue, there remain many obstacles to overcome for sustainable management of marine natural resources.

Second, as Prof Koutouki observes, while UNCLOS remains the most comprehensive international legal instrument pertaining to oceans and marine environment, there has been progress in post-UNCLOS agreements to address issues of sustainability. Under the FSA there is integration of the precautionary principle and acknowledgement of the importance of an ecosystem approach to questions of development. Many significant steps and measures are being taken collaboratively, though important gaps remain. However, enforced properly, the existing legal, policy and governance framework can be strengthened to have a positive influence in sustainable use of marine resources. A spectrum of other instruments including the Ramsar Convention, the New York Convention, and the Helsinki Convention provide for cooperation and collaboration relating to protection of wetlands, international watercourses or transboundary watercourses. Leveraging synergies across Conventions to drive mutually supportive implementation, and engage key stakeholders in relevant forums, will support complementarity and diffuse organizational costs of implementation. Increased emphasis is needed on capacity building and transfer of marine technologies for sustainable development. Lastly, the cultural and spiritual dimensions of oceans, seas, lakes, rivers and other waterways are important under SDG 14. Organisations such as the United Nations Permanent Forum on Indigenous Issues have worked to emphasize the importance of nature in general to the preservation and further development of Indigenous culture and that of local communities. Water is a spiritual symbol for many societies and hence its contribution to the physical, psychological, spiritual and cultural well-being of individuals and communities should be given a more central role.

4. Contributions of International Law to SDG 15 on Sustainable Management of Terrestrial and Biological Resources

Based on a Legal Brief with Prof Jorge Cabrera, HQ/Costa Rica, Mr Frederic Perron-Welch, Canada and Dr. Balakrishna Pisupati, India, with further review by Prof Arie Trouwborst, The Netherlands

4.1 Sustainable Management of Terrestrial and Biological Resources

This section focuses on SDG 15 to protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss, highlighting potential contributions of international law and policy in delivering targets 15.1 – 15.9. It provides a cursory survey of principal international law, policy and governance measures can contribute to realizing SDG 15. It considers options for legal and policy preparedness, notes potential for mainstreaming and more integrated implementation at international and national levels, and offers some recommendations on these matters. The analysis suggests that the SDG 15 targets are backed up by international environmental governance systems and legal measures, including multilateral environmental agreements (MEAs) that need to be appropriately linked to discussions on the development of indicators related to targets and national implementation.

Box 5: SDG 15 - Protect, Restore and Promote Sustainable Use of Terrestrial Ecosystems, Sustainably Manage Forests, Combat Desertification, and Halt and Reverse Land Degradation and Halt Biodiversity Loss

15.1 By 2020, ensure the conservation, restoration and sustainable use of terrestrial and inland freshwater ecosystems and their services, in particular forests, wetlands, mountains and drylands, in line with obligations under international agreements

15.2 By 2020, promote the implementation of sustainable management of all types of forests, halt deforestation, restore degraded forests and substantially increase afforestation and reforestation globally

15.3 By 2030, combat desertification, restore degraded land and soil, including land affected by desertification, drought and floods, and strive to achieve a land degradation-neutral world

15.4 By 2030, ensure the conservation of mountain ecosystems, including their biodiversity, in order to enhance their capacity to provide benefits that are essential for sustainable development

15.5 Take urgent and significant action to reduce the degradation of natural habitats, halt the loss of biodiversity and, by 2020, protect and prevent the extinction of threatened species

15.6 Promote fair and equitable sharing of the benefits arising from the utilization of genetic resources and promote appropriate access to such resources, as internationally agreed

15.7 Take urgent action to end poaching and trafficking of protected species of flora and fauna and address both demand and supply of illegal wildlife products

15.8 By 2020, introduce measures to prevent the introduction and significantly reduce the impact of invasive alien species on land and water ecosystems and control or eradicate the priority species

15.9 By 2020, integrate ecosystem and biodiversity values into national and local planning, development processes, poverty reduction strategies and accounts

15.a Mobilize and significantly increase financial resources from all sources to conserve and sustainably use biodiversity and ecosystems

15.b Mobilize significant resources from all sources and at all levels to finance sustainable forest management and provide adequate incentives to developing countries to advance such management, including for conservation and reforestation

15.c Enhance global support for efforts to combat poaching and trafficking of protected species, including by increasing the capacity of local communities to pursue sustainable livelihood opportunities

4.2 Contribution of International Law, Policy and Governance to SDG 15 on Terrestrial Ecosystems and Biodiversity

International and domestic environmental law and policy supporting better management of the environment, natural resources and ecosystems is guided by three principles of governance, namely, good governance (the process of inclusive decision making), effective governance (dealing with set goals and targets) and equitable governance (based on distributive justice).[201] In the context of realizing targets under SDG 15, countries

[201] D Shroeder & B Pisupati, *Ethics, Justice and the Convention on Biological Diversity* (UNEP, 2010).

have had some success establishing effective governance measures through implementation actions related to MEAs. Good and equitable governance related issues need more attention when countries are preparing to set a national agenda on SDG implementation. For the purpose of this analysis, focus is placed on using the MEAs related to biodiversity as the primary trigger to further strengthen governance, law and policy.

Underlying SDG 15, countries have established legally binding obligations to implement actions for conservation and sustainable use of biodiversity and equitable benefit-sharing at national, regional and international levels through the cluster of biodiversity-related conventions. Complementary governance approaches have been developed to address inter-linkages between the issues addressed under the respective treaty regimes and to provide a basis for cooperation.[202] The governing bodies have also set out specific mandates for cooperation, backed by formal memoranda of cooperation and joint work programmes. Of the key biodiversity related conventions, only the CBD supports actions at ecosystem, species and genetic levels. It focuses on the conservation of biological diversity, the sustainable use of biological resources, and the fair and equitable sharing of the benefits arising from the utilization of genetic resources, including through appropriate access to genetic resources and transfer of relevant technologies, taking into account all rights over those resources and to technologies, and by appropriate funding. The CBD is the most comprehensive international instrument dealing with justice and governance of biodiversity and ecosystems.[203]

The CBD reflects the international principle that States have the sovereign right to exploit their own natural resources, namely biological and genetic resources, pursuant to their own national laws and policies, subject to the constraint that such actions do not cause damage to the environment of other States or of areas beyond the limits of national jurisdiction.[204] Furthermore, Parties are expected to cooperate with other Parties directly, or through international organizations, on conservation and sustainable use of biodiversity in areas beyond national jurisdiction, and on other matters of mutual interest.[205] For implementation, commitments to collaborate with financing and capacity development are also key.[206] In 2010, CBD COP 10 adopted the Strategic Plan for Biodiversity 2011-2020[207] with the purpose of inspiring broad-based action by all countries and all stakeholders in order to meet the three objectives of the CBD through the establishment of a shared vision and mission, grounded in 5 cross-cutting strategic goals and 20 targets known as the Aichi Biodiversity Targets. The vision of the Strategic Plan is that "by 2050, biodiversity is valued, conserved, restored and wisely used, maintaining ecosystem services, sustaining a healthy planet and delivering benefits essential for all people." Its mission is to "take effective and urgent action to halt the loss of biodiversity in order to ensure that by 2020 ecosystems are resilient and continue to provide essential services, thereby securing the planet's variety of life, and contributing to human well-being, and poverty eradication. To ensure this, pressures on biodiversity are reduced, ecosystems are

[207] CBD COP Decision X/2.

restored, biological resources are sustainably used and benefits arising out of utilization of genetic resources are shared in a fair and equitable manner, adequate financial resources are provided, capacities are enhanced, biodiversity issues and values mainstreamed, appropriate policies are effectively implemented, and decision-making is based on sound science and the precautionary approach." This language is reflected in targets 15.1, 15.5, 15.6, 15.9 and 15.a.

A significant part of SDG 15, related targets, and indicators,[208] are in direct alignment with the provisions of CBD and several other biodiversity MEAs, including Protocols under the CBD such as the *Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization* (Nagoya Protocol). The CBD COP has also adopted a series of programmes of work to further the conservation and sustainable use of biodiversity in particular ecosystems, including the *Programme of Work on Dry and Sub-humid Lands* which supports target 15.3,[209] *Expanded Programme of Work on Forest Biological Diversity* which supports target 15.2,[210] *Programme of Work on Mountain Biodiversity* which supports target 15.4,[211] and the *Revised Programme of Work on Inland Water Biological Diversity* which supports target 15.1.[212] The COP has also adopted a series of principles, guidelines and other tools to support implementation of specific provisions of the CBD, such as the *Addis Ababa Principles and Guidelines for the Sustainable Use of Biodiversity*,[213] *Guidelines on Biodiversity and Tourism Development*,[214] *Guiding Principles for the Prevention, Introduction and Mitigation of Alien Species that Threaten Ecosystems, Habitats or Species* which supports target 15.8,[215] *The Ecosystem Approach*,[216] *The Tkarihwaié:ri Code of Ethical Conduct to Ensure Respect for the Cultural and Intellectual Heritage of Indigenous and Local Communities* which supports target 15.6[217] and *Voluntary Guidelines on Biodiversity-Inclusive Impact Assessment* which supports target 15.9.[218] Through new policies and innovative governance arrangements, including monitoring and peer review mechanisms, these COP decisions can contribute to the implementation of SDG 15. National reports provided by Parties in accordance with Article 26 will provide a valuable window on the status of implementation.

The Strategic Plan and Aichi Targets have been adopted by the UN and several biodiversity MEAs as the framework for their work.[219] In addition to the CBD, a number of biodiversity related MEAs offer opportunities to implement SDG 15 effectively at different levels. To preserve threatened and endangered species that are subject to international

trade, CITES aims to control the trade in designated species to avoid their extinction[220] based on the precautionary approach.[221] With the revisions made at COP 16 in 2013, the Parties to CITES have embraced the Aichi Targets and the Strategic Plan for Biodiversity in the *CITES Strategic Vision: 2008-2020*, which aims to "conserve biodiversity and contribute to its sustainable use by ensuring that no species of wild fauna or flora becomes or remains subject to unsustainable exploitation through international trade, thereby contributing to the significant reduction of the rate of biodiversity loss and making a significant contribution towards achieving the relevant Aichi Biodiversity Targets."[222]

Threats to the survival of transboundary species are addressed in the *Convention on Migratory Species* (CMS), which aims to conserve terrestrial, marine and avian migratory species throughout their range.[223] The 120 Parties work together to conserve migratory species and their habitats by providing strict protection for the most endangered species by conserving or restoring the places where they live, mitigating obstacles to migration and controlling other harmful factors, concluding regional multilateral agreements for the conservation and management of specific migratory species or categories of species with unfavourable conservation status which require international agreements for their conservation and management, or species with a status which would significantly benefit from international cooperation under an agreement (listed in Appendix II), and undertaking co-operative research and conservation activities.[224] Appendix II agreements range from legally binding agreements to less formal instruments like memoranda of understanding, and are adapted to the requirements of particular regions. At CMS COP 11 in 2014, the Strategic Plan for Migratory Species was adopted, with the goal of being applicable beyond the CMS by adapting the Aichi Targets as appropriate, thus allowing for the harmonized implementation of the CMS and the CBD through tools such as NBSAPs and the SDGs.[225]

Furthermore, the *Convention concerning the World Cultural and Natural Heritage*[226] (World Heritage Convention) aims to identify and conserve the world's cultural and natural heritage, establishing a list of sites identified by its Parties whose outstanding values should be preserved for all humanity.[227] Parties pledge to conserve their natural heritage, including natural features of outstanding universal aesthetic or scientific value, geological and physiographical formations and areas that are the habitat of threatened species of animals or plants, and natural sites or areas of outstanding universal value from the point of science, conservation or natural beauty.[228] Each Party recognizes its duty to

identify, conserve and transmit its natural heritage to future generations and to do all it can to this end, to the utmost of its own resources, and with any international assistance and co-operation required.[229]

The Ramsar Convention, Parties creates a framework for national action and international cooperation for the conservation and wise use of internationally significant wetlands and their resources, recognizing that wetlands are ecosystems that are important for biodiversity conservation in general, and for the well-being of human communities.[230] In this context, the term "wetlands" includes all lakes and rivers, underground aquifers, swamps and marshes, wet grasslands, peatlands, oases, estuaries, deltas and tidal flats, mangroves and other coastal areas, coral reefs, and all human-made sites such as fish ponds, rice paddies, reservoirs and salt pans.[231] Parties must formulate and implement plans to promote the conservation of wetlands designated to the List of Wetlands of International Importance, wisely use wetlands in their territory as far as possible, promote the conservation of wetlands and waterfowl by establishing nature reserves on all wetlands, and provide adequately for their protection.[232]

The *International Plant Protection Convention*[233] (IPPC) aims to prevent the introduction and spread of plant pests and promote the appropriate measures for their control to protect the world's cultivated and wild plant resources.[234] Parties must establish national plant protection organizations to conduct phytosanitary inspection, certification, disinfestation and disinfection, protection of endangered areas, surveillance, and pest risk analysis.[235] Parties also cooperate by exchanging information on plant pests and technical and biological information for risk analysis, establish regional plant protection organizations, and provide technical assistance to Parties, especially developing countries.[236] To ensure uniform application, the FAO Commission on Phytosanitary Measures developed the International Standards for Phytosanitary Measures (ISPMs), recognised by the *WTO Agreement on the Application of Sanitary and Phytosanitary Measures*.[237]

The *International Treaty on Plant Genetic Resources for Food and Agriculture*[238] (ITPGRFA) provides a framework for its 133 Parties to promote the conservation, sustainable use and equitable sharing of benefits arising from the use of plant genetic resources for food and agriculture (PGRFA), in harmony with the CBD, to ensure sustainable agriculture and food security. As a primary mechanism, the treaty establishes a multilateral system (MLS) for access and benefit-sharing to facilitate equitable access

to designated categories of PGRFA.[239] This system operates in parallel to the access and benefit-sharing rules of the CBD and Nagoya Protocol.

In addition to these seven specialized biodiversity instruments, the Rio Conventions are also relevant to SDG 15. The *United Nations Convention to Combat Desertification*[240] (UNCCD) calls upon national governments, NGOs, and local populations to cooperate to combat desertification and mitigate the effects of drought and dryland degradation.[241] The UNCCD contains five regional annexes, with the initial focus on the African continent as it is the region most threatened by desertification. It promotes sustainable development as the primary means to combat desertification.[242] A strategic planning framework is also established to coordinate national action programs on sustainable development to operationalize the goals of the UNCCD.[243]

Further, through the UNFCCC, Parties aim to prevent dangerous climate change.[244] States commit to promote sustainable management, and promote and cooperate in the conservation and enhancement, as appropriate, of sinks and reservoirs of greenhouse gases, including biomass, forests and oceans as well as other terrestrial, coastal and marine ecosystems.[245] The reduction of emissions from deforestation and forest degradation in developing countries, particularly through conservation, sustainable management of forests and the enhancement of carbon stocks (REDD+), has taken on particular significance in this regard. Depending on how it is executed, REDD+ could either support or undermine the conservation and sustainable use of biodiversity.[246] Parties adopted the Cancun Safeguards at COP 16 to address the issue of adverse impacts through the concept of biodiversity safeguards.[247] Safeguards were also addressed in the Warsaw Framework for REDD+ at COP 19.[248] The Paris Agreement reinforces the importance of forests as sinks and reservoirs of greenhouse gases, and encourages Parties to take action to implement and support the existing framework for REDD+ and alternative policy approaches, such as those on joint mitigation and adaptation.[249]

Besides the aforementioned global instruments, there are many relevant legal instruments with a regional scope. For instance, in southern Africa, the SADC *Protocol on Wildlife Conservation and Law Enforcement*[250] (Maputo Protocol) provides a framework to be taken into account. Likewise, in Europe a role can be played by the *Convention on the*

Conservation of European Wildlife and Natural Habitats[251] (Bern Convention) and its implementation through EU legislation. Similar considerations apply in the Arabian Peninsula regarding the *Convention on the Conservation of Wildlife and their Natural Habitats in the Countries of the Gulf Cooperation Council*,[252] and so on.

4.3 Legal Obstacles Facing the Implementation of SDG 15 on Terrestrial Ecosystems and Biodiversity

Considering the need to deliver on national commitments to deliver on the various MEAs that countries are Parties to, there is a direct correlation between country level legal and policy preparedness to deliver MEAs and the implementation of the SDGs. One key opportunity for connecting various MEAs and help countries prepare to deliver on SDG 15 exists in the form of NBSAPs. Currently more than 100 countries are finalizing their NBSAPs. Repeated calls are being made through various Governing Bodies of MEAs and UNEP to use the NBSAPs as a key entry point to deal with both legal preparedness and policy coherence on issues of biodiversity and ecosystem governance.[253] The UNGA encouraged Parties and all stakeholders, institutions and organizations concerned to consider the Strategic Plan for Biodiversity 2011-2020 and the Aichi Biodiversity Targets in the elaboration of the post-2015 UN development agenda, taking into account the three dimensions of sustainable development.[254] Member States attending the Rio+20 Conference also committed to strengthening the role of UNEP given its role the leading global environmental authority that sets the global environmental agenda, promotes the coherent implementation of the environmental dimension of sustainable development within the UN system, and serves as an authoritative advocate for the global environment.[255]

A reality check in terms of how countries are progressing towards achieving the Strategic Plan for Biodiversity indicates that in most cases, progress on meeting the Aichi Biodiversity Targets is insufficient to achieve them by 2020, and that additional action is required to keep the Strategic Plan for Biodiversity on course.[256] Targeted intervention is urgently required at the national level to ensure that the international environmental legal and policy commitments made through MEAs such as the CBD are seriously pursued using principles of both environmental rule of law and natural law, supported by more effective governance measures. Though countries have shown better policy preparedness to deal with the issue of achieving the objectives of the Strategic Plan for Biodiversity,[257] current legal and governance measures need to be further strengthened.

4.4 Future International Law Research on Sustainable Management of Terrestrial and Biological Resources

The SDGs and Agenda 2030 can promote the transformational change in economies and societies necessary to acknowledge the role and value of biodiversity and ecosystems for economic and social development, and provide the enabling conditions for biodiversity conservation and sustainable use, for more equitable sharing of benefits, and a reduction of the drivers of biodiversity loss.[258] The effectiveness of these efforts is likely to play a key part in the successful realization of SDG 15. Domestic law, policy and governance reform is likely to play an important role in many countries, and updated NBSAPs can be used as a key instrument to chart a road map to develop more effective legal, policy and governance measures. However, a review of about 86 post-2010 NBSAPs reveals that they are yet to integrate and mainstream issues relevant to implementation of the SDGs.[259] Countries should be guided by the key requirements of considering issues relevant to the SDGs within NBSAPs, ensuring that appropriate guidance is provided to the Governing Bodies of MEAs on the need to link with SDGs in implementation of MEAs, developing appropriate tools and methodologies to deal with rule of law at national level using MEAs as an anchor, and building the requisite capacities of stakeholders, including those in national statistical offices.

The means of implementation of Agenda 2030 reflect this, noting the critical importance of cohesive nationally owned sustainable development strategies, supported by integrated national financing frameworks.[260] The protection of natural resources and ecosystems, and environmental sustainability can only be achieved where there are fair, effective and transparent national governance arrangements, and the rule of law is firmly established. Effective legal and policy regimes are essential, as are effective implementation measures, accessible legal procedures and collective access to justice, and a supporting legal and institutional framework and principles. An independent judiciary and judicial process can also prove vital for the implementation, development and enforcement of sound environmental laws. Members of the judiciary, as well as those contributing to the judicial process at the national, regional and global levels, are crucial partners for promoting compliance with, and implementation and enforcement of, international and national environmental law. Collaboration on international research and implementation at all levels, especially among the legal research community, law schools, and international organizations, and among lawyers and researchers from other disciplines, can also strengthen and further support innovative initiatives and solutions to promote and protect biodiversity. By building and supporting the capacity of courts and tribunals, as well as prosecutors, law enforcement officials and other related stakeholders at national, regional and local levels to implement the aforementioned legal instruments, and by facilitating exchanges of best practices through continued knowledge transfer and research, there is great potential to contribute to the pursuit of the SDG 15 on terrestrial ecosystems and biodiversity.[261]

5. Note on Sustainable Development Goal 16 on Peace and Justice for All
Based on a brief by Dr Kamal Hussein, Bangladesh

Goal 16 in very clear terms identified democracy and the rule of law to be essential for building peaceful and inclusive societies, for providing access to justice for all, and for building effective, accountable and inclusive institutions at all levels. Violence both by state and non-state actors were declared to be uncompromisingly subordinated to the rule of law. The resolution urged that erosion of respect for law observed in most of our societies must be decisively reversed. Pathological developments had led to escalation of the levels of violence which threaten democracy and present the most formidable impediment to the emergence of just and stable societies under the rule of law. In this context, effective strategies to reduce and ultimately eliminate violence assume critical importance.

The starting point must be recognition of non-violence as a governing principle for relations between citizens and between the state and its citizens. In order to implement this principle, an effective legal framework needs to be developed. Impartial and effective law enforcement and elimination of double standards must be ensured, when 'police functions' are performed at the international or national level. In particular, national police and internal security forces must function as the protectors and not as the violators of the human rights of citizens. For the rule of law to be upheld, there is need for an active citizenry and for their empowerment. Empowerment requires nurturing and strengthening of civil society by harnessing the energies of people, through their active participation in both governmental and non-governmental bodies. Decentralisation and strengthening of local government institutions must be an integral part of the strategy. Conscious citizens must exercise vigilance, articulate their priorities, monitor the activities of those who exercise governmental powers, and ensure that the checks and balances written in the constitution function as more than paper safeguards.

In this context, SDG 16 powerfully reaffirms the critical importance of sound governance and the rule of law in curbing violence and terrorism as being essential for achieving sustainable development. It is noteworthy that it specifies as its very first objective that significant reduction of all forms of violence. To realize the SDGs, the following objectives are identified as the ones which need to be pursued: (a) promotion of the rule of law to ensure equal access to justice for all; (b) promotion and enforcement of non-discriminatory laws; (c) significant reduction by 2030 of illicit financial and arms flows; (d) reduction of corruption and bribery in all forms, and to that end, developing effective and transparent institutions; (e) ensuring responsive, inclusive and participatory decision making at all levels; (f) strengthening relevant national institutions by ensuring protection of fundamental freedoms and access to information; and (g) international cooperation for building capacity at all levels. The global response to the violence recently perpetrated in different states has led to a call for prompt and effective action at all levels. Goal 16 provides clear guidance for the action needed to be taken to combat violence and terrorism.

6. Further Scoping to be Completed in 2017

Initial scoping of the current rules and practices, and the most important contributions of international law to sustainable resources management has been conducted in 2015 and 2016 by Committee Members and respected expert colleagues in relation to key natural resources highlighted by the 2015 SDGs. In accordance with point (i) of the Work

Programme, further scoping notes shall be completed by Committee Members in 2017, building on and adopting the agreed format of the initial Committee discussion and research outcomes, and covering the following additional topics:

6.1 Rules and Practices of International Law for the Sustainable Management of Precious Mineral Resources, including Silver, Gold & Diamonds
Abstract by Prof Isabel Feichtner, Germany & Dr Guy Jules Kounga, HQ/Cameroon

A new scoping brief for the Committee will set out the economic relevance of precious mineral resources, the main mining sites and trade flows. The demand for gold, in particular, increases in times of global financial instability as gold performs a monetary function as a store of value. Not only developing countries perceive gold mining as a potential way to stimulate the economy, to generate employment and public revenue, but also in Europe renewed interest in gold mining could be observed during the Eurocrisis, e.g. in Greece and France. Given the high environmental costs of gold mining as well as the limited demand for gold by the real economy this development can be deemed worrisome from a sustainability perspective. It raises the question how the institutions of money and finance may be reformed to de-incentivize gold mining which is driven purely by a profit or money motive. After sketching the politico-economic context of precious mineral extraction the scoping brief will give an overview of the international and transnational law, including soft law initiatives, seeking to promote their sustainable management. The focus will be on legal regimes of particular relevance for the precious minerals industry. These include regimes that aim to contain trade in conflict minerals such as the Kimberley Process Certification Scheme, as well as US and EU legislation on conflict minerals trade, as well as regimes that seek to contain the environmental damage caused by mining, such as the Minamata Convention of 2013 which seeks to phase out mercury use and specifically regulates the informal sector of artisanal and small-scale gold mining. Finally, the scoping brief will indicate obstacles to the realization of the legal regimes' objectives, such as enforcement deficits (e.g. of the Kimberley Process standards) or unintended side effects such as trade diversion caused by conflict minerals certification regimes. The brief will further discuss how such obstacles may be overcome, an important innovation in this area being technologies that allow for the tracing of minerals. The brief will propose further research on the question how the international financial system promotes unsustainable resource extraction and how financial institutions may be reformed to enhance the sustainable management of precious minerals.

6.2 Rules and Practices of International Law for the Sustainable Management of Mineral Commodity Resources, including Nickel, Copper & Bauxite
Abstract by Dr Ilaria Espa, Italy

An additional scoping brief shall be prepared for the Committee surveying and discussing developments for mineral commodity resources. As the brief will demonstrate, attention to mineral commodity resources has grown exponentially in recent years due to a number of structural and cyclical factors. First, the major ongoing transformations occurring in China and other emerging economies, from urbanization to industrialization, have created unprecedented demand for mineral resources. Second, the dynamics at the root of the 2000s commodity 'supercycle' have increased competition for scarce and heavily geographically concentrated mineral resources, challenging the traditional South-North patterns against the backdrop of skyrocketing commodities prices. The sudden and

profound reversal of this trend as of the mid-2010s, with mineral commodity resources prices plunging to their lowest levels in more than a decade, has moreover brought back the issue of commodity price volatility. Finally, the irreplaceable role of many mineral commodities, including nickel, copper and bauxite, in key manufacturing sectors and many emerging technologies, matched with the typical low elasticity of supply and demand in the mining industry, have contributed to an escalation of tension between newly industrializing resource-rich economies and import-dependent Western countries over access to mineral supplies, leading to three major World Trade Organization (WTO) disputes (the most recent one, launched in July 2016 by the US, involves the use of export restrictions by China on several mineral commodities, including copper). In this context, the aim of this scoping brief is to review the international law instruments that are currently promoting a more sustainable management of mineral resources. Although there are some references to mineral exploration and exploitation in international legal instruments, many treaties, conventions and declarations deal with subjects that are only at a first glance peripheral to the development of natural resources and that have thus direct implications for mining related activities in light of their social costs and environmental impacts. Examples include human rights and environmental and waste management issues, as well as measures to alleviate and eradicate diseases, poverty, and improve living conditions. Importantly, these also include the seven principles of the New Delhi Declaration. The challenge for international law in regulating the issue of how to ensure sustainable management mineral resources consists of the fact that mining activities, albeit for the vast part conducted by a few international mining companies that invest in mining exploration and exploitation depending on price trends, are ultimately dependent upon concessions which are granted by national states, which detain sovereign rights over natural resources and remain in principle free to determine by means of national law what are the conditions for the concessions. The development of the international investment law framework in this respect is important inasmuch as, according to recent statistics, one fifth of all investment disputes concern the resource sector. Yet, it remains to be seen whether a system which historically revolved around the protection of the investment rather than its 'regulation' is still adequate in light of the emerging body of international law on sustainable development, particularly with respect to the principle of sustainable management of natural resources. The scoping brief will analyse the challenges coming from this complex interplay and will attempt to identify future trends and research priorities in this field.

6.3 Further briefs

Further briefs are projected for additional topics such as Rules and Practices of International Law for the Sustainable Management of Forests (Prof Konstantia Koutouki, Canada & Dr Christina Voigt, Norway), Rules and Practices of International Law for the Sustainable Management of Rare Earth (Dr Marc Burgenberg, Germany), and Rules and Practices of International Law related to Social and Environmental Aspects of Natural Gas Exploitation, including Shale Gas Resources[262] (Prof Paolo Farah, Italy & Prof

[262] To be based on P Farah, "A Comparison Between Shale Gas in China and Unconventional Fuel Development in the United States: Water, Environment and Sustainable Development" (2016) 41(2) Brooklyn Journal of International Law 579 and P Farah,"Offshore Natural Gas Resources in the Eastern Mediterranean in the Relations to the European Union: A Legal Perspective through the Lenses of MedReg" (2015) 8(6) Journal of World Energy Law and Business 559.

John Dernbach, USA/Chair). Once these notes have been considered by the Committee, cross-cutting lessons learned shall be discerned and extrapolated to better understand the current relevance and role of international law in the sustainable management of natural resources, both transboundary and, more problematically, in the purely domestic context.

III. Commitments to Sustainable Development and Sustainable Use of Natural Resources in the New Paris Agreement on Climate Change[263]

Breaking nearly seventeen years of deadlock, 197 Parties to the UNFCCC concluded a new international agreement on climate change in 2015. After intense negotiations during UNFCCC COP 21, the Paris Agreement was adopted on 12 December 2015. Parties aim to hold increases in global temperatures well below 2 °C, pursuing efforts toward a 1.5 °C limit, to increase adaptation to climate impacts and foster resilience, and to harness finance flows for low-greenhouse gas (GHG) emissions and climate-resilient development.

1. Commitments to Sustainable Development in the New Paris Agreement and its Adoption Decision

Sustainable development permeates the Paris Agreement and its Adoption Decision, which aim to "strengthen the global response to the threat of climate change in the context of sustainable development and efforts to eradicate poverty."[264] In the accord, States set a 'high ambition' framework for new climate mitigation, adaptation and finance commitments by countries, backed by measures for inter-governmental cooperation on loss and damage, forests and land management, technology development and transfer, education and capacity building, with a fit-to-purpose framework of transparency, peer review, stock-taking and compliance support. Adopting a 'bottom up' approach, the accord builds on submissions of climate action plans to the UNFCCC by 188 countries, as Nationally Determined Contributions (NDCs) to the global response to climate change. Through a series of cooperative frameworks and mechanisms, each of which establishes different legal rights and obligations for Parties, the Paris Agreement explicitly makes provision for the needs of developing country Parties, especially the most vulnerable. These multilateral mechanisms, some of which link directly to previous COP Decisions or flow from experience under the Kyoto Protocol, while others are shared with the UNFCCC itself, seek to support Parties to (1) achieve nationally determined contributions to mitigation and adaptation (NDCs), through (2) mobilization of resources, (3) transparency, global stocktaking and review, (4) a sustainable development mechanism and non-market approaches, (5) technology transfer, and 6) further implementation measures, such as capacity-building, education, as well as a compliance and implementation mechanism. The focus on sustainable development is especially relevant for the leading high ambition countries, for emerging economies and for the most vulnerable countries of the world that are otherwise often excluded from international law making.

The commitment to sustainable development permeates the Paris Agreement and its Adoption Decision. Indeed, the Decision begins by welcoming Agenda 2030 and the SDGs, particularly Goal 13, and acknowledging that climate change is a common concern of humankind. The Adoption Decision also recognizes that when taking action on

[263] Section based on analysis by Prof Marie-Claire Cordonier Segger et al, as an article for the Cambridge Journal of International and Comparative Law, forthcoming in 2017.

[264] Paris Agreement, *supra* n2, Art. 2(1).

climate change, States must respect, promote and consider their human rights obligations; the right to development; the rights of indigenous peoples, children and others in vulnerable situations; gender equality and empowerment; and inter-generational equity. It acknowledges the need to promote universal access to sustainable energy in developing countries, as well as the deployment of renewables, especially in Africa. Operationally, the Adoption Decision also clarifies that the Subsidiary Body for Scientific and Technological Advice will undertake a work programme under the framework for non-market approaches to sustainable development referred to in Article 6 of the Paris Agreement,[265] invites all UN agencies and financial institutions to provide information on how their development assistance and climate finance programmes incorporate climate-proofing and climate resilience measures,[266] recognizes the link between adequate and predictable financial resources and sustainable management of forests,[267] recognizes the co-benefits of voluntary mitigation actions for adaptation, health and sustainable development,[268] recognizes the importance of taking national sustainable development priorities into account in the existing technical examination process on mitigation[269], and encourages Parties to make effective use of the Climate Technology Centre and Network to obtain assistance to develop economically, environmentally and socially viable project proposals in the high mitigation potential areas identified in the process.[270]

2. Principles of Sustainable Development in the Paris Agreement and its Adoption Decision

In the New Delhi Declaration, seven principles of international law on sustainable development are highlighted, as discerned from a decade of analysis.[271] These principles are increasingly reflected in the decisions of international courts and tribunals on sustainable development.[272] The principles include: 1) sustainable use of natural resources whereby States have sovereign rights over their natural resources, and a corresponding duty not to cause (or allow) undue damage to the environment of other States in the use of these resources, 2) inter and intra-generational equity and the eradication of poverty, 3) common but differentiated responsibilities and respective capabilities, 4) the precautionary approach to human health, natural resources and ecosystems, transferring the burden of proving lack of significant harm from an undertaking to the proponent, in cases of scientific uncertainty, 5) public participation, backed by access to information and justice, 6) good governance, with measures to support rule of law, coherence and anti-corruption,

[272] MC Cordonier Segger w CG Weeramantry, eds, *Sustainable Development in International Courts and Tribunals* (Routledge, 2017 forthcoming).

and the 7) integration and interrelationship of human rights and social, economic and environmental objectives. As has been noted elsewhere, this last principle may sometimes be called (in short-hand) a 'principle of sustainable development', holding that States must take into account the environmental and social (including human rights) aspects of economic plans or projects, integrating related measures and costs, to promote more sustainable development.[273] These important sustainable development principles such as transparency and public participation, integration of environmental concerns and human rights into economic decision-making, good governance, precaution, inter-generational equity, common but differentiated responsibilities and respective capacities (CBDRRC), and sustainable use of natural resources such as energy, are reflected in the Preamble to the Paris Agreement Adoption Decision. Each of the New Delhi Declaration principles of international law on sustainable development is also reflected in the Paris Agreement in different ways.

The duty of States to ensure sustainable use of natural resources

In the Paris Agreement, atmospheric and carbon resources are framed as key resources to be managed in a sustainable manner that avoids dangerous climate change, as noted in the preamble and substantive sections on mitigation. For example, in Article 2, Parties recognize that limiting the temperature increase to 1.5 °C above pre-industrial levels "would significantly reduce the risks and impacts of climate change." As emphasized in Article 5, Parties are encouraged to take action on sustainable management of forests as a key natural resource and carbon sink, including through REDD+ and alternative policy frameworks such as joint mitigation and adaptation approaches for the integral and sustainable management of forests. The protection of ecosystems, biodiversity, and oceans is also prioritized in the Paris Agreement, alongside the need to build the resilience of socio-economic and ecological systems, including through sustainable management of natural resources, in Article 7.9(e) on adaptation.

The principle of equity and the eradication of poverty

The notion of equity arises frequently in the Paris Agreement, as was posited prior to the conclusion of the treaty by leading legal scholars. In the Preamble of the treaty, there are two references to equity and intergenerational equity, which also appear in the Preamble of the Adoption Decision. In the operation of the Paris Agreement, it is noted that Parties should protect the climate on the basis of equity and the principle of CBDRRC, as per Articles 2 and 4. The importance of efforts to eradicate poverty are also highlighted in the Preamble to the Agreement at paragraphs 8 and 9, in the statement of the general objective of the Agreement at Article 2, and in relation to cooperation to implement NDCs at Article 6.

The principle of common but differentiated responsibilities and respective capacities

The Paris Agreement will be implemented to reflect the principle of CBDRRC, in light of different national circumstances, as per Article 2. Each Party's successive NDC will

[273] MC Cordonier Segger & A Khalfan, *Sustainable Development Law: Principles, Practices and Prospects* (Oxford University Press, 2004); MC Cordonier Segger & CG Weeramantry, eds, *Sustainable Justice* (Martinus Nijhoff, 2004); MC Cordonier Segger, "International Law on Sustainable Development" in D Armstrong, *Routledge Handbook on International Law* (Routledge, 2008).

represent a progression beyond their earlier one, with its highest possible ambition, reflecting its CBDRRC as per Article 4.3. Each Party will also strive to formulate and communicate long-term low GHG development strategies, mindful of CBDRRC, as per Article 4.19, and as also recognized in the Preamble at paragraph 3. The Paris Agreement, to reflect CBDRRC, also commits to assistance in adaptation efforts, the provision and the mobilization of financial assistance, facilitation of technology transfer, and capacity building.[274]

The principle of the precautionary approach to human health, natural resources and ecosystems

As is clear in the Preamble at paragraph 4 on the urgent 'threat' of climate change, and in Article 2.1 on the need to strengthen global response to the 'threat' of climate change and to significantly reduce the risks of climate change, the Paris Agreement and the UNFCCC itself are founded on the precautionary principle. To stabilize GHG concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system and in order to allow ecosystems to adapt naturally to climate change, so as to ensure that food production is not threatened and to enable economic development to proceed in a sustainable manner, mitigation and adaptation actions must be taken even in the event of scientific uncertainty as to the exact contours of the challenge. As asserted in several places in the Paris Agreement, including the Preamble at paragraph 4, action on climate change should also be guided by the best available scientific knowledge. While not detracting from the precautionary nature of the Agreement, the emphasis on continuing to advance scientific knowledge is recognized at Article 4.1 on the long-term goal, at Articles 7.5 and 7.7(c) on adaptation, and at Article 14.1 on the global stocktake, with specific reference to the work of the IPCC. Such 'best available scientific knowledge', however, is evolving over time, and precaution may be required when the science is uncertain.

The principle of public participation and access to information and justice

As noted in the Adoption Decision and the Paris Agreement, public participation and access to information are crucial for global responses to climate change, and for the success of the new framework established by the Paris Agreement itself.[275] Public participation is emphasized throughout, including at Article 4 on mitigation, at Article 7 on adaptation, also Article 6 on the Sustainable Development Mechanism and non-market approaches, aiming to enhance public and private sector participation in the NDCs. Further, as per Article 12, Parties shall enhance education, training, public awareness, public participation and public access to information, recognizing their importance for actions. The treaty depends on public engagement, informed by the information that is made available through National Communications submitted to international registries, the global stocktake and the peer review, to assist Parties to progressively intensify their contributions to mitigation, adaptation, finance and other aspects of the global response to climate change. There is an unprecedented recognition of the importance (for some) of "climate justice" in taking action to address climate change, in the Preamble at paragraph 13. Climate change is arguably the justice challenge of this century, particularly for those

[274] Paris Agreement, *supra* n2, Arts. 7(7)(d), 9(1)-(3), 10(6), and 11(1)-(3).

[275] Paris Agreement Adoption Decision, *supra* n88, Paras. 83-84, 110; Paris Agreement, *supra* n2, Preamble at Para. 14

disproportionately affected by its impacts. Further, as recommended by the International Bar Association, there is a need to "ensure communities, individuals and governments have substantive legal and procedural rights relating to the enjoyment of a safe, clean, healthy and sustainable environment and the means to take or cause measures to be taken within their national legislative and judicial systems and, where necessary, at regional and international levels, to mitigate sources of climate change and provide for adaptation to its effects in a manner that respects human rights." Although "access to justice" is not expressly mentioned, Parties can access UNFCCC dispute settlement measures, as per Article 24.

The principle of good governance

Good governance is essential in the context of the Paris Agreement, particularly for the cooperative approaches that involve the use of internationally transferred mitigation outcomes towards NDCs. Indeed, Article 6 notes that transparency and robust accounting are required in the measurement of such outcomes. In the establishment of the Capacity-building Initiative for Transparency, Parties seek to build institutional and technical capacity with regard to the transparency requirements defined in Article 13 of the Paris Agreement.[276] Further, they are committed to ensuring transparency of action and also support, including the provision of climate finance, among other measures.[277]

The principle of integration and interrelationship, in relation to human rights and social, economic and environmental objectives

By recognizing the far-reaching nature of climate change across environmental, social and economic domains, as well as the need to act in a timely and effective manner in order to prevent detrimental impacts, the principle of integration of environmental and social/human rights considerations into economic decision-making permeates the Paris Agreement. The integration of economic and environmental concerns is found in the reference to "climate-resilient development" in Art 2.1(c), and in the linking of economic growth and sustainable development in the context of technology transfers at Article 10.5. Integration is also apparent in the references to economic diversification and sustainable resource management in the context of adaptation at Article 7.9(e), which also highlights the resilience of socioeconomic and ecological systems, underlining the need for adaptation measures to integrate all three objectives. The Paris Agreement supports the integration of environmental considerations into economic and social development, while ensuring that climate change actions are economically viable and respect human rights.[278] This principle is also reflected in references to safeguarding food security, and to respect for human rights, gender equality, indigenous rights, and the integrity of Mother Earth.[279]

[276] Paris Agreement Adoption Decision, *supra* n88, Para. 74(a), (b), (h).
[277] *Ibid*, Para. 93(c).
[278] *Ibid*, Preamble at Para. 7; Paris Agreement, *supra* n2, Preamble at Para. 11
[279] Paris Agreement, *supra* n2, Preamble at Paras. 9, 13.

As the ILA's 2014 Washington Resolution on Climate Change[280] affirms, States have an obligation "to employ due diligence efforts to mitigate climate change impacts"[281] in the design of any social and economic development plan which may result in significant emissions of greenhouse gases. In determining whether the substantive and procedural actions taken are in accordance with the due diligence principle, it suggests that "economic development and available resources, scientific knowledge, the risks involved in an action, and the vulnerability of affected states shall be taken into account".[282] The economic, social and environmental aspects of sustainable development are reflected in the new climate agreement, providing a framework to ensure that Parties' commitments are equitable, sustainable, and effectively implemented to avoid dangerous climate change. Indeed, based on the available scientific information, there can be no sustainable development if the worst-case scenarios for climate change are not averted. The effective implementation of the Paris Agreement, with due consideration for the applicable principles of international law, is necessary to achieving sustainable development.

3. Future Implementation of the Paris Agreement for Sustainable Development

The negotiation of the new climate change treaty occurred in an environment characterized by the emergence of new forms of international governance. Fragmentation of international law into increasingly specialized regimes; polycentricism and multi-level action in rule-making and implementation; experimentalism and revisability of legal obligations; increased participation of non-State actors; increased recourse to non-legally binding standards – such influences are reshaping the context for negotiation of treaties, and shall affect eventual implementation and compliance. Such developments inform and transform the roles and engagement of all actors in the UNFCCC process including State delegations, but also intergovernmental organizations and non-State observers from civil society, academia and the private sector. Indeed, jurists, inter-governmental organizations, countries, legal institutes and associations, law schools, judges' networks and other members of the law and governance community worldwide are collaborating, in the new Climate Law and Governance Initiative to advance effective legal and institutional reform on climate change.[283]

In order to develop the initial 'rulebook' for the implementation of the Paris Agreement, the Ad Hoc Working Group on the Paris Agreement (APA) was established at the 44th sessions of the UNFCCC Subsidiary Body for Implementation (SBI 44) and the Subsidiary Body for Scientific and Technological Advice (SBSTA 44) in Bonn, Germany from

[280] Resolution 2/2014, D*eclaration of Legal Principles Relating to Climate Change*, Committee On Legal Principles Relating To Climate Change, International Law Association 76th Conference, Washington D.C., USA 7-11 April 2014.

[281] *Ibid*, Para. 5.

[282] *Ibid*, Para. 7(A)(3).

[283] The Climate Law and Governance Initiative was launched in Paris in 2015 at the inaugural Climate Law and Governance Day, co-chaired and hosted by the Centre for International Sustainable Development Law (CISDL), University of Cambridge LCIL, La Sorbonne-Pantheon University IREDIES, University of Nairobi CASELAP, University of Chile CR2, and over 60 other faculties of law, relevant inter-governmental organizations, legal associations, law firm and others, including the ILA as a founding collaborator. Online: http://www.climatelawgovernance.org.

16–26 May 2016. The work of this APA was followed by the first Conference of the Parties serving as the Meeting of the Parties (CMA) to the Paris Agreement, which met for the first time in Marrakech, Morocco from 15-18 November 2016. Parties at the CMA committed to completing the 'rulebook' by COP 24 in 2018.

This Committee may find that its work to analyse and better understand the principles, practices and prospects of international law in this field to be even more crucial than anticipated.

IV. Future Work Programme and Forward Agenda

1. Future Work Programme

The Future Work Programme of the Committee considers three further issues. In particular, it will examine the principle of sustainable use of natural resources in international law over the next two years, alongside the regulation of natural resources in developing countries, in order to inform the next report. Finally, it will consider possible recommendations for guidelines for sustainable management of natural resources in accordance with international law. In particular, the focus shall be on:

(ii) **Principle of Sustainable Use of Natural Resources in International Law**

With regards the second tranche of work, on the **Principle of Sustainable Use of Natural Resources in International Law**, the following activities and deliverables are planned:

Activity 2: Form a working group to engage interested Committee Members in discussions and drafting of a series of short working papers leading to a report for peer discussion as took place during the 2016 Biennial Conference in South Africa.

Report II: An examination of the principle of sustainable use of natural resources, analyzing the duty of countries to use natural resources in a manner that is sustainable, considering the obligation to undertake impact assessments of plans and projects that might affect sustainable development, transboundary resources management, the sharing of resources in the world interest and taking into account the interests and needs of future generations, drawing on several Annexes:

Annex – Working Paper II-1: Survey of innovative economic instruments to support sustainable use of natural resources and their status and implementation in international law, including measures within regional trade agreements, international investment agreements and other economic treaties (Dr Markus Gehring, Germany & Dr Fabiano de Andrade Correa, Brazil);

Annex – Working Paper II-2: Survey of innovative instruments to support sustainable use of natural resources and their status and implementation in international law, including measures within multilateral environmental agreements (Prof Marie-Claire Cordonier Segger, Canada & Prof Arie Trouwborst, The Netherlands);

Annex – Working Paper II-3: Survey of the relationship between natural resource management and the enjoyment of human and peoples' rights, including measures within agreements and contracts related to indigenous rights (Prof Louis Kotze, South Africa, Ms Amanda Kron, Sweden, & Prof Maki Nishiumi, Japan);

Annex – Working Paper II-4: Summary analysis of key decisions of international courts and tribunals on matters related to natural resource management from 2002 – 2017 (Dr Freya Baetens, Belgium, Dr Ilaria Espa, Italy & Dr Ximena Fuentes, Chile).

(iii) **Regulation of Natural Resources in Developing Countries**
With regards the third set of work, on **Regulatory Approaches to Natural Resources in Developing Countries**, the following studies leading to deliverables are proposed:
Activity 3: Form a working group to engage interested Committee Members in discussions and drafting of a series of short working papers leading to a report, supported by a task team of legal researchers from Member law faculties, for peer review during an online process and an international conference event in 2017.
Report 3: A report examining innovative national and international approaches to the regulation of natural resources, commenting on the impact of such approaches on the sustainable use of natural resources and on the evolution of international law in this field.
Annex – Working Paper III-1: Survey of innovative regulatory approaches to support equitable access to and benefit-sharing from natural resources for the poor (Mr Frederic Perron-Welch, Canada);
Annex – Working Paper III-2: Review of innovative legal approaches to address the growing external ecological footprint from natural resource demand by major economies (tbc);
Annex – Working Paper III-3: Review of regulatory approaches to combat illicit flows and enhance governance of natural resource revenues (Prof Isabel Feichtner, Germany);
Annex – Working Paper III-4: Review of regulatory approaches to address sustainable use of wetlands and transboundary watercourses (Dr Otto Spijkers, The Netherlands & Prof Maki Nishiumi, Japan).

(iv) **Guidelines for Sustainable Management of Natural Resources in Accordance with International Law**
Activity 4: Rapporteurs and Committee Members draw together key issues and lessons learned from Reports 1-3 and their annexes, in consultation with IUCN and other relevant partners, taking into account the SDGs related to natural resources agreed in the post-2015 development agenda negotiations of the UNGA, producing draft Guidelines and a leading commentary for broad consultation and discussion in a parallel event during ILA 2018, and launch in ILA 2020.
Final Product 4: As a final product, the Committee intends to elaborate practical Guidelines for the Sustainable Management of Natural Resources in Accordance with International Law, in a first draft to be submitted at the ILA 2018 Biennial Conference and to be finalized and accompanied by a leading commentary, preferably in 2018 but no later than at ILA 2020 Biennial Conference in Kyoto.

2. The Forward Agenda

The Committee agreed the Work Programme and Methodology at the ILA 2014 conference in Washington, adopting a collaborative and inclusive approach, seeking to engage Committee Members as experts in joint preparation of Committee outcomes, using both in-person and online approaches. The Work Programme and Committee membership was finalized and agreed by email in 2014-15, as Committee Membership increased.

Committee Members are forming working groups based on their interests and research/practice agendas, towards elaboration of outcomes. Depending on their interests and expertise, Committee Members are welcomed in any/all working groups, and commit to the series of deliverables as co-author. The Reports are based on substantive analytical briefs or papers, prepared collaboratively by responsible Committee experts. Outcomes

of working groups are sent to all Committee members for review, and discussed in international meetings prior to adoption as Reports. Working groups organize research events with online collaborative elements, as space for peer discussions working papers and draft reports, this is likely to lead to book publications. Committee Members also engage young scholars and professionals to serve as pro bono research assistants in documenting innovative natural resources regulations and other tasks. Seminars to date have included a legal expert seminar kindly hosted by the Committee Chair, Prof Nico Schrijver from 12-14 November in Leiden in 2015 after the adoption of the SDGs by the United Nations. An international law conference may be held in Montreal in 2017. The eventual Guidelines and accompanying Commentary will be elaborated by the Rapporteurs, guided by the Chair, and reviewed by the Committee Members prior to adoption.

COMMITTEE ON THE ROLE OF INTERNATIONAL LAW IN SUSTAINABLE NATURAL RESOURCE MANAGEMENT FOR DEVELOPMENT

WORKING SESSION

Tuesday, 9 August 2016, 9.00am

Chair: Professor David Freestone (UK)

The Chair informed attendees that the Rapporteur was not able to attend the conference. However, copies of the report were available, and were distributed around the room.

Professor Nicolaas Schrijver (Netherlands) introduced the Committee as the youngest ILA Committee, having been established only a few years earlier. It built on the long and renowned history of the previous committees of ILA directed by Dr Kamal Hossain (Bangladesh). He expressed his gratitude that Dr Hossain was in attendance.

In 1978, the ILA established the Committee on Legal Aspects of a New International Economic Order (NIEO Committee). The NIEO Committee met for the last time in Seoul in 1986 and adopted a very interesting declaration on the progressive development of principles of public international law relating to the creation of a new international economic order. He also noted that the work of the Committee on Legal Aspects of Sustainable Development had resulted in the adoption of the 2002 New Delhi Declaration on Principles of International Law in the field of Sustainable Development, which Professor Schrijver presented here in Johannesburg in 2002 during the World Summit on Sustainable Development, on behalf of the ILA.

After New Delhi, a follow up Committee was established to look at more details on how the judiciary, especially at the domestic level, could make use of the New Delhi Declaration.

The core mandate of the present Committee was supposed to be more specific, focusing on how to manage natural resources in a sustainable way in order to contribute to development. The new Committee would focus on the principles of sustainable development and analyse the principle of sustainable use of natural resources as a crucial element of the evolving international law of sustainable development, in view of its firm status in treaty law and its frequent application in decisions of international courts and tribunals.

Professor Schrijver elaborated and highlighted that effective governance of natural resources, such as water, forests, biodiversity, landscapes, minerals, and energy (particularly from renewable sources), was crucial for sustainable development, as was the realization of the relationship between armed conflict and natural resource management. He stressed the need to analyse and build better global understanding of the role and legal status of principles and rules of international law for the sustainable use of natural resources, as well as their implementation in the practice of States and international organisations, and their reflection in the decisions of international courts and tribunals.

He then recalled the mandate of the Committee, especially on the crucial current issue of how international law could support the sustainable use and stewardship of natural resources, while also contributing to an adequate living standard and the realisation of human rights for all. There were several challenges to the work of the Committee reflecting on the concept of the principle of sustainable development. Nearly all countries,

economies and peoples depended on nature and its natural resources, yet there was a real danger of exhaustion of all natural resources and degradation of critical species, the ecosystem and the issue of climate change. These challenges were reflected in the Committee's mandate.

Professor Schrijver apologised for the late publication of the report, which he described as a very rich report, building upon very productive meetings in Leiden, the Netherlands, in November 2015. He then went on to note that, since the last ILA conference, at least two important developments had taken place that were relevant to the mandate of the Committee.

The first development was the adoption of the Sustainable Development Goals (SDGs) on the 70th anniversary of the United Nations. The SDGs differed from the Millennium Development Goals (MDGs), in at least three respects:

- The SDGs were universal, in a sense that they did not just formulate developmental goals for developing countries and for people living in developing countries, but they also addressed developed country issues such as those relating to their unsustainable patterns of production and consumption.
- The SDGs were inclusive in that they were not only addressed to States and international organisations, but also very much involved people; they were built upon the work of civil society organisations, business communities, trade unions, which all had a role to play.
- The SDGs used an integrated approach relating to issues of peace, security, justice for all, environmental conservation, sound macro-economic development, and respect for human rights.

Professor Schrijver noted that there were concerns that the 2030 Agenda for Sustainable Development was overloaded. Additionally, there was the issue of how to better to organise the implementation measures at all relevant levels, ie at the local, national, regional and global levels. This issue was discussed in the previous Committee's meetings and called for a better national and international institutional architecture for promoting sustainable development. The current system of consultation and decision making on sustainable development issues was very poorly organised, fragmented and ineffective.

Professor Schrijver highlighted that the SDGs, like the MDGs, might well be capable of generating important normative force. The ILA was in a unique position to analyse that and even to contribute to that work. The 17 SDGs were very important for the work of the Committee. Nearly half of them – if not all of them – were directly related to the mandate of the Committee, while others were indirectly relevant. The Committee should link its work with the goals of 2030 Agenda for Sustainable Development. The Committee had an important task not only to analyse but perhaps also to seek to contribute to the normative value of the SDGs, which were mostly of a political nature.

The second development was the adoption of the Paris Climate Agreement. It was very encouraging that the international community could finally adopt a new climate treaty after years of stalemates following the 1992 United Nations Framework Convention on Climate Change and the 1997 Kyoto Protocol. However, there were serious concerns. Was the Paris Agreement up to the task of really combating climate change effectively, noting

the innovative approach of countries submitting Nationally Determined Contributions (NDCs)? It was no longer like the Kyoto Protocol, which obliged States Parties to reduce their emissions of greenhouse gases in line with specific quantitative commitments.

Professor Schrijver also stressed the importance of having an implementation or monitoring machinery to verify that countries had achieved what they had committed to do, when they submitted their nationally determined contributions.

Nonetheless, in the Paris Agreement, there was a strong set of references to areas within the mandate of the Committee. There were also references to promoting respect for human rights, the right to development, the rights of indigenous people, and the right of children, gender equality, and the important principle of intergenerational equity. These rights were mentioned in the Paris Agreement. The report analysed the extent to which the New Delhi Declaration was reflected in the Paris Agreement. For example, the principle of sustainable use of natural resources, together with the important commitment not to raise the temperature higher than 2 degrees Celsius, was an important goal of the Paris Agreement. There were also several articles in the Paris Agreement relating to the principle of common but differentiated responsibilities, a principle that featured very prominently in the New Delhi Declaration. The precautionary principle was also reflected in the Paris Agreement. Professor Schrijver encouraged members to do more study to have a firm legal grip on the implementation of the Paris Agreement.

Professor Schrijver concluded by noting that in his own country, the Netherlands, there was an interesting case pending before the Supreme Court, the so-called Urgenda case. The case was brought by a foundation, some researchers and concerned citizens. They instituted legal proceedings to compel the government to do more to combat climate change. Significantly, the Court acceded their claim and ordered the government to speed up and to embark on a policy to reduce emissions by 2020 by at least 20% compared to 1990 levels. They based their claim on a combination of Dutch law, European Union law and international climate law. They also made use of the reports of the Intergovernmental Panel on Climate Change (IPCC), the Kyoto Protocol, court decisions, statements of the Dutch delegation, and argued that there was a hard core for a legal duty to reduce the emissions substantially lower than the current policy. If that would not change in years to come, then they would achieve at best a 16% reduction by 2020. In the view of the claimants this would result into a violation of the duty of care which the Dutch government had towards its citizens. This case was basically a civil action against the government to do more.

Dr Markus Gehring (Germany) presented the report of the Committee on behalf of the Rapporteur. He started by recalling that the Committee had had fruitful discussions at the Washington conference, in both open and closed session, where it decided to trace the sustainable use of natural resources principles through different subject areas. This was subsequently done, and Committee members were able to share their experiences in Leiden.

Now was a very busy period for sustainable development in general, and in particular as regards sustainable use of natural resources. Times were changing rapidly and the reason why the report had taken longer to produce was that the Rapporteur had just edited a 900 page book in which traced the development and principle of sustainable development

in recent decisions of international and national courts and tribunals. The work of the Committee had already resulted in the publication of a book (forthcoming), references to which were footnoted in the report.

Turning to the report, Dr Gehring indicated that the Committee decided in Leiden to take active note of the most recent developments on sustainable development goals and the Paris Agreement, and that they would try to reflect this in the report. He referred to the wealth of the decisions of international courts and tribunals that were referenced in the report, and which had been handed down in the last 18 months alone. They all concerned natural resources and sustainable development, and some of the crucial parts of those decisions reflected a growing understanding of sustainable development. Dr Gehring added his congratulations to Professor Schrijver and Professor Cymie Payne, who had been the trailblazers for the legal analysis, which was now filtering down through the decisions of international courts and tribunals. He stressed the need to have time to discuss some of those issues and to have the Committee members express their views on sustainable development elements of the recent PCA decision on the South China Sea.

The report was reorganised to reflect the SGDs. Different members of the Committee had contributed heavily to the report. The global view was that the Committee was not starting from zero with its work. When it comes to the SDGs, many of the targets were already part of international law in one shape or another.

Finally, Dr Gehring indicated that there are more SDGs that the committee needs to reflect upon and this report is not yet finished, since at this point is it a draft report and we need to gather more information going forwards. He then reiterated, before the next meeting of the ILA in Sydney, to have a seminar at Markel University in Canada just to advance the work.

What was done so far in the report was not only to show where the SDGs were at and the extent to which they were reflected in international law, but also to highlight the current obstacles and limitations to implementing the SDGs. In this regard, he drew attention to the final section of the report, which addressed how to move forward, what could be done to overcome these obstacles, and where more work or legal analysis was needed. He indicated that this analysis would serve as a starting point for discussion. The section was only finalised in the weeks following the Paris Agreement, and would benefit from further reflection and further analysis. It was necessary to focus on the NDCs and find more reflections of the sustainable development principles and the New Delhi Declaration. Dr Gehring encouraged the Committee to reflect on those principles where they found them, but not just by reference to the treaty text but also as highlighted in national and international court decisions as well as in national laws.

The Chair invited Dr Kamal Hossain to address Goal 16 of the SDGs.

Dr Kamal Hossain (Bangladesh) gave a historic overview of the evolution of sustainable development.

He referred to the Earth Summit in Rio de Janeiro in 1992, which set the challenge of facing the global economic order so that sustainable development could be achieved. 10 years later, the world came to Johannesburg for the World Summit on Sustainable Development. But just before then, the precursor ILA Committee produced the New

Delhi Declaration, which added further input to the Johannesburg Summit and the same Declaration was now described as the Johannesburg Declaration. Then it was back to Rio de Janeiro in 2012 for the Rio+20, which set the scene for the Sustainable Development Summit in 2015. There was a historic continuity, and younger colleagues, who were going to be the master builders of the coming 30 years, should understand that history.

Now was a very important moment for the Committee to reflect on how much of what they had aspired to do had actually been achieved and how much still needed to be done. This was an issue for the human race with very major expectations of all humanity. This was the agenda for all humanity. This was what had been aspired for in the Universal Declaration of Human Rights.

The SDGs were a global project where challenges were taken by all humanity, governments, and no one could refuse it because the good thing was that they had been working on this for the last 35 years or more and they had faced the scepticism but had succeeded in putting it in a global agenda. However, the problem was still ongoing but humanity did not go away, the aspiration of humanity could not go away.

The consensus affirmed on at the UN Summit on 18 September 2015 was truly a global consensus. All heads of states came together and reaffirmed what everyone had thought was ideological "mumbo jumbo". How things had changed. The youngest master builders of tomorrow needed to have that confidence. Young people needed to understand the things like gender inequality were manmade and what was manmade could be undone by the efforts of man.

He thanked the Chair for being deeply committed to the work of the Committee and for making efforts to come to Johannesburg. He indicated that this was a lifetime commitment where those of them who were part of the Committee passed away while still committed. Rebuilding the world was a major task and a major undertaking was about transforming the world not just conducting a study. In this commitment, they always thought three decades ahead. He reiterated that those who were taking over must know that they were taking over a historic undertaking. He appreciated the report and indicated that it was very impressive because it had a detailed mapping, it identified tasks, and showed the seriousness of everyone who had contributed. He had never seen such a comprehensive report. The 17 SDGs were identified. Goal 16 emphasised how important and critical issues of governance were in order to achieve the SDGs.

In a way, the very first objective was missing in the report. This included issues such as significant reduction of violence, the use of force by States or evolution of use of force by States, elimination of all forms of violence. Violence was what was taking the world today, not necessarily State violence or State actors.

Dr Hossain elaborated on how to achieve Goal 16 and the 7 principles on the New Delhi Declaration, making reference to:

- promoting the rule of law to promote justice for all
- promoting and enforcing non-discriminatory laws
- significantly reducing illicit finance and arms growth by 2030
- reducing all forms of corruption and bribery
- ensuring responsive and inclusive decision making at all levels

- strengthening relevant national institutions for ensuring the protection of fundamental freedoms and ensuring access to information
- international cooperation for building capacities in all levels, particularly in developing countries to prevent violence and to combat terrorism and crime.

He emphasised that the Committee could not miss this out in its next report. The next report should be circulated in time so that this could get due attention and he indicated that the whole team should be assigned this particular task. This violence which had spread globally must be taken on by humanity, not only by national governments and by its intelligence or homeland security but by all because it was much bigger than national security and was something against which all people of all countries must come together and fight.

Dr Hossain indicated that what was important for him now was handing over to the new generation because it was their future. Seniors would not be there from 2030! It was wonderful to be part of this effort and to be part of this historic moment. Dr Hossain felt like the spirit of Nelson Mandela was there, smiling and approving what they had done in Johannesburg.

The Chair thanked Dr Hossain for his inspiring words. He then informed attendees that a number of detailed papers and presentations would follow.

Dr Otto Spijkers (Netherlands) gave a presentation of the section of the report on the sustainable management of freshwater resources. The aim of the paper was to assess the importance of freshwater and its regulation for the world today. The paper also provided a survey of the international legal terrain (overview of applicable legal instruments), looked at the legal obstacles and opportunities, and referred extensively to the SDGs, especially Goal 6 (the socalled "water goal") and Goal 15 (the socalled "ecosystems goal)".

Professor Cymie Payne (US) gave a presentation on the section of the report on the sustainable management of fisheries and ocean resources.

Dr Gehring gave a presentation on the section of the report on the sustainable management of renewable energy.

Dr Freya Baetens (Belgium) gave a presentation on sustainability issues in the negotiation of the TransPacific Partnership Agreement (TPP), the Comprehensive Economic and Trade Agreement (CETA) and other treaties.

Dr Baetens explained that the topic was part of the Committee's future agenda and was still in development. Sustainable development scholars should be mindful there was a lot of sustainable development going on outside the sustainable development treaties, including in the area of free trade and investment. The megaregional agreements that were being negotiated by the European Union in this area included provisions that were relevant to sustainable development.

In 2009, pursuant to the Lisbon Treaty the competence of the EU vis-à-vis its Member States had expanded to include additional areas. The European Commission was given the mandate to negotiate treaties and the ideas was that this would replace the existing bilateral trade and investment treaties entered into by individual Member States. It also meant that there were to be mega-treaties between the 28 EU Member States and the

other countries such as the USA, Canada, Singapore, and Vietnam. These were the four treaties that would form the focus of Dr Baetens' presentation.

There was a lot of opposition to these treaties, including issues of potential "retrenchment" of data protection and regulatory "race to the bottom". Many people protested against the investment protection and dispute settlement provision in these treaties, but it was clear that what the EU was trying to do was to incorporate or regulate areas that previously were left out by such treaties. Such areas included sustainable development, environment and labour.

The first treaty was CETA between the EU and Canada. Negotiations were concluded in 2014. In July 2016, the European Commission decided to refer the agreement to the Council of the European Union for signature and conclusion.

The second treaty was the EU-Singapore Free Trade Agreement. This agreement is the subject of a case before the Court of Justice of the EU, which was expected to deliver an opinion on whether each and every individual Member State had to ratify it. If that was the case, such agreements would not enter into force for some time because some States took a long time to ratify. The Commission had issued a proposal for the provisional application of the agreement. Dr Baetens added that just because a treaty had not been fully ratified and entered into force did not mean that it had no effect on sustainable development.

The third treaty was EU-Vietnam Free Trade Agreement. Negotiations were concluded in February 2016 and the text was undergoing legal revision. After that occurred, it would go back to the Council for signature and ratification.

The fourth and most notorious and controversial treaty was the Transatlantic Trade and Investment Partnership Agreement (TTIP) between the EU and the US. The latest round of negotiations were concluded on 15 July 2016. There would be another round of negotiations before Christmas 2016. What was particular in this treaty was that it followed the most extensive model of regulating sustainable development.

These treaties could be grouped into two types. First, there was CETA, which forcibly split sustainable development, environment and labour into different chapters and included a lot of statements of intention (eg, strive to promote something). An institutional mechanism comprising a Committee on Trade and Sustainable Development had been established to oversee the implementation of these chapters, and there was also a Civil Society Forum to conduct a dialogue on the sustainable development aspects of the agreement. This did not represent any major change or reform.

Then there were the agreements with Vietnam and Singapore and the proposed TTIP, which were much more extensive.Sustainable development, environment and labour had been integrated into the one chapter.

Subsequently, the Chair gave the floor to other participants to raise questions on the presentations so far.

Professor Maki Nishiumi (Japan) appreciated the report for its deep and comprehensive presentation, analysis and consideration. He indicated that he would contribute to the work of the Committee on the sustainable management of freshwater resources by

introducing Japanese national law and jurisprudence on the subject. Professor Nishiumi also noted his desire to contribute to the future work programme of the Committee with respect to the relationship between sustainable development and indigenous rights.

With respect to the section of the report on the sustainable management of renewable energy, Professor Nishiumi referred to Japan's experience with the Fukushima accident and suggested that Committee critically evaluate the nuclear plant policy. In his view, it would fundamentally be in contradiction with the principle of inter-generational equity to continue to produce radioactive waste. He asked the panel what it thought about the relationship between sustainable development and nuclear energy plant policy?

Dr Gehring responded that nuclear energy production was incompatible with sustainable development. In terms of financial impact, nuclear plants were costly. With regard to sustainable renewable energy, it was better to think from a much more integrated angle, taking into consideration the aspects of conflict, proliferation, installation and transportation.

Professor Damilola Olawuyi (Nigeria) asked a question about the increased attempt by oil rich African countries to institute sovereign wealth funds as economic/legal instruments for the sustainable management of oil wealth. Nigeria, for example, had established a SWF system that transplanted the key legal tenets from the Norwegian SWF. The Nigerian SWF, however, faced several implementation challenges. He therefore recommended that the Committee provide some guidelines or normative recommendations on a law and governance framework for implementing SWF as an economic instrument for sustainable natural resources management.

Professor Schrijver responded by indicating that there was an attempt to create an independent organisation. He queried whether the Committee had the mandate, but observed that it could still consider the suggestion and look at it in the next report. He referred Professor Olawuyi to the discussion in the report on issues relating to social and environmental risk in petroleum and oil resources. He indicated that, in this context, oil should be seen as a public good.

Dr Aboubacar Fall asked Professor Payne to elaborate on the concept of deterritorialisation.

Professor Payne responded that de-territorialisation was placed in the context of biodiversity. When the natural resources were within national jurisdiction, the question was how to ensure protection, given that environmental impact did not have national boundaries. In Australia, the term was used in the context of sea level rise in the maritime zone. She indicated that biodiversity beyond national jurisdiction was a possible topic for the next report of the Committee.

Mr Mohan Katarki (India) queried whether the obligation to use river water in a sustainable manner was being misinterpreted as maintaining natural flow, which had been disregarded many years earlier in favour of the equitable apportionment doctrine.

Dr Spijkers responded that, when interpreting sustainable development obligations, consideration should be given to ethical stewardship, and optimal use of natural resources for the benefit of neighbouring States and future generations.

Dr Spijkers then referred to the Dutch court case cited earlier by Professor Schrijver. The case was decided by The Hague District Court in 2015 against the Dutch government. The court ruled that the government must take more actions to reduce the greenhouse gas emissions in the Netherlands. The government had to ensure that Netherlands emissions in the year 2020 could be at least 25% lower than 1990 levels. The government also had to do more to avert the imminent danger caused by climate change, in view of its duty of care to protect and improve the living environment. Moreover, the costs of the measures ordered by the court were not unacceptably high.

Dr Spijker observed that the Urgenda case meant that the Netherlands should not hide behind the argument that the solution to the global climate problem did not depend solely on Dutch efforts. However, he highlighted that there were several challenges that needed to be resolved before the court arrived at such conclusion. First, the claims needed to be established in court by lawyers. The court relies on the report of IPCC. It also needed to establish the link between the Dutch government duty of care and what was required under the law. Likewise, they needed to establish the violation, the nature of the danger, the knowledge and foreseeability of those damaged, the nature of the obligation of States to take necessary measures and the question of whether the Dutch government was adequately discharging its duties as required. The court's decision also raised concerns. The concerns arose because the Netherlands was part of the EU. If the Dutch courts obliged the government to reduce emissions, other States of the EU might increase theirs to compensate the loss.

Professor Schrijver indicated that the Committee now needed to finalise its report. He stressed that the Committee needed assistance, including ideas on how to complement as well as at the same time how to reduce the report.

Ms Amanda Kron (Sweden) echoed Dr Hossain's remarks on Goal 16, which could serve as an additional entry point to the work. In this context, the proposed survey of transparency, accountability and participation in decision-marking over natural resources spoke to different aspects of Goal 16. Moreover, the work of the Committee could also access gender equality in greater depth, for instance through analysing Goal 5, which recommended reforms to give women access to ownership and control over land and natural resources.

María del Pilar Vanegas Guzmán asked a question on Dr Spijkers' presentation. She observed that Dr Spijker had presented a picture of a fragmented international law of natural resources, with the SDGs as soft law. Moreover, treaties under negotiation in Europe provides non-mandatory commitments. In this scenario, Ms Vanegas Guzmán highlighted the importance of decisions by local courts dealing with matters which substantially intersected with the SDGs. Local practice could inform international law, and judicial decisions served to build customary practice towards the creation of binding obligations internationally.

Professor Schrijver responded by referring to the Rio Declaration, and Stockholm Declaration as examples in the field of statements with a strong normative force, and indicated that the Universal Declaration of Human Rights had been very progressive in contributing to the evolution which culminated in the adoption of the SDGs. He indicated that there was a gap in the law-making process. International law was not static but dynamic and evolving.

Dr Gehring suggested that there must be a meeting at the regional level which would provide a mechanism to address the problem and to fill the gap between human needs and the provisions of the law.

Dr Gehring also added that the SDGs had identified the exact scope of treaties. He indicated that it was better to remind States that, if they wanted to achieve the SDGs, they ought to ratify existing international treaties.

Nadia Sánchez CastilloWinckels (Chile) suggested including a section in the report that would provide guidance on how to bridge the gap between the normative level (which already included principles of sustainable development) and the implementation level. This would give concrete suggestions to those in charge of implementing the norms.

Dr Gehring responded that the analysis did often not match more with international treaty law but they were related to customary international law. He then indicated that the question to be asked was how to operate when so many treaties were not yet widely ratified and how to establish evidence of customary international law.Professor **Schrijver** added that there were indeed limited numbers of ratifications. For example, in issues of water management, Principle 21 of the Stockholm Declaration was agreed by States and had a very strong normative force. This also applied to the Helsinki Rules of the ILA on joint water management. However, it had not been ratified by many States. He then indicated that, in the next meeting, the Committee should consolidate its efforts and speed up for the 2017 meeting in Cambridge. He expressed his appreciation to Professor David Freestone for so ably chairing this meeting.

Professor Andre Thomashausen also commented that the principle of equity and the eradication of poverty should be re-focussed in the envisaged rules and guidance. The focus to be included should be the equitable requirement that the exploitation of natural resources contribute to the eradication of poverty and benefit the economy of the resource host countries. Resource exploitation serving only the economic interest of resource companies should be discouraged. Resource exploitation projects that would necessary lead to resource depletion should be considered as unsustainable.

The Chair thanked attendees for their participation and expressed his wish to see them again at the next ILA conference in Sydney in 2018.

TWELFTH REPORT

FINDINGS
(in summary form for ease of reference)

The Twelfth Report of the Committee reviews continuing trends and themes in the area of international securities regulation following on from the Committee's 2014 report. Given the fast pace of regulatory change – it is designed to provide a snapshot of the current state of international securities market regulatory infrastructure and day-to-day operational measures; and highlight their profound effect on market participants and regulators (from a global, regional and domestic perspective).

This Committee's Reports have tracked progress in achieving coherent international derivatives regulation to govern a very global market. At least from the viewpoint of EU/US derivatives regulation – so far 2016 has been a banner year for regulatory harmonization

with regulators agreeing on central clearing counterparty (CCP) comparability standards and rolling out a more extensive "substituted compliance" regime on a cross-border basis. Asia is now following suit by implementing new derivatives regulation, and given its common roots in the G-20 measures from the Pittsburgh summit, there is some promise of truly global derivatives regulatory infrastructure.

We begin with an analysis of infrastructure issues: the Over the counter (OTC) Derivatives and CCP Resilience, Recovery and Resolution initiatives which have preoccupied the markets over recent years in the wake of the global financial crisis. We have found a high incidence of cooperation and communication among market players together with governments and regulators intent on demonstrating their adherence to perceived global behavioral and structural norms. But, the potential for inward-looking and protectionist approaches remains high as carefully developed but untested legal and regulatory structures are finally at some stage deployed.

CCP resilience is a case in point – there remain questions regarding practical concentration risks of channelling a high proportion of OTC derivatives transactions (eventually) and clearing through a relatively small number of central counterparties – their resilience and indeed how they could be "recovered" and at worst resolved at some point are explored below. An approach that is less than global, and does not incorporate such measure of coordination, could create more rather than less potential systemic risk.

The last two years also have seen a focus on financial firms other than banks, and the impact of their activities on the global financial stability. The Financial Stability Board (FSB) and the US Financial Stability Oversight Council (FSOC) began by considering asset managers and their clients – including some of the large public investment funds (generally known as "mutual funds" in the United States) – as possible candidates for designation as nonbank systemically important financial institutions (SIFIs). The systemic risk regulators have recently moved on, at least for the time being, to focus mainly on certain asset management activities, such as liquidity management, use of leverage, operational functions, securities lending and transition planning, for heightened regulation. This is currently in progress – with an analysis of any residual risks still on the agenda.

On a positive note, the EU Capital Markets Union proposal represents a potentially important market infrastructure development – the EU Commission has put forward a robust proposal to enhance Europe's relatively underdeveloped and fragmented capital markets. The European economy is as big as the American one, but Europe's equity markets are less than half the size, its debt markets less than a third. The EU now seeks to achieve more integrated capital markets to promote efficiency gains and support Europe's ability to fund growth. Stronger capital markets are meant to complement Europe's strong tradition of bank financing, and unlock more investment from the EU and the rest of the world – and to channel capital in to all companies, including SMEs, infrastructure and long term sustainable projects that need it to expand and create jobs. It also seeks to provide households with better options to meet their retirement goals.

At a more operational level, we have explored insider dealing and corporate governance issues, using particular jurisdictions as proxies for the discussion: insider dealing has international resonance, and it can be seen from the section of this Report concerning

State-Owned Enterprises and their ownership of securities (with a Brazilian perspective, given the increasing importance of that jurisdiction) that a number of universal lessons can be learned from such comparative analysis

It is not possible to cover all issues and subjects relevant to the international securities markets, but our intended focus has been on the major developments at a macro level and ongoing market developments, with a view to assessing their implications for market participants and actors at all levels.

This Report was substantially finalized prior to the UK referendum on Brexit, and the implications in that regard are a topic for another day, given the seismic change for the EU.

Moreover, this Report does not at this stage comment upon the FinTech phenomenon, nor cyber-security, both of which important emerging issues would clearly merit forming part of the Committee's future work.

IMPORTANT – We have adopted for the purposes of this Report the approach of arriving at the above summary Report findings. This Report is supported by the detailed materials contained in the accompanying Annex.

This reflects the broad scope of the Committee's work, taking into account international developments and their local/regional effects and consequences in relation to major market infrastructure issue, together with specific governance issues and their treatment in specific jurisdictions (and lessons that can be accordingly learned more widely).

END OF REPORT

(Please refer to the Annex to this Report for supporting materials)

ANNEX TO THE TWELFTH REPORT OF THE INTERNATIONAL SECURITIES REGULATION COMMITTEE OF THE INTERNATIONAL LAW ASSOCIATION

Johannesburg 2016

Part I – Market Infrastructure

1. International over the counter (OTC) Derivatives Regulation

A. Background (Ida Levine)

The G20 stated in Pittsburgh:

"All standardized OTC derivative contracts should be traded on exchanges or electronic trading platforms, where appropriate, and cleared through central counterparties by end-2012 at the latest. OTC derivative contracts should be reported to trade repositories. Non-centrally cleared contracts should be subject to higher capital requirements".[1]

This 2009 pledge in the wake of the global financial crisis was the basis of global reform of the regulation of OTC derivatives. In our Committee's Report to the Association at the 76th Conference (Washington 2014), we covered the European Market Infrastructure Regulation (EMIR)[2] which regulates derivatives, central clearing counterparties (CCPs) and trade repositories. Europe – together with the US – is at a more advanced stage than Asia in enacting agreed measures to in order to increase transparency and reduce counterparty risk, but it is still well behind its intended schedule as set out in our 2014 report.

The 2014 report covered the scope, substantive requirements and the transactions and securities subject to EMIR's requirements. We also looked at the sources of regulation and guidance, as well as the extra-territorial reach of the rule, and the potential inconsistencies and duplication due to the extra-territorial impact of the US Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank).

EMIR technical standards on OTC derivatives, reporting to trade repositories and requirements for trade repositories and central counterparties entered into force on 15 March 2013. The first obligations under EMIR included risk management through portfolio reconciliation, dispute resolution and trade compression. Double sided reporting by financial counterparties to trade repositories followed in 2014 – although in a format inconsistent with the single-sided approach in the US. There are informal indications that the EU regulators may be willing to revert to the US single-sided approach in the interests of standardization – but this is very much a work in progress.

The obligation for central clearing of OTC derivatives will come into force from June 2016. A Delegated Regulation imposing a mandatory clearing obligation for interest rate swap contracts entered into with any European counterparty has finally been published after a long wait. Clearing requirements for other types of OTC derivatives such as Credit Default Swaps (CDS) are still in process. Margin requirements for non-cleared OTC derivatives will also be implemented in 2016, but this still has not been finalized.

[2] European Commission, Financial Markets Infrastructure, Derivatives/EMIR http://ec.europa.eu/finance/financial-markets/derivatives/index_en.htm (last visited September 28, 2016).

But one of the big stories is about the CCPs and the transatlantic substituted compliance framework agreed between the US and EU earlier this year.

B. US/EU Cooperation (Ida Levine)

Part of the delay on the EU rules on clearing has been a positive development: greater transatlantic cooperation. We mentioned in our previous report, the start of international progress through the work of The Basel Committee on Banking Supervision (BCBS), through the Bank for International Settlements (BIS), together with the International Organization of Securities Commissions (IOSCO). This provided a framework for margin requirements for non-centrally cleared derivatives based on a standard approach.[3] Under these global standards, financial firms and systemically important non-financial entities that enter into these transactions exchange initial and variation margin to reduce counterparty risks arising therefrom using consistent principles.

The last two years have seen greater global regulatory convergence in the derivatives markets at least between the EU and US . The EU and North America account for about 90 per cent of the global derivatives markets meaning that the US Commodity Futures Trading Commission (CFTC) and the European Commission have the predominant oversight responsibility.[4] Until recently, they had been unable to agree common standards on to harmonize requirements across markets. But signs are that with the changes at both the CFTC and the Commission, things have improved, and a constructive working relationship has been established between the two agencies.

Common Standards on CCPs

CCPs provide financial market infrastructure which enhances market and financial stability by guaranteeing the obligations of each counterparty to a transaction. This is a foundation of the G20 measures following the financial crisis – and was meant to provide back-up to reduce market dependence on the financial health of individual counterparties. Cleared transactions include exchange traded and over the counter (OTC) derivatives as well as other financial products such as bonds, equities and securities financing contracts. If a counterparty to a transaction goes into default before settling its obligations, its other counterparties are protected by the financial resources held by the CCP. These financial resources are largely made up of high quality collateral, which is calculated and collected from the counterparties on a daily basis. In this sense, the CCP acts as a circuit breaker, mitigating a domino effect of financial losses across the markets when one participant fails.

Recognizing the importance of CCPs in mitigating risks in the financial system, G20 leaders committed in 2009 to make the use of CCPs mandatory for standardized derivatives contracts. Both the CFTC and the EU Commission have now adopted rules to this effect, increasing the use of CCPs across EU and US markets. As many derivatives are traded cross-border, EU and US market participants need access to CCPs that can serve both markets.

[4] Bank for Int'l Settlements, Michael Chiu, Derivatives Markets, Products and Participants: An Overview http://www.bis.org/ifc/publ/ifcb35a.pdf.

CFTC/EU Commission Common Approach

In February 2016, EU Commissioner Lord Jonathan Hill and CFTC Chairman Timothy Massad announced a landmark agreement on a common approach regarding requirements for central clearing counterparties (CCPs).[5] This common approach to both the regulation and supervision of global derivatives markets had twin goals of supporting cross-border trade and investment while fostering financial stability.

In March 2016, the Commission adopted an equivalence decision for US CCPs. This decision was based on a determination that EU and US CCPs operate to the same high level standards, and alleviates the regulatory burden for US and EU CCPs, allowing compliance with only one set of rules. Thus, US CCPs once recognized by ESMA can operate in the EU with substituted compliance with US rules. The EU equivalence determination means that the EU have decided that the US rules achieve the same objectives as those in the EU – i.e., a robust CCP framework promoting financial stability through a reduction in systemic risk. It does not mean that there was a finding that identical rules are in place in the US.

During the same month, the CFTC unanimously approved a substituted compliance framework for dually-registered CCPs; this included a determination of comparability with respect to certain EU requirements, which will permit EU CCPs to provide services in the US complying primarily with their own local requirements.[6] The CFTC also has streamlined the registration process for EU CCPs wishing to register with them. The determination involved extensive analysis by the staffs of the CFTC and Commission to understand whether differences in their regulatory regimes were significant, and identified those EMIR requirements that are comparable to corresponding CFTC rules. The CFTC specifically noted that harmonization would enhance customer protections while reducing risk of regulatory arbitrage.

The elusive substituted compliance that this Committee has discussed in so many previous reports is finally beginning to come to fruition at least in relation to the global derivatives markets. The common approach discussed above followed detailed analysis of differences between the CFTC and EU regulatory requirements in relation to CCPs, undertaken over a number of years. Both the CFTC and EU requirements are based on international principles, and CFTC staff and the European Commission Services undertook to work together, along with counterparts across the global regulatory community, to further develop these principles and harmonize the standards to which internationally active CCPs are held.

Building bridges and relationships across the Atlantic between derivatives regulators has launched the beginning of a more harmonized approach to the massive regulatory infrastructure defining these global markets. This will be of benefit to firms, their customers, the integrity of the markets themselves and ultimately financial stability.

C. Asian catch-up (Alan Ewins)

An interesting issue from an international law perspective is the inevitable creation of nuances in interpretation as regards the trades and persons caught in the net for any given jurisdiction, when compared with other Asian jurisdictions' requirements.

Following on from previous reports, we have continued to use Hong Kong as a useful proxy to reflect Asian developments, with a view to assessing progress in recent years towards achieving consistency with, and keeping pace with, the evolution of international standards. We have provided comparisons with developments in other Asian jurisdictions, where appropriate, to provide reasonable balance.

It remains fair to say that, in Hong Kong, there has been careful and measured, rather than rapid, progress towards arriving at a settled mandatory trading, clearing and reporting regime. When the Hong Kong Government passed the Securities and Futures (Amendment) Bill in 2014, that created the framework for the introduction of the three areas of regulation, with accompanying record keeping requirements. This enabled Hong Kong to point to its having formalized the regulation of OTC derivatives activity in line with international requirements. That framework contemplated that detailed implementation would be handled through the promulgation of rules by the SFC, with the HKMA's consent and after consultation with the Financial Secretary of Hong Kong. Accordingly, there is an intention to proceed on a cross-sector basis, subject to the formal final say of Government to ensure consistency with the international markets, while building in a degree of flexibility allowing changes to be made at a sub-statutory level to accommodate market changes. Given the complexities of the regime and the cross-border issues arising, this seems a sensible approach. The likely form of the ultimate regime tends to be foreshadowed in the consultation process, which (while not providing full certainty to market players to allow them to adjust their operations and procedures) normally provides a reasonably clear indication of the path the incoming regime is likely to follow.

The most significant progress, as anticipated, has been towards putting in place a **mandatory reporting** regime, followed by **mandatory clearing**, and leaving open the difficult issue of introducing mandatory trading in due course. That is not fully consistent or compliant with the aims referred to above expressed in Pittsburgh.

The new **mandatory reporting** regime has been split into two phases, showing the relatively slow pace of reform in this difficult area:

First phase reporting came into effect on 10 July 2015, following extensive market consultation. That first phase was restricted to certain types of interest rate swaps (IRS) and to non-deliverable forwards (NDF).

The consultation for second phase reporting was published in September 2015, with a view to expanding the mandatory reporting rules to cover all OTC derivative products. There have been no further developments to date on this consultation, but it is expected that the expanded reporting requirements will come into effect in early 2017.

Mandatory clearing was also put forward in the September 2015 consultation. It is expected that the first phase of mandatory clearing may come into effect by September 2016, ready for clearing of trades to commence in mid-2017.

There is no clarity at this stage as to when **mandatory trading** will be introduced in Hong Kong (consistent with the global trend of securing robust reporting regimes and, as far as possible, clearing regimes first).

Essentially, Hong Kong has approached the question of mandatory trading, clearing and reporting on the basis of taking steps to adopt international standards within parameters directly relevant to the Hong Kong market. Interest rate swaps (**IRS**) and non-deliverable forwards (**NDF**) make up by far the highest proportion of OTC derivative trades conducted in the Hong Kong derivatives market, and the mandatory reporting regime targeted those products from the outset. Those products also have the useful feature from the Hong Kong perspective of being relatively non-complex, lending themselves to a reasonably straightforward reporting environment.

The expansion to a much bigger universe of derivative products in the second phase will test the robustness of the Hong Kong regulators' information handling systems. There is an inevitable danger for the regulators that the sheer volume of information received may ultimately create problems in identifying and swiftly acting upon issues that arise in the market. Global collection and interpretation of derivatives-related information to enable early warning of potential crises remains a faraway goal rather than an imminent achievement. From a global perspective, piecemeal pockets of information in domestic repositories need to be linked in an effective manner to allow the big picture to be observed; at this stage, there is a sense that the local markets are still aiming to show their "good citizenship" in the global markets and to act in relation to their particular local issues rather than necessarily contributing to a cohesive international regime.

We have considered below certain aspects of the mandatory clearing regime proposed for Hong Kong, with a view to identifying potential issues and risks within the new regime.

Regionally, Hong Kong has been playing a version of catch-up with competitor markets, for example Japan, India, China and South Korea which have all introduced mandatory clearing regimes (clearing being in many respects the primary milestone rather than reporting, since implementation results in a sea change in structures and legal relationships), typically for restricted suites of products, normally interest rate based. The first phase of mandatory central clearing took effect in Australia in April 2016 in relation to OTC interest rate derivatives denominated in Australian dollars and in other major world currencies: US dollars, euros, British pounds and Japanese yen. Australian and overseas financial institutions which meet the clearing threshold need to comply with the clearing requirement. The Monetary Authority of Singapore (**MAS**) has put in place its mandatory clearing rules, although the clearing obligations are only planned to come into effect later this year.

Essentially, Hong Kong has accelerated its moves to establish its reporting and clearing regimes, presumably at least in part in the light of the other jurisdictions' regime changes.

Main areas of focus in this section concerning the Hong Kong mandatory clearing regime

- What is caught
- Who is caught
- Clearing thresholds (beyond the scope of this Report)

- Exemptions
- "Clearing channels" (i.e. what are "designated CCPs), including "substituted compliance"
- The treatment of uncleared trades (in brief)

The above elements rely heavily upon a combination of clear definitions and robust practical implementation, together with careful management of cross-border issues.

What is caught?

The intention is in the initial stage that only "specified" *plain vanilla* interest rate derivatives will be covered by the mandatory clearing requirement, being:

- Single currency fixed-for-floating interest rate swaps (IRS) and single currency basis swaps denominated in any of HKD, USD, GBP, EUR or JPY, with a tenor of between 28 days and 10 years; and
- Single currency overnight index swaps denominated in USD, GBP or EUR, with a tenor of between 7 days and 2 years

It is important to note that, unlike other jurisdictions, non-deliverable forwards (NDF) will not be covered when the regime comes into effect. Hong Kong has adopted the limited goal of achieving a functional mandatory clearing regime in a restricted range of products (which in this case also helpfully covers less complex products) to ensure as far as possible the timing considerations do not de-rail the process. IRS-denominated in certain G4 currencies, such as GBP, are not catered for by regional central counterparties, and this will accordingly lead to the need to use global CCPs which provide clearing services for these products. As a result, local market participants will need to become clearing members of the relevant CCP or enter into client clearing arrangements with clearing members of such CCPs.

There would naturally be a significant compliance cost for both approaches, in terms of use of resources generally to meet membership criteria and conditions where direct clearing membership is pursued or the time-consuming and expensive process of negotiating client clearing documents with established clearing members of the relevant CCPs.

This creates a significant commercial and practical issue: since the mandatory clearing obligation can only be satisfied by having the relevant specified OTC derivative transaction cleared by a "designated CCP" for Hong Kong purposes, then the relevant global CCP would need to have applied and been accepted as such a "designated CCP" for the relevant classes of OTC transactions. In addition, the CCP would need to have become an authorised provider of "automated trading services" in Hong Kong. The affected market participants would need to bear in mind this need for authorisation on the part of the global CCP in planning for the consequences of the launch of phase 1 clearing, which is scheduled to take effect later in 2016. They have no control or influence over those regulatory processes, and would need to modify trading strategies if no designated CCP were available at the relevant time.

An important point to bear in mind is that, as articulated in the Consultation Paper at paragraph 54:

> "[The Authorities] will…monitor activity levels in product types that are not subject to clearing in Hong Kong but subject to clearing in other jurisdictions, for signs of regulatory arbitrage that might undermine the G20 commitments."

This provides food for thought in the sense that clearly the various CCPs with their specific application of clearing (and reporting and trading) rules to the market will inevitably throw up potential mis-matches, including possible avenues for trading that adhere strictly to all the potentially applicable rules but where the trading arrangements and structure are designed to exploit available loopholes. This does not necessarily show malicious intent, more that dealers may be inclined to minimise their levels of interaction from a clearing perspective with clearing jurisdictions, to control costs, resources and potential liabilities. What that could mean is that the clearing picture might be distorted for individual jurisdictions and that in turn may lead to tinkering with local rules in an effort to redress any perceived imbalance.

Who is caught?

The clearing obligations will cover persons who enter into relevant OTC derivatives transactions where they are authorised institutions (banks and deposit-takers) regulated by the HKMA, corporations regulated by the SFC, and approved money brokers (regulated by the HKMA), being "prescribed persons" under the legislation. If they are authorised institutions or approved money brokers which incorporated overseas, then the deal is only caught where the transaction is recorded by way of entry in their Hong Kong books.

However, it does not end there.

A prescribed person is only caught where it deals with:

- *Another* prescribed person (*although – importantly – it does not matter whether the trade is recorded in that person's Hong Kong books*), or
- A "financial services provider" – a person included in a list of such "financial services providers", essentially intended to be limited to G-SIBs at this stage and (if different) to dealer groups who undertook to the OTC Derivatives Supervisors Group to work collaboratively with CCPs, infrastructure providers and global supervisors to continue to make structural improvements to global derivatives markets.

A G-SIB which is incorporated overseas and which has a licensed bank in Hong Kong (making it an "authorised institution") would be covered under *both* legs of the definition – as an "authorised institution" and also as a "financial services provider" by virtue of appearing on the list. The practical consequence is that the financial services provider list may include an entity which is a prescribed person (for example, an authorised institution) but which does not reach the clearing threshold in Hong Kong. In those circumstances, it will still need to be treated by its counterparty as caught under the clearing regime when dealing with it, making the assessment of whether a transaction falls under the regime as a multi-layered process. That is notwithstanding that the use of a published list is designed to provide greater certainty for market participants in their dealings.

Exemptions

There are three exemptions to discuss in the context of Hong Kong clearing, broadly reflecting the international trends: intra-group and trade compression (both beyond the scope of this Report) and, important from an international perspective.

As regards the jurisdiction-based exemption, the clearing obligation does not apply where a transaction is entered into by a *local* prescribed person counterparty in a jurisdiction which is "exempt" under the rules, the trade is recorded in the books of the prescribed person in that exempt jurisdiction and, at the end of a trading day, looking at *all* outstanding trades, the positions of the person for *each* jurisdiction do not exceed 5% of the total positions of that person; *and*

the aggregate of that person's positions for *all* jurisdictions that are exempt jurisdictions in relation to the person do not exceed 10% of the total positions of that person. Exempt jurisdictions for the trader must be identified and notified to the regulators before they can be treated as valid.

Clearing Channels

Although not described as such in the legislation, "substituted compliance" is provided for in the Hong Kong regime.. Please refer to the discussion above in relation to "substituted compliance" in the EU and US contexts.

A prescribed person is treated as having complied with the mandatory clearing requirement if, in relation to an OTC derivative trade to which it is a counterparty, all of the following conditions are satisfied:

- The SFC needs to have designated the jurisdiction in question;
- The trade was required to be cleared with a CCP;
- The trade has in fact been cleared with a CCP in accordance with the laws of that jurisdiction; and (in many respects most importantly in practice)
- The central counterparty through which the trade was in fact cleared is a "designated CCP".

There is further discussion above regarding the designation of CCPs and how that impacts upon the business of market participants, particularly in the early phases of the new regime.

The regulators in Hong Kong have clearly decided to ensure that there is an embedded mechanism catering for "substituted compliance" with a view to maintaining flexibility, having accepted that the Hong Kong market will need to build in such flexibility, especially when the suite of products needing to be cleared grows, given the realities of the global markets.

The ability of the SFC to designate an offshore CCP as suitably compliant for Hong Kong market purposes is subject to checks and balances to avoid the Hong Kong market becoming tied up in a welter of CCPs in an uncontrolled fashion: the SFC needs to obtain the consent of the HKMA and publish a notice in the Hong Kong Government Gazette, in respect of which jurisdiction the SFC is satisfied that the laws of the jurisdiction in question provide for requirements that are similar to, or serve similar purposes as, Hong Kong's clearing obligation, and those laws are appropriately administered supervised and enforced in that jurisdiction. This hammers home the point that where a jurisdiction simply puts into place infrastructure that on the face of it follows international trends, and is in line with Hong Kong's requirements, the jurisdiction would not be acceptable unless it ensured that those laws were properly applied. A paper trail would be insufficient.

Treatment of Uncleared Trades

On 3 December 2015, the HKMA published a consultation paper setting out a draft module in its Supervisory Policy Manual aimed at introducing margin requirements for uncleared OTC derivatives trades for Hong Kong authorized institutions. Initial margin and variation margin will need to be posted by authorized institutions with specified counterparties in respect of OTC derivatives trades. The requirement will take effect in September 2016. The requirements will broaden going forwards to cover a greater range of market players.

This is an important piece of the jigsaw, in particular encompassing non-standardized transactions, such as bespoke bilateral hedging arrangements, which would not otherwise be addressed by the overall OTC derivatives regime.

There will inevitably be a push towards use of cleared trades to avoid the more stringent uncleared regime, although given the evolutionary nature of the derivatives market, there will always be products which simply cannot be fitted into the cleared environment, or for which it would make no commercial sense to try to handle them in that environment.

It would be easy to say that Hong Kong had complied with its perceived international obligations as regards clearing (and reporting) of OTC derivatives trading activity, but it needs to be borne in mind, as with other jurisdictions in the region, the launch of mandatory clearing regimes is as much a political act as an economic or legal measure – Hong Kong has concentrated on specific, at this stage limited, products which relate to how its market operates, and has built in exemptions and an "exit" route in an effort to make the requirements reasonably palatable commercially to global businesses, while adhering sufficiently to the perceived international agenda to allow a robust position to be adopted in terms of international compliance and cooperation.

There is a great deal to be done before the Asian jurisdictions have fully functioning reporting clearing – and trading – regimes, and effectively cater for uncleared trades, but given the significant complexities of the various requirements and regimes, it is reasonable to view there having been a demonstrably positive start to the creation of relevant internationally acceptable legal infrastructure in Hong Kong and the main financial centers in the broader Asian region in relation to addressing issues viewed by the international establishment as needing to be addressed in relation to OTC derivatives.

2. Evolution of international resolution regimes for Global Systemically Important Financial Institutions (G-SIFIs)

A. CCP Resilience, Recovery and Resolution (Ida Levine)

Background

As we noted in the discussion of cross-border derivatives regulation in the Annex to this Report, the clearing of transactions through Central Clearing Counterparties (CCPs) was a lynchpin of the G20 measures following the financial crisis.[7] Clearing of derivatives transactions was meant to reduce market dependence on the financial health of individual

[7] See G20 Leaders Statement: The Pittsburgh Summit, September 24-25, 2009, University of Toronto G20 Information Centre available at http://www.g20.utoronto.ca/2009/2009communique0925.html#institutions

counterparties – and reduce the risk that firms engaging in transactions might be thought of as "too big to fail" (TBTF).

A CCP places itself between the original counterparties to a transaction, effectively guaranteeing that if a counterparty fails, the CCP will continue to perform on the transaction vis-a-vis the other party. A CCP protects itself from risk by taking collateral ("margin") from each party and from by collecting a "default fund" from its Clearing Members (CMs) to meet losses that exceed the margin it holds. The CCP itself and CMs also hold their own capital.

CCPs are becoming increasingly important in financial markets, in particular following the G20 commitment that all standardized over-the-counter (OTC) derivative contracts should be cleared through CCPs.

Risks inherent in CCPs

Central clearing brings many benefits, including increased transparency of positions for regulators and market participants, and reduced counterparty risks inherent in bilateral OTC transactions.

But central clearing results in certain risks being concentrated in a handful of global CCPs. Their clearing members (CMs) are big banks with brokerage businesses that must be prepared to take on additional risk – this also creates inter-connectedness with Systemically Important Banks (SIBs).

So the creation of CCPs brings with it the risk that the CCPs themselves – the foundation of the G20 solution – may become TBTF. This discussion makes some suggestions from a European perspective on measures around CCP resilience, recovery and resolution that are currently being considered by policymakers.

As a cornerstone, a robust and durable *global* framework seems to be in order – CCPs are international, CMs are international and so are their customers. It is essential that EU policymakers work together with their colleagues around the world to create a harmonized set of rules and practices that are coordinated globally in order to give these measures the best chance of success.

Progress to Date

In the EU, the European Markets Infrastructure Regulation (EMIR) will soon require clearing of OTC derivatives in accordance with the G20 mandate; Regulatory Technical Standards (RTSs) are now being finalised by the European Securities and Markets Authority (ESMA) and the European Commission.[8] The clearing obligation will be in place beginning in 2016 with interest rate derivatives. Further clearing obligations will be phased in over time.

The Commission, with the European System of Central Banks (ESCB), were required under EMIR to assess the need for measures to facilitate access of CCPs to central bank liquidity facilities. But in a move that has drawn some comment, the ESCB issued a

[8] See Adoption of a delegated regulation on central clearing for interest rate derivatives, European Commission (June 10, 2016) available at http://ec.europa.eu/finance/financial-markets/derivatives/index_en.htm#maincontentSec2.

report leaving central banks with discretion whether to provide liquidity to CCPs and has declined to introduce requirements in EMIR regarding CCP access.[9]

This has underlined the need to find ways to provide liquidity to CCPs in the event of the failure of one or more CMs. Where the so-called CCP "default waterfall", including CCP and CM resources and capital, is inadequate, policymakers have begun to look at whether other sources such as initial margin (IM) and/or variation margin (VM) posted by CMs and counterparties in relation to transactions cleared through CCPs.

CCP Resilience, Resolution and Recovery

Which brings us to the subjects of CCP resilience, resolution and recovery. Following the G20 agreement on clearing of standardised OTC derivatives, the Basel Committee on Banking Supervision (BCBS), the Committee on Payments and Markets Infrastructures (CPMI), the Financial Stability Board (FSB), and the International Organization of Securities Commissions (IOSCO)(together, the "Committees") agreed to coordinate individual policy work to enhance the resilience, recovery planning and resolvability of CCPs in close collaboration.

The Committees reported on the status of this important work in its Progress Report on the CCP Work-plan in September 2015.[10] They noted that fully realising the benefits of CCPs requires them to be subject to strong regulatory, oversight and supervisory requirements. To achieve this, they set out three separate areas of focus in relation to CCPs.

First, the group identified CCP resilience based on sufficient risk management standards and financial resources (including stress testing, margin, pre-funded default funds and liquidity resources) to allow CCPs to understand and mitigate risks, and withstand CM failures and other stress events to a high probability. Second, they looked to CCP recovery plans to allow CCPs to allocate excess losses and generate liquidity to safeguard CCP viability without endangering CMs and end-users. And third, they set out the requirement to have CCP resolution plans in place.

Financial Resources and Liquidity

There is general agreement that CCPs and CMs – and the CCP default waterfall – should be the first port of call in the event of a default, but at a certain level of capital, clearing could become unduly expensive. Another suggestion has been the issuance of bail-inable debt by CCPs. This could provide more access to capital, to keep down costs of clearing – but is at best a partial solution and presents other issues.[11]

End-users of OTC derivatives include businesses and institutional investors. The latter include clients and public and private funds advised by asset managers acting in fiduciary capacities who use OTC and exchange traded derivatives in their investment strategies. As part of the larger G-20 strategy, as end-users they are required to use CCPs as agents in connection with these activities.

[9] See Report of the ESCB on the need for any measure to facilitate the access of the CCPs to central bank liquidity facilities, European Central Bank (August 2015) available at https://www.ecb.europa.eu/pub/pdf/other/genc-2015-escb-reporten.pdf?a9e9416bb391b8515616e4fb78570479

[10] See Progress report on the CCP workplan, Bank for Int'l Settlements (September 2015) available at http://www.bis.org/cpmi/publ/d134.htm.

[11] See id.

In many cases, transactions are used to hedge and mitigate risk. End-users do not own or profit from CCPs or related market infrastructure and are required to deposit margin (IM and VM) in good faith. This could be undermined by haircutting of margin to cover losses due to the insolvency of a CM or CMs. In particular, the use of IM could create the wrong incentives and become pro-cyclical. Investors could decide to close-out hedging/risk management transactions rather than lose their good faith deposit. Moreover, given the original role of margin, this use of IM or VM to augment the default waterfall could have unintended consequences.

Margin v. Capital

Margin has a specific purpose serving as collateral in relation to the other counterparty or counterparties to a transaction; it is not a capital buffer. The CCP default waterfall structure should be designed so that there is a fair allocation of loss in the event of a default – this should rest with the CCP and the CMs. Before they reach into margin, CCPs and CMs should be required to maintain their own resources to absorb losses; loss absorbency and liquidity should be provided from sources other than margin to the extent commercially possible.

In reviewing the appropriateness of using IM and/or VM as a source of liquidity, it is useful to remember the very different roles of margin and capital in cleared transactions.

Margin is "defaulter-pay". In the event of a counterparty default, margin protects the surviving party by absorbing losses using the collateral provided by the defaulting entity. Margin offers enhanced protection against counterparty credit risk. Capital adds loss absorbency to the system, because it is "survivor-pay", using capital to meet losses consumes the surviving entity's own financial resources. Margin is more "targeted" and dynamic, each portfolio has its own designated margin for absorbing the potential losses in relation to that particular portfolio, and with margin being adjusted over time to reflect changes in that portfolio's risk. In contrast, capital is shared collectively by all the entity's activities and may thus be more easily depleted at a time of stress. Capital requirements against each exposure are not designed to cover the loss on the default of the counterparty, but rather the probability-weighted loss given such default. However, it is worth keeping in mind that the accuracy and precision of probability-weighted loss estimates in a default scenario by a CCP maybe no better than the same estimates that were (inaccurately) made by bilateral counterparties pre-financial crisis.[12]

A significant open issue in ongoing policy work is whether and which type of margin should be used to augment the default waterfall of CCP and CM capital and resources. From the vantage point of the end-user, the preferred approach should be to look to CCP and CM resources to provide liquidity in the event of a CM default. Margin should be used as a last resort and then not without careful thought as to the unintended consequences of such an action.

Resilience – the first line of defence and highest priority

As emphasized by Committees in their September 2015 update, the highest priority is to maintain the resilience of CCPs to minimize the risk of CCP insolvency and reduce the impact of any CM default. In the first instance, policymakers would be well served by

[12] Id.

creating the right structures and incentives to support robust CCPs, including sufficient CCP "skin in the game".

Resilience will be aided by a strong emphasis on transparency and benchmarking of CCP risk management systems and practices – including a standard CCP stress testing framework with testing at regular intervals. Increased loss absorbing resources may be most effectively calibrated through standardized stress testing. And the amount of CM contributions required by CCPs should be risk based and also provide enough "skin in the game" to incentivize proper risk management within CMs.

Regulators should establish globally harmonized stress testing and capital standards. CCPs and CMs generally are global firms – a lack of coordination risks reducing the effectiveness of these measures, and could encourage regulatory arbitrage.

Current proposals under EMIR and other EU market structure regulation seem to be moving in this direction. Broader transparency to market participants (as well as regulators) of CCP stress testing will provide further scrutiny and allow them to perform due diligence on CCPs with better information.

Recovery – a quick, clear and transparent process

An opportunity for CCP recovery should be provided – with a defined recovery process and fully equipped toolbox. But given how quickly market confidence can spiral downwards, the recovery phase must be expeditious to allow end-users to close-out and cover positions quickly if recovery is not feasible.

As before, a cross-border recovery mechanism maybe essential. Swift decision on whether to move to resolution may need to be made by an established global resolution authority with decision-making power. In a resolution scenario, it would be important for CCP resources to not be used in a recovery process where resolution is the actual probable outcome. The goal should be to preserve capital and minimize resort to margin to create the right incentives and protect end-user interests.

Using margin to allow a CCP *to recover* (rather than as part of the ultimate resolution process) after other default waterfall resources are depleted could discourage use of OTC risk mitigation techniques by market participants. Haircutting of IM held by or through non-defaulting CMs should be off the table – this creates the wrong incentives for clearing participants to run for the exit – and away from the CCP. Moreover, VM haircutting should be seen as a measure of last resort rather than a liquidity source. In any event, any VM taken should receive a senior claim or other compensation.

CCP failures will arise where a CCP is unable to cover the positions guaranteed or owned by a defaulting CM or the cost of covering them exceeds CCP resources. During the recovery phase, broader auction participation may help where other CCP CMs want to avoid taking on further risk. Participants could be pre-cleared, with criteria published in the CCP's recovery and resolution plan.

Resolution – mitigating the impact of a CCP failure

Recovery should not be at all costs; CCPs could be allowed to fail with public resolution plans ultimately overseen by an appropriate resolution authority, particularly where there

is substitutability – in other words, CMs and participants can transfer activity to other CCP(s) because there is coverage of all OTC instruments they require.

A critical question is how to define the *Point of Non-Viability* triggering the resolution process. One option is that it could be the point at which no bids for any of the failing CCPs positions are received in an auction or where the losses from accepting the best bids are less than the CCP's total loss absorbing resources. But this is clearly a crucial part of the ongoing rule-making process that will require practical input from market participants.

Again, process should be clear and rapid. The goal must be to wind-down positions and pay back available margin. This gives market participants optionality to transfer position to a viable CCP, use other instruments or leave positions unhedged if credit risk is greater than market exposure. Thought might also be given to suspending the clearing requirement temporarily to enable market participants to re-establish hedges on a bilateral basis.

This more open approach recognises the reality that failure of a CCP reflects a flawed risk management process and will undermine confidence in the CCP. The primary function of the CCP is to appropriately size default funds and capital amounts so to maintain recourse even in unexpectedly adverse market conditions. Once a CCP is in the resolution phase, it has failed in its purpose as well as in a more literal sense. And end-users – who are ultimately taxpayers – should be given the greatest latitude to take actions to remain whole and/or recoup as much of any loss as possible.

C. Assessment of efforts by the FSB and other "soft law" efforts to deal with the need for harmonised resolution procedures for systemically significant financial institutions (Barbara Green)

The "soft law" level of the international bodies presently comprising the "international financial architecture", the Financial Stability Board (FSB) has taken the lead in international efforts to promulgate standards for national resolution legislation supported by IOSCO, the BCBS and the IAIS. In October 2011, the Key Attributes were published and were endorsed as an international standard by the G20 at their Cannes summit in November 2011.

These requirements refer to so-called "global systematically important financial institutions" (G-SIFIs) and call, inter alia, for institution-specific cooperation agreements between home and host authorities A comprehensive overview of the FSB's Key Attributes was given in the ILA International Monetary Law Committee's (MOCOMILA) Report to the Sofia Conference, and summarized in this Committee's Report to Sofia. Dr Eva Huepkes, who authored the portion of the 2012 MOCOMILA Report on the FSB's work on the Key Attributes has reported again in the MOCOMILA Report to the Washington Conference, but this time, the emphasis is on how the work of the FSB produces so-called "soft law". In short, the Key Attributes are an informal architecture, not treaty-based, but rather relying on international co-operation. However, the FSB has put an iterative process of conducting reviews of its member jurisdictions in place in order to assess implementation.[13]

[13] The progress of each individual FSB member is regularly published on the FSB website most recently on 5th September, 2013.

However as this Committee reported to the ILA Sofia Conference, the scope of the Key Attributes is even wider than credit institutions and insurance undertakings: it is setting the standard for the resolution procedures for all SIFIs and financial market structures (FMIs).

In parallel, the impact of the so-called "shadow banking entities" on financial stability has been tackled by the October 2011 FSB Consultation Paper "Shadow Banking: Strengthening Oversight and Regulation". Accordingly, the definition of systemically significant non-banks includes "credit intermediation that involves entities and activities outside the regular banking system", in particular credit risk transfer, maturity transformation, liquidity transfer and leverage. In this context, five workstreams have been identified: (i) banks' interactions with shadow banks; (ii) regulation of money market funds (entrusted to the IOSCO); (iii) regulation of other shadow banking entities, entrusted to the FSB task force; (iv) regulation of securitisation, entrusted jointly to IOSCO and the BCBS; and (v) regulation of securities lending and repos, entrusted to the FSB task force.

Apart from "Policy Recommendations for Money Market Funds" (IOSCO, October 2012), the most recent outcome of the "soft law" architecture is an FSB/IOSCO Consultative Document "Assessment Methodologies for Identifying Non-Bank Non-Insurer Global Systemically Important Financial Institutions", published on 8th January 2014. This paper aims at "extending the SIFI framework that currently covers banks and insurers to all other financial institutions". It identifies SIFIs as institutions whose distress or disorderly failure, because of their size, complexity and systemic inter-connectedness, would cause significant disruption to the wider financial system and economic activity. The framework for identification will comprise:

- size
- inter-connectedness
- substitutability
- complexity
- global (cross-jurisdictional) activities

As far as size is concerned, the following benchmarks have been proposed:

- finance companies and market intermediaries (broker dealers): $100m balance sheet (total assets)
- investment funds: $100bn net assets under management
- hedge funds: $400–600bn gross notional exposure
- other non-banks non-insurance (NBNI) financial entities: $100bn balance sheet (total assets)

Any attempt to apply the Key Attributes to the extended scope of SIFIs—banks, insurance companies and NBNI entities—will impose major legislative efforts on the individual national jurisdictions. The FSB Chairman's letter[14] to the G20 finance ministers and central bank governors sets ambitious targets:

[14] See the Chairman's 17 February 2014 letter at https://www.financialstabilityboard.org/publications/r_140222.pdf.

> By the Brisbane Summit: A global standard for a minimum level of gone-concern[15] loss-absorbing capacity that global systemically important banks should hold will be proposed by the FSB. Proposals will be developed by the FSB for contractual or statutory approaches for cross-border recognition of resolution actions, including bail-in and temporary stays on the close-out of financial contracts, and cross-default rights when a firm enters resolution.

This latter target for proposals suggests that the FSB is planning to propose for all its constituents the procedures laid out in the FDIC/ Bank of England White Paper described herein. In that "bail-in" is jargon for the bearing of failed firm losses by shareholders and unsecured debt holders, the proposal if made will be a far cry from the Key Attributes which pussyfooted around the notion of "burden sharing".

D. Systemic Risk Regulation (Barbara Green)

Asset Management Industry

For almost five years, regulators have been considering how to pursue their mandate to consider risks to financial stability in the asset management industry. The first round of studies, reports and positions taken by the FSB and the Financial Stability Oversight Council (FSOC) fell spectacularly short in the eyes of experts. The criticisms centered on the lack of familiarity of the systemic risk regulators with the structure, diversity, historical patterns and comprehensive regulation of the asset management industry and the differences between banks and asset managers and their largest clients – including investment funds. After considering asset managers and their clients – including some of the large public investment funds (generally known as "mutual funds" in the United States) – as possible candidates for designation as nonbank systemically important financial institutions ("SIFIs"), the systemic risk regulators have recently moved on, at least for the time being, to focus mainly on certain asset management activities, such as liquidity management, use of leverage, operational functions, securities lending and transition planning, for heightened regulation. In the U.S., the Securities and Exchange Commission ("SEC"), as the primary regulator of the asset management industry, has launched rulemaking initiatives in these areas. Most of these new rules will likely be in place by the end of 2016.

FSOC and the Nonbank SIFI Designation Process

In response to the global financial crisis, the U.S. Financial Stability Oversight Council ("FSOC") was established in July 2010 pursuant to the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank) to identify risks to, and monitor and respond to emerging threats to U.S. financial stability.[16] Chaired by the U.S. Treasury Secretary, the FSOC has ten voting members. These include the heads of several banking agencies, such as the Chairman of the Board of Governors of the Federal Reserve System ("FED"), the Comptroller of the Currency, and the Chairman of the Federal Deposit Insurance Corporation. Also, the Chairs of the SEC and the Commodities Futures Trading Commission and an independent member with insurance expertise are voting members. Five non-voting members serve in an advisory capacity.[17]

---

[15] A "gone-concern" is the new jargon for a failed or about to fail SIFI.
[16] 12 U.S.C.5301 et seq.
[17] 12U.S.C. 5321 (b).

Among its roles, FSOC is empowered to identify a non-bank financial company as a SIFI for supervision by the Federal Reserve (FED) under heightened prudential standards, including requirements relating to risk-based capital, leverage, liquidity, concentration, resolution planning and risk management.[18] A company is eligible for SIFI designation if (1) material financial distress at the company could pose a threat to the financial stability of the U.S. or (2) the nature, scope, size, scale, concentration, interconnectiveness, or mix of activities of the company could pose such a threat.[19] The FSOC is required to "consult" with the primary financial regulator for a nonbank financial company before a final SIFI designation is made. [20]

Significantly, Dodd-Frank also gave the FSOC a powerful tool to pressure primary federal financial regulators to follow FSOC recommendations relating to financial stability risk. Under the statute, the FSOC can recommend more stringent regulation to a primary federal financial agency to address activities or practices the FSOC determines pose potential risks to financial stability. If the other agency does not adopt the recommendations, the other agency must provide its reasons in writing to the FSOC.[21]

In April 2012, FSOC released a final rule and guidance[22] on how it would proceed with designating nonbank SIFIs under Dodd-Frank ("2012 Final Rule and Guidance"). Based on the statutory standards set out in Dodd-Frank,[23] the FSOC outlined six categories it would use for assessing a non-bank financial firm – size, interconnectedness, substitutability, leverage, liquidity risk and maturity mismatch, and existing regulatory scrutiny ("Six-Category Framework").[24] The FSOC also outlined a three-stage review process and metrics that would be used in each stage of a nonbank SIFI determination.[25] The procedures set out in the 2012 Final Rule and Guidance were supplemented by the FSOC in February 2015 generally to provide for more engagement with the companies under review and their primary regulators. ("Supplemental Procedures")[26]

In Stage 1, using information from public sources or other regulators, the FSOC evaluates whether the company has $50 billion or more in total consolidated assets and meets several other quantitative thresholds, such as $3.5 billion in derivative liabilities or $20 billion or more of debt outstanding.[27] A company meeting the Stage 1 standards is then

[18] 12 U.S.C.5322.
[19] 12 U.S.C.5323 (a).
[20] 12 U.S.C. 5323(g).
[21] 12 U.S.C.5330.
[22] 12 C.F.R sec. 1310.1 et seq.
[23] Dodd-Frank sets forth ten standards, which the FSOC grouped into six categories in its guidance. One of the statutory standards relevant to the asset management industry is "the extent to which assets are managed rather than owned by the company, and the extent to which ownership of assets is diffuse."
[24] 77 Fed. Reg. 21637, at 21657-21660 (April 12, 2012).
[25] 77 Fed. Reg. 21660-21662.
[26] 80 Fed. Reg. 7595, 7596 (February 11, 2015). The Supplemental Procedures are available at www.fsoc.gov. The U.S. Government Accountability Office studied FSOC's nonbank designation process and issued a report in November 2014 that identified areas where the FSOC could improve accountability and transparency. GAO Report, *Financial Stability Oversight Council, Further Actions Could Improve the Nonbank Designation Process*, November 2014.
[27] Other quantitative thresholds are $30 billion or more in credit default swaps, minimum 15 to 1 leverage ratio and minimum 10 percent in short term debt ratio. 77 Fed. Reg. 21637, 21661.

evaluated in greater depth in Stage 2 under the Six Category Framework. In this stage, the FSOC evaluates the risk profile and characteristics of each company, including the extent of regulation of the company and whether resolution of the company could threaten U.S. financial stability. As modified by the Supplemental Procedures, at the commencement of Stage 2, the FSOC gives written notice to the company that it is being considered for nonbank SIFI designation. Also, for any company regulated by a primary financial regulatory agency, or home country supervisor, the FSOC will notify and begin consultation with the regulator or supervisor no later than when the Company is notified it is under active review in Stage 2. Beginning in Stage 2, the FSOC can request information from the company, and the company can meet with FSOC analytical staff and submit materials to challenge the FSOC's consideration of the Company.[28]

The FSOC will notify a company if the FSOC decides to advance a company's review from Stage 2 to Stage 3. In Stage 3, an in-depth evaluation of the company will continue. In Stage 3, the FSOC considers channels of transmission through which a company's material financial distress or activities could be transmitted to other companies or markets or impair market functions. The transmission channels include (1) exposure to creditors, counterparties, investors or others participating in the markets, (2) asset liquidation which could result in a sudden drop in asset prices and disrupt trading or cause funding problems for other firms and (3) critical functions or services on which other market participants rely, but the company will no longer provide.[29] The FSOC also may look at such factors as the company's complexity, opacity of its operations, and resolvability. If the FSOC approves a proposed nonbank SIFI designation, it will provide a written explanation, and the Company can request a non-public hearing to contest the proposed designation. Thereafter, with the affirmative vote of two-thirds of the FSOC voting members, including the U.S. Treasury Secretary, the FSOC can determine that material financial distress at the company or its activities could pose a threat to U.S. financial stability.[30] At least once a year, the FSOC is required to reevaluate each nonbank SIFI designation and rescind the designation if the company no longer meets the nonbank SIFI standards.[31]

Money Market Fund Reform

In its 2012 Final Rule and Guidance, the FSOC indicated that it would be looking at U.S. asset management firms and the extent to which they pose potential threats to U.S. financial stability.[32] A sector of the asset management industry FSOC quickly turned to was money market mutual funds. Citing the market-wide instability among money market funds after the Reserve Primary Fund "broke the buck" during the financial crisis, the FSOC believed that money market funds were susceptible to destabilizing runs, which may spread quickly to other funds and result in liquidity, credit or other problems in the financial system.[33] The SEC had adopted money market fund reforms in 2010 in direct response to the financial crisis that considerably strengthened and improved the ability of money market funds to address market problems.[34] Furthermore, commentators criticized

the use of bank-centric views and terminology like the term "runs" in the money market fund context. Nevertheless, FSOC believed that additional structural reforms were necessary to address what the FSOC viewed as remaining vulnerabilities in the money market fund context. Using its authority to recommend regulatory action to other federal financial agencies,[35] in November 2012, the FSOC released for public comment proposed recommendations to the SEC involving three alternative reforms, including a floating net asset value ("NAV") alternative, which were intended to address the structural vulnerabilities of money market funds.[36]

Following this recommendation, the SEC proposed in 2013 and eventually adopted in July 2014 reforms that require institutional non-government money market funds to maintain a floating NAV for sales and redemptions based on the current market value of the portfolio securities they hold.[37] The 2014 SEC reforms also permit boards of most money market funds to impose liquidity fees and redemption gates to address the risk of runs, impose expanded disclosure and stronger diversification requirements, and call for enhanced money market fund stress testing. On the date the SEC adopted the money market structural reforms, the FSOC announced it would assess the reforms and their potential impact on financial stability, signaling the FSOC was leaving the door open to push for any additional reforms it may find necessary.[38]

Other Asset Management Products and Activities

In September 2013, the Office of Financial Research ("OFR"), an office of the Treasury Department established by Dodd-Frank, released a report on "Asset Management and Financial Stability," prepared at the request of the FSOC.[39] The report focused to a great extent on asset management firms and identified four areas of vulnerability: "(1) reaching for yield and herding behaviors; (2) redemption risk in collective investment vehicles; (3) leverage, which can amplify asset price movements and increase potential for fire sales; and (4) firms as sources of risk."[40] In the months that followed, the report was widely criticized for factual inaccuracies, analytical defects, the dearth of empirical data, a lack of understanding of the asset management industry, and the failure to call upon the expertise of the SEC and to obtain industry and public input, among other things.[41] The SEC Chair in an unusual step opened a public comment file on the OFR Report, thereby providing a formal public forum for debate on the report.[42]

---

[35] The FSOC released its proposed recommendations after the then SEC Chair had announced in April 2012 that the SEC would not call a meeting to consider additional money market reforms due to the lack of support at that time by other SEC Commissioners.

A few months later, the FSOC hosted a conference to hear directly from industry members, academics and other stakeholders, including regulators from the SEC and CFTC, on the impact of the asset management industry on financial stability.[43] The SEC staff presentation at the conference underscored that asset managers serve as agents and follow investment mandates from their clients so that the investment risks and rewards are borne by the clients, not the asset management firms. The presentation also described the structure and diversity of the asset management industry and the comprehensive regulation of the industry by the SEC and the states, and the significant data on the industry that is filed with or collected by regulators.[44] Following that, in July 2014, the FSOC directed its staff to engage in a more focused analysis of the potential risks of the industry with the emphasis on 'industry-wide products and activities' rather than focusing on designating asset management firms as nonbank SIFIs.[45]

In December 2014, the FSOC issued a notice for public comment on whether asset management products and activities pose potential risks to U.S. financial stability ("2014 Notice")[46]. While the 2014 Notice invited comment generally on risks posed by the asset management industry to U.S. financial stability, comment also was requested on four principal areas with numerous questions relating to each area: liquidity and redemptions, leverage, operational risk and resolution.

With respect to liquidity and redemptions, the FSOC asked whether redemption incentives associated with various types of pooled investment vehicles could increase the incentive for investor runs during periods of market stress and make fire sales in the assets in which the vehicles invest more likely.[47] On the topic of leverage, the FSOC requested comment on ways leverage used by various kinds of investment vehicles, including separately managed accounts ("SMAs"), could result in forced asset sales or expose lenders or other counterparties to potential losses or unexpected market risks. Questions were also posed relating to the implications of the use of leverage, and, in particular, derivatives, for U.S. financial stability.[48] Regarding operational risk, the FSOC sought comment on operational risk generally in the asset management industry and more specifically particular risks associated with the transfer of client accounts or assets from one asset manager to another, and risks arising when one or more asset managers use one or a limited number of third party providers for significant services such as pricing, valuation or portfolio risk management.[49] On the subject of resolution, the FSOC asked whether there are financial interconnections, such as transactions or investments across affiliated investment vehicles, between an asset manager and an investment vehicle or with third parties, or

other potential issues that could make resolution in the asset management industry more complicated in periods of market stress.[50]

In the 2014 Notice, the FSOC acknowledged that SEC initiatives were underway that might address some of the risks outlined.[51] The FSOC noted that, while the focus of these initiatives was not U.S. financial stability, it would consider their impact on reducing risks to financial stability.[52]

SEC Responds with Proposals for Enhanced Risk Monitoring and Asset Management Regulation

With the possibility of FSOC action again in traditional areas of SEC jurisdiction, the SEC moved to address the subjects raised in FSOC's 2014 Notice in three sets of rule proposals in 2015. These proposals generally are widely seen as intended by the SEC to provide more information to FSOC about funds' portfolio holdings and transactions and to promote risk monitoring and risk management.

Portfolio Information reported by Funds and Investment Advisers (May 2015).[53] Under these proposals, the SEC would require registered funds, other than money market funds, to provide new portfolio-wide and position-level holdings data on a monthly portfolio holdings reporting form (Form N-PORT). Data collected would also include information related to the pricing of portfolio securities, repurchase agreements, securities lending, the terms of derivatives contracts and portfolio level and position level risk measures. With respect to investment advisers, the proposals would require certain aggregate information relating to SMAs, including assets held and the use of borrowings and derivatives in those accounts.

*Mutual Funds' Liquidity Risk Management and Swing Pricing (*September 2015).[54] These SEC proposals are intended to reduce the risks that funds will not be able to meet redemption requests or that redemptions result in dilution of fund shareholders' interests. In these proposals, the SEC would require mutual funds and exchange-traded funds ("ETFs") to have a liquidity risk management program that would include classification of the liquidity of portfolio assets, assessment, periodic review and management of each fund's liquidity risk, establishment of a three-day liquid asset minimum, and board approval and review of the program. Classification would be required for each of the assets in the fund's portfolio into one of six categories based upon the number of days each asset position would be convertible to cash at a price that does not materially change the value

of that asset immediately before sale. A fund must determine the fund's three-day liquid asset minimum, considering certain factors, such as the size, frequency, and volatility of past purchases and redemptions during both normal and stressed market conditions. The fund cannot acquire any less liquid holding if following the acquisition the fund would have invested less than the three-day liquid asset minimum in three-day liquid assets. In addition to this proposed liquidity classification, the SEC's guidance limiting a fund's holdings of illiquid assets to 15 percent would be codified in a rule.

These proposals also would permit mutual funds (other than money market funds and ETFs) to elect to use "swing pricing." Swing pricing would allow for the adjustment of a fund's net asset value (NAV) so that purchasing and redeeming investors would bear part of the costs of trading in the fund shares in certain circumstances. The goal of swing pricing would be the protection of existing shareholders from dilution related to the purchases and redemptions of fund shares.

Regulation of Funds' Use of Derivatives. (December 2015).[55] This SEC proposal would require a fund to comply with one of two alternative portfolio limitations in order to restrict the amount of leverage a fund may have through derivatives and certain other transactions. A fund also would be required to segregate certain assets (in general cash and cash equivalents) in an amount to permit the fund to meet its obligations in connection with derivative transactions and certain other transactions, such as reverse repurchase agreements. A fund would need a formalized derivatives risk management program and designated derivatives risk manager if the fund utilizes complex derivatives or more than a limited amount of derivatives.

Beyond these proposals, the SEC is developing rules to require transition planning for investment advisers in case of a major business disruption and stress testing for large investment advisers and funds,[56] which is required by Dodd-Frank[57] Additionally, reflecting the increased focus on risk monitoring, the SEC has added two offices to expand monitoring risk – the Risk and Examinations Office in the Division of Investment Management, which analyzes industry and firm operational data, including the risk-taking activities of asset management firms, and the Risk Assessment Office within the SEC's Division of Economic and Risk Analysis to provide risk modeling expertise and guidance on the analysis of data to promote risk-based examinations.

FSOC April 2016 Update: FSOC Focuses On Liquidity and Redemptions and Leverage Risks

In April 2016, the FSOC published an update on its asset management review.[58] In the update, FSOC identified five areas of potential financial stability risk that may arise from asset management products and activities and specific steps to address these risks. The five areas are: liquidity and redemptions, leverage, operational functions, securities

lending and, lastly, resolvability and transition planning. The key areas of focus of the update were liquidity and redemptions and leverage risks.[59]

With regard to liquidity and redemptions, the FSOC pointed to two features of pooled investment vehicles. The "Liquidity Transformation" feature permits investors to redeem daily while the vehicle is invested in less liquid assets. During market stress, the FSOC explained, the price of assets held may decrease quickly if there are heavy redemptions.[60] The other feature highlighted by the FSOC was "First Mover Advantage." This occurs when the costs of satisfying investor redemptions are borne to a great extent by the shareholders remaining in the fund, which may create incentives for some investors to redeem ahead of others.[61] Despite the acknowledgement that there is scant evidence of widespread runs by mutual fund investors, the FSOC concluded that large redemptions in mutual funds holding less liquid assets in periods of market stress could lead to price drops in the asset class and forced asset sales at declining prices, which, in turn, could transmit stress to other market participants and result in broader market disruptions.[62]

The FSOC referred to the situation in December 2015 of a high yield bond fund, the Third Avenue Focused Credit Fund ("Third Avenue Fund"), which had suspended redemptions to protect the fund's investors. While the FSOC conceded that no other high yield bond funds had been unable to satisfy redemption requests in this period of market stress, the FSOC concluded that the closure of the Third Avenue Fund "illustrates both liquidity and redemption risk in less-liquid mutual funds and raises questions about the implications for financial stability." [63]

The FSOC listed several steps that could help address the liquidity and redemption risks: (1) robust liquidity risk management for mutual funds; (2) clear regulatory guidelines regarding limitations on mutual funds holding less liquid assets; (3) greater reporting and disclosure with respect to mutual funds' liquidity profiles and liquidity risk management practices; (4) allocation of redemption costs to investors redeeming shares intended to eliminate "First Mover Advantage;" and (5) greater public disclosure of external sources of financing, such as interfund lending and lines of credit, for mutual funds.[64] Despite the FSOC's concerns, virtually all of these steps are either addressed by existing rules and regulations that have proven effective at preventing risks to financial stability originating from asset management firms or addressed to some extent in the SEC's 2015 rule proposals on expanded reporting of portfolio holdings information, liquidity risk management and swing pricing. The FSOC acknowledged the SEC's ongoing rulemakings and indicated it would await the results of the SEC's 2015 rule proposals and then would consider if financial stability risks remain.[65]

With respect to leverage, the FSOC considered ways in which leverage used by investment vehicles could make direct or indirect losses more likely for counterparties or other market participants and possible implications for the broader financial system. The FSOC

[65] Id.at 13.

noted that leverage appears to be concentrated in private funds, and, in particular, hedge funds, and the need to gather more information. To this end, the FSOC stated that an interagency working group was being created to share and analyze information about hedge funds, with the goal of improving regulators' understanding of hedge fund activities and their use of leverage. If the working group concludes that financial stability risks arise from hedge funds' use of leverage, the FSOC will decide whether the appropriate regulators have the authorities to address these risks or need additional authorities.[66]

On the subject of operational risk, the FSOC decided that additional information and analysis is needed relating to the potential for disruption or failure of a service provider that might result in wider market risk. The FSOC also called for further information and analysis relating to securities lending. The FSOC was concerned that there could be a widespread termination of securities loans by borrowers, which might create unanticipated and heavy redemptions in pooled investment vehicles that are holding the cash collateral of the lenders, in turn, leading to potential financial stability risks.[67]

In the FSOC's view, resolvability and transition issues resulting from the failure or stress of clients of asset management firms, and possibly asset management firms themselves, could exacerbate the risks relating to liquidity or leverage. The FSOC noted that advance planning could help to mitigate risks and it would monitor the outcome of an SEC rulemaking underway on the subject of transition planning.[68]

Challenges to the FSOC on Multiple Fronts

Public push back to FSOC. Beginning with issuance of the 2013 flawed (and embarrassing) OFR Report, independent experts, investors, representatives of the asset management industry, and Commissioners of the SEC themselves, have called for changes in the FSOC process and thinking. Several themes have emerged. Both funds and advisers have been highly regulated by the SEC and the states for the past 75 years; this comprehensive regulatory scheme has worked to promote financial stability, and SEC expertise and the transparent SEC rulemaking process should be used when additional regulation is being considered. Unlike banks, fund managers are agents that invest on behalf of the funds and their investors, not the fund managers, bear the losses and benefit from the gains. The vast majority of investor assets are in long term, large-cap stock and bond mutual funds, and investors in these funds have for 75 years been long-term stable owners, mostly saving for retirement, and have not tended to rapidly withdraw from the funds or initiate "runs." Historical experience also shows funds and advisers exit the business regularly without government intervention, "bailouts" or financial stability repercussions. The review of the asset management business should be based on the historical record and empirical evidence, not hypothetical situations, such as theoretical shareholder runs on funds or "herding," when history shows that fund outflows are muted in periods of market stress and there is no evidence that millions of shareholders act in concert. In light of the Dodd-Frank requirements for the FED to impose prudential standards on nonbank SIFIs, the FSOC, with its concentration of banking regulators, is intent on imposing bank-style regulation on the asset management industry despite the potential for harm to investors through higher costs and less investment flexibility.

FSOC Loses the MetLife Case: Setback to the Nonbank SIFI Designation Process. In 2013, the FSOC designated three companies as nonbank SIFIs, American International Group, Inc., and Prudential Financial, Inc., both insurance companies, and General Electric Capital Corporation, Inc. ("GE Capital"), a financial services company. In December 2014, MetLife, Inc. ("MetLife"), another insurance company, was designated as a nonbank SIFI by the FSOC. Within a month, MetLife became the first company to bring suit against the FSOC challenging the nonbank SIFI designation. [69]

On March 30, 2016, the U.S. District Court in the District of Columbia agreed with MetLife and rescinded MetLife's nonbank SIFI designation as arbitrary and capricious on two grounds.[70] First, the Court noted that the FSOC had determined that material financial distress at MetLife could pose a threat to the financial stability of the U.S. but the Court found that the FSOC had not analyzed MetLife's vulnerability to financial distress and had not assessed how there would be an impairment of financial intermediation or financial market functioning severe enough to inflict significant damage on the broader economy as required by FSOC's 2012 Final Rule and Guidance.[71] Notably, the Court found that the FSOC had not projected any estimated losses to other market participants, what financial institutions would be affected or how the market would destabilize. Second, the Court determined that FSOC was required to but did not consider the costs to MetLife of the SIFI determination. The FSOC's action, the Court said, was "unreasonable" and the result of a fatally flawed process"[72]

The FSOC has decided to appeal the *MetLife* Court decision,[73] and the case will likely not be finally resolved for some time. Some commentators have viewed the *MetLife* decision as a "knockout" and a signpost of the failure of Dodd-Frank.[74] The *MetLife* decision does place the onus on the FSOC in future nonbank SIFI determinations to conduct and present a rigorous analysis based on empirical data to show how and why financial distress at a firm will have the required effect on U.S. financial stability and to provide a careful analysis of the costs of a nonbank SIFI determination. While the *MetLife* case calls for some revamping of the nonbank SIFI designation process, it does not suggest there will be any dismantling of the Dodd-Frank scheme of systemic risk regulation. Certainly, the *MetLife* case provides grounds for demanding historical evidence, empirical data and rigorous analysis, rather than theoretical and hypothetical scenarios, in a nonbank SIFI designation proceeding involving the asset management industry.

GE Capital SIFI Rescission Request. GE Capital is taking another route to challenge its nonbank SIFI designation. On March 31, 2016, the day after the court decided the *Metlife* case, GE Capital filed a request with the FSOC for rescission of its nonbank SIFI designation.[75] GE Capital asserted that it has significantly reduced its risk profile,

[75] GE Capital Files Request for Rescission of Status as a Systemically Important Financial Institution, Press Release, March 31, 2016.

is substantially less interconnected to the financial system and thus does not meet the requirements for SIFI designation. GE Capital had downsized through asset sales, exiting various businesses, including leveraged lending and U.S. consumer lending, and reducing real estate debt, real estate equity and outstanding commercial paper. The firm also said it has reorganized and simplified its structure and thereby reduced its complexity and increased its resolvability.[76]

U.S. Congressional Action. A number of bills regarding the FSOC and its nonbank SIFI designation process have been introduced in the U.S. Congress. H.R.3340, The Financial Stability Oversight Council Reform Act, which passed the U.S. House of Representatives on April 4, 2016, would require that the budgets of the FSOC and the OFR be subject to the annual appropriations process, giving the U.S. Congress control over the purse strings and thus oversight over the FSOC and OFR. [77] This bill notes that the FSOC and OFR currently receive funding from assessments on financial firms that are deposited into the Financial Research Fund and become immediately available for spending without any Congressional review or approval. H.R. 1550, the Financial Stability Oversight Council Improvement Act of 2015, would require the FSOC, before making a proposed nonbank SIFI designation, to identify with specificity the risks the company poses to U.S. financial stability and to consider the appropriateness of imposing prudential standards rather than other forms of regulation to mitigate the risks FSOC has identified.[78] Prior to a proposed designation of a company with a primary regulator, the FSOC would be required to allow the primary regulator to address the identified risks, including undertaking regulatory action to mitigate the risks if appropriate. In addition, the bill would permit a company that the FSOC has proposed to designate as a nonbank SIFI an opportunity to provide a plan that modifies the company's structure, business or operations to address the identified risks.

FSB and IOSCO Examination of Asset Management

Since 2011, the Financial Stability Board ("FSB"),[79] in consultation with the International Organization of Securities Commissions ("IOSCO"), have been conducting an examination of the asset management industry from a global standpoint for potential identification of non-bank non-insurer ("NBNI") global systemically important financial institutions ("G-SIFIs").[80] On March 4, 2015, the FSB and IOSCO released their second Consultative Document called "Assessment Methodologies for Identifying Non-Bank Non-Insurer Global Systemically Important Financial Institutions, Proposed High-Level Framework and Specific Methodologies" ("2015 Consultation"). The 2015 Consultation sets forth

[76] *Id.*

[77] H.R. 3340, Financial Stability Oversight Council Reform Act (Introduced July 29, 2015; passed House April 14, 2016; referred to U.S. Senate Committee on Banking Housing and Urban Affairs April 16, 2016).

[78] H.R. 1550, Financial Stability Oversight Council Improvement Act of 2015 (Introduced March 23, 2015; passed House of Representatives Committee on Financial Services November 4, 2015). Along the same lines, S. 1484, The Financial Regulatory Improvement Act of 2015, would require the FSOC to consider the extent to which a company being evaluated for nonbank SIFI status is already regulated by a financial regulatory agency, including the appropriateness of applying prudential standards instead of, or in addition to, other regulations.

[79] The FSB was created by the G-20 in April 1999.

[80] The FSB was asked by the G-20 in November 2011 to prepare the assessment methodologies in consultation with IOSCO.

revised methodologies based on responses to the previous FSB/IOSCO Consultation issued in January 2014. The methodologies are intended to help identify NBNI financial institutions "whose distress or disorderly failure, because of their size, complexity and systemic interconnectedness, would cause significant disruption to the wider financial system and economic activity across jurisdictions."[81]

The 2015 Consultation sets out the same three systemic risk and transmission mechanisms as in the 2014 Consultation: the exposures/counterparty channel; the asset liquidation/market channel and the critical function or service/substitutability channel.[82] The same basic impact factors also are used in the 2015 Consultation: size, interconnectedness, substitutability, complexity and global/cross-jurisdictional activities.[83] The 2015 Consultation proposes a methodology for identifying global systemically important individual investment funds with a focus on leverage, taking into account that more leverage taken on by a fund leads to higher interconnectedness through borrowing. A separate methodology for identifying global systemically important individual asset managers also is proposed, which will focus on asset managers whose distress or disorderly failure could result in "significant disruption to the global financial system and economic activity across jurisdictions.[84] Proposed thresholds for evaluation as a G-SIFI were enumerated in the 2015 Consultation. For public investment funds, these were:

- $U.S. 30 billion in net asset value ("NAV") and balance sheet financial leverage of 3 times NAV, with a size-only backstop of $U.S.100 billion net assets under management (AUM)
- $U.S. 200 billion in gross AUM unless it can be shown that the fund is not a dominant player in its markets[85]

For private funds, the proposed threshold was: $U.S. 400 billion of gross notional exposure.[86] This threshold was selected to include private funds that are highly leveraged. For asset managers, the proposed thresholds were:

- $U.S. 100 billion (or another specific number) in balance sheet assets
- $U.S. 1 trillion (or another specific number) in AUM[87]

The 2015 Consultation outlines the process to be followed.[88] After approval of the methodologies, the FSB would give the relevant national authorities a list of entities that meet the thresholds. The national authorities would then develop a list of entities recommended for G-SIFI evaluation. The FSB and the national authorities together would agree on a final list of G-SIFIs.

[88] *Id*. at 12-15.

The proposed methodologies in the 2015 Consultation have been met with many of the same criticisms as FSOC pronouncements. The thresholds, in particular, have been objected to for relying too heavily on asset size as an indicator of risk. In fact, under these thresholds, a large number of U.S. SEC-registered funds would automatically become subject to G-SIFI evaluation – an absurd result since a large portion of these would be unleveraged, diversified large-cap index funds invested in the S&P 500, which are widely regarded as some of the simplest, most popular, least-complex and least-risky funds available to investors.[89]

In June 2015, IOSCO announced that "a full review of asset management activities and products in the broader global financial context should be the immediate focus of international efforts to identify potential systemic risks and vulnerabilities,"[90] and this work would take precedence over work on the methodologies. Further work on the methodologies would be reassessed after the review is completed.

Following IOSCO's statement, the FSB changed the focus of the asset management review to certain activities. In a March 31, 2016 press release, the FSB announced the launch of a public consultation on policy recommendations to address structural vulnerabilities from asset management activities.[91] The press release stated the key policy recommendations are intended to address risks posed by funds' liquidity mismatch, funds' use of leverage, operational risks, risks in transferring investment mandates in circumstances of stress and securities lending by funds and asset managers. In addition, the FSB encouraged authorities to use stress testing to assess the ability of funds to meet redemption requests in periods of market stress.

E. Implementation in the EU[92] (Dr. Klaus Peter Follak)

In the immediate aftermath of the global credit crisis, the subject of resolution of financial institutions has been taken up by several national jurisdictions, including Germany and the UK. As is delineated below, the UK through the Bank of England is also collaborating with the resolution authority for SIFIs designated under the US's 2010 financial reform legislation, Dodd-Frank, to ensure that the UK's legislation in the area is harmonized not only with the EU legislation but also with the agreed-upon (between FDIC and the Bank of England) procedures for SIFI resolution, which in essence are those described by the FSB's Chairman in his February 17, 2014 letter above. These national attempts will have to be adapted and supplemented (but not totally abolished) in the course of the EU harmonisation, which will also implement the FSB requirements.

Due to the creation of the Banking Union within the Euro zone, the EU harmonisation will have to be implemented within a dual structure: The Directive establishing a framework for the recovery and resolution of credit institutions and investment firms[93] must be

[93] latest draft COM (2012) 280 final, 6.6.2012.

implemented into national legislation by the Member States of the EU and the EEA (EU plus Iceland, Liechtenstein and Norway). After the EU Council reached an agreement with the EU Parliament on December 18, 2013, the Directive provides that it will come into force on January 1, 2015, whereas the bail-in tool will be postponed for another year.

The Regulation, which under EU constitutional procedures has direct force of law in the Member States of the Banking Union (Euro Zone)[94] establishing uniform rules and a uniform procedure for the resolution of credit institutions and certain investment firms in the framework of a Single Resolution Mechanism and a Single Bank Resolution Fund, will be adapted to the above-mentioned general agreement of December 18, 2013. As the Directive has to be implemented by all Member States including the Banking Union Members, the Regulation will have to be consistent with the general Directive.

The scope of both drafts is still limited as compared with the latest FSB drafts in respect of insurance companies and the Shadow Banking System: Within the Regulation, to the extent parent undertakings, investment firms and financial institutions are included in consolidated supervision by Europe's central bank, the European Central Bank (ECB) (basically, the scope of banking supervision by the ECB – Art. 2 of the Regulation); Within the Directive, the scope "…is identical with that of the Capital Requirements Directive (CRD), which harmonises prudential requirements for institutions including financial institutions included in a banking group, and investment firms", and "…should also apply to holding companies where one or more subsidiary credit institutions or investment firms meet the conditions for resolution."

On the other hand, following the traditional EU principle of minimum harmonisation, the scope of application is not restricted to individually designated systemically significant entities, but will be applied to all banks, investment firms, and all relevant insurance companies and financial institutions operating in the EU.

Both the Directive and the Regulation will supersede the Directives on mutual recognition and enforcement of reorganisation or winding up measures in relation to credit institutions (2001/24 EU) and insurance companies (2001/17, now integrated into the so-called Solvency II Directive 2009/138) that have branches in other Member States. Both 2001 Directives had introduced the recognition of the respective national home country insolvency regime.

The respective national insolvency law will still be maintained as the general basis:

> Losses, once identified through a valuation process, are to be allocated between the shareholders and the creditors…in accordance with the hierarchy of claims established by each national insolvency regime. However…the resolution framework establishes certain principles for the allocation of losses…irrespective of what each national insolvency regime establishes:…that the losses should first be allocated in full to the shareholders and then to the creditors that creditors of the same class might be treated differently if it is justified by reason of public interest and in particular in order to underpin financial stability.[95]

---

[94] latest draft COM (2013) 520 final, 10.7.2013

[95] Proposal for a Directive of the European Parliament and of the Council establishing a framework for the recovery and resolution of credit institutions and investment firms and amending council directives (COM 2012) available at http://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A52012PC0280.

In accordance with the general international insolvency procedures, security, collateral and guarantees will remain untouched, as well as certain priorities of claims under the aspect of the general good, such as social security liabilities, wages of employees etc.:

> It is not appropriate to apply the bail-in tool to claims in so far as they are secured, collateralised or otherwise guaranteed. Nevertheless, it is appropriate to exclude certain kinds of unsecured liability from the scope of application of the bail-in tool for reasons of public policy and effective resolution…[96]

In respect of the general aim of insolvency procedures, the new resolution regime allows for re-structuring versus liquidation: "Resolution constitutes an alternative to normal insolvency procedures and provides a mean to restructure or wind down a bank that is failing and where failure would create concerns as regards the general public interest", threatening financial stability, the continuity of a bank's critical functions and/or the safety of depositors, client assets and public funds. Therefore, the introduction of the following tools into national legislation will be mandatory:

- transfer (sale) of the business
- transfer to a bridge institution
- asset separation (in particular deposits)
- bail-in of unsecured debt instruments.

As far as relations with third countries are concerned, the Directive contemplates the negotiation of binding agreements. In their absence, the European Banking Authority (EBA) has the ability to recognize, on a case by case basis, third country resolution proceedings relating to an institution having its residence in a third country. In these cases, third country resolution proceedings have to be enforced under the national jurisdiction of individual EU Member Countries. Apart from that, as long as soft law principles or the EU Directive have not been implemented by national law or the Banking Union Regulation, courts will apply exclusively national law, subject to the general principles of international insolvency law.

Needless to say, the implications of Brexit will need to be considered in detail over the coming period in the UK context, given the negotiated changes to the relationship with the EU that will be hammered out in time.

Cross-border Issues

The aim of resolution frameworks is to avoid formal insolvency. As they are due in a pre-insolvency situation, the principles of international insolvency law are not applicable, at least not directly. Nevertheless, cross-border issues and problems are similar. Like insolvency law, resolution frameworks are mandatory national law, not subject to choice of law by related parties. They provide for the legal basis of implementing measures by the competent authorities, giving regulators a range of tools including statutory powers to write down and/or convert into equity a financial institution's liabilities. Such measures have to be considered as administrative acts, i.e. acts of state. This means that the scope of application hinges on the interpretation of sovereign power according to the principles of international law. Under the law of nations, national jurisdiction is restricted to the national territory, i.e.

[96] *Id.*

- jurisdiction in personam to citizens, and to individuals and legal persons with residence in the respective territory;
- jurisdiction over assets situated in the respective territory (lex rei sitae).

Regularly, cross-border transactions involve several jurisdictions:

- the law of the contract;
- the law of the residence of the individuals and legal persons subject to resolution measures, and
- the lex rei sitae in respect of the affected assets.

This means that the enforcement of a Bail-In or Resolution "Stay" may be challenged under the law of contract before the courts of another country in cases where a jurisdiction different from the residence of the obligor (i.e. the respective financial institution) has been agreed upon. In consequence, the outcome in view of established legal principles such as frustration, force majeure, mandatory law and extraterritorial jurisdiction might be very doubtful. This is why the FSB has affirmed the importance of contractual clauses that recognize the effectiveness of resolution actions taken in the jurisdiction in which the affected financial institution is established.[97]

Solution in EU/EEA Jurisdictions

The EU has chosen the established path of minimum harmonization and Europe-wide application of home country legislation by issuing a Directive on Resolution Frameworks[98] (BRRD) which has to be transformed into national legislation by the EU and EEA Member States. The tool of minimum harmonization has proved to be very successful in creating the Single Market in the financial services area. The BRRD had to be implemented by EU and EEA governments to come into force on the1st of January, 2015. National Legislators have to make sure that a minimum set of resolution tools is in place and that related statutory powers of the financial institutions' home country regulations are effective throughout the EU/EEA.

The BRRD applies to EU incorporated credit institutions and investment firms, their EU incorporated holding companies and their EU subsidiaries, including non-EU branches of EU incorporated institutions but excludes non-EU incorporated institutions and their EU branches. Resolution tools under the BRRD, in particular Bail-In of financial institutions' liabilities, Write down and Conversion powers have to be effective Europe-wide in respect of all liabilities under a document established from the 1st of January 2016 and governed by respective law, regardless of the terms of that document. The following exceptions to the Bail-In requirement are applied:

- Secured liabilities;
- Client money and fiduciary relationships separated from the financial institution's assets in ways which are insolvency-proof;
- Certain short-term liabilities to financial institutions;
- Certain short-term liabilities to settlement systems;

[97] FSB, Principles for Cross-border Effectiveness of Resolution Actions, 3rd Nov. 2015.
[98] Directive 2014/59 EU

- Deposits covered by a deposit guarantee scheme;
- Deposits from private individuals or SME companies;
- Liabilities for contributions to a deposit guarantee scheme;
- Certain liabilities to employees;
- Certain liabilities to tax or social security authorities;
- Certain liabilities for the provision of goods and services which are critical to the daily functioning of the financial institution's operations.

Due to transformation of the BRRD into national law, exercises of Write-Down and Conversion Powers will be effective in respect of any liabilities under a document governed by the law of an EU/EEA country. However, as the FSB rightly stated, such effectiveness is at least doubtful in the case of an EU/EEA financial institution's liabilities under a document governed by the law of a non-EU/EEA country. The EU has solved the problem by obliging EEA financial institutions to include a Bail-In clause in certain of these documents. The Bail-In clause introduced by Art. 55 of the BRRD has to require the EU/EEA financial institution's counterparties to agree that the institution's liabilities under that document are subject to the Bail-In or Conversion request by the institution's regulator. The scope of application of Art. 55 BRRD is very wide and, according to current interpretation practices of leading counsels worldwide that are adopting conservative approaches to compliance, involves any potential contractual or non-contractual liability including ancillary claims such as confidentiality obligations. However, Art. 55 BRRD does not provide for any retro-active effect (which could be challenged under the principles of national constitutional or administrative laws anyway). Rather, the Art. 55 requirement will be triggered by any of the following events:

- an EU/EEA financial institution becomes a party to a document from 1st of January 2016;
- material amendment to an existing document from 1st of January 2016;
- new liabilities arising under an existing document from 1st of January 2016.

Although the use of Art. 55 clauses is already mandatory since 1st of January 2016, the respective draft EU Regulatory Technical Standards (RTS) have not yet been finalized by the European Banking Authority (EBA).[99]

A couple of industry associations have published or are working on standard terms:

- The Assoc. for Financial Markets in Europe (AFME): Model Clause re. Art. 55 for issuers of debt securities established in the UK but governed by NY law; additional versions for capital market transactions will follow;
- International Capital Markets Assoc. (ICMA);
- Loan Market Assoc. (LMA) and Loan Syndications and Trading Assoc. (LSTA) for European and US style loan documentations.

It has to be noted that the BRRD regime for conflicting Third Country laws is by no means complete. As the BRRD has been established following the principle of minimum harmonization, Member Countries can introduce stricter and more comprehensive regimes. For example, there is no BRRD requirement for clauses recognizing suspension

[99] Final EBA Report on RTS: EBA/RTS/2015/06.

or disapplication of contractual termination rights or rights to enforce a security interest (so-called "Stays"). Both Germany and the UK have included related contractual requirements for financial contracts under third country jurisdictions. There is still much room for coordination by FSB member countries.

F. Asia (Alan Ewins)

It would be a serious mistake to assume that resolution and recovery is essentially relevant only for banks or only mainly relevant in the US and the EU. Securities markets would be significantly affected by the resolution of banking groups containing securities businesses

The Financial Stability Board (FSB) framework is on the face of it an expression of hope that the resolution and recovery machinery created will at the very least smooth the process of resolution as and when needed. The new regimes target the major global institutions to ensure as far as possible that they have plans in place to head off delay, confusion and over-complexity (by improving their resolvability). The underlying intention is for mechanisms to be in place to allow regulators to take strong action at a time of crisis to revive institutions where they have reached non-viability (and it is not appropriate for them simply to be put into insolvency). All of these regimes need to work together as seamlessly as possible cross-border. The level of necessary trust in relation to the international dimension is a primary obstacle in relation to the smooth operation of resolution regimes.

Asia suffered greatly during the Asian Financial Crisis in the late 1990s. It is fair to say that Asian jurisdictions learned from that crisis, modified their regulatory regimes and consequently their institutions fared better in the recent Global Financial Crisis (GFC) than their US and EU counterparts. Banks in Asia did not fold in the same way as in "First World" countries, particularly given the increased strength and stability of the banks in Asia which had evolved from the earlier turmoil under tightened requirements.

However, following the GFC, the international moves described above and degree of consensus developed with a view to embedding in domestic legislation powers designed to be used in times of impending crisis, or actual crisis, to resolve systemically important institutions which were in danger of failing.

Those powers are intended to allow relevant regulators (so-called "resolution authorities") essentially to take swift stock of a troubled institution and take strong action. including over-riding shareholders' property rights, to transfer the institution's assets to third party purchasers, "store" parts of its business in asset managers or "bridge" (holding) institutions, and otherwise allow steps to be taken to "save" vulnerable institutions in the sense of allowing critical functions and services, such as deposit taking, payment systems and so on, to be maintained during the crisis. The underpinning aims are to allow covered institutions to fail "safely", without major systemic disruption while at the same time as far as possible protecting public funds, restoring or maintaining critical market functions and limiting "moral hazard" (that is, avoiding institutions from complacently assuming that there will be a "bail out" using public funds of their liabilities and obligations) – the key resolution objectives are maintaining stability, protection of creditors to no less extent than they would be protected under a winding up, protecting client assets of

the in-scope financial institution to an extent no less than under a winding up and (subject to those objectives) containing costs and protecting public money.

The resolution concept is designed to act as an alternative to liquidation where the cost, speed and ultimate outcomes of the blunt tool of insolvency would not suffice to achieve those objectives. Essentially, insolvency is "personal" to an institution, whereas resolution is intended to consider the wider safety and continuity of the market.

There has been a temptation in Asia to view these issues overall as principally amounting in a practical sense to "First World" issues. This is subject to the desire on the part of the major Asian jurisdictions to be viewed as being an integral part of world markets. That is particularly the case for places such as Hong Kong and Singapore, which are viewed, individually, as major international financial centers. China continues to assess its own position in relation to recovery and resolution, in the light of international developments. There is accordingly, and naturally depending on the viewpoint of the observer, good citizenship, herd mentality or lip service in respect of the adoption of resolution regimes in Asia.

The FSB Key Attributes act as a blueprint for regimes internationally, and although the target date of the end of 2015 for the implementation of regimes has been missed, significant steps have been taken by many jurisdictions to put such a regime in place, in keeping with the expectations set out in the Key Attributes, with a view to fully functioning regimes working as soon as possible. The relative calm after the GFC has given regulators some breathing space in which to develop suitable regimes. President John F. Kennedy, in his State of the Union address in January 1962, said that 'The time to repair the roof is when the sun is shining.' Or in this case, at least when there have been no further catastrophic storms to date.

Australia, Singapore, Korea and Australia are among the jurisdictions which have already adopted special resolution regimes, broadly along the FSB lines. Hong Kong is discussed in detail below. Hong Kong is one of the G20 members based in Asia (together with Australia, China, India, Indonesia, Japan and South Korea) .

Total Loss-Absorbing Capacity (TLAC) is a related concept that is designed to bolster the capital of institutions by requiring capital to be held and readily available to enable failing institutions to withstand shocks. That involves allowing for financial support to be distributed within a multi-national group to where it is needed – this is crucial for ensuring the overall credibility of cross-border responses to a crisis. TLAC provisions will be set out in subsidiary legislation in Hong Kong in due course, to conform with the recent FSB publication of the final TLAC standard for globally systemically important banks.

Relevance of resolution regimes to Asian securities markets

In this section, we will consider developments in Hong Kong, a key international financial center in Asia, which nicely demonstrates certain issues in relation to the evolution of an international resolution environment. Hong Kong has been a later mover in this area. Accordingly, it has had the benefit of taking into account various developments in resolution regimes as part of the evolution of its incoming legislation, rules and guidance, hence its usefulness as a case study and proxy.

The Hong Kong banking, securities and futures and insurance regulators jointly published, together with the Financial Services and Treasury Bureau (i.e. the Hong Kong Government), a series of consultation papers and consultation conclusions on recovery and resolution. There is clear evidence in support of the assertion that banks are viewed as the primary targets for the incoming regime, where the Hong Kong Monetary Authority (HKMA) has taken the lead in pursuing the implementation of a new resolution and recovery regime. There has been no substantive follow-up from the securities and futures regulator, the Securities and Futures Commission (SFC), which has adopted more of a monitoring stance in relation to the new regime. Having said that, the SFC is an active member of the IOSCO Task Force on Unregulated Fund Entities and on Supervisory Cooperation, and the IOSCO Implementation Task Force, reviewing the methodology for assessing implementation of IOSCO objectives and principles of securities regulation, and of the Working Group on Systemic Risk; the HKMA is a member of the FSB; the Hong Kong Insurance Authority is a member of IAIS.

The publication of Hong Kong's Financial Institutions (Resolution) Bill in November 2015 (Bill) has crystallised the series of consultations, consultation responses and "soft" industry consultations that have been published and taken place in Hong Kong. The Bill attempts – for the first time in Hong Kong – to place recovery and resolution issues into a legislative framework.. The Bill is currently progressing through the Hong Kong Legislative Counsel legislation process, with a view to implementation later in 2016. It covers the creation of resolution authorities (to manage resolution), pre-resolution requirements (in relation to ensuring resolvability of institutions), sets out the resolution objectives of the regime, sets out the stabilisation options available to a resolution authority and includes a range of important provisions concerning controls such as remuneration clawback and various checks and balances for the authorities to observe.

Notwithstanding the center of gravity of resolution and recovery measures is the banking sector, it is important to consider the potential effects on the securities industry of the inclusion of securities entities.

In terms of *scope*, in addition to banks and insurers, the following types of entity are to be included under the regime:

- Licensed broker-dealers, asset managers and other securities firms are in-scope where they (not being a bank or an insurer) stand alone as a global systemically important financial institution
- Licensed broker-dealers, asset managers (considered in more detail below as a specific sub-topic) and other securities firms are in-scope where they are a branch or subsidiary of, or a subsidiary or holding company of, a global systemically important bank or global systemically important insurer
- Entities that are "primarily engaged in the provision of financial services or the conduct of financial activities" are in-scope when designated as such by the Hong Kong Financial Secretary
- Financial markets infrastructures (FMI) – clearing houses, payment systems, central securities depositaries, securities settlement systems, central counterparties and trade repositories – are in-scope; the above discussion on resilience, recovery and resolution of CCPs is pertinent here

- A recognized stock exchange (the Hong Kong Stock Exchange) can be designated as in-scope by the Hong Kong Financial Secretary on the recommendation of the SFC
- Affiliated operational entities (AOE), which are corporates that are members of an in-scope financial institution's group and that provide services (directly or indirectly) to the financial institution, are themselves in-scope – AOEs essentially cover outsourcees within the group, and they are themselves directly subject to the resolution powers of the relevant resolution authorities to protect critical services that are needed for the institution's operations outsourced to them
- Holding companies of in-scope financial institutions are themselves in-scope

Note: A useful point to bear in mind is that securities firms within a group headed by a globally systemically important bank or insurer, even where those securities firms are unregulated (where they operate outside the defined limits of the licensing regime, including under applicable exemptions), would potentially still be affected by resolution, where the resolution authority for example acted to sell off the bank's or insurer's assets, including the securities firm, or otherwise used its resolution powers so as to steady the failing group as a whole.

As is evident from the above list, the scope of the regime is designed to encompass globally systemically important securities firms (there are none designated at present), securities firms regardless of their size when they form part of a globally systemically important bank or insurer, or a branch of such a bank or insurer in Hong Kong, and any other entity which might be, or be part of a sector constituting, a potential global risk which has not to date been identified as such. That could for example include hedge funds or groups of funds which have not as yet been treated as globally systemically important, but may develop in a manner by which the international view of them may change and require them to be so designated.

Groups of hedge funds could ultimately prove to be large enough to create systemic instability and therefore be included as in-scope entities, but the likelihood at present is that they would not individually be of sufficient size to do so. A "collective" grouping of unaffiliated funds may accordingly at some stage fall under the jurisdiction of resolution authorities if that "bundling" approach were adopted in the future. That would have profound implications, since regulators, in the form of resolution authorities, may then be able to directly affect and direct the disposition of the assets and structure of those entities, subject to powers significantly more far-reaching than those currently available under licensing, prudential and enforcement rules. That would amount to an additional step-change in the way in which securities markets are currently governed.

FMI are automatically treated as caught, and a "wait and see" attitude has been adopted for exchanges given that the more likely source of substantive problems is the failure or impending failure of a clearing house. The counter-argument in that regard is of course that any troubled (or rumored to be troubled) stock or other exchange for whatever reason is likely to create shock-waves of instability within the jurisdiction in which it operates, and perhaps further afield .

AOE and holding companies are drawn into the scope of the regime to ensure that resolution powers and actions can be flexibly applied to groups, including groups containing securities firms, to ensure that the response of the regulators can be fine-tuned to achieve

the overall aim of rescuing an in-scope financial institution or institutions without allowing the practicalities of continuity (outsourcing) or group structure (holding companies) to act as a barrier to resolution.

The need for not just the flexibility of inclusion of particular entities (exchanges), and as yet unspecified entities or collections of entities which may in due course have a significant adverse effect on the global or local markets, as well as affiliated entities, is clear, but just as clear is the need for those designations to be enabled by the resolution regime, so as to ensure that slow-moving legislative machinery would not de-rail a regime which is fundamentally required to be able to be implemented swiftly and decisively.

The Hong Kong proposition is accordingly a practical, risk-based, assessment in relation to the overall initial scope of the regime: focus on the banks (and insurers), but ensure that the securities firms are within the scope of the regime to ensure that they do not unwittingly skew or unbalance the authorities' powers and options under the resolution regime. It is of critical importance that a seamless range of resolution options is available to the authorities, given that the global financial institutions are typically made up of a mixture of banking/insurance and securities elements. Not securing powers over the securities arms of the banks or insurers would potentially make the resolution process considerably harder to manage.

As a result, securities firms, such as broker-dealers and asset managers, whether or not they are in scope of the resolution regime, can be fundamentally affected by the application of resolution powers to their group.

There have been moves to determine the role of asset managers in the context of resolution regimes, initiated by the FSB and IOSCO, which had carried out early work to determine the level of systemic importance of major asset managers. The process had been a consultation exercise on whether non-bank non-insurer (NBNI) financial institutions such as asset managers (and pension funds) are systemically important to financial markets. That exercise has been halted following the pronouncements of IOSCO on the matter.

Instead, work is now progressing on conducting a full review of asset managers in a global financial context. Following that exercise, there could then be a more measured approach to determining any specific asset managers or groups of asset managers and related entities which may be of systemic importance and therefore require further regulation under the resolution framework.

We agree that this is the appropriate method to approach this issue, rather than taking a more narrow and focused view at the outset.

It is important to establish the precise universe of "asset managers" for the purposes of such study (for these purposes, references to *asset managers* mean fund managers (including self-managed funds, hedge fund managers and fund management companies), whether regulated or unregulated. In addition, there is a need to identify those aspects of the relevant businesses which could have a systemic impact and the most appropriate – targeted – ways by which to address those issues.

That can then be incorporated into the overall matrix of how the global financial markets operate and are potentially at risk in relation to crises from the activities of asset managers (including their possible contribution to exacerbating crises).

The main issue which needs to be borne in mind is that asset managers act as agents of their clients, and accordingly act as intermediaries in the markets for channelling capital as between investors and investee assets. This means that care needs to be taken before assuming that even very large asset managers could create a systemic global threat in the event of a crisis affecting them individually, hence the brake having been put on the FSB initiative.

In our view, the issue relates very much to asset managers' status as effectively a potential catalyst or accelerant in a crisis (rather than the entity in crisis), as a result of triggering action in other parts of the market and/or being or contributing to concentration risk in the markets generally (the quality, liquidity and spread of their assets held in respect of funds inevitably has a significant bearing on the following)

Borrowing – where the asset manager on behalf of the fund has borrowed in line with its investment objectives/strategy – in a crisis, lenders could recall their loans, thereby potentially prompting fire sales of fund assets into the market.

Derivatives transactions – where the asset manager on behalf of the fund has entered into derivatives transactions in line with its investment objectives/strategy – in a crisis in respect of a counterparty, normally the asset manager on behalf of the fund would consider its ability to trigger close-out clauses in the derivatives documentation, but this would be subject to any temporary stay on such behaviour under the relevant legislation. Accordingly, there would be unlikely to be significant impact on the part of the asset manager during the course of a resolution weekend.

Stock borrowing/lending – where the asset manager on behalf of the fund has borrowed stock in line with its investment objectives/strategy – in a crisis, lenders could recall the borrowed stock, thereby potentially prompting fire sales of fund assets into the market.

Sales of fund assets – where the asset manager on behalf of the fund decides to sell fund assets as a protective measure for the fund in a time of crisis, thereby potentially feeding the crisis by way of a fire sale of assets.

Risk disclosure – where clients of the asset manager recognise the inherent risks of a fund concentrated in a particular market or product and, in a crisis, act, by way of redemption application, to protect their position, again potentially worsening fire sale conditions.

Redemption management – where a crisis precipitates significant levels of redemptions by investors, potentially impacting on the ability of the asset manager to satisfy all investor requirements and either leading to a closure of the redemption "gate" insofar as permissible, or fire sale activity in respect of the fund assets

Proprietary trading – we would not expect this to add substantially to the development of a crisis

There could accordingly be a potentially significant overall impact by asset managers in the evolution of a crisis, principally in the context of the knock-on effects of activities and functions directly triggered in the event of a crisis.

We consider that, subject to the outcome of the ongoing IOSCO study, the likelihood is that individual asset managers should not necessarily be viewed as globally systemically important, but their ordinary course responses to a crisis could worsen the effects of a crisis.

Coupled with considerations of geographical spread and concentration of asset manager business amongst the main asset managers, our expectation is that there is the potential for groups of fund managers, not necessarily affiliated and not necessarily members of globally systemically important groups, could have a "herd" effect on the markets in the context of a crisis. As a result, it may prove to be appropriate to identify on an ongoing basis the networks of asset managers concentrated in particular asset classes and particular geographies/markets, since certain "clusters" of such asset managers may amount to a collective systemically important group that goes significantly beyond the consideration of individual legal entities.

Therein lies a major obstacle to assessing such "clusters" and their potential impact on global markets: sufficiently up to date information on global asset management markets and players to allow rigorous examination of their activity empirically, to enable a proper assessment of their potential role as globally systemically important entities. We do not consider that such "clusters" would be capable of clear identification and regulation as the markets currently stand, given the relative paucity of relevant information. Our expectation is that local resolution authorities would need to keep track of major asset management groups in their jurisdiction and, for example in the case of Hong Kong, consider whether any such "clusters" relevant to the jurisdiction warrant being separately classified under the "wild card" provision as in-scope financial institutions.

Ultimately, we would not expect asset managers to be viewed as globally systemically important in their own right, rather that they may be viewed as secondary sources of systemic risk based on their activities and functions in the event of a crisis of a globally systemically important third party. We consider the identification of globally systemically important "clusters" of asset managers and funds to be a potentially fruitful way forward in terms of the identification of relevant components of future crises, and worth exploring further.

Resolvability is a key element of recovery and resolution, being the extent to which an in scope entity in crisis can be quickly and efficiently scrutinised to determine whether it should be allowed to fail by leaving the entity to the operation of the relevant insolvency regime, or whether it is more appropriate to bring to bear the resolution regime. Where resolution is viewed as the most suitable approach, there is the need for the structure and operations of the institution to have been analysed in an earlier, non-stressed, situation so as to have arrived at an understanding of how an entity is organised: its group members, governance, service providers (including material outsourcees) and other inter-dependencies, and otherwise. This is so as to have enabled a plan to be drawn up to map the most appropriate ways to achieve a safe resolution of the entity.

Resolution planning is essential to the success of resolution, given the potential for rushed and potentially bad decisions to be made without that having been done. Typically, a recovery plan is written, confirming the major elements of the business and assets, and the expectations as to the most likely routes that could be followed when the entity's materially adverse financial position or other factors dictate the need for action to stabilise the entity (without the need for resolution or insolvency). The exercise necessary to create such a rescue programme (which itself needs to have sufficient flexibility to be built in to avoid unwelcome surprises in a crisis) is then used as an indicator for the resolution authorities to be able to determine, where recovery is not enough and the entity is on the brink of failure, how the resolution powers can be suitably exercised over the institution to achieve appropriate resolution. There is in practice a significant overlap between the exercise of creating a recovery plan and a resolution strategy (in Hong Kong, the larger banks have prepared recovery plans and resolution strategies), and given that their group structure typically includes securities firms, the exercise has potentially far-reaching implications for those securities firms drawn into the scope of the regime.

As and when a crisis appears imminent, the regimes are designed to filter and identify those situations where decisive action is required and insolvency would not deliver a sufficiently swift and effective outcome (in reality, insolvency is unlikely to suit many of the larger major institutions given their potential to result in "runs on the market" and typically the cumbersome nature of insolvency processes).

Resolution can only be triggered by a resolution authority where it is satisfied that the *relevant trigger conditions* are met in relation to an in-scope financial institution, which could include broker-dealers, asset managers, etc. as described above. The conditions are that:

- The financial institution has ceased or is likely to cease to be viable (Viability Condition),
- There is no reasonable prospect that private sector action, outside of resolution, would result in the financial institution again becoming viable within a reasonable period (Prospects Condition), and
- The non-viability poses risks to the stability and effective working of the financial system of Hong Kong, including to the continued performance of critical financial functions (being activities carried on by the institution which – if discontinued – would amongst other things give rise to "contagion" within the Hong Kong financial system) – provided that initiation of resolution would avoid or mitigate those risks (Stability Condition).

The resolution authority, in determining whether it is satisfied that all the conditions have been met, is entitled (not bound) to take into account the effect of resolution on other group members and indeed on the stability and effective working of any offshore jurisdiction.

This means that for regulated (in Hong Kong) securities firms which form part of a globally systemically important financial institution, they will potentially be subject to having all or part of their business shut down, hived off, or have the scope of the products

and services that they provide narrowed, insofar as that would achieve the resolution objectives.

What this means is that securities firms within a broader financial services group need to be conscious of such possible outcomes and plan accordingly in respect of their longer term business plans in an appropriate joined-up manner with the rest of the group. This is of particular importance for example in relation to the inter-connectedness of the provision of functions and services within the group, to ensure that there are no material barriers to resolution.

It is noteworthy that, short of the initiation of resolution itself, the Hong Kong resolution authority would have the power to give directions to an in-scope financial institution where the Viability Condition and the Stability Condition are met, but not *the Prospects Condition, thereby giving a degree of greater flexibility to the authorities. The available directions can be given to either the institution itself (which would include regulated securities firms who are members of the group) or related persons (group companies, directors of the institution or any group company) and the chief executive officer (CEO) or deputy CEO of any of them. Under the Hong Kong regime, the directions can be given to offshore persons who are within the scope of this power, as well as onshore, making for difficult enforcement issues. The directions can be made "in relation to the affairs, business or property in Hong Kong" of an in-scope institution or group company.*

The Bill contemplates, in line with the FSB framework, the following *resolution tools*:

- Transfer to a commercial purchaser
- Transfer to a bridge institution
- Transfer to an asset management vehicle
- Bail-in (beyond the scope of this Report)
- Transfer to a temporary public ownership company (i.e. a government vehicle) (TPO) (beyond the scope of this Report)

Transfers to a commercial purchaser are effected by the issue of a "securities transfer instrument" and/or a "property transfer instrument". The transfer takes effect (subject to any applicable condition imposed in relation to a property transfer instrument) despite any restriction, including a restriction requiring the sanction of the Court, or the approval of a regulatory body, for a transfer) arising under contract or legislation or in any other way. Securities transfer instruments are freed from any trust, liability or other encumbrance, and are able to extinguish rights to acquire securities (e.g. to cancel option rights). Property transfer instruments are similarly wide-ranging in effect. Accordingly, by virtue of these provisions, the practical effect is that the ownership and rights of the in-scope entity (either directly in the case of a licensed broker-dealer, or indirectly and structurally where an instrument is issued in respect of a holding bank that is aimed at transferring all or part of the securities business), can be fundamentally, and on the face of it expeditiously, clarified in the pursuit of a rapid and decisive stabilisation of the group.

It should be noted that the built-in exclusion of any approval requirement on the part of a regulatory authority – in the case of a securities firm, the SFC in the context in particular of the SFC's fit and proper suitability criteria – removes a highly sensitive obstacle to this resolution tool. It is highly likely in any event that, given the nature

of the in-scope institutions, commercial purchasers would be selected on the basis of their existing licence/registration and likely ability to absorb the relevant firm or business without exerting strain on their business model and infrastructure. That of course begs the question of how that would in practice be evaluated and would require swift action over the resolution weekend.

Similar considerations are relevant where there is a *transfer to a bridge institution or asset management vehicle*, designed to act as a "holding area" for assets. An additional protection measure for the resolution process is that the SFC can defer the requirements for a licence or registration to be put in place for the relevant entity, to avoid the need for a time-consuming vetting process in the context of the resolution exercise.

The overall result would be that any securities firm forming part of the in-scope institution's group would be liable to change of ownership at short notice, and either become part of the purchaser's group (with all the integration issues that would entail) or be held by a bridge institution or asset management vehicle in a degree of limbo prior to either sell-off or break-up. Again, this demonstrates the need for a clear resolution plan.

As a result of the above, there is a clear potential for securities businesses to be significantly affected by resolution action, either in relation to parent banks or insurers, or where the regulated securities firm is either non-viable or in danger of becoming so, cannot be privately rescued, and for example is seen to pose a systemic risk to Hong Kong if it fails (and insolvency would not adequately address the problem). In a market such as Hong Kong, where market intelligence is key, any potential failure of a "brand name" (i.e. major) securities firm within a globally significant group, could be seen to potentially create a panic within the Hong Kong market if not stabilized. This gives significant latitude to the resolution authorities to safeguard the market, and creates a very broad scope for inclusion of entities within the resolution regime. The collapse of a broker-dealer, even if not itself globally systemically important, could trigger resolution if that were viewed as the best way to stave off a market run. That could also have cross-border consequences – see below.

The Bill provides for *temporary stays*, i.e. suspension, in respect of obligations to make payment or delivery under a contract to which an in-scope financial institution, or its subsidiary, is a party. Where the holding company of the in-scope financial institution is the entity in resolution, then contracts to which the holding company is a party, as well as those to which the institution and/or subsidiaries are a party, are also covered. The resolution authority is required to consider the impact of any such suspension on the orderly functioning of the Hong Kong financial markets before exercising its suspension power. Any suspension is for a specified period, ending no later than the end of one business day after the suspension is put in place. The purpose of the suspension is to achieve such a "breathing space" for a financial institution over a "resolution weekend" to enable an assessment of its financial position and a reasonable opportunity for the resolution authority to arrive at an appropriate plan to take the institution through resolution.

In Hong Kong, the types of contracts covered by a suspension of payment or delivery would not be restricted to financial contracts, but also to leases, IT contracts and so on which may have trigger clauses on change of control, financial adverse change and so on. The statutory provisions provide a flexible framework for resolution authorities' responses.

The list of excluded obligations, i.e. those which cannot be suspended, include for example a financial institution's obligation in relation to its participation – directly or indirectly – in an FMI. That is a sensible exclusion to ensure that CCPs are not prevented from ensuring their smooth operation through margin calls and the like so as to avoid contagion risk.

In addition, the right of counterparties to put into effect any termination/close-out rights they may have under a contract, such as under an ISDA Master Agreement or equivalent derivatives contract, can be suspended by the resolution authority. Such rights would normally be incorporated as a matter of course, in an expanded manner to take into account resolution regimes. The "freezing" of those contracts under such a suspension provides the opportunity to take resolution action over the in-scope institution's assets and liabilities without the need to bring into the equation immediately the typically very wide range of counterparties standing ready to make claims under contracts which would complicate the already highly complex resolution exercise. The implications for the Hong Kong financial markets again needs to be considered before effecting a suspension, and the suspension would last only for a maximum specified period, as for payment and delivery obligations. Financial institutions would normally include provisions in their contracts to re-instate the close-out/termination rights as soon as the suspension ceases, subject to the measures taken during the suspension period by the resolution authority.

The execution by 21 globally systemically important banks of a revised Resolution Stay Protocol has resulted in the amendment of the ISDA Master Agreement for over-the-counter bilateral derivatives to improve the effectiveness of cross-border resolution actions. The Protocol also covers securities financing transaction master agreements. Under the Protocol, there is agreement by the counterparties to cross-border enforceability of existing statutory stays on resolution-related early termination in OTC bilateral derivatives contracts and securities financing transactions. This is intended to facilitate orderly resolution of a globally systemically important bank in a similar way for both domestic and foreign counterparties, while aiding continuity of critical functions and minimalizing wider market impact. The intention is to extend further such contractual recognition beyond globally systemically important banks. This is in line with the FSB Key Attributes. This development dove-tails with the statutory changes in an effort to minimise conflicts of laws issues cross-border.

As a result of the above, the international securities markets (derivatives) are significantly impacted by the incoming regimes. The material interference with counterparty rights is a ground-breaking change in the markets.

Cross-border issues are a key element of the overall picture in relation to recovery and resolution. In Hong Kong, the Bill provides for the operation of the resolution regime in terms of "Non-Hong Kong Resolution Action", being an action under the law of a non-Hong Kong jurisdiction to manage the failure or likely failure of a non-Hong Kong financial institution or non-Hong Kong group company,

- The anticipated results of which are, in relation to such institution or group company, broadly comparable to results that could have been anticipated from the application of a stabilization option (i.e. resolution powers) to an entity in Hong Kong; and

- The objectives of which are, in relation to that jurisdiction, broadly comparable to the resolution objectives as they apply in relation to Hong Kong.

The Hong Kong resolution authority is entitled to recognize all or only part of the off-shore action, after having first consulted the Hong Kong Financial Secretary. Recognition cannot be given where the resolution authority is of the opinion that:

- Recognition would have an adverse effect on financial stability in Hong Kong;
- Recognition would not deliver outcomes that are consistent with the (Hong Kong) resolution objectives; or
- Recognition would disadvantage Hong Kong creditors or Hong Kong shareholders (or both) relative to other creditors or shareholders of the entity in relation to which the non-Hong Kong resolution action has been taken.

The resolution authority is entitled to take into account any fiscal implications for Hong Kong of the making of the instrument.

Where the Hong Kong resolution authority is notified of any non-Hong Kong resolution action being taken, it is entitled to support that action by exercising its powers under the Hong Kong regime if it considers that the support would be consistent with the Hong Kong resolution objectives.

The above powers are broadly consistent with the FSB Key Attributes, but raise difficult questions as regards the potential for true harmonization of international action in the event of a crisis.

29 out of the 30 currently designated G-SIBs (i.e. globally systemically important banks) have operations in Hong Kong, and the predominant model is that of operating through a branch structure and with accompanying securities firms in their group, such as brokers and asset managers. What that means is that Hong Kong is for all practical purposes a "buyer" of resolution action cross-border. (Restricting the regime to on-shore entities would emasculate the regime, and not be in line with the over-arching FSB concept of seamless cross-border cooperation in times of crisis.)

Looking more closely at the particular characteristics of the incoming Hong Kong regime, as it currently stands, and as is broadly reflected across a number of the important Asian financial centers, the FSB Key Attributes are in many respects observed, but in Hong Kong's case the structural nature of its markets (i.e. branch-based for G-SIBs) changes the center of gravity of the regime.

Given the emphasis on global systemic importance, the head offices of the affected institutions are offshore Hong Kong, and the inevitable consequence is that resolution action splits into two parts: domestic-specific action to protect the Hong Kong market in relation to the potential or actual failure of a G-SIB branch or its subsidiaries (including securities firms), particularly where such failure would have an adverse material effect on the stability of the Hong Kong markets. That would be where say a "brand name" securities firm suffered from a major set-back (litigation, regulatory investigation or otherwise) which adversely affected its viability and therefore, through a potential domino effect, could create panic in the Hong Kong market. In that situation, the Hong Kong resolution

authority could step in to trigger resolution of the securities firm as a subsidiary of the G-SIB, regardless of the ongoing stability and viability of the G-SIB parent. That could create cross-border issues for the Hong Kong resolution authority in terms of liaising with and reaching agreement on the planned action (which could itself potentially have knock-on effect for the parent).

More importantly, the Hong Kong resolution authority, when notified by an offshore resolution authority of a G-SIB in difficulties, would need to make the relevant decisions to determine Hong Kong's stance in relation to that entity. The various decisions, which are hard-wired into the regime, arguably act as – depending on the observer's perspective – a check and balance or an escape clause for Hong Kong. If the offshore resolution action would not be likely to have a material adverse effect on the Hong Kong markets, then it should presumably be a straightforward decision to support the action.

The more difficult situation is where the offshore G-SIB's position is such that its failure could damage Hong Kong. That would be the time that the international cooperation regime is truly stress-tested.

In those circumstances, the legal position arguably becomes a means of potentially acting as a self-protection mechanism for Hong Kong, bearing in mind the list of relevant considerations/issues. If cooperation with and support to the offshore resolution authority would potentially:

- Harm Hong Kong market stability
- Disadvantage Hong Kong creditors more than under a winding up
- Put at risk client assets of the in-scope financial institution to a greater extent than under a winding up
- Subject to the above three bullets, generate significant resolution costs and fiscal costs for Hong Kong and put at risk public money that would create substantial tension in relation to Hong Kong's part in that resolution exercise

Would Hong Kong simply recognize and/or support the offshore resolution action and take steps to resolve the relevant Hong Kong element of the G-SIB? Would it seek to negotiate with the offshore resolution authority (or college of resolution authorities) in respect of the action to be taken to dampen adverse effects on Hong Kong (which would necessarily need to be carried out within a very short timeframe), or would it exercise its prerogative (supported by carve-outs in the FSB framework) to refuse to act so as to protect its local interests? While the political issues in Hong Kong are in some ways less directive than in fully democratic systems, there would be extreme pressure placed on the resolution authority in this type of scenario given the potential public outcry from potentially being seen to fall in line with foreign regulators. If Hong Kong failed to recognize/support a resolution exercise then that could of course lead to serious adverse consequences for Hong Kong's status as a major financial center if it were seen to have reneged on its international commitments. The required consultation with the Hong Kong Financial Secretary would bring the political issue into sharp focus, and the time pressures created by a "resolution weekend" would exacerbate the situation.

The legal position would arguably not be sufficiently clear in such a situation to cater for the particular circumstances. Arguably, the resolution regime would effectively amount

to a framework to assist relevant resolution authorities, in Hong Kong and offshore, to act within wide and flexible parameters rather than within strict legal boundaries.

Recognition or support of a "non-Hong Kong resolution action" is not a bright line test.

Non-Hong Kong resolution action is where a non-Hong Kong jurisdiction notifies the Hong Kong resolution authority that it has taken action under its laws "to manage the failure or likely failure of a non-Hong Kong financial institution or non-Hong Kong group company". Presumably a clear notification to that effect is all that is required.

However, there can be no recognition or support *unless* the offshore action taken is expected to have results "broadly comparable" to results that could have ben anticipated from the application of a stabilization option (i.e. resolution powers) to an entity in Hong Kong. How would that be determined? There would need to be sufficiently clear guidance to jurisdictions as to the equivalency of various types of resolution action. We anticipate that a matrix of such equivalencies would be a useful underpinning for the swift and secure satisfaction of this requirement.

Also, there can be no recognition or support unless the "objectives" of the offshore resolution action are, in relation to that jurisdiction, "broadly comparable" to the resolution objectives as they apply in relation to Hong Kong. This requires the Hong Kong resolution authority to take a view as to the "objectives" underlying the offshore resolution action. Clearly, this is subject to significant subjective interpretation.

Accordingly, the starting point for recognition or support is, arguably, effectively a subjective – and inevitably politically influenced – decision making process rather than a rigorous legal process, notwithstanding the trappings of international consensus and local supporting legislation. The key to resolution of securities firms within systemically important banking and insurance groups can therefore be seen as the subject of mutual ongoing discussion and communication among relevant resolution authorities and governments, with a view to the creation of ongoing trust among resolution authorities and the embedding of that trust to stand as firmly as possible in the event of future crises, relying on the legislative infrastructure to articulate the crucial areas of pre-agreement in as firm a manner as possible, given the substantial complexities and inherent unpredictability of such crises.

3. EU Capital Markets Union –analysis of the proposals and in particular the perceived potential unintended consequences, together with commentary from a broader international perspective (Dr. Klaus Follak)

The EU Capital Markets Union

The EU Capital Markets Union is a project to help complete a Single Market for capital with a focus on increasing and diversifying the funding sources for business and long-term projects.[100] It started in February 2015 with an EU Commission consultation on related measures[101] and covers the following areas:

[100] For an overview see EU Commission, Press Release (IP/15/5731), 30th September 2015, and the Green Paper „Building a Capital Markets Union"- COM (2015) 63 final (18.2.2015).
[101] IPI15/4433; MEMO/15/4434

- Alternative sources of finance complementary to bank financing including capital markets such as venture capital, crowdfunding,[102] and asset management institutions;
- Supporting SMEs and start-ups;
- Fostering infrastructure projects;
- Removing barriers to cross-border investments.

A first set of initiatives is already under way, comprising:

- Re-starting securitization: The Commission is working on a regulatory framework "securitization light" to facilitate and simplify transparent and standardized transactions, including less burdensome capital requirements.
- Solvency II treatment for insurance companies involved in infrastructure projects: Based on the advice of the European Insurance and Occupational Pensions Authority (EIOPA), a separate infrastructure asset class is created to reduce inadequate capital requirements for insurers' debt and equity investments in qualifying infrastructure projects.
- Public consultation on venture capital: the Commission is considering to amend the EuVECA and EuSEF Regulations on collective investment funds in order to attract private investors in SMEs. The consultation period ended on 6th January, 2015.
- Public consultation on covered bonds: the Commission is considering to harmonize the existing national frameworks. The consultation period ended on 6th January, 2015.
- Public consultation on the cumulative impact of financial legislation: the Commission is analyzing related negative impacts on long-term investments and growth.

Part II – Focus on market conduct issues relevant to the international securities industry

1. Market manipulation/fraud/insider trading (Barbara Green)

In its broader sense, bearing in mind the FX and rates scandals and the likely international fall-out, coupled with ever-increasing aggressive enforcement against insider dealing and other fraud/manipulative conduct, is highly topical in terms of cross-border regulator cooperation, etc.

The following is an analysis, using the US as the principal focus, of the increasing importance of enforcement of abusive market behavior as a counterpoint to the vigorous rule-building undertaken by jurisdictions internationally.

U.S. Insider Trading Law 2016: The U.S. Supreme Court Will Weigh In on the Personal Benefit Requirement

Many insider trading cases brought in the U.S., and, in particular, some recent high profile cases arising from investigations in suspected insider trading at hedge funds, involve "tipping" by a company insider. In the typical case, the insider (or "tipper") discloses material nonpublic information about the company in breach of his fiduciary duty to the company's shareholders. The information is disclosed to a friend, family member or other non-insider who then trades in the company's securities ("tippees").[103] Since the 1983

[102] See also MOCOMILA report, part

[103] Insider trading is considered a form of securities fraud prohibited by various antifraud statute and rules in the U.S., most prominently Section 10(b) and Rule 10b-5 under the Securities Exchange Act of 1934.

U.S. Supreme Court decision in *Dirks v. Securities and Exchange Commission,*[104] the test for determining if a company insider has breached his fiduciary duty is "whether the insider personally will benefit, directly or indirectly, from his disclosure."[105] Without the personal benefit to the insider, there is no breach of duty.[106]

In January 2016, the Supreme Court agreed to hear *United States v. Salman*,[107] one of two significant insider trading cases decided by federal appellate courts since late 2014 that addressed the personal benefit requirement. Three months earlier, in October 2015, the Supreme Court had declined to hear *United States* v. *Newman*,[108] the other case that focused on the personal benefit requirement. In *Salman*, the Supreme Court is set to decide whether and what type of a personal benefit must be received by the insider to establish insider trading liability. The Court's decision should establish, or at least clarify, the perimeters for future Government insider trading prosecutions, particularly in tipping cases involving friends and family.

Background: The Dirks Case

In the *Dirks* case, the U.S. Supreme Court rejected the theory advanced by the Securities and Exchange Commission ("SEC") that any non-insider who trades while in possession of inside information violates the antifraud prohibitions of the U.S. federal securities laws.[109] In *Dirks*, the Supreme Court reasoned that a tippee assumes the insider's fiduciary duty owed to the company's shareholders not to trade on material nonpublic information, and the test for tippee liability for insider trading is whether the insider has breached his fiduciary duty by passing on the inside information for his personal benefit, whether direct or indirect, and the tippee knows or should have known of the breach.[110] *Dirks* went on to explain that the direct or indirect personal benefit to the insider from the disclosure to the non-insider could be "a pecuniary gain or a reputational benefit that will translate into future earnings"[111] and that "[t]here may be a relationship between the insider and the recipient that suggests a *quid pro quo* from the latter…."[112] With respect to friends and family members, *Dirks* further elaborated that "[t]he elements of fiduciary duty and exploitation of nonpublic information also exist when an insider makes a gift of confidential information to a trading relative or friend. The tip and trade resemble trading by the insider himself followed by a gift of the profits to the recipient."[113]

The Newman *Case*

In *United States* v. *Newman*,[114] the U.S. Court of Appeals for the Second Circuit, reversed the convictions of two hedge fund portfolio managers, Todd Newman of Diamondback Capital Management LLC ("Diamondback") and Anthony Chiasson of Level Global Investors, LLC ("Level Global"), for conspiracy and insider trading and ordered the

trial court to dismiss their indictments with prejudice.[115] The Government had provided evidence at the jury trial that a group of financial analysts at various investment firms and hedge funds had received certain quarterly earnings numbers in 2008 for two publicly traded companies, Dell Inc. ("Dell") and NVIDIA Corporation ("NVIDIA"), both directly and at times indirectly from insiders at those companies, before the earnings information had been publicly released. The information was shared among the analysts and ultimately passed on to portfolio managers, including Newman and Chiasson, who then traded in Dell and NVIDIA stock making $4 million and $68 million, respectively for the funds they managed.[116]

In *Newman*, the Second Circuit, relying on the *Dirks* case, held that a tippee must know of the insider's breach of fiduciary duty, which the Court said, requires not only knowledge that the information divulged was confidential, but also that it was disclosed in exchange for a personal benefit.[117] In both the Dell and NVIDIA tipping chains, Newman and Chiasson were three or four steps removed from the company insiders who had divulged the pre-announcement earnings numbers, and the Second Circuit concluded that there was no evidence that Newman and Chiasson as remote tippees knew they were trading on information from insiders or that they knew, or avoided knowing, that the insiders received any benefit in exchange for divulging the information.[118] The Court took notice that neither of the Dell or NVIDIA insiders had been charged with insider trading.[119]

The Second Circuit in *Newman* also found that the evidence was insufficient to prove that the corporate insiders had received any personal benefit in exchange for disclosing the inside information. In the Dell tipping chain, Rob Ray, the insider who worked in Dell's investor relations department shared the nonpublic earnings numbers with Sandy Goyal, a friend who had previously worked at Dell. Goyal had provided some career advice to the Dell insider, such as editing Ray's resume and sending it to a Wall Street recruiter, but was not a "close" friend. The NVIDIA tipping chain began with Chris Choi, an employee in NVIDIA's finance unit, who passed on the nonpublic earnings information to Hyung Lim, a family friend from church. They only occasionally socialized. Based on this thin record, the Court in *Newman* concluded that the Government could not prove receipt of a personal benefit by the "mere fact of a friendship, particularly of a casual or

[116] *Id.* at 444.

[117] *Id*. at 446. The Second Circuit held that the jury instructions at trial had been erroneous because they did not instruct the jury that the Government had to prove beyond a reasonable doubt that Newman and Chiasson knew that the tippers disclosed the confidential information in exchange for a personal benefit. *Id.* at 444, 45-451.

[118] *Id*. at 453. The Dell tipping chain began with Rob Ray in Dell's investor relations department who tipped the pre-announcement earnings information to Sandy Goyal, an analyst at Neuberger Berman, who, in turn, provided the information to Jesse Tortora, a Diamondback analyst, who then passed it on to his manager, Newman, and to other analysts, including Spyridon Adondakis, a Level Global analyst, who relayed it to Chiasson. With regard to the NVIDIA tips, the insider, Chris Choi, in NVIDIA's finance unit tipped the pre-announcement earnings information to Hyung Lim, a former technology company executive who Lim knew from church. Lim relayed the information to Danny Kuo, an analyst at Whittier Trust, who, in turn, provided the information to a group of analyst friends, including Tortora and Adondakis, who relayed the information to Newman and Chiasson.

[119] *Id*. at 443-444.

social nature."[120] Instead, the Court noted that, to the extent "a personal benefit may be inferred from a personal relationship between the tipper and tippee, such an inference is impermissible in the absence of proof of a meaningfully close personal relationship that generates an exchange that is objective, consequential, and represents at least a potential gain of a pecuniary or similarly valuable nature."[121]

Newman's rejection of casual or social relationships as a basis for satisfying the personal benefit requirement and the requirement of a consequential or valuable personal benefit raised the bar for the Government's proof in insider trading prosecutions[122]. The Government's reaction to the *Newman* decision was forceful. In its petition for a rehearing of the *Newman* case by the Second Circuit *en banc*, the Government asserted that the *Newman* decision will "dramatically limit the Government's ability to prosecute some of the most common, culpable, and market-threatening forms of insider trading"[123] and that the opinion's "exchange-based pecuniary limitation on what constitutes a personal benefit … arguably represents one of the most significant developments in insider trading law in a generation.[124] Until there is further word from the Supreme Court, the limitations that the *Newman* case articulated will apply to insider trading cases within the jurisdiction of the Second Circuit, which includes Wall Street.

The Salman *Case*

In *United States v. Salman,*[125] the United States Court of Appeals for the Ninth Circuit affirmed the conviction at a jury trial of Bassam Yacoub Salman for conspiracy and insider trading.[126] Salman was found to have traded on material nonpublic information disclosed by Maher Kara, his future brother-in-law, who worked in Citigroup's healthcare investment banking group. Over time, Maher regularly divulged inside information about transactions of Citigroup clients to Michael Kara, his older brother, who became "fast friends' with Salman. Michael disclosed the inside information to Salman who, in turn, shared the inside information with his sister-in-law and her husband who traded on the information and split the profits with Salman. There was evidence that the Kara and Salman families became close, that Salman knew that Maher was the source of the inside information and additionally that Salman knew that Maher and Michael Kara had a close and mutually beneficial relationship.[127]

On appeal, Salman urged the Ninth Circuit to apply *Newman* to the case and argued that the evidence had been insufficient for a finding that Maher had disclosed the inside

[121] *Id*.
[122] Shortly after rehearing was denied in the *Newman* case, the SEC argued that that *Newman* did not apply to the misappropriation theory of insider trading. The Court rejected that argument and noted that the *Newman* case explicitly addressed this question. *SEC v. Payton*, No. 14 Civ. 4644 (S.D.N.Y. April 5, 2015).

[127] *Id.* at 1088-1090.

information to Michael in exchange for a personal benefit or that Salman knew of any such benefit as required under the *Newman* decision. The Ninth Circuit disagreed and found that the Supreme Court's holding in the *Dirks* case, rather than the Second Circuit's *Newman* decision, governed.[128] The Court recited the language in the *Dirks* case that "[t]he elements of fiduciary duty and exploitation of nonpublic information also exist when an insider makes a gift of confidential information to a trading relative or friend"[129] and found that Maher's disclosure of the nonpublic information to his brother Michael when Maher knew Michael would trade on the information was exactly "the gift of confidential information to a trading relative" envisioned by *Dirks.*[130]

Salman also argued that, under *Newman*, evidence of a friendship or familial relationship between tipper and tippee, without more, is not sufficient to prove that the tipper received a benefit. Again, the Court disagreed and pointed out that *Newman* had recognized that personal benefit is broadly defined to cover not only pecuniary gain, but also "the benefit one would gain from simply making a gift of confidential information to a trading relative or friend."[131]

When the Supreme Court declined to review the Second Circuit's decision in the *Newman* case, many thought that the Court was not interested in hearing an insider trading case. The Court's decision to review the *Salman* case suggests that the Court was waiting for the right vehicle to redefine or clarify the personal benefit test.

2. Corporate governance issues – State Ownership (Gustavo Grebler)

A. Corporate Governance in State-Owned Enterprises ("SOEs")

Corporate Governance in SOEs has gained prominence in the period after the last ILA International Conference, and awareness of SOEs' impact over the interest of securities holders has increased accordingly.

SOEs are not new, nor is the knowledge that a material share of securities traded across the globe are issued by SOEs and carry risks associated with their control holder. The latest OECD report on the subject states that SOE securities account for 6% of the total market capitalization of securities traded in developed countries and between 18% and 24% of securities traded in developing countries.

But times of increased globally available standardized information have caused the review of States' and SOEs' market conduct – and of its alignment to responsible business practices and interests of non-State securities holders – to gain momentum.

States' conduct impacts the market in ways different than that of private enterprises. Like the latter, at least where States retain corporate control, they guide the investment, financial and distribution policies of the company. But differently than private enterprises, States are given wider latitude by law to deviate from securities price maximization if it can be established that deviation is a condition to attaining a public policy objective.

Also like private enterprises, SOEs materially impact the relevant market in which they supply goods and services. However, because States do not generally subordinate their

[128] Id.at 1091-1093.
[129] Id.at 1092.
[130] *Id.*
[131] Id.at 1093.

investment decisions to market standards of cost of capital and rates of return, they cause a transfer of wealth from shareholders of competitor companies to the SOEs, as the former forgo the benefit of cash flows that became economically unviable, which are in turn captured by SOEs.

Perhaps most notably, impact of States' conduct over interests of securities holders distinguishes itself from that occasioned by private companies in respect to its alignment to the spirit of the law of the various legal systems to which they are subject. Shareholders of private companies suffer the consequences of bad investments, whether economically or politically – if we broaden the term to encompass management ousting – whereas the disutility of bad investments hurts States less due to taxation prerogatives, exposure strongly correlated to the party's mandate, and the fact that governments cannot be ousted or bought out if the SOE underperforms, as it would happen to private control holders.

It is no surprise that in many States securities of non-State securities holders incorporate in their prices supervisory and management bodies whose dexterity are better traced to the political arena than to the arts of the trade, or subservience to a party's political agenda. Or, as it has been the case, incorporate the failure by members of the political body to resist the opportunity to extract rents from economic agents with whom the SOE deals.

After a decade, in November 2015, the OCDE updated the Guidelines for Corporate Governance of State-Owned Enterprises ("OECD SOE Guidelines"), which, according to the organization, are to be used in conjunction with the G20/OECD Principles of Corporate Governance.

OECD SOE Guidelines are a set of instructions adopted by the General Council, aimed at the governments of member and non-member States, conveying the internationally agreed standards on the exercise of state ownership. OECD goals are threefold: (i) it intends to discipline governments into finding actual objectively verifiable public policy reasons prior to creation of the SOE, (ii) it intends to mitigate the agency conflict between public officials and constituencies, as there is wide perception that public officials have not been fully accountable to the consequences of their actions, and (iii) it intends to limit the State role in the marketplace to the satisfaction of constituents' needs that cannot or should not be total or partially satisfied by private enterprises.

As the information is known or can be derived by States from known principles, it can be said that OECD SOE Guidelines are not so much intended to inform, but rather to constrain States to responsible market conduct, inasmuch as the State chooses to deviate from the collective and generally agreed standards and must bear the cost of justifying it to securities holders, constituencies and opposing political forces. Deviation can be in the best interests of the State, but demonstrating compelling concern not collectively shared is a high waterline.

The OECD believes States' market conduct should extend through seven different areas, which are set forth below. This description is interpretive and economizes on detailing conducts shared by States and private enterprises in order to focus on those particularly important to the States. The reader should consult OECD SOE Guidelines for authoritative purposes:

1. Rationale for State Ownership
Prescribed conduct: States should (i) objectively and formally determine the policy rationale and SOE objective that must be achieved through ownership of securities holdings, and the actions it and the SOE reasonably expects to take for its achievement, and (ii) submit the predetermined policy rationale and SOE policy objective to the scrutiny of the general public.

2. Role of the State as Owner:
Prescribed conduct: States should (i) subordinate SOEs to operating practices and legal forms within market standards, (ii) enable management and supervision bodies to discharge their duties according to their technical judgment, (iii) transfer ownership of securities to a single or coordinated ownership bodies, whose functioning and communication with other branches of the government follows formal routines; and (iv) exercise the holdings rights actively and intelligently, including through adoption of transparent and merit-based criteria for nomination of board members and, where applicable, management.

3. SOEs in the Marketplace:
Prescribed conduct: States should (i) be bound, and cause SOEs to be bound, by decisions taken through arbitration, (ii) command SOEs to make known the cost and revenue sums allocated to achievement of the public policy objective; (iii) fund public policy objectives, (iv) subject SOEs to the legal regime applicable to private enterprises where possible, including to insolvency and recovery procedures; (v) subject SOEs to terms, in respect to cost of capital, of inputs, and rates of return, consistent with those borne by comparable private enterprises; and (vi) command SOEs to adopt non-discriminatory, competitive and transparent procurement processes in contracting with third parties.

4. Equitable Treatment of Shareholders
Prescribed conduct: States should cause SOEs to: (i) confer non-State securities holders the same access to corporate information, (ii) actively promote communication and consultation with securities holders, (iii) facilitate shareholders engagement, particularly in meetings destined to election of board members; (iv) constrain related-party transactions to market conditions; (v) adhere to the practices of corporate governance codes; (vi) inform the general public of SOE public policy objective; and (vii) obey contractual obligations and their enforcement.

5. Stakeholder Relations and Responsible Business:
Prescribed conduct: States should cause SOEs to (i) obey securities holders legal and contractual rights, (ii) report on relations with stakeholders, (iii) build controls for fraud and corruption prevention and combat, (iv) disclose the mechanisms for discharge of obligations of responsible business conduct, and (v) abstain from the financing of political activities, including campaign contributions.

6. Disclosure and Transparency:
Prescribed conduct: States should demand SOEs (i) report financial and non-financial information under internationally recognized standards. Information should cover (a) the public policy objective, (b) an assessment of the actions taken for its achievement, (c) the company financials break-down, (d) company governance standards, (e) board and

executive members qualifications, selection process, compensation, and whether they are independent, (f) company risk factors and risk mitigating measures, (g) financial commitments received from the State or given by the State to third parties on the SOE's behalf, (h) related-party transactions; and (i) issues with stakeholders of the SOE. States should demand that (j) the SOE be audited by well-reputed independent auditing firms, and that (k) the State ownership entity(ies) report on SOE data in aggregate form, annually, via world wide web.

7. Responsibilities of SOE Board Members:

Prescribed conduct: States should make the mandate of SOEs boards part of statutory laws, preferably within the corporate laws of each State. The mandate should require that board members be (i) free from conflicts of interests and political interference (ii) in charge of the decision of appointing and dismissing the CEO, of management compensation schemes, (iii) elected on the basis of technical expertise and responsibilities, (iv) led by a Chair, other than the CEO, responsible for monitoring efficiency of the body and representation before the State, (v) supported by expert committees, (vi) reviewed annually, (vii) subject to internal controls with discretion to directly report to an audit committee besides the board itself; and (viii) where an employee representative is part of the board, it should have rules contributing to such member's effective representation.

There a number of cases where the State's use of the SOE falls short of basic standards of good corporate governance. Given the aggressiveness of practices involved and cross-border effects, the Brazilian SOE Petrobrás is a particularcase in point. As addressed in more detail below, the State and the SOE both conceded that that value of the SOE's financial assets and therefore of its securities were severely impaired as a result of criminal activities of the SOE's management, and a corresponding lack of proper oversight by its board of directors]

The Petrobrás case:

1. In 2010, Brazilian State Owned Oil Company Petróleo Brasileiro S.A. – Petrobrás came to be the 12th largest global corporation, measured by market capitalization, and held investment grade ratings from all three internationally recognized major ratings agencies.

2. Petrobrás securities were listed in the São Paulo Stock Exchange, in the New York Stock Exchange and in the Latibex of Madrid Stock Exchange. The company's preferred shares accounted for 12,31% of the total weighted average of the São Paulo Stock Exchange Index – IBOVESPA.

3. Petrobrás securities and derivatives based on the São Paulo Stock Exchange Index include a substantial number of domestic retail investors and domestic and international institutional investors in search of comparatively low risk grade securities.

4. In 2016, Petrobrás is embroiled in scandals ranging from the use of the SOE's assets to finance political campaigns to variegated corruption practices involving members of Executive and Legislative branches. Petrobrás has also been involved in controversy by informing securities holders it would not raise its prices with the purpose of preventing international oil prices oscillations to be transmitted to the domestic market.

A comparison between OECD SOE Guidelines and factually established market conduct of Petrobrás in the relevant period is set forth in the table below. For ease of interpretation, OECD SOEs Guidelines are transcribed to the extent they correlate to conduct practiced by Petrobrás:

General guidance	Participant's market conduct
Rationale for State ownership	
• Detailed formulation of SOE public policy objective. • Full and continuous disclosure of the public policy objective.	• Detailed policy non-existing. • Company justified refusal to increase prices with the need to protect domestic market from international prices.
Role of the State as owner	
• Hands-off approach in respect to SOE board of directors and management. • SOE board and management to be elected on basis of technical expertise and responsibilities.	• Company board predominantly composed of Ministers of State, public officials and other SOE officers. • Some company officers admittedly appointed for political reasons.
SOEs in the marketplace	
• Detailed formulation and disclosure of SOE public policy objective. • SOE public policy objective to be funded by the State. • Subject to insolvency and recovery procedures. • Rates of return consistent with those of private enterprises. • Contracting through competitive procurement processes.	• Detailed policy non-existing. • SOE public policy objective are born by all securities holders jointly. • Company not subject to insolvency or recovery procedures. • Company officers admitted to contracting in exchange for political donations and bribery. • Company justified refusal to increase prices with the need to protect domestic market from international prices.
Equitable treatment of shareholders	
• Detailed formulation and disclosure of SOE public policy objective. • SOE public policy objective to be funded by the State.	• Detailed policy non-existing. • SOE public policy objective are born by all securities holders jointly.
Stakeholder relations and responsible business	
• No use of SOE assets to finance political activities.	• Company officers admitted contracting in exchange for political donations and bribery.

General guidance	Participant's market conduct
Disclosure and transparency	
• Detailed formulation and disclosure of SOE public policy objective.	• Detailed public policy non-existing. • Company justified refusal to increase prices with the need to protect domestic market from international prices.
Responsibilities of SOE board members	
• SOE board members must be free of conflicts of interests. • SOE board members to be elected on the basis of technical expertise and responsibilities.	• Company board predominantly composed of members of the Executive branch or subordinate to it. Composition has included Brazilian Ministers, public officials, and other SOE officers.

The facts available do not support the understanding the view that that the Petrobras Case should be taken as an isolated incident. Rather, , but rather that securities markets suffer the effects of from the current institutional arrangement's incapacity incapacity to of keeping in check the market conduct of States as control holders, and high-powered globally traded SOEs in check.

In fact, Both the knowledge and the experience currently available send regulators a loud and clear message that private ordering by market participants on behalf of securities holders is insufficient to purge market misconduct when States are involved, and consequently that economic resources of non-State securities holders will continue to be unduly appropriated transferred to/by the States.

States market conduct impose far-reaching risks over securities holdings, that surpass States geographical borders as a result of increased capacity by international intermediaries, including low risk institutional investors, to mobilize savings of retail investors in their local markets, and invest the resources in SOEs domestic markets, if not via international markets where SOEs are listed, or via synthetic products originally intended to track low economy-wide risks. In addition, publicly held SOEs are no longer small players and have now occupied too large a portion of their States' and of international economies, calling for a countervailing claim to States that they bring their conduct on par with the risks their size impose on the system.

The Committee understands it is time for the internationally recognized organized markets, in response to their material role in capital formation, as well as in risk sharing and transmission among securities holders, to review OECD SOE Guidelines and, in coordinated efforts, to establish a set of conducts to be required from States and SOEs in order to allow access to investors in their markets.

B. "Reasonable expectations" in the international markets

The doctrine of "reasonable expectations" has evolved into a powerful tool for judicial and regulatory activism and, as a result, a bellwether for the trajectory of the law. The concept has broadened – both in scope and in the range of potential claimants. It is

particularly relevant to contemporary society, where legislative processes have become constrained by various factors, including the difficulties faced by governments in tackling long-term, systemic policy issues because of the short-term incentives that inform and motivate political processes. This challenge is reinforced by the growing degree of inter-dependence and inter-connectedness that have come to define the world we live in — a world where domestic regulation no longer provides adequate instruments to deal with public stewardship challenges.

As the tension between "public expectations" and legislative responsiveness becomes more severe, a growing role has emerged for our courts and independent regulatory bodies to attach the term "reasonable" to nouns such as "expectations" (or "doubt", "person" and the like) to forge new, often radical, legal pathways. This section of our report outlines what appears to be an accelerating trend — first by reflecting on the nature of "reasonable expectations" and then exploring how the doctrine has been and is likely to be applied.

This topic is covered in greater depth and detail in the article written by Edward J Waitzer and Douglas Sarro in the March 2016 edition of the Canadian Business Law Journal, entitled "Protecting Reasonable Expectations: Mapping the Trajectory of the Law".

While the references in that article are to Canadian law, the principles are of broader application.

INTERNATIONAL SECURITIES REGULATION COMMITTEE

WORKING SESSION

Tuesday, 9 August 2016, 3.00pm

Chair: Professor Manuel Almeida Ribeiro (Portugal)

The Chair welcomed the members of the Committee and the members of the ILA present in the room. The Chair then invited Mr Alan Ewins, the Co-Chair of the Committee to give the first presentation.

Mr Alan Ewins (Hong Kong) acknowledged that it was National Women's Day in South Africa. Mr Ewins provided a brief background to National Women's Day and noted that the day was about unity, trust and harmony, something that would feature prominently during the course of the afternoon. Mr Ewins explained that the report of the Committee was drafted in short form. It addressed a number of current issues in international securities markets. There was an annexure that supplemented the report by covering the issues in more detail.

Mr Ewins said that the issues covered during the working session would be split into two main parts. The first part related to infrastructure issues. The second part of the report related to more operational and day-to-day issues, in particular inside dealing type issues and also other corporate governance and related issues. Mr Ewins noted that the Committee would also look briefly at the EU Capital Markets Union as one of the areas that needed to be covered. He then introduced the panel.

The Chair invited Ms Ida Levine, the Committee's other Co-Chair, to present on a number of topics.

Ms Ida Levine (UK) noted that the first topic that she would be covering the OTC derivatives. There had been substantial progression in the past year in harmonisation and "substituted compliance". 2015 was a banner year. It started in 2009 with the G20 mandating that standardised OTC derivative contracts be cleared, that there should be margining for non-cleared contracts to provide protections, and that clearing should be through central clearing counterparties (CCPs). She noted that this was in the wake of the global financial crisis and that there were twenty countries that pledged to follow this mandate from the G20 meeting. The US and the EU were the first out of the block, the US with the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank), which was largely implemented in this area. There were also five hundred regulations that were unimplemented but that legislation around clearing and margining was basically completed. In the EU, there was the European Market Infrastructure Regulation (EMIR), where trade reporting had been implemented. Some risk management features of EMIR had been implemented. The EU was in the process of putting into effect the clearing and margining of non-cleared derivatives.

Ms Levine noted the reason why it was a banner year was that in the beginning of the year saw very effective dialogue between the US and the EU on funding equivalences for CCPs.

Professor Cynthia Lichtenstein (US) asked what CCP stood for.

Ms Levine responded that CCPs were central clearinghouses and that they were basically organisations which brought together members, which were clearing members (the banks). She noted that when a party entered into a derivative transaction with the clearinghouse, the clearinghouse was their counterparty, not the other side of the transaction. She noted that the G20 was trying to achieve change credit exposure in these transactions so that no counterpart would be at the mercy of any one of these institutions. There were clearinghouses throughout the world. Most of them were global. This was where the whole situation around substituted compliance became important. In February, there was dialogue between the US and the EU about equivalence, which would allow the very global CCPs to register in the EU or the US rather easily, and provided that the concept of substituted compliance meant that the US CCPs who registered in the EU would be able to comply with US rules and that the European CCP's that registered in the US would be able to use their own EU rules.

Mr Ewins added that the great advantage of the CCPs was that when parties entered into a derivative contract, one party was basically taking a credit risk on behalf of the other party. If one reversed those contracts so that the CCP as the counterparty with massive reserves, it was then able as a much stronger entity to stand as a credit risk. Basically, one was taking a credit risk of a massive entity rather than the counterparty, which was the advantage.

Professor Lichtenstein asked whether on each side laws mandated the CCPs or the CCP reserves.

Ms Levine responded in the affirmative and noted that, in the EU, the resilience of the CCPs was mandated by EMIR, which was one of the critical parts of EMIR, which covered derivatives. There was much anticipation in the Committee to see the implementation of substituted compliance, which was something that had been spoken about in the past three reports.

Mr Ewins added that the emerging markets had been observing the US and EU and had now come to some degree of accommodation. A number of the emerging market jurisdictions had essentially agreed to participate in the same environment because it was more concrete.. Now the foreign authorities had the ability to say that if you had cleared in a suitable foreign CCP then we would treat it as having fulfilled your obligations in Hong Kong as an example, which was one of the interesting advantages. Emerging markets were not only discussing it principally but the economic reality had struck in that the US and EU had a 90% share of the market. As a result, that had pulled the emerging markets into play. Asia and other parts of the world would become more important as time went on because the emerging markets increased in size as a result of the way that history was beginning to work. This was one of the reasons why everyone should be playing by the same rules.

Ms Levine added that this brought out a lot of international law topics and non-state actors because the G20 was actually a supranational organisation that had a real influence. There had been an observance of the meeting of the minds between the International Association of Insurance Supervisors (IAIS) and the EU, which covered 90% of the derivatives markets. Then Asia was waiting to see what was going to happen but then followed suit. This had been a real event in international securities law, particularly

for practitioners. With global firms, the more they saw consistent standards and ways to operate more easily globally the better. There were also regulatory and supervisory benefits as well because it discouraged arbitrage. She noted that there were a number of areas where it was very important that supervisors and regulators work together in such supervision because most of the major gains and financial institutions were global and supervision necessarily had to have a global element. Equivalences determinations and getting through the relatively small issues to come to a greater understanding on the bigger issues was very promising and was something that had been spoken about in the Committee for a very long time.

She noted that the foregoing discussion basically summed up the topic of OTC derivatives, which was to point out the milestone in having a substituted compliance regime for CCPs.

Mr John Taylor (Australia) asked what was going to happen with respect to the remaining 10% of the OTC market that was not settled through CCPs.

Ms Levine responded that part of the 10% was Asia and handed the query over to Mr Ewins, whom she noted was the expert on Asia.

Mr Ewins commented that Asia was fragmented. There was China, which did its own thing, never following and always learning from the Western markets. Then there were monster economies like Japan, Singapore and Hong Kong which were huge international trading centres and everyone was trying to get a piece of the pie. So essentially the way that it had worked in Asia and the way it was developing, looking at clearing for the moment, was not just the case of accepting international standards; it was a case of accepting them in the context of local requirements and the local economies. For example, in Hong Kong, clearing only related to interest rate swaps and non-deliverable forwards., because those were the biggest sector in the Hong Kong market. All other OTC derivatives were not going to be covered by clearing, which was not going to come in until 2017. Mr Ewins noted that what had happened was that Hong Kong had effectively taken a practical view of this and said that it would be going along with clearing because it acknowledges it as a good concept, but that it would only do it insofar as it had to and needed to. Australia had done the same, having a very limited amount of cleared products, and Singapore.

Mr Ewins noted that basically what you ended up with was a number of different standardised transactions which would be covered and then there was the bucket of lots of other types of relatively standard transactions and products which would not be cleared within the Asian concept.

Ms Levine asked whether they would be margined.

Mr Ewins responded that the question would come under the uncleared margining. He noted that one had to take a holistic approach to what was covered and how it dealt with standard CCP and then assess what remained.

Ms Levine added that, with a large transaction, you needed not have the benefit of a CCP counterpart but what you did have was collateral that was held against the transaction.

Mr Ewins noted that one of the problems was that you would be penalised for going that route if you could clear and if you could structure your transaction so that it was

not standard and not cleared to an exchange. He noted that if you chose to go down that route, you would be hammered with quite penal margin requirements, which acted as an incentive to basically encourage players to get onto the standardised contract. He noted that you would either be cleared or not cleared and if you were cleared, you were directed into having a CCP and if you were not cleared than you would be hammered with the margin requirements. Mr Ewins noted that one of the interesting parts of the OTC markets was what was standardised and what was not. He noted that this was quite an intuitive experience with the market players because you had to work out what was a standardised product to see how far it was going to get into exchange derivatives. He noted that this was an extension of the exchange trade.

Ms Levine reverted back, noting that the Committee was completing the segment of the report on OTC derivatives and introduced the next topic of CCP Resilience, Recovery and Resolution initiatives. She noted that with the CCPs the counterparts had a certain measure of protection because their counterparty was the CCP. She noted that you ended up with a very concentrated amount of risk in the CCPs and put forward the question of how such risk should be dealt with which was the next "too big to fail" issue. She noted that the CCPs were becoming increasingly important in financial markets.

Ms Levine noted that Dodd-Frank and EMIR did focus a lot of attention on the resilience of the CCPs. EMIR concentrated on risk management and other techniques and measures for the CCPs. The counterparts and the asset managers who were for the counterparts also had their own due diligence requirements with respect to both the CCPs and their clearing members. She noted that if you were clearing through a particular institution you must perform due diligence on the institution you were clearing with as well as the CCPs. Essentially with both, the regulations and the due diligence obligations of counterparts and their agents, there was quite a lot of focus on the CCPs, which was one of the most important areas for focus. The reason was that once you got to the point where clearing members were having financial difficulties, there was a very small universe of clearing members and CCPs. Once you got to the point where there wee considerations of recovery, it was a very precarious time.

Ms Levine introduced the next point of the report, which focused on recovery. She noted that, from a practical standpoint, the recovery phase of the CCPs seemed like an issue that needed to be observed carefully. Recovery was a time where there was a loss of comfort in the clearing member(s) at the same time as the institutions were becoming more financially distressed. Someone (at the moment there was a concept of a college) needed to watch the whole situation very carefully, ensuring that the recovery phase did not continue for prolonged periods. The reason was, during the recovery phase, the "default waterfall", which was the resources of first the CCP (because they were required to hold capital), the resources of the clearing members (because they were also required to hold capital) and margin that was held with the clearing members. She reiterated that it was extremely important to have supervision of this recovery phase and that when it was clear that the CCP was not going to be able to recover, that there was a quick resolution to the extent possible. To the extent possible, it was advantageous for the counterparts to the OTC derivatives transactions to be able to transfer their transaction to another CCP, another clearing member, which would only be possible for some types of OTC derivatives but not all because some were specialised. However, where it was possible, this should be the goal. Whether that was possible was unknown but the report advised

that it would be preferable to have a closely supervised recovery period and, where it was clear that the CCP was not able to recover, to appoint a viability resolution.

Mr Ewins added that where the CCP was in difficulties, the recovery process was designed to do something about that to improve the situation. Mr Ewins said that if you could not manage to save the CCP as a whole, then put in place resolution measures to try to recover as much value as possible.

Ms Levine stated that in the report the thesis was that global supervision of the process was needed together with a very short sharp recovery period with the supervisory resolution. She added that the main point was to preserve the transactions for the counterparts and whether this was possible in an interconnected market that was reacting to the whole situation was unknown.

Mr Ewins said that it was quite interesting because this was the new clear option; the recovery and resolution process for the CCP. It would have been unthinkable in 2006 or 2007 to talk about a CCP blowing up because that sort of thing never happened. Suddenly you had banks falling over, you had a volatile position in the market and as a result what was coming out of it was very much the case of looking at the worst-case scenario and the worst case being if the CCP got into trouble. Experience showed that, as impossible as it may seem, these things might happen and you had to have measures in place to try fix the situation.

Ms Levine said that this is why resilience was so important. One additional point to be made from the customer standpoint was the issue of how much margin and which margin was used during the recovery or resolution phase. There was probably some recognition that variation margin, which was margin that was used to collateralise the day-to-day movements and the value of the derivatives, might have to be used in extraordinary circumstances. At least from the customer standpoint, there was a strong belief that it was inappropriate to use the initial margin which was a quick phase deposit. In the report, the Committee discussed the difference between margin and capital. This point was being made from the customer standpoint but there were different points to be made on the same topic from the banks' perspective, the CCPs' perspective, the regulators' or supervisors' perspective.

Mr Ewins said that ultimately the regulators did not really care as long as the entity either survived, gracefully failed, or was moved onto another entity. So long as one of the techniques was effective, the regulators or resolution authorities were not so concerned with the customer's position as they were concerned with the market stability. This showed that there was quite some tension in the market.

Ms Levine added that this was still being resolved. There were still discussions about the default waterfall and how the recovery resolution procedures would work and how the global oversight would work. It was however still important and was the next new frontier of the "too big to fail" with the concentration on CCPs.

Professor Chiara Zilioli (Italy) referred to an earlier comment that clearing was global and therefore required very close coordination of supervision and resolution procedures. She asked whether this idea could be developed in terms both of cross-border coordination but also crosssector coordination.

Ms Levine said that this took the discussion out of the realm of securities regulation and into more banking and global stability. Ms Levine could not provide an answer on the specifics, but stressed the importance of having predetermined procedures that brought supervisors from different jurisdictions together. She agreed that it was impossible to have absolutely the same regulations and procedures. When crises happened, they happened so fast. She stressed the importance of a close knit group of people who could make decisions quickly in these situations. This was because, once the CCPs started becoming precarious, its members could be affected and vice versa.

Mr Ewins added that it was important to bear in mind that the CCPs element of resolution and recovery was one of the newer elements. He contrasted this to the situations with the banks, where there is regular dialogue between regulators in the US, Europe and Asia.

Ms Levine added one point following from what she had previously mentioned. She said that she had been involved in the Baring Bank crisis in the mid-1990s, and recalled the way that the Singaporean regulators stepped into Barings really quickly and continued settling trades. The crisis would have been much worse if they had not done so. When supervisors acted quickly, when they tried to preserve transactions in the market and things were set up in an organised manner, it could make a huge difference.

Mr Ewins added that, one way or another, the markets tended to want quick decisive action. It almost did not matter what the action was, as long as something happened in terms of stabilising the position.

Professor Lichtenstein asked whether, under legislation, the CCPs and the structures were examined before there was difficulty in the recovery phase, and whether it was the traditional securities system that controlled compliance.

Ms Levine responded that in the UK, the Financial Conduct Authority (FCA) was the conductl regulator for all financial institutions.

Professor Lichtenstein asked whether the CCPs are examined as banks.

Ms Levine responded that, as far as she was aware, the CCPs were examined as banks but she was not certain.

Professor Zilioli added that UK banks also had a prudential regulatory body – the Prudential Regulatory Authority (PRA).

Ms Levine noted that, at least in the UK, the CCPs would be supervised by the FCA. She also noted that the UK had equal capital, unlike the US.

Professor Lichtenstein added that coordination in the case of recovery and resolution was not simple because the far-out branches had already been synchronised. The regulators had been cooperating and so forth.

Ms Levine commented that it was the same with regulators in the UK and that the US was different.

Mr Paul Stevens (US) added that the supervision examiners for banks were in the profit-making business compared to the supervisory bodies for the CCP, which was not out there to score in terms of profit. He would disagree slightly with the SEC as they did have

credential experience but it was more statutory rather than discretionary. Therefore, when they dealt with financial firms, they are more restricted in terms of credentials.

Mr Ewins stated that it was mirrored in Hong Kong where the requirement existed that the main CCPs be recognised as Ms Levine was speaking about.

Ms Levine commented that the supervisors would be supervising the CCPs against the EMIR resilience rules, tracking their mismanagement, procedures and the use of the right capital.

Mr Ewins noted that it was possible to try to avoid a crisis by trying to make sure that it was set up properly. It was difficult to prevent a crisis but there were recognised means.

Ms Levine said that, in terms of the structure of the meeting, they were going to move around the report as amounts to resolution which Mr Ewins was going to cover both in Europe and Asia, Banking and Security included.

Mr Ewins added that the report used Hong Kong as a proxy to reflect Asian developments, which broadly followed the Financial Stability Board (FSB) G20 requirements in the process of implementing those requirements into the regime. He said that one of the aims of the report was to make the point that securities firms were just as affected by recovery and resolution as banks because typically in the modern world there were multinational and multidiscipline entities such as banks and asset managers sitting underneath them, and that these were integrated groups that were mostly too complex to separate.

He mentioned that one of the interesting things about recovery and resolution was that, upon discussion with banks and securities firms on how they were set up, and about all of the requirements for recovery plans and resolution plans and how they actually organised themselves to make it easier to resolve, it was discovered that all of these things were done previously. Therefore, the myriad pronouncements from the FSB and the G20, are all really aiming to say that everything needed to be in order so that a financial regulator could put it into action when there was a problem. He added that the regulators needed to know what you had so that they could decide how to utilise their powers effectively to put the organisation back on its feet.

He stated that it is very true of the banks and of securities firms that the regulators and the global supervisors, who confirmed what the global regulations and trends were, were getting bent out of shape at the moment in terms of asset managers because they were not sure where to place asset managers. Therefore, part of the securities market had an ongoing work in progress in order to work out what to do with these strange creatures.

Mr Ewins highlighted that a critical question was who was systemically important and what to do with them. There was not just a systemic dealer that had been identified. They were all part of the banking group, and then there were asset managers and privatised funds. He mentioned that the FSB had just published a report asking the question on whether to include liquidity type requirements, work out derivatives and activities in the context of the requirements. One of the areas that was causing a problem was actually having insufficient information at the global level, and trying to work out how to centralise the information and how to use it effectively to work out whether organisations were systemically important and to work out, if they were, what to do with them.

Just to show that there was not complete harmony in the international community, the FSB and the International Organization of Securities Commissions (IOSCO) published a paper towards the end of 2015 where they discussed financial managers and how to treat them for recovery and resolution purposes. One of the issues that they tried to highlight in the report was that if you had asset managers, they themselves were not going to be globally systemically important. One of the things that asset managers were important for was what they did with their assets. For example, did they sell them off etc. Those things created ripples in the market and therefore they were potentially systemically important. It could do things in a crisis that could actually act as an accelerator or trigger, creating ripples that fuelled the problem. A fund could itself act as a catalyst in the crisis, particularly if it was highly leveraged. Once derivatives were involved, there were multipliers in the issues that were happening. Therefore, if there was a perceived potential crisis in the market, any clients who were potentially affected under the fund would hit the button for redemption. The assets would then be needed to make that redemption and then the worry was that, although it did not necessarily all happen at once, there would be knock-on effects for the crisis. It tended to happen in a very short order and that is why these ripples could reach beyond the resolutions and further into the market.

Ms Levine added that the FSB consultation on asset management activitiess was very well done and she though that the paper showed a deep understanding of the asset management industry and its activities. She said further that one thing that was interesting was that the US had an almost parallel process going on. They had the Financial Stability Oversight Council (FSOC) and that something that was written on in the report. She said that Mr Stevens would be covering the US side where the SEC had come in and proposed legislation in some of the key areas.

Mr Stevens thanked the chair for the introduction. He continued in saying that one of the outcomes of the financial crisis in 2007 on Wall Street was the Consumer Protection Act. One of the many things that was mandated as part of that legislation was the creation of the FSOC. The goal was to have a kind of "best of the best" committee to imagine what financial stability might be like in the future. FSOC was made of major US regulatory and was chaired by the head of the US Treasury. It also included among its members the SEC, the chairman of the Commodity Features Trading Commission (CFTC) as well as an insurance regulatory representative. Uniquely, in the US there was no federal agency controlling insurance. It was regulated by 50 states. Of course, having 50 state insurance regulators on the committee would be cumbersome, so they decided to have one insurance regulatory representative.

Ms Levine added that it was just the opposite of the UK, where there was a single regulator.

Mr Stevens continued by saying that FSOC's composition was the result of traditional legal structures in the US that gradually progressed into federal regulation of securities markets and insurance was one of them, which was traditionally regulated by the states. He said that all the regulators, as a collective, tried to establish what threats might emerge from asset management, insurance and banking; but the focus here would be the non-banking side of FSOC. He said that they had already mandated the designation of the banking firms.

He highlighted that FSOC composition was important because it had a great deal of functional banking regulators. He said further that FSOC was probably created to determine whether non-banks that posed a threat to financial stability. The non-bank designation process had been a work in progress since the creation of Dodd-Frank and since the creation of FSOC. It had taken time to designate its criteria for what firms should be designated as systemically important. He said that, once the criteria have been established regarding which firms should be designated as systemically important, it would develop criteria to supervise them. Until it was designated as systemically important, it would continue to be regulated by its primary regulator. In the case of asset managers those were regulated by the SEC.

The designation process had gone through a couple of phases and continued to mention the four phases stating the initial phase as being the examination of the asset management industry. He added that FSOC was aided by its research arm, being the Office of Financial Research (OFR). The OFR produced a report in 2013 in which it catalogued potential financial risk stemming from non-bank asset management firms. The report identified a risk of increasing asset prices, particularly in a time of low interest rates. He continued to say that the search for robust returns for clients raised concerns that investors would be herded into the same assets that otherwise might be too risky. The second thing they identified in their report was a redemption risk in collective investment vehicles. He said that, as Mr Ewins was mentioning, there was a concern that if assets would all of a sudden drop in price or become illiquid, or if there was a concern regarding the quality of the assets, there would be a redemption from the funds and that would create selling pressure on the assets held by the funds, which would in turn create selling pressure on broader market and would have ripple effects on the economy. The third risk was leverage in applying those asset price movements. Fourthly, was that firms themselves formed a systemic risk category.

Mr Stevens continued to mention that the 2013 report was widely criticised by the asset management industry and some experts; however, it was a tenable effort by the OFR. The OFR was a new organisation in the US, and it would be wrong to criticise it too much. It did, however, get some fundamental things wrong about how the asset management industry worked. It failed to differentiate between asset managers who were investing money on behalf of their clients and did not distinguish the asset managers from their funds which were two separate corporate entities with two separate balance sheets. He said that it followed that the report was collectively looking at the asset managers and their funds. He explained that asset managers in general, except for maybe the very large ones, tended to have relatively small balance sheets compared to their clients and their funds. He added further that the 2013 report was criticised for a variety of errors as regards to wording, and generalising a great deal. So the industry pushed back against the report with the experts and so did the SEC itself.

The SEC, however, heard what the FSOC's concerns were generally and had another consultation. The SEC started coming out with proposals for reform on its own and said that these were now starting to emerge in the asset management industry and in proposals for enhanced liquidity monitoring for the US and US funds.

There had been a series of rule makings regarding money market funds that were impacted by the crisis. During the financial crisis, the reason why there was a concern for

the financial oversight councils was because the Reserve Primary Fund"broke the buck". Money market funds were designed to return one dollar for every dollar that was invested in them. The fund did not necessarily go bankrupt, but it broke that 1:1-dollar promise. It would be worth noting that the reason why it "broke the buck" was because they had a great deal of assets in Lehman Brothers commercial paper so it was worth asking the fund managers of that fund why. He said that the shareholders of the Reserve Primary Fund did what they were supposed to do and they stayed in, but then they got left with the short stick when Lehman Brothers went bankrupt.

Money market funds were now primarily moving away from this 1:1dollar promise in response to FSOC's concerns. The value of the money market funds now would generally oscillate around one dollar and it would not necessarily be guaranteed at one dollar as it might be something less or it might be something more. FSOC has been urging SEC to impose liquidity fees and redemption gates to prevent a run and/or close before it actually happens.

Mr Stevens added further that there was a report out today (9 August 2016) which talked about dislocations in the market that had occurred, and whether or not money market funds would survive as a vehicle. These might be changing as we speak.

Ms Levine mentioned that there were parallel changes in Europe with the money market consultation and changes underway in money market fund structure.Mr **Ewins** stated that it is interesting how the US clearly fed into the consultations.

Mr Stevens continued in saying that the FSB was chaired by Mark Carney but had significant input from all jurisdictions. He said that the money market funds had been transformed and there had been additional efforts in FSB to move away from regulating asset management firms at an entity level. In one of the FSB reports, FSB noted that it was shifting focus from looking at all activities of asset management firms to looking more at leverage and liquidity. Mr Stevens referred back to what Mr Ewins had mentioned – that historically speaking, there was a great deal of diversity amongst asset manager firms. When one was talking about the industry there were all sorts of firms that might propose varying levels of risk and complexity that might be of concern to regulators. He gave the example that if a regular person might be invested in a firm through their government pension plan which was structured very differently from private equity funds. That might all be brought under the term of "asset management", but it was important to note that different types of funds had different restrictions on them already, and had had them for a long time, for instance on liquidity, leverage and on asset quality. He said finally that it was a very complex area and it was not easy to fit under a "one size fits all" solution.

Ms Levine mentioned what it was interesting to see the SEC do some dramatic things, particularly with regards to the liquidity rules, which were not very popular but were very focused on the sorts of issues that had come out of the FSB report and could alleviate some of their concerns.

Mr Stevens added that the chairman of the SEC was very active in this area. There would be an investigation into how firms under US jurisdiction were regulated, ways that they could improve, listen and respond to relevant comments from FSOC. The FSOC had not foreclosed, but it did not have the power to necessarily designate asset managers as

systematically important. He said that it might do so in the future and it remained to be seen whether it would do so.

Ms Levine clarified by saying that the focus at the moment was still on activities along with the FSB, IOSCO and that it was ongoing.

Mr Ewins stated that the rest of the regulators in Hong Kong had been very clear in that they had a set of potential systemically important entities as, essentially, a "catch-all" so that, for example, when the FSB ultimately came to a view, then it would be relatively straight forward to slot these categories into the framework. He commented that there was a desperate attempt to try to make it as flexible and mobile as possible.

Ms Levine stated that one thing that Mr Stevens did not mention that she felt was interesting was the MetLife decision. One thing about that which was notable was the role of the Administrative Procedure Act in the US. It was something which they do not have in Europe wherethere are not very defined procedures around agencies' decisions. The MetLife decision illustrated how the US system works.

She mentioned that Mr Edward Fleischman (US) could not make it on the day and it was his intervention to talk about this case. She said that she was therefore asking the question on his behalf.

Mr Stevens replied saying that MetLife is a large US insurance company. Insurers in the US were required to hold assets sufficient for all their liabilities for their policy holders. Insurers went about it in different ways and some took greater risks than others. Based on its activities, FSOC designated Metlife as a systemically important institution. MetLife management decided that it was going to fight the designation so it sued the United States in the District Court, as allowed under Dodd-Frank. Taking a step back, he noted that there was an internal appeals process for FSOC and there was a possibility to appeal its designation to the Council and have it re-examined. Ultimately, it followed its other avenue of relief which was to sue in the District Court under the Administrative Procedure Act (APA).

He continued in highlighting that the APA was essentially applicable to any US (federal) regulatory agency and provided that regulation by US regulators must be reasonable and with a minimum standard of due process that is embedded in the APA. The District Court found that MetLife's designation process by FSOC was flawed, citing that it was not adequately explained how the activities of MetLife would spread to the broader market place, identifying with specificity which particular activities were dangerous.

Ms Levine added that this was a procedural claim.

Mr Stevens agreed, noting that MetLife did not say that it was not systemically important or that it could not be. It simply said that FSOC did not explain, adequately, its decision with enough evidence. He explained that basically MetLife's argument was that FSOC did not follow its own procedural rules. The main point of criticism was that, because FSOC's purpose was to identify emerging or potential threats, it was important to realise that if you were dealing with hypothetical scenarios then you could imagine all sorts of possible harm. What the APA said and what the District Court found was that you could deal with purely hypothetical situations under Dodd-Frank, and that FSOC had to have an element of causation, procedure and evidence that was more than just hypothetical.

Mr Stevens asked Ms Levine what it was like in Europe.

Ms Levine replied that, in Europe, there was no equivalent of the APA, but a member of the audience might be more expert than she was on this matter.

Sir William Blain (UK) commented that, from a financial perspective, it had been a healthy discussion. He admitted that he had not fully appreciated the example that had been decided under the APA or the DoddFrank procedure. Nor had he appreciated that there was an internal appeal, but that he could probably have guessed that the decision went on procedural grounds rather than on substantive grounds. He said that he would, as a judge himself, say that the big thing that had come out of 2008 was the idea of systemic designation. He found that a decision that lay at a body, as was identified, which had the overall picture in front of it and not just institutional procedures, would hold more weight. He commented further that he would hope that the responsible regulator, or supervisor, was in a better position to make that kind of decision which, whether you dressed it up procedurally or not, ultimately, the court was not in the field to make that kind of decision.

Ms Levine noted that there was a very large contingent from the International Monetary Law Committee present, which was very much appreciated.

Sir Ross Cranston (UK) stated that, by his experience, parties were arguing procedural points and they were arguing, in their system, lack of consultation. At the end of the day, it was better for the regulators who made these decisions to abide by these procedural points because they had the expertise and should be making the decisions.

Mr Stevens added that it was decided that they would appeal the decision of the District Court to the Court of Appeals.

Ms Levine added that, in the meantime, FSOC could just take the evidence again and do it properly.

Mr Ewins (Hong Kong) commented that he would agree that they should just go back and do it again. He was of the opinion that it had been a delay tactic.

Mr Stevens commented further that the choice to appeal was a tough one because if the decision of the District Court was wrong, they did not want it to become precedent. Therefore, they did not want to go back and deal with their analysis again. They would rather have the Court of Appeals say that FSOC was right or wrong.

Ms Levine added that it was a very interesting case for the study of this Committee.

Mr John Taylor (Australia) asked whether the CCPs themselves had entered into arrangements with their owners and or their counterparties to protect themselves in the event of a crisis. He reference to Ms Levine's earlier comments about risk in the CCP and queried whether they had sought to lay that risk off.

Ms Levine responded by saying the CCPst held capital. She continued by saying that they had risk management procedures that were mandated in EMIR in the EU that were quite strong. She said that quite a lot of time had been spent on developing those properly and they are closely supervised.

Mr Taylor (Australia) followed up by noting that the reason he asked the question was because, within the banking system, the requirement on a bank holding company was to ensure that there was sufficient capital to support the banks or some sufficient other protective method. He rephrased his question by asking within the CCP framework if there was an equivalent or something similar.

Ms Levine responded by saying that she was not the expert but would attempt to answer the question. She said that, first, at CCP level there was the CCP, which itself had to hold capital. This was part of the so-called "default waterfall" and then the clearing members, who were banks, had to hold capital. There was also the margin that was held at the CCP, which hopefully you would not have to resort to. There was the variation margin, which was collateral against the transactions and the change in value of the transactions. So there was capital within the CCP and within the clearing members themselves and then collateral at a transactional level – which was different and meant to protect counterparties to the transaction.

Mr Ewins added that, from a bank's point of view, at this point the shareholders would get taken out because, in the banking sector, it was the shareholders who were first up against the wall when there was a major problem. He said that this would broadly be implemented in the CCP sector.

Mr René Smits (Netherlands) began his intervention by complimenting the Committee on the very clear report and transparent explanations, especially on the difference between margin and capital. The first point he moved onto was with respect to the APAand the absence of an EU equivalent. What the EU did have was case law which clarified the steps to be taken in terms of reasoning or in terms of conducting an internal review at the agencies. There were different administrative review mechanisms for different agencies (eg, the European Banking Authority (EBA), European Central Bank (ECB) and Single Resolution Board (SRB).

Having said this, there was a convergence over time. On applying standards to review requests, the varied bodies could rely on decade-long case law of the European Court of Justice, which had identified due process requirements for administrative agencies like the European Commission in the area of competition law enforcement. So essentially there was no consolidated EU law but reliance on a history of consistent case law.

Professor Lichtenstein asked who the shareholders were in the CCPs. She understood that they were cleared on a series of banks within the derivative business, but who owned the CCPs?

Ms Levine responded by saying that, to her knowledge, CME, for instance, was a public company. That was one of the derivatives clearing houses. Professor **Lichtenstein** asked whether they were State owned.

Ms Levine responded in the negative – CCPs are public companies.

Professor Lichtenstein queried whether they were public utilities.

Ms Levine responded that they were not public utilities.

Professor Lichtenstein asked whether Ms Levine meant that they sold public equities.

Ms Levine responded by saying that they were public entities as well and there had been a lot of thought around how CCPs could be funded as well as the clearing members. There were instruments such as CoCos, which could be used for capital and augment the capital of the CCPs or the clearing members. She said that there were a lot of techniques and that it was quite a complicated area but the CCPs themselves were public companies and not state owned. The shareholders would take a risk if the CCP failed.

Ms Levine then moved on to introduce the topic of Capital Markets Union (CMU) and the initiative of the European Commission. This brought up the topic of Brexit because CMU was initially an initiative that came from Commissioner Lord Jonathan Hill. She said that CMU was a very hopeful and exciting proposition. It was an attempt to expand the European capital markets and to provide more market financing to companies, to promote growth in the economy and to create jobs. There was recognition that bank financing was the primary source of financing in Europe whereas market financing and the capital markets went against the US. As far as she was aware, it was 80/20 in the US and 20/80 in Europe, but she could not certify the accuracy of those figures. In essence, there was a lot of potential for growth in the capital markets in Europe.

There was a very comprehensive program of looking at possible impediments to the growth of the capital markets in Europe, including whether bank regulations could be creating issues. There was a call for evidence and there was a focus on, for instance, the rules around distribution of funds and other areas to see where there could be an impetus towards more capital markets. There was also a focus on venture capital and creating venture capital funds and a review of securitisation. Ms Levine believed that this was ongoing and that the European Commission was certainly looking at fund distribution, which was a big priority for that part of the Commission. The Commission was currently conducting a EU consultation but one wondered with the Brexit scenario and the unfortunate situation with Commissioner Hill resigning, whether that would continue in the same way. She further mentioned that parts of it were continuing but said that it would be affected by Brexit.

Mr Ewins made a brief comment on the ironies of the situation.

Ms Levine concluded on the topic of CMU. She then introduced the last topic on insider dealings and corporate governance, into which she would not go into any detail. She mentioned that the relevant section of the report included an analysis of a recent US case. From a comparative perspective, the case highlighted the difference between the US rules and at least the UK rules. The actual interpretation of US rules by the courts was , in her opinion, looser then the UK rules. But the SEC in particular had taken a very tough stance on insider dealings in enforcement. A personal opinion was that this was very warranted. Ms Levine mentioned an article in the *Financial Times* recently that there was still a substantive amount of trading before takeovers and that distorted the markets and was not the right thing. Hopefully supervision in this area would be as effective as possible. In the US, the issue was around whether there had to be a financial benefit to the tipper if the issue had surrounded a tipee disclosing information.

Mr Stevens commented that this is what was dealt with in the Salman case. He said that the issue was whether giving information to a relative or friend was enough of a personal benefit to support a finding of benefit to the tipper under the US federal insider

trading rules – this focussed on the personal relationship. **Ms Levine** commented on the comparative position in the UK in this respect.

Mr Stevens added that in the US it was all mostly case law.

Mr Ewins commented that, in Hong Kong, legislation regulated insider trading, and a stricter approach was taken.

Ms Levine then introduced the last topic on corporate governance, the continuing theme in the Committee. She attributed the part of the report to Mr Gustavo Grebler (Brazil), who discussed some of the issues in Brazil and in particular state-owned enterprises and the Petrobrás case and the fact that these SOEs created many issues around corporate governance and shareholders not getting their full rights because the state owner just took different positions that disadvantaged the public float.

Mr Ewins added that there were many other areas, which would be discussed in future, such as cyber security and others.

The Chair asked whether there were any questions about the last issues addressed.

Professor Zilioli commented on CMU that she did not think that there would be any breaking of the promise. She said that there was more going on to make the flow of money more fluent in Europe. Of course, there were signs that CMUs were slowing down because of Brexit. On the contrary, the securitisation draft was being discussed in Parliament. A new draft on venture capital with investment funds was being discussed.

Ms Levine said that this was good news and that it was a very powerful and important initiative.

Mr Ewins added that the reality was that once the UK came out, it still had the EU pushing it forward.

Professor Zilioli agreed, but said that the real risk was for the EU. It could be that the EU had a stronger interest than the others but this was a new thing so it could be that non-Euro countries had less interest than the UK had but it did not matter because the engine was also elsewhere.

Professor Lichtenstein asked whether Professor Zilioli meant that the legal structure of the CMU was such that countries that were not members of the EU could nevertheless participate.

Professor Zilioli responded to Professor Lichtenstein by saying that this was not what she meant. She was simply saying that the Euro area, which was a sub sector of the EU of course, had a strong interest to develop this, but first they were not alone and second, this was the frame of dichotomy between the single market and the Euro area. The two were not mutually exclusive and there were some things that could only work if it was for the EU as a whole because this was a single market issue. Whether it was then broadened to other countries was an extra step and it should first be achieved internally which was proving not to be easy. She said that she was sure that there was an interest but this was an extra step.

Professor Lichtenstein agreed and said that she was asking because if the UK was part of the EU, it was no longer a member of the single market and in order to participate, if

the structure was limited to members of the single market, it would need the next step to keep them in.

Professor Zilioli said that this applied to all that had been and that if the UK withdre, some sort of solution needed to be developed.

Ms Levine commented that this was a really great topic for the next report to talk about some of the solutions.

Professor Zilioli said that the next ILA convention was in two years and hopefully there would be more solutions then there were at the moment.

Ms Levine said that there would be and that there were currently solutions out there.

Professor Zilioli agreed with Ms Levine, but said that it was one thing to get out proposals but another thing to decide and agree on how to continue, which should take longer.

Ms Levine commented that another interesting development was the third country regime for the Alternative Investment Fund, and how that could create a blueprint for equivalence, determinations.

Professor Zilioli said that this was not an improvement from what there was currently.

Ms Levine agreed that it was not.

The Chair thanked the Committee for the report and attendees for their and closed the session.

THIRD REPORT

Introduction

The Committee on Recognition/Non-recognition in International Law was established by the Executive Council of the International Law Association (ILA) in May 2009, with the purpose of examining "whether contemporary issues of secession, break-up of States and the creation of new States have changed international law and policy with respect to recognition." The Committee first met at the 2010 ILA Conference in The Hague, Netherlands. It also held meetings in the 2011 Regional ILA Conference, in Taipei, Taiwan, in Vienna in January 2012, in the 2012 ILA Conference in Sofia, Bulgaria, in Warsaw in June 2013 and in Washington in 2014.

The First Report of the Committee was presented at the 2012 ILA Conference in Sofia. It focused on the fundamental aspects of recognition of States. The Second Report, presented in Washington in 2014, focused on the international and domestic aspects of non-recognition and unrecognized entities.

This third report deals with the issue of recognition of governments. In preparation for this text, the members of the committee provided reports on their respective national practices, addressing the following questions:

- Does the State on which you are reporting formally recognize governments of other State entities? If so, has it stated its criteria? Once recognition is conferred upon a government, do any domestic legal consequences flow from such act?
- What are the important examples, if any, of the State on which you are reporting recognizing or not recognizing governments or other entities?
- Are there examples of domestic legal consequences due to the recognition of the government of another State entity?
- Do governments view acceptance of credentials under Vienna Convention on Diplomatic Relations as leading to other legal obligations, and if so, what are they?
- How does the State on which you are reporting address a disputed transition of government?

Responses were submitted by the following branches (and members): Austria (Gerhard Hafner), Australia (Alison Pert and Stephen Tully), Canada (Christopher Waters), Cyprus (Aristoteles Constantinides), France (David Ruzié), Italy (Enrico Milano), Japan (Shotaro Hamamoto), Kosovo (Robert Muharremi), Palestine (Valentina Azarova), Slovenia (Mirjam Škrk), Taiwan (Chun-I Chen and Pasha Hsieh), Tanzania (Khoti Kamanga), The Netherlands (Olivier Ribbelink), United Kingdom (Daud Ilyas and Matthew Happold), and the United States (Christopher J. Borgen, Margaret E. McGuinness, and Brad Roth). Additional research was conducted on Brazil.[1] Members of the committee were asked to provide, whenever possible, pertinent diplomatic, administrative, judicial or parliamentary practice of the countries on which they were reporting.

I. The recognition of governments as a legal concept

A. Defining the recognition of governments

Ordinarily, changes in the government of a State occur in accordance with the respective legal order and there is no dispute over who the legitimate representative of that State is. However, when a new government arrives in power in a manner not prescribed by that State's domestic legal order, such as a coup d'état or a revolution, the attitude of other States towards the new authority may be of fundamental importance to ascertain its international legal standing.

States have a spectrum of possible responses towards the new regime including: refusing diplomatic relations, maintaining pre-existing diplomatic relations, or interacting with the regime on an *ad hoc* basis without clearly stating whether it views the regime as a legitimate government. The executive, legislature, and judiciary of a State may, either in concert or separately, make declarations, enact laws, or decide cases that may explicitly or implicitly address whether the regime in question is the government of a particular State.

[1] The co-rapporteurs acknowledge the aid of research assistants Bruno Biazatti, Mariana Ribeiro and Mariana Ferolla in the preparation of this report and of Bruno Biazatti for his preparation of the Brazilian report.

The recognition of a government[2] may be defined as accepting certain institutions and/or individuals as the lawful representatives of a State in its international affairs.[3] It does not need to be formally or publicly announced[4] and it may be "more a matter of implication than of express declaration".[5] This report, however, focuses on the *formal* and express recognition of governments.

The practice of formally recognizing governments has been criticized by some commentators. For example, former International Court of Justice Judge Richard Baxter has written:

> [A]n institution of law that causes more problems than it solves must be rejected and replaced by working arrangements that are flexible and realistic. The partial withdrawal of law from this area of international relations will facilitate the maintenance of relations with states in which extraconstitutional changes of government are taking place, and that in itself is a good thing.[6]

---

[2] A definition of government, in the international legal context, was formulated by KELSEN: "A government, according to the norms of international law, is the individual or body of individuals which by virtue of the effective constitution of a state, represents the state in its relations with other states, i.e., is competent to act on behalf of the state in its relations with the community of states." KELSEN, Hans. Recognition in International Law: Theoretical Observations. *American Journal of International Law*, vol.35, pp. 605-617, Oct., 1941, p.614-615.

[3] In this sense, see Feldmann: "Recognition of a new government means that recognizing States consider it to be the only representative of this State in international affairs". FELDEMANN, David. The recognition of new governments and other types of recognition. In: _____. *International Personality*, 1985, pp. 395-405 (Collected Courses of the Hague Academy of International Law, vol. 191). In previous course, in 1933, Sir Williams stated that with the recognition of government, the State "(...) donne à entendre qu'il est prêt à accepter certains individus comme étant les agents effectifs d'un autre Etat dans toutes les activités internationales". See WILLIAMS, John Fischer. *La doctrine de la reconnaissance en droit international et ses développements récents*, 1933 (Collected Courses of the Hague Academy of International Law, vol. 044). A resolution of the Institute de Droit International defines recognition of governments as "l'acte libre par lequel un ou plusieurs Etats constatent qu'une personne ou un groupe de personnes sont en mesure d'engager l'Etat qu'elles prétendent représenter, et témoignent de leur volonté d'entretenir avec elles des relations." INSTITUTE DE DROIT INTERNATIONAL. *La reconnaissance des nouveaux Etats et des nouveaux gouvernements*. Session de Bruxelles, 1936. Available at < http://www.justitiaetpace.org/ > The U.S. *Restatement of the Law (Third) of the Foreign Relations Law of the United States* explains that recognition of a government constitutes a "formal acknowledgment that a particular regime is the effective government of a state and implies a commitment to treat that regime as the government of that state." *Restatement (Third)* § 203, *comm. a. The Restatement (Third)* is a publication of the American Law Institute. Although is not a code or even an official document, it is perceived as "an accurate distillation of the state of the law" at the time of its publication. The third and most recent version of "The Restatement of the Law" was published in 1987.

[4] JENNINGS, Robert; WATTS, Arthur. *Oppenheim's International Law*. Vol.1, 9 ed, London: Longman, 1992, p. 146.

[5] Ibid. See, however, the Restatement of the Law (Third) of the Foreign Relations Law of the United States, which regards recognition of governments as a "formal acknowledgment that a particular regime is the effective government of a state and implies a commitment to treat that regime as the government of that state."

[6] GALLOWAY, L. Thomas. *Recognizing foreign governments*: the practice of the United States. Washington: American Enterprise Institute, 1978, foreword.

As will be discussed in Part II, below, State practice itself shows a certain ambivalence regarding the recognition of governments.

B. Criteria for recognizing governments: theoretical and historical perspectives

Jurists have long opined on when a State should (or must) recognize or refuse to recognize a regime as the government of another State.

Effectiveness[7] seems to be a common requisite for almost all legal authors who wrote about criteria for recognition of governments. As put by Feldemann "it is of such great

[7] According to Jiménez de Aréchaga, "[c]abe definir la efectividad como el control de hecho de la machinaría administrativa de Estado, y la aquiescencia de la población del Estado al nuevo gobierno, la cual se manifiesta por la falta de resistencia armada a las nuevas autoridades. La efectividad se expresa por la continuada obediencia a ese nuevo centro de poder. Esta continuada obediencia se puede manifestar en forma expresa, mediante actos plebiscitarios, en los cuales el pueblo de un Estado adhiere al nuevo gobierno; o en forma tácita, mediante la falta de resistencia armada, la continuada obedecía de la población a las órdenes o mandatos del nuevo centro de poder." ("[e]ffectiveness can be defined as the *de facto* control of the administrative structure of the State, and the acquiescence of the State's population to the new government, expressed through the absence of armed resistance to the new authorities. Effectiveness expresses itself by the continuous obedience to the new center of power. This continuous obedience can manifest itself expressly, through plebiscites, in which the people adhere to the new government; or tacitly, through the lack of armed resistance or the population's continuous obedience to the orders and mandates of the new center of power.") ARÉCHAGA, Eduardo Jiménez de. *Derecho Internacional Publico,* vol.II, Montevideo: Fundación de Cultura Universitaria, 1995, p.57. For Feldemann, "If an old government is overthrown or the result of the struggle against it is predetermined, the question of effectivity of the new government arises, that is whether the latter is effective in realizing its power over the State territory, whether the great majority of the population of the country obeys it and if it really represents this State in international relations. That is, it must be evident that the new government is capable of living, that it can and really does accomplish the State power." In FELDEMANN, David. *International Personality*, 1985, p.400 (Collected Courses of the Hague Academy of International Law, vol. 191). See also Scipione: "On peut dire, en thèse générale, avec M. P. Costal qu'il existe une autorité effective là ou une personne, un comité ou une assemblée est obéi par la population d'un territoire déterminé et dans une forme telle que ses ordres sont respectés et observés, tout au moins en ce qui concerne l'impôt du sang et les autres contributions. Il n'est cependant pas toujours facile de juger de la généralité et de la continuité de cette obéissance. Quant à la généralité, on ne pourra prétendre que toute résistance cesse dans tout le territoire de l'État. Chaque gouvernement nouveau peut avoir sa Vendée. Quant à la continuité, on ne peut pas non plus se formaliser de quelques efforts pour la briser, pourvu que ces efforts n'arrivent pas jusqu'à la compromettre. (...) C'est donc la stabilité dans l'exercice du pouvoir, c'est la réalité de son action qui démontre le caractère effectif du gouvernement de facto." SCIPIONE, Gemma. Les gouvernements de fait. 1924, p.337 (Collected Courses of the Hague Academy of International Law, vol. 004)

importance that some lawyers consider it to be the only criterion of recognition."[8] Many authors also include *stability* as a criterion for recognition.[9]

Lauterpacht pointed out that effectiveness, "either in its literal sense or as evidenced by an adequate expression of popular consent-within the territory of the State is an essential and the principal condition of recognition both of States and of governments".[10] Moreover, "reasonable prospect of permanency and stability […] or the final and apparently irrevocable defeat of the pretensions of the parent State [...] are generally admitted".[11] According to Lauterpacht, the "free acceptance of the new regime by the majority of the population", and the "ability or willingness to fulfill international obligations" are also found in State practice, though less commonly than the other criteria.[12]

Schwarzenberger, however, presented a rather critical view of the role of acceptance by the majority of population: "In view of the means of control and repression at the disposal of any present-day government, it is hardly convincing any longer to imagine that, ultimately, any government depends on the consent of those governed." [13]

For Hans Blix, "the criteria of effective control, independence and stability is all that need be fulfilled by an authority legally to constitute a government."[14] Nevertheless, States

---

[8] FELDEMANN, op.cit., p.400. See, also, Pellet (et al.), "[l]a reconnaissance de gouvernement est une competénce de chaque État, competénce qu'il exerce de façon discrétionnaire, mais en se fondant, en principe, sur l'effectivité du gouvernement nouveau." DAILLER, Patrick; FORTEAU, Mathias; PELLET. *Droit International Public*. 8 ed. Paris: L.G.D.J., 2009. For Dupuy, "[L]a conduite la plus conforme au respect de la règle de non-ingérence dans les affaires intérieures d'un État consiste pour un État tiers à ne subordonner sa reconnaissance qu'à la seule exigence de l'effectivité des pouvoirs du gouvernement considéré, ce qui constitue d'ailleurs la position classique défendue en principe par la France." In DUPUY, Pierre-Marie. *Droit International Public*. Paris: Dalloz, 2002, p. 100.

[9] See, for instance, Scipione: "Mais, puisque liberté n'est pas caprice, les États ne se décident à donner ou à refuser leur reconnaissance à un nouveau gouvernement qu'à la suite de considérations très complexes. Une première appréciation est toujours une appréciation de fait. Elle précède toute décision. On ne trouvera point d'État disposé à reconnaître un changement qui ne présente pas des caractères d'effectivité et de stabilité." In SCIPIONE, Gemma. *Les gouvernements de fait*. 1924, p.337 (Collected Courses of the Hague Academy of International Law, vol. 004). In the same line of thought, Benadava wrote: "Un Estado no está obligado a reconecer a un nuevo gobierno, pero está facultado para reconocerlo si dicho gobierno es estable y efectivo" (A State is not under an obligation to recognize a new government, but is allowed to recognize it if such government is *stable* and *effective*). In BENADAVA, Santiago. *Derecho Internacional Publico*. Santiago (Chile): LexisNexis, 2001, p. 113. See also BARBOZA, Julio. *Derecho Internacional Publico*. Buenos Aires: Zavalia, 2004, p. 185; DIEZ DE VELASCO, Manuel. *Instituciones de Derecho Internacional Público*. 15 ed. Madrid: Tecnos, 2005, p. 272.

[14] BLIX, Hans Martin. *Contemporary aspects of recognition*, 1970, p.643 (Collected Courses of the Hague Academy of International Law, vol. 130)

may withhold recognition of a government until the regime fulfills certain conditions, which are "extraneous to its quality as a government in the international law sense."[15] According to Blix:

> Such extraneous conditions may be of great diversity. Demands for democratic legitimacy as well as monarchic or any other "legitimacy" would be among them. Others could be more closely linked to the national interests of the foreign State, such as willingness of the new régime to respect obligations under treaties or general international law, to protect foreigners or foreign property, etc.[16]

With the perspectives of these jurists as context, we will turn to observations of State practice drawn from the reports submitted by Committee members. We stress that the descriptions and preliminary conclusions in this report are based on a small subset of States. They point to possible interesting trends and areas for further investigation.

II. The current practice of recognition of governments

A. Do States actually recognize governments?

The national reports found that, in general, the States studied did not formally recognize governments as part of their standard practice. One older example of a State *not* making *formal* declarations of governmental recognition is Mexico's Estrada Doctrine. In 1930, Genaro Estrada, the Secretary of Foreign Relations of Mexico announced that:

> [...] the Mexican Government is issuing no declarations in the sense of grants of recognition, since [this] nation considers that such course is an insulting practice and one which, in addition to the fact that it offends the sovereignty of other nations, implies that judgment of some sort may be passed upon the internal affairs of those nations by other governments [...].[17]

The set of national reports submitted by the Committee Members revealed that the reasoning of the Estrada Doctrine finds place today in the practice of most of the States studied. The Australian report explained that Australia had abandoned the practice of

---

[15] "The criteria of effective control, independence and stability is all that need be fulfilled by an authority legally to constitute a government. When they are satisfied the authority can claim of other States conduct based on cognizance of its legal status: to be accepted in those functions in the international sphere which as of right may vest in it, e.g., representing the State in an international organization of which it is a member. This is not to say that it can claim close, friendly or even normal relations with other governments. It is open to a foreign State to reject any "optional co-operation". This latitude may evidently be used until the régime becomes more attractive to the State in question by fulfilling other conditions which may be raised, and which are extraneous to its quality as a government in the international law sense." Ibid, p.643-644.

[16] Ibid, p.644: "In short, in determining whether to recognize another government, States do not find the democratic quality of the government as decisive; other factors are taken into consideration as well. The stated reason for recognizing the government may be that the transition to democracy is better achieved by engaging in relations with the non-democratic government, rather than isolating it. Indeed, the willingness to recognize a non-democratic government is not necessarily detrimental to the best interests of its people; respectable arguments are made by respectable commentators that a democratic form of government is not the best form for some States depending on their stage of economic and political development."

[17] AMERICAN JOURNAL OF INTERNATIONAL LAW. Estrada doctrine of recognition. Vol. 25, n.4, Official documents, 1931, p. 203.

extending formal recognition to new governments in 1988.[18] Australian authorities chose to "conduct relations with new regimes to the extent and in the manner which may be required by the circumstances of each case."[19]

The reports concerning the State practice of Austria,[20] Canada,[21] Cyprus,[22] France,[23] the Netherlands[24] and the United Kingdom[25] made reference to express policies of recognizing States, not governments. Documents cited in the reports on Dutch[26] and British[27] practice also alluded to the practice of other States of not recognizing governments. The

[19] Quoted in PERT and TULLY, Australian Report.

[20] HAFNER, Austrian Report.

[21] WATERS, Canadian Report.

[22] CONSTANTINIDES, Cypriot Report.

[23] "La pratique de la France est, en effet, d'entretenir des relations diplomatiques non pas avec des gouvernments mais avec des États. C'est ainsi qu'elle n'a accomplit pas d'acte formel de reconnaissance lorsqu'un nouveau gouvernment est instauré à la suite d'un changement de régime. Il s'agit d'une position constante." (Quoted from a response provided by the French Minister of Foreign Affairs on March 16, 1979). "Dans nos relations avec le Tchad, nous suivons les règles du droit international (...) nous reconnaissons les États et non les gouvernments" (Quoted from a response provided by the French Minister of Cooperation on November 25th, 1982). Both quotes appear in SALMON, Jean. *Dictionnaire de Droit International Public*. Brussels: Bruylant, 2001.

[24] RIBBELINK, Dutch Report.

[25] HAPPOLD, British Report.

[26] "The Netherlands Minister of Foreign Affairs sent a letter to Parliament on 4 July 1990 in which he informed Parliament "(…) of the practice that will be followed in future by the Dutch Government with regard to the recognition of governments." And he continued: "The Dutch view is that there is no duty to recognize a new government and no right to recognition of a new government. Factors which the Netherlands believes to be important in relation to the recognition of a new government are not only the effectiveness of its rule but also its willingness and ability to maintain relations on a footing of equality with other governments and to observe international obligations entered into by the previous government. Finally, in certain circumstances attention is paid to whether a new government has the support of a large part of the population." The Minister of Foreign Affairs then refers to the practice of the other states partners in the European Political Cooperation (EPC) which has become that "in the last few years in particular almost all of them have to some extent applied the doctrine 'we recognize states, not governments' (…) and since it is desirable to follow the policy of all the other EPC partners, the Dutch Government has come to the conclusion that it will no longer recognize governments." The letter concludes: "The answer to questions whether the Dutch Government regards an entity as a foreign government will have to be inferred from the nature of the relations which it has with that entity. Discussion of such issues will not disappear as a result of a change of this kind in Dutch policy, but will instead concentrate on the nature of the relations." RIBBELINK, Dutch Report.

[27] From 1981 onwards, the British government decided it would no longer formally recognize governments, as stated in a written answer in the House of Commons by the Lord Privy Seal: "We have conducted a re-examination of British policy and practice concerning the recognition of Governments. This has included a comparison with the practice of our partners and allies. On the basis of this review we have decided *we shall no longer accord recognitions to Governments*. The British Government recognizes States in accordance with common international doctrine." UNITED KINGDOM. House of Commons. Parliamentary debates, Written Answers, vol. 983, 25 April 1980, c.278. Reprinted in: United Kingdom Materials on International Law, *British Yearbook of International Law*, vol.51, 1980, p.367 (italics in original). Quoted in HAPPOLD, British Report.

Cypriot report also stated that "in the view of Cyprus, separate recognition of governments is an outdated practice (…)".[28]

Additionally, the Kosovar[29], Palestinian[30], Taiwanese[31] and Tanzanian[32] reports also mentioned a policy of according formal recognition to States, not governments. Also Polish[33] and Israeli[34] practice is limited to recognition of States, and no case of recognition of a government was reported.

The Italian report denoted a less explicit policy. Italy has never expressly stated its position of not recognizing governments, but it normally abstains from doing so. Recognition of governments is "implied from diplomatic relations and accreditation of diplomatic personnel".[35]

The U.S. report explained that, in the past forty years, as a means of exercising political approval or disapproval of foreign regimes, United States practice has shifted from the use of formal recognition of governments to deciding whether or not to have diplomatic relations with the regime in question. In most cases, the U.S. does not emphasize whether that government was "recognized."[36] As noted in the Restatement of the Law (Third) of the Foreign Relations Law of the United States, "[r]epeatedly, the State Department has responded to inquiries [about the recognition of governments] with the statement: 'The question of recognition does not arise: we are *conducting relations* with the new government'"[37].

Moreover, the *Restatement (Third)* notes that, while one State may recognize the government of another State, it may choose not to establish or to break off diplomatic relations with that government. The act of "breaking off [diplomatic] relations does not constitute de-recognition of the government."[38]

---

[28] Quoted in CONSTANTINIDES, Cypriot Report.

[29] "The Republic of Kosovo is independent since 2008, and without international supervision since 2012. Within this relatively short period of time as an independent state, Kosovo has focused on recognition of states and not on recognition of governments." In MUHARREMI, Kosovar Report.

[30] "Palestine abstains from formally recognizing foreign governments, nor maintains any formal policy position on the bright-line criteria for which governments it would be unable to recognise. It simply engages in relations that imply such recognition."AZAROVA, Palestinian Report.

[34] RONEN, Personal communication with the co-rapporteurs via e-mail, August 1st, 2016.

[35] Quoted in MILANO, Italian Report.

[36] "In the past forty years, United States practice has moved away from focusing on the recognition of governments as a means of exercising political approval or disapproval of foreign regimes to one where diplomatic relations serve this function. While the U.S. may extend, withhold, or even "downgrade" diplomatic relations with various governments, in most cases (with the exception of certain instances, such as those discussed in Part II) the U.S. has not emphasized whether that government was "recognized."

[37] Reporters' Note 1 of Section 203 of the Restatement of the Law (Third) of the Foreign Relations Law of the United States. Quoted in BORGEN, MCGUINNESS and ROTH, U.S. Report.

[38] *Restatement (Third)* § 203, *comm. d*, quoted in BORGEN, MCGUINNESS and ROTH, U.S. Report; see also, *Oppenheim*, op. cit., Withdrawal of recognition, p. 177, § 52 (explaining that the U.S. has stated that severing diplomatic relations us not a withdrawal of recognition).

Within the sample of researched countries, only two clearly express a policy of recognizing governments: Japan and Brazil. Based on an official statement of the Government of Japan, the Japanese report explained that Japan may recognize a government even if it came to power by means that did not conform with that country's constitutional framework.[39] It should be noted, however, that Japan has not granted any express recognition of government since 1976.[40]

B. Criteria for the recognition of governments: evidence from State practice

According to the Japanese report, Japan sets two conditions for recognition of governments: territorial effective control and willingness and capability of observing international law. However, even when both conditions are present, there is no obligation to grant recognition.[41]

Brazil has listed four criteria to recognize a government: "(i) effective control over the territory and population; (ii) commitment to follow international obligations; (iii) the consent of the government to be recognized; and (iv) the democratic and constitutional character of the government transition in question."[42]

Even States that do not engage into the practice of recognizing governments may, occasionally, have to deal with competing claims of representation of a government. Most

[39] "Japan in principle grants both recognition of States and recognition of governments. […] Recognition of governments […] is granted when a new government is established in a State in a way not in conformity with the constitution of that State, for example by revolution." Statement by Mr. Akira Hayashi (Director-General, Treaties Bureau, Ministry of Foreign Affairs), Committee on Foreign Relations, House of Representatives, 16 April 1997, p. 8 [quoted and translated by Hamamoto]. HAMAMOTO, Japanese Report.

[40] HAMAMOTO, Japanese Report.

[41] "I think that there are two conditions for such recognition: first, the newly-formed government has established its effective control in the State; and second, the newly-formed government is willing to and capable of observing international law. Be it recognition of a State or of a government, recognition is a unilateral act of the recognizing State. There is no obligation to grant recognition where the above conditions are met and it depends on the will of the recognizing State." Statement by Mr. Akira Hayashi (Director-General, Treaties Bureau, Ministry of Foreign Affairs), Committee on Foreign Relations, House of Representatives, 16 April 1997, p. 8 [Translated by Hamamoto]. Quoted in HAMAMOTO, Japanese Report. Mr. Hayashi further explains: "When deciding whether to recognize a government, we consider whether such conditions are met. This is a decision to be made from a purely legal point of view. It goes without saying that, looking at the situation from another perspective, we consider it important that democratic regimes and respect of human rights spread all over the world. However, I trust that you understand that we will not necessarily withhold recognition of a government or of a State simply because […] there is no democratic election or no such political regime as the one we consider desirable in that State. When an entity is newly created as a State or a new government exercising effective control is objectively formed, it will be necessary to maintain relations with it concerning various questions […]"Statement by Mr. Akira Hayashi (Director-General, Treaties Bureau, Ministry of Foreign Affairs), Committee on Foreign Relations, House of Representatives, 16 April 1997, p. 9 [Translated by Hamamoto]. Quoted in HAMAMOTO, Japanese Report.

[42] Telegram sent by the Ministry of Foreign Relations of Brazil to the Brazilian Embassy in Washington, about the Brazilian Position in Matters of Recognition of Government. 14 October 1975. In BRAZIL, Brazilian Foreign Policy Handbook: 1961-1981, 2nd ed., Brasília: FUNAG, 2012, pp.180–181.

reports indicate that, in such situations, a position is developed on a case-by-case basis. Different criteria were mentioned, including legitimacy, effectiveness, effective control, national interest, position taken by regional[43] and international organizations and observance of democratic and constitutional procedures.

The United Kingdom seems to have a defined set of conditions concerning recognition during a contested transition. In the case *Republic of Somalia v Woodhouse Drake & Carey*[44], Justice Hobhouse enumerated the following criteria for acceptance of a government as the government of the State *in casu*:

(a) whether it was the constitutional government of the State;
(b) the degree, nature, and stability of administrative control – if any – that it exercised over the territory of the State;
(c) whether the United Kingdom government had any dealings with it and if so, the nature of those dealings; and
(d) in marginal cases, the extent of international recognition that it had as the government of the State.

As it will be later discussed, these criteria were applied in the case *Sierra Leone Telecommunications Co Ltd v Barclays Bank Plc.*

C. Cases in which governments or other entities were (or were not) recognized

Members of the Committee were asked to provide relevant examples in which the State they were reporting on recognized (or did not recognize) governments or other entities. An example common to many reports is the recognition of "the Government of the People's Republic of China as the only legal Government of China".[45] National reports cited bilateral communiqués between the People's Republic of China and Austria (1971)[46], Brazil (1974)[47], Italy (1970)[48], Japan (1972)[49] and the United States (1978)[50], in which recognition of government was addressed, among other issues.

More recent examples have focused on the legal significance of new terminology coming into practice.

The Austrian, Canadian, Palestine and Slovenian reports mentioned, as an example of not recognizing a government, the case of the National Transitional Council (NTC), in Libya. In the midst of the struggle for power between the Qaddafi regime and NTC, these States reconciled their respective positions of not recognizing governments and their will to politically support the NTC by recognizing the NTC as the "legitimate *representative* of the Libyan people" and not as the "government of Libya".[51] Similar statements concerning the status of the NTC were made by France, Qatar, the Maldives, Gambia, Senegal, Turkey, Jordan, Spain, and Germany.[52]

Analogous expressions were used to refer to the NTC by other States. Italy described the NTC as "the only legitimate interlocutor for bilateral relations".[53] The United States used the terminology "legitimate governing authority," and also stated that it no longer recognized the government of Muammar Qaddafi.[54] In considering this, the authors of the U.S. report wrote:

> We note that the U.S. government did not state that it was recognizing a "government" but a "legitimate governing authority." Whether there is a legal significance to the difference terms remains to be borne out in further practice. However, please note the similar practice concerning the Syrian Opposition Coalition, [...] which explicitly stated that in that case, recognizing a legitimate representative of the people was not tantamount to recognizing a government.[55]

Taiwan, for its part, explicitly stated that it regarded the NTC as the new government of Libya:

> The government of the Republic of China (Taiwan) respects the people of Libya's pursuit of democracy and recognizes the National Transitional Council (NTC) as the sole legitimate *governing authority* for Libya. Taiwan is willing to work with the *new Libyan government* to promote various cooperative projects, so as to enhance substantive bilateral relations. It is hoped that the welfare of the Libyan people will be enhanced under the leadership of the *new government*.

Available at <https://www.asil.org/insights/volume/15/issue/16/recognition-libyan-national-transitional-council>. According to Talmon, France was the first country to recognize the NTC as"the legitimate representative of the Libyan people".

[53] MILANO, Italian Report.

[54] BORGEN, MCGUINNESS and ROTH, U.S. Report.

[55] Ibid.

In the case of Syria, some States demonstrated support to the National Coalition by acknowledging its position as the legitimate representative of the Syrian people, but not using the term "government". See, for examples, the reports concerning Australia[56], Japan[57], Slovenia[58], Netherlands[59], the United Kingdom[60] and the United States[61].

The Libyan and Syrian cases point to the emerging practice of declaring or even "recognizing" an entity as a "legitimate representative" or a "legitimate governing authority" or some other new term. Do such declarations depart from the preceding practice of some States of not formally recognizing governments? Are such statements tantamount to recognizing a government? In the Syrian case, the United States clarified its view of the legal significance of the "legitimate representative" terminology it was using:

> The U.S. Department of State announced at the Friends of the Syrian People meeting in December 2012 that the United States was recognizing the Syrian Opposition Coalition ("SOC") as the legitimate representative of the Syrian people. The United States does not recognize the SOC as the government of Syria.[62]

The U.S. made this announcement over a year after its recognition of the TNC in Libya as a "legitimate governing authority." While in the Libyan case there was certain ambiguity concerning whether that recognition was tantamount to the recognition of a government, in the Syrian case the U.S. government clearly stated in its practice, a "legitimate representative of the Syrian people" is not co-extensive with being the government of Syria.

[62] *Ibid.* As quoted in BORGEN, MCGUINNESS and ROTH, U.S. Report, the U.S. Department of State spokesperson said: " As the President said last night, this reflects our positive view of the progress that the Syrian Opposition Council has made in establishing organizational structures, in making connections with the political opposition on the ground. And it also will give us the opportunity to better direct the nonlethal assistance that we are providing so that it can get directly to political leaders on the ground in the local coordinating councils, particularly in those areas of Syria that have now been liberated from regime control, and where these local coordinating councils are taking on functions of having to provide basic services, et cetera. So we want to strengthen a political opposition that's committed to a democratic transition." *See*, UNITED STATES OF AMERICA. Department of State Daily Press Briefing. Victoria Nuland Spokesperson Washington, DC, (December 12, 2012). Available at <http://www.state.gov/r/pa/prs/dpb/2012/12/201930.htm#SYRIA>.

Other reports, in addition to the American, assert that these declarations of support do not constitute formal recognition of government.[63] However, the real meaning of the expression "the legitimate representative of the people" remains unclear.[64] The Australian report affirms that "[...] it is merely a political expression of support for a particular group".[65] On the other hand, the Slovenian report states that these declarations "[...] concern the recognition of the legitimacy of relevant political movements or coalitions in the chaotic circumstances due to the dissolution of the previous regime or, in case of an internal armed conflict (civil war)."[66] The Dutch report mentions that recognizing a regime as the legitimate representative of the people "[...] is a political matter without international law implications."[67] From the practice of the States studied, is not possible to extract a definitive conclusion. We can only say that the evolving use of such "legitimate representative" terminology is one area of evolving State practice in relation to the law of recognition.

In contrast to the use of these new terms, once can in fact see recent clear statements of recognition. Consider the recognition of the government of Somalia, discussed in the Japanese and U.S. reports. As quoted in the Japanese Report, the State Minister for Foreign Affairs had previously declared:

> Since 1991, armed conflicts continue. Although a Transitional Federal Government was established in 2005, it still does not exercise effective control over the whole territory of Somalia. For these reasons, Japan has not recognized it. […] We are certainly aware that the TFG is now considered to represent Somalia in the United Nations or the African Union and there is an increasing necessity to cooperate with the TFG on the international plane. We will therefore carefully examine the matter, considering various circumstances surrounding Somalia.[68]

Japan only recognized the government of Somalia in November, 2012, after the adoption of the Somali provisional constitution.[69] Assistant Vice-Minister for Foreign Affairs Kazuyuki Yamazaki said: "The Japanese Government recognized the new government of Somalia, which was established for the first time […] 21 years ago". [70]

Similarly, the United States explicitly recognized the government of Somalia on January 17, 2013. The Note from the Spokesperson of the U.S. Department of State explained:

> In 2012, after more than a decade of transitional governments, Somalia completed its political transition process. This culminated in a new provisional constitution, a new parliament, and

[70] Ibid.

> the election by that parliament of Mr. Hassan Sheikh as Somalia's president. In recognizing President Hassan Sheikh's government as the Government of Somalia, the United States is committing to sustained diplomatic engagement with the Somali authorities.[71]

Two straightforward statements of recognition of a government, without any new terminology.

III. The domestic legal consequences due to the recognition or non-recognition of the government of another state

Recognition of a regime may have a variety of legal consequences such as access to the domestic courts of the recognizing State, control of State property located abroad (such as bank accounts), possibility to claim certain privileges and immunities and the attribution of legal value to foreign official acts and documents.[72]

The case *Sierra Leone Telecommunications Co Ltd v Barclays Bank Plc* (QBD 25 Feb. 1998) provides an example of a domestic consequence due to the recognition of another State entity.[73] Sierra Leone Telecommunications Co Ltd (Sierratel), a company incorporated in Sierra Leone, was wholly owned and controlled by the Sierra Leone government. It held an account with Barclays Bank in London. Under its mandate, Barclays Bank was required to act on the authority of the directors of Sierratel.

When a military coup took place in Sierra Leone in 1997, the democratically elected government of President Kabbah was forced into exile in Guinea, where it claimed to continue to act as the government of Sierra Leone. Barclays Bank was then notified by the alleged new controllers of Sierratel that the old board of the company had been dissolved and that, with immediate effect, the previous signatories were suspended. Following the notification, Barclays Bank refused to meet payments. Sierratel applied to the court for a declaration of right, contending that the previous mandate remained valid and that the authority of the signatories had not been validly revoked.

The court applied the criteria set in the case *Republic of Somalia v Woodhouse Drake & Carey (Suisse) SA*.[74] It concluded that the military junta was not the constitutional government of the State and had no control over more than two-thirds of the country. Additionally, the government of the United Kingdom had consistently censured the

[74] *Woodhouse*, op. cit.

military coup and continued to deal with the Kabbah government; finally, the coup had been condemned by the United Nations Security Council, the Commonwealth, the Organization of African Unity and the European Community.

The *British Arab Commercial Bank plc v National Transitional Council of the State of Libya* case[75], a decision rendered by the Queen's Bench Division in 2011, provides another illustration of disputed transition of government. It addressed the status of the National Transitional Council of the State of Libya (NTC) and the prerogative of its representatives to control funds held by the Libyan embassy in the United Kingdom.

The Libyan embassy had funds in the British Arab Commercial Bank. A significant portion of those funds was intended to finance student grants for Libyan students in the United Kingdom.

In 2011, after the adoption by the United Nations Security Council of economic sanctions against Libya, the United Kingdom's relation with the Gaddafi government deteriorated and, in July, the NTC was recognized as the sole government of Libya. Subsequently, diplomats from the previous regime were asked to leave the country and new representatives were indicated by the NTC[76].

Following these events, the British Arab Commercial Bank received a series of contradicting instructions regarding the management of the student grant funds. The Bank was instructed by both contending sides, diplomats of the Gaddafi government and the Libyan Foreign Bank, its major shareholder, to prevent further withdrawals from the accounts. Despite these orders the Libyan embassy requested the payment of certain student grants[77].

The Bank started proceedings before the Queen's Bench Division asking for a declaratory judgment as to who could operate the mandate over the funds. The Court decided that the accounts belonged to the Libyan embassy and, as the NTC diplomats where the only accredited representatives of Libya in the UK, the funds owned by the Libyan government were under their control[78].

The Japanese report also discussed a case adjudicated by the Japanese Supreme Court in 2007 (*Kokaryo* case). In 1952, a dormitory in Kyoto (named "Kokaryo") was purchased by the Republic of China, to be used by Chinese students.

Some residents, as an act of political support of the government of the People's Republic of China, refused to observe residential regulations. The consulate of the Republic of China, unable to have the students comply with the regulations or to leave, brought a claim to the Kyoto District Court in 1967.[79] Meanwhile, in 1972, with the suit still

[79] ANDO, Nisuke. Khoka-Ryo Case and International Law: A Critique of the Japanese Supreme Court Decision. *Japanese Yearbook of International Law*, vol.53, 2010, pp.1-18.

pending, Japan recognized the Government of the People's Republic of China as "the only legal Government of China".

Two legal issues relating to the shift in the recognition of the Chinese government were brought before the lower courts (i.e., the Kyoto District Court and the High Court of Osaka): (1) whether or not the Republic of China (Taiwan) had lost all *locus standi* before Japanese courts and (2) whether or not the ownership of *Kokaryo* had been transferred to the People's Republic of China.[80]

The lower courts recognized the *locus standi* of the Republic of China (Taiwan) and rejected the transfer of *Kokaryo*'s ownership to the People's Republic of China. The decision, however, was reversed by the Japanese Supreme Court. The relevant parts of the decision, quoted in the Japanese report, are the following:

> [T]he party to be identified as the plaintiff in this case is the State of China whose name was the "Republic of China" at the time of the filing of this lawsuit, but then changed to the "People's Republic of China" on 29 September 1972, when this case was first pending before the first instance court. […]
>
> Nevertheless, on the premise that the party identified as the plaintiff was the party existing as a de facto State with control over Taiwan, the court of the first instance carried out the proceedings and gave judgment […].
>
> Accordingly, the Court cannot but conclude that on and after 29 September 1972, while this case was first pending before the first instance court, the court proceedings were carried out without delegation of powers necessary to perform procedural acts on behalf of the person identified as the plaintiff, i.e., the State of China, and therefore the original judgment shall inevitably be quashed without passing judgment on the parties' arguments […].[81]

Therefore, the Japanese Supreme Court considered that the Republic of China (Taiwan) had lost the right to represent China in Japan, left the issue of ownership open and sent the case back to the court of first instance (Kyoto District Court). The case is still pending at the present time.[82]

In regards to U.S. law, the recognition of a regime as the government of a State can lead to that government being able to: (a) maintain a suit before a U.S. court, (b) claim sovereign immunity if sued in U.S. court, (c) access property of the State, such as bank accounts, within the jurisdiction of the U.S., and (d) have its lawful acts recognized by the U.S.[83]

[81] Judicial Decisions in Japan. *Japanese Yearbook of International Law*, vol. 51, pp.512-569,2008. Judgment, Supreme Court, 27 March 2007 p. 512. Quoted in HAMAMOTO, Japanese Report.

[82] It is further explained in the Japanese Report that the "2007 Judgment of the Supreme Court has been severely criticized by a number of Japanese international lawyers. Nisuke Ando argues that the Kokaryo case, being a civil one, has nothing to do with the right to represent the State of China and that the 1972 Joint Communiqué (...) does not prevent Japan from allowing its nationals to engage in various transactions of private character with the people of Taiwan or with the government of the Republic of China." In HAMAMOTO, Japanese Report.

[83] BORGEN, MCGUINNESS and ROTH, U.S. Report., referring to discussions in MURPHY, Sean. *Principles of International Law*. 2nd ed., West Academic Publishing, 2012, p. 41; BEDERMAN, David. *International Law Frameworks*. Foundation Press, 2001, p.56-57); *Oppenheim's*, op. cit., p.158-160, § 47 and accompanying notes concerning U.S. practice; see, also, *Restatement (Third)* § 205 concerning the effects of non-recognition.

In *Banco Nacional de Cuba v. Sabbatino*, the U.S. Supreme Court stated that foreign States are allowed to access U.S. courts based on the principle of comity.[84] It also decided that the U.S. courts may accept suits brought by governments with which the U.S. does not maintain diplomatic relations, such as the Castro regime in Cuba. [85] It is further explained that

> This followed earlier jurisprudence that suits by corporations owned or controlled by unrecognized regimes may be permitted. In cases where the Executive has explicitly stated that a particular government is barred from accessing U.S. courts, courts will defer to that decision. In cases where the Executive is silent, a U.S. court may then determine whether to treat an entity as the government of a state.[86]

While U.S. courts have not held recognition of a government by the Executive to be a necessary condition for sovereign immunity,[87] they have held it to be a sufficient basis for immunity.[88] Moreover, where the Executive has recognized a competitor government or has made a definitive determination that a *de facto* government is not to be recognized, the courts would be unlikely to confer sovereign immunity on the *de facto* government and its agencies.[89]

A U.S. federal court surveyed practice across jurisdictions in the United States and discerned at least four "divergent approaches" to issues related to unrecognized entities, which may include issues of aspirant States or governments:

1. Unrecognized entities are denied comity and therefore denied access to courts and to property held in the U.S;
2. Unrecognized entities are generally accorded *de facto* juridical personality for the purpose of engaging in commercial transactions, conveying private rights and giving effect to judicial and ministerial acts within the recognized entities' territory;

---

[84] The U.S. Supreme Court wrote: "Under principles of comity governing this country's relations with other nations, sovereign states and allowed to sue in the courts of the United States, …This Court has called 'comity' in the legal sense 'neither a matter of absolute obligation, on the one hand, nor of mere courtesy and good will, upon the other.'" UNITED STATES OF AMERICA. Supreme Court. *Banco Nacional de Cuba v. Sabbatino*, 1964 ("*Sabbatino*"). In: United States Reports vol. 376 , 1964, p.408-409; Supreme Court Reporter, vol. 84, p.930. Quoted in BORGEN, MCGUINNESS and ROTH, U.S. Report.

[87] BORGEN, MCGUINNESS and ROTH, U.S. Report., citing to UNITED STATES OF AMERICA. Court of Appeals of New York. *Wulfsohn v. Russian Socialist Federated Soviet Republic*, 1923. In: New York Reports, vol. 234, p. 372; North Eastern Reporter, vol. 138, p. 24.

[88] BORGEN, MCGUINNESS and ROTH, U.S. Report., citing to UNITED STATES OF AMERICA. Supreme Court. *National City Bank of New York v. Republic of China*, 1955. In: United States Reports vol. 348, p. 358 (continuing U.S. recognition of the Taiwan-based government compelled immunity, since "[t]he status of the Republic of China in our courts is a matter for determination by the Executive and is outside the competence of the Court").

[89] BORGEN, MCGUINNESS and ROTH, U.S. Report., citing to Note, HINES, Julius H. Why do Unrecognized Governments Enjoy Sovereign Immunity--A Reassessment of the Wulfsohn Case. *Virginia Journal of International Law*, vol. 31, issue 4, pp. 717-760, 1991, p.759 (1991).

3. Courts defer to the Executive policy and statements when determining the scope of sovereign immunity of unrecognized entities;
4. In the absence of an Executive policy or Statement, courts permit jurisdiction over unrecognized entities if such jurisdiction does not violate public policy or the interests of justice.[90]

In addition, courts in the United States have given effect to acts "dealing solely with private, local and domestic matters," within the territory of the entity, as opposed to "with respect to matters extending beyond the borders [...]"[91]

There is a difference between an entity being regarded as simply "unrecognized" and a situation in which there is a U.S. policy of non-recognition. The key factual distinction between the two is whether the Executive has stated an affirmative policy of non-recognition, or has remained silent; in the latter case, the courts may treat the entity as simply unrecognized.

IV. The Vienna Convention on Diplomatic Relations and Recognition of Governments

Despite the relevance of the issue, little has been written on the potential link between diplomatic relations and recognition of governments. When addressing the matter in 1924, Scipione asserted that the admission of a right of diplomatic representation culminated in the admission of the legal existence of the government.[92] Hans Blix, in a later work (1970), affirmed that there had been no examples of the establishment of diplomatic relations without recognition:

> A government can recognize another State or government without establishing diplomatic relations with it. If official contacts will be numerous, voluminous or important, it may, however, prove practical or even indispensable to establish a channel for official contacts by

See also *Restatement (Third)* § 205, Reporter's Note 3.

[92] "Nous savons que, sauf engagements particuliers, un État n'a le devoir ni de reconnaître, ni de ne pas reconnaître un gouvernement de fait; mais ce qui est bien démontré par ces anciens débats et ce qui reste toujours incontestable est qu'admettre un droit de représentation diplomatique, c'est admettre aussi 1'existence légale du gouvernement dont on accepte officiellement les envoyés». In: SCIPIONE, Gemma. Les gouvernements de fait. 1924, p.372 (Collected Courses of the Hague Academy of International Law, vol. 004).

> means of diplomatic missions. The practice of States evidences no cases, on the other hand, in which such diplomatic relations have been established without recognition. Such relations are universally comprehended as implying recognition.[93]

In the same line of thought, Warbrick argued that "the opening of diplomatic relations is one of the few objective acts from which recognition may be implied".[94]

When asked about obligations which may flow from the acceptance of credentials under Vienna Convention on Diplomatic Relations, most reports made reference to the terms of convention itself, such as the diplomatic privileges and immunities. Others, which dealt specifically with the possible relation between diplomatic relations and recognition had distinct responses and also addressed recognition of States.

The Australian[95] and the Palestinian[96] reports stated that acceptance of credentials under the Convention necessarily meant that the sending State had been recognized by their respective States (i.e., Australia and Palestine). On the other hand, the Slovenian report pointed out that Slovenia had accepted the credentials of the Ambassador of Palestine, although it had not yet recognized it at the time.

As for the United Kingdom, as mentioned in one of the British reports, "the existence of diplomatic relations does not necessarily constitute dealings on a 'normal Government to Government basis', as diplomatic relations are said to be maintained with States rather than Governments." The Taiwanese report cautioned it was unclear whether acceptance of credentials led to "legal obligations in addition to those in the said Convention."[97]

Closing Observations

The practice of the States studied in this report reveals that formal recognition of governments seems to no longer be a widespread international practice. Accordingly, when faced with two or more competing regimes claiming to be the government, States frequently offer political support to one of them by treating it as the legitimate representative of the local people or the rightful authority. The word "government" is deliberately not used in order to avoid any contraction in the position of not recognizing governments.

The criteria to determine which competing claim shall prevail vary in the State practice. Most reports indicated that a decision choosing a regime to be supported is taken on a

See, also, Rosenne: "(…) acceptance by the competent authorities of a State of the accreditation of an individual such as an ambassador, means recognition of the accrediting authority" ROSENNE, Shabtai. *The perplexities of modern international law*: general course on public international law. 2001, p. 269 (Collected Courses of the Hague Academy of International Law, vol 291).

[95] "In the case of Australia, yes, but only because acceptance of credentials under the Convention necessarily means that the sending state has been recognised by Australia. The consequences are that the Convention's provisions on diplomatic privileges and immunities will apply." PERT and TULLY, Australian Report.

[96] "If Palestine as receiving state accepts the credentials of a diplomat from a sending state, the acceptance implies that Palestine recognizes the sending state as a state and the government of the sending state as the government of the sending state." AZAROVA, Palestinian Report.

[97] HSIEH and CHEN, Taiwanese Report.

case-by-case basis, considering, *inter alia*, effectiveness, national interest, the position adopted by regional and international organizations and respect for democratic and constitutional procedures.

Moreover, recognition of a regime may have legal and political implications in the domestic sphere of the recognizing State. For instance, recognition can affect the control of State property as well as privileges and immunities and the *locus standi in judicio in the courts of the* recognizing country.

A very uncertain aspect relating to the formal recognition of governments is its impacts on the diplomatic relations. The reports submitted by the members of the Committee indicates that the State practice is far from uniform on this issue. Thus, the maintenance (or severance) of diplomatic relations and the acceptance (or rejection) of credentials under the Vienna Convention on Diplomatic Relations do not necessarily mean that a new regime in the sending State had been or had not been recognized by the receiving States.

SUSTAINABLE DEVELOPMENT AND THE GREEN ECONOMY IN INTERNATIONAL TRADE LAW

WORKING SESSION

Tuesday, 9 August 2016, 2.00pm

Chair: Professor Toshiyuki Kono (Japan)

The Chair welcomed attendees and provided them with the minutes of the inaugural meeting of the Committee that was held in Geneva in June 2015. He then introduced Professor Mary Footer (UK), chair of the Committee, who went on to explain the history and development of the Committee, referring to its mandate of November 2014. The International Trade Law Committee, of which the Chair had been a member, was wound up at the 2014 Washington Conference, and it had been decided to build on some of the work of that Committee under the present Committee.

The Committee was interested in two specific areas of international law, namely climate change and sustainable development. This decision had been motivated by two events in, namely the adoption of the Paris Agreement on climate change in December, 2015 and the launch of the Sustainable Development Goals (SDGs) in September, 20165. The aim of the Committee was to analyse and study how far the rulesbased international trading system supported open, fair and developmentfriendly trade, which was both socially inclusive and environmentally sustainable as an enabling environment for sustainable development and a green economy.

There had not been any further developments in the WTO Doha Round. There had, however, been some developments in regional trade agreements, such as the Trans-Pacific Partnership Agreement and the EUCanada Free Trade Agreement.

At its inaugural meeting in June, 2015, the Committee had selected and allocated specific topics in the following areas of its mandate: trade and environment; climate and energy; trade and agriculture; and trade and development. The importance of transparency in international trade agreements had also been emphasised.

The Chair further questioned what needed be done, if anything, to ensure that everyone in the world received basic nutritional food or access to food as stated in the Sustainable Development Goals, specifically in developing countries.

Professor PeterTobias Stoll (Germany) queried what the possible the impact might be of the Sustainable Development Goals and the Paris Climate Agreement.

Professor Footer responded that the Cambridge meeting, scheduled for November 2016, would expand more on this issue. Professor Kati Kulovesi, a new member of the committee from Finland, would develop this issue in the context of the forthcoming UNFCCC (COP 22) meeting in Marrakech in November, 2016, which she would be attending.

Dr Markus Gehring (Germany), who had been in the ILA Committee meeting on the Role of International Law in Natural Resource Management for Development, observed that the latter Committee's work could complement the work of this Committee. He asked whether the Committee would also analyse how international trade law stands in the way of the transition to a greener economy.

Professor Footer responded that members of the Committee were practitioners with experience advising clients in various fields whilst having extensive experience in the fields of international trade law and the environment. The Committee could investigate these obstacles. She had suggested during the Geneva meeting that the Committee map out a clear route for identifying what these obstacles were.

As for advice to developing countries, she noted that there was developing country fatigue, in a sense that there was an inconclusive round of trade negotiations, the Doha Development Round having been put on ice. This took the pressure off the international trade community to think about the developing country context, which was very unfortunate. Many multinationals had access to information compared to governments in underdeveloped countries.

Dr Gehring made reference to carbon leakage and border adjustments. He also noted that carbon pricing after the Paris Agreement would be inevitable.

Professor Footer referred to the second area of the mandate, which addresses carbon pricing and carbon emissions trading.

Ms Luz Helena Hanauer asked whether the Committee was going to address the obligations of States in relation to environmental agreements outside the traditional trade system. She also queried whether the Paris goals were binding on States.

Professor Footer referred to the mandate of the Committee, which it had interpreted as having an emphasis on issues relating to the 'international trading system', which included regional trade agreements. She noted that disputes could not be avoided and that all WTO Members had the right to bring a complaint regarding any of the 'covered' multilateral agreements at the WTO. As for the Paris Agreement, it was not necessarily binding on all States, only those that had become parties to it.

Professor KilWon Lee (Korea) queried whether the Committee had been in talks with international organisations such as the WTO, UN and WIPO. He noted that the topics covered by the mandate seemed broad, and asked how the Committee proposed to manage and control these issues. Finally, he asked what the goal for the Committee was in the coming two to four years.

Professor Footer responded that the Committee was keen to take the discussion beyond the confines of international trade law. At its very first meeting in Geneva in 2015 the Committee had invited representatives from a number of institutions to address the Committee members.

The Committee intended examining what was being done in the UN system, where there was a "task team" looking at the post2015 Development Agenda. The UN system linked up all agencies and programmes, which is something that can never been done in the WTO.

The Committee could make recommendations to those working in the UN system on both the development system and development agenda. The Committee had sought to narrow down the topics within is mandate according to the degree of importance, with a view to encouraging a proactive approach in dealing with the issues, which fluctuated in

accordance with the sustainable development goals. All members of the Committee were willing to work on these issues one topic at a time.

As the breadth of the Committee's mandate, Professor Footer explained that, following discussion on the matter, it had been kept deliberately broad. Climate change and sustainable development discussions were not occurring mainly at the WTO so to limit discussions to those at the WTO would be an "own goal" by the Committee. Similarly, the Committee would not achieve its aims if it were to limit its work only to regional trade agreements. At this point nothing was ruled out but if some issues emerge as more pressing areas of work, then work of other aspects could be reduced accordingly.

Professor Junji Nakagawa (Japan) made reference to the detailed documentation tabled by the Professor Footer, which gave an indication of what would be discussed in the Committee.

Dr Gehring queried whether there were ways in which individuals could engage with the Committee without being ILA members and, if so, how they could get involved.

Professor Footer responded that non-members could indeed get involved through open sessions such as the present session during the biennial conferences. She voiced her support for greater cooperation and collaboration. It was important to reach out to other members. There was a need for greater transparency and improved communications amongst ILA members.

The Chair thanked attendees for their participation.

INTERIM REPORT

1. Introduction: Background, Mandate of the Committee and Methodology of Work[1]

During the fall of 2014, the Chair, the co-Chair, the Rapporteurs and some Committee members prepared a work-plan to serve as a basis for the first formal meeting of the Committee (after a small informal meeting during the combined ILA and American Society of International Law Meeting at the beginning of April 2014). The first formal meeting took place in The Hague, at the Institute for Global Justice, from 20 to 21 February 2015. The meeting attracted a good number of members and future members, some of whom took part via the Skype connection, while it was also attended by a number

[1] This Section is based on the Committee's "Report of the Meeting held in The Hague on 20-21 February 2015", circulated among Committee members in September 2015.

of observers. The initial work plan was intensely discussed during the meeting, since it would provide the direction for the work of the Committee.

The mandate of the Committee is to provide an in-depth study on the level of implementation of existing norms of international law – be it customary international law, treaty law or *soft law* – as ascertained and interpreted by the ILA Committee on the Rights of Indigenous Peoples, which completed its work at the ILA Biennial Conference held in Sofia in August 2012.[2] In particular, the present Committee aims at carefully looking at what legal, quasi-legal and practical barriers potentially block the road for existing international legal standards to translate into actual protection of indigenous peoples in a number of countries throughout the world. While the former Committee ascertained that in many countries significant practice and *opinio juris* have developed which are consistent with the provisions of the 2007 *United Nations Declaration on the Rights of Indigenous Peoples* (UNDRIP),[3] and, with respect to some rights, have risen to the level of customary international law, a range of problems remain which often hinder the full realization of the UNDRIP provisions and pertinent customary international law. Such problems need to be addressed taking as guidance *ILA Resolution No. 5/2012*,[4] which endorsed with a virtually unanimous vote and without any objections the findings and conclusions arising from the work of the former Committee. As to actual practical problems, one can refer to the fact that indigenous peoples are often confronted with discrimination and social, economic, and political marginalization. Other major violations of their rights relate to denial of justice, such as arbitrary arrests, unjust imprisonment and related inhumane treatment, denial of liberty of association, and collective punishment. In some cases, such violations arise solely as a result of their efforts to promote or safeguard their human rights. Other violations relate to reluctance shown by governments to recognize and implement in practice indigenous peoples' rights to lands and resources or cultural rights, as well as to lack of access to schools and health facilities, political recognition, representation, and participation. Often, the rights of indigenous peoples to their lands, territories, and resources have not been secured, leaving them with little or no access to natural resources on their territories and to their traditional economies. In some cases, they are forcibly removed from their lands in order for others, including foreign investors and multinational companies, to exploit their resources. Given the inter-related, interconnected, indivisible and inter-dependent nature of indigenous peoples' human rights, each violation of the latter reverberates on the whole social and cultural structure of the communities concerned. Denial of land rights, in particular, translates into the impossibility for indigenous peoples to enjoy their internationally recognized cultural and other rights, to maintain a livelihood of their own choice, to determine their own priorities for development, or, even more important, to foster and transmit their cultural identity to future generations. A key issue − in many ways: *the* issue − therefore relates to land rights, which are the focus of the mandate of the Committee, embedded in the notion that all indigenous peoples' human rights have a strong cultural dimension, the recognition of which is at the foundation of their very existence. At the same time,

[2] The documents produced by the ILA Committee on the Rights of Indigenous Peoples are available at <http://www.ila-hq.org/en/committees/index.cfm/cid/1024> (accessed 11 June 2016).

however, the approach of the Committee is based on the assumption that all the different human rights recognized by international law in favour of indigenous peoples are strictly interrelated and inseparable from each other. This relates, *inter alia*, to the interplay between economic and cultural rights.

In terms of legal standards used by the Committee to ascertain the level of effective implementation of the rights of indigenous peoples in the real world, priority is given to the standards established by the UNDRIP. However, attention is also devoted to other pertinent international legal standards, particularly pertinent rules of customary international law (which reflect some of the standards provided for by the UNDRIP), ILO *Convention No. 169 concerning Indigenous and Tribal Peoples in Independent Countries* of 1989 (ILO Convention 169),[5] as well as other international instruments and/or rules which are directly or indirectly relevant to indigenous peoples, including (but not limited to) the *International Covenant on Civil and Political Rights* (ICCPR)[6] and the *International Covenant on Economic, Social and Cultural Rights* (ICESCR),[7] the 1965 *Convention on the Elimination of All Forms of Racial Discrimination*,[8] the 1989 *Convention on the Rights of the Child*,[9] the 1992 *Convention on Biological Diversity*[10] and its *Nagoya Protocol*,[11] as well as bilateral treaties between the states and indigenous peoples. Furthermore, the case-law of the Inter-American Court of Human Rights (IACtHR) is devoted special attention, together with the practice of other human rights monitoring bodies, including the African Commission on Human and Peoples' Rights, the Human Rights Committee, the Committee on Economic, Social and Cultural Rights, the Committee on the Elimination of Racial Discrimination and the Committee of the Rights of the Child. Last but not least, the interplay between the domestic, national, regional and international level is also considered. More in general, the Committee's approach consists in considering any type of norms which are relevant to its study, irrespective of whether these are strictly legally binding or not.

As for the methodology used by the Committee, a range of cases have been studied, in order to collect empirical material for providing a response to the question concerning the way and the extent to which international legal obligations on the rights of indigenous peoples are actually implemented at the domestic level. The Committee has selected a number of key case studies from all regions of the world, so as to ensure that the study provides global coverage of the status of indigenous peoples on the planet. The study of the said cases has been carried out through applying an interdisciplinary analysis of them, taking into account relevant social, cultural and – in particular – legal factors, ranging from indigenous customs, practices, land tenure systems and law, as well as

national, regional, and international law with a view to identifying an effective resolution of the existing conflicts hindering the effective realization of indigenous peoples' rights. In the context of this work, particular attention is devoted to cultural factors as well as to the cultural implications arising from violations of indigenous peoples' rights, culture being the cornerstone of the very existence of those peoples. Consideration is also paid to economic factors and actors, with a focus on States and third parties, including multinational companies, and the role they are playing, positively and negatively, in the lives of indigenous communities. The examination of the selected case studies is also aimed at identifying and selecting "best practices" relating to countries that have implemented or are attempting to implement the UNDRIP standards and provisions and imagining how such practices could be applied to other areas, taking into account existing cultural and social differences. Furthermore, through comparing the different case studies, the Committee aims at drawing general conclusions concerning whether and to which extent the recent evolution of international law in the field of indigenous peoples' rights has led to further concrete outcomes translating into positive impacts on the lives of indigenous peoples and communities. Last but not least, the Committee also pursues the objective of defining strategies which might be easily applied worldwide by a variety of legal researchers and activists, as well as to contribute to the prevention of future violations of indigenous peoples' rights.

2. The Current Status of International Law on the Rights of Indigenous Peoples[12]

An inclusive summary of the current status and rights of indigenous peoples under international law is provided by ILA Resolution No. 5/2012,[13] which, as noted in the previous section, is used as guidance for the work of the Committee. Resolutions of the International Law Association have been recognized as evidence of international law under Article 38(1)(d) of the International Court of Justice (ICJ) Statute. The *Third Restatement of Foreign Relations Law of the United States* affirms this characterization.[14] As stated by Graf Vitzthum, global resolutions of a body as qualified and diverse as the International Law Association are stating a rare consensus amongst, at times, radically different cultures and value traditions, and thus should be especially appreciated,[15] transcending the relevance of the writings of individual scholars. This is particularly true when, as in this case, a resolution passes not only uncontested, but with emphatic support.[16]

According to Conclusion no. 1 of the Resolution, indigenous peoples "are holders of collective human rights aimed at ensuring the preservation and transmission to future generations of their cultural identity and distinctiveness. Members of indigenous peoples are entitled to the enjoyment of all internationally recognised human rights – including

[16] S. Wiessner, "The State and Indigenous Peoples: The Historic Significance of ILA Resolution No. 5/2012," in M. Breuer et al. (eds.), *Der Staat im Recht* Berlin, 2013, p. 1368.

those specific to their indigenous identity – in a condition of full equality with all other human beings". The legal standards defining the nature and content of such rights are enshrined in the UNDRIP, which – as is well known – is in principle a declaration of non-binding character. However, although as a whole the UNDRIP "cannot yet be considered as a statement of existing customary international law […] it includes several key provisions which correspond to existing State obligations under customary international law".[17] These obligations concern the areas of self-determination, autonomy or self-government, cultural rights and identity, land rights as well as reparation, redress and remedies.[18] In particular, Conclusion No. 7 of ILA Resolution No. 5/2012 affirms that "States must comply – pursuant to customary and applicable conventional international law – with the obligation to recognise, respect, safeguard, promote and fulfil the rights of indigenous peoples to their traditional lands, territories and resources".

As for the provisions included in the UNDRIP which do not yet correspond to customary international law, they

> "nevertheless express the aspirations of the world's indigenous peoples, as well as of States, in their move to improve existing standards for the safeguarding of indigenous peoples' human rights. States recognised them in a 'declaration' subsumed 'within the framework of the obligations established by the Charter of the United Nations to promote and protect human rights on a non-discriminatory basis' and passed with overwhelming support by the United Nations General Assembly. This genesis leads to an expectation of maximum compliance by States and the other relevant actors. The provisions included in UNDRIP represent the parameters of reference for States to define the scope and content of their existing obligations – pursuant to customary and conventional international law – towards indigenous peoples".[19]

The fact that the UNDRIP represents more than a mere *soft-law* instrument of hortatory character is corroborated not only by the Preamble to the UNDRIP itself – stating that, in adopting the UNDRIP, the U.N. General Assembly was guided "by the purposes and principles of the Charter of the United Nations, and good faith in the fulfilment of the obligations assumed by States in accordance with the Charter"[20] – but also by the practice of international human rights monitoring bodies. For instance, the Committee on Economic, Social and Cultural Rights has affirmed that proper realization of the right to take part in cultural life established by Article 15.1(a) ICESCR presupposes that "all indigenous peoples […] have the right to the full enjoyment, as a collective or as individuals, of all human rights and fundamental freedoms as recognized in the Charter of the United Nations, the Universal Declaration of Human Rights and international human rights law, *as well as the United Nations Declaration on the Rights of Indigenous Peoples*".[21] In a similar vein, the African Commission on Human and Peoples' Rights has used the UNDRIP as parameter of reference for defining the nature and scope of

[20] See first recital of the UNDRIP Preamble.

[21] See General Comment No. 21, "Right of everyone to take part in cultural life (art. 15, para. 1 (a), of the International Covenant on Economic, Social and Cultural Rights)", U.N. Doc. E/C.12/GC/21 of 21 December 2009, para. 7 (emphasis added).

indigenous peoples' rights,[22] while the Committee on the Rights of the Child has affirmed the Declaration as international standard on the basis of which States should "adopt a rights-based approach to indigenous children".[23]

In addition to customary international law and the UNDRIP, indigenous peoples' rights are affirmed and protected by ILO Convention 169, which provides in particular for a wide measure of cultural rights, land rights and labour rights for indigenous communities and their members. The problem with ILO Convention 169 is that, at the moment of this writing, it has been ratified by 22 States only, fifteen of which are Latin American countries.[24] Outside such a geographical context, therefore, the impact played by the Convention, so far, has been virtually imperceptible. However, for the purposes of the work of the present Committee, ILO Convention 169 is to be recognized of significant weight especially with regard to the Latin American geographical context, where it has a notable impact.

Other human rights treaty provisions contribute to reinforcing international standards on indigenous peoples' human rights especially thanks to their evolutionary interpretation as provided by competent monitoring bodies. It is the case, for example, of Article 27 ICCPR[25] – interpreted by the Human Rights Committee as implying the existence of an obligation "to protect the identity of a minority and the rights of its members to enjoy and develop their culture and language and to practice their religion",[26] as well as to safeguard all different forms in which culture manifests, "including a particular way of life associated with the use of land resources, especially in the case of indigenous peoples. That right may include such traditional activities as fishing or hunting and the right to live in reserves protected by law".[27] To a similar extent, the Committee on Economic, Social and Cultural Rights has interpreted Article 15 ICESCR as presupposing a State obligation to

> take measures to guarantee that the exercise of the right to take part in cultural life takes due account of the values of cultural life, which may be strongly communal or which can only be expressed and enjoyed as a community by indigenous peoples. The strong communal dimension of indigenous peoples' cultural life is indispensable to their existence, well-being and full development, and includes the right to the lands, territories and resources which they have traditionally owned, occupied or otherwise used or acquired […] States […] must therefore take measures to recognize and protect the rights of indigenous peoples to own, develop, control and use their communal lands, territories and resources, and, where they

> have been otherwise inhabited or used without their free and informed consent, take steps to return these lands and territories […] [States should also] respect the principle of free, prior and informed consent of indigenous peoples in all matters covered by [indigenous peoples'] specific rights.[28]

Another relevant example is provided by the practice of the Committee on the Elimination of Racial Discrimination (CERD Committee), which has held that, in order to prevent discrimination against indigenous peoples, States have an obligation to take a number of measures, aimed in particular at

> (a) Recogniz[ing] and respect[ing] indigenous distinct culture, history, language and way of life as an enrichment of the State's cultural identity and to promote its preservation; (b) Ensur[ing] that members of indigenous peoples are free and equal in dignity and rights and free from any discrimination, in particular that based on indigenous origin or identity; (c) Provid[ing] indigenous peoples with conditions allowing for a sustainable economic and social development compatible with their cultural characteristics; (d) Ensur[ing] that members of indigenous peoples have equal rights in respect of effective participation in public life and that no decisions directly relating to their rights and interests are taken without their informed consent; (e) Ensur[ing] that indigenous communities can exercise their rights to practise and revitalize their cultural traditions and customs and to preserve and to practise their languages.[29]

Last but not least, the practice of the IACtHR is worth emphasizing, especially as regards the interpretation provided by the Court to Article 21 of the 1969 *American Convention on Human Rights*,[30] considered as covering protection of land rights of indigenous peoples over their ancestral territories.[31][32]

Outside the context of human rights law *stricto sensu*, Article 8(j) of the Convention on Biological Diversity[33] is worth mentioning. According to this provision, in the context of *in-situ* conservation of biological diversity, "[s]ubject to its national legislation, [each State party shall, as far as possible and as appropriate,] respect, preserve and maintain

[32] For a more comprehensive assessment of the relevant practice, see ILA Committee on the Rights of Indigenous Peoples, "The Hague Conference (2010) Interim Report", n. 1 above, *passim*.

[33] See n. 9 above.

knowledge, innovations and practices of indigenous and local communities embodying traditional lifestyles relevant for the conservation and sustainable use of biological diversity and promote their wider application with the approval and involvement of the holders of such knowledge, innovations and practices and encourage the equitable sharing of the benefits arising from the utilization of such knowledge, innovations and practices". This provision has been implemented in 2010 through the adoption of the Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from Their Utilization to the Convention on Biological Diversity.[34]

As regards the specific human rights standards concerning indigenous peoples – which are to be mainly conceived as *collective* rights – the most important ones, as detailed by ILA Resolution No. 5/2012, are the following:

(a) *right to self-determination*, "conceived as the right [of indigenous peoples] to decide their political status and to determine what their future will be, in compliance with relevant rules of international law and the principles of equality and non-discrimination";[35]
(b) *right to autonomy or self-government*, "which translates into a number of prerogatives necessary in order to secure the preservation and transmission to future generations of their cultural identity and distinctiveness. These prerogatives include, *inter alia*, the right to participate in national decision-making with respect to decisions that may affect them, the right to be consulted with respect to any project that may affect them and the related right that projects significantly impacting their rights and ways of life are not carried out without their prior, free and informed consent, as well as the right to regulate autonomously their internal affairs according to their own customary laws and to establish, maintain and develop their own legal and political institutions";[36]
(c) *right to cultural identity* (in all its elements, including cultural heritage), which must be "safeguarded in a way that is consistent with the perspectives, needs and expectations of the specific indigenous peoples [concerned]",[37] so as to allow them to keep such identity genuine and transmit it to future generations without external interferences;
(d) *right to traditional lands, territories and resources (land rights)*, "which include the right to restitution of the ancestral lands, territories and resources of which they have been deprived in the past. Indigenous peoples' land rights must be secured in order to preserve the spiritual relationship of the community concerned with its ancestral lands, which is an essential prerequisite to allow such a community to retain its cultural identity, practices, customs and institutions";[38]
(e) *right to establish their own educational institutions and media, as well as to provide education to indigenous children in their traditional languages and according to their own traditions*;[39]

---

[34] See n. 10 above.
[35] See ILA Resolution No. 5/2012, n. 3 above, Conclusion No. 4.
[36] Ibid., Conclusion No. 5.
[37] Ibid., Conclusion No. 6.
[38] Ibid., Conclusion No. 7.
[39] Ibid., Conclusion No. 8.

(f) *right to reparation and redress* "for wrongs they have suffered, including rights relating to lands taken or damaged without their free, prior and informed consent. Effective mechanisms for redress – established in conjunction with the peoples concerned – must be available and accessible in favour of indigenous peoples. Reparation must be adequate and effective, and, according to the perspective of the indigenous communities concerned, actually capable of repairing the wrongs they have suffered".[40]

Hence, the rights just listed represent the main standards that States have to comply with *vis-à-vis* indigenous peoples. However, they do not exhaust the list of State obligations existing in the field of indigenous peoples' rights, as others ensue directly or indirectly from existing pertinent instruments and rules, including instruments which may be considered *sui generis*, i.e. "treaties, agreements and other constructive arrangements concluded with States or their successors".[41] With respect to the latter, ILA Resolution No. 5/2012 affirms that "States must cooperate in good faith with indigenous peoples in order to give full recognition and execution to treaties and agreements concluded with indigenous peoples in a manner respecting the spirit and intent of the understanding of the indigenous negotiators as well as the living nature of the solemn undertakings made by all parties".[42] It is important to note that, according to the preferred interpretation, the treaties and agreements in point "retain their original character as international legal agreements, with the attendant consequences of customary international law governing their validity, interpretation and termination".[43]

As final remark, it is worth reiterating that, generally speaking, the rights of indigenous peoples cannot be considered in isolation from each other, "for the reason that – in light of the holistic vision of life of indigenous peoples – [such rights] are all strictly inter-related with each other as building blocks of the unique Circle of Life representing the heart of indigenous peoples' identity, to the extent that 'the change of one of its elements affects the whole'".[44]

3. Analysis of Case Studies[45]

LATIN-AMERICA

The Indigenous Territory and Natural Park TIPNIS, Bolivia

(by *Alexandra Tomaselli* and *Rainer Hofmann*, with the contribution of *Ebun Abolarin*)

Bolivia has incorporated UNDRIP into its domestic legislation, with Law No. 3760 of 2007. The Territorio Indígena y Parque Nacional Isiboro-Secure (TIPNIS) is a recognized National Park, a demarcated Indigenous Communitarian Native Land, and home to approximately 60-70 indigenous communities. The construction of a highway that crosses TIPNIS in the middle began in June 2011. The project was approved without any prior consultation, and after two indigenous marches, a contested process of consultation was organized in late 2012. However, although the construction of the highway appeared to be blocked subsequently, the works in the first stretch continued. No compensation or redress mechanism for the affected indigenous communities is currently foreseen. Indigenous lawsuits in domestic courts so far have been declared inadmissible. Therefore, the TIPNIS case appears to be one of the clearest instances of misapplication of the right to consultation and to land of indigenous peoples in one country that apparently would have the best legal framework protecting these specific and all other indigenous peoples' rights. In other words, this is a case in which all the legal guarantees were in place, but they were neither implemented nor respected, translating into a violation of a number of internationally recognized rules protecting the rights of indigenous peoples, including the rights to self-determination, autonomy or self-government, land rights, as well as the specific right according to which projects significantly impacting indigenous peoples' rights and ways of life must not be carried out without their prior, free and informed consent. This is a flagrant violation not only of international law, but also of Bolivian domestic law, by virtue of the fact that – as previously mentioned – the adoption of Law No. 3760 of 2007 has attributed binding force to the whole UNDRIP as law of the country. As a consequence, in December 2015, Deputy Horacio Poppe Inch filed Supreme Decree No. 2298/2015 – which introduced the possibility for the administration to opt out of the consultation procedure with indigenous communities – with action of unconstitutionality before the Constitutional Court for alleged violation of several articles of the Constitution, of Articles 3, 5, 6 and 8 of ILO Convention 169, as well as of Articles 18, 19 and 40 UNDRIP.

National politics played and plays a large role in the road construction via the TIPNIS. Alternative routes would exist – and had been actually suggested from various parts – which would have preserved indigenous peoples' rights without significantly affecting the government's development plans. In particular, the suggestion of constructing a railroad along the Park borders appeared to be very sustainable. This would be highly desirable, given that the construction of the highway without crossing in between an indigenous territory and a natural Park that is so rich in biodiversity would be clearly

[45] Each case study is presented in this section in an edited version based on the original studies written by the authors indicated under the title of each case. The work of editing has been carried out by the rapporteurs of the Committee, Federico Lenzerini and Timo Koivurova. The integral case studies are available on file with the respective authors as well as with the chairs and rapporteurs of the Committee. Some of them are available on the Committee's web page, at http://www.ila-hq.org/en/committees/index.cfm/cid/1048

the best solution. The insistence on crossing the Park sadly suggests that the main reason behind this project is, in reality, to connect the coca fields in the area.

Land and Water Rights in Chile
(by *Alexandra Tomaselli and Rainer Hofmann*, with the contribution of *Federico Lenzerini*)

Chile has not yet granted constitutional recognition to the indigenous peoples that live within its borders. Thus, indigenous peoples in Chile enjoy the rights recognized in domestic legislation and more specifically in the Indigenous Law No.19.253 of 5 October 1993 (*Ley sobre Protección, Fomento y Desarrollo de los Indígenas*, but mainly known as *Ley Indígena*). However, in 2008 Chile ratified ILO Convention 169. This prompted a new debate on indigenous rights and a wave of initiatives aimed at further protecting indigenous peoples. Chile also voted in favour of the UNDRIP when the latter was adopted by the U.N. General Assembly in 2007.

This, however, did not eliminate the problems existing in Chile concerning the implementation of indigenous peoples' rights, particularly land rights. Indeed, indigenous water and land rights are particularly undermined in a country in which watercourses and underground natural resources represent vital aspects of the national economy. In 2009, the U.N. Special Rapporteur James Anaya underlined the problematic construction of hydro-electric plants and other environmentally hazardous projects on indigenous peoples' lands; the absence of general indigenous water rights; and, in a specific section, the issue of Mapuche land occupations followed by police repression. Furthermore, he stressed the need to adopt a procedure for the recognition of traditionally occupied land, an aspect also emphasized during the fifth human rights periodic review of Chile, and formally guaranteed by the Indigenous Law (Article 12.2).[46]

As regards water rights, Article 64 of the above-mentioned Indigenous Law recognizes a special protection for the water rights of the indigenous peoples living in the North. However, in recent times the further desertification of the northern areas of Chile and the problems caused by the indefinite appropriation of water rights have prompted civil society organizations to insistently demand a reform of the Water Code (*Código de Aguas*). The main achievements in 2015 have been the works of the Commission for Hydric Resources and Desertification (*Comisión de Recursos Hídricos*) on the draft laws to reform the Water Code, which, *inter alia*, would establish, if approved, the recognition of the right to water as a human right, the prioritization of the use of water for human consumption, and the introduction of a 30-year limit for water concessions, thus eliminating permanent water rights. Against this background, since 2009 the Chilean Court of Appeals and the Supreme Court started to produce an extremely evolving and interesting jurisprudence regarding indigenous land and water rights, as well as their (related) right to consultation. In late 2009, the Chilean Supreme Court recognized the "ancestral water rights" of the Aymara indigenous community *Chusmiza y Usmagama*, basing its arguments on Articles 13.2 and 15.1 of the ILO Convention 169 (indigenous land as "habitat", which thus includes also the watercourses), also confirming that the reference to the indigenous territories in Article 64 of the Indigenous Law is not limited

[46] See James Anaya, "Informe del Relator Especial sobre la situación de los derechos humanos y las libertades fundamentales de los indígenas", Human Rights Council, U.N. Doc. A/HRC/12/34/Add.6 of 5 October 2009.

to registered properties, but also to those lands traditionally used by indigenous peoples. In the same period, in a case concerning the logging of native trees close to a land belonging to a Mapuche indigenous community, the Chilean Supreme Court condemned the logging company *Sociedad Palermo Itda* for damages to Mapuche sacred sites and thus adverse effects to the practice of traditional medicine, on the basis of Articles 13-14 of ILO Convention 169 and other international instruments, including the Convention on Biological Diversity and the Convention on the Elimination of All Forms of Racial Discrimination. In mid-2010, the Court of Appeal of Valdivia found the Environmental National Commission guilty of waste allocation in the area contiguous to Mapuche lands and the consequent destruction of a ceremonial area, mentioning Articles 6.1.a, 6.2 and 7.1 of ILO Convention 169 and Article 25 UNDRIP; in particular, the Court stated that the indigenous peoples concerned should have been duly consulted, in good faith and according to the specific situation with the aim of reaching an agreement or their consent regarding the concerned measure. The Supreme Court upheld this decision in January 2011. In late 2014, the Supreme Court ruled in favour of the Peasant Community Diaguita of Huascoaltinos against the Environmental Evaluation Commission of the third region (Atacama), which had authorized the construction of an open-pit mine of gold and copper onto 2,463 hectares of land (including large parts of indigenous territories) without any (due) consultation with the affected indigenous peoples – in violation of Articles 6, 7 and 15 of ILO Convention 169.

The jurisprudence just examined may surely be framed as a good practice. Irrespective of whether the plaintiffs had directly claimed the application of the ILO Convention 169, which, as mentioned, had prompted an extensive debate within this country, the courts referred either to other provisions of this treaty or to other instruments, including the UNDRIP. Indeed, although relevant domestic law is far from matching the international standards, the Chilean domestic courts *completed* the understanding and the application of the domestic protection of indigenous water and land rights *via* the reference to the international standards. Indeed, the practice of Chilean courts appears to be consistent with the standards set by the UNDRIP, particularly with articles 20 (right of indigenous peoples to be secure in the enjoyment of their own means of subsistence and development), 25 (which explicitly refers to waters), 26 (land rights) and 32.2 (consultation, cooperation, prior free and informed consent with respect to any project affecting their lands or territories and other resources, including water). It may be reasonably argued here that the Chilean case law may potentially positively influence international standardization of the application of indigenous water and land rights, as the evolving jurisprudence developed by Chilean courts may contribute to the fine-tuning of the content and the application of indigenous water and land rights in other parts of the world.

Gas of Camisea in Territories of Indigenous Peoples in Isolation: Gaps in Legislation and Obligations of Peru
(by *Gloria Huamán Rodrígez* and *René Kuppe*)

The Lower Urubamba area in the south-eastern part of the Peruvian Amazon has been inhabited for immemorial times by peoples who live far from any contact with today's dominant society. Those nomad peoples are on the move through vast stretches of ancestral territories in search of resources for their subsistence. In the 1980's, the Peruvian government initiated one of its most ambitious projects called Gas of Camisea, for which it has issued licenses in favour of transnational companies for exploration and

exploitation of this hydrocarbon precisely in territories inhabited by peoples in voluntary isolation. Since 1996 this project has gained huge support by political leaders, and is seen as one of the engines for economic growth in the country. It is said to have a number of advantages, ranging from industrial development to the fact of satisfying the needs of social projects and national energy demand.

During the development of the Camisea project, several groups who used to live in isolation have been forcibly contacted by workers of Camisea and others that took advantage of the lack of clear protection norms – causing serious suffering of chronic diseases and a high death toll. The establishment of a weak territorial reserve – an area where indigenous peoples live voluntarily in isolation in order to use their natural resources – has not changed the serious effects of an invasive industry. Far from recognizing these peoples' right to their ancestral territories, the Peruvian State has approved new exploration and exploitation activities for hydrocarbons in Block 88, which is superimposed to the territorial reserve meant for the Kugapakori, Nahua, Nanti and other peoples living in isolation, producing an imminent danger of extinction for these peoples. In addition, the central government has irregularly given its approval to an expansion of the project which allows the consortium to open frontlines of exploration of new gas fields inside the territorial reserve. Even the adoption of *Law 28736 on the Protection of Indigenous and Original Peoples in situation of isolation or initial contact* in May 2006 has not had any significant impact, as this law has introduced the concept of "indigenous reserves", which have access to special protection only pursuant to official recognition on the basis of an administrative process, and so far the Peruvian state has not established a single indigenous reserve.

The Peruvian state is clearly not fulfilling its international obligations to protect, respect and guarantee the human rights of indigenous peoples living in isolation. In order to comply with existing international standards, the immediate response which should be given by the State in this situation would be to declare the whole areas inhabited by indigenous peoples in isolation since time immemorial as *intangible territories* or *protected territorial reserves*, and to establish buffer zones around the said territories which would prevent third parties from entering, consistent with the *Guidelines for the Protection of Indigenous Peoples in Isolation and Initial Contact in the Amazon Region, the Gran Chaco and the Eastern Region of Paraguay*.[47] The intangibility of this territory is not a particular right of indigenous peoples in isolation, but the most appropriate measure to achieve the ends of the UNDRIP and other relevant international rules as well as to implement a number of general indigenous human rights, like the right to life, cultural survival, and rights to health, food security and use of territories and resources. It is to be noted that Peru ratified ILO Convention 169 in 1994,[48] but has never opened consultation with the affected indigenous peoples during the different steps of the Camisea project. Neither ILO Convention 169 nor the UNDRIP make any specific references to the protection of the rights of indigenous peoples in isolation. However, as a matter of fact, we

[47] Result of the consultations by the UN Office of the High Commissioner for Human Rights in the region: Bolivia, Brazil, Colombia, Ecuador, Paraguay, Peru, and Venezuela, May 2012, available (in Spanish) at <http://acnudh.org/wp-content/uploads/2012/03/Directrices-de-Protecci%C3%B3n-para-los-Pueblos-Ind%C3%ADgenas-en-Aislamiento-y-en-Contacto-Inicial.pdf> (accessed 26 May 2016), para. 53(a).

[48] See n. 22 above.

have to consider how human rights rules and standards protecting indigenous peoples in general are relevant for isolated peoples, especially considering their particular situation of high vulnerability. On the other hand, it is obvious that the right to consultation cannot be easily put into practice when it comes to isolated indigenous groups, as establishing physical contacts with them would endanger their health and undermine their current independent political and social situation. However, their opinion on the issue should be quite explicit, as it is freely expressed through maintaining their isolation, and, as such, it should be respected. This notwithstanding, at present the project Camisea continues to be carried out, even if it is performed in blatant violation of internationally recognized rights of indigenous peoples.

Burlington Resources Inc. v. Ecuador/Kichwa Indigenous People of Sarayaku v. Ecuador

(by *Christina Binder*, with the contribution of *Jane A. Hofbauer*[49])

The case of *Burlington v. Ecuador* represents a unique example of the triangular relationship between investors, States and indigenous communities, and has been investigated both from an investment law and human rights perspective. It thus bears particular relevance in delineating the scope of the rights and obligations of the respective parties in the context of resource development projects/foreign investments which have an impact on indigenous communities. Moreover, it also constitutes an example of the overlapping of different judicial bodies and non-judicial forums regarding a particular set of facts. While in theory this should increase the level of protection offered to the affected (indigenous) communities, difficulties arise due the specific mandates of the respective bodies and their treatment of the absent third party as an "externality" to the proceedings.

Article 57 of the amended 2008 Constitution of Ecuador accords a broad range of rights to indigenous peoples, including, at para. 7, a right to "free, prior and informed consultation within a reasonable period of time, on the plans and programs for prospecting, producing and marketing non-renewable resources located on their lands and which could have an environmental or cultural impact on them". This notwithstanding, disparities continue to exist particularly with regard to the right to free, prior and informed consultation in the context of hydrocarbons, which has been implemented through Executive Decree 1247,[50] understanding the goal of the consultation process to be participation and not consent. A further concern relates to the matter of drafting of said decree, as indigenous communities were not consulted about the law itself, and to the envisioned outcome as "any agreements which may be reached must be based on pre-existing public policy measures".[51]

The facts of the case of Burlington v. Ecuador were investigated by, first, an ICSID arbitral tribunal and, subsequently, the IACtHR. The *Burlington Resources* award by

[49] Senior Researcher, Department of European, International and Comparative Law, University of Wien (Austria).

[50] Reglamenta para la ejecución de la consulta previa libre e informada en los procesos de licitación y asignación de áreas y bloques hidrocarburíferos, 19 July 2012.

[51] CESCR, Concluding observations of the Committee on the third periodic report of Ecuador as approved by the Committee at its forty-ninth session (14-30 November 2012), 13 December 2012, U.N. Doc. E/C.12/ECU/CO/3 of 13 December 2012, para. 9.

the ICSID arbitral tribunal[52] in the end dismissed Burlington Resources' claims that Ecuador had failed to provide full protection and security to its investment against the violent resistance by the affected indigenous groups on procedural grounds, and thus did not assess whether indigenous interests had any role to play on substantive issues. The IACtHR reached a landmark judgment in 2012 with regard to the rights of indigenous peoples in the context of resource exploitation projects.[53] The Court emphasized that, in order for the requirement of effective participation to establish a true dialogue between the parties and be based on mutual trust, it was essential to remember that consultations had to be carried out in good faith, i.e. in "absence of any form of coercion by the State or by agents or third parties that act with its authority or acquiescence."[54] It also pointed out that this meant that practices which attempted to "undermine the social cohesion of the affected communities, either through corruption of community leaders or by establishing parallel leaders, or through negotiations with individual members of the community that are contrary to international standards",[55] were incompatible with good faith requirements. Finally, it reminded the parties that "the obligation to consult is the responsibility of the State; therefore the planning and executing of the consultation process is not an obligation that can be avoided by delegating it to a private company or to third parties, much less delegating it to the same company that is interested in exploiting the resources in the territory of the community that is the subject of the consultation".[56] The IACtHR concluded that Ecuador violated rights recognized in the American Convention on Human Rights – particularly through violating the rights to consultation, to indigenous communal property and to cultural identity (Article 21 of the Convention), as the project directly affected the territory of the Kichwa – and ILO Convention 169. In addition, the Court recalled several times the UNDRIP as a source of applicable standards in the field, including as instrument "particularly relevant to the recognition of the right to cultural identity of indigenous peoples".[57] In light of its findings, the IACtHR ordered Ecuador to pay $1.4 million compensation for pecuniary and non-pecuniary damages, and consult with the Sarayaku people on the removal of the remaining explosives on the territory of the Sarayaku as well as on any type of investment or development plan with potential repercussions for their territory or affect essential aspects of their worldview or life, integrity or cultural identity. Moreover, Ecuador was ordered to adopt legislative or other measures to give full effect to the right to prior consultation of indigenous peoples as well as make a public acknowledgement of its international responsibility. At the moment of this writing, the implementation by Ecuador of the Court's judgment has only been partial, as the government has only paid compensation and issued an official apology, which is troubling in particular regarding the obligation to ensure with legislative or other measures that the international standard of the right to consultation is put into effect. Furthermore, to date the majority of the explosives have not been removed from the Sarayaku territories.

[55] Ibid.

[56] Ibid., para. 187.

[57] Ibid., para. 215.

The *Sarayaku* proceedings serve as yardsticks for the protection of indigenous rights in several aspects. In particular, the inclusive procedure exemplified in this case is certainly a promising example for future proceedings dealing with indigenous rights. On a substantive level, the IACtHR observations relating to the content of the consultation process, especially its detailing of the good faith requirement and its emphasis on clarifying that the obligation is a direct responsibility of the state which cannot be delegated to private parties interested in resource exploitation activities, are particularly noteworthy. This comes not only as a direct response to the facts at hand but as a general response to the common problems arising in the context of operationalizing the principle of free, prior and informed consultation/consent.

The Decision by the Inter-American Court of Human Rights concerning the Awas Tingni vs. Nicaragua Case (2001): The Implementation Gap
(by *Felipe Gómez Isa*)

In August 2001, the IACtHR issued a landmark and pioneering decision in the field of indigenous peoples' human rights law with the Awas Tingni judgment.[58] As is well-known, the ruling of the IACtHR in this case soon gained the value of precedent in recognizing that the interpretation of the right to property established in Article 21 of the American Convention on Human Rights includes the communal forms of property of ancestral lands common among indigenous communities. However, while the huge significance of the judgment in point is undeniable, its implementation by the government of Nicaragua has been long and tortuous.

As stated in the Court's judgment, the State of Nicaragua had to "adopt the legislative, administrative, and any other measures required to create an effective mechanism for delimitation, demarcation, and titling of the property of indigenous communities, in accordance with their customary law, values, customs and mores".[59] In the specific case of the Awas Tingni community, the Court granted the State 15 months to "carry out the delimitation, demarcation, and titling of the corresponding lands of the members of the Awas Tingni Community […] with full participation by the Community and taking into account its customary law, values, customs and mores".[60]

There have been various stages in the implementation of the judgment in various respects. One of the main difficulties has concerned recognition, demarcation and titling of the land rights of the indigenous community. There have been a clear lack of resources and delays in the implementation process. The major progress occurred in December 2008, when – once the work of measuring and marking out the indigenous territory was successfully completed – the community was awarded the title to their ancestral lands and that title was registered. It was the *Comisión Nacional de Demarcación y Titulación (CONADETI)* which, pursuant to Law 445 (2003), issued the Communal Title Deed No. 007-13-12-2008 relating to the AMASAU territory (*Awas Tingni Mayangnina Sauni Umani*) on 13 December 2008.

However, the last stage of the process of demarcation and titling, involving the title clearance in relation to the third parties located within them, has proved particularly

[58] See *Case of the Mayagna (Sumo) Awas Tingni Community v. Nicaragua*, n. 29 above.
[59] Ibid., para. 164.
[60] Ibid.

problematic. Title clearance was intended to identify and characterise the presence of third parties within indigenous territories in an attempt to reach a solution that was compatible with the exercise of the territorial rights by indigenous peoples, but the title clearance process was hampered by the lack of coordination between the institutions. As a consequence, the absolute lack of title clearance is paving the way to the invasion of the indigenous territories by settlers through violence, displacement and destruction of indigenous property.

It is to be recognized that it is objectively difficult for a country like Nicaragua to properly implement a judgment like the one in discussion, especially when it leads to big changes (like the Awas Tingni judgment actually does). In any event, even if there are serious problems in implementing the judgment in point, it has nevertheless greatly empowered the indigenous community to defend its land rights. The very process leading to the Court's judgment has represented an essential tool for the empowerment of the community. The judgment in itself was of paramount importance for a number of reasons: first, the evolutionary interpretation of the IACtHR in the Awas Tingni case set a *very promising precedent* for the evolution of the right of indigenous peoples to their lands and natural resources in international law, followed by the Court in its subsequent jurisprudence;[61] secondly, it recognized the collective dimension of indigenous peoples' land rights, as well as that "the close ties of indigenous people with the land must be recognised and understood as the fundamental basis of their cultures, their spiritual life, their integrity and their economic survival";[62] thirdly, the Court emphasized that the legal basis of indigenous peoples' land rights is not grounded on the recognition by the State, but on the customary practices of indigenous communities; last but not least, in one stage of the implementation of the judgment – particularly in Recital III of the Communal Title Deed awarding communal title deed in favour of the Awas Tingni – the legal grounds used to argue the relevance for that title to be issued included a reference to the UNDRIP, in particular to the provisions concerning the right of indigenous peoples to their lands, territories and resources. In sum, despite the enormous difficulties that the Awas Tingni have faced in the implementation process of the IACtHR judgment, it must be acknowledged that the Court's decision has paved the way for very progressive developments in terms of indigenous peoples' rights to their lands and territories, and a degree of empowerment for the indigenous peoples themselves in defence of their rights. On the other hand, however, there is a huge gap between, on one side, the formal recognition of indigenous peoples' rights and, on the other, the stark reality still faced every day as part of an unbridled struggle for access to natural resources. In this respect, it is to be noted, among other things, that the Inter-American human rights system should be improved especially through establishing some specific effective mechanisms to favour the implementation process of the IACtHR decisions.

The Maya Communities in Belize

(by *Federico Lenzerini* and *Siegfried Wiessner*)[63]

More than thirty villages belonging to Maya Communities are scattered throughout Southern Belize, connected with each other through gravel roads and forest trails. For

more than twenty years the Maya in Belize have been fighting for preserving their traditional lands, after the government of Belize, in the mid-1990s, had granted logging concessions and oil exploration licences over parts of their lands in the Toledo District. In particular, in 1994, the government converted almost 42,000 acres of the Maya ancestral territory into government land, establishing the Sarstoon-Temash National Park (STNP), without consulting the community. The government subsequently opened the STNP to oil exploration and drilling by US Capital Energy Belize, Ltd, a wholly owned Belizean subsidiary of the American company US Capital Energy, Inc. Starting from 2004, the Maya Communities achieved a series of judicial victories in front of the Inter-American Commission on Human Rights as well as of various national courts. This notwithstanding, the government of Belize continued to pursue its plans of economic exploitation in the areas where the Maya territories are located. For this reason, the Maya brought their case in front of the Caribbean Court of Justice (CCJ), where the community obtained another landmark victory.

In 2004 the Inter-American Commission on Human Rights found that the government of Belize – by granting logging and oil concessions in the Maya lands and otherwise failing to adequately protect them and to recognize and secure the territorial rights of the Maya people in those lands, as well as by failing to afford the Maya people judicial protection of their rights and interests in the lands – violated a number of provisions of the 1948 *American Declaration of the Rights and Duties of Man*.[64] In particular, the said behaviour violated the right to property enshrined in Article XXIII, the right to equality before the law, to equal protection of the law, and to non-discrimination provided for by Article II, as well as the right to judicial protection enshrined in Article XVIII of the Declaration.[65] The Commission consequently ordered the government of Belize to adopt "in its domestic law, and through fully informed consultations with the Maya people, the legislative, administrative, and any other measures necessary to delimit, demarcate and title or otherwise clarify and protect the territory in which the Maya people have a communal property right, in accordance with their customary land use practices, and without detriment to other indigenous communities"; to carry out "the measures to delimit, demarcate and title or otherwise clarify and protect the corresponding lands of the Maya people without detriment to other indigenous communities"; and to repair "the environmental damage resulting from the logging concessions granted by the State in respect of the territory traditionally occupied and used by the Maya people".[66]

In 2007, in a landmark judgment in the consolidated cases of *Aurelio Cal et al. v. Belize*, the Supreme Court of Belize ordered the government of Belize to officially declare that the claimant Maya villages and their members hold, respectively, "collective and individual rights in the lands and resources that they have used and occupied according to Maya customary practices and that these rights constitute 'property' within the meaning of […] the Belize Constitution", as well as that the boundaries of the said lands are those "established through Maya customary practices". In addition, the Court ordered the government

[66] Ibid., para. 197.

to demarcate the lands concerned and provide official documentation of Maya property title, as well as to defend the community from external interferences – either by agents of the government itself or third parties – threatening their property rights.[67] The Chief Justice, in elaborating on his finding of a violation of customary international law, stated that the UNDRIP, "embodying as it does, general principles of international law relating to indigenous peoples and their lands and resources, is of such force that the defendants, representing the Government of Belize, will not disregard it". "The United Nations, its bodies and specialized agencies including at the country level, and states, are enjoined to promote respect for and full application of the Declaration's provision and to follow up its effectiveness".[68] The Supreme Court ruled in favour of Maya communities again in 2010,[69] and, in 2014, finally affirmed that the decision of the government of Belize to allow oil drilling and road construction in the STNP was irrational and unreasonable, "that decision having been made without the free, prior and informed consent of the indigenous Maya communities". In addition, it held that the government has an *obligation* under the UNDRIP "to respect the rights of the Indigenous Maya Peoples to their lands, territories and resources which they have traditionally owned, occupied or otherwise used or acquired".[70] In the meantime, in 2013, the Court of Appeal affirmed the decision of the Supreme Court that Maya customary land tenure existed in all Maya villages in the Toledo District of southern Belize, as well as that it constituted property within the meaning of the Constitution of Belize. However, the Court of Appeal also held that there had been no violation of any constitutional guarantees by the government and, consequently, that the issue of constitutional relief did not arise.[71] For this reason, the Maya brought their case before the CCJ.

The Caribbean Court released its judgment on 30 October 2015.[72] The Court assessed the issue of damages for breach of the Maya community constitutional rights under three separate heads: (1) protection against arbitrary deprivation of property; (2) right to equality and non-discrimination; and (3) right to protection of the law. The CCJ failed to find a breach of the right to the protection against arbitrary deprivation of property under

the Constitution of Belize, because the nature of the Appellants' property rights and the entitlement flowing therefrom are yet to be precisely defined. The Court also dismissed the equality and non-discrimination claim, on the basis that there was no evidence of discriminatory treatment of the Appellants based on race or ethnicity. However, the Court held that the Maya community right to the protection of the law had been breached, due to "the failure of the Government of Belize to recognize and protect Maya customary land tenure rights".[73] In this respect, the Court noted that "the right to protection of the law encompasses the international obligations of the State to recognize and protect the rights of indigenous people. A recognized sub-set of the rule of law is the obligation of the State to honour its international commitments".[74] The Court added that "[i]t is beyond dispute that international law recognizes and protects the rights of indigenous peoples",[75] and, referring to the UNDRIP specifically, emphasized that, while it is not binding in itself, it is "relevant to the interpretation of the Constitution of Belize which in its preamble explicitly recognizes that state policies must protect the culture and identity of its indigenous peoples but also must promote respect for international law and treaty obligations".[76] In conclusion, the CCJ resolved that the decision of the Court of Appeal on the issue of damages be reversed, and that the Maya community be awarded moral damages for violations of their right to maintain their customary land tenure. It consequently ordered the Government of Belize to establish a fund of BZ$300,000.00 as a first step towards compliance with its undertaking to protect Maya customary land tenure, as well as to pay 75% of the appellants' costs.

The decision of the CCJ reinforces the recognition of indigenous peoples' rights to their traditional lands under their customary land tenure systems, as well as the right to moral damages, i.e. reparations for violations, serving as key example of the implementation of international collective rights of indigenous peoples in municipal law, in this case on the level of constitutional law.

Indigenous Rights and Extractivism in Argentina
(by *Marzia Rosti*[77])

The second half of the 20th century has represented perhaps the most important, long-awaited moment for the indigenous peoples in Argentina, because the country aligned itself with the policies adopted by the other Latin American countries in relation to indigenous rights during the same period. In particular, new Article 75.17 of the Constitution, introduced in 1994, lists a large catalogue of indigenous rights, including the right to collective ownership of the lands traditionally occupied, participation in managing the natural resources present in those territories and the right to a bilingual and intercultural education. This provision is supplemented by some very significant legislative acts increasing the level of protection of indigenous peoples' rights in the country. Argentina ratified ILO 169 Convention in 2000[78], and the government voted in favour of the UNDRIP on the day of its adoption by the U.N. General Assembly, on 13 September 2007.

As just noted, in Argentina land rights of indigenous peoples are constitutionally protected. However, the increase in territorial claims stimulated a number of initiatives at the provincial level to regulate possession of the land, which on their turn led to the development of a case law in the context of which, while the courts sometimes ruled in favour of the indigenous communities, they proved to be quite reluctant to acknowledge that the fact of being indigenous entitled indigenous communities to specific rights. In addition, the profound political, economic and social crisis experienced by the country during 2001-2002 led the government, in order to revive the country, to promote the production and export of agricultural products and the exploitation of natural resources, in particular gas and crude oil, first of all to satisfy the domestic energy requirements. The success of the *modelo extractivista* allowed the penetration of extractive activities into areas of the country which had previously remained excluded or almost excluded from exploitation projects, including traditional territories of indigenous communities, with a resulting increase in tensions, which frequently degenerated into episodes of violence. This led to the evacuation of many indigenous communities from their traditional lands and allowed "extraction industries" to have access into indigenous territories, with the complicity of political institutions, while movements of protest by indigenous peoples were criminalized. On the other hand, however, some of the controversies triggered by this situation have led to the victory of the indigenous communities concerned and to recognition of their land rights by domestic courts. It is the case, for example, of the dispute between the Wenctru Trawel Leufu Community and the Empresa Petrolera Piedra de Aguila, concerning a license granted to the latter to perform exploration activities and to exploit the hydrocarbon resources in the area inhabited by the community. Indeed, in 2011, a local court ordered the operations in the indigenous territory to be suspended. This decision was confirmed on 6 December 2012 by the Tribunal Superior de Justicia di Neuquén, which rejected the appeal submitted by the oil company and by the Fiscalía de Estado and acknowledged the existence of the indigenous settlement and, therefore, the obligation to respect indigenous rights.

In conclusion, it is to be noted that in Argentina, in some cases, the complicity among the national or local institutions and the extraction companies has led to a denial of indigenous peoples' land rights, in violation of both national legislation and pertinent international standards. In other cases, however, national courts have followed the opposite approach, ruling in favour of indigenous rights. This recently happened, for instance, with a judgment by the Corte Suprema de Justicia de la Nación (CSJN), issued on 10 November 2015, which upheld the Recurso Extraordinario Federal submitted by the Las Huaytekas community of Río Negro against the precautionary measure that ordered the evacuation from its territory and recognized the evidentiary value of the "relevamiento técnico-jurídico-catastral", in line with Article 14.2 of ILO Convention 169, establishing that governments "shall take steps as necessary to identify the lands which the peoples concerned traditionally occupy, and to guarantee effective protection of their rights of ownership and possession". It is to be hoped that in the near future the attention recently shown by courts with regard to indigenous peoples' land rights will consolidate, as well as that the government will be able to reconcile the objectives of economic growth with its international obligations regarding indigenous peoples.

The Implementation of IACtHR Judgments Concerning Land Rights in Suriname: *Saramaka People V. Suriname* and Subsequent Cases
(by *Anna Meijknecht*, *Bas Rombouts* and *Jacintha Asarfi*[79])

In recent years, the IACtHR has issued two very significant judgments concerning indigenous and tribal peoples' land rights in Suriname.

First, in the leading *Saramaka* case,[80] the IACtHR reaffirmed the right to communal property under Article 21 of the American Convention on Human Rights for tribal peoples, by stating that "the Court`s jurisprudence regarding indigenous people's right to property is also applicable to tribal peoples because both share distinct, social, cultural, and economic characteristics, including a special relationship with their ancestral territories, that require special measures under international human rights law in order to guarantee their physical and cultural survival".[81] The Court, taking into account Article 32 UNDRIP, significantly added that, "[r]egarding large-scale development or investment projects that would have a major impact within Saramaka territory, the State has a duty, not only to consult with the Saramakas, but also to obtain their free, prior, and informed consent, according to their customs and traditions".[82] The Court concluded that Suriname had violated the property rights of the members of the Saramaka people recognized in Article 21 of the Convention and ordered the respondent government to delimit, demarcate and grant the community collective title over the territory in accordance with their customary laws, and through previous, effective and fully informed consultations with the Saramaka people, as well as to ensure the full exercise and enjoyment of their right to communal property through adopting all the necessary legislative, administrative and other measures to this end.[83] Additionally, the Court ordered the State to take measures of satisfaction, such as translating the judgment in Dutch and publishing it in the State's Official Gazette and one daily newspaper as well as financing the broadcasts of several paragraphs in the *Saramaka* language. The material and immaterial damages were also awarded, through, respectively, granting a compensation of US$ 75.000,00 and allocating US$ 600.000,00 for a community development fund.[84]

The second case at issue concerned the Kaliña and Lokono people.[85] In its judgment, released in November 2015, the IACtHR followed the same reasoning of the *Saramaka* judgment, by declaring that the State has to grant the Kaliña and Lokono peoples legal recognition of collective juridical personality, delimit and demarcate the traditional territory of the members of the communities concerned, grant them collective title to that territory and ensure their effective use and enjoyment thereof, as well as create a community development fund to their benefit.[86]

[81] Ibid., para. 86.
[82] Ibid., para. 134.
[83] Ibid., para. 194.
[84] Ibid., paras. 195-196.
[85] See *Case of the Kaliña and Lokono Peoples v. Suriname*, Series C No. 309, Judgment of 25 November 2015.
[86] Ibid., paras. 5-11.

Finally, another similar case is at present pending before the Court. It concerns the Kaliña indigenous community of Maho and the Association of Indigenous Village Leaders in Suriname, who filed a complaint to the Inter-American Commission on Human Rights on 16 December 2009, claiming that the government of Suriname has granted concessions and permits to third parties to allow them to exploit the land, territory and natural resources traditionally occupied and used by the community.[87] The petition was declared admissible by the Inter-American Commission on Human Rights on 19 March 2013.

So far, a number of obstacles have hampered the full implementation by Suriname of the *Saramaka* judgment. Considering the innovative character of the Courts' rulings concerning indigenous land rights, it is plausible that their practical implementation on national level takes some time. However, almost ten years have passed since the *Saramaka* judgment and the government of Suriname has still not managed to fully implement any of the substantive parts of the ruling. Among other things, it has been unable to provide the legislative basis for recognising and securing indigenous and tribal rights in Suriname, notwithstanding international expertise offered by the U.N. Special Rapporteur on the Rights of Indigenous Peoples, several detailed monitoring compliance reports by the IACHR, involvement of the CERD Committee and other States and even the submission to the State for its consideration of several draft laws on indigenous and peoples' rights drafted by indigenous and tribal peoples and their organisations. The ongoing lack of full compliance with the Courts' ruling affects the physical and cultural survival of the Saramaka indigenous communities, as well as the environment and natural resources in the areas concerned. Moreover, it undermines the trustworthiness of the State and creates repetitive cases – the case of the *Kaliña and Lokono* people and the *Maho Indigenous Community* case. All three cases reveal a structural problem involving a lack of recognition in domestic law of the juridical personality and right to collective property of indigenous and tribal peoples in Suriname. Furthermore, they reveal the lack of strong compliance mechanisms within the Organization of American States system; indeed, in case of failure to comply with the IACtHR judgments in contentious cases of breach of the American Convention on Human Rights or the Court's order of provisional measures, there are no effective tools to enforce sanctions.

A positive development, though, seems to be a growing alertness within the government that the development of measures necessary to implement the judgments will have to be done in dialogue with the people concerned. This development can be discerned, for instance, by the fact that the State and the Maho Indigenous Community are in the process of a friendly settlement and that the State of Suriname has communicated to the Inter-American Commission that it is in favour of finding a solution for the land rights issues and to hold a dialogue with the Maho Indigenous Community.

The Case of the Hydroelectric Plant of Belo Monte in Brazil
(by *Rafael Soares Leite*)

Belo Monte is a hydroelectric plant, qualified as a mega structure project that has been built in the Xingu River in the Amazon in the state of Pará. The plant was planned as an expansion of Brazilian energy matrix, which is highly dependent on hydropower. Since the very beginning of the construction of the plant, it has been subject to criticism by

[87] Report No. 9/13, Petition 1621-09, Admissibility *Maho Indigenous Community v. Suriname*, 19 March 2013, p. 1.

both environmentalists and traditional communities that live off the surrounding natural resources. Even though the implementation of the dam project is well advanced, its completion is expected in 2019. The environmental impact studies date from 2007, and the granting of the concession occurred in 2010. In terms of development for the country, it is estimated that the plant, with the installed capacity of 11.233,1 megawatts, will be able to supply energy for 60 million people, or approximately 18 million households.

At present, there are many lawsuits being considered that are related to the implementation of the hydroelectric dam. In addition to indigenous disputes and conflicts of an environmental kind, there have recently been allegations of fraud and corruption involving parties that support the government, linking those crimes to the Belo Monte concession. In particular, the failure to implement the necessary conditions for ensuring appropriate protection of the traditional lands of the communities concerned has threatened the very survival of the indigenous peoples affected by the project. Furthermore, a licence has been issued for the Belo Sun gold mining project in close proximity to the Belo Monte dam, in the absence of consultation and the lack of a cumulative assessment of environmental, social and human rights impacts on indigenous peoples.

The case is now under international scrutiny by the Inter-American Commission on Human Rights. On 1 April 2011 the IACHR granted precautionary measures in favor of the indigenous communities of the Xingu River basin, with the purpose of safeguarding the life and personal integrity of those people, affected by the construction of the Belo Monte hydroelectric plant.[88] The Commission suggested many provisional measures to the Brazilian government, including the suspension of works related to Belo Monte. The Brazilian government did not receive well this decision, and reacted by adopting severe diplomatic measures. The case is still pending.

In addition to the Inter-American Commission, the case is under scrutiny by domestic courts. There are many lawsuits related to the Belo Monte hydroelectric dam construction, and one of the most important is registered under n. 2006.39.03.000711-8/PA. In this case, the object of litigation is about the observance of the obligation to consult the affected indigenous communities before the deliberation by the Brazilian state about the concession and construction of the hydroelectric plant. The Federal Public Prosecution Body, as a plaintiff in the case, required the discontinuation of the construction of the plant as long as the indigenous communities are not consulted. It also disputed the legal validity of the Legislative Decree n. 788/2005, which authorized the federal government to implement the water use of Belo Monte in the Xingu river, since it was approved without consulting with the communities and without carrying out environmental impact studies.

Important background for this case is the leading case of the demarcation of *Raposa-Serra do Sol*.[89] Even though the Brazilian Constitution was enacted in 1988, it took almost twenty years for the Supreme Court to pronounce a judgment that would develop relevant standards for the interpretation of indigenous peoples' constitutional rights. The case of the demarcation of Raposa-Serra do Sol gave rise to a controversial decision, in

[88] See <http://www.cidh.oas.org/medidas/2011.port.htm> (accessed 26 May 2016).

[89] Reference by the Supreme Federal Court standards: Pet 3388, Relator(a): Min. Carlos Britto, Tribunal Pleno, 19 March 2009.

so far that, while recognizing the importance of indigenous peoples' rights, the judgment seemed to subordinate such rights to other interests. For example, the Supreme Court held that, in the case of an indigenous land that is also a natural protected area, the federal environmental agency is responsible for the administration of the land.

The Case of the Hydroelectric Plant of São Luiz do Tapajós in Brazil
(by *Rafael Soares Leite*)

The Tapajós hydroelectric project relates to the government's intention to build a dam in a river located in the Tapajós basin, in Brazil. The project is still on paper and the execution has not started yet. When the Munduruku – the indigenous people living in the concerned area – learned about the government's movements, they started mobilizing to ensure that ILO Convention 169 and the Federal Constitution be respected, especially the provisions related to participatory rights.

The hydroelectric plant of the São Luiz do Tapajós is supposed to produce up to 8,000 megawatts with the flooding of a total area of 729 square kilometers after the construction of the reservoir. Besides the legal requirements from the perspective of indigenous peoples' rights, there are also some legal procedures required by environmental law. Mainly, for the construction of the dam, it is also necessary for the project to obtain the environmental permit.

From the indigenous point of view, the flooded area would extend to 17,000 hectares of the indigenous territory Sawré Muybu, attributed to the Munduruku people. It must be noted that this area has not been demarcated yet, an element which distinguishes this case from the one of Belo Monte. The lack of consultation and the absence of demarcation of indigenous lands impacted by the Tapajos dam complex has been noted in the End of Mission Statement of 17 March 2016 by the United Nations Special Rapporteur on the rights of indigenous peoples, Victoria Tauli Corpuz, on her visit to Brazil.[90]

What makes the Tapajós case unique is the active participation of the indigenous peoples through two distinct but interrelated instruments: the so called "self-demarcation of land" and the consultation protocol. The self-demarcation of indigenous land Sawré Muybu was proposed by the Munduruku after government delay in the official demarcation. This delay is seen with suspicion by the Munduruku, since the recognized area would be flooded if the hydroelectric plant of São Luiz do Tapajós is implemented. This raises a very important question: what do the Munduruku people expect to achieve with the self-demarcation and how does it impact official decision making about the São Luiz do Tapajós? Another initiative attributed to the Tapajós case is the formulation of a "consultation protocol", determining the terms according to which, how and when the Munduruku should be consulted. This is also of fundamental relevance in understanding the implementation of indigenous peoples' rights, since this was supposedly based on ILO Convention 169 and affects the economic rights of the Munduruku.

[90] See <http://www.ohchr.org/EN/NewsEvents/Pages/DisplayNews.aspx?NewsID=18498&LangID=E> (accessed 27 May 2016).

Like for the case of the hydroelectric plant of Belo Monte, the leading case of the demarcation of *Raposa-Serra do Sol*[91] represents an important background for the São Luiz do Tapajós case as well.

NORTHERN AMERICA

Glamis Gold Ltd. (Claimant) v United States of America (Respondent), NAFTA/UNCITRAL Award, 8 June 2009

(by *Christina Binder*, with the contribution of *Jane A. Hofbauer*)

The *Glamis Gold* award (2009)[92] is one of the recent investment awards touching upon indigenous rights and may be considered a symbolic example of the clash between investors' rights and cultural heritage protection. This award is particularly concerned with the question how regulatory measures aimed at the protection of cultural indigenous sites can be classified from an investor's perspective, and whether such measures amount to a breach of standards of treatment enshrined in the *North American Free Trade Agreement* (NAFTA).

Glamis Gold, a Canadian mining company, was engaged in gold mining operations from 1988 in southeastern California, in an area of the Californian desert near to Native American lands and areas where the Quechan Indian Nation's tribe has a special cultural concern.[93] The mining site was located within the California Desert Conservation Area (CDCA), an area governed by three principles, i.e. *multiple use*, *sustainable yield* and the *maintenance of environmental quality*.[94] In application of these principles a balance is to be achieved between the competing interests of the investor with "other potential uses for the land and the need to protect federal resources".[95] In this context, the CDCA Plan foresees that cultural resources are to "be given the same consideration as other resource values".[96] The Tribunal addressed Glamis Gold's claims for expropriation under Article 1110 NAFTA and fair and equitable treatment (FET) under Article 1105 NAFTA in turn. In the end, it dismissed both claims. In particular, with respect to the FET issue, the Tribunal noted that a change by the government of a decades-old rule grounded on a danger of a "significant, unavoidable adverse impact to cultural resources and Native American sacred sites"[97] was not contrary to the principle of fair and equitable treatment.

The proceedings were marked by a comparatively strong involvement of the affected community, the Quechan tribe, through the filing of two non-party submissions. In addition, the Quechan tribe was allowed to watch the proceedings from a different location with a separate video feed which was not interrupted when the otherwise restricted discussion on the cultural sites and artefacts was taking place. A strong focus of their submissions focused on the question whether Glamis Gold's investment and the regulatory measures taken in response by the United States, were consistent with indigenous rights, i.e. "wider public international law", which they argued was part of the applicable law

[91] See n. 82 above.
[92] *Glamis Gold Ltd. (Claimant) v United States of America (Respondent)*, NAFTA/UNCITRAL Award, 8 June 2009.
[93] Ibid., para. 10.
[94] Ibid., para. 46.
[95] Ibid., para. 48.
[96] Ibid., para. 50.
[97] Ibid., paras. 760-761.

to be considered by the Tribunal established under the UNCITRAL arbitration rules. At the same time, the award by the NAFTA Tribunal paid surprisingly little attention to the submissions by the Quechan tribe and to the role of indigenous interests in the context of foreign investments proceedings. Not only did it point this out explicitly in the opening passages of the award, but it is also evident in its analysis of the substantive arguments of the parties. Thus, the Tribunal repeatedly emphasized that, in light of the balancing exercise states must conduct when dealing with competing interests, its role was limited to subsidiary determination whether these measures were, e.g., a gross or "manifestly arbitrary" denial of justice. Hence, even though the award was, in result, favorable to the Quechan tribe's rights, indigenous rights and concerns played little to no role for the Tribunal's decision.

Tsilhqot'in Nation v. British Columbia (Canada)
(by *Nicole Schabus*[98] and *René Kuppe*)

Tsilhqot'in Nation v. British Columbia[99] was decided by the Canadian Supreme Court on 26 June 2014. It must be considered as a landmark decision concerning indigenous land and resource rights, within a Common Law legal framework. It is a historic decision in that it resulted in the first affirmation of Aboriginal Title in Canada. The case history goes back to the year 1983, when the Canadian province of British Columbia granted a logging permit in a territory claimed by the indigenous Tsilhqot'in people, living in the Interior of the province of British Columbia. The Tsilhqot'in had resisted the decision of the province through blockades and negotiations, and finally filed an action, seeking a declaration of Aboriginal title based on the constitutional protection for Aboriginal Rights provided under subsection 35 (1) of the Canadian Constitution Act (1982), stating that "(t)he existing aboriginal and treaty rights of the aboriginal peoples of Canada are hereby recognized and affirmed". Aboriginal title is a doctrine developed in Common Law countries by jurisprudence, stating that indigenous tenure by Aboriginal Peoples has persisted the assumption of sovereignty by the British colonial empire, which in itself is a problematic concept. In Canada, one of the sources of Aboriginal title is exclusive occupation at the time of assertion of sovereignty, which for British Columbia has been set for 1846 with the Oregon Boundary Treaty. The Canadian Supreme Court set out the following principles for the proof of Aboriginal title in *Delgamuukw v. British Columbia*: "(i) the land must have been occupied prior to sovereignty, (ii) if present occupation is relied on as proof of occupation pre-sovereignty, there must be a continuity between present and pre-sovereignty occupation, and (iii) at sovereignty, that occupation must have been exclusive".[100]

The full application of the test was to be determined in the Tsilhqot'in case whose claim referred to an area in the core of Tsilhqot'in territory of approximately 4,300 square kilometers. British Columbia Supreme Court trial judge Justice Vickers accepted a territorial concept of Aboriginal Title, but he rejected the arguments by the province of British Columbia and the federal government urging a site specific approach, where only specific

intensively used sites such as villages could be subject to Aboriginal Title, as a "postage stamp approach" that was inconsistent with Canadian constitutional law and for that matter international law. Yet that was the very approach that the British Columbia Court of Appeal adopted relying on the rejected "cultural security approach", suggesting that indigenous peoples could maintain their culture solely through recognition of Aboriginal use rights, such as hunting and fishing, throughout the territory, while declarations of title would be limited to small site specific areas such as villages, preferably fenced areas and extensively and proactively used areas, such as "salt licks and buffalo jumps". This approach was unanimously and soundly rejected by the Supreme Court of Canada, which stated that "[t]here is no suggestion in the jurisprudence or scholarship that Aboriginal title is confined to specific village sites or farms, as the Court of Appeal held. Rather, a culturally sensitive approach suggests that regular use of territories for hunting, fishing, trapping and foraging is "sufficient" use to ground Aboriginal title […]".[101] The Supreme Court hence reverted to a territorial concept of Aboriginal Title, arguably going beyond its own previous decisions on that regard. It issued a declaration of Aboriginal Title to a contiguous area of about 1,750 square kilometers that the Tsilhqot'in had historically used and occupied. Aboriginal Rights to hunt, fish and trap had already been accepted in a legally binding manner, for the entire claim area, by courts. The legally binding declaration of Title is actually contained in a map prepared by the trial judge together with a cartographer, using elevations on the plateau, rivers including the spawning grounds for the Chilko salmon run, and other natural features to demarcate the area.

The importance of the Supreme Court of Canada issuing the first declaration of Aboriginal Title in Canadian history cannot be overstated. In previous cases, such as *Delgamuukw*, while upholding the concept of Aboriginal Title, no legal remedy had been granted and the case was sent back to trial. While the Supreme Court in its decision does not explicitly refer to international law, a number of the indigenous interveners made reference to international legal standards, such as the right to self-determination and other specific indigenous peoples' rights. They also included references to Canada's policy of not recognizing indigenous land rights being criticized by international human rights bodies, including by the Inter-American Commission on Human Rights, that Canada lacked effective national remedies in regard to the recognition of indigenous land rights, both in the courts and negotiations, in regard to the Hul'qumi'num Nation,[102] who also intervened in this case before the Supreme Court of Canada. Together, indigenous peoples made it clear that, if they were to be once again denied a remedy, they would take the case before international bodies and this clearly weighed heavily on the Supreme Court of Canada issuing a declaration of title.

The judgment in point also has important implications for a correct understanding of the definition of indigenous rights over land. It strengthens the view that the geographical extent of indigenous land rights must be defined according to traditional patterns of land and resource use, and must not limit indigenous land rights to areas under intense occupation. This should be an important understanding of the land rights articles included in the UNDRIP, Article 26(2) of which states that "[i]ndigenous peoples have the right to own,

[101] See *Tsilhqot'in Nation v. British Columbia*, n. 91 above, para. 42.

use, develop and control the lands, territories and resources that they possess by reason of traditional ownership or other traditional occupation or use, as well as those which they have otherwise acquired". The Tsilhqot'in decision is an important step to show that "traditional occupation or use" should not be defined by a reference to a western understanding of intense land use, but recognize and protect indigenous patterns of stewardship over and use of lands.

The Onondaga Nation and The Haudenosaunee against The United States
(by *Joseph J. Heath, Esq.*, Onondaga Nation General Counsel)

This case study concerns the Onondaga Nation's Land Rights Action, which was summarily dismissed in the federal courts of the United States and the actual, practical problems which the Nation has experienced in gaining any true justice for loss of human rights. The Onondaga Nation is a sovereign Indigenous nation whose original homelands are situated in what is now central New York State, in the United States. The Nation seeks redress for the violation of the human rights of the Onondaga people to their lands, to equal treatment, and to judicial protection. The Nation and its people have a unique spiritual, cultural and historic relationship with the land, which is embodied in the Gayanashagowa, the Great Law of Peace.

The Haudenosaunee Six Nations, including the Onondaga Nation, entered into three treaties with the United States: the 1784 Treaty of Ft. Stanwix, the 1789 Treaty of Ft. Harmer and the 1794 Treaty of Canandaigua. In these treaties, the United States affirmed the sovereignty of the Nation, promised to protect Nation lands, and guaranteed the Nation the "free use and enjoyment" of its territory. Between 1788 and 1822, the State of New York took approximately 2.5 million acres of Onondaga Nation land in violation of federal law and treaties and in violation of the Nation's own law. Today, despite these treaty and statutory guarantees, the Onondaga Nation is in possession of only a small fraction of its legally-protected, original territory. The land currently acknowledged as Onondaga territory under federal law comprises approximately 6,900 acres. The courts of the United States have failed to provide any remedy for this loss of land. The Nation asserted its case at three levels of the federal judicial system: U.S. District Court, the Court of Appeals and the U.S. Supreme Court. The Nation was denied relief at each stage. The federal courts uniformly ruled that they are powerless to provide any remedy. As a result, the loss of Nation lands at the hands of New York State cannot be redressed in the U.S. judicial system. On 29 March 2005, about three weeks after the filing of the Nation's Complaint, the United States Supreme Court ruled, in *City of Sherrill vs. Oneida Indian Nation*,[103] that the doctrines of "laches, impossibility and acquiescence" precluded the Oneida Nation from asserting immunity from real property taxes on treaty protected, reservation land that had been taken by the State of New York in 1795 but subsequently purchased by the Oneidas in the 1990s. Oral argument on the Defendants' Motion to Dismiss was heard by U.S. District Court Judge Kahn, in Albany, New York, on 11 October 2007. Decision was reserved at that time. On 5 August 2010, the Second Circuit Court of Appeals dismissed another Indian land claim based on violations of the Trade and Intercourse Act.[104] On 22 September 2010, Judge Kahn issued a Memorandum Decision and Order that granted the

[103] 544 U.S. 197 (2005).
[104] *Oneida Indian Nation v. County of Oneida,* 617 F.3d 114 (2d Cir. 2010).

Defendants' motions to dismiss and ordered the dismissal of the Nation's Complaint in its entirety, thereby foreclosing the possibility of any judicial relief for New York State's violations of the treaties and federal law. Oral argument was held before a three-judge panel of the court in New York City on 12 October 2012. One week later, on 19 October 2012, the Court of Appeals issued a two page Summary Order and Judgment affirming the District Court's dismissal of the Nation's complaint.[105] In 2013, the Nation's Land Rights Action was summarily dismissed by the federal courts of the United States. Subsequently, on 15 April 2014, the Nation filed a Petition against the United States before the Inter-American Commission on Human Rights.[106]

The loss of control over and access to their traditional hunting, gathering and fishing areas at the hands of the State of New York has deprived the Onondaga people of food and other materials essential to their health and welfare. As a result, the loss of their lands has significantly degraded the health of the Onondaga people; and the loss of their lands has been profoundly disruptive to the Nation's citizens and their health. The loss of Onondaga original territory has also weakened and in some cases severed the Nation's cultural and spiritual ties to Onondaga sacred sites, such as Onondaga Lake, the glacial, kettle lakes in the region of Tully, New York and many others.

The United States domestic legal system's denial of a remedy for breach of the Nation's land rights and treaties is a violation of the Nation's fundamental human rights protected by the American Declaration on the Rights and Duties of Man, the UNDRIP and other rules of customary international and treaty law. In addition, the illegal dispossession of the Nation's lands was in clear violation of the above mentioned bilateral treaties between the United States and the Haudenosaunee Six Nations, the United States Constitution and federal laws of the United States. There is no international forum that has the jurisdiction to enforce any human rights decision against the United States. Additionally, the Inter-American Commission on Human Rights is so severely underfunded and understaffed that cases take far too long for any adjudication or decision. Once a decision is eventually released by the Commission, the United States can simply ignore it, as it has done in other cases won by Indigenous nations. So, the practical result is that no relief is available for the violation of human rights of Indigenous nations by the United States.

The Onondaga Nation recommends that the United States government recognizes the Nation's land rights and fully comply with relevant international legal standards (especially the UNDRIP), removes the doctrine of discovery from its legal jurisprudence, reaches an agreement with the Nation, through discussion with the Nation's leaders and the Nation's chosen representative, on mechanisms by which the United States can fulfill its treaty obligations to the Nation and remedy the violations of the Nation's rights. To the latter end, the government should establish an independent commission to study the violation of treaties between the United States and Indian nations and the subsequent disruption of Indigenous cultures, economies and governments by the United States, as well as adopt any legislative, administrative or other mechanisms to ensure the protection of the Nation's rights.

Fate Control and Human Rights: Local Governance in America's Arctic
(by *Mara Kimmel*)

This case study focuses on land ownership and, more importantly, governance rights of Alaska Native peoples. The extent of sovereign rights to self-government is the result of federal and Alaskan state legislation and the decisions of the court systems, and it is continually evolving. While the Alaska Constitution's text endorses local governance,[107] its practices do not. Alaska's policies of local self-government stand in stark contrast to the lack of authority given to tribal governments. While the urban system of governance is relatively simple, the corresponding rural system is very complex. This "complex non-system" of governance in the rural areas of Alaska creates tremendous obstacles for tribal governments when measured against similarly situated local governments in urban Alaska. The impacts of this disparity are magnified by the unwillingness of the State of Alaska to work with tribal governments. On multiple occasions, for example, the State has litigated against Alaska Native tribes to prevent their exercise of certain aspects of local self-government.[108]

The legislation that aimed to settle aboriginal land claims by Alaska Natives – *Alaska Native Claims Settlement Act* of 1971 (ANCSA) – was rooted in promoting economic opportunities for Alaska Natives and created for profit regional and village corporations to effectuate that goal. One outcome of this land claims settlement, however, was to sever tribal jurisdiction over traditional lands, leading to a situation where they do cannot govern their own territory. The legal solution in ANCSA and other Alaska specific laws and regulations prevents tribal governments from exercising the same sovereign rights over their territory as other indigenous communities, and is thus distinctly different from the self-governance rights other indigenous tribes enjoy in the rest of the United States. To remedy this gap in self-governance, Alaska Natives are attempting to reassert their territorial governance rights via litigation and innovative co-management initiatives. The success of these outcomes has yet to be realized, and depends in large part on the application of legal principles of internal self-governance powers inherent to all indigenous peoples to Alaska Natives.

Two approaches to remedying the loss of governance are advanced: expanding "Indian Country" to support territoriality, and amending federal law to provide for co-management of federal resources by tribes. With respect to the first approach, in May of 2014 the Department of Interior issued a draft regulation allowing Alaskan lands to be returned

---

[107] See Article X, § 1: "The purpose of this article is to provide for maximum local self-government […]".

[108] See, e.g., *Simmonds v. Parks*, 329 P.3d 995 (Alaska 2014) (holding that tribal sovereignty extended to member children, against state objections in the trial court); *Alaska v. Native Vill. of Venetie Tribal Gov't*, 522 U.S. 520 (1998) (holding that ANCSA extinguished Indian country); *John v. Baker*, 982 P.2d 738 (Alaska 1999) (holding that tribal court and state court exercised concurrent jurisdiction over child custody disputes between tribal members). See also *Alaska v. Native Village of Venetie Tribal Government*, 522 U.S. 520 (1998), when the U.S. Supreme Court held that lands conveyed under ANCSA are outside the definition of "Indian Country" and cannot be the basis for sustaining territorial sovereignty.

to trust status, recasting them as "Indian country" capable of supporting tribal governance.[109] As for the second approach, it would consist in amending the *Alaska National Interest Lands Conservation Act* (ANILCA), through the *Alaska Native Subsistence Co-Management Demonstration Act* of 2014 bill.[110] This bill proposes a new co-management structure for the Ahtna region in Interior Alaska. It would amend ANILCA to provide for co-management on traditional lands within this specific region, integrating tribal governance and doing away with the dual system of management currently in place.

To a notable extent, however, successful application of self-governance relies on the willingness of the U.S. and Alaska governments to cooperate and acknowledge those rights. In particular, State support should be accorded to rural governments, including tribal governments, to the same degree as in urban communities. Such support would enhance the capacity of tribal governments to adopt policies that promote human development and fate control.

ASIA

From Declaration to Implementation: The experience of the Subanon in the Philippines with the Operationalization of the U.N. Declaration on the Rights of Indigenous Peoples

(by *Cathal M. Doyle*)

In 1997 the Philippines Congress passed the *Indigenous Peoples Rights Act* (IPRA).[111] This landmark law was heavily inspired by the then draft UNDRIP, effectively incorporating the Declaration's key provisions regarding the recognition of indigenous peoples' territorial, cultural and self-determination rights into the national legislative framework. Among other things, the IPRA affirms the right of indigenous peoples "to use their own commonly accepted justice systems, conflict resolution institutions, peace building processes or mechanisms and other customary laws and practices within their respective communities and as may be compatible with the national legal system and with internationally recognized human rights".[112] The IPRA also established a National Commission on Indigenous Peoples (NCIP), responsible for the "formulation and implementation of policies, plans and programs to recognize, protect and promote the rights and well-being of [indigenous peoples with due regard to their beliefs, customs, traditions and institutions] and the recognition of their ancestral domains as well as the rights thereto".[113] The Act affirms that customary law has primacy within ancestral domains in the context of dispute resolution, with the NCIP serving as an appeal mechanism. This requirement is consistent with the UNDRIP's recognition of indigenous peoples' rights to self-determination and autonomy, to maintain and strengthen their political, legal, economic, social

[112] Ibid., Chapter IV, Section 15.

[113] Ibid., Chapter VII, Sections 38 and 39.

and cultural institutions and to promote, develop and maintain their own juridical systems or customs.[114]

Also in 1997, the CERD Committee issued its General Recommendation No. XXIII on Indigenous Peoples[115] – a document which served to strengthen indigenous peoples' position in negotiations with States on the UNDRIP and would become a key touchstone for State recognition of indigenous peoples' rights. In 1997, the government of the Philippines also submitted a State party report to the CERD Committee, which was to be its last for over twelve years, prompting the Committee to commend its effort in drafting the IPRA, but also to express its concerns in relation to the negative impacts development projects were having on the country's indigenous peoples.[116]

1997 was also the year that the Subanon community located at the foot of Mt Canatuan, on the Zamboanga Peninsula of Mindanao, obtained its Certification of Ancestral Domain Claim (CADC) from the Philippines' Department of the Environment and Natural Resources (DENR), and commenced its engagement with the new procedures for strengthened rights recognition under the UNDRIP-inspired IPRA. This convergence of events offered the promise of a future based on respect for their inherent rights in favour of the Philippines' indigenous peoples, such as the Subanon of Mt Canatuan. At that time the Subanon were involved in a struggle to protect their territories from the encroachment of a junior Canadian mining company, TVI Resources Development Philippines, Inc. (TVIRD). Of particular concern to the Subanon was the company's intent to develop an open pit gold mine thereby, destroying the peak of their sacred mountain, Mt Canatuan. From 2004 on-wards the Subanon adopted an alternative strategy based on two mutually reinforcing rights assertion approaches. The first approach was to invoke their own customary legal system. This resulted in the issuance of two rulings, one against the State in 2004 and the other against the company in 2007, for violations of Subanon customary law. The second approach adopted by the Subanon was to focus on international fora in which to seek remedies for their grievances. In particular, they turned to the CERD Committee for assistance in 2007. This opened a long dialogue between the CERD Committee, the government and the community, as a result of which the Committee requested several times that the Government provide it with information in relation to steps taken to implement its recommendations. On the one hand, the CERD Committee recognized that positive developments had occurred; in particular, the Committee welcomed "the recognition and the protection by the State party of traditional indigenous justice and conflict resolutions mechanisms" and its "statements that it wishes to respect the customary practices […] of the Subanon people",[117] also placing considerable emphasis on the role of Subanon customary law in free, prior and informed consent processes and in relation to ensuring culturally appropriate reparations. On the other hand, however, as of September 2015 the government has not yet responded to CERD Committee's request for

[114] UNDRIP Articles 5 and 34.

[115] See n. 27 above. For an assessment of the background to CERD Committee's drafting of General Recommendation XXIII see C. Doyle C., *Indigenous Peoples, Title to Territory, Rights and Resources: The Transformative Role of Free Prior and Informed Consent*, London, 2015, pp. 166-7.

[116] CERD Committee Concluding Observations, Philippines, U.N. Doc. CERD/C/304/Add.34 of 15 October 1997, paras. 9 and 17.

[117] See Concluding Observations, Philippines, U.N. Doc. CERD/C/PHL/CO/20 of 23 September 2009, paras. 7 and 25.

updated information or taken the necessary measures to implement its recommendations in relation to reparations due to the Subanon.

This reality reveals that, to a notable extent, the post-IPRA relationship between indigenous peoples, the Philippine State and mining companies seeking to operate there continues to be dominated by power rather than by law. The failure to implement the law in accordance with its spirit and intent is simply a reflection of the extent of the power imbalances in governance structures at local, national, regional and international levels, all of which act in favour of mining companies to the detriment of indigenous peoples' enjoyment of their rights. This reflects a general situation in the context of which the rights of Philippine indigenous peoples are recognized under the law but not yet fully realized in practice.

AFRICA

Centre for Minority Rights Development (Kenya) and Minority Rights Group International (on behalf of Endorois Welfare Council) v. Kenya

(by *Ebun Abolarin*, with the contribution of *Alexandra Tomaselli*)

The ownership claim of the Endorois to their ancestral lands in the Lake Bogoria area is well known to the neighbouring tribes because the sites were used seasonally for cultural festivities that involves all Endorois form the whole region. Though Kenya has no domestic law or instrument with express mention of the rights of indigenous peoples, the land had been enjoyed without any disturbance for centuries, even under the British colonial administration. However, the ownership and habitation of that territory provided a close link with the land, in which the Endorois practised a sustainable way of life until dispossession through the creation of the Lake Hannington Game Reserve in 1973, and a subsequent re-gazetting of the Lake Bogoria Game Reserve in 1978 by the Government of Kenya. The Endorois were promised compensation of fertile land for 400 families after the creation of the game reserve, and each of the 400 families was to be paid 3,150 Kenyan Shillings as for relocation. However, only 170 families received some money, in 1986. The community claimed justice before Kenyan domestic courts, but it was denied. Therefore, their case was brought before the African Commission on Human and Peoples' Rights. The Commission rendered its decision on 25 November 2009,[118] recognizing the intrinsic guiding value of the UNDRIP's standards and finding that Kenya violated Articles 1 (obligation to respect rights), 8 (freedom of conscience and religion), 14 (right to property), 17 (right to take part in cultural life and to promotion and protection of morals and traditional values), 21 (peoples' rights to freely dispose of their wealth and natural resources) and 22 (peoples' right to their economic, social and cultural development) of the 1981 *African Charter on Human and Peoples' Rights*.[119] Therefore, the Commission recommended the government of Kenya to: recognise rights of ownership to the Endorois and return their ancestral land to the community; ensure unrestricted access to Lake Bogoria and surrounding sites for religious and cultural rites and for grazing their cattle to the Endorois community; pay adequate compensation to the community for all the loss suffered; pay royalties to the Endorois from existing

[118] See Communication No. 276/2003, *Centre for Minority Rights Development (Kenya) and Minority Rights Group International on behalf of Endorois Welfare Council v. Kenya*, n. 20 above.
[119] Available at <http://www.achpr.org/files/instruments/achpr/banjul_charter.pdf> (accessed 27 May 2016).

economic activities and ensure that they benefit from employment possibilities within the reserve; grant registration to the Endorois Welfare Committee; engage in dialogue with the community for the effective implementation of these recommendations; report on the implementation of these recommendations within three months from the date of notification.

In order to persuade Kenya to implement its recommendation, in 2013 the Commission adopted a resolution calling on the Republic of Kenya to implement the Endorois decision,[120] urging the government to comply with its obligations under the African Charter, including giving effect to the rights and freedoms guaranteed therein, as well as to inform the Commission of the measures proposed to implement the Endorois decision, and more particularly, the concrete steps taken to engage all the players and stakeholders, including the victims, with a view to giving full effect to the decision. The government of Kenya has so far failed to honour its obligations arising from the Commission's communication, but, in its Combined Periodic Report (CPR) of 2014[121] addressed most of the issues enumerated as violations against the Endorois Community under its 2010 Constitution. In the CPR, Kenya claimed that, in the last few years, it had "made remarkable progress in safeguarding the rights, freedoms and duties of its people [including indigenous peoples and socially disadvantaged persons] as enshrined in the Charter",[122] as well as that all the rights assumed as violated by the Commission in its recommendation are guaranteed and protected by its 2010 Constitution, hence they may be fully enjoyed by the Endorois who are nomadic pastoralist within their traditional lands. With respect in particular to the right to property, Kenya emphasized that Article 40 of the Constitution allows every person the right to acquire and own property, and that compensation is due to persons for land compulsorily acquired by the government; compulsory acquisition has to be only for public use and the Government has to pay promptly and in full.[123] Despite the statements included in the CPR, and the effort of the Government of Kenya in late 2014 to set up a task force dedicated to the implementation of this ruling,[124] so far Kenya has failed to implement the *Endorois* decision as recommended by the African Commission.

AFTRADEMOP and Global Welfare Association (on behalf of the Moko-oh Indigenous Peoples of Cameroon) v. Cameroon
(by *Ebun Abolarin*)

The Association for the Reconstruction and Development of the Moko-oh Peoples of Cameroon (AFTRADEMOP) – an agro-pastoral (minority) people of Upper Moghamo, a clan in Batibo Sub-division of the North-west of Cameroon – and Global Welfare Association on behalf of the Moko-oh indigenous peoples of Cameroon filed a complaint

[120] Resolution 257 of the African Commission on Human and Peoples' Rights, meeting at its 54th Ordinary Session, held in Banjul, The Gambia from 22 October to 5 November 2013, available at <http://www.achpr.org/sessions/54th/resolutions/257/> (accessed 27 May 2016).
[121] CPR – Republic of Kenya, Combined 8th-11th Periodic Report on the African Charter on Human and Peoples' Rights, November 2014, available at <http://www.achpr.org/files/sessions/57th/state-reports/8th-11th-2008-2014/kenya_state_report_eng.pdf> (accessed 27 May 2016).
[122] Ibid., para. 1.
[123] Ibid., para. 100.
[124] Minority Rights Group International (MRG), "Kenyan Task Force formed to implement the 2010 Endorois ruling", 29 September 2014, available at <http://minorityrights.org/2014/09/29/kenyan-task-force-formed-to-implement-the-2010-endorois-ruling/> (accessed 27 May 2016).

to the African Commission on Human and Peoples' Rights on 9 February 2007.[125] Though the Complaint is against the State of Cameroon, the oppression and domination was perpetrated by the Bali-Nyonga, a migrant tribe from Chamba in the North of Cameroon. The Moko-oh alleged that the domination, enslavement and oppression began during the colonial era with the German and British administration, which was compounded by series of raids in 1914, at the beginning of the 1st World War. At that period, the land of the Moko-oh was invaded by the Bali-Nyonga, a local tribe, who chased them out of their land to different parts of the country, while their oil and wine palm plantation were demolished. But in 1928 a delimitation of the boundary between the Bali-Nyonga and the Moko-oh was carried out by the District Officer of the Bamenda Division, which was further inspected and confirmed by the Provincial Resident of the Cameroon Province in Buea in 1929. But the outright objection of the Bali-Nyonga to this officially set boundary prevented the Moko-ohs from returning to their village. This refusal of the Bali-Nyonga to accept the 1928 boundary adjustment led to incessant persecution of the Moko-oh in order to drive them perpetually out of their ancestral land. Thus, the agitation of the Moko-oh to regain their land through all available constituted institutions in Cameroon began. The Complainant's petitions before administrative authorities, seeking redress to repossess its land, was without success, and all Moko-oh community's efforts to regain their land and property have been frustrated by the Cameroonian authorities. The violations alleged by AFTRADEMOP in its complaint concern Articles 3 (equality of all individuals before the law), 4 (right to life and integrity of the person), 5 (right to respect of human dignity), 10 (right to free association), 11 (right to free assembly), 12 (right to freedom of movement and residence), 14, 19 (right to equality of all peoples), 20 (peoples' right to existence and freedom), 21, and 24 (peoples' right to a general satisfactory environment favourable to their development) of the African Charter. The ultimate purpose of the complaint is to persuade Cameroon to return the Moko-oh their traditional territories on the basis of the established pre-independence boundary delimitation of 1928 and recognize them under domestic law, to rehabilitate the Moko-oh villages and allow the resettlement of the community there, as well as to protect the Moko-oh from further discrimination and oppression.

San and Bakgalagadi peoples' land rights and the case of the Central Kalahari Game Reserve in Botswana
(by *Maria Sapignoli*[126], with the contribution of *Robert K. Hitchcock*[127], *René Kuppe* and *Alexandra Tomaselli*)

This case study concerns the eviction of San and Bakgalagadi people, who sued the Government of Botswana and won two cases before domestic Courts in 2006 and 2011. The Central Kalahari Game Reserve in Botswana was established in 1961 to protect the wildlife resources and to guarantee the hunter-gatherer San people access to land, and, thus, their means of livelihood. Over time, the lifestyle of the San people and other

residents of the Game Reserve changed. In 1986, the Government decided to relocate all people residing within the Reserve to outside settlements on the grounds that the communities' lifestyles were considered to be no longer consistent with the objectives of the Reserve, as they were allegedly depleting the wildlife and natural resources of the Reserve. The first set of removals took place in 1997. In 2002, the Government ceased provision of basic and essential services to the inhabitants who remained in the Game Reserve, and removed the pipe and capped the borehole that brought water to inhabitants of the Reserve. Hence, 239 San and Bakgalagadi individuals, who had lived in the Reserve, lodged an urgent application with the High Court of Botswana, seeking an order declaring the termination of basic and essential services by the Government unlawful and unconstitutional, and declaring the Government's obligation to restore these services and their access to the lands and resources within the Reserve. In December 2006, the High Court of Botswana, in the case of *Roy Sesana v. the Attorney General*, held that the "[a]pplicants were deprived of [possession of the land, which they lawfully occupied] by the Government forcibly or wrongly and without their consent",[128] and that the applicants have the constitutional and legal rights to hunt in the Reserve. Following the High Court's decision, the government allowed to return to the Reserve only the applicants to the Court case. In addition, the government stated that it is not obligated to provide access to water in the Reserve and that it will not permit the inhabitants to gain access to water through the use of the Mothomelo borehole. Later, on 27 January 2011, the San people won an appeal against the Government in the Botswana Court of Appeal.[129] The Appeal Judges quashed the previous ruling of Justice Walia that denied people access to water on their ancestral land and referred to Kalahari people's plight as "a harrowing story of human suffering and despair caused by a shortage of water in the harsh climatic conditions of the Kalahari Desert".[130] Furthermore, the Government was ordered to pay the costs of the San people's appeal.

The two decisions just described certainly represent positive developments in terms of compliance with the standards set by the UNDRIP. So far, however, the judgements have not been implemented by the government of Botswana. In February 2015 Roy Sesana, first applicant in the 2006 case, met with President Khama. At the end of this meeting the President decided to direct several ministers to go to the central Kalahari and discuss the issues that people in the Central Kalahari Game Reserve were concerned about. Following the visit, the ministers made several promises concerning initiatives aimed at facilitating life in the Reserve (including the commitments of providing a mobile health clinic for the settlements in the reserve, of transporting children living in the Reserve back and forth to school, or to provide pensions to the elderly people qualified to receive them), but, as of March 2016, none of these promises have been acted upon. As a consequence, it cannot be said that at the moment of this writing the applicants have been completely satisfied by the outcome of the two cases, since they still lack hunting rights, access to water in

some communities, and the ability to move in and out of the reserve freely and to stay there as long as they wish.

Realizing Land Rights of the Nuba People in Sudan
(by *Jernej Letnar Černič*)

This case study studies deals with land rights of the Nuba people, which are an indigenous ethnic group living in the area of the Nuba mountains in Southern Kordofan in Sudan. They include a variety of tribes in the Nuba mountains. The land is central to the Nuba peoples' cultural existence, language, customs, identity, and socio-economic survival, and is critical to the community's survival. Customary laws have traditionally regulated land tenure in the Nuba mountains. However, the Sudanese land tenure system has undermined the ancestral land rights of the Nuba people.[131] In particular, the government has seriously disregarded the Nuba peoples' ancestral lands and their individual and collective human rights. The Nuba peoples have been pushed "systematically to the margin of their customarily owned land".[132] Most recently, *The New York Times* reported, on 3 July 2011, that the Sudanese army has "been relentlessly pounding the Nuba Mountains from Russian-made Antonov bombers for weeks […] Hundreds of civilians have been killed, including many children. Bombs have been dropped on huts, on farmers in the field, on girls fetching water together, slicing them in half with buckets in their hands".[133] So far, no case or claim has been brought to enforce Nuba's land rights or their human rights generally speaking, and their current situation constitutes an evident violation of Sudan's international obligations towards indigenous peoples. Therefore, the government of Sudan should be urged to strengthen its national judicial system, as well as to ratify the relevant international treaties – including the 1966 *Optional Protocol to the ICCPR*[134] – so as to ensure access to justice in favour of the Nuba for the violations of their land rights and other human rights of which they are victim.

OCEANIA

Te Urewera: Return and Co-Management of Traditional Lands of the Tuhoe People, Aotearoa New Zealand
(by *Catherine J. Iorns Magallanes*)[135]

Te Urewera National Park was a large park created from ancestral lands of the indigenous Tuhoe people. As part of the New Zealand attempt to provide redress and reparations for historic grievances including such land takings, agreement was recently reached whereby the New Zealand government passed legislation removing the national park status, creating a separate legal personality which holds title to its own lands, and enabling Tuhoe

[135] This text is an extract from Catherine J. Iorns Magallanes, "Maori Cultural Rights in Aotearoa New Zealand: Protecting the Cosmology that Protects the Environment", 21 *Widener Law Review* 2, 2015, pp.273-327.

to co-manage the new entity, Te Urewera. The Tuhoe people argue that it is only through the exercise of their traditional relationship with the land and its natural environment that they would be able to exercise their spiritual authority through guardianship. The Crown was unable to agree to transferring ownership of a national park to a Maori tribe, but instead offered Tuhoe the solution of legal personality for the park, whereby no one owned the park but it owned itself. It would remain protected, with public use, akin to a national park, but it would maintain its own separate identity and be governed very differently, with significant Tuhoe input and in a way which better respects Tuhoe cosmology and relationship with the lands. This agreement was finalised in March 2013 and legislation to implement it passed in July 2014.[136] The purpose of the Act reflects various aspects, particularly "to establish and preserve in perpetuity a legal identity and protected status for Te Urewera for its intrinsic worth, its distinctive natural and cultural values, the integrity of those values, and for its national importance, and in particular to — (a) strengthen and maintain the connection between Tūhoe and Te Urewera; and (b) preserve as far as possible the natural features and beauty of Te Urewera, the integrity of its indigenous ecological systems and biodiversity, and its historical and cultural heritage; and (c) provide for Te Urewera as a place for public use and enjoyment, for recreation, learning, and spiritual reflection, and as an inspiration for all".[137] As for the principles governing the implementation of the Act, they focus primarily on different aspects of environmental protection, but are also protective of indigenous relationships with the park, and of public access for the benefit of all New Zealanders.[138]

EUROPE

The Rönnbäcken Case

(by *Maja K. Eriksson*)

The Rönnbäcken case deals with a concession which has been granted to an international corporation (Nickel Mountain AB) to establish three open pit mines (K No. 1-3) to be used for about 27 years within a traditional reindeer herding territory, without asking for and receiving the consent of the Sámi village Vapsten. The members of Vapsten have officially declared that they have no intention whatsoever to offer their consent to the mining project and to the corporation to entry on the territory in question. The refusal to give their consent should have some implications, e.g. that the activities should be discontinued, but the Swedish laws and the ways that authorities interpret them have not granted any protection to the Sámi in the area. Sámi did complain on the basis of the mining code but the government rejected their claim. For this reason, the Sámi made an application comprising an urgent request for interim measures, which is a tool for preventing human rights violations and irreparable damage, to the CERD Committee in September 2013. The claim was presented by the Sámi Council together with a Sámi community (Vapstens sameby). It was based on the assumption of the Vapsten's members (16 persons) that the decision to grant permission for the mine constitutes a violation of the right to property in conjunction with an arguable claim of discrimination, and a violation of the right to effective remedy, in combination with the right to equal treatment

before tribunals, in breach of, respectively, Articles 5(d)(v), 6 and 5(a) of the Convention on the Elimination of All Forms of Racial Discrimination. At the time of writing, the communication is still pending.

It is to be noted that in Sweden, a dualist country, courts are not used to apply any other international human rights instrument than the 1950 *European Convention on Human Rights*,[139] which is directly applicable law. Unfortunately, so far the European Court of Human Rights has not shown particular sensibility (contrary to other human rights bodies, e.g. the IACtHR) as regards the application of general human rights provisions to indigenous peoples. This explains why there is a clear discrepancy between what international law requires in terms of indigenous peoples and how domestic law has been interpreted and applied in Sweden. Also, domestic law presently in force in Sweden is not supportive of Sámi land rights, and may therefore have severe and adverse impact on reindeer herding. Yet, there are positive recent signs within the Swedish legal court system paying more attention to international law standards related to indigenous peoples.

Case Study of Norway: How Norway's International Law Obligations vis-à-vis the Sámi Indigenous Peoples' Land Rights have been Implemented in Practice
(by Øyvind *Ravna* and *Timo Koivurova*)

This case study concentrates on how land rights of Sámi indigenous people in Norway have been identified and given legal recognition, in particular in the northernmost Finnmark County. Norway was the first country in the world to ratify ILO Convention 169, in 1990,[140] as, and, as required by the Convention, in 2005 enacted the *Finnmark Act*[141] to, *inter alia*, identify and recognize, through specific procedures, indigenous specific Sámi land and water rights within that county. The fact that Norway has ratified and implemented ILO Convention 169 in its domestic law is notable also for the reason that the other countries where Sámi also live (Finland, Sweden or Russia) have not ratified the Convention nor have they tried to establish any procedures to investigate and recognize Sámi land and water rights.

The *Finnmark Act* incorporates ILO Convention 169, which in Article 8(1) establishes that, "in applying national laws and regulations to the peoples concerned, due regard is to be given to their customs or customary laws". To this purpose, the Act is grounded on the assumption that, when establishing special procedures for clarifying land ownership by the Sámi, their customs and legal opinions should be taken into account, basing on applicable national law. With a view of implementing ILO Convention 169 (particularly Articles 14 and 15, on land rights), Norway has transferred the ownership of 95% of the lands and waters of Finnmark county to its residents; they are administered by the so called Finnmark Estate, consisting of 3 members appointed by the Sámi Parliament and 3 by the Finnmark County Council

The main procedural tool established by the *Finnmark Act* is a commission (the Finnmark Commission) mandated to investigate and adjudicate Sámi land and water rights in

[139] *CETS* No. 005.
[140] See n. 22 above.
[141] *Act No. 85 of June 17, 2005 relating to Legal Relations and Management of Land and Natural Resources in the County of Finnmark*, available at <http://www.wipo.int/wipolex/en/details.jsp?id=11129> (accessed 27 May 2016).

Finnmark. In addition, a special tribunal (The Uncultivated Land Tribunal of Finnmark) has the task to settle disputes concerning such rights arising from the investigation of the Commission. These procedures, however, are not reserved to the Sámi, but are open to all Finnmark County residents, circumstance which is being criticized.

In principle, Norway has created a legislative framework (although only for Finnmark) which should be able to process claims of immemorial ownership and use rights of indigenous Sámi. Unfortunately this is not the case. In fact, in the five cases where the Finnmark Commission has so far provided a report, it has not taken appropriately into account Sámi customary law, or oral evidence, and has mostly proceeded from the basis that Norway has by now established legal ownership to these lands. Only in one case, in the small abandoned coastal Sámi village of Gulgofjord, the Commission has found that local people have acquired ownership to an outlying area of 30 square kilometers. However, the case was not of any practical significance, since the Commission concluded that the owners (mostly successors of coastal Sámi living there up to 1970) would need to move back to such abandoned village, a roadless village by the ocean, to acquire the title. In the four other investigation fields, the Commission has not followed what the legislature stipulated in the Finnmark Act, namely, the importance of Sámi use of lands or Sámi customary law. Instead, it has found that governmental activities, rather than the local, informal management of natural resources, are of law-making significance. As a consequence, Norway has received rather hash criticism from the CERD Committee, which has noted, among other things, that "there remain significant gaps in translating the legal recognition into practice, thus resulting in reality in limited recognition and protection of rights over their lands".[142]

The behaviour of the government of Norway is also in contravention of Article 27 ICCPR,[143] incorporated into Norwegian Law by the 1999 *Human Rights Act*,[144] with higher authority than an ordinary Act of the Parliament. Article 27 ICCPR is of particular interest for this case study, especially in light of the interpretation given to it by the Human Rights Committee,[145] which conceives the provision in point as the substantial basis for a minority's culture, including, e.g., a particular way of life associated with the use of land resources. In relation to the Sámi, this means that lands, pastures, waters, and other natural resources of importance for traditional livelihoods enjoy legal protection against interference by the government that could threaten the exercise of Sámi culture and livelihood – both for individuals and communities. In addition, Article 27 ICCPR implies an obligation by the government to identify lands of indigenous peoples, further strengthening Sámi land rights. The Norwegian government supports this interpretation.

Land and Fishing Rights of Indigenous Peoples in Russia
(by *Federica Prina*[146] and *Alexandra Tomaselli*)

In the Russian Federation, 46 peoples have been legally recognized as "small-in-number indigenous peoples of the North, Siberia and the Far East". Russia has not ratified ILO Convention 169, and abstained from voting for the UNDRIP. Regarding the former, the Russian Parliament held two hearings on its potential ratification in 1994 and in 2006, but both ended with a rejection based on the assumption that the Convention is incompatible with Russian legislation. As to the latter, during its second Universal Periodic Review in 2013, Russia stated that it had no intention to approve or endorse the UNDRIP, affirming that it already complied with the standards enshrined in it. Indigenous peoples are constitutionally recognized in Article 69 of the 1993 Constitution of the Russian Federation, stating that "[t]he Russian Federation shall guarantee the rights of the small-in-number indigenous peoples in accordance with the universally recognized principles and norms of international law and international treaties of the Russian Federation". This article was legally implemented by the adoption of three federal laws, which specifically apply to indigenous peoples, namely the Laws "On Guarantees" (1999), "On *Obshchinas*" (2000), and "On Territories" (2001).[147] Formally, these laws provide indigenous peoples with a number of individual and collective rights, guaranteeing, *inter alia*, the right to freely use land and renewable natural resources in the territories they traditionally occupy, and areas where they engage in traditional economic activities ("On Guarantees", Article 8, para.1). However, problems seem to lie in the effective implementation of the laws or their constant amendment. For instance, Article 11 of the original text of the Law "On Territories" stated that the use of territories of traditional natural use (in Russian: *Territorii Traditsionnogo Prirodopol'zovaniya*, hereinafter TTP) shall be free of charge. However, the Russian government has undermined the right of the indigenous peoples to free land use by amending Article 11 through Federal Law No.118-FZ of 2007. It has also failed to designate such TTP at the federal level. Regarding fishing rights, Article 25 of the Russian Federal Law No.166-FZ of 2004 "On fishery and the protection of biological water resources" foresees an exception clause for indigenous peoples from the requirement of holding a fishing permit, when fishing is carried out to satisfy subsistence needs and follows traditional practices at the level of the indigenous community. This provision is also poorly applied.

At the same time, indigenous peoples have recently successfully litigated to uphold their fishing rights before domestic Russian courts, in order to guarantee the community's livelihood. In some cases, Russian courts have appeared biased and given reasons for concern, showing that the Russian judiciary is not always fully independent, and there have been instances of judges being subjected to pressure from various actors. At the same time, in other cases Russian courts (including the Supreme Court) have provided

[146] School of Social and Political Sciences, University of Glasgow (Scotland).

[147] Respectively, Law No.82-FZ "On Guarantees of the Rights of Small-in-Number Indigenous Peoples of the Russian Federation" ("On Guarantees"), adopted in 1999; Law No.104-FZ "On General Principles of the Organization of *Obshchinas* of Small-in-Number Indigenous Peoples of the North, Siberia and the Far East of the Russian Federation" ("On *Obshchinas*"), adopted in 2000; and Law No.49-FZ "On Territories of Traditional Nature Use of the Small-in-Number Indigenous Peoples of the North, Siberia and the Far East of the Russian Federation" ("On Territories"), adopted in 2001.

some protection to indigenous peoples, ruling on a number of indirect or direct safeguards. First, they have affirmed that settlements of indigenous peoples shall be taken into consideration prior to the elaboration and issuing of documents on fishing grounds used for industrial fishing.[148] Secondly, they have guaranteed a (fairer) procedure in the bids for both hunting and fishing licenses, thereby indirectly underlining how indigenous peoples may be easily excluded from such tenders.[149] Thirdly, they have stressed that indigenous peoples have the right to pursue their traditional lifestyle and economic activity, as well as to access land free of charge.[150] Fourthly, one court of second instance directly referred to the exception clause for indigenous peoples from the requirement of holding a fishing permit, when fishing is carried out to satisfy subsistence needs and follow traditional practices.[151] Finally, the Constitutional Court of the Republic of Sakha (Yakutia), in its ruling of 2014, upheld indigenous peoples' right to priority in the exploitation of wildlife and referred to mechanisms of settlement in cases of land disputes that take into account the culture of indigenous peoples.[152] In these cases, the courts have observed, although by no mean explicitly, the relevant standards contained in the UNDRIP. We may therefore conclude that a few of the standards of the UNDRIP regarding indigenous peoples' land and fishing rights have been (partially) echoed in Russian Federation's domestic jurisprudence, although it is very difficult to establish whether Russian courts may have been aware of such standards. This ultimately supports the argument of the universal value of the UNDRIP.

In practice, sometimes indigenous peoples face many difficulties in bringing their cases to courts, which suggests that many violations of their rights are often ignored; and, when cases are adjudicated by courts, it remains unclear whether the resulting rulings are fully executed. At the same time, however, Russian courts may play a significant role in the protection of indigenous peoples, as shown by the cases just summarily described. Furthermore, the Law "On Guarantees" states at Article 14 that "[indigenous peoples have] the right to judicial defence of their ancestral lands, traditional way of life, economic activity and traditional practices […] In the consideration by courts of cases involving indigenous peoples […] the traditions and customs of these peoples can be taken into account, when they do not contradict federal legislation and the laws of the subjects of the Russian Federation. For the effective judicial protection of the rights of indigenous peoples, authorised representatives of small-in-number peoples can participate in the said judicial defence". Therefore, the members of indigenous communities and their associations are guaranteed by law a special regime of legal protection, with the participation of members of these groups themselves, so as to ensure the fairness of proceedings.

4. Overall Assessment and Preliminary Conclusion[153]

The analysis of the case studies just presented has drawn an overall picture looking like a double-sided coin.

On the one hand, only a few cases are characterized by blatant violations of international legal standards applicable to indigenous peoples. In most cases, indigenous peoples' rights are actually recognized by States, especially at the level of the legislature and the judiciary. This consideration applies not only as regards States parties to ILO Convention 169, but more generally to the majority of States considered in this report, irrespective of whether or not they have ratified the said convention. This further confirms the status of the main international legal standards concerning the rights of indigenous peoples as principles of customary international law, with respect to which the State behaviour just described attains the role of practice accompanied by *opinio juris*. The fact that in some cases violations take place do not militate in any way against this conclusion. In fact, as noted by the ILA Committee on the Rights of Indigenous Peoples, quoting the ICJ, "'for a rule to be established as customary, the corresponding practice must [not] be in absolutely rigorous conformity with the rule", on the condition that 'instances of State conduct inconsistent with a given rule should generally have been treated as breaches of that rule'. The fact that the said negative examples are actually treated as violations is demonstrated by the univocal and virtually unanimous condemnation of them by the international community, including U.N. bodies".[154] In fact, in virtually all cases discussed in the previous section, the existence of a State obligation to respect the said standards is unanimously and unquestionably confirmed by international courts and other human rights monitoring bodies. Even when the position of the latter courts and bodies "is based on the prospective violation that the behaviour in point may produce with respect to obligations arising from treaties binding the State concerned, the multilateral treaties pertinent to indigenous peoples' […] rights – taken as a whole – form a thick network of obligations which affect virtually every government in the world".[155]

On the other hand, the dark side of the coin is represented by the rather unsatisfactory degree of practical implementation and effective realization of the rights of indigenous peoples, especially on the executive and administrative level, which characterize a good number of the case studies described in the previous section. One might assert that this is a fate characterizing human rights generally speaking, as at the present stage of evolution of international human rights law the effective degree of implementation of either human rights rules in general or decisions of human rights monitoring bodies in particular is in many ways problematic at the global level. It is true that the phase of the implementation of the existing standards in daily reality is the more complicated one to achieve in practice, as it is influenced by a number of meta-legal factors, including economic,

[153] This Section has been written by Federico Lenzerini, Co-Rapporteur of the Committee. As it is made clear in the title of this section, the conclusions drawn herein are only preliminary and based on the case studies assessed by the Committee so far. These conclusions, therefore, may be subject to revision in the course of the future work of the Committee.

[154] See Final Report, "Sofia Conference (2012)", p. 27, quoting ICJ, *Military and Paramilitary Activities in and against Nicaragua (Nicaragua v. United States of America)*, Merits, Judgment of 27 June 1986, *ICJ Reports*, 1986, p. 14, para. 186.

[155] See ILA Committee on the Rights of Indigenous Peoples, Final Report, "Sofia Conference (2012)", p. 27.

social, cultural and political considerations. The fact remains, however, that the phase of implementation is the most important one to give effectiveness to human rights – i.e. to make it possible that human rights, including indigenous peoples' rights, are actually and fully enjoyed by the intended beneficiaries of the relevant rules. In fact, recognizing and proclaiming human rights on paper is not enough, as they must find realization in the real world. It is true that some lack of implementation does not allow to cast doubts on the actual existence and validity of the relevant standards as rules of international law which States are bound to respect and to which they are obliged to give effectiveness. However, if these standards are not properly implemented, human rights (including indigenous peoples' rights) fail to achieve their paramount purpose, i.e. to ensure their *effective enjoyment* by individuals and communities.

The preliminary conclusion which can be drawn from the work carried out so far by the present Committee is twofold. Indeed, on the one hand, further developments in the field of international law on indigenous peoples are necessary in order to remove and prevent the situations that still exist in the world characterized by blatant violations committed by States in breach of legal standards existing in the field. On the other hand, it is at the same time indispensable to work on the phase of implementation, beginning from promoting a general awareness that such a phase is fundamental for ensuring effective realization of human rights. Too often, in fact, experts, practitioners and even common people celebrate domestic and international judgments adjudicating indigenous peoples' rights as huge victories, but then they lose sight of the phase of implementation, *de facto* leaving some governments free to continue to deny such rights at the political level through not properly implementing the relevant judicial decisions.

5. Future Work of the Committee

In view of the 2018 Biennial Conference of ILA, when the mandate of the Committee will expire, we plan to concentrate on the following activities:

- further examination of already assessed case-studies which at present are still pending;
- selection and study of other cases of interest for our research;
- investigation of the legal, quasi-legal and practical barriers blocking the road from international legal standards to effective protection in a number of areas of the world;
- elaboration of suggestions and recommendations (including, if opportune, suggestions and recommendations addressed to specific States with respect to particular cases) aimed at removing and preventing violations of indigenous peoples' rights by States;
- elaboration of suggestions and recommendations for improving the phase of implementation of domestic and international decisions adjudicating and/or affirming the rights of indigenous peoples;
- identification and selection of *best practices* relating to countries that have, or are attempting to, implement UNDRIP (and other relevant instruments') standards and provisions, and evaluation of how such practices could be applied to other areas, taking into account existing cultural and social differences;
- definition of strategies which might be applied worldwide by legal researchers and activists;

- preparation of suggestions and recommendations for involving the private sector, including national and multinational enterprises, in the elaboration and realization of concrete strategies for making indigenous peoples' rights – especially land rights – effective;
- elaboration of final conclusions based on a wider range of case studies.

IMPLEMENTATION OF THE RIGHTS OF INDIGENOUS PEOPLES

WORKING SESSION

Tuesday, 9 August 2016, 2.00pm – 6.00pm

Chair: Dr Patricia Conlan (Ireland)

The Chair welcomed attendees and gave the floor to the Chair of the Committee to talk briefly about the Committee and its work.

Professor Willem van Genugten (Netherlands) introduced Mr Rafael Soares Leite (Brazil), Professor Siegfried Wiessner (USA), Professor Christina Binder (Austria), Professor Dwight Newman (Canada) and Professor Rainer Hofmann (Germany) as members of the Committee, who were present. Professor van Genugten noted that the first Committee on the Rights of Indigenous People commenced its work with Professor Wiessner (USA) as chair. This operated for six years and sought to clarify the legal status of the 2007 *Declaration on the Rights of Indigenous Peoples* (UNDRIP). UNDRIP was among the most important documents today, with global relevance for the rights of indigenous peoples. The Committee decided to analyse each article in UNDRIP. This was with a view to determining: to what extent the articles reflected customary international law; to what extent they could be used as a source of law; and to what extent they could be used as standards (including in the context of non-judicial dispute settlements). The Committee clearly defined the legal status of UNDRIP. Professor van Genugten noted that, given that declarations are not binding (documents), the division between binding and non-binding was irrelevant. The two ways of reasoning this were:

- several articles of UNDRIP reflected customary international law, and in international law, customary international law was equally as important as treaty law, and
- in UNDRIP, one article stated specifically that countries that voted in favour of UNDRIP were bound by it.

Professor van Genugten elaborated further, by means of an example from a case, on how binding law could be created by various means.

Professor van Genugten noted that, when UNDRIP was initially adopted, there were only four votes against it. Those four States had subsequently explained that their opposing votes no longer applied. UNDRIP could now be seen as one with special status.

Professor van Genugten referred attendees to the current Committee's report, which provided a summary of the work done by the Committee.

Professor van Genugten noted that the next step that a lawyer would follow would be to clarify the standards by posing a key question, enquiring whether or not States lived up to these standards, by asking to what extent the standards were implemented, not only on (policy) paper, but also to what extent, in practice, on the ground. The Committee then decided that the key question of the mandate would be to determine to what extent indigenous peoples worldwide had knowledge of international law, and if so, whether they used legal instruments / quasi legal instruments to solve their problems.

The next step taken by the Committee was to address the question as to whether indigenous peoples had knowledge of international law. The Committee looked at cases

worldwide, with a view to highlighting this perspective. This resulted in the Committee identifying a total of 41 cases globally. The Committee then invited members to begin analysing the cases identified by the Committee. Instead of using a prescriptive approach in their methodology, the Committee allowed the researchers to approach the work in their own way, but at the same time within a specified framework, with the key questions being: did law play a role; what mechanisms had been used; did people have knowledge of law, etc.

The cases that the Committee had completed analysing and the Committee's first interim report was available on the ILA website. The Committee's first interim report assessed the Committee's analyses of the cases done so far. The Committee had completed around 16 of the 41 identified cases. Professor van Genugten noted that there were over 20 cases that were still to be delivered before April 2017. The results from these cases might lead to broader delivery, and the option of drawing broader conclusions regarding the key questions: did indigenous peoples have knowledge of international indigenous law; were they able to work with legal instruments; and were they able to use non-judicial means, while at the same time using legal standards. Professor van Genugten noted that indigenous peoples might have knowledge of legal standards but might not trust the courts in their countries. He further stated that indigenous issues might also be faced with political dimensions. When looking at the rights of indigenous peoples in reality, one should not "dream of" the ideal court, but should face the reality that other fora might be better, or more effective.

Professor van Genugten paid tribute to Dr Federico Lenzerini (Italy) and Professor Timo Koivurova (Finland), who were very active in bringing the report together.

Professor van Genugten noted that the conclusions were preliminary and many more conclusions could be drawn. While the Committee's mandate was due to expire in 2018, the Committee had decided that good work was a priority. Arising from this, as well as the desire of the Committee not to compromise, if need be, the Committee would request an extension to complete its mandate as it would wish (to the desired standard).

The Chair thanked Professor van Genugten for his input and opened the floor to the Committee members who were present.

Professor Christina Binder (Austria) raised a few general remarks on the draft report. It was welcome (and necessary) that the present report builds upon the past ILA report, in the sense of continuity and in order not to question the customary value of international law notwithstanding violations. There was a need for increased regional spread in the case studies (for example with regard to Asia). There was a need for more uniformity in the case studies with regard to facts, institutions involved, the role of international law; factors stimulating or impeding implementation and interests involved. The Committee needed to draw firmer/further conclusions:

- with regard to national/regional particularities (presence of strong Human Rights institutions in Latin America);
- in the identification of factors in favour of or against the recognition of women's rights;
- with regard to the factors in favour of the role of international law and

- in the identification of good/best practices in case of indigenous peoples to guide future implementation/research.

Professor van Genugten responded to Professor Binder with regard to the spread of the global coverage of cases by reiterating that there were still cases from several countries to be delivered. Those countries included: Ecuador, Nicaragua, Mexico, USA, Canada, India, Malaysia, Pakistan, Japan, Cambodia, Kenya, New Zealand and Australia. With regard to the remark on methodology, it was decided to allow researchers to analyse the cases as they deemed appropriate, in case a decision to do otherwise might lead to fewer contributions. The Committee did provide questions for the researchers to follow, to ensure that the mandate was addressed.

The Chair thanked Professor Binder for her contributions and introduced the next Committee member.

Professor Rainer Hofmann (Germany) stated that it was important to repeat the remarks by Professor Binder. Case analyses should reflect the individual style of the researchers and that there was a need to have additional cases analysed in areas such as China, Denmark, Greenland, Finland and Asia. Furthermore, Professor Hofmann noted that there should be a short report on the Bolivia and Chile case analyses. Professor Hofmann stated that the conclusion of the report had still to be organised. Professor Hofmann remarked that completion of the report within the next two years represented an ambitious target. It was his view that the Committee should not reduce the quality of it work in order to have a declaration ready at the next conference in Sydney in 2018.

The Chair thanked Professor Hofmann for his remarks and introduced the next Committee member.

Professor Dwight Newman (Canada) noted that the Committee report had many strengths and summarised the case reports perfectly. The cases being analysed were repeatedly clustering on certain topics. The Committee should determine whether this clustering was a problem, or if it was deliberate. Other sources, such as special rapporteurs, may be useful to supplement his previous point (and determine if the clustering of certain topics was deliberate or a problem). Professor Newman enquired whether the cases being analysed took a particular form that missed political aspects. He also posed the question as to whether there should be room for contestation of claims in underlying reports, as some of them had contestable elements. He concluded his intervention by stating that the Committee should continue searching for cases bearing on the private sector aspirations of the Committee.

Professor van Genugten encouraged Committee members to be critical of the report in their remarks, as it was the purpose of having the open meeting. The Committee had not randomly selected the cases to be analysed; they had been very selective when deciding which cases were to be analysed, and this was defended by the Committee's mandate. While the use of a peer review might be relevant, setting up a scientific peer review might be beyond the Committee's ability.

The Chair thanked Professor Newman for his remarks and introduced the next Committee member.

Mr Rafael Soares Leite (Brazil) concurred with the other Committee members' remarks with regards to the methodological assumptions. Mr Soares Leite noted a methodological consideration of involving scholars and academics from the legal systems related to the cases being analysed by the Committee.

Professor van Genugten noted that one challenge faced by the Committee was finding ILA members from developing countries, especially among indigenous peoples. This was a weakness of the Committee, and one that the Committee was trying to remedy.

The Chair remarked that, in general, the ILA was faced with the challenge of (limited) diversity in its membership. He thanked Mr Soares Leite for his remarks and introduced the next Committee member.

Professor Siegfried Wiessner (USA) commended Professor van Genugten and the CoRapporteurs, especially Professor Lenzerini, on the great work they undertook in addressing the implementation of the international legal standards regarding the rights of indigenous peoples. The starting point for this effort was IL Resolution No 5/2012 on the Rights of Indigenous Peoples with its findings of customary international law rights to culture, traditional lands, and autonomy. It was unanimously adopted by the ILA in Sofia in 2012, and, as such, was evidence of international law according to Article 38(1)(d) of the ICJ Statute. In terms of the legal authority of its resolutions, this special role of the ILA as a scholarly body was shared only by the International Law Institute and the International Law Commission, according to § 103 Reporter's Note 1 of the American Law Institute's Third Restatement of Foreign Relations Law of 1987.

Professor Wiessner noted that this Committee's preliminary conclusions regarding implementation made an important distinction between legislative and judicial bodies on the one hand – often recognising indigenous rights – and executive/administrative decisions on the other, which might appear less inclined to do so. Case studies submitted so far often also commendably included the necessary facts and context of particular problem scenarios. One integrative, problem-oriented approach to such a case study would be the five-step process suggested by the New Haven School of Jurisprudence which included the delimitation of the problem, the conflicting claims, past legal responses to them in light of their conditioning factors, a prediction of future decisions, an appraisal in light of the goal of a world order of human dignity, and the development of recommended solutions. This approach, however, might be overly demanding in various respects. For this reason, Professor Wiessner welcomed the pragmatic approach to fashioning the case studies as suggested by Professor van Genugten.

In light of the need to complete the outstanding case studies, their analysis, and the drawing of conclusions, Professor Wiessner strongly supported the extension of the mandate of this important committee beyond its scheduled end in 2018. The topic of indigenous peoples' rights and their status should be a permanent concern of the ILA.

The Chair thanked Professor Wiessner for his remarks and opened the floor to remarks and questions.

Professor James Nafziger (US) summarised a report by the Committee on Cultural Heritage Law of which he serves as Chair. That report, which dovetailed with the work of the current Committee, was entitled "The Law Pertaining to Cultural Landscapes

Significant to Indigenous Peoples". An example of the dovetailing was that UNDRIP was also a foundation of the report and recommendations of the Committee on Cultural Heritage Law. In this regard, Professor Lenzerini, as a member of both Committees, had served as a liaison in preparing the report. With reference to Professor van Genugten's excellent summary of the current Committee's project, Professor Nafziger asked about the extent of planned case studies from Africa, the continent where the current conference was taking place and whose diverse experiences had been illuminating in the project of his Committee. Its full report on cultural landscapes was scheduled for final review and adoption at the working session of the Committee on Cultural Heritage Law at the current conference, which he encouraged attendees to attend.

A fundamental topic of shared interest between the two Committees was land rights. Insofar as issues might arise in protecting and managing cultural landscapes, they were typically complicated by the engagement of numerous stakeholders. Taking into account this complexity, and picking up on points made by Professors van Genugten and Wiessner concerning the process of implementing UNDRIP, Professor Nafziger suggested a focus in the diverse contexts of the case studies on the relative efficacies of alternative methods of implementation, which could be either judicial or non-judicial. The object would be to determine, whenever possible, what had worked and what had not worked in an effort to assist indigenous peoples and allied institutions to implement their rights and interests, given the limited resources at their disposal.

Ms Risa Schwarts (Canada) commented that it might be interesting to undertake case studies on political actions of States concerning the rights of indigenous peoples such as the Commission in Canada (Truth and Reconciliation and Murdered and Missing Indigenous Women) as well as the Royal Commission launched in Australia concerning the abuse of young indigenous boys in the institutions of the Northern Territory.

Dr Federica Prina mentioned that a challenge in some cases was that domestic law did not correlate with international law. She stated that, when preparing a report on a country, and establishing whether the law made a difference, it was difficult to establish long-term effects of positive judgments and/or progressive legislation. She had observed the link between the judicial environment and the political climate, and that politics influenced the work of the courts and NGOs representing indigenous peoples. There was a contradiction between federal and regional law, and regional legislation and judgments were sometimes more progressive. However, these regional "success stories" had a limited impact and were not reflected at the federal level.

Professor van Genugten referred Dr Prina to pages 25-7 of the report.

Dr Anja-Riitta Ketokoski-Rexed (Finland) discussed land rights and mentioned that the whole cultural approach to indigenous people was in a way shown in the Nordic Sami Convention. It was not yet in force, but was drafted in an effort to induce competition between the Nordic countries to better answer the questions, since this was the only indigenous population in the EU. It might be interesting since there were both Norwegian and Swedish members, and as there was a big difference between Nordic countries. Dr Ketokoski-Rexed moved on to a second point, the cultural part of it, not just with landscapes but the whole UNESCO side of it, cultural diversity and what was conveyed in that. She noted that sustainability was also important. She enquired whether

the Committee used CEDAW reports because women were reported on in CEDAW reports, and were invisible everywhere, and (yet) most visible in land rights. A special focus on women would have to be visible in all case studies with the CEDAW reports and linguistic rights as reference points.

Professor Piers Davies (New Zealand) followed up on a few comments made by other Committee members. There was a need to increase the involvement of indigenous people as members of the Committee and that there were ways to supplement indigenous involvement. An indigenous person might not have the time, or the money, to be on the Committee. They could join in by twinning with Committee members, or by the Committee member workshopping the case study that they were looking at with indigenous people. He informed the Committee that he did that with the report of the Committee on Cultural Heritage Law on cultural landscapes, because the views of the indigenous people in New Zealand were quite different to the views of the non-indigenous people as far as cultural landscapes were concerned. So there were these supplementary ways to get more indigenous people involved in the work of the Committee.

Professor van Genugten queried whether, if twinning was not an option (and he thought that it was a very good idea), it could be an option to ask indigenous scholars to read the case studies made by non-indigenous scholars.

Professor Davies replied that that was the suggestion of a workshop, to call a meeting of indigenous people in the area and present some of the case studies to them for their involvement, and ask them if the case study accurately assessed what they feel about, or whether they thought it was just an academic overview from somebody who did not have an indigenous understanding.

Professor van Genugten stated that Professor Davies touched upon something which made him feel very uneasy too. Not being an indigenous person himself doing this work, mainly with people who did not have an indigenous background, felt sometimes that this was an exercise for indigenous people without indigenous people. He continued by saying that Committee members had tried their very best, in many ways, but clearly there was still a lot more to do. Twinning might be an option, the workshop might be good, and then still travelling had to be done. These were all very good ideas.

The Chair asked Professor van Genugten to give his final remarks.

Professor van Genugten used his final comments to refer back to some aspects which had been touched on during the session. He thought that it had been a good session, picking up some good issues that they could take on board. It would definitely help in improving the work of the Committee. He thanked attendees for their input and stated that what the Committee worked for was “reality on the ground, pragmatism as well as legal means”. He thanked the Co-Reporters for their hard work.

FINAL REPORT

I. WORK OF THE COMMITTEE AND THE FINAL REPORT

1. This is the fourth and final Report of the ILA Committee on Non-State Actors (NSAs). The first section of the Report briefly summarizes the history of the Committee and introduces the structure and purposes of this Final Report.

A) Background of the Final Report

2. The establishment of a Committee on Non-State Actors was discussed at the ILA Conference in Toronto in 2006 and inaugurated in 2008 after the Committee held its first meeting during the ILA conference in Rio de Janeiro in August 2008.[1] At its creation,

[1] See *Preliminary issues for the the ILA Conference in Rio de Janeiro,* 2008 (hereafter Rio Document 2008).

the Committee had 17 members coming predominantly from Europe and East Asia. In the next years, the membership was expanded up to 35 members from four continents. The Chair of the Committee is Professor Math Noortmann from the British Branch. Professor Cedric Ryngaert was the Committee's principal Rapporteur in 2008-2014. He worked closely with Professor Malgosia Fitzmaurice (2008-2010), and Professor Jean d'Aspremont (2012-2014) as co-rapporteurs with drafting assistance from Dr Barbara K. Woodward. Assoc. Professor Veronika Bílková (2015-2016), a Committee member since the beginning, drafted this Final Report. The Committee adopted three reports during the ILA conferences held in the Hague (2010),[2] Sofia (2012)[3] and Washington (2014).[4]

3. The 2010 report had a general focus and sought to identify the aims of the Committee, the scope of its mandate and the approach to be taken. The original intent of the Committee to focus on international security by way of a case study, expressed in the 2008 preliminary document,[5] was abandoned in the aftermath of the first meeting of the Committee, as it was too narrow. The Committee then defined its general purpose more broadly as that of *"examining the position of NSAs in international law in terms of their rights and obligations"*.[6] More specifically, it set itself the following tasks: (1) to map the scope of the field; (2) to determine the actual practice of NSAs and its effects on the functioning of the international legal system; (3) to identify NSA rights and obligations; and finally (4) to synthesize and draw conclusions on how NSAs conceptually fit within international law.

4. The Committee undertook to reproduce these conclusions in a set of general principles in its final report;[7] however, following seven years of deliberations, the Committee has determined that the complexity brought about by the different types of NSA means a set of considerations is more fruitful than principles, and these considerations are provided at the end of the report.

5. The 2012 report analysed the roles NSAs play in actual law-making and their participation in law-making processes. The 2014 report discussed obligations NSAs have under international law and whether they can be held responsible for violations of these obligations or held liable in other circumstances.

6. In addition to the formal Committee meetings at the ILA conferences, Committee members and 'Friends of the Committee' participated in a number of seminars on NSA-related issues. From 2009-2012 these meetings were supported by Professor Ryngaert's Non-State Actors in International Law project and facilitated by the Leuven Centre for Global Governance Studies at Leuven University (Belgium) established by Professor Jan Wouters. In 2011, the Committee held a seminar on NSAs and human security organized by Oxford Brookes University (UK). In 2013, it held a conference on theoretical

and empirical issues relating to the responsibilities of NSAs organized by the Institute for Transborder Studies at Kwantlen Polytechnic University in Vancouver (Canada). In 2015, the Committee held a working meeting addressing the scope and content of the final report; the meeting was hosted by the Institute of International Relations in Prague (Czech Republic).

7. The meetings in Leuven, Oxford and Vancouver resulted in a number of publications on NSAs, including several books, such as *Global Civil Society in International Lawmaking and Global Governance*: *Theory and Practice* (2010),[8] *Participants in the International Legal System – Multiple Perspectives on Non-State Actors in International Law* (2011),[9] *Human Security and International Law: the Challenge of Non-State Actors* (2013),[10] *Responsibilities of the Non-State Actor in Armed Conflict and the Market Place. Theoretical Considerations and Empirical Findings* (2015),[11] or *Non-State Actors in International Law* (2015).[12]

B) Context for and Structure of the Final Report

8. International law has traditionally been construed as inter-State law.[13] When Bentham coined the term in 1789, he defined international law as a body of legal rules, norms and standards that apply between sovereign States.[14] Two hundred years later, in 1998 Schachter described international law in a similar way, as *"a system of discrete autonomous entities based on their defined territories, each exercising plenary authority over persons and things in that territory"*.[15] This system was formal[16] and rather homogeneous in that all its constitutive units were virtually identical and they operated under uniform rules on norm-creation, monitoring compliance and law enforcement. The extent of their capacities was not specified or was considered as unlimited. That also allowed for a rather clear separation between international law on the one hand and national law(s) on the other.

[13] For an alternative view, see D´ASPREMONT, Jean, Cognitive Conflicts and the Making of International Law: From Empirical Concord to Conceptual Discord in Legal Scholarship, *Vanderbilt Journal of Transnational Law,* Vol. 46, 2013, pp. 1119-1147. The author shows that that the system of international law has always been plural and that the Westphalian/State-centric account is to a large extent a construction.

[14] For more details, see JANIS, M. W., Jeremy Bentham and the Fashioning of "International Law", *American Journal of International Law,* Vol. 78, 1984, pp. 405-418.

[16] KENNEDY, David, The Disenchantment of the Logically Formal Legal Rationality, *Hastings Law Journal,* Vol. 55, 2004, pp. 1031-1076.

9. The international legal system has never been a closed regime in terms of its participants. It has always recognised such *sui generis* entities as the Holy See and the Sovereign Order of Malta. Gradually, it also opened up to accommodate other "non-state" actors such as international organizations (IGOs) (e.g., UN), certain civil society organizations (e.g., the ICRC), armed opposition groups (AOGs) (e.g., PLO) and individuals (mostly in the areas of international human rights law and international criminal law). The increasing pluralization *ratione personae* on the international scene has disrupted the original unity and homogeneity of the State centric system and upset the borders between international, national and arguably transnational law.

10. The globalization process has further weakened the factual power of the State. Internally, large scale privatization has occurred, and States have transferred many of their fundamental competences to NSAs. Externally, NSAs are no longer confined within the territory of a single State but actively operate across national borders. This applies both to the actors of "civil society" (non-governmental organizations, transnational corporations, etc.) and of "uncivil society" (terrorist groups, mafias, organized crimes groups, etc.) as well as to those in between the two categories (AOGs). As a result, States now have less control, let alone a monopoly, over developments both within their own territory and at the international level.

11. It is generally considered that the ascension of NSAs is not yet adequately reflected in international law nor led to another wave of pluralization *ratione personae* of this law. Although, as Math Noortmann puts it, *"the process of globalization and the proliferation of actors on the global scene makes the differentiation between states and other non-state actors obscure and obsolete",*[17] this erosion of the borders between the two types of actors does not seem to have had a transformative and visible impact on the way we conceptualize international law. Thus, though factually interconnected, States and NSAs remain normatively separated at the international level.

12. Taking this traditional account as the starting point, this report first verifies whether it is factually correct and then discusses some alternative approaches.

13. Section II proposes a working definition of NSAs, ponders whether it is appropriate to use this term and provides several typologies of NSAs.

14. Section III sums up the conclusions of the mapping exercise and of the empirical/comparative studies, which were presented in the previous reports of the Committee. It also analyses how international law responds to these changes and discusses to what extent this law addresses the gap between international practice and the doctrine of international law, if such a gap exists at all.

15. Section III applies the traditional State-centric approach to international law. This approach, albeit dominant in the doctrine, is not the only one that can be applied with respect to NSAs. Section IV maps alternative approaches which portray the role of NSAs within the system of international law differently. Furthermore, it considers whether the ascension of non-state actors could bring about more radical changes of international law and if so, what implications these changes would have both for NSAs and for the existing international legal order as such.

[17] NOORTMAN, Math: Globalization, Global Governance and Non-State Actors: Researching beyond the State, *International Law Forum,* Vol. 4, 2002, p. 38.

II. CONCEPT OF NON-STATE ACTORS

16. This section of the Final Report introduces a working definition of the term NSAs. It also discusses the appropriateness of the use of the term and outlines the most common classifications of these actors encountered in scholarly literature

A) Who Are Non-State Actors?

17. In 2008, the Committee opted for a negative definition of NSAs that encompassed *"all actors who are not State"*.[18]

18. In the 2010 Report, the Committee adopted a more elaborate working definition of NSAs based on three elements.

a) First, NSAs are not *"bodies comprised of and governed or controlled by States or groups of States"*.[19] This excludes not only IGOs and less formal groups of states (G7), but also federal components of States and territorial entities such as Kosovo and East Timor while under international administration.
b) Secondly, NSAs are actors that *"actually perform functions in the international arena that have real or potential effects on international law"*.[20] The range of such functions is not predetermined, because different NSAs accomplish different functions at the international level.
c) Thirdly, NSAs are legally recognized and organised entities. The legal recognition can take place in national or international law. This excludes individuals and some entities lacking organization and/or legal recognition such as terrorist organizations and mafias.

19. For the purposes of this report, NSAs are therefore defined as *legally recognized and organised entities that are not comprised of nor governed or controlled by States nor groups of States and that actually perform functions in the international arena that have real or potential effects on international law.* It is a working, operational definition which might not, and which does not aspire to, be shared by all scholars.

20. The 2010 Report lists actors expressly excluded from and expressly included in the working definition.

a) Actors excluded are IGOs comprised solely of State members, federal components of a State, pseudo-States, individuals, illegal and illegitimate organized bodies (mafia), and illegal groups not organized in any recognized manner (Al-Qaeda, pirate groups).
b) Actors included are non-governmental organizations (NGOs) with some form of recognized international status; multinational enterprises (MNEs); organized AOGs; *sui generis* entities (e.g., ICRC, the Holy See); and organized indigenous peoples´ groups.

21. There is no generally accepted definition of the term "NSAs" in international law. The term is not even (yet) a legal term of art. Since international law has been conceptualized as a system of rules regulating relationships between States, NSAs in the broadest

[18] Rio Document 2008, p. 2.
[19] The Hague Report 2010, p. 6.
[20] *Ibid.*

understanding of the term – that is all entities that are not States – have for a long time had no formal place in it. Those NSAs which have gradually managed to challenge the State-centric orientation of international law have done so as specific entities (IOGs, etc.), not as members of a larger group of non-state actors. Thus, while several international treaties address and sometimes define particular rights and obligations of specific NSAs to participate within their realms,[21] there is no international instrument addressing rights and obligations of NSAs generally.

22. Recently, however, references to NSAs have appeared in certain acts adopted at the international level, and some of these have sought to define NSAs.

23. An example of this is UN Security Council Resolution 1540 (2004),[22] on *Non-Proliferation of Weapons of Mass Destruction.* The Resolution expresses grave concern at *"the threat of terrorism and the risk that non-State actors /.../ may acquire, develop, traffic in or use nuclear, chemical and biological weapons and their means of delivery"* (par. 8, Preamble) and imposes on States the obligation to refrain from providing any form of support to NSAs that attempt to acquire or use such weapons and to prohibit NSAs from acquiring or using such weapons in their national law. The resolution contains a footnote defining NSA as an *"individual or entity, not acting under the lawful authority of any State in conducting activities which come within the scope of this resolution".*

24. Similarly, the European Commission (EC) uses the concept of NSAs in its framework of international cooperation and development. It defines the term by means of four elements: NSAs gather the main structures of organised society outside government and public administration; are independent of the State; often are the result of grass-roots initiatives seeking to bring social changes; and are active in different fields (poverty reduction, emergency, human rights, environment, etc.).[23]

25. In another document on development policy, the EC defines NSAs as *"a range of organisations that bring together the principal, existing or emerging, structures of the society outside the government and public administration. NSAs are created voluntarily by citizens, their aim being to promote an issue or an interest, either general or specific. They are independent of the state and can be profit or non-profit-making organisations. The following are examples of NSAs: Non-Governmental Organisations/Community Based Organisations (NGO/CBO) and their representative platforms in different sectors, social partners (trade unions, employers associations), private sector associations and business organisations, associations of churches and confessional movements, universities, cultural associations, media".*[24]

---

[21] For instance, the 1986 Vienna Convention on the Law of Treaties between States and International Organizations or between International Organizations states that an international organization *"means an intergovernmental organization"* (Article 2(i)). The definition solely apples for the purpose of the Convention.

26. The official definitions are meant to apply in a specific context and do not aspire to be used for more general purposes.

27. Some scholars have proposed more general definitions of NSAs. In recent decades, the number of books and articles discussing NSAs by international lawyers[25] and experts from other disciplines (international relations, political science, security studies)[26] has increased sharply, and a legal journal devoted to NSAs emerged.[27] It is interesting to note that many authors speak about NSAs without offering any definition of the term or just enumerating the types of entities that, in their view, fall under this category.[28] Other authors simply use the negative definition of NSAs.[29]

28. A minority of commentators suggests a definition of the term. Pearlman and Cunningham define a NSA as *"an organized political actor not directly connected to the state but pursuing aims that affect vital state interests"*.[30] Arts refers to *"all those actors that are not (representatives) of state, yet that operate at the international level and are potentially relevant to international relations"*.[31] Josselin and Wallace, while acknowledging that *"the universe of non-state actors is /.../ necessarily diverse"*,[32] identify three characteristic features of NSAs: large or entire autonomy from central government funding or control; operation as or participation in networks which extend across the boundaries of two or more States; and acting in ways which affect political outcomes.[33]

29. The various definitions, though similar to a certain extent, are not identical. In fact, the only elements that remain constant are an independence from States and the relevance, operation or impact at the international level. Thus, in the broadest understanding, NSAs are defined as entities other than States that operate at the international level. Other elements – relating e.g. to the internal organization or the membership criterion – are

present only in some definitions. The definition used in this report, as we saw above, adds three additional elements, namely the organized character, legal recognition in national or international law and the fact that a NSA is not comprised of and governed or controlled by States. As such, the definition is rather narrow.

B) The Term "Non-State Actor"

30. The very term "non-state actor" betrays the bias that exists within international law and international relations. The category is construed by its opposition to, and difference from, the State. Not being a State is the crucial unifying feature of the identity of all non-state entities, strong enough to prevail over any potential differences among them.

31. Alston has explained that, *"these negative euphemistic terms /.../ have been intentionally adopted in order to reinforce the assumption that the state is not only the central actor, but also the indispensable and pivotal one around which all other entities revolve"*.[34] Similarly, Sébastien Jodoin has stressed that *"international law remains a law for states made by them and made for them. It remains so through its focus on the interiority of the state at the expense of the exteriority of the Other"*.[35]

32. Adhering to the NSAs label thus means implicitly embracing and endorsing the vision of international relations and international law in which the State *"remains the starting point and the frame of reference"*.[36] At the same time, abandoning the label prematurely could produce confusion, as it is long-established in the doctrine. Consequently, the Committee has decided to retain the term with the caveats that it presumes and pre-structures a particular reality and that *"it is not a legal term but a descriptive concept seeking to reflect as closely as possible the contours of the reality"*.[37]

C) Need to Classify Non-State Actors?

33. NSAs are a very heterogeneous group, particularly in the broadest understanding of the term. Some scholars have thus proposed classifying NSAs into various categories.

34. Most proposals concentrate on the type of the NSA and its relationship to States. For instance, Gustaaf Geeraerts has noted that *"an initial classification of non-state actors distinguishes between two major types of international organizations: international governmental organizations (IGOs) and international non-governmental organizations (INGOs)"*.[38] He views this classification as simplistic and outdated and suggests replacing the second category with that of transnational organizations (TNOs). This would include *"those networks, associations or interactions which cut across national societies, creating*

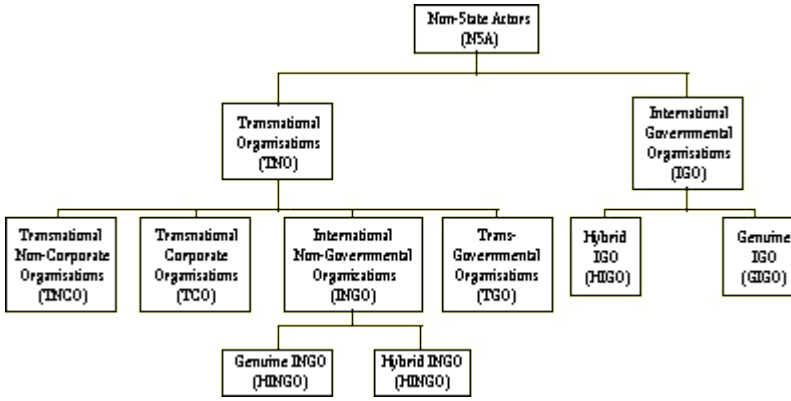
[38] GEERAERTS, Gustaaf, Analyzing Non-State Actors in World Politics, *Pole Paper Series,* Vol. 1, No. 4, 1995, online at http://poli.vub.ac.be/publi/pole-papers/pole0104.htm (3 June 2015).

linkages between individuals, groups, organizations and communities within different nation-states".[39] Thus, TNOs include international NGOs (e.g. Amnesty International), transgovernmental organizations (e.g. International Union of Local Authorities), transnational corporate organizations (e.g. General Motors) and transnational non-cooperate organizations (e.g. churches or transnational terrorist networks). Geeraerts´ classification appears as Figure 3, *Typology of Non-State Actors in World Politics*.[40]



35. Although the type is the most common criterion of classification, occasionally other criteria are used. For instance, some authors focus on the predominant means NSAs use in their activities to achieve their goals. The most basic classification based on this criterion is that between violent and other, non-violent NSAs. Violent NSAs include either all organized entities that resort to violent means (military force, criminal methods etc.) or, more narrowly, organizations that *"use illegal violence (i.e. force not officially approved of by the state)".*[41] They typically encompass entities such as terrorist groups, militias, paramilitary forces, criminal groups and, occasionally, insurgents (AOGs).[42]

36. The classification based on means corresponds to a large extent to that between "good" and "bad" (or legitimate and illegitimate) NSAs that is often, albeit implicitly, present in scholarly literature. Commentators frequently qualify violent NSAs as *"illegitimate vis-à-vis the classical state system in part because the essence of being a state is having a monopoly on the legitimate use of violence".*[43] Yet, the category of "bad" NSAs sometimes includes non-violent actors as well, for instance corporations.[44] Typical

"good" NSAs are most NGOs, churches or transnational public interest networks.[45] This classification, inspired by the positive reputation that various NSAs have in the areas of human rights and humanitarian aid activities, fails to reflect the plurality of roles that most NSAs play. It is also subjective and arbitrary, and it would be difficult to rely on it.

37. Finally, NSAs are often classified – or rather grouped together – based upon the function they have in international relations and/or upon the substantive area of international law where they have the largest impact. Thus, for instance, authors writing about the law of the sea would have a particular interest in pirate groups, while those researching international humanitarian law would focus on AOGs or the ICRC and other humanitarian NGOs. Of course, many NSAs are not exclusively active in one field only; so the groups have large overlaps. Yet, with the increasing fragmentation of international law and the growing specialization of international lawyers, the division of actors along functional lines has gained increasing relevance.

38. Similarly, as with the definition of non-state actors and the very term used to denote them, the classification also serves as a template which not only helps describe the complex reality but also, in a certain way, forms and re-forms this reality. Characterizing some NSAs as good and others as bad conventionally suggests the need for a differentiated treatment of such entities under international law. Ranking some NSAs among the violent ones usually entails questioning their legitimacy. For these reasons, the current report does not embrace any of the classifications described above. Nor does it seek to propose a new classification of NSAs.

III. NON-STATE ACTORS AND INTERNATIONAL LAW

39. This section of the Final Report describes the role NSAs have acquired at the international level over the past decades. It draws largely on the mapping exercise and empirical/comparative studies presented in the previous reports of the Committee.[46] The section first considers the activities of NSAs in the spheres of norm-creation at the international level. Secondly, it examines the roles NSAs have played in monitoring compliance with international law and in dispute-settlement. Finally, it reviews the scope of rights and duties NSAs now have under international law. Prefacing this overview is a brief discussion of the origins of the evolving changes in the factual and legal status of NSAs at the international level. The overview is followed by an outline of two ways that international law has used in its attempt to accommodate NSAs. Finally, the section considers whether further conceptual changes are needed to address the gap between international practice and the traditional State-centric approach to international law.

A) The Rise of Non-State Actors Internationally

40. NSAs are far from a new phenomenon on the international scene. They have always been present, influencing the course of international relations as well as the formation and application of international law. With globalization and increasing privatisation of key government domains, the role of NSAs has become even more prominent in recent

[45] See, e.g., MURDIE, Amanda, STAPLEY, Craig S., Why Target the "Good Guys"? The Determinants of Terrorism Against NGOs, *International Interactions,* Vol. 40, No. 1, 2013, pp. 79-102.
[46] See The Hague Report 2010, Sofia Report 2012 and Washington Report 2014.

decades. It is thus time to consider whether the status these actors have traditionally had (or rather have not had) under international law remains appropriate.

41. Andrew Clapham has identified four forces, or phenomena, which help to explain the rise of NSAs in the international legal arena and which, in his view, are important for understanding why discussing obligations of NSAs and their legal status in increasingly relevant.[47] Although the analysis relates to the sphere of human rights, it can be used more broadly. The four forces are:

a) Globalization of the world economy which has *"highlighted the power of large corporations and their limited accountability in law for human rights abuses"*;[48]
b) Privatization of sectors that in the past were controlled and administered exclusively by States, such as health, education, prisons or communications. Privatization has strengthened the roles of NSAs in spheres that States have vacated, giving rise to questions relating to the legal status of NSAs and the possibility that States could free themselves from legal obligations by simply withdrawing from particular spheres of activities;
c) Fragmentation of States which means internal contestation of their power and monopoly over violence by NSAs, for instance AOGs fighting against the central government in non-international armed conflicts;
d) Feminization of international law and international relations, which questions and disrupts the classical barrier between the private and public (internal and external) spheres both within societies and States and among them.

42. Amplifying how NSAs have acquired international legal obligations, Raffaa Ben Achour and Salim Laghmani have identified six different roles NSAs have played in modern international relations.[49] They are beneficiaries of the decisions by States and international organizations, partners in the realization of certain projects, advisors with respect to policy decisions, lobby groups that influence these decisions, watchdogs monitoring what States do, and, occasionally, enemies of States.

43. Nevertheless, the two authors remain sceptical about how this factual role of NSAs has translated into legal norms. On the one hand, they admit that NSAs have contributed to the formulation of new legal norms and to the implementation of existing ones (monitoring of the compliance, naming and shaming etc.). On the other, they stress that *"non-state actors have an influence but, from the strictly legal point of view, they are never decisive. Their influence is certain from the perspective of political science but uncertain from the perspective of law"*.[50]

44. The following subsections verify whether this quotation correctly reflects the international practice relating to norm-creation, monitoring of compliance with international law, dispute-settlement, and to the scope of substantive rights and duties.

B) Non-State Actors and International Norm-Creation

45. As the 2010 Report reveals in some detail,[51] today NSAs are actively involved in various processes that result in the creation of hard or soft international legal norms by other actors. Moreover, as documented at length in the 2012 Report,[52] NSAs themselves engage in norm-creation.

46. Article 38(1) of the Statute of the International Court of Justice (ICJ) contains the list of sources of public international law which has traditionally been considered as exhaustive. These sources are divided into primary sources (treaties, international custom and, arguably, general principles of law recognized by civilized nations) and subsidiary sources (judicial decisions and the teachings of the most highly qualified publicists of the various nations). Only the primary sources are formal sources of international law, i.e. they *"provide the legal authority for a substantive statement about conduct making it a rule of law, binding upon States"*.[53] Subsidiary sources help establish and confirm the content and correct interpretation of primary sources.

47. NSAs actively engage in processes resulting in the conclusion of ***international treaties.***[54]

48. First of all, they may play a role in the drafting of treaties adopted by other actors, typically States and international organizations. In some instances, this role is informal: NSAs influence law-making processes through informal channels and arrangements. For instance, NGOs had important roles in the processes leading to the conclusion of the 1997 ***Ottawa Treaty on the Anti-Personal Mines***, the 1998 Rome Statute of the International Criminal Court, and the 2003 United Nation Convention Against Corruption. NSAs – particularly NGOs – may also form coalitions that, though not an official participant in the negotiations, can have a significant impact upon its course and outcome.

49. In addition to NGOs, other NSAs may become informally involved in the conclusion of an international treaty, particularly when the treaty relates to their activities. Thus, private military and security companies (PMSCs), a specialised type of MNEs, are following and seeking to influence the outcome of the *UN Open-ended intergovernmental working group to consider the possibility of elaborating an international regulatory framework on the regulation, monitoring and oversight of the activities of private military and security*

[52] Sofia Report 2012, pp. 4-6.

[53] The Hague Report 2010, p. 8.

[54] The 1969 Vienna Convention on the Law of Treaties defines a treaty as *"an international agreement concluded between States in written form and governed by international law, whether embodied in a single instrument or in two or more related instruments and whatever its particular designation" (Article 2(1)).* The customary definition is broader and encompasses also agreements concluded between other subjects of international law and instruments in other than written form.

companies, which has been tasked with the elaboration of a treaty on State obligations relating to the activities of PMSCs.[55]

50. Some NSAs engage in treaty-making processes on the basis of a more formal mandate. For instance, the International Committee of the Red Cross (ICRC) has, under its Statute approved by State Parties to the Geneva Conventions, the task to *"work for the understanding and dissemination of knowledge of international humanitarian law applicable in armed conflicts and to prepare any development thereof"* (Article 4(g)). This provision is traditionally interpreted as implying the right, if not the obligation, of the ICRC to submit drafts of new instruments of international humanitarian law to be adopted by States and to participate actively in all phases of the negotiation process.

51. In other instances, NSAs enjoy a formal position (a consultative or observer status), which while not directly entitling them to take an active part in the conclusion of treaties, permits them to have a specific participatory role in the process. This is for instance the case of those NGOs accredited as consultants or observers with the UN under Article 71 of the UN Charter and under many other IGO constitutive agreements.

52. Also, NGOs and other NSAs are competent to make contributions to the formulations of rules binding on the State parties of various Multilateral Environmental Agreements (MEAs) through special 'autonomous institutional arrangements' that empower plenary Conferences or Meetings of the Parties to formulate and adopt rules without a new instrument requiring ratification.[56] Accreditation provides NGOs with the possibility of participating, albeit generally indirectly, in treaty-making processes taking place within the UN or other such IGOs and in MEA processes. Some IGOs, such as the International Maritime Organization, and MEAs provide NGOs with particularly strong participatory rights, including the right to contribute to their treaty and rule-making processes.

53. In addition to participating in the treaty-making processes resulting in the conclusion of a treaty between States and/or IGOs, NSAs may also, albeit more exceptionally, conclude treaties themselves. It is generally accepted that at least some of the *sui generis* entities, namely the Holy See and the Sovereign Order of Malta, have the capacity to conclude treaties.[57] Moreover, some other NSAs – e.g. AOGs and transnational corporations – enter written agreements or contracts with States or other NSAs (special agreements under Common Article 3 of the 1949 Geneva Conventions,[58] State contracts between

States and companies[59]). The nature of these acts remains unclear: while some qualify them as international treaties, others speak about hybrid treaties or about acts that are governed by national and not international law.[60]

54. NSAs therefore assume various roles in the processes resulting in the conclusion of treaties. It is less clear what role they play in the formation of ***international custom.***

55. Article 38(1) of the ICJ Statute defines international custom as *"evidence of a general practice accepted as law"* (al. b)) without specifying whose practice (*usus longaevus*) and acceptation (*opinio juris*) should count. In the opinion of some scholars, this means that *"practices may emanate from state and non-state actors"*.[61] In its 2000 final report, the ILA Committee on the Formation of Customary (General) International Law also noted that a rule of customary international law is one *"which is created and sustained by the constant and uniform practice of States and* other subjects *of international law in or impinging upon their international legal relations, in circumstances which give rise to a legitimate expectation of similar conduct in the future"* (emphasis added).[62]

56. This view, however, is not uniformly shared. In his 2014 report, the ILC Special rapporteur on identification of customary international law Michael Wood suggested that *"the better view /.../ is that, while individuals and non-governmental organizations can indeed "play important roles in the promotion of international law and in its observance" (for example, by encouraging State practice by bringing international law claims in national courts or by being relevant when assessing such practice), their actions are not "practice" for purposes of the formation or evidencing of customary international law"*.[63] Similarly, the ICRC in its 2005 Study on Customary International Humanitarian Law notes that the practice of AOGs as a NSA does not constitute State practice and *"while such practice may contain evidence of the acceptance of certain rules in noninternational armed conflicts, its legal significance is unclear"*.[64] At the same time, the ICRC has not shied away from invoking its own practice as evidence of the existence of certain rules of customary international humanitarian law.[65]

57. Whereas the formal role of NSAs in the formation of international custom – including custom binding upon themselves – remains controversial, it is evident that NSAs can contribute to the formation of custom indirectly. Thus, NSAs may induce States to

[65] *Ibid.*

behave in a particular way and/or to take a particular position with respect to a certain issue.[66]

58. The third source of international law consists of ***general principles of law*** (recognized by civilized nations). For some scholars, general principles of law constitute the third primary source on a par with treaties and custom. For others, it is just a means for filling in gaps in international law and saving courts from having to declare *non liquet.* In both cases, general principles are defined as principles stemming from domestic legal orders that are commonly shared and can be applied at the international level (such as *nemo iudex in causa,* principles of *res judicata* etc.).[67]

59. NSAs may have some influence on the formation of general principles of law. On the one hand, they may pressure States to introduce certain legal institutions into their domestic legal orders and see to it that these institutions are spread enough to be eligible candidates for general principles of law. On the other hand, NSAs may also help select which of the legal principles shared by various legal cultures will be brought to the international level. They may, for instance, provide international courts with evidence of the general nature of a certain principle. In both cases, the NSAs role will only be indirect.

60. Norm-creation at the international level is not necessarily limited to the conclusion of treaties, emergence of customary rules and establishment of general principles of law. In a broader sense, it further encompasses the adoption of unilateral legal acts and, possibly, the formation of soft-law standards.

61. The legal status of ***unilateral legal acts*** is uncertain. Whereas, it is generally accepted that certain unilateral legal acts issued by States[68] or by IGOs have binding effect, it is far less clear whether NSAs have the capacity to bind themselves (or someone else) in a similar way. Some authors believe that *"there is no reason not to extend the binding nature of unilateral acts to other actors* /than States/ *whose international legal personality is functionally necessary for the international community to function adequately"*.[69] This view however is not uniformly accepted.

62. NSAs themselves are quite active in adopting unilateral (legal) acts. Typical examples include unilateral declarations by AOGs, codes of conduct adopted by MNEs or ethical codes issued by NGOs. The acts differ very substantively in their content and purposes. Some are meant to bind the author of the act, others simply and solely sum up certain moral or political principles. In case of the former category, the concept of 'legitimate expectations' has been suggested as an argument in favor of the binding nature of such unilateral acts.[70] So far, however, this concept has not been universally accepted and

[70] See RYNGAERT, Cedric, Human Rights Obligations of Armed Groups, *Revue belge de droit international,* Vol. 41, No. 1-2, 2008, pp. 355-381.

the legal status of unilateral acts of NSAs – or, in fact, their capacity to produce unilateral legal acts – remains controversial.[71]

63. At the same time, NSAs can contribute to the formation of unilateral legal acts adopted by States or IGOs. Similarly, as in previous cases, their role here is mostly indirect and informal. Thus, for instance, NGOs or MNEs may induce States to recognize a certain entity or to protest against certain acts.

64. The role of NSAs in this area is similar to that they may have with respect to ***soft law***. The term lends itself to different interpretations.[72] Yet, it is mostly used to encompass, at least, non-binding political declarations containing normative provisions (the UN General Assembly Declarations) and/or vague provisions of international treaties not entailing rights or obligations.[73] NSAs may contribute to the formulation of soft-law instruments in the ways described above.[74] Moreover, some of the instruments that NSAs themselves adopt, if qualified as non-binding, could potentially be deemed part of *soft law.*

C) Non-State Actors and Monitoring of Compliance with International Law and Dispute-Settlement

65. As a decentralised, horizontal system, current international law is not subject to any central ***monitoring*** agency. States and IGOs may follow what other States and IGOs, or even NSAs, do. Yet, their capacities are not unlimited and they may also lack political will to pay attention to certain instances of non-compliance with international law (for instance those committed by close allies or by failed or weak States).

66. NSAs therefore have an important role to play in monitoring compliance with international law, sometimes alongside States and IGOs, sometimes even instead of them. When doing so, they may obviously also have their own biases and/or pursue their own agendas. Monitoring by NSAs – for instance by NGOs – is thus not necessarily more objective and impartial than that provided by other actors. Yet, the plurality of sources of information is in itself a value, as it may help to reach a more objective and impartial view of the situation.

67. Some NSAs have been endowed with a formal mandate to monitor compliance with international law. This is the case of the ICRC, which is mandated to *"to undertake the tasks incumbent upon it under the Geneva Conventions, to work for the faithful application of international humanitarian law applicable in armed conflicts and to take*

cognizance of any complaints based on alleged breaches of that law" (Article 4(1)(c) of the ICRC Statute). Another example is the 1973 Convention on International Trade in Endangered Species in which its secretariat has entered into agreements with two NGOs (the World Conservation Monitoring Centre and the Trade Records Analysis of Fauna and Flora) to submit particular information and monitoring information.[75]

68. More generally, NGOs are approaching such a position in some areas, for instance in international environmental law and international human rights law. There are formal NGOs monitoring roles in several human rights Committees (e.g., the Committee on the Rights of the Child).[76] In addition, NGOs may submit shadow reports to any of the UN Committees, which on a regular basis check the level of implementation of UN human rights treaties by States. The views of NGOs are also summed up in one of the three reports on which the members of the UN Human Rights Council base their review of all States' human rights record under the Universal Periodic Review (UPR).[77]

69. Monitoring by NSAs is not limited to the acts of States and IGOs but may focus on acts of other NSAs as well. The ICRC, for instance, monitors the behaviour of all parties to a conflict including AOGs and PMSCs.[78] The Geneva Call, a Geneva based NGO, concentrates primarily on AOGs.[79] In the same vein, some NGOs such as the International Commission of Jurists have specific programs on "violations of human rights" committed by MNEs or PMSCs.[80]

70. NSAs have also gradually managed to assert themselves in various capacities in the area of ***dispute-settlement***.[81]

71. In some instances, they have the right to initiate cases by submitting complaints on their own behalf or on behalf of victims (e.g. the European Court of Human Rights). Where this is the case, NSAs are generally provided with a *locus standi* and become full parties to the proceedings. This is so especially in the areas in which NSAs have been attributed rights and duties under international law or where it is considered in the public interest to let them directly intervene in the proceedings (typically in the human rights sphere).

72. In other instances, NSAs are not direct participants in the proceedings. They might however enjoy certain procedural rights, for instance that of filing an *amicus curie* brief

and offering opinions as experts. In 2004, the ICJ adopted Practice Direction XII permitting international NGOs to submit written statements and/or documents on their own initiative to the Registrar to be held in a designated location in the Peace Palace. Under the WTO dispute settlement mechanism, the panels may allow *"any party to the dispute to attach the briefs by /NGOs/, or any portions thereof, to its own submissions"*.[82]

73. NSAs may also serve as direct agents of dispute-settlement. For instance, the Crisis Management Initiative, a Finish NGO founded by the former president of Finland Martti Ahtisaari, helped negotiate the peace agreement between the Government of Indonesia and the Free Aceh Movement in 2005.[83]

D) Substantive Rights and Duties of Non-State Actors

74. The previous two sections demonstrated roles that NSAs have today in norm-creation, monitoring of compliance with international law and dispute-settlement. All these areas relate to the functioning of the international legal system. In addition, NSAs also possess substantive rights and duties, and the violations of international law by NSAs can probably in some instance entail their legal responsibility.

75. The question of substantive rights and duties is closely linked to that of ***legal personality*** of NSAs. It is now largely accepted that States are not the only legal persons under international law. As the ICJ held in the 1949 *Reparations for Injuries* case, *"the subjects of law in any legal system are not necessarily identical in their nature or in the extent of their rights, and their nature depends upon the needs of the community. Throughout its history, the development of international law has been influenced by the requirements of international life, and the progressive increase in the collective activities of States has already given rise to instances of action upon the international plane by certain entities which are not States"*.[84] Few authors deny that in addition to States, IGOs are legal persons under international law.[85] Claiming that NSAs are legal persons is more complicated due to the diversity of NSAs.[86]

76. There is consensus that some NSAs enjoy aspects of legal personality under international law. This is the case of the ICRC,[87] the Holy See[88] or AOGs.[89] The legal status of other NSAs, including NGOs and MNEs, is more controversial.[90]

77. The uncertainties surrounding the very concept of legal personality add to the complexity.[91] It is for instance not fully clear whether actors must become subjects of international law in order to be able to acquire rights and duties under this law and if so, how the status is actually gained (*a priori* approach) or whether they become subjects of international law by acquiring concrete rights and duties (*a posteriori* approach).[92]

78. NSAs have acquired an extensive set of ***rights and duties.*** The extent differs depending on the actual type of NSA. Some NSAs are in a position similar to that of States. For example, the Holy See, which is a party to many multilateral treaties as well as a series of bilateral treaties (concordats) with certain States, has generally gained rights and assumed obligations. Other NSAs have a more limited extent of rights and duties which usually remain restricted to a particular area of international law.

79. AOGs are considered to be bound by primary rules of international humanitarian law applicable in non-international armed conflicts (Common Article 3 to the four Geneva Conventions, Additional Protocol II, customary rules etc.).[93] It is less clear whether they are bound by other rules of international law, for instance by human rights standards.[94] Since the late 1990s, the Security Council and other organs of the UN have repeatedly called upon various AOGs to abide by human rights obligations, respect human rights and put an end to human rights violations.[95] It has been suggested that the acts by the

UN bodies could themselves establish human rights obligations for AOGs.[96] This view however is not generally accepted.[97]

80. MNEs are subjects of domestic law, but their status under international law remains disputed. There is some support for the view that MNEs have an obligation to refrain from committing crimes under international law. This view has its roots in the post-WWII criminal trials, which however focused on individuals and not companies, and in some national practice (the US Alien Tort Claims Act), which again is rather inconclusive. It has also been suggested that corporations might have obligations stemming from human rights law[98] but, again, there is no consensus reached on this.[99]

81. NGOs are also primarily subjects of domestic law, although there have been attempts to harmonize the regulation among States, at least at the regional level (e.g., 1986 *European Convention on the Recognition of the Legal Personality of International Non-Governmental Organisations*).[100] NGOs seem to have obligations, but it is not clear how much these qualify as international legally binding obligations properly so called. Such obligations stem from treaties (international labour law), arrangements within international organizations (ECOSOC), autonomous institutional arrangements (multilateral environmental agreements), and other agreements (CITES, etc.).

82. It is thus well-established that NSAs have some substantive rights and duties under current international law. It is less clear, however, whether the violation of the obligations they have entails international ***responsibility*** (or liability/accountability).

83. In practice, emphasis is often placed on mechanisms of indirect responsibility. Indirect responsibility arises in connection with activities of NSAs that would constitute an international wrongful act if committed or omitted by other actors – typically States, IGOs and individuals – which are somehow linked to NSAs. Thus, for instance, a violation of international humanitarian law committed by an AOG can give rise to the responsibility of the State exercising effective control over such a group, or to individual criminal responsibility of persons acting on behalf of the group.[101] At the same time, NSAs may be held accountable at the domestic level – within civil or criminal procedure. This however can be difficult and is not always successfully achieved.[102]

84. Direct responsibility of NSAs is more controversial. Some instruments seem to indicate that such responsibility is conceivable. For instance, the *UN Basic Principles and Guidelines on the Right to a Remedy and Reparation for Victims of Gross Violations of International Human Rights Law and Serious Violations of International Humanitarian Law* (UNBPG) state that where *"a person, a legal person, or other entity is found liable for reparation for a victim, such party should provide reparation to the victim or compensate the State if the State has already provided reparation to the victim"* (Principle 15). The ILA Committee on Reparations for Victims of Armed Conflict also noted that AOGs can be held responsible to provide reparations where they commit violations of international humanitarian law.[103] Yet, the international practice is scarce and does not allow us to make any general conclusions.

E) Non-State Actors and Contemporary International Law

85. The previous subsections have demonstrated that NSAs assume many important roles at the international scene. They have also revealed that these roles are not, as it is sometimes believed, fully ignored by international law. In fact, so far, there have been two moves to accommodate non-state actors: the formal incorporation of NSAs within the international legal system and informal integration of NSAs into this system. The border between these two strategies is not strict.

86. ***The formal incorporation of NSAs*** into international law consists of the conferral upon these actors of formal legal personality and/or of concrete rights and duties. We saw above that some NSAs have a well-established position under current international law. The Holy See is a legal person with the capacity to conclude treaties or to send its official representatives to States. The ICRC is recognized as a legal person under international humanitarian law. AOGs are deemed to be bound by primary norms of IHL applicable in non-international armed conflicts.

87. Other NSAs, including NGOs and MNEs, only have a limited set of rights and/or duties, established usually within particular treaty regimes (for instance the regime of the European Convention on Human Rights). It is unclear whether it turns them into legal persons under international law. This confirms that legal personality is not an all-or-nothing institution and that the line between legal persons and non-persons is not as strict as generally assumed; some entities find themselves in a grey zone between the two areas. This is the result of the evolution of international legal personality as a legal technique, of the evolution of international law *ratione materiae* and *personae*, and the lack of rationalisation in the theory of international law.[104]

88. The formal incorporation of certain NSAs into the international law system does not place them on the same level as States. The inequality pertains not only to the extent and content of the legal personality but also, more importantly, to the fact that NSAs have very limited, if any, input in determining what this extent and content will be.

89. Thus, having lost a part of their factual power at the international level, States seek to keep at least the normative power over other actors. They want to continue to serve

[103] ILA Committee on Reparations for Victims of Armed Conflicts, The Hague Report, 2010, pp. 12-13.

[104] LAMALLE, Sandy, L'évolution conceptuelle dans le langage juridique international ou la traduction d'une nouvelle littéralité, *Sémiotica*, Issue 201, 2014, pp. 145-165.

as gate-keepers who decide which actors, and under what conditions, may enter into the exclusive club of legal persons under international law. This is problematic on many accounts including the growing gap between the theory of international law and the practice of international relations, the controversial legitimacy of the State monopoly over norm-creation[105] and the lack of incentives for some NSAs to abide by State-created rules. Consequently, commentators have proposed various alternatives to the State-centred view of international law that occasionally endow NSAs with an improved position. Some of these alternatives will be examined in section IV of this report.

90. ***The informal integration of NSAs*** in the international legal system relates to the situation in which NSAs are not granted a formal position within this system but their factual role is nevertheless acknowledged by other, informal means. There are various ways in which the participation of NSAs, mostly NGOs, in norm-creation processes is given a certain established basis without the conferral of formal rights and duties to such actors. These include simple recognition of the possibility of interaction with NSAs (Article 71 of the UN Charter) or sharing of information with NSAs (Ospar Convention). Similarly, judicial and quasi-judicial fora have benefited from the expertise of NSAs, again mainly NGOs, without the formalisation of their position (e.g., NGOs serving as expert witnesses in the ICJ etc.).

91. The informal integration of NSAs further relativizes the importance of legal personality and the distinction between those who have acquired it and those who have not. At the same time, for lawyers trained in the traditional positivist approach, it might be somewhat difficult to follow how the law-making and law-enforcement mechanisms actually work. This explains the dissatisfaction with the unclear role of NSAs that authors express as well as the proposals to change the current legal regulation and enhance the legal status of NSAs. Some of these proposals will be discussed in the next section.

92. The current state of affairs is certainly not definitive or unchangeable. Even under the traditional State-centric paradigm of international law, NSAs could have their legal status ***further strengthened*** through the two moves mentioned above – formal incorporation and informal integration. Some NSAs, which today are solely the object of informal integration, could be formally incorporated into the system.

93. In the area of *law-making,* certain NSAs already have the power to conclude international treaties. This power could be extended to other entities, for instance NGOs and MNEs. Moreover, the capacity of NSAs to make binding unilateral commitments could be generally recognized (for instance, the Deeds of Commitments signed by AOGs could be deemed binding upon them). Finally, NSAs could gain a more active role in the creation of customary international law, with their practice and opinion being considered as relevant as that of States (at least with respect to customary rules that bind these NSAs).

94. In the area of *compliance monitoring,* some NSAs, such as the ICRC, have a well-established and generally recognized position. This position could be opened to other actors. For instance, the practice of NGOs submitting their reports to human rights or environmental bodies could be formalised. NGOs would have a right to submit the report and/or the international body would be required to consult them.

---

[105] See RYNGAERT, Cedric: Imposing International Duties On Non-State Actors And The Legitimacy Of International Law, *Leuven Working Paper No. 42,* March 2010.

95. In the area of *dispute settlement*, NSAs could have a more active role to play in mechanisms and procedures that are currently *"geared towards States, with rights of* locus standi *typically reserved for States"*.[106] For instance, NGOs and other NSAs could acquire a formal right to present expert opinions and *amici curie* to the ICJ and to other international judicial and quasi-judicial bodies.

96. In the area of *primary rights and duties*, NSAs already recognized as persons under international law could have their rights and duties extended, while other NSAs could finally have their legal personality confirmed. Thus, for instance, AOGs could have obligations stemming not only from international humanitarian law but also from human rights law.[107] NGOs and MNEs, in turn, could acquire clear rights and/or duties under human rights law and/or international criminal law.

97. In the area of *responsibility*, the possibility of strengthening the legal status of some NSAs (AOGs, MNEs) discussed above may emerge at least in some areas of international law (human rights law, international humanitarian law, international criminal law etc.).[108]

98. It thus seems that the position of NSAs under international law ***could*** be further strengthened in the ways described above. The question however is whether this ***should*** be done and, if so, which NSAs should be included and under what conditions, and which, if any, should on the contrary remain outside the system.

99. Formal incorporation, and partly also informal integration of NSAs is not merely a technical operation; it affords these actors opportunities to provide input in important issues. In so doing, it also enhances their legitimacy: those admitted to the club gain certain membership rights and become part of a shared, normative culture. Conferring such a position on some NSAs, for instance PMSCs, might cause controversy.

100. Moreover, strengthening the international legal status of NSAs means further blurring the line between national and international law. Operating in the territory of one or several States, NSAs are subject to such State'(s') legal order. If, in addition, they are subject to international law, the relationship with the State becomes more complex. Special rules would be required to solve, or avoid, conflicts between several legal orders (for instance national legal orders of several States, international law and rules created by NSAs). Thus, the legal status of NSAs under international law is not merely a question for international law; it has important domestic implications as well.

101. Most of the changes described above would not constitute a radical departure from the traditional paradigm of international law. The legal status of NSAs would be strengthened but the degree to which this would destabilise the State-centric system

---

would probably be limited. Yet, it is exactly this State-centric system that some authors find problematic.[109] Other scholars suggest that the system does not exist in the first place and that the traditional paradigm of international law is not the only (and the most correct) one through which to read and interpret international law. The next section presents alternatives to the traditional paradigm and examines some of the practical consequences that the adoption of such alternative views could have for international law and for the position of NSAs.[110]

IV. ALTERNATIVE APPROACHES TO NON-STATE ACTORS

102. The previous section discussed the role of NSAs from the traditional, positivist perspective. While still dominant at the international level, this theoretical perspective is far from exclusive. A number of alternative approaches exist that conceptualize international law differently. Consequently, they also differ in their views of the role of NSAs. This report focuses on those approaches that have dealt with the position of NSAs in more detail: global legal pluralism, transnational law approach, constitutionalism, the policy-oriented approach, and interdisciplinary IL/IR approach.

103. The main purpose of this section is to demonstrate that the role assigned to NSAs under international law is not objectively determined. Rather, it reflects the particular theoretical position that one embraces with respect to (international) law.[111] In this regard, we are all "prisoners of the theory", which provides us with lenses through which we contemplate and assess the (international) reality. The theory determines which factors and actors are deemed relevant and what position is attributed to them. It then largely depends on the persuasive force of the supporters of the theory whether, and to what extent, they gather the support of the relevant epistemic community.[112]

A) Global Legal Pluralism[113]

104. The theory of legal pluralism starts from the premise that people are part of multiple groups and feel that they are bound by the norms of these groups. Besides the familiar groups, such as States and political affiliations, people can have affiliations that are not part of an "official" State-based system, such as subnational ethnic groups, religious institutions and trade organizations. These communities may exert tremendous power over

[110] See also OLIVIER, Michele: Exploring Approaches to Accommodating Non-State Actors within Traditional International Law, *Human Rights and International Discourse,* Vol. 4, 2010, pp. 15-31.

[111] Fitzmaurice elucidated how choice of theoretical approach and understandings about sources of international law affect content. In his view, *"direct relationship between certain differences of approach to international law, certain controversies as to its basic character, on the one hand, and on the other, divergencies of view regarding sources of international law, formal and informal, are capable of influencing their content, or the view taken or suggested as to the content of the law because of the absence of any legislator, legislature or statute law"*. [112] See KOSKENNIEMI, Martti, *From Apology to Utopia. The Structure of International Legal Argument,* Cambridge: Cambridge University Press, 2006.

[113] This section is based on TJEN-A-KWOEI, Alberto, RYNGAERT, Cedric, *Background Paper on Global Legal Pluralism and NSA,* 21 September 2015.

the actions of people.[114] Thus, the key insight of legal pluralism is *"a recognition that multiple orders exist and a focus on the dialectical interaction between and among these normative orders".*[115] Legal pluralists empirically study which statements of authority tend to be treated as binding in actual practice and who treats them as such.[116]

105. The theory of global legal pluralism has emerged more recently, primarily as a reaction to the globalization process. Whereas some see it as a mere adaptation of legal pluralism to the new global context, others believe it constitutes a new paradigm.[117] Global legal pluralism is interested in the coexistence of different legal systems stemming from different sources. It also studies the relationship between various actors participating in the creation and/or implementation and application of such legal systems.

106. The theory of global legal pluralism is in itself ***pluralist.*** Its supporters are interested in different aspects of global developments. Teubner, for instance, argues that 'global law' constitutes a new legal order stemming from intersections between multiple actors in many spheres of activities. To understand this law, it is necessary to make a turn from groups to discourses and communicative networks.[118] Snyder defines global legal pluralism as the totality of episodic conjunctions of multiple sites which are strategically determined and situationally specific. Pluralism in his view has two main aspects: the structural aspect involving a variety of institutions, norms and dispute resolution processes, and the relational aspect, concerning the relations between sites.[119] Berman, in his turn sees global legal pluralism as a normative project aimed at striking a middle ground between strict territorialism and open-ended universalism.[120]

107. The theory of global legal pluralism has been used to explain certain developments within ***international law.*** For instance, it has been applied to the process of fragmentation.[121] Burke-White identifies seven trends in international law, out of which three suggest fragmentation and four suggest *"new forms of interaction between national and international actors and the development of an international legal pluralism".*[122] The three trends that point towards fragmentation are the diversification of international tribunals, the growth and potential conflict of legal norms, and the increased access by NSAs

to the international legal adjudication fora. The four trends that suggest the development of a pluralist legal system are the application of a common body of law by international tribunals, inter-judicial dialogue, the blending of procedures and traditions, and the hybridization of international law enforcement.

108. The theory of global legal pluralism postulates the existence of multiple orders that interact with each other. Law is created through the interaction of these orders. In such a system, there is room for ***NSAs*** as the system does not dictate what types of actors create, implement and enforce the law or are bound by its rules. Global legal pluralism uses the concept of NSAs, favouring however the term "communities". Some communities predate the creation of their normative space (ethnic communities), others emerge together with this space (various social network). In this way, the actors become inseparable from their normative practice or, even, may be constituted by these practices. The production of rules (norm-creation) is therefore the decisive element which allows us to determine which actors (communities) matter under global (international) law and which do not.

109. Berman notes that *"a more pluralist account of international law also recognizes the wide variety of non-state actors engaged in the establishment of norms that operate internationally and transnationally".*[123] He adds that there are several ways in which NSAs could establish such norms. The first is that of NSAs acting as direct lawmaking bodies. In this case NSAs create their own norms of self-regulation, separated from norms created by States or IGOs.[124] Another possibility is that NSAs are delegated lawmaking authority by official legal actors, or that official legal actors recognize the efficacy of non-state norms. In these cases NSAs also create norms that have the effect of law, but instead of creating for the purpose of self-regulation, States and other formal lawmaking entities recognize and take over these norms because of their efficiency, or because they delegated a non-governmental body to create standardizing norms in a specific field. A third way is that of international conventions empowering private parties to develop international norms.[125] This conception still posits the central role of the State but it does not condition the validity of legal norms produced by NSAs on the consent of the State.

110. Teubner also recognizes the capacity of NSAs to establish their own norms. Yet, unlike Berman, he does not see such norms as part of a comprehensive system of international law but, rather, as a nucleus of a new system of global law which has so far been developing at the periphery of the legal systems.[126] His view primarily applies to international economic law. The same is true for Snyder, who is more reluctant to assign NSAs (MNEs) a formal norm-making role within international or global law.[127]

111. Thus, global legal pluralists see NSAs as relevant players in the construction and application of international/global law. Their position is determined primarily by their normative actions that do not require any formal approval by States. They simply have to be efficient enough to produce consequences within the relevant community. Normative

systems produced by various actors (communities) interact, though the rules for such interactions are not made very clear in the global legal pluralism literature. It is solely possible to note that often, priority is conceded to the norms established by States (at the national or international level). NSAs are thus still defined by their other-than-State character and the norms they produce remain at the periphery.

B) Transnational Law Approach

112. Transnational Law approach emerged in the 1950s, as a reaction to the growing displeasure with the positivist mainstream in international law. While the first usage of the term is disputed, "transnational law" is conventionally associated with the US scholar Phillip C. Jessup. Jessup defined transnational law as *"all law which regulates actions or events that transcend national boundaries".*[128] Such actions and events involve not only States but also IGOs, individuals, and various NSAs. Yet, the positions of these actors differ substantially under international law according to Jessup – whereas States and, to a certain extent, IGOs, are subjects of the law and its norm-makers, NSAs remain objects of the law or, as a maximum, norm-takers.[129]

113. In 1972, a collection of essays entitled *Transnational Law in a Changing Society* was published in honour of P. C. Jessup.[130] While putting emphasis on the pluralistic nature of the international society, the authors showed scepticism as to the strengthening of the status of actors other than States in international law. For instance, in his chapter on MNEs, Wilfred Jenks wrote: *"/N/o international status for multinational corporations can be created in the foreseeable future by a mandatory decision and the status would become a significant reality only insofar as corporations sought it and governments recognize it".*[131] The quote suggests that those writing about transnational law did not do enough to conceptualize this law, distinguish it from national and international law, and to consider the role of various actors within it.

114. In the 1990s, the concept of transnational law/relations, as conceived during the Cold War, attracted criticism. In his book on NSAs published in 1995, Thomas Risse-Kappen wrote that *"the original concept of transnational relations was ill-defined. It encompassed everything in world politics except state to state relations".*[132] The alternative definition, Risse-Kappen proffered, conceptualized transnational relations as *"regular interactions across national boundaries when at least one actor is a non-state agent or does not operate on behalf of a national government or an international organization".*[133] NSAs have an important role to play in transnational relations, because as the author stresses *"we cannot explain state behaviour in crucial issue-areas without taking the*

cross-boundary activities of non-state actors into account".[134] Thus, analysing the activities of NSAs and assessing the impact they have on transnational relations is one of the main tasks of scholars of international relations. What this would mean for (international) law however is unclear, as the book does not pay much attention to law.

115. It is different in the work of contemporary legal scholars writing about transnational law or, more typically, transnational legal process. This is the case of Harold Koh, who combines the elements of policy-oriented approach (so-called New New Haven School) with those of transnational law. For Koh, transnational legal process is *"the theory and practice of how public and private actors /.../ interact in a variety of public and private, domestic and international fora to make, interpret, enforce, and ultimately, internalize rules of transnational law"*.[135] Transnational law breaks down the distinction between public and private and international and national – NSAs, traditionally relegated to the national and private sphere but more and more present in the international and public sphere is one of the main agents of change in this area. What concrete changes this should bring for the position of NSAs in international law, and for international law as such, remain however yet to be determined by transnational law scholars.

C) Constitutionalism

116. Constitutionalism[136] is often presented as an opposite to (global legal) pluralism.[137] It stresses unity instead of plurality, common values instead of separate normative orders, hierarchy instead of coordination. It, however, shares with pluralism the rejection of the classical State-centric theory of international law.[138] That would suggest that it should be open to NSAs. Yet, in reality, *"the impact of new participants in the international legal system is ambivalent from a constitutionalist perspective"*.[139]

117. Although stressing unity, constitutionalists are not uniform in their approach. Yet, the aim most of them seem to share is *"to constrain free state will with regard to both the conduct of international relations and the design of domestic constitutional orders"*. [140] One of the main tools bringing about such constraints is international law, which limits

(eds), *The Worlds of European Constitutionalism,* Cambridge: Cambridge University Press, 2012, pp. 203-261.

[138] Certain authors express doubts as to whether constitutionalism is an alternative of positivism or just a strand within it. For instance, Kleinlein notes that *"as a contribution to international legal scholarship, international or global constitutionalism is not so much a public international legal theory of its own, but a particular doctrinal approach within the positivist mainstream of public international legal scholarship"*. KLEINLEIN, Thomas, Non-state actors from an international constitutionalist perspective, in D´ASPREMONT, Jean (ed.), *Participants in the International Legal System, op. cit.,* p. 43.

[139] *Ibid.,* p. 41.

[140] *Ibid.,* pp. 41-42.

freedom of States internationally and domestically. For constitutionalists, international law is not comprised of consent-centred instruments whose content is fully determined by States. Rather, international law *"increasingly focuses on the realization of community interests and the promotion of global public goods"*. [141] To achieve these goals, international law itself is construed as a hierarchical system with certain higher norms placed at the top of the normative pyramid. Concepts such as *jus cogens* or *erga omnes* obligations are conventionally referred to in this context, expressing those community interests and global public goods that the international community is to pursue.

118. So far, the theory of constitutionalism has not paid much attention to ***NSAs.*** This is partly due to the fact that, as Kleinlein notes, *"subjects doctrine does not play prominent role in constitutionalists´ studies, which are, in general, rather focused on sources doctrine"*.[142] Another factor is that constitutionalists largely concentrate on two specific actors (beyond States) – IGOs and individuals, both of which fall outside the definition of NSAs adopted in this report. Whereas IGOs are seen as crucial actors in the creation and application of international law, individuals constitute the main and in the final stage the only real addressee of legal norms. *"In a constitutionalized world order, natural persons are the primary international legal persons and the primary members of the global constitutional community."*[143]

119. Anne Peters is the principal scholar who has analysed the legal position of NSAs from the constitutionalist standpoint.[144] Starting from the assumption that *"there is a global constitutional community which is made up by individuals, states, international organizations, NGOs, and business actors",*[145] she discusses not only the three "usual suspects" (States, IGOs, individuals) but pays attention to two NSAs as well: NGOs and MNEs. Peters first recognizes the factual relevance of these actors. NGOs *"*de facto play an increasingly important role in the international legal process".[146] MNEs *"form part of the global constitutional community and are embedded in an economic constitutional framework. Transnational commercial activities have been a crucial factor for the development of international law"*.[147]

120. Peters asserts that *"the constitutionalist approach allows the reframing of the doctrinal debate on the international legal personality"*.[148] The statement relates specifically to NGOs but there is no reason why it should not apply to other NSAs as well. In Peters´view, the question is not, whether NSAs are subjects of international law but *"which precise fundamental rights and obligations they possess and should possess in a constitutionalized world order"*.[149] She opts for a functionalist approach claiming that

NSAs should hold rights and obligations that reflect their functions. She then provides an overview of functions that NGOs and MNEs assume at the international level and of rights and obligations they have under current international law because of these functions. The overview is not radically dissimilar to that provided in the previous section of this report (and, in more detail, in the reports adopted by this Committee in 2010-2014). The reframing of the doctrinal debate is therefore, if it occurs at all, rather moderate.

121. Moreover, the relationship of constitutionalists to NSAs is difficult, even ***ambiguous***. On the one hand, NSAs assume important functions in promoting community interests and global public goods as well as in advocating for the rights of individuals. Thus, their rise is perceived as *"a step towards inclusiveness and empowerment of entities other than states"*.[150] On the other hand, the rise of NSAs, particularly when entities other than NGOs and MNEs are included in the analysis, may be viewed as problematic, because it *"threatens the overall coherence of the international order from a normative point of view"*.[151] The pluralization of actors endowed not only with right and duties but also, potentially, with the capacity to establish, apply and enforce legal rules could place the normative unity of international law constitutionalists strive for in jeopardy.

D) Policy-Oriented Approach

122. The policy-oriented approach constitutes a more radical departure from the traditional approach to international law than global legal pluralism and constitutionalism. The term is not used in a completely uniform way. In the narrow sense, it usually refers to the New Haven School of international law.

123. The New Haven School arose from the Yale Law School in the United States. Representatives include Myres S. McDougal and Harold Lasswell in the first generation and a host of other scholars in the next generation, including W. Michael Reisman, Richard Falk, Harald Koh, and Rosalyn Higgins. Their understanding is encapsulated by the view that law is *"not just a set of rules governing the behaviour of social actors, but a process of authoritative decisions"*.[152] The supporters of this approach are practice-oriented: they seek to provide decision-makers with legal advice that would be both scientifically sound and politically relevant. The analysis proceeds in five steps (labelled as the praxis of intellectual tasks) encompassing: goal formulation, trend description, factor analysis, projection of future decisions, and the invention of alternatives.[153]

124. The New Haven School stresses the value of human dignity that international law should strive to protect. In a public order of human dignity, all individuals should have access to the things they cherish, that is, power, wealth, enlightenment, skill, well-being, affection, respect and rectitude. Borrowing from social sciences, the New Haven School analyses social processes rather than merely rules, that are described through six aspects:

[153] See REISMAN, W. Michael, WIESSNER, Siegfried, WILLARD, Andrew R., The New Haven School: A Brief Introduction, *Yale Journal of International Law,* Vol. 32, 2007, p. 576.

(1) those who engage in it (participants), (2) the factors that motivate them (perspective), (3) the situation in which they interact (situations), (4) the resources upon which they draw (bases of power), (5) the ways they manipulate those resources (strategies), and (6) the aggregate outcomes of the process of interaction (outcomes).[154]

125. The New Haven School rejects the concept of (formal) legal personality, replacing it with that of participation. As Higgins put it: *"It is not particularly helpful, either intellectually or operationally, to rely on the subject-object dichotomy that runs through so much of the writings. It is more helpful and closer to perceived reality to return to the view of international law as a particular decision making. Within that process (which is a dynamic and not a static one) there is a variety of* participants*, making claims across state lines, with the object of maximizing various values".*[155]

126. The participants in global decision making include *"those formally endowed with decision competence /.../ and all those other actors who, though not endowed with formal competence, may nonetheless play important roles in influencing decision outcomes".* [156] The scope is thus not restricted to States or IGOs, but includes various NSAs as well, with particular attention being again paid to NGOs.[157] The circle of such NSAs is potentially open-ended and there is no *a priori* condition, accept for the factual participation in the decision process, that would limit this circle to certain NSAs or to those meeting a specific definition. Thus, whether NSAs are organized or not, whether they have a link to States or not, whether they are considered legitimate or not, and whether they enjoy formal legal recognition, is irrelevant. What matters is merely their factual power. Thus, the list of participants includes such diverse entities as individual human beings, States, IGOs, transnational political parties, civilizations, folk cultures, mafia and terrorists, etc.[158]

127. Unlike the traditional approach, global legal pluralism and constitutionalism, the New Haven School does not presuppose hierarchy among actors and does not place the State at the centre of the international legal order. That is another reason why it does not need the concept of the NSA. Absent a single paradigmatic participant, it does not make much sense to introduce a State/non-State dichotomy. This general position is however not always followed in concrete analyses. For instance, when discussing the use of force, a field in which NSAs have notably asserted themselves in recent years, the distinction between States and other actors is as clearly made by New Haven scholars as by scholars belonging to the other approaches.[159] This shows how deeply rooted the distinction

between States and NSAs is in positive international law and also in the minds of most international legal scholars.

E) Interdisciplinary IL/IR Approach

128. In recent years, interdisciplinary approaches have become popular in social sciences. This is also true in international law (IL) where they usually seek to combine international law and theories of international relations (IR). More exactly, it looks at international law from the perspective of various theories of international relations. Despite the scepticism of influential authors,[160] this approach has gained many supporters in both IL and IR camps.[161] What unites them is the social sciences methodology used to analyse international law. What divides them is the concrete IR theory they apply.

129. Noortmann has suggested that despite its internal plurality, the interdisciplinary approach could help *"understand and explain the role and position of all participants in the constitutive process of order and justice at the world level".*[162] He concedes that both IL and IR have so far primarily engaged in the study of political and legal relations *"by the states for the states and of the states".*[163] Yet, he asserts that the lack of inclusiveness and the hegemonic position of the State that have traditionally characterized IL and IR could be overcome by means of three potential solutions.

130. The first is the elaboration of the concept of transnationalism. Recalling Jessup's distinction between internationalism and transnationalism, Noortmann rejects a division of the world into several spheres of interaction based on participants and suggests replacing it with one based on an understanding of the structure and process of the world. Thus, for instance, NGOs should not be pigeon-holed in the sphere of national or transnational law, provided their activities have an impact on the international scene as well.

131. The second solution calls for revisiting and overhauling the concept of participants as suggested by the policy-oriented approach. Noortmann supports the New Haven School's approach whereby *"international law is in theory stripped of its state-oriented biases, and the practices and opinions of non-state actors are assessed in a similar way to those of states".* [164]

132. The third solution is to design a new sociology of IL and IR where they are understood within a social context that is construed to include not only States, as was traditionally the case, but also NSAs. *"An interdisciplinary approach to non-state participants and non-state participation would acknowledge the opinions and practices of these participants as a variable in the process of understanding the world beyond the state".* [165]
